The Physic Garden is situated to the south of Magdalen College. We pass through a small court, to the grand entrance, worthy of Inigo Jones, but designed by Nicholas Stone. It is of the Doric order, and ornamented with rustic work. It is moreover adorned with a bust of the founder, lord Danby, a statue of Charles I. and another of Charles II. On the face of the Corona and the frieze is the following inscription: "Gloriæ Dei optimi maximi honori Caroli I. regis in usum academiæ et reipublicæ Henricus comes Danby, anno 1632." The same inscription is on the garden front.

The garden, which is five acres in circumference, is surrounded by a noble wall, with other portals in the rustic style, at proper distances. The ground is divided into four quarters. On the right and left, at our entrance, are two neat and convenient green-houses, stocked with a valuable collection of exotics. The quarters are filled with a complete series of such plants as grow naturally, disposed in their respective classes. Without the walls, on the east, is an admirable hot-house, where various plants, brought from the warmer climates, are raised. Of these the chief are, the pineapple, the plantain, the coffee-shrub, the caper-tree, the cinnamon, the creeping Cereus, &c.

This garden was instituted by the earl of Danby, above-mentioned, A. D. 1632; who having replenished it with plants for the use of students in botany, settled an annual revenue for its support. It has been since much improved by Dr. Sherrard, who erected the edifice which we see on our left, at entering the garden, and furnished it with an useful collection of botanical books. He likewise assigned three thousand pounds for the maintenance of a professor of botany, for whose lodgings some apartments in the building just mentioned have been appointed.

Having surveyed the public buildings in Oxford, we shall proceed to the several colleges and halls which constitute the university of Oxford.

The earliest accounts of the university of Oxford are equally doubtful with those of the city. The foundations of both are by some referred to the British king, Memprick; by some to another British king, named Arviragus, who reigned in the time of the emperor Domitian, about the seventieth year of the Christian æra; and by others, to king Vortigern.

Upon the whole, it is probable that this university was founded soon after the Christian religion was established in England; for in the papal confirmation of it, under the pontificate of Martin the second, in the sixth century, it is styled an ancient academy or university.

Some historians affirm, that before the reign of Eorpwald, king of the East Angles, there were two general seminaries of literature in England, one for the instruction of youth in the Latin language, at a place in Gloucestershire, not far from Oxford, called therefore Latinlade,

lade, and afterwards, by corruption, Leccalade, and Lechlade: the other for teaching the Greek language, at a place which then was called Greglade and Greccalade, but now Creklade, a borough town of Wiltshire. The students and masters in both these academies are said to have been removed by the Saxons to Oxford.

We have however no credible accounts of this university before the time of king Alfred, towards the end of the ninth century; Alfred is therefore generally considered as its founder, though he was in fact no more than the restorer of learning at this place.

At the accession of Alfred, learning had suffered so much by the wars of the Romans, Danes, and Saxons, that few persons could read English, and scarce a single priest in the kingdom understood Latin.

To remedy this inconvenience, Alfred first ordered Gregory's Pastoral to be translated into English, and sent a copy of it to every bishop in the kingdom. He then procured several men of literature, and among others were Grymbald, and John the Monk, two men eminent, as well for their piety as for their learning, whom, in 886, he settled at Oxford, which was before that time an university or seminary of literature.

Grymbald, and the learned men that accompanied him hither, having prescribed new statutes, institutions, and forms of reading, to the students, the old scholars refused to comply. They pleaded, that letters flourished here before the arrival of Grymbald; and that if the students were less in number before his arrival than afterwards, it was owing to their having been expelled in great numbers by the tyranny of Pagans and Infidels. They further insisted, that they were ready to prove, by the undoubted testimony of their annals, that good rules and orders had long subsisted for the government of the place; that these rules were prescribed by Gildas, Melkin, Nennius, Kentigern, and others of great learning and piety, who had prosecuted their studies at Oxford, and formed and improved the constitution of its university.

After the animosity between Grymbald and the old students of Oxford had subsisted three years, it broke out with such violence, that upon Grymbald's complaint, king Alfred came in person to Oxford, and was at great pains in hearing both parties, and endeavouring to accommodate their differences; and having exhorted them to friendship and reconciliation, he left them, in hopes that they would comply; but the students continuing their opposition, Grymbald retired to the monastery at Winchester, which Alfred had then lately founded.

During the stay of Grymbald at Oxford, he and St. Neots were regents and readers of divinity; grammar and rhetoric were taught by Asser, a monk, a man of extraordinary parts and knowledge; logic, music, and arithmetic, by John, a monk of St. David's; and geometry and astronomy, by another John, a monk, and the colleague of Grymbald, a person of admirable knowledge at that time in those sciences.

UNIVERSITY COLLEGE.

For the advancement of learning in this place, king Alfred built three halls, as is generally believed, all subject to one head, and called by the names of Great University Hall, Little University Hall, and Less University Hall; and in these halls he placed twenty-six students in divinity, whom he endowed with annual stipends, paid out of the Royal Exchequer. Others are of opinion, that king Alfred founded only one hall here, under a threefold distinction, from the professions or sciences taught in it. Such, however, is the foundation of what is now called University College, which is allowed to be the most ancient in Oxford. Some, however, maintain, that this college was a mansion for scholars long before the time of king Alfred, and that St. John de Beverley, who died in 721, received his education here. Its subsistence prior to Alfred, they say, appears by a parliamentary petition in the reign of Richard II. and they insist, that Alfred only rebuilt the house which he called Great University Hall, and provided the students with exhibitions.

In the reign of king Ethelred, this college or hall was sacked and burnt, together with the city, by the Danes; and they were scarcely rebuilt, when king Harold, who succeeded to the crown in 1036, being much incensed against this place, for the murder of some of his friends, in a tumult, banished the scholars from their studies. By an edict of Edward the Confessor, the scholars were however restored to their ancient pensions and habitations; but William the Conqueror being desirous to abolish the English tongue, and therefore unwilling to have the doctrines of the church any longer preached in it, was vigorously opposed by the clergy and scholars of Oxford, upon which he retracted the stipends granted them by king Alfred, and the scholars were thus reduced to live on charitable contributions, till the college was a second time endowed.

This college, according to some writers, was, at the time of the Conquest, let out to the scholars by the citizens, into whose possession it is supposed to have come during the Danish wars; but this circumstance is by no means probable, since the edict of Edward the Confessor restored the scholars to their ancient privileges. However, it is certain, that for some time before the reign of Henry III. the scholars rented the college of the citizens. By what means it became the property of the city, does not appear; but such was the city's right to this college, that it had power to sell it, and it was actually bought of the city by William, archdeacon of Durham, who died in 1249; and by his last will and testament, bequeathed it to the students, and endowed it with three hundred and ten marks, for the maintenance of ten or twelve scholars.

The magnificent front of this college is extended upwards of two hundred and sixty feet along the south side of the High Street. In it, at due distances, are two stately portals, with a tower over each. That on the west leads into the old court, which is a handsome Gothic quadrangle, of one hundred feet square. Over the gate, at our entrance, on the outside, is a statue of queen Anne, and within another of James II. Over the eastern entrance, on the outside, is also an admirable statue of queen Mary, wife of William III. On the south of the western quadrangle are the chapel and hall. The statue of St. Cuthbert is over the gate of the chapel, and that of Alfred at the entrance of the hall. The altar window was given by Dr. Radcliffe, as appears by its inscription, A. D. 1687. The roof of the chapel is a well-wrought frame of Norway oak. The hall has been lately fitted up in a very beautiful Gothic style, at the expence of many generous contributions, and is a most complete room of the kind. It is of the age of the chapel.

From this court, through a narrow passage on the east, we are led into another area of three sides. It is opened to a garden on the south. The east, and part of the north side, is taken up by the lodgings of the master, which are commodious and extensive. In a nich over the gate on the north, is a statue of Dr. Radcliffe. The sides of this court are about eighty feet.

A society being thus established, many other benefactors afterwards appeared, who improved the revenues and buildings. Of these the most considerable are, Walter Skirlow, bishop of Durham, who founded three fellowships. Henry Piercy, earl of Northumberland, A. D. 1443, added the same number. Sir Simon Bennet, in the reign of Charles I. established four fellowships, and four scholarships. Many others have likewise founded fellowships and exhibitions.

As to the buildings, the present spacious, splendid, and uniform structure, began to be erected, A. D. 1634, by the benefaction of Charles Greenwood, formerly fellow, and was soon carried on by Sir Simon Bennet, above-mentioned. Nor were succeeding patrons wanting to continue so noble a work, till it was finally completed by Dr. John Ratcliffe, who erected the whole eastern quadrangle entirely at his own expence. He likewise settled on the college six hundred pounds a year for two travelling fellowships.

The present society consists of a master, twelve fellows, seventeen scholars, with many other students, amounting in the whole to near seventy.

BALIOL COLLEGE.

Though in the reign of Henry III. particularly in the year 1231, there appears to have been no less than thirty thousand students at this university, consisting of English, Scotch, French, and Irish; yet there was but one college or hall, till after the year 1260, when the foundation of another college was projected by Sir John Baliol of Bernard Castle, in Yorkshire, knight, father of John Baliol, king of Scotland, who settled some yearly exhibitions upon certain poor scholars, till he could provide a house and other accommodations for them; but dying in 1269, his widow, Devorgilla, having been requested by him to complete his design, hired of the university a house in a street, then called Horse-manger-street, but now Canditch, in which she placed her exhibitioners, consisting of a principal and sixteen fellows, and prescribed statutes for their government in 1282. Afterwards, in 1284, she purchased another tenement, called St. Mary's Hall, which she rebuilt, and to which the society was removed by her charter, giving it the name of Baliol College.

It has a handsome Gothic gateway, that leads us into the first court, part of which is finished in the style in which it is intended to rebuild the whole college.

On the north is the chapel, which was erected about the reign of Henry VIII. It is adorned with some beautiful pieces of painted glass. The east window particularly demands our regard, which represents the passion, resurrection, and ascension of Christ; and for which Nicholas Wadham offered two hundred pounds, intending it for the east window of the chapel of his college.

The hall is handsomely wainscotted. In the master's lodgings is a spacious old apartment, whose beautiful bow window projects on the west side of the court, and which was formerly the college chapel. In the library, which was finished about the year 1477, are many curious manuscripts. Besides this court, there is an area to the north-west, consisting of irregular and detached lodgings. But an elegant front is now building by this court, a benefaction of three thousand pounds having been lately received for that purpose.

The principal benefactors are, Philip Somerville, Thomas Stanhope, Peter Blundell, lady Periam, with several others.

John Warner, bishop of Rochester, A. D. 1656, founded four exhibitions for natives of Scotland, whose benefaction was since enlarged by John Snell, Esq.

Here is one master, twelve fellows, and eighteen exhibitioners. The whole number of the society amounts to about fifty.

MERTON COLLEGE.

After Baliol College, the other societies of this university were successively endowed. Walter de Merton, lord high chancellor of England, in the reign of king Henry III. and afterwards bishop of Rochester, first founded and endowed a college of twenty poor scholars, and two or three chaplains, at Malden, near Kingston, a market town of Surry, in the year 1261; but because the liberal arts were taught only in the universities, and he was not willing that his students should be ignorant in them, he translated this society to a building he erected for them in St. John's street at Oxford in 1267, prescribed a body of statutes for them in 1274, and gave the college the name of *Domus Scholarium de Merton*.

It is separated from that of Corpus Christi, towards the west, by a small grove of elms. In the first court, the most striking object is the east window of the chapel, the construction of which is a fine piece of Gothic workmanship. From this court, by a flight of steps, we enter the hall: it is large and lofty, but has nothing particularly remarkable, except the wainscot over the high table, which appears, by a date engraved upon it, in figures of an antique form, to have been erected in the year 1554.

The chapel, which is also the parish church of St. John, is an august Gothic edifice, with a tower, in which are eight bells. Its choir, or inner chapel, is the

longest of any in the university, that of New College excepted. It had once an organ, yet without any regular institution for choir-service, before the present stalls and wainscot were put up. There is something elegant in the painted glass of the east window, which is of a modern hand. The ante-chapel is proportionably spacious, and was originally much larger; for if we examine the outside of the church, towards the west, we may perceive the arches filled up, which once stood within, and made part of the nave. Near the altar are the monuments of Sir Thomas Bodely, and Sir Henry Saville. On the right hand of the choir door, is that of the late warden, Dr. Wintle, and his sister, which is prettily executed; and not far from the north door of the ante-chapel, is a bust and inscription to the memory of Anthony Wood. This church, as we are informed by a manuscript of Wood, was built about the year 1424, but it does not appear by what benefactor.

South of the church or chapel, is a small old quadrangle; the south side of it forms the library, built A. D. 1369, which still contains many curious manuscripts; notwithstanding, as we are told by Wood, a cart-load of manuscripts was taken from it, which were dispersed or destroyed by the visitors in the reign of Edward VI.

The new or second quadrangle was erected A. D. 1610, from whose apartments, on the south, there is a beautiful prospect over the meadows. The terrace, formed on the city-wall, in the garden of this college, is no less finely situated for a delightful view; and the gardens in general have a pleasing variety.

The benefactors of this society are numerous. Amongst these, the most remarkable are, Henry Sever, and Richard Fitz James, formerly wardens; and Dr. John Wyllyott, chancellor of the church of Exeter, who gave exhibitions for the maintenance of twelve *Portionists*, called Postmasters, A. D. 1380. These were afterwards increased to fourteen, by John Chambers, who directed, that his two additional exhibitioners should be elected from Eton School. Mr. Henry Jackson, late of this house, has likewise founded here four scholarships.

The society consists at present of a warden, twenty-four fellows, fourteen post-masters, four scholars, two chaplains, and two clerks. The number of members of every sort is near eighty.

EXETER COLLEGE.

In the year 1314, Walter Stapledon, bishop of Exeter, purchased two buildings in the city of Oxford, one called Hart Hall, and the other Arthur's Hall, where he instituted a society, consisting of a rector and twelve scholars, by the name of the Society of Stapledon Hall; but not liking the situation, he bought a piece of ground in the parish of St. Mildred, in this city; and having erected convenient lodgings and other accommodations for them, he translated the society to this building, which was at first called Stapledon Inn, but afterwards Exeter College.

About the year 1318, the Hebrew tongue began to be read at this university, by a Jewish convert, towards whose stipend every clerk in Oxford contributed one penny for every merk of his ecclesiastical revenue.

It is situated on the left side within the Turl from the north. In the centre of the front, which is two hundred and twenty feet in length, is a beautiful gate of rustic work: over it is a tower, adorned with Ionic pilasters, supporting a semicircular pediment, in the area of which are the arms of the founder on a shield surrounded with festoons. A light balustrade finishes the whole. This front deserves a better approach than its confined situation will allow. The workmanship in the roof of the gateway is equal to the rest.

This college consists chiefly of one handsome modern quadrangle, one side of which is the same as the front just described. On the south is the hall, which is long and lofty, and adorned with portraits. It was entirely built from the ground by Sir John Ackland, Knt. of Devonshire, A. D. 1618. On the north is the chapel, consisting of two isles. It was erected by Dr. Hakewell, formerly rector, A. D. 1624.

In the library, which was formerly the chapel, situated in the inner court, is a fine collection of the classics, given by Thomas Richards, Esq.

The old entrance into the college was through the tower which appears on the north-east angle of the court, and for which a postern in the city-wall was opened. Near or about this tower, the old college, as it in some measure may be called, seems to have stood; part of which still remains adjoining to the tower on either side, that on the east being the most ancient, erected A. D. 1404, and that on the west, viz. the rector's lodgings, together with the tower itself, A. D. 1432. However, all these are still more modern than any part of the founder's original structure, no remainder of which is to be seen at present, except a part of the chapel, since converted into the library.

The gardens are neat, with an agreeable terrace, from whence a prospect is opened to some of the finest buildings in the university.

The college consists, at present, of one rector, twenty-five fellows, and a bible-clerk, with two exhibitioners. The students of every sort are about fifty.

ORIEL COLLEGE.

Camden, Prynne, and other antiquarians, ascribe the foundation of Oriel College to king Edward II. in 1324; but it does not appear that he contributed much farther to this foundation, than granting a licence to Adam le Brome, his almoner, in 1324, to build and endow a college here, by the name of St. Mary's Hall. To this society king Edward III. in 1327, being the first year of his reign, gave a large building in Oxford, called le Oriel, to which the fellows removing from St. Mary's Hall, this was called Oriel College.

It is situated southward of St. Mary's church, on the north side of the front of Corpus Christi College, its great gate being almost opposite to the back gate of Christ-church. Its quadrangle, which was erected in the year 1640, is uniform and decent. The north side consists of the provost's lodgings, and the library; the east of the hall, buttery, and vestibule of the chapel, which runs eastward from thence; and the south and west sides form the common apartment.

We ascend the hall by an ample flight of steps, covered with a proportionable portico. It is handsomely wainscotted in the Doric style, and decorated at the upper end with a portrait of Edward II. dressed in his regalia, by Hudson; one of queen Anne, who annexed a prebend of Rochester to the provostship, by Dahl; and another of the late duke of Beaufort, who is represented erect, in his parliament robes, attended by a negro boy bearing a coronet, by Soldi. The best of these pieces the judicious spectator will probably determine to be that of the duke.

The chapel has that beauty belonging to it which is derived from a decent simplicity, and was finished A. D. 1642. The window over the altar has been lately painted with the Wise Men's Offering, by Mr. Pakett, of York.

The library is a neat, well-furnished room, being half the upper story of the north side of this quadrangle.

The garden-court, which we enter by a passage in the same north side, receives an agreeable air from an elegant little garden which is formed in the midst of it, and fenced on this side with iron gates and pallisades, supported by a dwarf-wall and stone piers. The sides are two wings, in a style correspondent to that of the quadrangle. That on the right was erected by Dr. Robinson, bishop of London; and that on the left, by Dr. Carter, formerly provost.

The college has gone through frequent revolutions with regard to its buildings.

The principal benefactor to the present edifice was Dr. John Tolson, when provost, who, besides other valuable donations, gave one thousand one hundred and fifty pounds for that purpose.

Nor should we forget the benefaction of the above mentioned Dr. Robinson, bishop of London, who gave two thousand five hundred pounds for augmenting the fellowships.

The present members are, one provost, eighteen fellows, and about fourteen exhibitioners. The students of all sorts amount to almost eighty.

QUEEN'S COLLEGE.

Robert Eglesfield, a bachelor of divinity in this university, and a native of Cumberland, at the desire of queen Philippa, consort of king Edward III. in the year 1340, purchased certain houses in the parish of St. Peter in the East, in the city of Oxford, which he converted into a collegiate hall, by the name of *Aula Scholarium Raginæ de Oxon.* and having obtained a royal charter of confirmation, dated the eighteenth of January 1340, he endowed this hall for a provost and twelve fellows, in allusion to Jesus Christ and his twelve apostles. He intended also to endow it with revenues for the maintenance of seventy poor scholars, in reference to Christ's seventy disciples; but this part of the design was never executed. By the founder's rules, the fellows were to be chosen out of Cumberland and Westmoreland, in preference to any other county.

After the founder's death, king Edward III. gave two tenements to this college, and settled them on the society, by the name of Queen's College, or Hall, in remembrance of his queen Philippa, who was a great benefactress to it.

About this time the students of Oxford growing wanton and insolent, separated themselves into two parties or factions, distinguished by the names of the Northern and Southern Men; and after many acts of violence and hostility, the Northern men retired to Stamford in Lincolnshire, and began to prosecute their studies in some halls or colleges which had been erected there when it was an university; but in a few years they returned to Oxford again, and laws were enacted, prohibiting the profession of the liberal arts and sciences at Stamford, to the prejudice of Oxford university.

It is situated in the High-street, opposite University College. The front, which is formed in the style of the Luxemburgh palace, is at once magnificent and elegant. In the middle of it is a superb cupola, the construction of which is by some thought too heavy for the rest. Under it is a statue of the late queen Caroline.

The first court is one hundred and forty feet in length, and one hundred and thirty in breadth. A beautiful cloister surrounds this court, except on the north side. Over the western cloister are the provost's lodgings, which are spacious and splendid. The north side is formed by the chapel and hall, and finely finished in the Doric order. In the centre, over a portico leading to the north court, stands a handsome cupola supported by eight Ionic columns.

The chapel is one hundred feet long, and thirty broad. It is ornamented in the Corinthian order, with a beautiful ceiling of fret-work. The windows are all of fine old painted glass, viz. 1518; that over the altar excepted, representing our Lord's nativity, which was executed by Mr. Price, A. D. 1717. The most remarkable are two on the north side, of the Last Judgment, and two on the south, of the Ascension. These, with the rest, were removed hither from the old chapel. There is an Ascension in the roof by Sir James Thornhill.

The hall is fitted up in the Doric order, and has an admirable proportion. It is sixty feet long, and thirty broad, with an arched roof, of a correspondent height. It is furnished with excellent portraits of the founder and benefactors. Over the screen is a handsome gallery, intended for music, and as a vestibule to the common room, to which it leads.

The north court is one hundred and thirty feet long, and ninety broad. On the west stands the library, which is of the Corinthian order. Under the east side of this edifice runs a cloister; its west side is adorned with statues of the founder, and benefactors, and other pieces of sculpture. The room within is highly finished. The book-cases, which are of Norway oak, are decorated with well-wrought carving, and in the ceiling are some admirable compartments of stucco.

The whole area, on which this beautiful college, which is one entire piece of well-executed modern architecture, stands, is an oblong square, three hundred feet in length, and two hundred and twenty in breadth; which being divided by the hall and chapel, is formed into the two courts just described.

The present edifice was begun by Sir Joseph Williamson, Knt. 1672, who was a most munificent contributor; and being continued by the liberality of several intermediate benefactors, was at length completed by the noble legacy of Mr. Mitchell of Richmond, who likewise founded eight fellowships and four scholarships. These fellows and scholars have handsome apartments appropriated to them in the New Buildings, besides an annual stipend of fifty pounds to each of the former, and thirty pounds *per annum* to each of the latter. This foundation was first filled up by election from other colleges of the university, on the twenty-sixth of October, 1764.

The custom of ushering in the boar's head, with a song, on Christmas-day, is, at present, peculiar to this college: but it was formerly practised all over the kingdom; and the Carol here sung on this occasion, is literally the same with that which was once universally used, except some few local alterations.

The college consists, at present of a provost, sixteen fellows, two chaplains, eight taberdars, so called from *Taberdum*, a short gown which they formerly wore, sixteen scholars, two clerks, and forty exhibitioners. To these we may add, the members of Mr. Mitchell's new foundation, just mentioned. The number of students of every sort is above one hundred.

NEW COLLEGE.

William of Wickham, bishop of Winchester, having erected and endowed a college at Winchester, for teaching a certain number of boys grammar learning, formed a design, about the year 1369, of building a college in Oxford, to which they might be removed at a proper time, and pass through a regular course of academical studies: he therefore obtained of king Richard II. in the third year of his reign, a licence, dated the thirtieth of June 1379, for carrying his design into execution. He laid himself the first stone of a magnificent structure, which being finished in 1386, he called New College; and on the fourteenth of April, in that year, the warden and fellows were admitted with great solemnity. The statutes, habits, customs, and privileges of this college, are different from those of any other college in the university.

It is situated eastward of the Schools, and is separated from Queen's College by a narrow lane on the south.

The first court is about one hundred and sixty-eight feet in length, and one hundred and twenty-nine in breadth. In the centre is a statue of Minerva, given by Sir Henry Parker of Honington, in Warwickshire. The north side, which consists of the chapel and hall, is a noble specimen of Gothic magnificence. The two upper stories of the east side form the library. On the west are the lodgings of the warden, which are commodious and ample, adorned with many valuable portraits. The third story of this court was added to the founder's original building, A. D. 1674.

We enter the chapel at the north-west angle. This chapel exceeds all in the university. The ante-chapel, which is supported by four pillars of fine proportion, runs at right angles to the choir, and is eighty feet long and thirty-six broad. The choir, which we enter by a Gothic screen of beautiful construction, is one hundred feet long, thirty-five broad, and sixty-five high. From hence the painting over the altar, done about sixty years ago by Mr. Henry Cook, is seen to the best advantage. It consists of a salutation piece, behind which the painter has artfully thrown the concave of a well ornamented dome, in which the chapel appears to terminate. Nor is the deception contrived with less art in the two panels on each side of the altar, which seem to discover some distant opening. The altar itself is approached by a noble flight of marble steps. It is inclosed by a well-wrought rail of iron-work, the gift of Mr. Terry, for-

merly fellow, and is covered with a rich pall of crimson velvet, given by Dr. Burton, the late head master of Winchester school. From this situation, the organ, with the stall-work underneath, has a striking effect. Nor are the stalls, with their ornaments, on either side, unworthy of the rest, being remarkably elegant in the style of the light Gothic. The windows on the south side are most beautifully painted by Mr. Price of London; each window representing eight figures of saints and martyrs, with their respective symbols and insignia, large as the life. It is intended by the society to finish all the remaining windows in the same superb style. The ante-chapel has lately received great ornament from a new western window, painted by Mr. Pecket of York.

Choir-service is performed here every day at eleven and five, and is probably no where performed with more solemnity, or heard to better advantage. The organ is a most admirable instrument, erected by the famous Dolham, and since improved with the addition of the clarion-stop and swelling organ, by Mr. John Byfield.

Near the chapel is a noble cloyster, which constitutes a quadrangle, one hundred and forty-six feet in length on two sides, and one hundred and five the other two, with a garden in the area. Contiguous to it, on the north, is a large and lofty tower, with ten bells.

The hall, to which we pass at the north-east side of the quadrangle, is of excellent proportion, being seventy-eight feet in length, thirty-five in breadth, and forty-three in height. Its wainscot, which was erected about the reign of Henry VIII. is curious, and much in character. At the east end are portraits of the munificent founder, William of Wickham; William of Wainfleet, founder of Magdalen College, who was schoolmaster of Wykeham's College at Winchester; and Henry Chicheley, the founder of All Souls College, fellow of New College, while the founder was yet living.

The two rooms of which the library before mentioned consists, are seventy feet long, and twenty-two broad. This library is furnished with a fine collection, and well known to the learned for its many valuable manuscripts.

In the chapel is shewn the crossier of the founder, one of the noblest curiosities, and almost the only one of its kind now remaining in this kingdom. It is nearly seven feet in height, is of silver gilt, embellished with variety of the richest Gothic workmanship, and charged with figures of angels, and the tutelar saints of the cathedral church of Winchester, executed with an elegance equal to that of a more modern age. It is finely preserved, and from a length of almost four hundred years, has lost but little of its original splendor and beauty.

From this quadrangle we pass into the garden-court. This beautiful area, by means of a succession of retiring wings, displays itself gradually as we approach the garden, from which it is separated by a sumptuous iron pallisade, one hundred and thirty feet in length. This court has a noble effect from the mount in the garden; and the prospect is still further improved by the appearance of the old Gothic spires and battlements, which overlook the new building from the founder's court. It began to be erected A. D. 1682, at the expence of the college, assisted by many liberal contributions.

The garden in general is judiciously disposed. Great part of it, as likewise part of the college, is surrounded by the city-wall; which, from this circumstance of serving as a fence or boundary to the college precincts, is here, and here only, preserved entire, with its battlements and bastions, to a considerable extent.

On the south side is a pleasant bowling-green, shaded to the west by a row of elms, and on the east by tall fycamores, the branches of which being interwoven and incorporated with each other, from end to end, are justly admired as a natural curiosity.

The principal benefactors are, John Buckingham, bishop of Lincoln, A. D. 1388. Thomas Beckington, A. D. 1440. Thomas Jane, A. D. 1494. Clement Harding, A. D. 1507. Wareham, archbishop of Canterbury; Shirebourne, bishop of Chichester; John Smith, William Flethmonger, with many others.

This college, dedicated to St. Mary Winton, has been called New College from its first foundation, being

at that time an object of public curiosity, and far superior, in point of extent and grandeur, to any college that had then appeared. It was the first effort to magnificence ever exhibited in Oxford; and probably Merton was, before this, the most splendid college in the university, though then by no means adorned with buildings as at present. The rest of the colleges then existing, viz. Baliol, University, Queen's, Exeter, and Oriel, were very small and inconsiderable structures.

The members of this college are, one warden, seventy fellows, ten chaplains, three clerks, sixteen choristers, and one sexton; together with many gentlemen commoners.

LINCOLN COLLEGE.

Richard Fleming, bishop of Lincoln, in 1427, being the sixth year of Henry VI. began a college here for one rector, seven fellows, and two chaplains, which he designed as a seminary of divines, who might confute the doctrines of Wickliff; but before this design was completed, he died, and Thomas Rotheram, bishop of Lincoln, in the year 1475, finished the building of the college, and encreased its revenues: he gave it a body of statutes, and called it Lincoln College.

It is situated between All Saints church and Exeter College, and consists of two quadrangles. The first, which we enter under a plain but decent tower, is formed, exclusive of chambers, by the lodgings of the rector, standing in the south-east angle, and erected by Thomas Beckington, bishop of Bath and Wells, A. D. 1465; the library and common room on the north, and refectory on the east.

The library, under which is the Common Room, is small, but neatly decorated, and contains many curious manuscripts, chiefly given by Thomas Gascoigne, A. D. 1432. It was finished, as it appears at present, by the liberality of Sir Nathaniel Lloyd, first a commoner of this, and afterwards fellow of All Souls College, A. D. 1738. This room was originally the chapel, and was converted into a library at the expence of Nathaniel lord Crew, when fellow, A. D. 1656.

The hall was erected by John Williams, bishop of Lincoln, A. 1631. It was handsomely wainscotted by bishop Crew, A. D. 1701, whose arms appear over the middle of the screen; and those of the rest of the contributors are interspersed about the mouldings. It is forty feet in length, twenty-five in breadth, and proportionable in height.

From this court, which forms a square of eighty feet, we enter through the south side, the second, which is about seventy feet square. On the south side of this quadrangle is the chapel, which particularly deserves our attention. It was built by bishop Williams above-mentioned, A. D. 1631. The screen is of cedar, elegantly carved. The windows are of painted glass, complete, and well preserved, done A. D. 1632. Those on the north represent twelve of the prophets, and those on the south the twelve apostles, large as life. The east window exhibits a view of the types relative to our Saviour, with their respective completions, viz. 1. From the left hand, the Nativity; and under it, the History of the Creation its antetype. 2. Our Lord's baptism; and under it, the passing of the Israelites through the Red Sea. 3. The Jewish Passover, and under it, the institution of the Lord's Supper. 4. The Brazen Serpent in the Wilderness; corresponding to—Christ on the cross. 5. Jonas delivered from the whale's belly, expressive of—Christ's Resurrection. 6. Elijah in the fiery chariot, with—Our Lord's Ascension.

The roof consists of compartments in cedar, embellished with the arms of the different founders and benefactors, and interchangeably enriched with cherubims, palm-branches, and festoons, diversified with painting and gilding. There is an admirable proportion and elegance of execution in the eight figures of cedar which are respectively placed at each end of the desks, and represent Moses, Aaron, the four Evangelists, St. Peter and St. Paul.

The benefactors to this college are, William Dagvyle, mayor of Oxford; William Smith, bishop of Lincoln,

and founder of Brazen-Nose College, who, it is said, intended to have bestowed all that he gave to his own college, on this of Lincoln; Edmund Audley, bishop of Salisbury; Jane Trappes, with many others. But their principal benefactor is Nathaniel lord Crew, bishop of Durham, who, about the year 1717, added to the headship an annual allocation of twenty pounds; to the twelve fellowships, ten pounds each; and to the seven scholarships and bible clerkship, five pounds each. He likewise improved the four college curacies; and moreover founded twelve exhibitioners, with salaries of twenty pounds *per annum* each.

The society consists at present of a rector, twelve fellows, twelve exhibitioners, and seven scholars, w^{ith} bible-clerk; besides independent members.

ALL SOULS COLLEGE.

In the year 1437, Henry Chichley, archbishop of Canterbury, began a college here, which he endowed for a warden and forty fellows, chiefly with the lands of alien priories, which were dissolved in the reign of Henry V. In 1438, the bishop procured a charter for incorporating this society: he called the college *Collegium Animarum omnium defunctorum de Oxon.* and hither he soon afterwards sent a body of statutes, directing the election of the fellows to be upon All Souls day annually.

All the buildings of this college, except the cloisters upon the east side of the quadrangle, were erected during the life of the founder.

It is situated in the High-street, westward of Queen's College. Over the gateway are the statues of the founder, Henry Chichely, and Henry VI.

The first, or old court, is a decent Gothic edifice one hundred and twenty-four feet in length, and seventy-two in breadth. The chapel on the north side is a stately pile. The ante-chapel, in which are some remarkable monuments, is seventy feet long, and thirty broad. We enter the inner chapel, which is of the same dimensions, by a grand flight of marble steps, through a screen constructed by Sir Christopher Wren. The spacious environ of the altar consists of the richest red-vein marble. Above is a fine assumption-piece of the founder, by Sir James Thornhill. On the right and left, at our approach to the altar, are two inimitable urns by the same hand, respectively representing, in their bas-reliefs, the institution of the two sacraments. Between the windows, on each side, are figures of saints in chiaro-obscuro, bigger than the life. The ceiling is disposed into compartments embellished with carving and gilding. The whole has an air of much splendor and dignity, and is viewed to the best advantage from the screen.

The hall, which forms one side of an area to the east, is an elegant modern room. It is furnished with portraits of the munificent founder, colonel Codrington, and Sir Nathaniel Lloyd. At the high-table is an historical piece by Sir James Thornhill, whose subject is the finding of the law. The figure of Josias, rending his robe, is animated and expressive. Over the chimney-piece, which is handsomely executed, in dove-coloured marble, is a bust of the founder; on one side is a bust of Linacre, formerly fellow, a famous physician in the reign of Henry VIII. and on the other, of John Leland, a celebrated antiquarian and polite scholar, about the same reign, supposed to have been a member of this house. The rest of the room is adorned with an admirable series of busts from the antique.

The adjoining buttery is worthy our observation; it is a well-proportioned room, of an oval form, having an arched roof of stone, ornamented with curious workmanship. It was built with the hall.

The second court is a magnificent Gothic quadrangle, one hundred and seventy-two feet in length, and one hundred and fifty-five in breadth. On the south are the chapel and hall; on the west a cloister, with a grand portico; on the north a library; and on the east two superb Gothic towers, in the centre of a series of fine apartments.

The library forms the whole north side of this court. It is two hundred feet in length, thirty in breadth, and forty in height, and finished in the most splendid and elegant

elegant manner. Its outside, in correspondence to the rest of the court, is Gothic. The room itself is furnished with two noble arrangements of book-cases, one above the other, supported by Doric and Ionic pilasters. The upper class is formed in a superb gallery, which surrounds three sides. About the middle of the room, on the north side, is a recess equal to the breadth of the whole room; and in its area is placed the statue of colonel Codrington, the founder of the library. The ceiling, and spaces between the windows, are ornamented with the richest stucco, by Mr. Roberts. Over the gallery, a series of Bronzes is interchangeably disposed, consisting of vases, and the busts of many eminent men, formerly fellows of this house.

Before we quit this court, the Common Room deserves our notice, which is a grand apartment, being a cube of twenty-six feet, and lighted by a large Venetian window. It is situated between the two towers above-mentioned.

The warden's lodgings, which front the High-street, are commodious and handsome, being formerly the dwelling-house of Dr. Clarke, formerly fellow, and given by him for the use of the wardens of this house successively.

The principal benefactors are, colonel Christopher Codrington, governor of the Leeward islands, formerly fellow, who, besides a valuable collection of books, granted by will six thousand pounds for building the library, and added four thousand pounds for purchasing books: Dr. George Clarke, the late duke of Wharton, Doddington Greville, lieutenant colonel Stewart, and Sir Nathaniel Lloyd. Of the combined munificence of all, or most of these, the second court, above described, is an illustrious monument.

This college consists of one warden, forty fellows, two chaplains, three clerks, and six choristers. No independent students are admitted.

MAGDALEN COLLEGE.

In 1458, William Patten, called also Wainfleet, bishop of Winchester, founded a college here, on the site where an hospital dedicated to St. John had formerly stood, and endowed it, among other lands, with those belonging to the hospital, for the maintenance of a president, and fifty graduate scholars, whom he directed to be augmented or reduced, as the revenues increased or diminished. He called the society by the name of Mary Magdalen College.

It is situated without the East Gate of the city, on the borders of the river Cherwell. A Doric portal, decorated with a statue of the founder, introduces us to the west front of the college, which is a striking specimen of the Gothic manner. The gate under the west window of the chapel demands a minute examination. It is adorned with five small, but elegant figures; that on the right represents the founder; the next is William of Wykeham, in whose college at Winchester the founder was schoolmaster; the third is St. Mary Magdalene, to whom the college is dedicated; the fourth is Henry III. who founded the hospital, since converted into this college; and the last St. John the Baptist, by whose name the said hospital was called.

On the left are the lodgings of the president. Nearly contiguous to these, is a stately gateway, the original entrance into the college, but since disused, formed in a tower, whose sides are adorned with statues of four of the persons above-mentioned. It has been observed, that the slender arches, separate and distinct from the other curve mouldings, in this and the chapel gateway, were formerly esteemed curious masonry; but it should be remembered, that curious masonry was more common three centuries ago than at present. It must however be allowed, that they relieve the work, and have an elegant effect.

From this area we pass into a cloister which surrounds a venerable old quadrangle. On the south are the chapel and hall. We enter the chapel on the right hand at entering the cloister. The ante-chapel is spacious, supported with two staff-moulded pillars, extremely light. In the west window are some fine remains of glass painted in *claro obscuro*. The subject is the resur-

rection. The design is after one invented and executed by Schwartz, for the wife of William duke of Bavaria, more than two hundred years since, which was afterwards engraved by Sadeler. The choir is solemn, and handsomely decorated. The windows, each of which contains six figures, almost as large as life, of primitive fathers, saints, martyrs, and apostles, are finely painted in the taste, and about the time of that just described. These windows formerly belonged to the ante-chapel, the two near the altar excepted, which were lately done, being all removed hither, A. D. 1741. In the confusion of the civil wars, the original choir windows were taken down and concealed. They did not, however, escape the rage of fanaticism and ignorance: they were unluckily discovered by a party of Cromwell's troopers, who spreading them along the cloisters, jumped through them in their jack-boots, with the utmost satisfaction, and entirely destroyed them. The altar-piece was performed by Isaac Fuller, about ninety years ago. It represents the Resurrection, and we suspect, never received the last finishing. It evidently wants grace and composition, and has too much of the Flemish colouring and expression. Many of the figures are, however, finely drawn. This painting is elegantly celebrated by Mr. Addison, formerly a student of this house, in a Latin poem, printed in the *Musæ Anglicanæ*. Under this piece is another admirable picture of our Lord bearing the cross, supposed to be the work of Guido. It was taken at Vigo; and being brought into England by the late duke of Ormond, came into the possession of William Freeman, Esq; of Hamels, in Hertfordshire, who gave it to the society. The altar is fitted up in the modern style, with a well executed wainscot, and columns of the Corinthian order, charged with other elegant embellishments. It is designed to wainscot the whole choir in the same manner. Choir-service is performed in this chapel at eleven and four every day; except, that on Sundays and holidays, the morning service is sung at eight, as it is in all the choirs of the university.

The hall is a stately Gothic room, well proportioned, and handsomely finished. It has four whole-length portraits, viz. of the founder, Dr. Butler, William Freeman, prince Rupert; and two half-lengths, viz. bishop Warner, and Dr. Hammond.

Great pains have been taken to unriddle the latent meaning of the hieroglyphics which surround the cloister. Some affirm, that they are nothing more than the licentious invention of the mason; while others as warmly contend, that they contain a complete system of academic discipline.

From this court, through a narrow passage on the north, we are led into a beautiful opening, one side of which is bounded by a noble and elegant edifice in the modern taste, consisting of three stories, three hundred feet in length. The front rests on an arcade, whose roof is finely stuccoed. It is intended to add two other sides; but as the present opening to the meadows and hills on the right, produces so charming an effect, we could almost wish the college might never execute their original design. Through the centre of this building we pass into the grove, or paddock, which is formed into many delightful walks and lawns, and stocked with about thirty or forty head of deer.

No college enjoys a more agreeable or extensive environ. Besides the grove just mentioned, there is a meadow within the college precincts, consisting of about thirteen acres, surrounded by a pleasant walk, called the Water-walk. The whole circuit of the walk is washed by branches of the Cherwell, and has many pretty rural prospects. This walk is shaded with hedges and lofty trees, which in one part grow wild, and in the other are cut and disposed regularly. A beautiful opening has lately been made on the west side into the College-grove, by demolishing the old embattled wall on the banks of the river.

The original endowment was most munificent, which yet has been augmented by many considerable benefactors. The most distinguished are, Henry VI. William Fitz Alan, earl of Arundel, Claymond, Morwent, &c. cardinal Wolsey, when burf of the college, A. D. 1492,

erected the tower, which is exceeded by none in strength, height, and beauty, and contains a musical peal of ten bells.

The college at this time consists of a president, forty fellows, thirty demies, a divinity lecturer, a schoolmaster, an usher, four chaplains, an organist, eight clerks, and sixteen choristers. The whole number of students about one hundred and twenty.

BRAZEN-NOSE COLLEGE.

In the year 1511, being the third of Henry VIII. William Smith, bishop of Lincoln, and chancellor of this university, and Richard Sutton of Prestbury, near Macclesfield, a market town of Cheshire, founded a college for a principal and sixty scholars, and called it Brazen-nose College, from a hall of the same name, distinguished by a large brass nose upon the gate, on the site of which hall this college was partly built.

Brazen Nose College constitutes the west side of the Radcliffe square. It has two courts. The first, which is the original one, consists of the lodgings of the principal, and chambers of the fellows and students, and the refectory, which is elegantly fitted up, and adorned with portraits. Over its portico are two antique busts, the one of Alfred, which built Little University Hall, or King's Hall, on the site of which the present college is partly founded; and the other of John Erigena, a Scotchman, who first read lectures in the said hall, A. D. 882. Over the door leading up to the Common Room, which was originally the chapel, is the following inscription, "A.º. xti 1509, et Reg. Hen. 8 priº."

"Nomine divino Lyncoln præsul, quoque Sutton,
"Hanc posuere petram Regis ad imperium.

i. e. "In the name of God, the bishop of Lincoln, and Sutton, laid this stone, at the command of the king." In the centre of this court is a statue of Cain and Abel.

We enter the second court through a passage on the left hand of the gate of the first. It is planned in a good taste, and was probably the work of Sir Christopher Wren. The cloister on the east side supports the library. On the south stands the chapel, which is at once neat and splendid. The roof, which, being a frame of wood, is an admirable imitation of Gothic stone-work, and the altar, with its decorations, particularly demand our attention. It was finished A. D. 1667, as was the whole court.

With regard to the very singular name of this college, it appears, that the founders erected their house on the site of two ancient hostels, or halls; Little University Hall, mentioned above, and Brazen Nose Hall. The latter of these acquired its name from some students removed to it from a seminary in the temporary university of Stamford, so denominated, on account of an iron ring fixed in a nose of brass, and serving as a knocker to the gate.

The present members of this house are, one principal, twenty fellows, thirty-two scholars, and four exhibitioners; together with about forty or fifty students besides.

CORPUS CHRISTI COLLEGE.

In 1513, Richard Fox, bishop of Winchester, founded a college here for a warden, certain monks and secular canons, designed as a seminary to the priory of St. Swithin in Winchester; but the founder, in 1516, converted this college to the use of secular students, like the other colleges of the university, and enlarging the buildings, endowed it for a president, twenty fellows, two chaplains, two clerks, two choristers, and three lecturers in philosophy and divinity, giving it the name of Corpus Christi College.

This college is situated near the back gate of Christchurch, on the south side of Oriel College. Through a beautiful Gothic gateway we enter the first court, in which there is a peculiar appearance of neatness. On the east stands the hall, which is handsomely waincotted, and well proportioned. The rafters in the ceiling are well wrought in the Gothic stile. In the midst of

this court is a curious column, exhibiting a cylindrical dial, the construction of which is esteemed a valuable piece of old Gnomonics. It was made by Robert Hegge, a fellow, about the latter end of Elizabeth. From hence we pass into the cloisters, which are in the modern taste. South of these is an elegant pile of building, of the Ionic order, which fronts Christ-church Meadow, and was erected by Dr. Turner, formerly president, A. D. 1706. There is likewise another neat structure, of the modern kind, near the hall, appropriated to gentlemen commoners, who must not exceed six in number.

The chapel is seventy feet in length, and twenty-five in breadth, with a screen and altar-piece of cedar.

The library, which is well furnished in general, is remarkable for a collection of pamphlets from the Reformation to the Revolution; an English bible, supposed to be of higher antiquity than that of Wickliffe; and a vellum roll, which exhibits the pedigree of the Royal Family, with the collateral branches, from Alfred to Edward I. richly decorated with their arms blazoned, and signed by the kings at arms. The most striking curiosity is an ancient manuscript history of the bible in French, illuminated with a series of beautiful paintings, illustrating the sacred story. It was given by general Oglethorpe, formerly a member of this house. Here is shewn also the crozier of the founder, which, although a fine specimen of antique workmanship, is by no means equal to that of Wykeham at New College.

The statutes ordain, that the fellows should be elected from the scholars, and the latter from the counties and dioceses following, viz. two from Surry, three from Hampshire, one from Durham, two from Bath and Wells, two from Exeter, two from Lincolnshire, two from Gloucestershire, one from Wiltshire, or, in defect of a candidate, the diocese of Sarum, one from Bedfordshire, two from Kent, one from Oxfordshire, and one from Lancashire.

Hugh Oldham, chaplain to Margaret countess of Richmond, and afterwards bishop of Exeter, is commemorated as the principal benefactor. The founder had intended his society as a seminary to the monks of St. Swithin's cathedral at Winchester; but Oldham persuaded him to change this design, and to make it a college of secular students on the academic plan; contributing at the same time six hundred merks for completing the building, besides certain estates for the augmentation of its revenue. William Frost, the founder's steward; John Claymond, the first president; and Robert Morwent, the second; with some others, have given lands, &c.

The present members are, one president, twenty fellows, two chaplains, twenty scholars, two clerks, two choristers, and six gentlemen commoners.

CHRIST CHURCH COLLEGE.

In 1525, the seventeenth of Henry VIII. Thomas Wolsey, cardinal of Sancta Cæcilia, and archbishop of York, obtained two bulls of pope Clement VII. for dissolving above forty monasteries, and converting their estates towards building and endowing two colleges, one at Ipswich, a borough town of Suffolk, the place of the cardinal's nativity, and another at Oxford. He also procured a royal charter, dated the thirteenth of July, 1525, empowering him to build and endow a college, by the name of Cardinal College, upon the site of a priory dedicated to Frideswide, one of the religious houses just dissolved, and to settle in this college a dean, secular canons, and other gownsmen, for the study of the liberal arts and sciences; and towards their maintenance, to purchase an estate of two thousand pounds *per annum*, and convey it to the society.

The cardinal, two days after the date of the charter, laid the foundation of this college with great solemnity; but being impeached of high treason in 1529, before the buildings were finished, all the estates and possessions of this society were forfeited to the king, which put a stop to the buildings for three years, at the end of which time, the king issued out letters patent, ordering the building to be carried on, the same revenues to be settled on the society, and the foundation to be called King Henry

Henry VIII.'s college; but being afterwards dissatisfied with this appointment, he suppressed the institution in 1545, and in the year following erected the church of this college into a cathedral, by the name of the Cathedral Church of Christ in Oxford, founded by king Henry VIII. and settled in it a bishop, dean, and eight canons, eight clerks, eight choristers, a music-master, an organist, and forty students, who were to be chosen yearly from Westminster-school, and the number of whom was augmented by queen Elizabeth.

The stately front of the college of Christ-church is extended to the length of three hundred and eighty-two feet, and terminated at either end by two corresponding turrets. In the centre is the grand entrance, whose Gothic proportions and ornaments are remarkably magnificent. Over it is a beautiful tower, planned by Sir Christopher Wren, and erected by bishop Fell. It contains the great bell called Tom, on the sound of which, every night at nine, the students of the whole university are enjoined by statute to repair to their respective societies. The judicious spectator cannot but observe with regret, that this front, perhaps the noblest in the kingdom of the Gothic stile, loses much of its effect, on account of the declivity of the ground on which it stands, and the narrowness of the approach. It seems however probable, that a terrace walk was intended, by way of raising the ground to a level, the whole length of the college; for the rough foundation stones of the hospital on the opposite side, left unfinished by Wolfey, still remain bare, and the smooth stones are terminated by an horizontal right line, to which height the ground would have been elevated.

The grand quadrangle is two hundred and sixty-four by two hundred and sixty-one feet in the clear: the east, north, and west sides, with part of the south, consist of the lodgings of the dean, the canons, and the students, &c. The greatest part of the south side is formed by the hall, which is considerably elevated above the rest of the buildings, and, taken as a detached structure, is a noble specimen of ancient magnificence.—The south, east, and part of the west side, were erected by cardinal Wolfey, as was the kitchen, to the south of the hall, which is every way proportionable to the rest of the college. The whole is strongly expressive of the greatness of the cardinal's conceptions, who yet intended much more than is executed.

The north, and what remained of the west side of this court, was finished A. D. 1665. By the marks on the wall, some suppose this area was surrounded by a cloister. It is evident that a cloister was designed, but it never, as we can find, was executed. We are apt to suspect, that when the college fell into the king's hands, the teeth-stones only of the projected cloister, with some other of the pilasters, had been begun; which probably the new founder removed, and smoothed to the wall. For uniformity's sake, they took care to make the same marks in the new part erected in 1665, as we have just observed.

Round the whole area is a spacious terrace-walk, made in the same year; and in the centre a basin and fountain, with a statue of Mercury. On the inside, over the grand entrance, is a statue of queen Anne. Over the arch, in the north-east angle, another of bishop Fell; and opposite to that at the south-east, a statue of cardinal Wolfey, which is justly admired; it was done by Francis Bird.

Under this statue of the cardinal we enter the hall, by a spacious and stately stair-case of stone, covered by a beautiful roof, built A. D. 1630, which, though very broad, is supported by a small single pillar of fine proportion. This hall is probably the largest, and certainly the most superb, of any in the kingdom. It contains eight windows on each side, is one hundred and twenty feet in length, forty in breadth, and its ceiling eighty feet high.

The roof is a noble frame of timber-work, beautified with near three hundred coats of arms, properly blazoned, and enriched with other decorations of painting, carving, and gilding, in the Gothic taste.

The delicacy of the Gothic fret-work in the roof

over the window on the left side of the high table, particularly demands our observation.

This room has been refitted at a large expence, and is adorned with the following portraits of eminent persons, educated at, or related to, the college.

Over the High Table.

Compton, Bp. of London. Corbet, Bp. of Norwich.
HENRY VIII. in his regal robes.

King, Ep. of London.	Duppa, Bp. of Winton.	Cardinal Wolfey.	Fell, Bp. of Oxon.	Morley, Bp. of Winton.	Boulter, Abp. of Armagh.
----------------------	-----------------------	------------------	--------------------	------------------------	--------------------------

On the South Side, beginning at the upper End. | *On the North Side, beginning at the upper End.*

Wake, Abp of Canterbury.	Sir J. Dolben, Abp of York.
Potter, Abp of Canterbury.	Sir J. Trelawney, Bp of Winton.
Smalridge, Bp of Bristol.	Wood, Bp of Litchf. & Cov.
Trevor, Bp of Durham.	Gilbert, Abp of York.
Lord Mansfield.	Drummond, Abp of York.
Hooper, Bp of Bath and Wells.	Blackbourn, Abp of York.
Benfon, Bp of Gloucester.	Cox, Abp of Cashel.
Efte, Bp of Waterford.	Dr. Stratford, canon of Ch. Church.
Robinson, Abp of Armagh.	— Friend, M. D.
Morton, Bp of Meath.	Dr. Aldrich, dean of Ch. Ch.
Godwin, sen, Bp of Bath and Wells.	Dr. Friend, master of Westminster School.
Godwin, jun. Bp of Landaff.	Dr. Nicol, canon of Ch. Ch.
Matthews, Abp. of York.	Richard Frewen, M. D.
Fuller, Bp of Lincoln.	Sir J. Dolben, Preb. of Durh.
Gastrel, Bp of Chester.	Dr. Fell, dean of Ch. Ch.
Hickman, Bp of Londonderry.	Dr. Busbey, master of Westminster School.
Sanderson, Bp of Lincoln.	— Pret, Archd. of Rochest.
Griffith, Bp of St. Asaph.	

Over these.

Smith, Bp of Gloucester.	Westfaling, Bp of Hereford.
James, Bp of Durham.	Peers, Abp of York.
Ravis, Bp of London.	Heton, Bp of Ely.
Bancroft, Bp of Oxford.	Howson, Bp of Durham.

Over the Screen, and on each Side, in the following Order.

Lord Arlington.	
Sir Dudley Carleton.	Ellis, Bp. of Kildare.
A Bust of GEORGE I. in Marble.	
King, Bp. of Lond.	
Mr. Alfop.	Locke.
Sir Gilb. Dolben.	Peter Martyr.

The church of this college, which is the cathedral church of the bishop of Oxford, is situated to the east of the grand quadrangle. It is an ancient venerable structure, and was originally the church of St. Frideswide's monastery, on or near the site of which the college is erected. It was finished before the year 1200. The roof of the choir is a beautiful piece of stone-work, put up by cardinal Wolfey, who likewise rebuilt or refitted the spire as it now stands. The original one was much loftier. The east window is elegantly painted by Mr. Price, senior, from a design of Sir James Thornhill, representing the Epiphany. The ile, on the north of the choir, was the dormitory of St. Frideswide's, in which an ancient monument is shewn, said to be the tomb of that faint. She died A. D. 739. At the west end of the same ile is a window painted in a masterly manner by John Oliver, in the eightieth year of his age, and given by him to the college, A. D. 1700. The subject is St. Peter delivered out of prison by the angel. There is great expression in the attitudes of the sleeping soldiers. Many remains of painted glass appear in different parts of the church, remarkable for strength and brilliancy of colour; the windows having been for the most part destroyed, A. D. 1651. But some of these fragments have been lately collected, and with great taste disposed into complete windows, or compartments. The tower contains ten musical bells, brought hither from Osney Abbey, as was the great bell, called Tom, above-mentioned. The neighbouring chapter-house is worthy the inspection of the curious. In this cathedral, choir-service is performed at ten and four every day. This church was designed by the cardinal for private masses and theological exercises only. The foundation stones

stones of the church or chapel intended for the public service, may still be traced in the gardens on the north side of the great quadrangle, which, as Wood tells us, would have been an august and immense work.

Peckwater-court, to the north-east of the great quadrangle, is perhaps the most elegant edifice in the university. It consists of three sides, each of which has fifteen windows in front. The middle story is Ionic. Its architect was dean Aldrich; its principal founder Dr. Radcliffe, a canon of this church, assisted by other contributions. Opposite to it is a sumptuous library, one hundred and forty-one feet in length, supported by pillars of the Corinthian order. It was first intended to have placed this structure on piazzas, which would have given it a lighter air. The south side of this library is furnished with elegant book-cases extended to the whole length of the room, with a gallery above; and between the windows on the opposite side is likewise placed a series of book-cases, respectively assigned to the several sciences; over each of which there are beautiful festoons in stucco charged with symbolical imagery, severally representing the particular branch of literature contained beneath. The ceiling is also richly ornamented with masterly compartments of stucco. The wainscoting, &c. which is of the finest Norway oak, together with the banisters of the gallery, are all highly finished with carving. Upon a pedestal, in a recess on the north side, is placed an admirable whole length statue of Locke, formerly a student of this house, by Roubillac. Towards the south of the library are several apartments, furnished also with book-cases, and cabinets for manuscripts.

East of this court stands Canterbury Court, originally Canterbury College. It was a distinct college, founded in 1363 by Illip, archbishop of Canterbury; but afterwards dissolved, and taken into this foundation.

There is, besides, the Chaplain's Court, to the south-east of Wolfey's quadrangle; on the north side of which is a light Gothic edifice, formerly belonging to St. Frideswide's monastery, and named St. Lucia's Chapel. It was lately used for a library, but it is at present adorned with the following curious collection of pictures lately belonging to general Guise.

A piece of architecture, rather large, adorned with many small figures very graceful. The architecture by Viviani; the figures, in his best manner, by Sebastiano Ricci.

Two heads in one picture, a little smaller than life. They exhibit two caricaturas, by Spagnoletto.

A portrait of some Spanish nobleman half length, after the life, nobly painted and well preserved, by Moriglio.

A head with part of the shoulders: it seems to be the portrait of some great man, by Titiano, in his first manner.

A picture with many figures, two feet high, representing Solomon's judgment. The invention, disposition, and colouring, are equally wonderful, by Pasqualini Romano, disciple of Andrea Sacchi.

A representation of our Saviour on his way to Calvary. The figures almost as big as the life, by Andrea Mantegna. Mantegna was Correggio's master, and this picture was in the collection of Charles I.

The rape of the Sabines. A picture of great merit, both for invention and colouring, the author unknown.

A figure as big as the life, of particular beauty, exhibiting St. Jerom fervently praying, by Domenichino.

A head with part of the shoulders, as big as the life. It is the portrait, painted by himself, of Francesco Mola.

A small sketch representing a sacrifice, with the temple of Diana. The figures are many, and wonderfully well disposed, by Pietro da Cortona.

A small sketch in light and shadow, with many figures, representing a faint ready to suffer martyrdom, drawn with great liveliness and taste, by Ant. Vandyke.

A small octagonal picture on a black stone, representing our Saviour carried to the sepulchre, by Annibal Caracci.

A picture containing several figures about three feet high, exhibiting St. Laurence's martyrdom, by Tintoretto.

A landscape with figures one foot high, representing the martyrdom of St. Peter Martyr. The figures by Agostino Caracci. The landscape by Gobbo de Caracci.

A sketch, representing a victorious prince carried in triumph. The figures are many, a foot and a half high, and many of them allegorical, by Giordano d'Anveria.

A large piece of architecture, with figures. In his first manner, by Nicol. Pouffin.

A picture, containing some half lengths a little bigger than the life, exhibiting Faith that gives her sword to a general, by Pietro della Vecchia.

The portrait of a general, half length, a little bigger than the life. It is believed to be a copy from Titian, by Luca Giordano.

Figure very artfully fore-shortened, representing our Saviour dead, as big as the life, by Lodovico Caracci.

A picture, exhibiting a battle, full of figures, about one foot high: one of the noblest performances of Bourgoynone.

Apollo and Marsyas. The figures about three feet high, by Sebastiano Ricci.

A large picture, containing some half lengths as big as the life, and representing the taking our Saviour in the garden, by Giacomo da Bassano.

A piece, containing many half length figures as big as the life, representing the prodigal son received by his father. A famous performance of Guercino da Cento.

Sophonisba dying with grief in the arms of her damsel, on receiving doleful news. The figures are half lengths as big as the life. A celebrated piece, by Domenichino.

Our Saviour known by the two disciples in the breaking of the bread; the figures bigger than the life, by Lodovico Caracci.

The flight into Egypt; the figures as big as the life. A noble work, by Guido Reni.

The heads of St. Andrew and St. Paul, bigger than the life; a valuable performance, by Andrea Sacchi.

St. Elizabeth, with St. John, when a babe, musing on a cross made of reeds; the figures smaller than the life. A renowned piece, by Leonardo da Vinci.

Judith holding Holofernes's head; a half length, very beautiful, by Francesco Salviati.

Our Saviour's nativity; the figures a little more than one foot high, finished with extreme diligence. A rare work, by Baldassare Peruzzi.

Our Lady contemplating her babe. The figures about two feet six inches. Wonderfully well done after Correggio's manner, by Francesco Mazzuoli, commonly called Parmigianino.

A half length, as big as the life, representing a naked woman, by Titiano.—It is thought that this is the portrait of the woman that was Titian's model, when he drew the famous Venus now existing in the room called La Tribuna, in the Medicean Gallery at Florence.

Our Saviour taken down from the cross; the figures a little more than one foot high, by Daniele da Volterra. This appears to be the sketch from which Daniel made the large famous picture, that is now in one of the chapels of the church called La Trinita de Monit, at Rome.

An oval picture, representing Medusa's head, bigger than the life, painted with astonishing expression, by Rubens.

A Holy Family; the figures one foot high, completely finished, by Annibal Caracci.

Our Saviour crowned with thorns; the figures a foot and a half high. One of the best works in his first manner, by Correggio.

Our Lady, with the two babes, Jesus and John, laying hold of a lamb, and two angels devoutly looking on them, by Francesco Mazzuoli, called Parmigianino. It was formerly in Charles I.'s collection.

Socrates and Alcibiades; half lengths of about a foot and a half, by Giorgione.

A small picture, representing our Lady's assumption, and the apostles, by Francesco Naldini. This was the sketch of a celebrated picture now in Florence.

Our Saviour's circumcision; an original sketch, by Polidoro da Caravaggio.

A picture in light and shadow, representing Diana and nymphs in the bath, changing Acteon into a stag; an original beautiful sketch. The figures are a foot high, by Nicolo dell' Abate.

A small sketch for a ceiling in light and shadow, by Correggio.

Our Saviour's supper, a small and most beautiful performance, by Innocenzo da Imola. He was one of Raphael's best disciples.

A Venetian history, by Paulo Veronese. This is an original sketch of one of the large pictures painted by Paolo in the Sala del Consiglio, at Venice.

A boy's head, as big as the life, by Annibal Caracci.

Diana's head, as big as the life, by Camillo Procaccini.

St. Catharine, a foot and a half high; a celebrated and well-preserved performance, by Benvenuto da Garofolo.

A landscape, exhibiting the hunting of the hare; a beautiful work, by Gobbo de Caracci.

Adam and Eve driven out of Paradise by the angel. The figures one foot high: a famous and well-preserved work, by the Cavaliere Guiseppe d' Arpino.

The head of a woman smiling, smaller than life, by Leonardo da Vinci.

A child's head, smaller than the life, by Fra. Bartolomeo di San Marco.

The pale of an altar, with figures bigger than the life, representing St. Lucy, St. John the Evangelist, St. Homphrey, and St. Francis: a famous performance, by Correggio, except St. Humphrey's figure, which, having been left unfinished by Correggio, was afterwards finished by Spagnoletto.

The family of the Caraccis represented in a butcher's shop, and those celebrated painters in butchers dresses. Annibal is weighing some meat to a Swiss of the Cardinal of Bologna's guard. Agostino is shaking a nail, and trying if it holds fast, that he may hang on it a leg of mutton, which he holds in his left hand. The Gobbo is lifting up a calf to hang it on a beam, and Lodovico stoops down killing a sheep. The mother of them is represented as a servant maid that comes to buy some meat. The likenesses are traditionally said to be wonderful; and the whole of this no less odd than beautiful picture was the most celebrated performance of Annibal Caracci.

Three half figures as big as the life, representing three ladies diverting themselves with music, and a gentleman listening to them. In all probability they were portraits, by Titiano.

A sketch of one of the most capital pictures in Venice, and preserved there in a church. It represents our blessed Lady, with St. Peter and St. Francis, and a Venetian general of the Capello's family come back victorious from a battle against the Turks, who offers the standard and the trophies of his victory to the altar of our Lady. The whole Capello family is exhibited in this picture: a celebrated work, by Titiano.

A landscape with figures. It represents part of the country near Bologna, by Domenichino.

A woman representing Simplicity, with a dove in her hand; a half length, as big as the life, by Francesco Furino.

The good Samaritan; the figures are two feet high; a valuable picture, by Sisto Badalocchi.

Our Lady with her babe, about two feet high, painted much after Correggio's manner, by Sebastian Ricci.

The head of a youth, a little smaller than life, by Raphael.

Two small pictures, exhibiting two different martyrdoms of two saints, by Giacomo del Po.

A small sketch, by Ciro Ferri.

A picture, exhibiting our Saviour's nativity. The devotion and maternal affection of our blessed Lady looking on her babe, is prodigiously well expressed. St. Joseph stands admiring the compunction of two shepherds contrasted by another that takes care of the ass. Of two other shepherds, placed at some distance, one holds a light in his hand, and shews the other the manger,

expressing a pious wonder. Further off, there is a most beautiful angel in the clouds, proclaiming the birth of our Saviour to the shepherds. No picture ever surpassed this most elaborate performance of Titiano. It was one of king Charles I.'s collection; and there are two prints of it, an ancient one in wood, the other in copper-plate.

Another nativity, painted likewise with his usual delicacy and noble expression, by the same Titiano.

Our Lady with her babe in her arms; near as big as life, standing on the clouds, supported and attended by cherubs and angels. Under it there is a fight of the town of Bologna, and adjacent villages, all painted in his best manner, by Annibal Caracci.

Susanna tempted by the two old men, boldly and vigorously painted as big as the life, by Agostino Caracci.

The slaughter of the Innocents, containing nineteen figures as big as the life. A master-piece, both for composition and colouring, by Valerio Castelli.

Two children bigger than the life, representing Holy Love the conqueror of Prophan Love; one of the best performances in his first manner, by Guido Rheni.

A lively figure of an Italian buffoon drinking merrily, an half figure, as big as the life, by Annibal Caracci.

The portrait of some nobleman, a little more than a half length, by Francesco Forbido, commonly called Il Moro Veronese. This painter was much admired by Titian himself.

A nativity of our Saviour; the figures about one foot high. The effect of the light that shines out of the babe, and irradiates the whole picture, is astonishing. This is a celebrated piece, by Cavalier Cavedone.

A head as big as the life, representing our Saviour, painted in a bold manner, by Agostino Caracci.

Apollo in the attitude of slaying Marfyas. The figures about two feet high, by Andrea Sacchi.

Two small pictures, the one representing a mountebank drawing a tooth to a clown, surrounded by many spectators; the other exhibiting many people playing at balls upon the ground. By Michael Angelo delle Battaglie.

A small picture, containing our Lady and her babe, St. Joseph, and St. Catharine, half figures, finely painted, by Bartolomeo Schidone.

A small picture, representing an angel that contemplates, with a most afflicted look, one of the nails with which our Saviour was crucified, holding it up in his hand; by Correggio.

A most beautiful sketch, representing our Saviour laid in the sepulchre, with the Virgin, who has swooned, and is supported by the three Marys, by Giacomo da Bassano.

Four small pictures, containing some figures two feet high, most masterly painted, by Francesco Mazzuoli, called Il Parmigianino.

A small picture with many figures, representing our Saviour shewn to the people by Pilate: a noble performance, by Frederigo Barocci.

A small picture, representing our Saviour appearing to Mary Magdalen in the gardener's form, by Raphael's master, Pietro Perugino.

The infant Jesus and St. John embracing; an excellent performance, and well preserved, by Raphael.

Three heads in water-colours, bigger than the life, by Raphael.

A head of Joseph of Arimathea, as big as the life, by Frederigo Barocci.

A half length, a little smaller than the life, representing St. Catharine: a rare ancient picture, by Vettori Carpaccio.

Our Lady with her babe and St. John; the figures two feet high: an incomparable performance of Andrea del Sarto.

A small picture representing a father with his two children praying, by Holbein.

A nativity of our Saviour, containing eighteen figures two feet high. The posture of our Lady, who offers her breast to her babe, and that of the babe itself, are most graceful; St. John with them completes one of the best groups that the art of painting ever produced; and equally graceful is another group of three angels playing

upon musical instruments. Two other angels descending from heaven in an attitude of adoration. Many more beautiful attitudes of devotion are those of the shepherds, that fill up the left side of this astonishing performance of the immortal Raphael.

Our Lady with her babe, St. Catharine and St. Francis. The proportion of the figures two feet. An excellent and well-preserved performance of Paolo Veronese.

The view of a noble temple, our Saviour coming out of it, meets with Magdalen, who is by him converted in the presence of some other women. An excellent and well-preserved performance, done in his first manner, by Andrea del Sarto.

Two half lengths, as big as the life, of two women, one the mistress, the other her maid. The mistress was probably a portrait. She holds the looking-glass with one hand, and with the other adjusts her head, listening to the maid that speaks to her. This is one of the best works of Domenichino.

Our Lady with her babe, the Magdalen, St. John, and St. Jerom. The figures are about three feet high, painted with the greatest gracefulness, by Parmigianino.

A Cupid drawn by two doves in a golden car, and two other Cupids playing about him encircled by a flower garland: a picture extremely well preserved, as well as masterly done, by Domenichino.

A copy of the famous nativity, known under the name of Correggio's Night; the figures two feet high, by Carlo Cignani.

Diana in the bath converting Acteon into a stag, with her nymphs about her: an elegant composition nobly coloured, the figures a foot and a half, by Tintoretto.

The communion of the apostles, the figures a little above two feet. There is a kindled lamp in this picture, which has a striking effect, and the whole is painted with great vigour, by Tintoretto.

St. John preaching in the desert, beautified with many well-disposed figures, by Gobbo de Caracci.

The fable of Erictonius delivered to the nymphs to be educated. Their fear and wonder in spying the boy's serpentine feet, and their different attitudes, are most beautifully expressed. Each figure is about half the bigness of nature, and painted with great spirit, by Salvator Rosa.

A landscape, exhibiting Moses delivering from the snares of the shepherds, the daughters of Reuel, the priest of Midian, that came to give drink to their cattle, by Domenichino.

Another small landscape, exhibiting some fishermen, and women washing linen, by the same Domenichino.

A youth little less than life, that plays upon the guitar, with a boy behind that listens with pleasure to him. By the celebrated Spanish disciple of Titian, Fernandos.

A half length, representing our Lord tempted in the desert, by Titian.

Two most beautiful cherubs heads as big as the life, by Domenichino.

A St. John's head with a lamb, as big as the life, in his best manner, by Guercino da Cento.

Marfyas and Apollo, with Midas that sits as their judge. The figures about a foot high: a fine performance, both for invention and colouring, by Andrea Schiavone.

A copy of the famous Correggio's Cupid, as big as the life, by Annibal Carracci.

An Ecce Homo, as big as the life, painted with great force of expression, by Ludovico Caracci.

Our Lord laid in the sepulchre; the figures a little more than a foot; another noble work of Ludovico Caracci.

St. Francis in a vision supported by angels. The figures about two feet high, admirably well painted, by Annibal Caracci.

A little landscape, adorned with some pretty little figures, and it looks as if painted after nature, by Gobbo de Caracci.

A Venus and Cupid as big as the life: an astonishing performance, by Titiano.

A copy of the celebrated pictures of Raphael in the Roman Vatican. This represents an achievement of the emperor Constantine. This copy appears to be the work of some great painter of the Florentine School, being done in the most masterly manner.

A choir of angels playing on several musical instruments, their proportion about a foot and a half. God, the Father, supported by three cherubs, by Guido Reni. This is thought to be the original sketch of a picture done in fresco by Guido, in St. Gregory's church at Rome.

The martyrdom of St. Erasmus, the figures about two feet high. This is the original sketch of the famous picture preserved in St. Peter's at Rome, by Nicolo Pouffin.

Two pictures adorned with many beautiful figures, whose proportion is about two feet. One represents the age of iron, the other of copper; and they are the original models of the two pictures in fresco, that are in the palace of Pitti at Florence, by Pietro da Cortona.

The original sketch of one of the ceilings painted in the Barberini's palace at Rome, by Pietro da Cortona. It represents many allegorical figures.

A half-length portrait as big as nature. The figure has a letter in one hand, by Lodovico Caracci.

The portrait of Maria Robusti; a half length as big as nature, by Paris Bourdon.

The picture of a woman as big as life, half length, by Giorgione da Castel Franco.

A head, with part of the shoulders, representing a Greek merchant, as big as the life, by Michael Angelo da Caravaggio.

Our Lady, with her babe, and St. John; the figures near as big as the life. An excellent performance, by Titiano.

A half length with the hands, representing Diogenes the Cynic; masterly done, by Spagnoletto.

A half-length portrait of himself, by Tintoretto.

A portrait, down to the knee, of the celebrated Naugerius, as big as the life, by Tintoretto.

The nativity of our Saviour, enriched with many beautiful figures about one foot high, by Francesco Zuccarelli.

A cartoon in water-colours, representing the Holy Family. The figures near as big as the life, by Andrea del Sarto.

An emperor on horseback; the horse white, the proportion about two feet; a bold and noble work of Giulio Romano.—It was once in king Charles I.'s collection.

A finished sketch of king Charles I.'s white horse; its proportion about two feet, by Vandyke.

The slaughter of the Innocents, and Herod on a throne commanding it, by Bourgoignone.

Ariadne abandoned by Theseus; a naked figure as big as the life, by Francesco Furino.

Nor should we omit an elegant range of building on the south, commonly called Fell's, which fronts a noble walk belonging to the College, called the White Walk, upwards of two furlongs in length, and fifty feet wide, shaded on each side with lofty elms, and commanding a delightful prospect of the adjacent meadows, the river, and the neighbouring villages.

The benefactors here have been numerous. The principal are, dean Fell, lady Holford, and the late Dr. Lee, who by his last will consigned a legacy of twenty thousand pounds, and upwards, for the support of several new and useful institutions in the College. One of these is an anatomy-school, which has been lately finished in an elegant and commodious taste, with an ample stipend for a lecturer. It is situated on the south side of the hall.

This college, or church, consists of one dean, eight canons, eight chaplains, eight singing men, one organist, eight choristers, one hundred and one students, besides many independent members. The whole number about one hundred and eighty.

TRINITY COLLEGE.

Among the religious houses dissolved by Henry VIII. there was a college here for the education of the monks of the cathedral church of Durham, which was therefore called Durham College. This house being granted by king Edward VI. in 1552, the seventh year of his reign, to his physician George Owen, was, in 1554, purchased by Sir Thomas Pope, knight, who, in 1555, repaired the building, and endowed it for a president, twelve fellows, and eight scholars, calling it Trinity College.

It stands opposite to the Turl, and has a spacious avenue, fenced from the street by an handsome iron pallisade, with folding gates, adorned on the outside with the arms of the donor, the earl of Guildford, and on the inside with those of the founder. This avenue leads us to the front of the college, which consists of the chapel, and the gateway, with its tower. Over the gate, in stone, are the arms of the founder, surrounded with a wreath of laurel, and supported by the Genii of Fame. In the first court are the chapel, hall, library, and lodgings of the president.

The chapel has a peculiar elegance, which results from an assemblage of the most finished, and yet the most simple ornaments. The carvings about the screen, which is of cedar, are very masterly. The altar-piece, of the same wood, is, besides other embellishments, charged with exquisite festoons by Guibbons. Under an alcove near the altar, is a fine Gothic tomb, on which are the effigies of the liberal founder and his lady, in alabaster. The ceiling is covered with a bold and beautiful stucco.

In the midst of it is an Ascension, which, on the whole, is executed in a good taste, but perhaps has too much of the French manner. It was painted by Peter Berchett, a Frenchman.

The hall is spacious and well-proportioned, in the Gothic stile, and adorned with portraits of the founder and his lady; and of three presidents, Kettel, Bathurst, and Sykes.

In the library is shewn a valuable manuscript of Euclid; being a translation from the Arabic into Latin, before the discovery of the original Greek, by Adelardus Bathoniensis, in 1130. It is extremely fair, and contains all the books. It was given by the founder, together with several other manuscripts; who likewise furnished this library with many costly printed volumes, chiefly in folio, at that time esteemed no mean collection.

The second court is an elegant pile, planned by Sir Christopher Wren, and said, by Wood, to be one of the first pieces of modern architecture that appeared in the university. It consists of three sides, the north and west of which are to be raised and finished in the manner of that on the south. The opening to the gardens on the east, has a singular and most agreeable effect.

The gardens are extensive, and laid out into two divisions. The first, or larger division, is chiefly thrown into open grass-plots. The north wall is covered with a beautiful yew-hedge. The centre walk is terminated by a well-wrought iron gate, with the founder's arms at the top, supported by two superb piers. The southern division is a pleasing solitude, consisting of shady walks, with a wilderness of flowering shrubs, disposed into serpentine paths, and much frequented.

The principal, and almost only benefactor, is Dr. Ralph Bathurst, formerly president, who expended nineteen hundred pounds in rebuilding the chapel, the ancient one above-mentioned having been miserably decayed in the civil wars.

This college consists of one president, twelve fellows, and twelve scholars, instituted by the founder. These, with the independent members, amount to near seventy.

ST. JOHN BAPTIST'S COLLEGE.

In 1555, being the second of Philip and Mary, Sir Thomas White, alderman of London, purchased a building belonging to this university, called St. Bernard's College, formerly in possession of the monks of

St. Bernard; and in 1557, endowed it, by the name of St. John Baptist's College, for a president, fifty fellows and scholars, three chaplains, three lay clerks, and six choristers; but the chaplains, lay-clerks, and choristers, were about twenty years afterwards suppressed by the president and fellows.

This structure stands in a retired situation, on the north of Baliol and Trinity Colleges. Before its front is a handsome terrace, shaded with a row of lofty elms. It chiefly consists of two courts. In the first are the chapel, and hall, on the north, and the president's lodgings on the east. The chapel is decently furnished. The screen and altar are finished in the Corinthian order. Over the communion-table is a beautiful piece of tapestry, representing our Lord breaking bread with the two disciples at Emmaus, from a famous original of Titian. The circumstance of the dog snarling at the cat, under the table, is remarkable. The organ, which stands in an alcove on the north side, has a splendid appearance, and was erected by Sir William Paddy, Knt. A. D. 1618. Choir-service is here performed twice every day, at eleven and five.

On the north wall of this chapel, eastward of the organ, is a singular curiosity. A marble urn, containing the heart of Dr. Rawlinson, inclosed in a silver vessel, which was placed here according to the directions in his last will.

The hall is fitted up in the modern taste, with great elegance. The screen is of Portland stone, in the Ionic order; and the wainscot in the same order, is remarkably beautiful. The roof and floor are correspondent to the rest. The chimney-piece is magnificent, of variegated marble, over which is a picture of St. John the Baptist, by Titian. It is likewise adorned with several other excellent pieces: at the upper end is a whole-length portrait of the founder, with archbishop Laud on the right, and archbishop Juxon on the left. On the north and south sides are those of bishop Mew, bishop Buckridge, Sir William Paddy, Knt. and of other eminent men, who have either illustrated this society by their learning, or enriched it by their beneficence.

The common room, on the north side of the hall, should not be neglected. Its ceiling is a good piece of stucco, by Mr. Roberts; and the whole room is handsomely adorned in general.

The second court, which we enter through a passage on the east side of the first, is the design of Inigo Jones, and built in 1635. The east and west sides exhibit, each, a beautiful Doric colonade, whose columns consist of a remarkable species of stone, said to be dug at Fifield, in Berks. In the centre of each colonade are formed two porticos, charged with a profusion of embellishments. Over these, on each side, are two good statues in brass; that on the east, of Charles I. and that on the west, of his queen. They were cast by Francis Fanelli, a Florentine. Their respective niches are ornamented with the Ionic and Corinthian orders; and the whole has an elegant and agreeable appearance. But perhaps it may be thought, that this building is not in the purest taste of its celebrated architect.

The upper stories of the south and east sides form the library. The first division consists of printed books; the second of manuscripts, chiefly given by archbishop Laud. This, as it is furnished with cases of iron lattice-work, which are disposed in a parallel direction with the sides, forms an ample and airy gallery. In this room, the archbishop above-mentioned entertained Charles I. and his court, with a magnificent feast. In the archives are many curiosities; particularly a drawing of king Charles I. which contains the book of Psalms written in the lines of the face and hair of the head. Also a picture of St. John the Baptist stained in marble.

The gardens are extensive; and on the whole are a most agreeable retreat. The inner grove, as it is commonly called, has all those graces which arise from a regulated variety, and from a succession of beauties so disposed as to strike us gradually and unexpectedly.

The benefactors have been very numerous, and no less considerable. Sir William Paddy, knight, founded and endowed the present choir, that originally established

by the founder, having been dissolved by unanimous consent of the society, A. D. 1577, the revenues of the college being found insufficient for its maintenance. Archbishop Laud erected the second court, its south side excepted, which was built A. D. 1595, with the stones of the Carmelite friery in Gloucester-green, the Company of Merchant Taylors in London, amongst several other benefactions, contributing two hundred pounds. Archbishop Juxon gave seven thousand pounds to augment the fellowships; Dr. Holmes, formerly president, with his lady, gave fifteen thousand pounds for improving the salaries of the officers, and other purposes. And Dr. Rawlinson, above-mentioned, granted the reversion of a large estate in fee-farm rents. The college has likewise largely experienced the beneficence of many others, who have liberally contributed towards the improvement of its building and revenues.

The present members are, one president, fifty fellows, two chaplains, one organist, five singing men, six choristers, and two sextons. The number of students is about seventy.

JESUS COLLEGE.

In 1571, Hugh Price, doctor of the canon laws in this university, procured a charter from queen Elizabeth, for building and endowing a college here for a principal, eight fellows, and eight scholars. The queen agreed to furnish timber for the building, upon condition that she should have the first nomination of the principal, fellows, and scholars, and that the college should be called *Collegium Jesu infra civitatem & universitatem Oxon. ex fundatione reginæ Elizabethæ*; whence this society claim the honour of a royal founder.

In the first court is the hall, in which is a portrait of queen Elizabeth, with a ceiling of well-executed stucco, by Mr. Roberts; the principal's lodgings, in which is shewn a valuable picture of Charles I. at full length, by Vandyke; and the chapel, which is handsomely furnished, and well proportioned. Of these, the first was erected A. D. 1617; the second soon after the year 1621; and the last was completed in 1636.

Three sides of the inner court, begun by Dr. Mansel, one of the principals, a little before the Grand Rebellion, are finished in a decent and uniform manner. The library is on the west side, which is a well furnished room, and adorned, among other portraits, with a curious picture of Dr. Hugh Price, probably painted by Hans Holbein. It has been engraved as such by Vertue.

The chief benefactors are, Sir Eubule Thelwall, knight, formerly principal, who increased the number of fellows and scholars from eight to sixteen; Francis Mansel, D. D. Sir Leoline Jenkins, Charles I. and many others. The particular circumstances of whose respective donations towards the improvement of the buildings, revenues, and discipline of this house, deserve a more copious panegyric, and a more distinct display, than this work will allow.

In the Bursary is shewn a magnificent piece of plate, the gift of the late Sir Watkin Williams Wynne; also the statutes of the college, most exquisitely written on vellum, by the Rev. Mr. Parry of Shipston upon Stowre, formerly fellow.

This college consists of one principal, nineteen fellows, eighteen scholars, with many exhibitioners and independent students. The whole number about ninety.

WADHAM COLLEGE.

Nicholas Wadham, Esq; sometime a gentleman commoner in this university, having laid the design of building a college here, directed it to be carried into execution by his will; and accordingly, Dorothy, his widow and executrix, in 1609, purchased the site of a dissolved priory of the canons of St. Austin in this city, and erected a noble quadrangle, with statues of herself and her husband over the western gate; and having procured a royal charter, empowering her to endow it for a warden, fifteen fellows, fifteen scholars, two chaplains, two clerks, and other inferior officers, by the name of

Wadham College, it was opened, and the several members admitted accordingly, on the twelfth of April, 1613.

It stands in the northern suburb, called Holywell, the front being opposite to Trinity Gardens. Under a stately central tower we enter the Quadrangle, which is nearly one hundred and thirty feet square.

A portico, decorated with the statue of the founder, the foundress, James I. and other ornaments, leads us to the hall. This is a spacious and lofty Gothic room, furnished with some valuable portraits. From hence we pass into a cloister, which constitutes one side of a small area; the chapel being on the left, and the kitchen, with the library over it, on the right. The cloister, with its superstructure, in the midst of which is a handsome common room, forms a sort of east front, from whence we have a beautiful prospect over the meadows to the distant hills. This room has a most admirable portrait of an old woman.

The chapel is spacious and venerable. The antechapel, like those at Merton, New College, All Souls, and Magdalen, runs at right angles to the choir, having a proportionable height, length, and breadth. The east window is admirably painted by Van Ling, a Dutchman, A. D. 1622. It was given by Sir John Strangeways, represents the Passion of our Lord, and is said to have cost fifteen hundred pounds. The windows on the right side are perhaps by the same hand; but those on the left are poor, and of a later age.

The curious spectator will be extremely pleased with a most singular piece of painting which surrounds the altar. There is nothing of the kind now to be seen in Oxford; but the altar-pieces of Magdalen and All Souls were formerly finished in the same manner. The painting is on cloth, which being of an ash-colour, serves for the medium: the lines and shades are done with a brown crayon, and the lights and heightening with a white one. These dry colours being pressed with hot irons, which produced an exudation from the cloth, are so incorporated into its texture and substance, that they are proof against a brush, or even the hardest touch. The figures are finely drawn, and have a wonderful effect. It is the workmanship of Isaac Fuller, who painted the Resurrection-piece over the altar at Magdalen, and flourished near an hundred years since. The subject of the front is the Lord's Supper; on the north side, Abraham and Melchisedeck; and on the south, the children of Israel gathering manna, are respectively represented.

The buildings of this house have not received the least alteration from the time of the foundress; and, as they now stand, are the entire result of the first architect. From this circumstance they derive an uniformity and regularity scarcely to be paralleled in any other college of this university. The critical observer must also take notice, that the style of architecture in this college corresponds, in many particulars, with that of the public schools, and of the inner quadrangle at Merton College. These three edifices are all of the same age, and were most probably planned by the same artist. That indefatigable antiquary, Mr. Hearne, among his many curious researches, discovered, that the public schools were designed by Thomas Holt of York.

The principal benefactors are, John Goodridge, A. M. who gave, A. D. 1654, his whole estate at Walthamstow in Essex, for the endowment of several exhibitions, &c. and Dr. Hody, Greek professor; who founded four exhibitions for students in Hebrew, and six for others in Greek, of ten pounds each. Dr. Philip Bisse, archdeacon of Taunton, gave above two thousand volumes to the library, in which is preserved his portrait at full length, given by the foundress. Lord Wyndham very lately bequeathed two thousand pounds, fifteen hundred of which are appointed for the increase of the warden's salary, and the residue for ornamenting the house.

Lisle, the late warden, bishop of Norwich, added two exhibitions.

This college consists of one warden, fifteen fellows, and fifteen scholars; two chaplains, two clerks, and sixteen exhibitioners. The number of students of every kind about fifty.

PEMBROKE COLLEGE.

Thomas Tisdale, of Glimpton, near Woodstock, Esq; by his will, dated the thirtieth of June, 1610, left five thousand pounds to purchase an estate, for the maintenance of certain fellows and scholars, to be chosen from the free-school of Abingdon in Berkshire, into any college of this university. The trustees of this will offered to increase the society of Baliol College, by Mr. Tisdale's legacy, with seven fellows and six scholars; but not coming to an agreement, Dr. Richard Whightwick, formerly a member of Baliol College, persuaded the trustees of Mr. Tisdale's will to purchase a building, originally belonging to the priory of St. Frideswide, called Broadgate-hall, for the settlement of this charity; and promised, upon that condition, that he himself would be a considerable benefactor. Mr. Tisdale's trustees, therefore, procured a royal charter, dated the twenty-ninth of June, 1624, empowering them to found a college within the limits of Broadgate-hall, for one master, ten fellows, and ten scholars, by the name of Pembroke College, which name was given it in honour of William earl of Pembroke, then chancellor of the university. The royal charter also empowered George, archbishop of Canterbury, William earl of Pembroke, and Dr. Richard Whightwick, to make a body of statutes for the society, who were allowed to purchase lands and tenements to the yearly value of seven hundred pounds. Soon after this, the fellows and scholars were put in possession of their college; but the number of students increasing so much, that the building could not accommodate them, the society annexed to their college certain chambers, called Abingdon Lodgings, and Camby Lodgings.

We pass to this college in a direct line from the grand gate of Christ-church. At our entrance, the master's lodgings, on the right, make a handsome appearance, which are large and convenient. The first quadrangle is neat and uniform, though small. From this we are led, by the north-west angle, into the hall, which is adorned with pictures of the founders and benefactors; from thence into an irregular area, on one side of which stands the chapel. This is a modern edifice of the Ionic order. The altar is justly admired for its neatness, and the whole is elegantly finished, and properly adorned.

It was built by contribution, and consecrated in 1732. Their former chapel was an isle, in the adjoining church of St. Aldate.

Westward of the chapel is the garden, in which is a pleasant common-room, and an agreeable terrace-walk, formed on the city-wall.

Dr. Hall, master, and bishop of Bristol, built the lodgings of the master, together with the gateway of the college, soon after the Reiteration.

The society at present consists of one master, fourteen fellows, and upwards of thirty scholars and exhibitioners.

WORCESTER COLLEGE.

In this university there was a hall called Gloucester-hall, from having been originally a seminary for educating the monks of Gloucester. On the suppression of abbeys, it fell into the king's hands; and afterwards, by a royal grant from queen Elizabeth, it came to one Mr. Doddington, from whom it was purchased by Sir Thomas White, founder of St. John Baptist's College, and by him repaired in some measure, endowed, and conveyed to that society, who made it a house for students, under a principal; but in 1714, this hall was endowed by Sir Thomas Cooke of Akeley, near the city of Worcester, in the county of that name, Bart. for a provost, six fellows, and six scholars; upon which it was erected to a college, by the name of Worcester College.

It is situated at the extremity of the western suburb, on an eminence which descends to the river and meadows. The grand court, or area, consists of three sides, which are all completed in the modern taste. On the west it is proposed to form a garden, sloping to the water; so that a most agreeable prospect will be opened to the college. The library is a beautiful Ionic edifice, one hundred feet in length, supported by a spacious

cloister. It is furnished with a fine collection of books, the gift of Dr. Clarke, formerly fellow of All Souls College. Its greatest curiosity is Inigo Jones's Palladio, with his own manuscript notes in Italian.

At our entrance into the college, we have on each side the chapel and hall, both of which are fifty feet in length, and twenty-nine in breadth. On the whole, this house, when executed according to the plan, will be a well-disposed, elegant structure.

Here are one provost, twenty fellows, seventeen scholars, &c. The whole number about forty.

HERTFORD COLLEGE.

Here was a building formerly called Hart-hall, from Elias de Hartford, who, in the reign of Edward I. demised it, under this name, to some scholars of the university. It was afterwards purchased by Walter Stapledon, bishop of Exeter, and founder of Exeter College, who, on the tenth of May, 1312, had a charter granted him, for assigning this hall, together with another tenement called Arthur's Hall, to twelve scholars. So long as the bishop's scholars continued here, it was called Stapledon Hall; but they removing, it recovered its former name. Exeter College had long the nomination of a principal to this hall, and many of the fellows of New College resided here with their warden, while that college was building. Here were formerly twelve students, to whom the university paid a yearly pension of fifty pounds, upon account of the abbot and monks of Glastenbury, a market-town of Somersetshire, for the maintenance of such youth as were sent hither from Glastenbury school: but this hall being endowed by its late principal, Dr. Richard Newton, for a principal, four senior fellows, or tutors, and junior fellows, or assistants, besides a certain number of students, or scholars, was, upon the eighth of September 1740, erected to a college, by the name of Hertford College.

It stands opposite to the grand gate of the Schools. It consists of one irregular court, which has been lately beautified from a fund raised for that purpose by the late principal. Part of this court consists of a small quantity of modern buildings, viz. the south-east angle, and the chapel erected about thirty years since, in the stile of which the whole college is to be rebuilt.

The foundation consists of a principal, four senior fellows or tutors, and junior fellows or assistants, besides a certain number of students or scholars. There are at present about thirty members.

Besides the above Colleges, there are five Halls in the University of Oxford, viz.

I. ALBAN HALL.

This hall is contiguous to Merton College on the east. It appears to have been a house of learning in the reign of Edward I. and received its name from Robert de St. Alban, a citizen of Oxford, who, in the reign of Henry III. conveyed this tenement to the nuns of Littlemore. The front is decent, erected by Benedict Barnham, alderman of London, A. D. 1595. It has a small refectory, and no chapel.

II. ST. EDMUND'S HALL.

This hall is situated to the east of Queen's College. It was first established about the reign of Edward II. and was assigned to Queen's College, A. D. 1557. It has a library, refectory, and chapel, which are neat and commodious.

III. ST. MARY HALL.

It is situated in Oriol Lane, to the south of St. Mary's church. For its original we refer the reader to our account of Oriol College. It consists of an elegant little court, which encloses a neat garden. It has a library, with a handsome, though small chapel, and refectory. Erasmus, Sir Thomas More, and Sandys the poet, studied in this house. It has some exhibitioners.

IV. NEW INN HALL.

This hall stands near the church of St. Peter in the Bailey, towards the castle. It was consigned to students by John Trillock, bishop of Hereford, A. D. 1345. It is eminent for the education of many learned civilians. It has no chapel. Almost opposite to this hall stands part of the gateway of St. Mary's College, in which Erasmus resided for some time. He has left an elegant Latin poem on his manner of living here. It was founded A. D. 1437, for novices of the Augustin order, and suppressed at the Reformation.

V. MAGDALEN HALL.

This hall is almost contiguous to Magdalen College on the west. A very considerable part of it is the grammar-school for the choristers of Magdalen College, erected, with the college, by the founder, William of Wainfleet, for that purpose alone. To this structure other buildings being added, it grew by degrees into an academical hall. It has a well furnished library, with a neat chapel, and refectory. Here are several exhibitions. This seminary boasts the education of lord Clarendon, the celebrated historian.

About the year 730, Didanus, a petty king in these parts, is said to have founded a nunnery at Oxford, dedicated to St. Mary and All Saints, which at first consisted of twelve religious virgins of noble birth, under the government of his own daughter Frideswide, who was buried here, and afterwards canonized for a saint; whence this monastery, in course of time, was dedicated to her memory, and almost always called by her name.

This house, after having successively been in the possession of secular canons, monks, priests, and regular canons, of the order of St. Austin, continued in being till it was dissolved by pope Clement VII. at the instance of Cardinal Wolfey, when its annual revenues were rated at two hundred and twenty-four pounds, four shillings and eight-pence. Upon the site of this monastery, Christ-church College was founded, and partly endowed by its revenues.

In the castle of Oxford there was a collegiate church for secular canons, founded and endowed in 1074, by Robert D'Oily, and Roger Iveri; but this church, with all its revenues, was, in 1149, annexed to a house of regular canons at Osney, near this city; and the buildings were afterwards occupied by students.

There is an ancient manuscript, quoted by some writers, which makes mention of a monastery here, dedicated to St. Aldatus, before the year 1122.

About a mile eastward of this city, there is yet in being a little hospital, dedicated to St. Bartholomew, as ancient as the reign of king Henry I. It consisted formerly of a master, who was a priest, two healthful brethren, six infirm or leprous brethren, and a clerk. In 1328, king Edward III. gave it to Oriel College, upon condition of maintaining in it a chaplain and eight poor brothers.

Here was an hospital dedicated to St. John Baptist, consisting of a master and several brothers and sisters, in the reign of king John. King Henry III. new-founded, or at least new-built it, in 1233, laying the first stone himself; and king Henry VI. gave the master and brethren leave to give up and convey this house, and all the estates belonging to it, to William Wainfleet, bishop of Winchester, about the year 1456, who, on or near the site of it, laid the foundation of Magdalen College.

The Dominican friars, upon their coming to England in 1221, repaired to Oxford, where Isabel de Bulbec, widow to Robert earl of Oxford, gave them ground in a parish called St. Edward's, upon which to build a house and chapel; but about forty years afterwards, they removed their habitation to a little island, near a gate called Watergate, in a parish called St. Ebb's, which was given them by king Henry III. and here they continued till the dissolution.

The Franciscan friars came to Oxford in 1224, and settled also in St. Ebb's parish, in houses assigned them

by Richard le Mercer, Richard le Miller, Thomas Walongs, and others.

The Carmelite friars first settled in this city in 1225, in an house given them by Nicholas de Molis, sometime governor of the castle of Oxford, on the west side of a street called Stockwell-street, on the ground where Worcester College now stands; but sixty years afterwards, king Edward II. gave to twenty-four of these friars a royal palace called Beaumont, built by king Henry I. in the north part of the city, where they continued till the dissolution.

Without the west gate of this city, near the castle, on a piece of ground where formerly stood a church dedicated to St. Benedict, king Henry III. placed the friars de Sacco, who continued here till they were suppressed, with some other mendicant friars, in 1307.

In 1268, Henry III. gave the friars heremites of the order of St. Augustine, a piece of ground in Holywell parish, on which to build a chapel and lodgings, and here they continued till the general suppression.

On the south side of the street without the east gate, over-against Magdalen Hall, Edmund earl of Cornwall founded a small house and chapel for Trinitarian friars, of the redemption of captives, in 1291, in which, and in a chapel dedicated to the Trinity, within East-gate, the brethren of this order, and several poor scholars who lived upon alms, continued till near the time of the general dissolution.

Oxford sends four members to parliament, viz. two for the city, and two for the university. The markets are on Wednesday and Saturday; besides which, there are three annual fairs, viz. the third of May, Monday after the first of September, and Thursday before Michaelmas, for toys and small ware.

About seven miles and a half from Oxford, is the palace of Blenheim, situated in Woodstock park. It is a vast and magnificent pile of building, a royal gift to the exalted merit of the invincible duke of Marlborough.

The roof is adorned with a stone balustrade, and a good number of statues; but there are several towers, or, as some call them, cupolas, (though they resemble neither) which have a very heavy aspect: these are far from being an ornament, and seem such an useless weight, that one would think they were intended to sink the fabric beneath the surface of the earth; which occasioned the following epitaph on the deceased architect, Vanbrugh:

Lie heavy on him, Earth! for he
Laid many a heavy load on thee.

The lofty hall is painted by Sir James Thornhill, the ceiling by La Guerre. The rooms are finely enriched with marble chimney-pieces and furniture, but more by the incomparable paintings and hangings, which latter represent the principal glories of the duke's life. Among the pictures, are many of Rubens's best and largest pieces; that celebrated one of himself, his wife and child, among others; Vandyke's K. Charles I. upon a dun horse, of great value; and the famous loves of the gods, by Titian, a present from the king of Sardinia. The gallery is worthy admiration, lined with marble pilasters, and whole pillars of one piece, supporting a most costly and curious entablature, excellent for matter and workmanship, the window frames of the same, and a basement of black marble quite round. Before it, is stretched out a most agreeable prospect of the fine woods beyond the great vallies. What is of the most elegant taste in the whole house, is of the dutchess's own designing. The chapel is equal to the rest. The garden is a very large plot of ground, taken out of the park, and may still be said to be a part of it, well contrived, by sinking the outer wall into a foss, to give a view quite round, and take off the odious appearance of confinement and limitation to the eye. It is within well adorned with walks, greens, espaliers, and vistas to divers remarkable objects, that offer themselves in the circumjacent country. Over the pediment of this front of the house is a curious marble busto of Lewis XIV. bigger than the life, taken from the gate of the citadel

of Tournay. The orangery is a pretty room. Near the gate of the palace is the house where our famous Chaucer was born. At the entrance into the castle from the town, her Grace has erected a noble triumphal arch to the memory of the Duke, and has set up a vast obelisk in the principal avenue of the park, whereon is inscribed the best account of the duke's actions and character that ever was penned in the same compass, and indeed is supposed to be written by the greatest genius of his time, the late lord viscount B.

The inscription does so much honour to the memory of the duke, and at the same time to the British nation, that we cannot deny ourselves the pleasure of inserting it here as follows :

The castle of Blenheim was founded by **QUEEN ANNE**;

In the fourth year of her reign,

In the year of the Christian æra 1705.

A monument designed to perpetuate the memory of the
Signal victory.

Obtained over the French and Bavarians,

Near the village of Blenheim;

On the banks of the Danube,

By **JOHN Duke of MARLBOROUGH**:

The hero not only of this nation, but of this age ;
Whose glory was equal in the council and in the field ;

Who by wisdom, justice, candour, and address,

Reconciled various, and even opposite interests ;

Acquired an influence

Which no rank, no authority, can give,

Nor any force but that of superior virtue ;

Became the fixed important centre,

Which united, in one common cause,

The principal states of Europe ;

Who by military knowledge, and irresistible valour,

In a long series of uninterrupted triumphs,

Broke the power of France,

When raised the highest, when exerted the most ;

Rescued the empire from desolation ;

Asserted and confirmed the liberties of Europe.

Philip, a grandson of the house of France, united to the interests, directed by the policy, supported by the arms of that crown, was placed on the throne of Spain. King William III. beheld this formidable union, of two great, and once rival monarchies. At the end of a life spent in defending the liberties of Europe, he saw them in their greatest danger. He provided for their security in the most effectual manner. He took the duke of Marlborough into his service.

Embassador extraordinary and plenipotentiary to the
States-General of the United Provinces,

The Duke contracted several alliances before the death of king William. He confirmed and improved these. He contracted others, after the accession of queen Anne; and re-united the confederacy, which had been dissolved at the end of a former war, in a stricter and firmer league.

Captain-general and commander in chief of
The forces of Great Britain,

The duke led to the field the army of the Allies. He took, with surprising rapidity, Venlo, Ruremonde, Stevenswaert, and Liege. He extended and secured the frontiers of the Dutch. The enemies, whom he found insulting at the gates of Nimeghen, were driven to seek for shelter behind their lines. He forced Bonne, Huy, Limburgh, in another campaign. He opened the communication of the Rhine, as well as the Maes. He added all the country between these rivers to his former conquests. The army of France, favoured by the defection of the elector of Bavaria, had penetrated into the heart of the Empire. This mighty body lay exposed to immediate ruin. In that memorable crisis, the duke of Marlborough led his troops with unexampled celerity, secrecy, order, from the Ocean to the Danube. He saw: he attacked:

nor stopped, but to conquer the enemy. He forced the Bavarians, sustained by the French, in their strong intrenchments at Schellenberg. He passed the Danube. A second royal army, composed of the best troops of France, was sent to reinforce the first. That of the Confederates was divided. With one part of it the siege of Ingolstadt was carried on. With the other the duke gave battle to the united strength of France and Bavaria. On the second day of August 1704, he gained a more glorious victory than the histories of any age can boast. The heaps of slain were dreadful proofs of his valour. A marshal of France, whole legions of French, his prisoners, proclaimed his mercy. Bavaria was subdued, Ratibon, Aufbourg, Ulm, Memmingen, all the usurpations of the enemy were recovered. The liberty of the Diet, the peace of the Empire, were restored. From the Danube, the duke turned his victorious arms towards the Rhine, and the Moselle. Landau, Treves, Traerbach, were taken. In the course of one campaign, the very nature of the war was changed. The invaders of other states were reduced to defend their own. The frontier of France was exposed in its weakest part to the efforts of the Allies.

That he might improve this advantage, that he might push the sum of things to a speedy decision, the duke of Marlborough led his troops early in the following year once more to the Moselle. They, whom he had saved a few months before, neglected to second him now. They, who might have been his companions in conquest, refused to join him. When he saw the generous designs he had formed, frustrated by private interest, by pique, by jealousy, he returned with speed to the Maes. He returned, and Fortune and Victory returned with him. Liege was relieved; Huy retaken. The French, who had pressed the army of the States-General with superior numbers, retired behind intrenchments, which they deemed impregnable. The duke forced these intrenchments, with inconsiderable loss, on the seventh day of July 1705. He defeated a great part of the army which defended them. The rest escaped by a precipitate retreat. If advantages proportionable to this success were not immediately obtained, let the failure be ascribed to that misfortune which attends most confederacies; a division of opinions, where one alone should judge; a division of power, where one alone should command. The disappointment itself did honour to the duke. It became the wonder of mankind how he could do so much under those restraints, which had hindered him from doing more.

Powers more absolute were given him afterwards. The increase of his powers multiplied his victories. At the opening of the next campaign; when all his army was not yet assembled; when it was hardly known, that he had taken the field; the noise of his triumphs was heard over Europe. On the twelfth of May 1706, he attacked the French at Ramillies. In the space of two hours, the whole army was put to flight. The vigour and conduct with which he improved this success, were equal to those wherewith he gained it. Louvain, Brussels, Malines, Liere, Ghent, Oudenard, Antwerp, Damme, Bruges, Courtray, surrendered. Ostend, Menin, Dendermond, and Aeth, were taken. Brabant and Flanders were recovered. Places which had resisted the greatest generals for months, for years; provinces disputed for ages, were the conquests of a summer. Nor was the duke content to triumph alone. Solicitous for the general interest, his care extended to the remotest scenes of the war. He chose to lessen his own army, that he might enable the leaders of other armies to conquer. To this it must be ascribed that Turin was relieved; the duke of Savoy reinstated; the French driven with confusion out of Italy.

These victories gave the Confederates an opportunity of carrying on the war on every side into the dominions of France. But she continued to enjoy a kind of peaceful neutrality in Germany. From Italy she was once alarmed, and had no more to fear. The entire
reduction

reduction of his power, whose ambition had caused, whose strength supported the war, seemed reserved for him alone, who had so triumphantly begun the glorious work.

The barrier of France, on the side of the Low Countries, had been forming for more than half a century. What art, power, expence, could do, had been done to render it impenetrable. Yet here she was most exposed; for here the duke of Marlborough threatened to attack her.

To cover what they had gained by surprize, or had been yielded to them by treachery, the French marched to the banks of the Schelde. At their head were the princes of the blood, and their most fortunate general, the duke of Vendôme. Thus commanded, thus posted, they hoped to check the victor in his course. Vain were their hopes. The duke of Marlborough passed the river in their sight. He defeated their whole army. The approach of night concealed, the proximity of Ghent favoured their flight. They neglected nothing to repair their loss, to defend their frontier. New generals, new armies, appeared in the Netherlands. All contributed to enhance the glory, none were able to retard the progress, of the confederate army.

Lisle, the bulwark of this barrier, was besieged. A numerous garrison, and a marshal of France, defended the place. Prince Eugene of Savoy commanded, the duke of Marlborough covered and sustained the siege. The rivers were seized, and the communication with Holland interrupted. The duke opened new communications with great labour, and much greater art. Through countries over-run by the enemy, the necessary convoys arrived in safety. One alone was attacked. The troops which attacked it were beat. The defence of Lisle was animated by assurances of relief.

The French assembled all their force. They marched towards the town. The duke of Marlborough offered them battle, without suspending the siege. They abandoned the enterprize. They came to save the town. They were spectators of its fall.

From this conquest the duke hastened to others. The posts taken by the enemy on the Schelde were surprized. That river was passed the second time, and, notwithstanding the great preparations made to prevent it, without opposition.

Brussels, besieged by the elector of Bavaria, was relieved. Ghent surrendered to the duke in the middle of a winter remarkably severe. An army, little inferior to his own, marched out of the place.

As soon as the season of the year permitted him to open another campaign, the duke besieged and took Tournay. He invested Mons. Near this city, the French army, covered by thick woods, defended by noble intrenchments, waited to molest, nor presumed to offer battle. Even this was not attempted by them with impunity. On the last day of August, 1709, the duke attacked them in their camp. All was employed; nothing availed against the resolution of such a general, against the fury of such troops. The battle was bloody. The event decisive. The woods were pierced. The fortifications trampled down. The enemy fled. The town was taken. Dowaay, Bethune, Aire, St. Venant, Bouchain, underwent the same fate in two succeeding years. Their vigorous resistance could not save them. The army of France durst not attempt to relieve them. It seemed preserved to defend the capital of the monarchy.

The prospect of this extreme distress was neither distant nor dubious. The French acknowledged their conqueror, and sued for peace.

These are the actions of the late Duke of MARLBOROUGH, Performed in the compass of a few years; Sufficient to adorn the annals of ages.

The admiration of other nations
Will be conveyed to latest posterity,
In the histories even of the enemies of BRITAIN.
The sense which the British nation had
Of his transcendent merit,

Was expressed
In the most solemn, most effectual, most durable manner.
The acts of parliament * inscribed on this pillar
Shall stand
As long as the British name and language last,
Illustrious monuments
Of MARLBOROUGH's glory,
And
Of BRITAIN's gratitude.

In this park there was, about a century ago, a celebrated echo, which, in a still night, would repeat very distinctly eighteen or twenty syllables; but it has been much impaired by removing some buildings.

This feat is said to have been a royal palace in the days of king Ethelred. Here Alfred the Great translated *Boetius de Consolatione Philosophiæ*; and here K. Henry II. built a labyrinth, called Rosamond's Bower, with a house in the centre of it, to secrete his mistress, Rosamond, daughter to lord Clifford, from Eleanor, his queen; but there are now no traces either of the palace or bower.

The town of Woodstock is a corporation, governed by a mayor, four aldermen, and sixteen common-councilmen. It is well paved, has three alms-houses, and a school, founded in the twenty-seventh year of the reign of queen Elizabeth, by Richard Cromwell, citizen and skinner of London.

Woodstock is famous for a manufacture of polished steel, and gloves, but does not employ above twenty or thirty men in the former, and forty or fifty in the latter. Journeymen in the steel-work earn from fifteen shillings to two guineas a week; and men and women, by making gloves, about eight or nine shillings a week.

This town sends two members to parliament, has a weekly market on Tuesday, and five annual fairs, viz. the twenty-fifth of March, and Tuesday in Whitsun-week, for all sorts of cattle; the second of October, and Tuesday after the first of November, for cheese, and all sorts of cattle; and the seventeenth of December, for cheese and hogs.

The seat of lord Litchfield, at Ditchley, is situated about the distance of three miles from Blenheim, on the north-west. It is built of hewn stone, and has a beautiful southern front, with two correspondent wings, commanding a most agreeable and extensive prospect, in which the magnificent palace just described has the principal effect. In the centre of the front is,

THE HALL.

This room is finely proportioned, and elegantly decorated. Its sides and roof are ornamented with stucco, which is at once bold and delicate. Its door-cases, pediments, entablatures, and columns of the Corinthian and Composite orders, are all richly ornamented with gildings, &c. The ceiling contains an assembly of the gods, painted by Kent. Two of the compartments are filled with historical pieces from the *Æneid*, by the same hand; one of which represents *Æneas* meeting *Venus*, his mother, in the wood, near Carthage; and the other, *Venus* presenting *Æneas* with the new armour. The Sciences are introduced as ornaments, with busts of philosophers, poets, historians, and orators, viz. *Socrates*, *Virgil*, *Homer*, *Cicero*, *Sappho*, *Shakespeare*, *Dryden*, *Milton*, and *Livy*. Over the statues are bas-reliefs, copied from antiques out of the Florentine Museum, properly disposed; and a statue of the *Venus de Medicis*. And there is here a curious model of the Radclivian Library at Oxford.

The chimney-piece is superb and lofty, decorated with a portrait of the late lord, by Akerman.

* Several recitals of clauses in acts of parliament, made to do honour to this immortal commander, are engraven on the same superb pillar.

MUSIC ROOM.

The construction of this apartment is well adapted to the use assigned; and its peculiar elegance cannot fail of having the most pleasing effect on the spectator at his first entrance.

The Paintings are,

A portrait of the earl of Litchfield's grandfather, and grandmother.

The present earl of Litchfield.

The two late dukes of Beaufort.

Rubens and family, hunting.

Two Venetian courtezans.

A landscape, by Wootton; in which are introduced his lordship, and the Hon. Mr. Lee, taking the diversion of shooting.

With three hunting-pieces, by Wootton.

DINING ROOM.

On the whole, this room is furnished with much simple elegance. Here is a capital full-length portrait of Henry VIII. by Hans Holbeins; executed with a strength and freedom not generally found in the performances of that high finisher.

A family-piece of Charles I. with Charles II. a child, at his knee; by Vandyke.

Sir Henry Lee, with the mastiff which saved his life, by Johnson.—The story of this piece is founded on a miraculous escape of Sir Harry, from being assassinated by one of his own servants, who had formed a design of robbing the house, after having murdered his master. But providentially on the night this project was intended to be put in execution, the mastiff, though no favourite with, nor ever before taken notice of by his master, accompanied him up stairs, crept under the bed, and could not be driven away by the servant; when, at length, Sir Harry ordered him to be left: and in the dead of night, the same servant entering the room to execute his design, was instantly seized by the dog, and upon being secured, confessed his intentions.

In one corner of the piece are the following lines:

“ More faithful than favoured.

“ Reason in man cannot effect such love,

“ As Nature doth in them that reason want:

“ Ulysses true and kind his dog did prove,

“ When faith in better friends was very scant.

“ My travels for my friends have been as true,

“ Tho' not as far as Fortune did him bear;

“ No friends my love and faith divided knew,

“ Tho' neither this nor that once equal'd were.

“ But in my Dog, whereof I made no store,

“ I find more love than them I trusted more.”

The late lord, and present dowager lady, in their coronation robes; by Richardson and Vanderbank.

The duke of Monmouth and his mother, in the Italian manner.

Prince Arthur, by Johnson.

Sir Charles Rich, killed in the unfortunate expedition to the Isle of Rhee, 1627.

Sir Christopher Hatton.

With four portraits of Sir Henry Lee's brothers, by C. Johnson, in that master's best manner.

The DAMASK BED-CHAMBER.

It is adorned with tapestry, representing boys squeezing grapes, and engaged in other sports; which must please all who can discern and taste justness of design, and liveliness of expression.

The furniture of the bed, &c. is rich crimson damask.

The Paintings in this room are,

The queen of Bohemia, by Johnson.

And the portraits of lord and lady Teynham.

TAPESTRY DRAWING ROOM.

It is furnished with tapestry not less masterly than that last described. The subjects are, the Muses and Apollo singing and playing on their several instruments; Bacchanalian scenes, and a vintage.

The paintings are, Anne, countess of Rochester and Lindsey; by Sir Peter Lely.

Sir Francis Harry Lee; by Vandyke.

And Sir Harry Lee, at full length, in the robes of a knight of the garter; by Johnson.

The chimney-piece, in black and white marble, is in the Ionic order, and an excellent piece of workmanship.

The windows of this apartment open to a most agreeable landscape, which does not perplex the eye by the distance and multiplicity of its objects, but affords those gentler charms which arise from a single, distinct, and confined prospect. It principally consists of a winding valley, with a serpentine canal, covered with an elegant Chinese bridge. The whole is bounded by an easy spreading declivity, interspersed with groups of trees.

The SALOON.

The roof is stuccoed in a rich, though chaste stile. The middle compartment is Flora, with the Zephyrs. The walls are also stuccoed, and painted of an olive-colour, on which are Minerva and Diana, whole-length bas reliefs, in the antique stile.

Here is an excellent antique of the goddess Health, about forty inches in height, lately purchased from Dr. Mead's collection.—On its pedestal is a bas relief of the head of Æsculapius, cut with a remarkable boldness. Here is also shewn an antique medallion of the Sailing Cupid. The diameter is about twelve inches.

Green Damask DRAWING-ROOM.

The chimney-piece is finely executed by Skeemaker. The frieze is enriched with a vase and cornucopia; and on each side female Termini, finished in the most superb taste. In the middle is a landscape by Wootton, whose free manner all judges of this most enchanting species of painting, must allow to be truly calculated for affording the liveliest representations of rural objects.

Over the doors are two striking pieces brought from Italy of ruins, rocks, and cascades. The architecture in the manner of Panini.

Here is also a table of Italian marble, having a greenish ground interspersed with white veins, which is a most beautiful and valuable curiosity.

GILT DRAWING ROOM.

This was formerly called the Best Dining Room.

The Paintings are,

A full-length portrait of Charles II. and of the dutchess of Cleveland; by Lely.

The present duke of Grafton's great grandfather.

And lady Charlotte Fitzroy, his lordship's grandmother, by Kneller.

The decorations of the wainscot are gilt; and the stuccoed ceiling is correspondent to the taste and splendor of the rest.

Here are two tables of Egyptian marble, which justly demand our observation.

The chimney-piece of this apartment is also executed by Skeemaker. In the freeze, a Bacchanalian's head finely executed; and over it a landscape by Wootton.

The VELVET BEDCHAMBER.

Both the bed and hangings of this apartment are of rich figured Genoa velvet, made on purpose at Genoa, for admiral Lee.

The chimney-piece is executed in a most masterly manner: on the freeze are festoons of flowers; and in the middle a winged head of Mercury; and it is adorned with a prospect of a ruin by an Italian hand.

And here is a dressing-table of curious workmanship, done in France. It consists of a dark-coloured wood, inlaid with fine ramifications of brass-work.

The TAPESTRY ROOM.

This apartment, which is the last we are shewn, is curiously ornamented in the Chinese taste.

Here are two striking pieces of tapestry; one of which represents the Cyclops forming the armour of Æneas; the other, Neptune, with his proper attendants, giving

directions about refitting a vessel, which has just been shipwrecked.—The heads of the dolphins are executed with much spirit and expression. The sea-scene is remarkably beautiful, and the distant prospect most elegantly fancied, as well as judiciously conducted, in point of perspective.

Over the chimney-piece, which is finely finished in white marble, is a capital picture of the duke and dutchess of York, and the princesses Mary and Anne; by Sir Peter Lely.

Over the two doors are two masterly landscapes, by an Italian hand.

The chairs are covered with tapestry, each of which is prettily ornamented with the story of a fable from Ætîop.

A small fire-screen in this apartment, beautifully worked with a needle, by the late lady Litchfield, cannot escape the attention of the curious: the subject of which is the rape of Proserpine.

In conformity to the stile of this apartment, here are two beautiful Chinese figures; one a Chinese lady, the other a porter with a chest of tea.

On the whole, this seat is a noble repository of valuable and masterly portraits, executed by the most eminent artists in that species of painting; Rubens, Vandyke, Sir Peter Lely, and our ingenious countryman and rival of Vandyke, Johnson. As a piece of architecture, it is inferior to none for the justness of its proportion, and the convenient disposition of its apartments. With regard to furniture and decorations, it is finished with taste rather than with splendor; and adorned with that elegance which results from simplicity.

About five miles to the westward of Woodstock, lies Witney, or Whitney, a long straggling place, situated on the river Windrush, sixty-eight miles from London. It was a place of great repute before the Conquest, and in the reign of Edward II. was made a borough, and sent members to parliament, but lost that privilege in the reign of Edward III.

Witney is very famous for its woollen manufacture, which consists of what they call kersey-pieces, coarse bear-skins, and blankets. The two first they make for the North American market, vast quantities being sent up the river St. Laurence, and also to New-York, Boston, &c. Their finest blankets, which rise in price to three pounds a pair, are exported to Spain and Portugal; but all of them are first sent to London in broad-wheel waggons, four or five of which go every week. The finest wools they work, come from Herefordshire and Worcestershire, and sell from eight-pence to ten-pence a pound. The coarsest is brought from Lincolnshire; they call it Day-locks, and purchase it for about four-pence halfpenny a pound: it is used in making the coarse bear-skins. There are about five hundred weavers in this town, who work up seven thousand packs of wool annually. Journeymen in general earn, on an average, from ten to twelve shillings a week, all the year round; but they work from four in the morning till eight at night. The work is of that nature, that a boy of fourteen years of age earns as much as a man. Boys and girls of seven or eight years of age earn from eighteen to twenty-pence a week by quilling and cornering. Old women of sixty or seventy earn sixpence a day by picking and sorting the wool. A strong woman can earn from ten-pence to a shilling a day by spinning; and a girl of fourteen, four-pence or five-pence. They weave according to the season; in winter, kerseys and bear-skins, ready for shipping in the summer for the river St. Laurence; and in summer, blankets for home consumption, and to supply the markets of Spain and Portugal. The blankets usually purchased at home are about three-and-twenty and four-and-twenty shillings a pair, ten quarters wide, and twelve long.

There is a free-school at Witney, founded and endowed by Mr. Henry Box, a druggist in London; and adjoining to it, a fine library. This was one of the manors which the bishop of Winchester gave to St. Swithin's in this city, on queen Emma's happily escaping the fire ordered, by passing, bare-foot and unhurt, over

nine red-hot plough-flares, and by that means proving herself innocent of the adultery of which she was suspected with the prelate. The manor, however, did not long continue the property of St. Swithin's church; for in 1171, the bishop of that diocese gave it to the hospital of St. Cross, which he at that time founded.

Here is a weekly market on Thursday, and three annual fairs, viz. Thursday in Easter-week, and the twenty-ninth of June, for all sorts of cattle; and the twenty-third of November, for cattle and cheese.

Bampton is situated on the borders of Berkshire, sixty-six miles from London. It was a town of considerable note before the Conquest, and lies on a river, which, a few miles below the town, falls into the Thames, and is navigable by boats. Here is a weekly market on Wednesday, noted for the great quantity of fell-mongers' wares, as leather jackets, gloves, breeches, &c. which are brought hither chiefly from Witney. Besides which, here is an annual fair on the twenty-sixth of August, for horses and toys.

Burford is situated on the river Windrush, six miles from Witney, and seventy-four from London. In the Saxon times, a council of the bishops, abbots, &c. of the kingdom, was convened here by the kings Ethelred and Berthwald, and the then bishop of Sherborn was ordered to write a treatise against the error of the British churches in the celebration of Easter. Henry II. granted this town a charter, with all the privileges enjoyed by the citizens of Oxford. It has now indeed lost the greater part of these privileges; but it still retains the appearance of a corporation, having a common seal, and being governed by two bailiffs, and other inferior officers. An ancient custom prevails here, of carrying an artificial dragon through the streets on Midsummer-eve. This custom is supposed to allude to a certain banner, having on it the figure of a dragon embroidered in gold; and which was taken by Cuthred, a West Saxon, from Ethelbald the Mercian, in a battle fought near this place.

Here is a weekly market on Saturday and two annual fairs, viz. the fifth of July, for horses, sheep, cows, and pedlars ware; and the twenty-fifth of September, for cheese and toys.

Chipping Norton is situated near the north-west border of the county, seventy six miles from London. It sent members to parliament in the reigns of Edward I. and Edward III. but not since. It is a corporation governed by two bailiffs and inferior officers, who are empowered to hold a court, and to determine actions under four pounds value. Speed tells us, that there was formerly a monastery here, but there are now no vestiges of it. Roman coins are frequently dug up here; and near the church there are some remains of a castle. The church is a capacious structure, in which are a great number of monuments, erected to merchants, which shew it was once a town of considerable trade, though it has very little at present.

Here is a weekly market on Wednesday, and seven annual fairs, viz. the seventh of March, the sixth of May, the last Friday in May, the eighteenth of July, the fourth of September, the eighth of November, and the last Friday in November, for horses, cows, sheep, lambs, leather, and cheese.

About a mile to the northward of Chipping-Norton, is a remarkable piece of antiquity, called Roll-rich-stones. It consists of a number of huge stones placed in a circle, like those at Stonehenge. Some have thought that these stones were placed here as a monument of some remarkable victory; some think it was a burying-place, and others, a place for the coronation of the Danish kings; and that these stones were erected on Rollo's being proclaimed king here by his soldiers. Mr. Toland affirms, that they are the *vestigia* of an old British temple.

About four miles west-north-west of Chipping-Norton are the four shire stones, being the boundaries of the counties of Oxford, Gloucester, Worcester, and Warwick.

Banbury is a pretty large town, situated on the river Charwell, near the borders of Northamptonshire, seventy-five miles from London. In the year 1125, a castle

castle was built here by the bishop of Lincoln, then lord of the manor, and afterwards given by Henry VII. to Jasper earl of Pembroke, afterwards duke of Bedford. This town was made a borough in the first year of queen Mary, consisting of a bailiff, twelve aldermen, and twelve burghesses. It was incorporated in the reign of James I. and governed by a mayor, twelve aldermen, and twelve capital burghesses. In 1718, it received a new charter from king George I. and is now governed by a mayor, high steward, recorder, six capital burghesses, and thirty assistants. It has a fine large church, a free-school, and two charity-schools, one for thirty boys, the other for thirty girls. The trade of Banbury is considerable, especially in cheese; all the adjacent country being a rich feeding meadow-ground.

This town sends one member to parliament, has a weekly market on Thursday, and seven annual fairs, viz. Thursday after the seventeenth of January, first Thursday in Lent, Ascension day, Corpus Christi, and the thirteenth of June, for horses, cows, and sheep; Thursday after the tenth of October, for hogs, cheese, and hiring servants; and the twenty-ninth of October, for cheese, hops, and cattle.

A little to the west of this town, on the borders of the county, and at the extremity of a valley called Redhorse Vale, is Edge-hill, from whence there is a most extensive prospect. On the summit is a strong and capacious intrenchment, said to be Danish. On the north side of this hill a famous battle was fought between the forces of king Charles I. and those of the parliament, when neither gained any considerable advantage.

Deddington is situated about two miles to the west of the Charwell, and sixty-one from London. It was formerly a town corporate, and sent members to parliament in the reigns of Edward I. and III. but never since. It is, however, still a pretty large town, and governed by a bailiff. Dr. Plot says, there was here an ancient castle, but there are now few marks of it remaining. It has a charity-school for sixteen boys, and as many girls.

Here is a weekly market on Tuesday, and two annual fairs, viz. the tenth of August, for horses and cows; and the twenty-second of November, for horses, cows, and hogs.

Bicester, or Biffeter, is situated on a small brook, which, about six miles below, falls into the Charwell at Ilip, sixty miles from London. It is a long straggling place, famous for malt liquor, and had once a monastery; but it is more remarkable in antiquity for having had a famous Castrum on the west side of it, called Aldchester, long since passed over by the plough, which has turned up many Roman coins, and other remains of antiquity; and it is not doubted but it was the Maima of Revennas.

Here is a weekly market on Friday, and four annual fairs, viz. Friday in Easter week, first Friday in June, the fifth of August, and the thirteenth of December, for horses, cows, sheep, pigs, wool, and toys.

Ilip is a small town situated at the conflux of a small brook with the Charwell, fifty-nine miles from London. It is but a small place, but noted for the birth and baptism of Edward the Confessor. The font in which that prince was baptized, had for a long time been put to very indecent uses, till it was at last taken into the possession of a neighbouring gentleman. Here are still some remains of an ancient palace, said to be that of king Ethelred; and a good weekly market for sheep, but no annual fair.

Tame is an old town situated on a river of the same name, on the borders of Buckinghamshire, forty-five miles from London. Its situation is rendered the more pleasant, by being watered by the above river on the north side, and by two small brooks which flow through the east and west parts of it. The town is said to have been a borough in the time of the Saxons, when the Danes erected a fortification here, which was besieged and taken by king Edward the elder, with the slaughter of the Danish king, and all the garrison. But when the Danes over-ran the kingdom in 1010, the town of Tame felt their barbarous revenge; nor did it recover itself till the reign of Henry III. when Lavington,

bishop of Lincoln, brought through the town the great road, which before lay at some distance below it. It is a very considerable town, consisting principally of one large street, in the middle of which is the market-place. The church is a large and elegant structure in the form of a cross. Here was a monastery of Cistercian friars in the reign of king Stephen; and the ruins of it are still to be seen near the church: and in the reign of queen Elizabeth, Sir John Williams of Burfield, in Berkshire, steward to the bishop of Lincoln's lands here, founded a noble free-school, and an almshouse in this town. Some years since, a pot of Roman coins was found here.

Here is a weekly market on Tuesday, well furnished with live cattle, provisions, and other necessaries; and two annual fairs, viz. Easter Tuesday, for all sorts of cattle; and the tenth of October, or Old Michaelmas-day, for the sale of horses and fat hogs, and for hiring servants.

Watlington is a small market-town, consisting of about two hundred and sixty houses, including four hamlets belonging to the place. It is situated near the source of a small rivulet, forty-three miles from London. In its neighbourhood is the seat of the Stonor family, one of whom built the market-house, and founded a grammar-school here in the year 1666.

Here is a weekly market on Saturday, and two annual fairs, viz. the twenty-fifth of March, for toys, and the tenth of October, for hogs and black cattle.

Dorchester is a place of great antiquity, and was formerly a place of considerable consequence. It stands on the river Tame, over which it has a large stone bridge, near its confluence with the Thames or Isis, forty-nine miles from London. It seems to have flourished under the Romans, by their coins and medals being frequently found here. It enjoyed the honour of being an episcopal see for near five hundred years, till the reign of William the Conqueror, when its bishop, Remigius, removed the see to Lincoln. William of Malmesbury says, it had once five stately churches, though it is now dwindled to a small village. The removal of the see, and the frequent inundations from the river, to which the lower part of it is subject, injured the town so greatly, that there was hardly any vestige left of its former grandeur. An abbey of regular canons was founded here by Alexander, bishop of Lincoln, part of which was purchased at the dissolution by a gentleman of the town, and given to augment the parish-church, which is a large and venerable structure. There is a vulgar tradition, that no snake will live in this parish; and the inhabitants say they never saw any venomous creature in its district. Some ancient British coins have also been found here, particularly one of Cunabuline.

Here is no weekly market, and only one annual fair, held on Easter Tuesday, for toys.

Henley upon Thames is situated on that river, over which it has a fine bridge, thirty-five miles from London. It is a very ancient town; Dr. Plot says, the oldest in the county, and in a very flourishing condition. It stands very pleasantly on the northern bank of the Thames, and enjoys a very considerable trade. The buildings are neat, and the town is furnished with several good inns. It is incorporated, and governed by a warden, burghesses, and other inferior officers. Its chief trade is in malt, of which, and other corn, near three hundred waggon loads are often sold on a market-day; the inhabitants being generally maltsters, mealmen, and bargemen, sending their goods to London by barges, navigated on the Thames. The bridge, which is now of timber, is said to have been anciently of stone. Here is a good free grammar-school, and also a charity-school, liberally endowed, for teaching, cloathing, and apprenticing poor children. Here is also an almshouse, but very meanly endowed; for though there are not above six or seven persons in it, they have only six-pence a week each for their allowance.

Here is a noble weekly market on Thursday, and four annual fairs, viz. the seventh of March, for horses;

horses; Holy Thursday, for sheep; Thursday after Trinity Sunday, for horses and black cattle; and Thursday sevenight before the tenth of October, for cheese, and other goods.

Curious PLANTS found in Oxfordshire.

Female, or bell-flowered Pimpernel, *Anagallis scæmina flore cæruleo*, Park, found at Battle, near Oxford.

Painted or gilded Reed, *Arundo vallatoria foliis ex luteo variegatis*, found in the river Thames, not far from Oxford. It is only an accidental variety, but deserves to be mentioned on account of its scarcity.

The greatest doves-foot Cranes-bill, with dissected leaves, *Geranium Columbinum maximum foliis dissectis*, Plot, found in the hedges about Marston, and in those near Batley causeway, in great plenty.

Dogs-grass with awns, *Gramen caninum aristatum, radice non repente sylvaticum*, Moris. found plentifully in the woods near Stoken-church.

Wild Rye-grass of the woods, *Gramen secalinum majus sylvaticum*, Ger. found in the same woods with the former.

Cyperus-grass, with a round crow-foot head, *Gramen cyperoides minimum ranunculi capitulo rotundo*, C. B. found frequently in the bogs and watery parts on the west side of this county.

White-flowered bastard Hellebore, *Elleborine minor flore albo*, Park, found in the woods near Stoken-church, on the borders of the road leading from Oxford to London.

Naked Barley, *Hordeum nudum*, Ger. It is sown in the fields near Islip, and other parts of Oxfordshire, and is really a species of wheat, but has its name from its ear resembling the *Hordeum distichum*.

Birds-nest smelling like primrose roots, *Orobanche verbasculi odore*, Plot; found at the bottoms of trees, in the woods near Stoken-church.

Annual Pearl-wort, *Saxifraga Anglica annua alpinæ folio*, Plot; found in the walls of Baliol College garden, and plentifully in the fallow fields about Hedington and Cowley.

Base Hore-hound, *Stachys Fuchsii*, J. B. found near Witney-park, and in that neighbourhood, in great plenty.

Red Lime, *Tilia foliis molliter hirsulis viminibus rubris, fructu tetragono*, Robert; found in Stoken-church woods.

Creeping Tormentil, with deeply indented leaves; *Tormentilla alata foliis profundius serratis*, Moris. found

in the borders of corn-fields, between Hocklep and Shat-over woods.

Violet, with throatwort leaves; *Viola maritima hirsuta major inodora*, Moris. found in Magdalen College cops, on Shatover hills, in Stow wood, and many other places.

Round-leaved Marsh-violet, *Viola palustris rotundifolia*, Plot; found in the bogs about Stow-wood, and on the banks of the Charwell, between Oxford and Water-eyton.

The greater Periwinkle, *Clematis daphnoides major*, C. B. found on the borders of the highways, between Wolverton and Yarnton, and in several hedges thereabouts.

White-berried Elder, *Sambucus fructu albo*, Ger. found in the hedges near Watlington.

BRITISH COINS, and other ANTIQUITIES, found in Oxfordshire.

Besides the several pieces of antiquity already mentioned in describing the different places in this county, several others have been found. Particularly about Wood-Eaton, on the river Charwell, four miles north of Oxford, British coins of a particular kind have been found, not discovered any where else in England. They were, the coin of Cunobeline, who reigned here about the time of our Saviour's birth. On one side is a horse, with an ear of corn over him, and *Cuno* under him; and on the reverse is another such ear with *Camu*, for Camuladunum, or Malden, in Essex, where the coins were struck.

On a common in the hundred of Ewelme, near the Roman Iknild-street, a large urn was found in the year 1720, full of coins, some as old as the time of Julius Cæsar's landing in this island.

At Shinsfield, two miles from Woodstock, a large tessellated Roman pavement was discovered in 1713, consisting of small square stones, and bricks, of six different colours, strongly cemented: and near Great Tew, another has been found, consisting of red, white, blue, and yellow pieces, so disposed, as to form various beautiful figures.

MEMBERS of PARLIAMENT for this County.

The county of Oxford sends nine members to parliament, two knights of the shire for the county, two citizens for Oxford, two members for the university, two for Woodstock, and one for Banbury.

BUCKINGHAMSHIRE.

Buckinghamshire is bounded by the Thames, which divides it from Berkshire on the south; by Oxfordshire on the west; by Northamptonshire on the north; and by the counties of Bedford, Hertford, and Middlesex, on the east. It is about thirty-nine miles in length, from north to south; eighteen in breadth, from east to west; and one hundred and thirty-eight miles in circumference; containing an area of five hundred and forty-eight square miles, or four hundred and forty-one thousand acres. It is divided into eight hundreds, in which are fourteen market-towns, one hundred and eighty-five parishes, fifteen parks, about eighteen thousand three hundred and ninety houses, and one hundred and eleven thousand, three hundred and ninety-four inhabitants. It lies in the diocese of Lincoln, and province of Canterbury.

R I V E R S.

The rivers of this county, except the Thames, which bounds it on the south, are inconsiderable. The eastern parts are watered by the Coln, and the north by the Ouse, or Isa; besides which, several nameless rills glide through the other parts of the county.

Remarks on the INLAND NAVIGATION of Buckinghamshire.

The principal, and indeed the only navigation in this county, is the Thames, which we have already described in our account of Berkshire; and that of the Ouse will be mentioned in our account of Bedfordshire. None of the other rivers are capable of being made navigable, except the Coln, which washes the eastern borders of this county.

A I R A N D S O I L.

The south-east part of this county lies high, and consists of a ridge of hills called the Chiltern, probably from *Cylt*, or *Chilt*, a Saxon name for chalk. The northern part is distinguished by the name of the Vale.

The air on the Chiltern hills is extremely healthful; and even in the vale, it is better than in the low grounds of other counties. The soil of the Chiltern is stony, though it produces good crops of wheat and barley: in many places it is covered with thick woods, among which there are still great quantities of beech. In the vale, which is extremely fertile, the soil is marle or chalk; some parts of it are converted into tillage, but much more is used for grazing. The gentlemen who have estates in this county, find grazing so lucrative, that they generally keep their estates in their own hands; and the lands that are let, fetch more rent than any other in the kingdom. One single meadow, called Beryfield, in the manor of Quarendon, not far from Aylesbury, was let many years ago for eight hundred pounds a year, and has since let for much more.

Remarks on the HUSBANDRY of Buckinghamshire.

About High Wiccomb, the farms are in general large, and most of the farmers keep more teams than one. Five horses are always used to a plough, sometimes six, with two men, one to hold, and the other to drive; and an acre of ground they reckon a good day's work: if of following, half, or three quarters of an acre. This conduct is amazing: it is common in Suffolk to see an acre of ground, of exceeding strong soil, ploughed up in a day, by one man and a pair of horses. The course of husbandry in this neighbourhood is very well adapted to the soil: 1. turnips; 2. barley; 3. clover;

4. wheat; often barley after wheat; another proof that the soil does not require more than a pair of horses to a plough; for turnips are never sown but in soils that are somewhat light. One remark, however, is necessary; the fields are very hilly. The prices of labour are: for reaping wheat, the price is from five to seven shillings per acre; barley, one shilling and two-pence. A day-labourer in winter has one shilling a day; in June and July, one shilling and two-pence; in harvest, one shilling and six-pence, with board, and beer at all seasons. Threshing is all done by the day, a day's work being reckoned four bushels of wheat, six of barley, and eight of oats. The rents of lands in these hilly parts of the county are from seven shillings to ten shillings and six-pence an acre. Their middling crops are about three quarters of wheat; as much of barley, and about four of oats. From Wiccomb, up to Stoken-church in Oxfordshire, the soil is all chalk, but the crops of corn in general clean and good.

TRADE and MANUFACTURES.

The principal manufactures are bone-lace and paper; and the trade, in general, consists of corn, cattle, and malt.

BOROUGH, and MARKET TOWNS, &c.

We entered this county from Bicester, in Oxfordshire; and first visited the beautiful seat of lord Temple at Stow, two miles from Buckingham.

We ascend, by a noble flight of steps, designed by Signor Borra, ornamented with stone balustrades, to the Saloon, which is a grand apartment hung with fine tapestry, representing the functions of the cavalry. The dimensions of this room are forty-three feet by twenty-two; the furniture, crimson: and it is ornamented with two marble busts, a rich French cabinet, and fine china jars. The pictures are,

1. A landscape.
2. A flower-piece.
3. A fruit-piece.

The Hall is a spacious room, thirty-six feet by twenty-two and a half, designed and painted by Kent. Its ceiling is enriched with the signs of the Zodiac, and the walls are adorned with festoons of flowers, &c.

Over the chimney is a curious piece of alto relievo, the story of which is Darius's Tent. Here are also eleven marble busts properly disposed, and a statue of Narcissus.

The Dining-room is a well-proportioned apartment, thirty feet by twenty-one, in which are the following paintings, viz.

- Two large landscapes, by Horizonti.
- Two small ditto, by Loton.
- A dancing at the duke of Mantua's marriage, by Tintoretto.
- A landscape, by Claude Lorain.
- A small ditto of Acis and Galatea, by Millè.
- A large picture of young Bacchanals.
- A sea-port, by a Flemish master.
- A landscape with figures and cattle, by Bassan.
- A ditto, with a mill.
- Vulcan and Venus.
- The marriage at Cana, by Bassan.
- Moses burying the Egyptian, by Pouffin.

Near this are a Bed-chamber, with two Dressing-rooms, of which the hangings, bed, and furniture, are rich crimson casoy; and over the chimney is a full-length portrait of the late countess of Dorset.

In the first dressing-room, a piece of still life over the chimney.

In the second, a fine cabinet; and over the chimney, Prince Henry at full length.

The Grand Stair-case is ornamented with iron-work, and enriched with three ceiling-pieces, painted by Sclater, viz.

1. Justice and Peace.
2. Fame and Victory.
3. Plenty and Constancy.

The walls are also adorned with military pieces:

The Chapel is wainscotted with cedar, and has a gallery of the same, hung with crimson velvet, under which are seats for the servants. Its dimensions are thirty-seven feet by twenty feet ten inches, and twenty-six feet high.

Over the communion-table is a fine painting of the Resurrection, by Tintoretto; and over that are the king's arms, richly carved and ornamented.

Above the cedar wainscot are the following paintings at full length, viz.

1. Moses and Aaron.
2. St. Peter and St. Paul.
3. The Four Evangelists.
4. The Ascension.
5. Baptism.
6. The Salutation of the Virgin Mary.

The ceiling is the same as at the Chapel Royal at St. James's; and the cedar wainscot enriched with elegant carving, by Guibbons.

In her Ladyship's Dressing-room, the hangings, chairs, and window-curtains, of fine printed cotton.

A fine old Japan cabinet, ornamented with china jars.

A fine view of Peking, over the chimney-piece, by Solli.

In her Bed-chamber, the hangings, chairs, and window-curtains, the same as the Dressing-room; and there is a picture of a Chinese temple over the chimney, by Solli.

In the Chinese Closet, we meet with the repository of her ladyship's valuable china. The japan and ornaments were a present of the late prince and princess of Wales.

From this closet we enter a colonade, ornamented with paintings, by Sclater. It is likewise curiously embellished with exotics and flowering shrubs.

The Grenville Room is twenty-nine feet eight inches by twenty-six feet three inches, and nineteen feet four inches high. It is hung with green velvet, and ornamented with the following portraits, all at full length, except the first.

1. The late countess Temple, mother to the present earl.
2. The present countess Temple.
3. The present earl Temple.
4. The Right Honourable George Grenville.
5. The Honourable James Grenville.
6. The Honourable Henry Grenville, formerly governor of Barbadoes.
7. The Honourable Thomas Grenville, who was killed in the defence of his country, on board the *Defiance*, of which ship he was captain.
8. The Right Honourable Lady Hester Pitt.

The Gallery is a magnificent apartment, seventy-four feet by twenty-five feet, and twenty feet high, furnished with Gobelin tapestry chairs, and hung with three fine pieces of tapestry, as follows:

1. A beautiful representation of a farm.
2. A Dutch wake, from Teniers.
3. A Dutch fishery, from ditto.

In this gallery are two chimnies, with a picture of Roman ruins over each, by Panini.

And four doors with rural pictures over each, viz.

1. Plowing.
2. Reaping.
3. Hay-making.
4. Sheep-shearing.

Likewise a rich cabinet at each end, containing books; and ten marble busts of Roman emperors.

Near this is a Dressing-room, hung with yellow silk damask, trimmed with silver; with the following paintings:

- Joan of Arc, over the chimney.
A portrait of Sir Thomas Temple.
Ditto of Lady Hester Temple.

And a Bed-chamber, hung and ornamented as above, with a bed and chairs of the same. The paintings are, The representation of the Holy Lamb.

- A flower-piece.
Two landscapes, one over each door.

Another Dressing-room is hung with green damask, trimmed with gold, in which are the following paintings: A picture over the chimney, by Rembrandt.

Two saints, St. Laurence and St. Stephen, one over each door.

On one side, Oroses ordering melted gold to be poured into the mouth of Crassus.

On the other, two pieces of ruins, and a landscape, with dancing satyrs, by Paul Brill.

The rape of Helen, by Theseus.

The return of Chryseis to her father, both by Primiticcio.

The Bed-chamber has a green damask bed, hangings and chairs, trimmed with gold. The paintings are,

1. An original portrait of Oliver Cromwell.
2. A Silenus.
3. A portrait of Colonel Stanyan.

In another Dressing-room are the following paintings: A portrait of Rubens's wife, over one door, by Rubens. Over the other, a knight of the Bath, by Vandyke. Cymon and Iphigenia.

The State Gallery is seventy feet nine inches by twenty-five feet, and twenty-two feet high.

Here are two marble chimney-pieces of Siena, &c. The ceiling finely ornamented with paintings and gilding, by Sclater. Two fine large marble tables, with two large pier-glasses. The walls are adorned with curious pieces of tapestry, viz.

1. The triumph of Diana.
2. The triumph of Mars.
3. The triumph of Venus.
4. The triumph of Bacchus.
5. The triumph of Ceres.

The piers are adorned with trophies.

Two chimnies, the upper parts of which are adorned with gilding and carving.

1. Representing Mercury conducting Tragic and Comic Poetry to the hill of Parnassus.

2. A goddess conducting Learning to Truth.

The chairs and settees of blue damask, with carved and gilded frames.

The State Dressing-room is twenty-four feet eight inches by thirty feet, and nineteen feet four inches high. It is hung with blue damask, chairs and window-curtains of the same. The doors and ceiling are finely ornamented with carving and gilding. The paintings are,

A fine portrait of the late lord Cobham, by Sir Godfrey Kneller.

Four conversation pieces, by Francisco Cippo.

Venus binding the eyes of a Cupid, and the Graces offering tribute.

A marble table, with a fine pier-glass.

The State Bed-chamber is fifty-six feet eight inches, by twenty-five feet ten inches, and eighteen feet eight inches high.

The bed and ceiling by Signor Borra. The chairs and hangings of crimson damask, Pillars of the Corinthian order. The whole finely carved and gilt.

A Madona from the school of Rubens.

A picture over the chimney.

A very curious chimney-piece of white marble, designed by Signor Borra.

Two marble tables.

Two fine large pier-glasses.

The State Closet is hung with blue damask, finely ornamented with carving and gilding. Out of which you go into a colonade, where you have a beautiful view

of the gardens, as well as the country; and the passage is ornamented with marble busts.

There is also a grand stair-case, adorned with paintings of the four seasons. The ceiling represents the rising sun, by Phœbus in his car.

THE GARDENS.

The southern entrance of the gardens is formed by two light pavilions, of the Doric order, designed by Sir John Vanbrugh: they are adorned with rough masterly paintings, by Nollkins. The stories are from Pastor Fido.

Almost the first striking object which occurs, is an Obelisk, near seventy feet high, designed for a jet d'eau, and placed in the middle of a large octagon piece of water. At some distance we perceive two rivers, which are at last united, and enter the octagon in one stream. Over one of these is a Palladian bridge. From this point a Gothic edifice dedicated to Liberty, seventy feet in height, appears on the top of a hill. On the left is an Egyptian pyramid, from whence we were formerly conducted to the Cold Bath. Here we have a prospect of a natural cascade, falling from the last-mentioned octagon, in three distinct sheets, into an extensive lake. One of the sheets passes through the arch of an artificial ruin, covered with ever-greens.

But it is time to drop this general and collective detail, into which the first admittance to a promiscuous survey of so many beauties has imperceptibly betrayed us. We therefore proceed to give a circumstantial and distinct display of each remarkable particular, as it severally and successively presents itself, in our progress through the gardens.

The Hermitage, built of rough stone, and agreeably situated in a rising wood, on the banks of the lake.

The statues of Cain and Abel, which are finely executed.

The Temple of Venus, with the inscription, *Veneri Hortensi*, i. e. "To the Garden Venus." It was designed by Kent, and is painted with the story of Helenore and Malbecco, in Spencer's *Fairy Queen*, by Sletter. It is adorned in the front with the busts of Nero, Vespasian, Cleopatra, and Faustina. Over the frieze is the following motto alluding to the painting, from a poem ascribed to Catullus.

Nunc amet, qui nunquam amavit;
Quique amavit, nunc amet.

Thus translated by Parnell:

Let him love now, who never lov'd before;
Let him who ever lov'd, now love the more.

The Belvidere, or Gibbes's Building. Underneath is an ice-house.

The Roman Boxers, admirably copied.

Two Pavilions. One of them is used as a dwelling-house; the other is ornamented with the statues of Julius Cæsar, Cicero, Portia, and Livia.

The Egyptian Pyramid, which is sixty feet in height, with this inscription, "Inter plurima hortorum horum ædificia a Johanne Vanbrugh, equite, designata, hanc Pyramidem illius memorie sacram voluit Cobham."

That is, "Among the many edifices in these gardens designed by Sir John Vanbrugh, Cobham dedicates this, in particular, to his memory.

Within is the following inscription from Horace:

Lusisti satis, edisti satis, atque bibisti,
Tempus abire tibi est; ne potum largis æquo
Rideat et pulset lasciva decentius ætas.

Thus translated, extempore, by a gentleman, upon the spot:

Enough, my friend, you've trifled, drank, and eat,
'Tis time, at least 'tis prudence, to retreat;
Left wanton boys exert their decent rage,
And kick you drunk and reeling from the stage.

The statues of Hercules and Antæus, situated in a field, enclosed with a fence of stakes, after the military manner.

St. Augustine's Cave, a monastic cell, built with moss and roots: within is a straw couch, and the following inscriptions, which are extremely happy in the stile of the old monkish Latin verse, and said to have been composed by Mr. Glover, the ingenious author of *Leonidas*.

On the right hand:

Sanctus Pater Augustinus;
(Prout aliquis divinus
Narrat) contra sensualem
Actum Veneris lethalem,
(Audiat clericus) ex nive,
Similem puellam vivæ,
Arte mire conformabat,
Quacum bonus vir cubabat:
Quod si fas est in errorem
Tantum cadere doctorem;
Quæri potest, an carnalis
Mulier potius, quam nivalis,
Non sit apta ad domandum,
Subigendum, debellandum,
Carnis tumidum furorem,
Et importunum ardorem?
Nam ignis igne pellitur,
Vetus ut verbum loquitur.
Sed, inuptus, hac in lite,
Appellabo te, marite.

That is, "The holy Father Augustine, (as some divines tell us) against the sensual and deadly act of lust—(give ear, ye priests)—framed by wondrous art, a girl of snow, resembling the life, with whom the good man used to lie. But, if it be allowable for so great a doctor to fall into error, may we not reasonably ask, whether or not a girl of flesh and blood is not better qualified than one made of snow, to allay the importunate ardours of lust? For as the old maxim says, fire is expelled by fire. But I, an unmarried man, appeal to married men for a solution of this difficulty."

On the left:

Apparuit mihi, nuper in somnio mulier cum nudis et
anhelantibus molliter papillis et hianti suaviter vultu—
cheu! benedicite!

Cur gaudes, Satana, muliebrem fumere formam?
Non facies voti casti me rumpere normam.
Heus! fugite in cellam; pulchram vitate puellam;
Nam radix mortis fuit olim Fœmina in Hortis.
Vis fieri fortis? Noli concumbere scortis.

In sanctum originem eunuchum.
Filius ecclesie origines fortasse probetur;
Esse patrem nunquam se sine teste probet.
Virtus Diaboli est in lumbis.

That is, "A girl with a naked and panting bosom lately appeared to me in a dream, &c. &c.

"Why, O Satan, do you chuse to appear in a female shape? You will never force me to break my vows of chastity.—Haste, fly into your cell, and escape from the power of beauty; for the root of death was heretofore a Woman in a Garden.

"Would you be strong? Avoid unlawful enjoyments."

The last cannot be easily translated. Nor is it possible, by the best English translation, to give a just idea of the rest; the turn and humour of which is inherent in the Latin. The same may be said of the following, which fronts the door:

Mente pie elatâ, peragro dum dulcia prata,
Dormiit, absque dolo, pulchra puella solo;
Multa ostendebat, dum semisupina jacebat,
Pulchrum os, divinum pectus aperta sinum.
Ut vidi mammas, concepi extempore flammâs,
Et dicturus ave dico, Maria, cave:
Nam magno totus violenter turbine motus,
Pœne illam invado, pœne et in ora cado.
Illa sed haud lente fugit, curritque repente,
Currit et, invito me, fugit illa citò.

Fugit

Fugit causa mali, tamen effectus Satanali
 Internoque meum cor vorat igne reum.
 O inferne canis, cur quotidie est tibi panis,
 Per visus miros sollicitare viros?
 Cur monachos velles fieri tam carne rebelles;
 Nec castæ legi turbidi membra regi?
 En tibi jam bellum dico, jam triste flagellum
 Esuriamque paro, queis subigenda caro.
 Quin abscindatur, ne pars sincera trahatur,
 Radix, quo solus nascitur usque dolus.

That is, "As filled with devotion, I wandered over the delightful meadows; a beautiful virgin was sleeping on the ground. As she lay half-reclined, she discovered many beauties. Her naked bosom awakened my desires, and as I am about to say AVE MARIA, I cried out, MARY, BEWARE. My sudden passion almost tempted me to seize her in my arms; but she arose, and suddenly fled from me.—The cause of my pain is departed, but the effect still remains, and devours my guilty heart with inward fires. O, thou dog of hell, why is it your daily food to tempt mankind with these strange spectacles? Why is it your pleasure to raise rebellion in the flesh of monks, nor ever to suffer their turbulent emotions to submit to the laws of chastity? But I now declare war against you, and intend to conquer my passions with the scourge, and with hunger. But perhaps it is best to cut off the root of evil, lest the sound parts should be infected."

The Temple of Bacchus, an edifice of brick. Its inside is adorned with Bacchanalian scenes, painted by Nollikins. Among the rest, are two vases, touched in a masterly taste. Some of the smaller figures, in particular, demand our attention.

A small Obelisk, with this inscription, "To the memory of Robin Coucher."

The Saxon Temple. An altar situated in an open grove, about which the seven Saxon deities, which denominate the several days of the week, were formerly placed; but these have been since removed to the Gothic Temple.

Nelson's Seat. This is an elegant little building, from whence there is an agreeable open prospect. In the inside are the following inscriptions, explaining the paintings, in which the boys fixing the trophies are elegantly fancied.

On the right hand,

Ultra Euphratem et Tigrim
 usque ad Oceanum propagatâ ditione,
 Orbis terrarum imperium Romæ adsignat optimus princeps,
 cui super advolat Victoria
 Laurigerum sertum hinc inde
 utraque manu extendens,
 comitantibus Pietate et Abundantia.

In arcu Constantini.

That is, "Beyond Euphrates and Tigris, having extended his dominions even to the Ocean, the most excellent prince assigns the empire of the world to Rome. Above whom flies Victory, extending a laurel wreath on either side, with both hands, attended by Piety and Plenty."

In the arch of Constantine.

On the left.

Post obitum L. Veri.
 in imperio cum Marco consortis,
 Roma
 integram orbis terrarum
 potestatem ei et in eo contulit.

In Capitolio.

That is, "After the death of Lucius Verus, associate in the empire with Marcus, Rome conferred on him the entire command of the whole earth."

In the Capitol.

The Equestrian Statue of King George I. in complete armour, placed at the head of the canal, opposite the north front of the house, with this inscription from Virgil:

In medio mihi Cæsar erit.—
 Et viridi in campo signum de marmore ponam
 Propter aquam. COBHAM.

Thus translated:

"Full in the midst shall Cæsar's form divine
 "Auspicious stand, the godhead of the shrine.—
 "And near the stream a marble statue rear."

The Statue of His Late Majesty, raised on a Corinthian pillar, with this inscription:

Georgio Augusto.

That is, "To George Augustus."

Dido's Cave; a retired dark building, with this inscription from Virgil:

Speluncam Dido, dux et Trojanus, eandem
 Deveniunt.—

Thus translated on the spot:

"To the safe covert of one cavern came
 "The Trojan leader, and the Tyrian dame."

The judicious spectator will observe, that the figures of the two Cupids joining their torches are finely painted.

The Rotunda, supported by Ionic pillars, and designed by Sir John Vanbrugh. Within, is a statue of Venus de Medicis on a pedestal of blue marble. Scarce any object in the whole garden shews itself to more advantage than this structure, or makes a more beautiful figure from several different points of prospect.

The Statue of the late Queen, erected on four Ionic columns, and situated in a rural amphitheatre; with this inscription:

Honori, Laudi, Virtuti, Divæ Carolinæ.

That is, "To the Honour, Praise, and Virtue of the Goddess Caroline."

The Sleeping Parlour; a square building with an elegant Ionic portico, situated in a close wood, with this inscription:

Cum omnia sint in incerto, fave tibi.

That is, "Since all things are uncertain, take your pleasure."

The Witch House; a square building. The paintings on the walls are done by the late lord's gentleman; and, rude and inartificial as they may seem, are much in character.

The Temple of Modern Virtue; in ruins.

The Temple of Ancient Virtue; a complete and beautiful rotunda of the Ionic order, designed by Kent. Over each door, on the outside, is this motto: "PRISCÆ VIRTUTI." That is, *To ancient Virtue.* In four niches within, standing at full length, are the following statues:

I. EPAMINONDAS.

Cujus a virtute, prudentia, verecundia,
 Thebanorum respublica
 Libertatem simul et imperium,
 Disciplinam bellicam, civilem et domesticam,
 Accipit;
 Eoque amisso, perdidit.

That is, "Epaminondas, from whose valour, prudence and moderation, the republic of Thebes acquired its liberty and power; its military, civil, and domestic discipline; and at whose death it was deprived of them."

II. LYCURGUS.

Qui summo cum consilio inventis legibus,
 Omnemque contra corruptelam munitis optime,
 Pater patriæ,
 Libertatem firmissimam,
 Et mores sanctissimos,
 Expulsa cum divitiis avaritiâ, luxuria, libidine,
 In multa secula
 Civibus suis instituit.

That is, "Lycurgus, who having invented laws with the greatest prudence, and most wisely guarded them against every species of corruption; the father of his country,

country, established for his countrymen, through many ages the most unshaken liberty, the most unblemished morals; having expelled avarice, luxury, and lust, by banishing wealth."

III. S O C R A T E S.

Qui corruptissima in civitate innocens,
Bonorum hortator, unici cultor DEI.
Ab inutili otio, et vanis disputationibus,
Ad officia vitæ, et societatis commoda,
Philosophiam avocavit,
Hominum sapientissimus.

That is, "Socrates, who being virtuous in a most corrupt city, an encourager of all good men, called off philosophy from useless leisure and empty disputations, to the duties of life, and the conveniencies of society.

IV. H O M E R U S.

Qui poetarum princeps, idem et maximus,
Virtutis præco, et immortalitatis largitor,
Divino carmine,
Ad pulchre audendum, et patiendum fortiter,
Omnibus notus gentibus, omnes incitat.

That is, "Homer, who being the first, and greatest of poets, the herald of virtue, and the dispenser of immortality, known to all nations, excites all nations to dare with honour, and to suffer with resolution."

Over one door is this inscription:

"Carum esse civem, bene de republica mereri, laudari, coli, diligi, gloriosum est: metui vero, et in odio esse, invidiosum, detestabile, imbecillum, caducum."

That is, "To be dear to our country, to deserve well of the commonwealth, to be praised, honoured, and beloved, is glorious; but to be feared and hated is odious, detestable, hazardous, and unsafe."

And over the other.

"Justitiam cole et pietatem, quæ cum fit magna in parentibus et propinquis, tum in patria maxima est. Ea vita via est in cælum, et in hunc cætum eorum qui jam vixerint."

That is, "Regard justice and religion, which, though a matter of great importance to our parents and friends, is of still greater effect with regard to our country. Through such a course of life is the road to Heaven, and this assembly of those who have lived before us."

Apollo and the Nine Muses.

Here we cross the Serpentine River, whence we pass into the Elysian Fields; a most delicious retreat, in which is placed,

The Temple of the British Worthies. This edifice is disposed into niches, filled with the following bustos: Pope. Without any inscription.

"Sir Thomas Gresham, who by the honourable profession of a merchant, having enriched himself, and his country, for carrying on the commerce of the world, built the Royal Exchange."

"Ignatius Jones, who, to adorn his country, introduced and rivalled the Greek and Roman architecture."

"John Milton, whose sublime and unbounded genius equalled a subject that carried him beyond the limits of the world."

"William Shakespeare, whose excellent genius opened to him the whole heart of man, all the mines of fancy, all the stores of nature; and gave him power, beyond all other writers, to move, astonish, and delight mankind."

"John Lock, who, best of all philosophers, understood the powers of the human mind, the nature, end, and bounds of civil government; and with equal courage and sagacity, refuted the slavish systems of usurped authority over the rights, the consciences, or the reason of mankind."

"Sir Isaac Newton, whom the God of Nature made to comprehend his works; and from simple principles, to discover the laws never known before, and to explain

29 .

the appearances, never understood, of this stupendous universe."

"Sir Francis Bacon, lord Verulam, who, by the strength and light of a superior genius, rejecting vain speculations, and fallacious theory, taught to pursue truth, and improve philosophy by the certain method of experiment."

In the niche of a pyramid is placed a Mercury, with these words subscribed:

Campos ducit ad Elyfios.

That is, "Leads to the Elysian fields."

And below this figure is fixed a square of black marble, with the following lines:

Hic manus ob patriam pugnando vulnera passi,
Quique pii vates, et Phœbo digna locuti,
Inventas aut qui vitam excoluere per artes,
Quique sui memores alios fecere merendo.

Here chiefs, who bled to save their country, stray;
Here bards, who virtuous, pour'd the moral lay;
With those whom useful arts consign'd to fame,
And all whose merits Memory loves to name.

"King Alfred, the mildest, justest, most beneficent of kings; who drove out the Danes, secured the seas, protected learning, established juries, crushed corruption, guarded liberty, and was the founder of the English constitution."

"Edward, prince of Wales, the terror of Europe, the delight of England; who preserved, unaltered, in the height of glory and fortune, his natural gentleness and modesty."

"Queen Elizabeth, who confounded the projects, and destroyed the power, that threatened to oppress the liberties of Europe; took off the yoke of ecclesiastical tyranny; restored religion from the corruptions of Popery; and by a wife, a moderate, and a popular government, gave wealth, security, and respect to England."

"King William III. who, by his virtue and constancy, having saved his country from a foreign master, by a bold and generous enterprize, preserved the liberty and religion of Great Britain."

"Sir Walter Raleigh, a valiant soldier, and an able statesman; who endeavouring to rouse the spirit of his master, for the honour of his country, against the ambition of Spain, fell a sacrifice to the influence of that court whose arms he had vanquished, and whose designs he opposed."

"Sir Francis Drake, who, through many perils, was the first of Britons that adventured to sail round the globe; and carried into unknown seas and nations the knowledge and glory of the English name."

"John Hampden, who, with great spirit, and consummate abilities, begun a noble opposition to an arbitrary court, in defence of the liberties of his country; supported them in parliament, and died for them in the field."

Sir John Barnard, without any inscription.

On the back-side of this building is the following inscription:

To the memory of
S I G N I O R F I D O,
an ITALIAN of good extraction;
who came into ENGLAND,
not to bite us, like most of his countrymen,
but to gain an honest livelihood.
He hunted not after fame,
yet acquired it;
regardless of the praise of his friends,
but most sensible of their love.
Though he lived amongst the great,
he neither learned nor flattered any vice.

He was no bigot,
Though he doubted of none of the xxxix articles.

B b b b

And,

And, if to follow nature,
and to respect the laws of society,
be philosophy,

he was a perfect philosopher :

a faithful friend,

an agreeable companion,

a loving husband,

distinguished by a numerous offspring,
all which he lived to see take good courses.

In his old age he retired
to the house of a clergyman in the country,
where he finished his earthly race,
and died an honour and an example to the whole species.

READER,

this stone is guiltless of flattery ;

for he to whom it is inscribed

was not a Man,

but a

GREY-HOUND.

The Shell Bridge.

The Chinese House, situated, after the Chinese manner, upon a large piece of water. We enter it by a bridge, decorated with Chinese vases. It is a square building with four lattices, and covered with sail-cloth. The windows and roof, together with its cool situation on the lake, afford us a just specimen of the manner of living in a hot country. Within is the figure of a Chinese lady asleep. The outside of the house is painted in the Chinese taste, by Mr. Sleter ; the inside of India Japan work.

The Temple of Contemplation.

The Grotto, situated at the head of the Serpentine River, furnished with a great number of looking-glasses, both on the walls and ceiling, fixed in frames of plaster-work, stuck with shells and flints. It has a marble statue of Venus on a pedestal adorned in the same manner. On each side is a pavilion, one of which is ornamented with shells, the other with broken flints and pebbles.

The Ladies Temple, supported by groin arches, with Venetian windows. The inside is beautified with the following paintings by Sleter : on the right side, ladies employed in needle and shell-work : on the opposite side, ladies engaged in painting and music.

The Grecian Temple ; a large pile of the Ionic order, after the manner of the Temple of Minerva at Athens.

Captain Grenville's Monument, with this inscription :

Sororis suæ Filio

THOMÆ GRENVILLE,

Qui navis præfectus regiæ,

Ducente classem Britannicam Georgio Anson,

Dum contra Gallos fortissimè pugnaret,

Dilaceratæ navis ingenti fragmine

Femore graviter percussio,

Perire, dixit moribundus, omnino satius esse,

Quam inertis reum in judicio sisti ;

Columnam hanc rostratam

Laudans et mærens posuit

COBHAM.

Insigne virtutis, cheu ! rarissimæ

Exemplum habes ;

Ex quo discas

Quid virum præfectura militari ornatum

Deceat.

M.DCC.XLVII.

That is, " To the son of his sister, Thomas Grenville, who being captain of one of his Majesty's ships, under the command of admiral Anson, while he valiantly fought against the French, was mortally wounded in the thigh, declaring in his last moments, that it was better to suffer than to be tried for cowardice, COBHAM, expressing at once his approbation and regret, erected this rostrated column. This is, alas ! an example of courage too seldom found, from whence we may learn how it becomes a commander to behave."

A spacious Basin of Water, designed for the triumphal arch.

A Fluted Column, with these inscriptions :

On one side.

To preserve the memory of her husband,

Ann, Viscountess Cobham,

Caused this pillar to be erected

In the year 1747.

On the opposite side.

Quatenus nobis denegatur diu vivere,

relinquamus aliquid

quo nos vixisse testemur.

That is, " As it is not permitted us to live long, let us leave something behind as a testimony of our having lived."

The Gothic Temple, with this inscription :

Je rends grâces aux Dieux de n'être pas Romain.

That is, " I thank God for not being a Roman."

This is a spacious edifice of red stone, terminated with towers and pinnacles, seventy feet high, and placed on the summit of a hill. The windows are of glass curiously stained, and the inside of the dome is characteristically decorated with the arms of his lordship's family, from their rise to the present time. About it are the seven statues, which, as we mentioned above, originally surrounded the Saxon altar.

The Palladian Bridge, adorned with several antique marble busts. The roof, on the side facing the water is supported by Ionic pillars. The back wall is covered with a fine piece of alto relievo, which represents the four quarters of the world bringing their various products to Britannia. Here are also paintings of Sir Walter Raleigh, with a map of Virginia ; and of Sir William Pen, presenting the laws of Pennsylvania, performed by Sleter.

The Imperial Closet ; a square room, in which are painted by the last mentioned artist, three of the worthiest of the Roman emperors, each of which is respectively distinguished by a memorable saying of his own fixed over him.

IMP. TITUS CÆS. VESPASIAN.

Diem perdiidi.—

'That is, " I have lost a day."

IMP. N. TRAJAN CÆS. AU.

Pro me : si merear, in me.

That is, " For me : but if I deserve it, against me."

IMP. MARCUS AURELIUS

CÆSAR ANTONINUS.

Ita regnes imperator, ut privatus regi te velis.

That is, " So govern when a king, as you would desire to be governed if a subject."

A grand Terrace Walk, near three hundred feet long, which leads us to

The Temple of Friendship ; a well-proportioned structure of the Doric order. The emblem of Friendship above the door, those of Justice and Liberty, with the rest of the decorations, are elegantly touched. Britannia is seated upon the ceiling. On one side are exhibited the glory of her annals, the reigns of queen Elizabeth and Edward III. On the other is offered the reign of——which she covers with her mantle, and seems unwilling to accept. This painting is executed by Mr. Sleter. The motto of this temple is,

Amicitia S.

That is, " Sacred to Friendship."

Here are the busts of the late lord, and his illustrious friends, viz. Fredrick prince of Wales ; earls of Westmoreland, Chesterfield, and Marchmont ; lords Cobham, Gower, and Bathurst ; Richard Grenville, William Pitt, and George Littelton, Esqrs.

The

The Pebble Alcove; a little grotto, ornamented with his pebbles; in which likewise his lordship's arms are curiously wrought on the back wall.

Congreve's Monument; the embellishments of which are emblematical of the poet's comic genius. On the top is placed a monkey viewing himself in a mirror, with this inscription:

Vitæ imitatio,
Consuetudinis speculum,
Comœdia.

That is, "Comedy is the imitation of life, and the mirror of fashion."

The Poet's Effigies lies in a careless posture on one side, and on the other is placed this epitaph:

Ingenio
Acri, faceto, expolito,
Moribusque
Urbanis, candidis, facillimis,
GULIELMI CONGREVE
Hoc
Qualecunque desiderii sui
Solamen simul et
Monumentum
Pofuit Cobham. 1736.

That is, "To the piercing, facetious, and refined genius; to the polished, candid, and unaffected manners of WILLIAM CONGREVE: COBHAM has erected this poor consolation and monument of his loss."

The Spectator, whose mind is capable of being moved either with grace or majesty, cannot, without reluctance, leave a place so properly calculated to inform the judgment, and interest the fancy; where art appears without affectation, and nature without extravagance.

Having viewed the delightful seat and gardens of Stow, we came to Buckingham, situated on the Ouse, sixty miles from London. It is a corporation, governed by a bailiff and burgesses, and is still considered as the county town, though Sir John Baldwin, chief justice of the Common Pleas in the time of Henry VIII. purchased the manor of Aylesbury, and removed the assizes thither, where they are still frequently held in the winter, though the summer assizes have since been removed to Buckingham by act of parliament. The town stands low, and is surrounded on all sides, except the north by the river Ouse, over which it has three stone bridges. In the northern part there is a town-hall, not ill built; and in the west a church, a very large edifice; but its spire, which was one of the tallest in the kingdom, was blown down in the year 1693, and has never been rebuilt. The county gaol is also in this town, and here are several buildings, called wool-halls, which are now falling into ruins; for though Buckingham was once a staple for wool, yet that trade is now entirely lost. There is, however, still a free-school, and several paper-mills in the neighbourhood, on the river Ouse. In the year 1725, an accidental fire broke out in this town, by which near one hundred and thirty-eight houses were destroyed, and the damage was computed at thirty-three thousand pounds.

This town was fortified by Edward the elder, about the year 915, with a rampire and turrets on both sides the bank of the river, against the incursions of the Danes. It appears, however, to have been a place of very little consequence at the Conquest; for it appears by Doomsday-book, that in the time of Edward the Confessor, it paid but for one hide of land, and had only twenty-six burgesses. In the middle of the town, on a very high mount, there was anciently a castle, but it is not known by whom it was erected. The mount is still visible, but there are hardly any vestiges of the castle now remaining. The coffin of St. Rumbald was some years since discovered in the church, where that saint had formerly a shrine. In the Popish legend of his life, St. Rumbald is said to have been the son of a British king, by a Christian princess; to have been born at King's Sutton, a small village near this town; to have lived only three days, but during that short interval, to have professed

himself a Christian, and to have bequeathed his body to Sutton, the place of his birth, for one year; to Brackley in Northamptonshire, for two years; and then to this town for ever. After these prodigies, he was, at his own request, baptized, and immediately expired. It is added, that this wonderful saint was the patron of fishermen, and that his feast is still annually observed at Folkston in Kent. Here was an old hospital, consisting of a master and several inferior brethren, dedicated to St. Laurence.

This town sends two members to parliament, has a weekly market on Saturday, and eight annual fairs, viz. Monday se'nnight after the Epiphany, the seventh of March, the sixth of May, Whitsun-Thurs'day, the tenth of July, the fourth of September, the second of October, and the eighth of November; all for cattle.

At Chitwood, or Chetwood, a village in the neighbourhood of Buckingham, there was a priory of the order of St. Augustine, founded by Sir Ralph de Norwich, in the year 1244, and dedicated to St. Mary and St. Nicholas. The site of this priory, and the estate belonging to it, came into the possession of the abbot and convent of Nutley; and the conventual church of Chetwood became parochial; yet there still remained at this place a cell, consisting of a canon or two, from Nutley-abbey.

The village of Bittlefden, or Bidlesden, not far from Buckingham, was given by Ernald de Bosco, steward to Robert earl of Leicester, to the Cistercian monks of Gerondon, who founded an abbey here in 1147. It was dedicated to St. Mary and St. Nicholas, and, at the dissolution, was valued at one hundred and twenty-five pounds, four shillings and three-pence *per annum*.

Leaving Buckingham, we passed along the banks of the Ouse to Stoney Stratford, supposed to derive its name from the stony street which runs through it, and the ford where travellers used formerly to pass the Ouse. It is situated upon that river, and in the road to Chester, fifty-three miles from London. The town is rather large, and the houses in general are built of free-stone, dug from a quarry near this town. The Ouse is now crossed by a stone bridge at the ford, where sometimes the waters swell so high, that they break into the neighbouring fields with great violence, especially on that side next the town, the bank on the other side being something higher. This town has two parish churches, though no other town in the county has more than one. It has also two chapels, and a small charity-school. In May 1743, one hundred and fifty houses were totally destroyed by fire. The principal manufacture carried on in this town, is that of bone-lace, of which large quantities are made here. At this place was one of the crosses which Edward I. erected to the memory of Eleanor, his wife, but it is now totally destroyed. Here was also an hospital before the year 1240: it is supposed to have been dedicated to St. John, and to have stood upon the causeway leading to the bridge, but there are no vestiges of it now remaining.

Here is a weekly market on Friday, and four annual fairs, viz. the twentieth of April, the second of August, the tenth of October, and the twelfth of November, all for cattle.

At Bradwell, about two miles from Stoney Stratford, a priory of black monks was founded in the time of king Stephen, by Manefelmus, or Meinfelin, baron of Wolverton. It was dedicated to St. Mary, and was originally a cell to Luffield: it was one of the small monasteries granted to Wolfey; and at the dissolution, it was valued at fifty-three pounds eleven shillings and two-pence *per annum*.

Newport Pagnel was the next town we visited. It has its name from its ancient lord, Fulk Pagnel. It stands on the south side of the Ouse, fifty-four miles from London. It is only a market-town, though much larger than many corporations and boroughs. The place is well built and populous, and has two stone-bridges over the Ouse. It has an old, but capacious church, and the streets are well paved. An hospital was founded here about the ninth year of Edward I. by John de Somery, and dedicated to St. John the Baptist, and

and St. John the Evangelist. It was valued, on the dissolution, at six pounds six shillings and eight-pence a year. It still subsists, having been refounded by Anne, queen to James I. for three poor men, and as many women, above fifty years of age. It is now called the Queen's Hospital, and the vicar of the parish, for the time being, is master. This town is a kind of staple for bone-lace, of which, it is said, more is made in this place, and in the neighbouring villages, than in any other part of the kingdom.

Here is a weekly market on Saturday, and four annual fairs, viz. the twenty-second of April, the twenty-second of June, the twenty-second of October, and the twenty-second of December, all for cattle.

At Pickford, near Newport Pagnel, there was a cell of Cluniac monks, dedicated to the blessed Virgin. It was subordinate to the abbey called Marmonstier, at Tours, in France, to which this priory was given by Fulk Pagnel, in the reign of William Rufus. This, among other alien priories, was seized by Edward III. during his war with France; and when it was again restored to the church by Henry IV. it was made subject to the priory of the Holy Trinity at York. In the seventeenth year of Henry VIII. it was dissolved, with several other small monasteries, granted to Cardinal Wolsey to be settled on one of the colleges he was building at Oxford and Ipswich. The value was then one hundred and twenty-six pounds seventeen shillings *per annum*. When the Cardinal fell into disgrace, it was granted to the use of Queen's College, Oxford, but was afterwards resumed, and sold by James I. to one Atkins, a doctor of physic.

At Crawley, or Crowley, near Newport Pagnel, there was a monastery before Edward the Confessor, and continued till some time after the Conquest.

About six miles north of Newport Pagnel, is Ounley, situated on the river Ouse, fifty-four miles from London. It was formerly noted for its manufacture of bone-lace, great quantities of which were made in this town and its neighbourhood; but this manufacture is now much less than formerly, the greater part of it being removed to Newport Pagnel. The town is now remarkable only for its church, which has a very fine spire, and there is only one other steeple in the whole county.

Here is a market on Monday, and two annual fairs, viz. Easter Monday, and the twenty-ninth of June, both for cattle.

At Rauensfont, or Raunston, a village about a mile to the west of Ounley, Henry III. about the thirty-ninth year of his reign, built and endowed a small monastery of black canons, and dedicated it to the blessed Virgin. This monastery was among those given to Wolsey towards the endowment of his colleges, and was valued at sixty-six pounds thirteen shillings and four-pence *per ann.*

Two miles beyond Ounley, at a village called Laven-den, or Launden, was a monastery for Premonstratensian canons, founded by John de Bidun, in the reign of Henry II. and dedicated to St. Mary, and St. John the Baptist. At the dissolution of religious houses, its annual revenues amounted to seventy-nine pounds thirteen shillings and eight-pence. An annual fair is still held at this village on the Tuesday before Easter, for toys.

We now directed our way to the southern parts of the county, and came to Winslow, a small town surrounded with woods, forty-five miles from London; but neither the buildings or manufacture have any thing deserving particular notice. Here is a weekly market on Thursday, and two annual fairs, viz. Holy Thursday, and the twenty-first of August, both for cattle.

In the manor of Credendon, or Crendon, near Winslow, there was an abbey or priory for regular canons of the order of St. Augustine, called Noctele, or Nutley Abbey. It was built and endowed by Walter Giffard, the second earl of Buckingham, and Ermengard his wife, in the year 1162. It was dedicated to the Virgin Mary and St. John the Baptist; and the endowments were confirmed by Henry II. and king John, with additional liberties and immunities. At the dissolution of religious houses, the society consisted of eighteen monks, and the yearly revenues were computed at four hundred

and thirty-seven pounds six shillings and eight-pence. There are considerable ruins of this structure still remaining.

In the same manor, and not far from Nutley Abbey, are the ruins of a castle built by Hugh de Bolebee, son to Walter Giffard, second earl of Buckingham, about the middle of the twelfth century.

At Ascot, in the parish of Wenge, near Winslow, there was a cell of Benedictine monks, belonging to the monastery of St. Nicholas at Angiers in France, to which the church and other lands had been given by the empress Maud. It suffered the same fate with other alien houses, and was afterwards granted to the abbey of St. Albans, and as part of which, it came into lay-hands at the dissolution.

At Hogshaw, a few miles south-west of Winslow, there was a preceptory commandry, or hospital, belonging to the knights of St. John of Jerusalem, as early as the year 1180.

At Snellsall, near Whaddon-church, a few miles north of Winslow, there was a small convent of black monks, built by Ralph Martel, before the tenth year of Edward III. and dedicated to St. Leonard. Some arches of this building still remain, and support the north side of a farm-house. The four bells that were in the turret of the old building, were removed to the church of Bradwell, and on the largest of these bells is inscribed, *Vox Augustini sonet in aure Dei*: The voice of Augustine sounds in the ear of God. The yearly value of this priory, at the dissolution, was eighteen pounds one shilling and eleven-pence.

About four miles east of Winslow, is Stukeley, a large parish, remarkable for an old church, probably built before the Conquest, in the ancient plain manner. It consists of a parallelogram, composed of four squares, two of which are allotted to the performance of divine service, the third is covered by the steeple, and the fourth was the choir, and is vaulted over with stone. The windows are small, with semicircular arches: at the west end are three arches, that in the middle being the door.

Aylsbury, Aylesbury, or Alesbury, was the next place we visited. It is situated in a very fertile part of the county, at the west end of the vale of Aylsbury, near the river Tame, forty-four miles from London. The town consists of several streets lying round the market-place, a large handsome square, in the centre of which is the town-hall, and under it the prison. The town was incorporated by queen Mary, and the corporation consists of a bailiff, ten aldermen, and ten capital burghesses. It was a royal manor in the time of William the Conqueror, who gave it to one of his favourites to be held by an odd tenure, viz. that he should provide straw for the king's bed and chambers, and should furnish him with three eels in the winter, and two green geese in the summer, if the king should happen to come that way. From this place there is a causeway, which extends three miles towards London, raised at the expense of Baldwin, chief justice of the Common Pleas in the reign of Henry VIII. He also erected the town-house, and some other buildings. The church at Aylsbury is said to be the oldest in this part of the island, but has nothing remarkable. There was formerly an ancient hospital in this town, dedicated to St. John, said to have been founded by several of the inhabitants in the reign of Henry I. In the twenty-fourth of Edward III. the building was in ruins; and the revenues, valued only at five nobles, or one pound thirteen shillings and four-pence a year, had been seized by some lay-persons.

There was also another hospital in this town for lepers, said to have been built and endowed with twenty shillings *per annum* by the inhabitants, about the same time as that of St. John, with which it seems to have been afterwards ruined.

There was likewise a nunnery of Maturines, where the parsonage now stands. Besides which, there was a house of Grey, or Franciscan friars, at the south end of the town, founded by James earl of Ormond, in the tenth year of Richard II. and valued, on the dissolution of religious houses, at three pounds two shillings and five pence *per annum*.

Aylesbury sends two members to parliament, who are chosen by the inhabitants paying scot and lot, and returned by the constables, who are chosen by the lord of the manor, the corporation having no share in returning the members. Here is a weekly market on Saturday, abounding with all kinds of provisions, which are generally sold very reasonably; and three annual fairs, viz. Saturday before Palm Sunday, the fourteenth of June, and the twenty-fifth of September, all for the sale of cattle.

Ivingo, or Ivingho, is a small market-town, situated in a park between Bedfordshire and Hertfordshire, and surrounded with woods. A Benedictine nunnery was founded here by Henry de Blois, bishop of Winchester, about the year 1160, and dedicated to St. Margaret and St. Nicholas. At the dissolution, there were nine nuns in this house, though the annual revenues amounted to no more than fourteen pounds three shillings and a penny.

Four miles south-west from Ivingo, on the borders of Hertfordshire, is a village called Ashridge, or Effervy, where there was formerly both a royal palace and a religious house. The latter was founded in the year 1243, by Edmund earl of Cornwall, son to Richard, king of the Romans, in honour of the precious blood of Jesus Christ. It was a college for a rector and twenty brethren of canons, called Bonhommes, who observed the rules of St. Augustine. It was valued at four hundred and sixteen pounds sixteen shillings and four-pence *per annum*, on the suppression of religious houses, when it became the seat of the earls of Egerton, now dukes of Bridgewater. It stands in the middle of a very pleasant park, in a fine situation for hunting.

From Ivingo we passed to Wendover, an ancient borough town, situated in the road from Uxbridge to Aylsbury, thirty-nine miles from London. Its situation is low and miry, but the hills on each side are pleasant. It is but a mean place, in which there is nothing worth notice but a charity-school for twenty children. It, however, sends two members to parliament, has a weekly market on Thursday, and two annual fairs, viz. the twelfth of May, and the second of October, both for cattle.

Three miles to the south-west of Wendover, is Risborough, or Monk's Risborough, a small market-town, situated on an eminence, thirty-three miles from London. About the year 991, this place was given to the monastery of Christ-church in Canterbury, by Aeschwyn bishop of Dorchester, and a cell to that priory was placed here. The place has now nothing remarkable, except a weekly market on Monday, and an annual fair on the sixth of May, for the sale of cattle.

In the neighbourhood of Risborough are two places of great antiquity, Elleborough and Kymbel. At Elleborough, on a circular mound near the church, is an ancient fortification called Bellinus's Castle; and the inhabitants have a tradition, that king Bellinus resided there: and to the northward of this place, there is another eminence, that still retains the name of Belinesbury Hill. Kymbel is supposed to derive its name from Cunobeline, one of the British kings, the name, in some ancient records, being written Cunebel. Near this place are many trenches and fortifications, which confirm the opinion that this county was the scene of action, when the Britons opposed the Romans in their second expedition under Aulus Plautius, when Cataractus and Tagadumnus, the two sons of Cunobeline, were slain.

Not far from Monk's Risborough, at a village called Whiteleaf, is a high steep chalky hill, on the south-west side of which there is the figure of a cross, called Whiteleaf Cross, from the village of that name just mentioned. This remarkable piece of antiquity is of the same nature as the White Horse already described in our account of Berkshire. It is formed like the figure of the White Horse, by trenches cut into the chalk. The perpendicular line of the cross is about an hundred feet in length, two feet in depth, and about fifty in breadth at the bottom, but decreases gradually upwards, till it scarcely exceeds twenty at the top. The transverse line is about seventy feet in length, and twelve in breadth,

and the trench cut into the chalk is between two and three feet deep. The whole is supported on a triangular base, intended to represent the flight of steps gradually decreasing, on which it was usual in the Saxon times to erect crosses in the public ways; such crosses and steps being also represented on some of the coins of the northern nations; and in the charters granted in the early ages of christianity, by our Saxon ancestors. The same custom prevails here of scouring the cross, as already observed in our account of Berkshire, of cleaning the horse. It is supposed to be a trophy of the Saxons; but when, or on what particular occasion, it was formed, is unknown.

Not far from Monk's Risborough is Prince's Risborough, where, on the top of a hill, are the traces of a camp. At the foot of the hill a coin of the emperor Vespasian was found some years ago; and it is said that thirteen counties may be seen from the top of this hill.

Pursuing our journey to the southward, we came to West Wycomb, or Wycomb, a small place, where lord Despencer has a noble seat; but the house itself is by no means equal to the ornamented environs. The situation is very agreeable from an eminence rising from a most elegant river, which meanders through the park and gardens with the happiest effect. Before the house it forms an elbow, and has the appearance of a large lake, on which a yacht, completely rigged, rides at anchor, with a long boat, &c. Her masts rising in a particular manner above the adjacent trees, add greatly to the beauty of the landscape. On the summit of an adjacent hill, which overlooks the whole country, his lordship has built a new church, pretty much in the old taste; and adjoining to it a large mausoleum, a sexangled open wall of flints, with plaister ornaments, and a row of Tuscan pillars. On the inside runs a garter of stone round the whole, and two of the six divisions are occupied with dedications to the late earl of Westmoreland, and lord Melcomb. There is not, however, much to be commended in the taste of this building, which is either unfinished, or the idea very incomplete. The situation of it also is such, as to appear from many points of view to be one building with the church, which has by no means a good effect. At the same time, the path leading from the church to the adjacent village is so steep, and the hill, on the summit of which it is situated, so lofty, that the parishioners must have a particular veneration for religion, if they attend divine service constantly in this structure.

About two miles to the eastward of this village is High Wycomb, finely situated between two pleasant hills, thirty-two miles from London. It is a corporation, governed by a mayor, recorder, twelve aldermen, a town-clerk, two bailiffs, and a common council. It stands in the road to Oxford, and, except Aylsbury, is the best built, and most wealthy town in the whole county. It is divided into four wards, though it consists of only two streets. The church is a large structure, decorated with a steeple, not ill built, and the town has a free grammar-school, and two alms-houses.

This town was probably a Roman station; for in the year 1724, a Roman pavement was discovered by some workmen who were digging in a neighbouring meadow belonging to lord Shelborn. It was about nine feet square, and consisted of stones of various colours, wrought with exquisite art; but the largest not broader than the square of a die.

Here was an hospital for lepers, founded before the thirteenth of Henry III. and dedicated to St. Margaret and St. Giles. There was also, before the twentieth of Henry III. an hospital for a master, brothers and sisters, dedicated to St. John the Baptist. This hospital is still in being, and inhabited by poor persons under the government of the corporation. One of these hospitals was valued, on the dissolution, at seven pounds fifteen shillings and three-pence *per annum*.

This town sends two members to parliament, has a weekly market on Friday, which is so considerable, that the toll was let by lease at one hundred and thirty pounds a year; and an annual fair on the twenty-fifth of September, for hiring servants.

Not far from this town, at Bullstrade, is a seat in the midst of an elegant park, belonging to his Grace the duke of Portland. The park is peculiarly fortunate in situation, by means of contrast. The country adjoining is very flat, not well cultivated, and has few of those elegant varieties which are pleasing to the traveller; but this happy spot, which his Grace has chosen for his park, does not contain a level acre: it is composed of perpetual swells and slopes, set by scattered plantations, disposed in the justest taste. The extent is very great, and appears to be one of the finest parks we remember to have seen.

From Wycomb we passed to Great Marlow, a considerable town, situated on the banks of the Thames, under the Chiltern hills, thirty-one miles from London. It has its name from the marshy soil in which it stands, and is an ancient borough by prescription. It has a bridge over the Thames, not far from the conflux of the river, which rises at West Wycomb. Both the church and town-hall are handsome structures, and here is a charity-school for twenty boys. A considerable quantity of bone-lace is made here, and on the stream that rises at West Wycomb, and here falls into the Thames, there are several paper and corn mills, besides one for making thimbles, and another for pressing oil from the seeds of rape and flax.

This town sends two members to parliament, has a weekly market on Saturday, and four annual fairs, viz. the fifth, sixth, and seventh of May, for horses, black cattle, &c. and the twenty-ninth of October, for cheese, hops, and cattle.

At Medmenham, or Mednam, in the neighbourhood of Great Marlow, there was a small abbey of the Cistercian monks from Woburn in Bedfordshire. It was founded about the year 1204, and dedicated to the Virgin Mary. At the dissolution, it was valued at twenty pounds six shillings and two-pence a year.

At Little Marlow, a place also in this neighbourhood, there was a nunnery, said to have been first founded by Geoffrey, lord Spensar, before the reign of king John. It was of the Benedictine order, dedicated to the blessed Virgin, and valued, on the dissolution, at twenty-three pounds three shillings and seven-pence *per annum*.

Leaving Great Marlow, we directed our course towards Eaton, in order to view that famous seminary of learning; and in our way, passed through Burnham, a village near the banks of the Thames, about three miles north-east of Eaton. There was a nunnery of the order of St. Augustine, consisting of an abbess, and seven or eight nuns. It was founded by Richard, king of the Romans, in the year 1160, and dedicated to the blessed Virgin. It continued till the dissolution of religious houses, when it was valued at fifty-one pounds two shillings and four-pence *per annum*.

Eaton is situated on the banks of the Thames, on the borders of Berkshire, and joined to Windsor by a wooden bridge. It is famous for its beautiful college, founded by Henry VI. in the nineteenth year of his reign, for a provost, ten priests, four clerks, six choristers, twenty-five poor grammar scholars, with a master to teach them, and twenty-five poor old men. Some of the endowments were taken away by Edward IV. and at the general dissolution, out of which it was particularly excepted, the annual revenue was valued at no more than eight hundred and eighty-six pounds twelve shillings. But this revenue has been since increased to five thousand pounds a year; and the college now consists of a provost and seven fellows, two schoolmasters, two conductors, an organist, seven clerks, ten choristers, and other officers. Seventy poor grammar scholars are instructed here; they are nominated by the king, and thence called King's scholars; these, when properly qualified, are elected on the first Tuesday in August, to King's College, in the university of Cambridge; where, after being students three years, they claim a fellowship: but as there is not always a vacancy at Cambridge, the scholars remain at Eaton till vacancies happen, and these vacancies they fill up according to seniority.

The school is divided into two parts, the upper and the lower, and each of these is subdivided into three

classes. Children are admitted very young into the lower school; none enter the upper school till they can make Latin verses, and have acquired some knowledge of the Greek. Besides the seventy scholars on the foundation, there are seldom less than three hundred others, for whose education the masters are paid, and who board at the masters houses. The master of each school has therefore four ushers. The building has large cloisters like the religious houses abroad, and the chapel is a noble pile of Gothic architecture.

The present school-room is a modern building, and the other parts of the college have been repaired and beautified at a great expence. There is a library for the use of the school, and the number of books have been lately greatly increased by two other collections; one bequeathed by Dr. Waddington, sometime bishop of Chester, valued at two thousand pounds; and the other by the late lord chief justice Reeves, to whom the collection had been bequeathed by Richard Tapham, Esq; keeper of the Records in the Tower of London. The gardens are very large and pleasant, extending from the college almost to the Thames.

Eaton has no weekly market, and only one annual fair, held on Ash Wednesday, for the sale of horses and black cattle.

Colnbrook, or Colebrook, stands on four channels of the river Coln, over each of which it has a bridge, eighteen miles from London. It is situated in the road from London to Bath, and has accordingly several considerable inns, by which it principally subsists. One part of the town is in Buckinghamshire, and the other in Middlesex. Here is a charity-school, and an ancient chapel, said to have been founded by Edward III.

Here is a weekly market on Tuesday, and two annual fairs, viz. the fifth of April, and the first of May, both for horses, black cattle, and sheep.

At Ankerwyke, a few miles from Colnbrook, a nunnery was founded in the reign of Henry II. by Sir Gilbert de Montfichet, and Richard his son, for religious of the order of St. Benedict. At the dissolution, there were only five nuns in this house, and their revenues amounted to no more than thirty-two pounds and two-pence *per annum*.

From Colnbrook we crossed the country to Baconfield, and in our way passed by Langley, an elegant seat of his Grace the duke of Marlborough. The house has been lately rebuilt, and the park is laid out in a very pleasing manner.

Baconsfield stands in the road to Oxford, twenty-three miles from London, and is furnished with several good inns; but has nothing else remarkable, except a weekly market on Thursday, and two annual fairs, viz. the thirteenth of February, and Holy Thursday, for horses, cows, and sheep.

About six miles to the north-east of Baconfield, is Agmondesham, or Amer sham, situated on the road from Uxbridge to Aylsbury, twenty miles from London. It is an ancient borough, not incorporated, but governed by burghesses. It is situated in a valley between two woody hills, near the river Coln. It consists of two streets, one long, and the other short, crossing each other at right angles in the centre of the place. In the area where these streets intersect each other, stands the church, which is the best rectory in the county. Here is a free-school, founded by queen Elizabeth; and a guild, of market-house, built by Sir William Drake. Sir William Drake purchased the borough of king Charles II. and the Drakes are therefore, among others, hereditary members of the House of Commons. The town-house is a brick structure, raised upon pillars and arches, and has on the top a lanthorn and clock.

This town sends two members to parliament, has a weekly market on Tuesday, and two annual fairs, viz. Whitfun-Monday, and the nineteenth of September, both for sheep.

At Missenden, near Amer sham, Sir Thomas Missenden founded an abbey for black canons in the year 1133. It was dedicated to the blessed Virgin, and, on the dissolution, valued at two hundred and sixty-one pounds fourteen shillings and six-pence *per annum*.

Three miles north of Amerham, and twenty-nine from London, is Chesham, a small market-town, situated on the borders of Hertfordshire. It has nothing remarkable, except a free-school, a weekly market on Wednesday, and three annual fairs, viz. the twenty-first of April, the twenty-second of July, and the twenty-eighth of September, all for cattle.

In the parish of Chesham is a small hamlet called Latimer's, and also Islehamstead, remarkable for being the birth-place of lady Temple, wife of Sir Thomas Temple, and daughter to Sir Edward Sandys. This lady had by her husband four sons and nine daughters, and lived to see seven hundred descended from her. She died in the year 1656.

Curious PLANTS found in Buckinghamshire.

Crows-bill, *Geranium Robertianum*, *J. B.* found in the woods near West Wycomb.

Horse-mint, *Menthastrum*, *Ger.* found in plenty on the banks of the Coln, near Colebrook.

Calamint, *Calamintha vulgaris*, *flor. magno*, *J. B.* found in several parts of the county, under hedges by the road-side, especially near Baconsfield.

Hedge Mustard, *Eresimum vulgare*, *J. B.* found near Buckingham, and several other parts of the county.

Wood Betony, *Betonica purpurea*, *C. B.* found in Bernwood forest, and other woody parts of the county.

Wood Sorrel, *Luzula vulgaris*, *J. B.* found in the woods near West Wycomb.

Purging Flax, *Linum pratense floribus exiguis*, *C. B.* found in the upland pastures near Beaconsfield.

White-flowered Bastard Hellebore, *Elleborine minor*, *flor. albo*, *Park*; found in Bernwood forest.

Creeping Tormentil, with deeply indented leaves; *Tormentilla alata foliis profundius serratis*, *Morif.* found in the borders of corn-fields near Chesham.

Spurge Laurel, *Thymelæa lauri folio*, *Ger.* found in Bernwood forest, and in the woods near West Wycomb.

Catmint, *Nepeta majore vulgaris*, *Park*; found in watery places near Aylsbury.

Other ANTIQUITIES found in Buckinghamshire.

Besides the remains of antiquity we have already mentioned, there are some others which could not so properly be mentioned in their proper places.

On the side of a hill near Clifton, an elegant seat, sometime the residence of his late Royal Highness Frederick Prince of Wales, is a round cave, nineteen feet high, and about ten feet in diameter, cut out of the solid rock near the foot of the hill; and the roof an artificial arch of hewn chalk: but there are no remains which can give the least hint, either with regard to the intention of this work, or the time when it was formed.

At Bull, a small place on the borders of Bernwood forest, several Roman coins have been found. It was afterwards a royal villa of Edward the Confessor, but is now a village of no note.

MEMBERS of PARLIAMENT for this County.

Buckinghamshire sends fourteen members to parliament, two knights of the shire for the county, two burgessees for Buckingham, two for High Wycomb, two for Aylsbury, two for Amerham, two for Wendover, and two for Great Marlow.

H E R T F O R D S H I R E.

THIS county is bounded by Essex on the east, by Middlesex on the south, by Cambridgeshire on the north, and by Buckinghamshire on the west. It is about twenty-eight miles in breadth from east to west, thirty-six in length from north to south, and one hundred and thirty miles in circumference. It is divided into eight hundreds; and the justices of the peace, for the greater convenience of themselves and the inhabitants, have divided the shire into three parts, in each of which they hold their courts, or petty sessions. It contains nineteen market-towns, one hundred and twenty parishes, about sixteen thousand five hundred and sixty-nine houses, and ninety-five thousand inhabitants. It lies in the province of Canterbury, and partly in the diocese of London, and partly in that of Lincoln.

R I V E R S.

Hertfordshire is watered by several rivers, the principal of which are the Lee, or Lea, the Stort, the Ver, and the New River.

The Lee rises in the south-west parts of Bedfordshire, enters this county near a village called New-End; and passing by Hatfield, it is joined near Hertford by waters of two small rivers called the Mimeram, and the Bene, or Benefician. At Hertford, it becomes navigable, passes by Ware, and is joined near Hoddesdon by the river Stort. Thence it divides the counties of Hertford and Essex, and falls into the Thames a little below Blackwall, a village in Middlesex.

The Stort rises in the north-east part of the county; and passing by Bishopstortford, and separating the counties of Hertford and Essex, falls into the Lee near Hoddesdon, another market-town of this county.

The Coln rises near Bishop's Hatfield, a considerable market-town of this county; passes by Watford, another market-town, a few miles south-west of which, it falls into the Thames, near Stains, a market-town of Middlesex.

The river Ver, More, or Moore, rises in the west part of the county; and running south-east, passes by St. Albans; and after running two or three miles due south, falls into the river Coln near Hansted, a village of this county.

The New River has been already described in our account of Middlesex, page 196.

Remarks on the INLAND NAVIGATION of Hertfordshire.

The only rivers navigable in this county, are the Lee and the Stort. The river Lee has been long navigable to Hertford; but from the bad construction of the turnpikes or weirs, by which the water of the river was penned up to a certain height, in order to carry the barges over the shoals which occurred in the river, and other impediments, the voyage from London to Hertford was rendered long, tedious, and expensive. In order to remove this inconvenience, and improve the navigation of the river Lee, Mess. Smeaton and Yeomans, two very ingenious engineers, were employed, in the year 1766, to survey the river, and give the trustees a plan and estimate of the expences necessary for improving the navigation of the said river. This was accordingly done, a new act of parliament procured, and the improvements are now carrying on under the direction of the above engineers. By this plan, the river, where it is tolerably straight, and of a sufficient depth for any considerable length, is still to be the navigable track; but where shoals occur, the deep parts are to be connected by canals, with locks erected on them, whereby the barges

will readily pass from one deep to another. By this means the navigation will be greatly improved, and rendered certain at all seasons, except in frosts and extraordinary floods: the distance will be shortened, and the barges navigated in much stiller water, and straighter courses. A cut is also to be carried from the four mills at Bromley to the Thames at Limehouse-hole. This will at once greatly improve and shorten the navigation, which from Bromley mills to London was before tedious and difficult. In a word, the river Lee, by these improvements, will, from being one of the worst inland navigations, become equal to most, and superior to many.

The navigation of the Stort is also now carrying on under the direction of Mr. Yeomans, above-mentioned; and, when completed, will prove very advantageous to that part of the county. It is to extend from the influx of the Stort with the river Lee, to the town of Bishops Stortford.

A I R A N D S O I L.

The air of this county is very pure, and consequently healthy, and is often recommended by physicians to valetudinarians, for the preservation or recovery of health. The soil is, for the most part, rich, and in several places mixed with a marle, which produces excellent wheat and barley. Many of the pastures, however, are but indifferent; such as are dry generally producing fern and broom, and those that are wet, rushes and moss.

Remarks on the HUSBANDRY of Hertfordshire.

We have already observed, that in general the wet pastures in this county yield rushes and moss. This evil is, however, now removed in many parts, by a late invention called Bush-draining, which has greatly improved these wet lands. The country between Barnet and Hatfield has many pastures of this kind, and which now yield large quantities of hay.

Both the ploughs and ditches, though very material to a farm, are very bad in this county. Too many of the hedges are dead ones; others consist of boughs interlaced four feet high in stakes, and white thorn planted by the sides of it, intermixed with fallow stakes, and without any ditches. This is a wretched practice; for the fallow is so quick a grower, as soon to overtop the thorns, and drip them to death; nor is it of any use as a fence itself, growing ragged and open at the bottom. Every person curious in fences, carefully keeps all kinds of plants from among the thorns, because none unite with them; and gaps are for ever made in the hedges, by means of taking hold of fallows, hazles, oaks, ashes, or such plants as are not offensively armed; whereas a white thorn fence is impenetrable. Their ditches are not above eighteen inches wide and twelve deep, though in many of their flat fields their corn in winter is half spoiled for want of good ones to drain off the water.

Their ploughs are still worse than their hedges; they are so exceedingly large and heavy, that the mere draught of the weight is sufficient for two horses: a share commonly weighs sixty or seventy pounds. Hence results the practice of never stirring the ground with less than four horses, on a light loose gravel, after it has received three or four earths for turnips: the fifth, nay, the tenth, would not be given without four strong horses, and two men, one to hold, and another to drive; nor do they ever turn up above an acre a day. Much stronger lands than any in this part of Hertfordshire are, in the counties of Suffolk and Essex, broke up for the first time, with a pair of horses, and one man, who both holds the plough and drives; but then the plough

plough is not above one fifth of the weight of those in Hertfordshire. The loss from this mistaken practice must be amazingly great, since the difference is just half; for the wear of these immensely large ploughs cannot be less than double that of the small ones; so that by a change in this particular, double the quantity of land would be ploughed in the same time, and at the same expence, besides enjoying the capital advantage of being twice as speedy in critical seed-times; a point often of infinite importance.

The arable lands, however, produce vast quantities of excellent wheat and barley, and most other sorts of grain; and the wheat and barley of Hertfordshire are so much prized at London, that many thousands of quarters of both these grains are sold every year as the produce of this county, though not a single grain of it ever grew there.

The prices of labour are, in winter, one shilling and two-pence a day, with beer; in hay-time, one shilling and six-pence, with beer; and in harvest, two shillings and six-pence, with the same addition.

MANUFACTURES, and TRADE.

The inhabitants of this county are chiefly maltsters, millers, and dealers in corn; no manufacture worth notice being established in any part of the county.

BOROUGH, and MARKET TOWNS, &c.

We entered this county at a small distance from Chelham, in Buckinghamshire, and passed on to Berkhamsted, a considerable market-town, thirty miles from London. It stands on the side of a hill, and consists of a handsome broad street, of considerable length. The church, which stands in the middle of the town, is a spacious edifice, dedicated to St. Peter, and has several chapels and oratories. On the pillars of the church are representations of eleven of the apostles, each of them having a sentence of the Creed; and on the twelfth pillar is the figure of St. George killing the dragon. Here is an alms-house, built by Mr. John Sayer and his wife, who endowed it with thirteen hundred pounds, for the maintenance of six poor widows. Here is also a charity-school; and a free grammar-school, the latter is a handsome brick structure, and well endowed; the king being patron, and the warden of All-Souls College, in Oxford, visitor. One of the chapels in the church, dedicated to St. John, is used only by the master, ushers, and scholars of this free grammar-school.

King Henry II. kept his court in this town, and granted it several privileges; particularly, that its merchandize should pass free of toll and custom through England, Normandy, Aquitaine, and Anjou; and that no judicial writ should be executed by any of the king's officers within its liberties, but only by its own high-steward, coronets and bailiffs; that no market should be kept within seven miles of it; and that the inhabitants should not be obliged to attend at any assizes or sessions. In the reign of Henry III. it was a borough; and in the fourteenth of king Edward III. sent members to parliament. There are no less than fifty-three townships belonging to the manor, and which are obliged to pay homage, and chuse constables here. King James I. to whose children this place was a nursery, made it a corporation, by the name of the Bailiff and Burgesses of Berkhamsted St. Peter; the burgesses to be twelve; to chuse a recorder and town-clerk, and to have a prison; but the corporation was so impoverished by the civil wars, in the succeeding reign, that the government dropped, and it has not since been renewed.

Here was formerly a castle, built by Robert earl of Morton, half-brother to William the Conqueror, two thirds of which castle were burnt down in the reign of king Charles I. and are now only to be known by the moats and walls. The remains of it are converted into a gentleman's seat.

In the time of king John, there were here two hospitals of poor and infirm persons; one dedicated to St. John the Baptist, and the other, which was appropriated to

both brother and sister lepers, to St. John the Evangelist: the custody of both these hospitals was granted by Geoffrey Fitz-Pierce, earl of Essex, to the house of St. Thomas of Acon, in London. There was also in this town, in the reign of king Edward II. an hospital dedicated to St. Thomas the Martyr.

Berkhamsted has a weekly market on Monday, and three annual fairs, viz. Shrove-Monday and Whitfun-Monday, for cattle; and St. James's-day, for cheese.

Leaving Berkhamsted, we directed our way towards St. Albans, and passed through Hemsted, a considerable market-town, twenty-nine miles from London. It was incorporated by king Henry VIII. and is governed by a bailiff. The inhabitants are also empowered to have a common seal, and a pye-powder court, during its market and fairs. It stands among hills, on a small river called the Gade. Near the town is a handsome church, with a good ring of bells, and a tall spire, which is a great ornament to the place. Eleven mills stand within four miles of the place; these considerably increase the trade of the town, which consists of corn and meal. Here is also a manufacture of straw-hats, which return some thousand pounds a week.

Hamsted has a weekly market on Thursday, reckoned one of the greatest in the county, if not in all England, for wheat; and twenty thousand pounds a week is here often returned for meal only. Besides which, here is an annual fair, held the first Thursday after Whitfun-week, for horses, cows, and sheep, and the hiring of servants.

St. Albans has its name from an abbey built here about the year 703, to the memory of St. Albanus, the first martyr of Britain, who suffered in the first persecution of the emperor Dioclesian. It is situated on the river Ver, twenty-one miles from London. This town sent members to parliament as early as any borough in the kingdom. It is incorporated by charter, and governed by a mayor, high steward, recorder, twelve aldermen, a town-clerk, and twenty-four assistants. In this borough there is a particular district called a Liberty, which has a jurisdiction both in ecclesiastical and civil matters, peculiar to itself. This district includes the parishes of Watford, Rickmanworth, Norton, Ridge, Haxton, Walden Abbots, Sarret, Langley-Abbots, Elstre, Bushy, Cudicot, Shepehele, Sandridge, Redburne, and Barnet. This liberty has a gaol, and a gaol-delivery at St. Albans four times a year, on the Thursday after the quarter-sessions at Hertford. There are four wards in this town, in each of which there are two church-wardens and a constable. It is large and populous, though not one of the most beautiful towns in the kingdom. The country round it is, however, very pleasant, and abounds with fine seats. Here are two charity schools; one for twenty-eight boys, who are all clothed; and the other for twenty-one girls, of whom fourteen only are clothed.

The origin of St. Albans was owing to the monastery built by Offa, king of the Mercians, to the memory of St. Alban, in expiation of his barbarous murder of Ethelbert, king of the East-Angles, whom he had treacherously inveigled to his court, on pretence of marrying his daughter; and the same Offa it was that built Hertford church, and dedicated it to St. Ethelbert, and made a journey to Rome as a further penance, where he was absolved, tho' he kept the murdered prince's dominions, and joined them to his own.

Of all the monasteries in England, none excelled this. Its revenue was great, and its privileges still greater. In the royalties it had from its founder, and the episcopal powers from the Pope, none came up to it. The mitred abbot had precedence of all in England, and was subject to no ecclesiastical power, but the Pope immediately; and he had episcopal jurisdiction over both clergy and laity, in all the lands belonging to his monastery. From first to last they were forty-one in number, and many of them persons of great accomplishments, and high birth; the thirty-ninth of which, though not high-born, was Cardinal Wolfsey. The last abbot was Richard Boreman, who at the dissolution quietly surrendered on the royal command, and accepted of a pension for life of two hundred & sixty-six pounds thirteen shillings & four-pence.

Two bloody battles were fought near this place between the houses of York and Lancaster: the first upon the twenty-third of May, 1455, in which the Yorkists got the day; the second on Shrove-Tuesday, in the thirty-ninth of Henry VI. when the martial queen Margaret overcame the Yorkists, who had then the king in their power, and fought under the sanction of his name.

But we must not dismiss this subject, without giving some brief particulars of the famous abbey-church. We have before observed, that it was founded by king Offa; but it has been rebuilt in whole or part several times. The town purchased it at the dissolution, for four hundred pounds, which prevented so noble a fabric being pulled down, and torn to pieces, for making money of the materials; and it is made a parish-church for the borough. The high altar is a curious piece of Gothic architecture.

Within the north entrance is Offa on his throne. Underneath,

*Fundator Ecclesie, circa annum 793,
Quem male depictum, et residentem cernitis alte
Sublimem solio, MERCIUS OFFA fuit.*

That is,

The founder of the church, about the year 793,
Whom you behold ill-painted, on his throne
Sublime, was once for MERCIAN OFFA known.

In the most eastern part of the church stood the shrine. Six holes remain in the pavement, where the supporters of it were fixed. The inscription is still to be seen:

S. ALBANUS VEROL AMENSIS, ANGLORUM
PROTOMARTYT, 17. Junii 293.

On the south side of the shrine, in the wall of the south isle, is Duke HUMPHRY'S monument, with the arms of France and England quartered, and a ducal coronet. In niches on the south side are seventeen kings; the niches on the other side have none remaining.

*Piæ Memoriae V. Opt. Sacrum.
Hic jacet HUMPHREDUS, dux ille Glocestrius olim,
Henrici sexti protector, fraudis ineptæ
Detector, dum facta notat miracula cæci.
Lumen erat patriæ, columen venerabile regni,
Pacis amans, Musisque favens melioribus; unde
Gratum opus Oxonio, quæ nunc schola sacra refulget.
Invida sed mulier regno, regi, sibi nequam,
Abstulit hunc, humili vix hoc dignata sepulcro.
Invidia rumpente tamen, post funera vivet.*

In English thus:

Sacred to the pious Memory of an excellent Man.
Interr'd within this consecrated ground
Lies he, whom Henry his protector found;
Good Humphrey, Glo'ster's duke, who well could spy
Fraud couch'd within the blind impostor's eye*:
His country's light, the state's rever'd support,
Who peace, and rising learning, deign'd to court;
Whence his rich library, at Oxford plac'd,
Her ample schools with sacred influence grac'd:
Yet fell beneath an envious woman's wile,
Both to herself, her king, and kingdom, vile;
Who scarce allow'd his bones this spot of land;
Yet, spite of envy, shall his glory stand.

It is about forty years ago, that, digging for a grave, the stairs, leading down to the vault where the body lies, were discovered.

In the vault is a leaden coffin, with the body preserved by the pickle it lies in, except the legs, from which the flesh is wasted, the pickle of that end being dried up. On the wall at the east end of the vault is a crucifix painted, with a cup on each side of the head; another at the side, and a fourth at the feet. The vault is very neat, and hath no offensive smell. The coffin, we are told, had an outside of wood, which is entirely gone.

The west end of the choir hath a noble piece of Gothic workmanship, for the ornament of the high altar. Captain Polehampton, about forty years ago, gave an altar-piece, which represents the Last Supper.

There are many curious medals and coins to be seen in the church, which have been dug out of the ruins of Old Verulam.

This noble fabric hath wanted its abbot's zeal, and purse too, for repairs, since it hath been a parish-church. The roof was preserved by contribution of the nobility and gentry of England, many of whose arms are put up on this occasion; and money has been collected several times besides for its support: indeed such a fine fabric must too often stand in need of such helps, as there is no settled fund to maintain it.

There are three churches in the town at present, besides the abbey-church, viz. St. Michael's, St. Peter's, and St. Stephen's

In the church of St. Michael, is a monument of the famous Francis Bacon, lord Verulam, and viscount of St. Albans. It was erected by Sir Thomas Marrin, who had been secretary to this great man. The philosopher is sitting thoughtfully in an elbow chair; and on the monument is this inscription:

Francisc. Bacon, Baro de Verulam, Sti. Albani Viceco.
Seu notioribus titulis,
Scientiarum lumen, facundiæ lex,
Sic sedebat.
Qui, postquam omnia naturalis sapientiæ,
Et civilis arcana evolisset,
Naturæ decretum explevit,
Composita solvantur,
An. Dom. 1626. Ætat. 66.
Tanti viri mem. Thomas Meautys, superstitis cultor;
Defuncti admirator.

Thus translated:

Francis Bacon, baron of Verulam, and viscount of St. Albans; or by his more known titles, The Light of the Sciences, and the Law of Eloquence; was thus accustomed to sit; who, after having unravelled all the mysteries of natural and civil wisdom, fulfilled the decree of nature, *That things joined should be loos'd*, in the year of our Lord 1626, and of his age 66. To the memory of so great a man, this was erected by Thomas Meautys, who revered him while living, and admires him dead.

The manor of Kingsbury was sometime the residence of the Saxon monarchs, whence its name. It had a castle, which was kept up till king Stephen's time, when it was demolished, and the site given to the abbey.

The late dutchess dowager of Marlborough had a seat here, and which now belongs to lord Spencer, built by the late duke upon the river Verlam, which runs through the garden; and who also built handsome alms-houses at the entrance of the town.

The following remarkable inscription and character is cut upon the pedestal of a fine statue of the late queen Anne, carved by the noted Mr. Ryfbrack, and erected at St. Albans, at the expence of the dutchess, in gratitude to the memory of that excellent princess:

‘ QUEEN ANNE was very graceful and majestic in her person; religious without affectation. She always meant well. She had no false ambition, which appeared by her never complaining at king William's being preferred to the crown before her, when it was taken from the king her father, for following such counsels, and pursuing such measures, as rendered the Revolution necessary. It was her greatest affliction to be forced to act against him, even for security. Her journey to Nottingham was never concerted, but occasioned by the great consternation she was under at the king's sudden return from Salisbury.
‘ She always paid the greatest respect to king William and queen Mary; never insisted upon any circumstance of grandeur, more than what was established in

* Alluding to a pretended miraculous cure of a blind man, detected by the duke.

her family by king Charles II. though, after the revolution, she was presumptive heir to the crown, and, after the death of her sister, was in the place of prince of Wales.

Upon her accession to the throne, the civil list was not increased. The late earl of Godolphin, lord high treasurer of England, often said, that, from accidents in the customs, and lenity in the collection, it did not arise, one year with another, to more than five hundred thousand pounds a year.

She had no vanity in her expences, nor bought any one jewel in the whole time of her reign.

She paid out of her civil list many pensions granted in former reigns, which have since been thrown upon the public.

When a war was necessary to secure Europe against the power of France, she contributed, in one year, towards the war, out of her civil list, one hundred thousand pounds, in ease of her subjects.

She granted the revenue arising from the first fruits, to augment the provisions of the poorer clergy.

She never refused her private charity to proper objects.

Till a few years before her death, she never had but twenty thousand pounds a year for her privy-purse.

At the latter end of her reign, it did not exceed twenty-six thousand pounds a year; which was much to her honour, because it is subject to no account. And as to her robes, it will appear by the records in the

Exchequer, that in nine years she spent only thirty-two thousand and fifty pounds, including the coronation expence.

She was extremely well-bred, treated her chief ladies and servants as if they had been her equals. Her behaviour to all that approached her was decent, and full of dignity; and shewed condescension, without art or meanness.

All this I know to be true.

SARAH MARLBOROUGH.

M. DCC. XXXVIII.

In the middle of this town, king Edward I. erected a very stately cross in memory of queen Eleanor, who dying in Lincolnshire, was carried through St. Albans to Westminster, where she was interred.

St. Albans sends two members to parliament, has a large market, especially for wheat, on Saturday; and three annual fairs, viz. the twenty-fifth of March, the seventeenth of June, and the twenty-ninth of September, all for the sale of horses, cows and sheep, and hiring servants,

At Holmhurst, near St. Albans, king Offa, in the year 793, founded a noble abbey for one hundred Benedictine monks, and dedicated it to St. Alban, the protomartyr among the ancient Britons, and who suffered at Holmhurst. The monastery had very great privileges and exemptions. The yearly revenues, at the suppression, amounted to two thousand one hundred and two pounds, seven shillings and a penny.

Geoffrey, the sixteenth abbot of St. Albans, founded near that town, at a place called Heued, or Eywode, an hospital for lepers, and dedicated it to St. Julian. It consisted of a master, four chaplains, and six poor lepers; but how long it subsisted, does not appear.

The same abbot founded at Sopwell, near St. Albans, about the year 1140, a Benedictine nunnery, subject to the abbey of St. Albans, and dedicated it to the Virgin Mary. It originally consisted of thirteen nuns, but at the suppression, there were only nine, whose yearly revenues were valued at forty pounds seven shillings and ten-pence.

About five miles north-west of St. Albans, in the parish of Flamstead, Roger de Toney founded, in the reign of king Stephen, a small monastery for nuns of the order of St. Benedict, and dedicated it to St. Giles. Its annual revenues, at the dissolution, amounted to thirty pounds nineteen shillings and eight-pence.

In the fields adjoining to St. Albans, Garinus, an abbot of that place, founded, about the year 1190, a house or hospital for poor sick persons, and leprous wo-

men. It was dedicated to the Virgin Mary, and called St. Mary de la Pray; which, in course of time, became so well endowed, that a prioress, and several nuns of the order of St. Benedict, were maintained here. Cardinal Wolsey, commendatory abbot of St. Albans, procured, about the year 1528, a bull from Pope Clement VIII. for the suppression of this nunnery, and annexing the revenues to the monastery of St. Albans; but on the sixth of June, in the twentieth year of Henry VIII. he obtained a grant of it, together with all the lands belonging to that house, for himself. After the cardinal's attainder, the king exchanged it for other lands, with the abbey of St. Albans.

On the west side of the river Ver, opposite to St. Albans, stood the ancient and famous city of Verulam. When Julius Cæsar invaded Britain, Verulam was a large and populous place, though the only remains of it at present are the ruins of walls, and some tessellated pavements and Roman coins, which have from time to time been discovered by digging. Camden says, that he saw several coins found in this place, with the inscription TASCIA on one side, and VER on the other: and as *Tasc*, in the British language, signifies tribute, and *Ver* is put for Verulam, he supposes this to have been money paid here for a poll, or land-tax.

About the year 1666, there was dug up in this place a copper coin, which on one side had Romulus and Remus sucking the wolf; and on the other, the word ROMA, much defaced.

When the Romans drove from hence the powerful Cassibelinus, whom Camden supposes to have been king of the Cassii, they plundered the town of Verulam; but the inhabitants living quietly under their government, they were rewarded with the privileges of citizens of Rome, and their town made a Municipium, or city. This was one of the two Roman cities that were taken and sacked by the Britons, under the conduct of Boadicea, queen of the Iceni, in the reign of the emperor Nero, when a most dreadful slaughter was made of the Romans, and their allies. The other city destroyed by the Britons on this occasion, was Maldon, in Essex; but both these places were afterwards rebuilt, and flourished under the Romans.

Leaving St. Albans, we passed to Hatfield, or Bishops-Hatfield, from its belonging to the bishops of Ely. It is situated on the great northern road, twenty miles from London, and had once a royal palace, whence both king Edward VI. and queen Elizabeth were conducted to the throne. King Edward was educated here, and queen Elizabeth purchased the manor of the bishops of Ely. Here Theodore, archbishop of Canterbury, held a synod against the Eutychean opinions; and here are still two charity-schools. The rectory, which is the gift of the earl of Salisbury, is computed at eight hundred pounds a year.

Here is a weekly market on Thursday, and two annual fairs, viz. the twenty-third of April, and the eighteenth of October, both for toys.

The earl of Salisbury has a noble seat in the neighbourhood, built by the great lord Burleigh, and called Hatfield House. The park and gardens, in which is a vineyard, are watered by the river Lee.

Hertford, or Hartford, the county town, is situated on the river Lee, which is here navigable for barges, six miles from Hatfield, and twenty-three from London. It was a place of some note in the time of the ancient Britons; the East Saxon kings often kept their courts here, and upon the first division of the kingdom into counties, it was made the county town. It sent members to parliament in the reign of king Edward I. but after the seventh of Henry V. on the petition of the bailiff and burgeses, to be excused, on account of their poverty, that privilege was discontinued till the twenty-second of James I. In the time of Henry VII. the standard of weights and measures was fixed here, and queen Mary made this a corporation, by the name of Bailiffs and Burgeses; and by her charter, the number of burgeses was to have been sixteen. In the twenty-fifth and thirty-fifth years of queen Elizabeth, Michaelmas term was held here, on account of the plague, which then raged

raged in London; and that princeſs granted the town a new charter, by the ſtile of a bailiff, eleven capital burgeſſes, and ſixteen aſſiſtants. King James I. granted it another charter, with the ſtile of mayor, burgeſſes, and commonality, to have ten capital burgeſſes, and ſixteen aſſiſtants, and the mayor to be choſen out of the burgeſſes, by both the burgeſſes and aſſiſtants; but at preſent, the town is governed by a mayor, high ſteward, who is generally a nobleman, a recorder, nine aldermen, a town-clerk, chamberlain, ten capital burgeſſes, and ſixteen aſſiſtants, together with two ſerjeants at mace.

The town of Hertford is pleaſantly ſituated in a ſweet air and dry valley: it is built in the figure of a Roman Y, and has a caſtle placed between the two horns, in which is the ſeſſions-houſe for the county. An elegant town-hall has been lately erected; and here is alſo a county gaol. This town had formerly five churches, which are now reduced to two, All-Saints and St. Andrew's. All-Saints is ſituated on the ſouth ſide of the town, and has a tall ſpire, covered with lead, and eight good bells, beſides an organ, and a handſome gallery for the mayor and aldermen of the borough, and for the governors of Chriſt-church Hoſpital in London, who have erected a convenient houſe in this town for the reception of ſick and ſupernumerary children: they have alſo built a large gallery in the church, in which two hundred of their children may be accommodated. St. Andrew's is only remarkable for giving its name to one of the ſtreets. Here is a free grammar-ſchool, founded by Richard Hale, Eſq; in the reign of king James I. and endowed with forty pounds a year: the corporation are governors of it, but the maſter is appointed by the heirs or repreſentatives of Mr. Hale. The houſe is a handſome ſtructure, and was rebuilt ſome years ago. Here are alſo three charity-ſchools, one erected by the inhabitants for forty boys, who are cloathed and taught by ſubſcription; another for twenty-five children, and a third for twenty children. Both the latter are ſupported by the donations of private perſons.

The chief commodities of Hertford are wheat, malt, and wool; and the town is ſaid to ſend no leſs than five thouſand quarters of malt to London every week, by means of the river Lee, which, we have already obſerved, is navigable to this town. It is, however, obſerved, that the magnificence of Hertford is conſiderably diminiſhed, ſince one of the northern roads from London, which paſſed through it, was turned through the town of Ware.

Here was formerly a priory of Benedictine monks, ſubordinate to the abbey of St. Albans, erected about the latter end of the reign of William the Conqueror, by the biſhop of Limeſie, and dedicated to the Virgin Mary. Its revenues, at the diſſolution, amounted to ſeventy-two pounds fourteen ſhillings and two-pence *per annum*.

Hertford ſends two members to parliament, has a weekly market on Saturday, and four annual fairs, viz. Saturday fortnight before Eaſter, the twelfth of May, the fifth of July, and the eighth of November, all for the ſale of horſes, and other cattle.

Ware was the next town we viſited. It is a conſiderable market-town, ſituated in a valley on the eaſt ſide of the river Lee, twenty-two miles from London. It is ſaid to have derived its name from a ſort of dam, anciently made to ſtop the current of the ſtream, and called Wier, or Wear; a conjecture that ſeems to be confirmed by the abundance of water here, which has obliged the inhabitants to make weirs and sluices, to preſerve the town and adjacent meadows from inundations. It is a great thoroughfare, and one of the moſt conſiderable in the county, being one of the beſt poſt-towns on the north road.

The town of Ware was founded in the year 914, by order of Edward I. and began to be of ſome note in the reign of king John, when the high road to the north, which before went through Hertford, was, by the intereſt of Sayer de Quincy, then lord of the manor, turned through this town.

It conſiſts of one ſtreet, about a mile in length, with

ſeveral back-ſtreets and lanes, well inhabited. The church is large, built in the form of a croſs, and has a handſome gallery, erected by the governors of Chriſt's Hoſpital in London, who ſend ſeveral of the children of that hoſpital hither, either for health or education. Beſides a charity-ſchool, here are ſeven alms-houſes, well endowed. At one of the inns in this town, there is a famous bed, formerly uſed by travellers from London, and other places: it is of a ſquare form, and each ſide twelve feet in length: it will hold forty perſons.

The church of St. Mary in this town, together with all the tithes belonging to it, and two carucates of land, were given, about the year 1081, by Hugo de Grentemaiſnil, lord of the manor of Ware, to the monks of St. Ebrulf, at Utica, in Normandy; whereupon it became a cell to that abbey, and in courſe of time, was ſo well endowed, that when Edward III. during his wars with France, ſeized the alien priories, this was farmed at two hundred pounds a year. After the ſuppreſſion of theſe foreign houſes, this was given, in the third year of Henry V. to the monks of Skene. Henry VI. annexed it for ſome time to the abbey of St. Mary, near Leiceſter; but it was afterwards reſtored to Skene, and at the diſſolution, given by Henry VIII. to Trinity College in Cambridge. In the north part of the town there was alſo a houſe of Grey, or Franciſcan friars; but how long it continued, is not known.

Here is a weekly market on Tueſday, remarkable for corn and malt, five thouſand quarters of the latter being frequently ſent in a week to London, by the barges, which generally go with coals, grocery, &c. Beſides which, there are two annual fairs, viz. the laſt Tueſday in April, and the Tueſday before St. Matthew's day, both for horſes and other cattle.

In Lemmon Field, near Weſt-mill, or Wadef-mill, not far from Ware, three Roman wine-veſſels were dug up in the year 1729. Theſe veſſels were made of a pale reddiſh earth, and in the form of the Roman amphora, with two handles, and pointed at the bottom, for the purpoſe of fixing them in the ground. They were eighteen inches below the ſurface, and full of earth and chalk ſtones of the neighbouring ſoil. Many human bones have been dug up hereabouts; but though the ground around them was black, it did not appear that the bodies had been burnt: they ſeemed, by the ſhallowneſs of their burial, to have been the relics of a battle.

At Round-wood, near Weſt-mill, there is about an acre of ground intrenched; as there is alſo at Campwood, not far diſtant. They ſeem to have been Roman works, but the time when they were thrown up cannot be determined.

At Stanſted Thiel, near Ware, Sir William de Goldington founded, in the year 1315, a college or chantry, for a maſter and four ſecular prieſts, at the altar of St. Mary, in the church of St. Margaret; but William Grey, biſhop of London, finding, in his viſitation about the year 1429, that the revenues were alienated, and divine ſervice neglected, obtained the king's leave to diſſolve this college, and annex all its poſſeſſions to the priory of Elſing Spittle, in London, from which houſe afterwards were ſent two regular canons to reſide here, and perform divine ſervice.

From Ware, we followed the London road to Hoddeſdon, or Hodſdon, a great thoroughfare town, nineteen miles from London. Queen Elizabeth granted, by charter, a free grammar-ſchool to this town, and endowed it with certain privileges. An alms-houſe was alſo founded here in the reign of Henry VI. by Richard Rich, ſheriff of London. Here are ſtill the remains of an ancient chapel, belonging to an hoſpital formerly founded here for leprous perſons. The town is but ſmall, though it had once a conſiderable market for all ſorts of grain; but it has been, for ſome years, diſcontinued. Here is ſtill an annual fair on the twenty-ninth of July, for toys.

The village of Cheſhunt, about three miles to the ſouth of Hoddeſdon, is thought by ſome to be the Ducalium of Antoninus, which, in his Itinerary, he places fifteen miles from London, and which ſtands near the military way called Ermine-ſtreet. In Kilmore-field,

weſt

west of Cheshunt, are the remains of a camp. The angle of the square, or rather oblong fortification, is still remaining, and the rampart and ditch are very visible for above an hundred yards.

In this village there was also a Benedictine nunnery, dedicated to the Virgin Mary. It was founded about the year 1183, and afterwards augmented with the lands and tenements of the canons of Cathale, in the twenty-fourth year of Henry III. But notwithstanding this augmentation of its revenues, it was valued, on the dissolution of religious houses, at no more than fourteen pounds one shilling *per annum*.

In this neighbourhood is the manor of Theobalds, where formerly was built a magnificent seat by lord treasurer Burleigh, who gave it to his younger son, Sir Robert Cecil, and he exchanged it for that of Hatfield, at the desire of James I. who made it his hunting-seat, and here ended his life. From this place Charles I. set out to erect his standard at Nottingham. King Charles II. made a grant of it to George Monk, duke of Albermarle, and to his male issue; which failing in his son Christopher, king William gave it to William Bentinck, earl of Portland, in whose grandson, the present duke, it still continues. In the late civil war, the palace was plundered and defaced; and, from a royal residence, is now become a small village. The great park, which was inclosed within a wall of ten miles in compass, by king James, is now converted into farms. The place is, however, populous, and the New River runs near it, and through some of the gardens of the inhabitants. In this neighbourhood, Richard Cromwell, the abdicated protector, spent the last part of his life, in a very private manner.

The next place we visited was Barnet, or High Barnet, so called from its situation on a hill, and Cheaping Barnet, from a market held here to distinguish it from a village in its neighbourhood, called East Barnet. It is ten miles distant from London, in the great north road, and is therefore well supplied with inns. The church is a chapel of ease to the village of East Barnet. There is here an alms-house, founded and endowed by James Ravenscroft, Esq; for six widows. There is also a free-school, founded by queen Elizabeth, and endowed partly by that princess, and partly by alderman Owen of London, whose additional endowment is paid by the Fishmongers Company, who appoint twenty-four governors, by whom the masters and ushers are chosen to teach seven children *gratis*, and all the other children of the parish for five shillings a quarter each.

Here is a famous market for corn and cattle, held on Wednesday; and six annual fairs, viz. the eighth, ninth, and tenth of April, for toys; and the fourth, fifth, and sixth of September, for English, Welsh, and Scotch cattle.

This place is remarkable for a decisive battle fought in its neighbourhood on Easter-day 1468, between the houses of York and Lancaster, in which the great earl of Warwick, stiled Make King, was killed, together with many of the principal nobility, and ten thousand men. The place supposed to have been the field of battle, is a green spot near Kick's End, between St. Albans and Hatfield roads, a little before they meet; and here, *anno* 1740, a stone column was erected, on which is a long inscription, giving a particular account of that battle.

Estree, or Idlestree, near Barnet, on the borders of Middlesex, is thought by Norden to have been the station of Sullonicæ, mentioned by Antoninus in his Itinerary, as being twelve miles from London; but Mr. Camden and bishop Gibson think it was at Brockley-hill, in this neighbourhood: many coins, urns, Roman bricks, and other antiquities, having been dug up there. And at a place called Penney-well, near Brockley-hill, there are still visible the foundations of several walls, which tradition informs us are the remains of a city.

Two miles further to the westward is Watford, or Wetford, supposed by some to have been Watlingford. It stands where there was formerly a ford over the river Colne, seventeen miles from London; and the Pretorian, or Consular highway, made by the Romans in this

county, called Watling-street, crosses the Colne near it, and passes on to Verulam, near St. Albans. It consists of one very long street, which is extremely dirty in the winter, and the waters of the river, at the entrance of the town, are often so much swelled by floods, as to be impassable. Here are several alms-houses, and other funds for the poor; particularly a charity-school for forty boys, who are both taught and clothed; and a handsome free-school, built in 1709 by Mrs. Elizabeth Fuller.

Here is a weekly market on Tuesday, and two annual fairs, viz. Trinity Monday and Tuesday, for the sale of horses, cows, and sheep, and the hiring of servants.

Near three miles to the south-west of Watford, is Rickmansthorn, a corruption of its ancient name, Rickmearesthorn, supposed to be thus denominated from its situation on a neck of land, almost surrounded by a nameless river, which falls into the Colne, and forms, at its influx, a considerable pool of water. It stands low, in a black moorish cold soil, at the distance of twenty-two miles from London. It is governed by two constables, and two headboroughs, has a handsome church, and a charity-school for twenty boys and ten girls; also two alms-houses, one for five widows, and the other for four. There are several mills on the neighbouring streams, where great quantities of wheat are ground.

Here is a weekly market on Saturday, and three annual fairs, viz. the twentieth of July, and the fourth of November, for horses, black cattle, sheep, and hogs; and the Saturday before the third Monday in September, for hiring servants.

In the neighbourhood of this town there is a warren-hill, which has an echo that repeats twelve times to a trumpet.

About three miles north-east of Rickmansthorn, there were discovered not many years ago, in cutting a vista through a hill, several veins of sea-sand, mixed with mussel and other shells.

At King's Langley, a village about five miles to the north of Rickmansthorn, there was a house of preaching friars, said to have been founded originally by Roger, the son of Robert Helle, an English baron; but afterwards greatly enlarged in buildings, and increased in revenues, by the munificence of the kings, Edward I. II. III. and IV. so as to exceed all houses of this order in England. On the suppression of religious houses, it was valued at one hundred and twenty-two pounds four shillings *per annum*. Queen Mary restored this house to a prioress and nuns, who were dissolved in the first year of queen Elizabeth's reign.

Tring was the next place we visited. It stands in the west parts of the county, thirty eight miles from London. In the Saxon times it gave name to a hundred of which it was the capital. It is now a small, but neat town; has a handsome church, which was some years ago beautified and wainscotted by Mr. Gore, and Sir Richard Anderson. Here is a charity-school for teaching and cloathing twenty boys, supported by subscription.

Here is a large weekly market on Friday, for wheat; and many granaries are erected here for the reception of that grain. Besides which, there are two annual fairs held on the twenty-first of May, and the tenth of July, both for cattle.

In the neighbourhood of this town is a park, containing three hundred acres, through which runs the Ickening Street. And at a small village called Little Tring, in this parish, rises one of the heads of the river Tame.

Hitchin is a market-town, lying in a bottom, out of any great road, thirty-five miles from London, and within three of Bedfordshire. 'Tis governed by a bailiff and four constables, and was formerly famous for the staple commodities of this kingdom. The church is large, dedicated to St. Mary. It consists of the nave and two isles, with two chapels or chancels. The steeple has a ring of six bells, but is low, and disproportionate to the chancel. In the north isle window are paintings of Faith, Hope, and Charity, and of the four cardinal virtues; and, in the next north

window, the Beatitudes. The front hath the twelve apostles round it, but they have been sufferers from the booted saints of Forty-one. There are many monuments in it. A good free-school, and other charitable benefactions have been added to the town.

Hitchin has a weekly market on Tuesday, and three annual fairs, viz. the second of April, the thirtieth of May, and the twelfth of October, all for cattle.

We could not miss taking notice of Hexton, on the north-west end of the county, next Bedfordshire, where was a battle between the Danes and Saxons, some remains of which are visible between this place and Luton, as large barrows, &c. Half a mile to the south of this town is a fortified piece of ground, called Ravensborough Castle. The camp is a sort of oblong, containing about sixteen acres, the fortification entire. Nature has so well strengthened it, that one thousand men may defend it against a very great army. It is encompassed with a valley, and a very steep hill, inaccessible by an army any where but at the point of entrance, which is by a gradual ascent of a quarter of a mile.

The Beryflade, an house then possessed by John Cross, Esq; though low, and in the dirt, is now an agreeable summer-house, which it owes chiefly to St. Faith's well, a fine spring at Ravensborough. A moory piece of ground, where the spring rises, is cut into canals, which are stocked with trouts, many of them twenty-two inches long. These, having been used to take their food from the master's hand, out of a bowl with a long handle to it, come rolling up to the surface. The bottom is white, either from chalk or sand; and so transparent, that every fish may be seen that comes out of its hole. To preserve them from groping, the banks are wharfed, and in some places supported with timber; so that the fish can shelter themselves underneath; and a man must have his head and shoulders in water who sumps down to them. From hence the water feeds a large canal in the garden, stored with carp and tench; and there might be made basons or canals to any dimensions.

Near Hexton is a square Roman camp upon a promontory just big enough for the purpose, and under it is a fine spring.

Lilitho is a fine plat of ground upon an hill, where an horse-race is kept. It lies a little south of Hexton, just by the Ikening.

About four miles to the south-east of Hitchin, is Stevenage, situated on the great northern road, thirty-one miles from London. It has a church situated on a hill, the spire of which is large, and covered with lead. Here is a charity-school, an hospital, called All Christian Souls House, and several other charitable foundations for the poor.

Here is a weekly market on Friday, and four annual fairs, viz. nine days before Easter, nine days before Whitsunday, the fifteenth of July, and the first Friday in September; all for hawkers and pedlars wares: a little cheese is also sold at the latter.

Baldock, the next town we visited, is situated between two chalky hills, thirty-eight miles from London. It is a pretty large town, in the middle of which is a handsome church, with three chancels, and a beautiful tower, containing an excellent ring of six bells. Among other considerable benefactions to the poor of this place, Mr. John Winne gave eleven thousand pounds to build six alms-houses, and purchase lands sufficient to raise an annuity of forty shillings for each of the poor persons settled in them.

This town has a very considerable weekly market on Thursday, for wheat and barley; and six annual fairs, viz. Wednesday after St. Matthias, the twenty-fourth of February, the last Thursday in May, the sixth of August, the second of October, and the seventh of December. The last is a large fair for cheese, household goods, and cattle.

Here was a house for lepers in the reign of Henry III. It was founded by the Knights Templars, to whom the manor belonged, it having been given to that society by Gilbert earl of Pembroke.

Between Caldecot and Hinxworth, two villages a

little to the north of Baldock, upon the borders of Cambridgeshire, several Roman antiquities were discovered in the year 1724, particularly earthen vessels or urns, full of ashes and burnt bones, several human skeletons, not above a foot below the surface of the earth; pateras of fine red earth, glass lachrymatories, a brass tribulus, six small glass, two large green beads, with several other things. And at Athwell, in the neighbourhood of this place, is a spot of ground, consisting of twelve acres, called Arbury Banks, fortified, and thought to be one of the *castra exploratorum* of the Romans.

A little to the westward of Baldock, the Roman military road, known by the name of Ickening Street, runs through an intrenchment, the remains of a British town now called Wilbury-hill.

At Clothall, about two miles to the south-east of Baldock, there was a free chapel, college, or hospital, consisting of a master, brethren, and sisters, dedicated to St. Mary Magdalen. It was a very early foundation, and valued, on the general dissolution, at four pounds two shillings and eight-pence *per annum*.

Rayston is situated partly in Hertfordshire, and partly in Cambridgeshire, thirty miles from London. It is a populous and well-built town, and stands in a good air, on a chalky soil. The church formerly belonged to a convent, and contains several ancient monuments. It was made parochial soon after the dissolution; and the five parishes of which the town then consisted, being reduced into one, the rectory is of great value, and the incumbent is lord of the manor. At this place there is a charity-school, built and supported by voluntary subscription; and the town carries on a considerable trade in barley and malt.

We have already observed, that the parish-church belonged formerly to a monastery. This religious house was founded by Eustace de Mere, and his nephew, Ralph of Rochester, in the reign of king Henry II. It was inhabited by black canons, and dedicated to St. Thomas of Canterbury, at that time a newly canonized martyr. At the dissolution, there were in this house ten canons, who possessed an annual revenue of eighty-nine pounds sixteen shillings.

Here was also an hospital dedicated to St. Nicholas, in the time of king John; and in the reign of Henry III. there was a free chapel or hospital in this town, dedicated to St. John and St. James, in which was a master or warden, and several brethren. Richard de Argentinein was a patron of it in the year 1388. At the suppression, this house was valued at six pounds thirteen shillings and two-pence *per annum*.

Here is a weekly market on Thursday, and five annual fairs, viz. Ash Wednesday, Wednesday in Easter-week, Wednesday in Whitsun-week, first Wednesday in July, and Wednesday after the twenty-ninth of September; all for cattle.

We now returned to the southward by the London road, and passed through Buntingford, a small town, situated at the ford of a little river called Rib, thirty-two miles from London. It stands in four parishes, to one of which, called Layston, it is a chapelry. The chapel is a handsome brick structure, finished in the year 1626. Here is a sumptuous alms-house, founded by Dr. Seth Ward, bishop of Salisbury, for four ancient men, and as many ancient women, who, from a state of affluence, have been reduced by misfortunes to poverty. A school-house was built here in 1630, by the widow of William Freeman, Esq; who gave seven pounds a year to teach seven poor children. Bishop Ward, who was brought up at the free-school here, gave also four scholarships of twelve pounds a year to Christ's College in Cambridge, to be enjoyed by four scholars, natives of Hertfordshire, who were educated at this school, till they have taken the degree of master of arts.

Here is a weekly market on Monday, and two annual fairs, viz. the twenty-ninth of June, and St. Andrew's day, (Nov. 30) both for pedlars ware.

Standon, the next place we visited, is a small town, situated on the river Rib, twenty-nine miles from London. It has a handsome church, and several endowments for a school, and for the poor.

Here is a weekly market on Friday, and three annual fairs, viz. St. Mark's day, St. Peter's day, and the seventh of September, all for pedlars ware.

From Standon we passed to Bishops Stortford, so called from a ford over the river Stort, which, ever since the time of William the Conqueror, belonged to the bishops of London. It stands in a dry soil and healthy air, twenty-eight miles distant from London. King John made it a corporation town, with power to chuse its own officers; and it formerly sent members to parliament, but has long lost that privilege. The bishop of London appoints a bailiff here for what is called his liberty, and to him are directed all the sheriffs warrants that are to be executed in this and the neighbouring parishes. The bailiff has a right to strays, and the toll of corn and cattle in the markets and fairs held in this town. The bishop holds his court-leet and baron at the manor of Padmore, situated at the north end of the town. It is a considerable town, well built, and full of good inns, being a thoroughfare to Cambridge, Newmarket, and several towns in Suffolk. It consists of four streets, in the form of a cross, pointing east, west, north, and south. The church is situated on a hill in the middle of the town, decorated with a handsome tower, containing a ring of eight bells, and a spire fifty feet high, covered with lead. The church had an organ so long ago as the time of Henry VII. and is thought to be a very ancient structure, there being in one of the windows the names and pictures of king Athelstan, Edward the Confessor, and king Edward I. Here are two alms-houses, and a grammar-school; the school was built about half a century ago by the contributions of the gentry both of this county and Essex. It stands in the high-street upon arches, under which are shops, and a market. It fronts the church-yard, and consists of three rooms, which, with the stair-case, make a square building. The front to the street is the grammar-school, and the two wings are the writing-school and library, to which every scholar, when he leaves the school, presents a book.

Here is a weekly market on Thursday, and three annual fairs, viz. Holy Thursday, Tuesday after Trinity Sunday, and the tenth of October, all for horses and black cattle.

On the east side of the river Stort, near Bishop's Stortford, are the ruins of a castle, built by William the Conqueror, who gave it, together with the town, to the see of London: and that the bishop might be the better enabled to maintain it, granted with it several lands and manors, which he charged with certain yearly rents for castle-guard, that are still paid to the bishop by several places; for though the castle was demolished by king John, because the bishop of London was one of the three prelates that published the Pope's interdiction against the kingdom, yet when he restored the exiled bishops to their sees, he suffered the bishop to resume that possession, in order more effectually to make his peace with the Pope; and which his successors have ever since enjoyed, appropriating the ruins of the demolished castle to their own benefit. In this castle there was a deep dungeon, in which bishop Bonner confined many protestants who had

been convicted of heresy; whence it acquired the name of the Convicts Prison.

Sawbridgeworth is situated on the river Stort, thirty miles from London. It is a small town, but has a handsome church, in which are several monuments that deserve attention. It has a weekly market on Wednesday, and two annual fairs, viz. the thirteenth of April, and the nineteenth of October, both for horses.

Curious PLANTS found in Hertfordshire.

Small mountainous round-leaved Chickweed, resembling stone-basil, *Alsine montana minime acini facie rotundifolia*; found in several of the mountainous parts of this county, especially near Chalfont St. Peter, on the borders of Buckinghamshire.

Small Autumnal Gentian, with leaves like the lesser Centaury; *Gentianella Autumnalis Centaurii minoris foliis*, Park; found near the ruins of Old Verulam.

Yellow Loosestrife, with a globular tuft of flowers; *Lythymachia luteo flore globoso*, Ger. found near King's-Langley.

Pepper-mint, *Mentha piperata*, Park; found in several parts of the county, especially near Kinsbury.

Fresh-water Soldier, or Water-aloe; *Militaris aizoides*, Ger. found in the ditches near Hatfield.

Marsh Twyblade, *Ophris sive bifolium palustre*, Park; found in the wet grounds between Hatfield and St. Albans.

The greater Fly-orchis, *Museam referens major*, C. B. found near Welling.

Broad-leaved Bastard Hellebore, with a white clove flower; *Helleborine latifolio flore albo clauso*, Ger. found near Diggeswell.

Jagged Cow-parfnep, *Sphondylium montanum minus angustifolium tenuiter laciniatum*, Park; found near Tring, on the borders of Buckinghamshire.

The lesser Mountain Bell-flower, with a round leaf; *Campanula alpina minor rotundifolia*; found in some gravel-pits near Rickmanfworth.

Other ANTIQUITIES found in Hertfordshire.

Besides the antiquities already mentioned, there are some others which must not be omitted; particularly Ravensborough-castle, in the neighbourhood of Henton, near the Roman military way. It is an oblong camp of about sixteen acres, with an entire fortification, and so strong by nature, that a thousand men may defend themselves against a numerous army.

Near Westleton-green, in the neighbourhood of Bishop's Stortford, there is another fortification, which seems to be a Roman work. It contains an area of about seven acres of rising ground, which is inclosed with a rampart, and the ditch in some places is still remaining.

Three of the Roman military ways lead through this county, which cannot be said of any other in England.

MEMBERS of PARLIAMENT for this County.

Hertfordshire sends six members to parliament; two knights of the shire for the county, two burgeses for the town of Hertford, and two for that of St. Albans.

E S S E X.

THE county of Essex is bounded on the north by Suffolk and Cambridgeshire; on the east, by the German ocean; on the south, by the river Thames, which separates it from Kent; and on the west, by the counties of Middlesex and Hertford. It is about forty-seven miles in length from east to west, forty-three in breadth from north to south, and one hundred and fifty in circumference. It is divided into twenty hundreds, and four hundred and fifteen parishes; in which are twenty-four market-towns, forty-six parks, about thirty-four thousand eight hundred and nineteen houses, and two hundred and eight thousand eight hundred inhabitants. It lies in the province of Canterbury, and diocese of London; and Chelmsford, a considerable market-town, nearly in the middle of the county, is situated twenty-eight miles north-east from London.

R I V E R S.

The principal rivers in this county are the Stour, the Lee, the Coln, the Blackwater, and the Chelmer. The Stour rises in the north-west part of Essex; and running south-east, separates it from Suffolk, and falls into the German ocean at Harwich, a borough town of this county. The Lee has been already described among the rivers of Hertfordshire. The Coln rises in the north-west part of Essex; and passing south-east to Halsted, a considerable market-town, runs parallel to the river Stour, and passes by Colchester, a large borough town, where, forming an angle, it directs its course towards the north-east, and falls into the German ocean about seven or eight miles south-east of that town. The Blackwater rises also in the north-west parts of Essex; and running south-east, passes by Braintree, a market-town, and falls into the Chelmer at Maldon, a borough town of Essex. The Chelmer rises within two or three miles of the source of the Blackwater; and running nearly parallel to it, passes to Chelmsford, where, forming an angle, it runs directly east; and receiving the Blackwater, falls into the German ocean near Maldon.

Remarks on the INLAND NAVIGATION of Essex.

The navigable rivers in this county are the Lee, the Chelmer, and the Coln. The navigation of the Lee has been already described in our account of Hertfordshire. The Chelmer is very capable of being made navigable to Chelmsford; and works are already constructed for that purpose, but extremely defective, being formed in the ancient manner. An act was therefore very lately procured for improving the works, and rendering the navigation more complete and expeditious. The ingenious Mr. Yeamans is to have the direction of this work, which will, when completed, be of the greatest advantage to the county.

The river Coln is navigable to Colchester. Hoys, and other small vessels, go up to the town; and ships of considerable burden to within three miles of it. The navigation of this river was improved and extended by three acts of parliament; one passed in the reign of king William III. another in that of George I. and the third in the reign of king George II. The navigation might be easily extended; but hitherto it has been neglected, possibly from there being no place of note above Colchester situated on that river.

Besides these inland navigations, there are several creeks which run up a considerable distance into the land, and, like the mouths of the rivers, are navigable; but these will be described in our remarks on the sea-coasts of Essex.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is, in general, unhealthy, especially to strangers. Some parts of it, particularly the hundreds of Rochford and Dengy, which border on the Thames, and are a rotten, oozy soil. Besides which, the county is full of fens and marshes, which produce noisome and pernicious vapours, and subject the inhabitants to agues, and such other disorders as are generally the consequence of a moist and putrid atmosphere. But in great part of the western and northern divisions of the county, the air is as pure and healthy as in any other district of the kingdom.

It has been observed of this county, that the air is generally best where the soil is worst; for the fenny hundreds that border upon the sea and the Thames, abound with rich pastures and corn lands; but in the more inland parts, the soil is of a poorer nature. The northern parts are remarkable for the production of saffron; and in some of these parts the soil is so rich, that after three crops of saffron, it will yield good barley for twenty years together, without dunging. Other parts of Essex yield great quantities of hops. The county has plenty of wood, and no district in England is better stored with provisions of every kind.

Essex furnishes the markets of London with corn, fat oxen, sheep, and calves. There is always a good breed of serviceable horses in the marshes of this county, and great plenty of all sorts of sea and river fish, especially oysters. It abounds with wild-fowl; and by the seaside the inhabitants have decoys, which, in the winter season, generally produce great emoluments to the owners.

Remarks on the HUSBANDRY of Essex.

Lord Clare, who has a seat at Gosfield, about three miles from Braintree, has set a very useful example to the farmers, of using oxen instead of horses for all the purposes of draught. His lordship, some years ago, keeping a farm in his hands, and making many improvements in his park, introduced this practice from Gloucestershire, by purchasing a team of oxen, with all their geers, and hiring a driver in that country for the instruction of his own people; at the same time he took a plan of a very complete ox-house, with sundry adjoining conveniencies, which he erected at Gosfield.

This scheme was highly ridiculed by all the neighbouring farmers, who would as soon believe that an ox could speak as draw; but experience and ocular demonstration convinced them of the contrary; and in one instance remarkably, for a waggon with horses being set in the village, and the ox-team passing by accidentally, the horses were taken off, after much rallying, and the oxen clapt too; who, to the amazement of the beholders, drew it out in triumph.

His lordship used them for the culture of his farm, as long as he kept it in his hands, and had once near thirty in constant work. He has ever since done all his business with them, such as carting in his park and plantations, carrying timber, and bringing coals, &c. from Colchester for his family. By very exact comparisons between the expences of his oxen and the horses which he formerly kept for the same purposes, he clearly found there was a vast saving by using the first. Their food has constantly been hay in winter, and good grass in summer, without any oats. But notwithstanding the clear superiority, none of the farmers have followed the example, although a number of boys in the parish, and many labourers, have gained a full knowledge of their management, and are as expert in driving them, and breaking young beasts to the yoke, as any of their men can be with their horses.

About

About Samford, the soil is naturally very good, and greatly improved by hollow draining. The soil is a stiff clay, but when drained, is an exceedingly fertile, found, dry, and what the farmers call mellow land. The arable lets from twelve to sixteen shillings per acre, and the grafs from fifteen shillings to a guinea. Clay-lands generally are so retentive of water, and so apt to bake with a hot sun, that the culture of them is a matter of great difficulty, both in the pulverization of them, and the gaining early feed-times; but these clays, when hollow drained, are of so dry a nature, that after heavy rains, they very soon admit the plough, nor does wet weather give the moulds that adhesion which is so pernicious in many countries. Whatever the weather is, the moulds exposed to the surface are always porous, and drop into powder upon the slightest impression of the foot, which is a circumstance of incomparable value; for no soils contain half the virtues of clays, when reduced to moulds. The farmers are by no means backwards in making the best advantage of such an excellent soil. They manage it with due judgment, and reap accordingly uncommon crops. A common course with them is, 1. fallow; 2. barley; 3. oats. Also, 1. fallow; 2. wheat; 3. oats. Likewise, 1. fallow; 2. barley; 3. clover, till June; 4. wheat. Another, 1. fallow; 2. barley; 3. beans; but few turnips are sown. For wheat they plough four times, sow two bushels, and reap upon a medium three quarters; and upon the better sort of land, three and a half. For barley they plough five times, four in the fallow year, throwing the land on to the ridge for winter by the fourth; then they take the first opportunity of hard frosts to carry on their composts, at the rate of twenty and thirty loads per acre, which are farm-yard dung mixed up with the turf that grows around the barley fields, and prepared ready for the season of carrying: after spreading this manure, they take the first opportunity of the lands being dry enough to plough and sow the barley, from the last week in February to the middle of April; but if the seed is not in the ground in March, they despair of a great crop. They sow four bushels per acre, and reap, upon lands managed in the preceding manner, five quarters and a half per acre; and at a medium, of all their barley-lands in general, four quarters and a half. For oats they plough once, sometimes twice, sow four bushels, and gain in return four quarters. Beans they plough twice, (sometimes but once) sow two bushels, and reap four quarters.

The above barley-culture is the most perfect we have met with, and incomparably good. It is an excellent practice to plough and sow in the spring, and give preparatory ploughings when the seed should be in the earth; for early sowing is a point almost sufficient to turn the scale in favour of bad land, in comparison with good otherwise managed. In Suffolk they generally give three spring stirrings, by which means it is common to see them sowing barley in May, but no great or good crops can be gained so. Their grafs-lands are likewise very rich in this neighbourhood, which may be judged of by the product of their cows, which at a medium is reckoned at eight pounds per head, when well fed. The particulars of a farm here, were as follow:

300 acres.
200 arable.
100 grafs.
30 cows.
10 fattening beasts.
200 sheep.
10 horses.
3 servants.
8 labourers.

Of another:

220 acres.
180 arable.
40 grafs.
20 cows.
80 sheep.

10 horses.
3 servants.
4 labourers.

PRICE OF LABOUR.

All winter to hay-time, one shilling a day and small-beer, (used to be but ten-pence.)

Mowing, one shilling and six-pence a day, and beer: per acre, one shilling and six-pence, and one shilling and eight-pence.

In harvest, thirty shillings the harvest, and board: lasts generally a month.

Threshing wheat, (in common years) two shillings a quarter; barley and oats, &c. one shilling.

Hoeing turnips twice, six shillings and six-pence per acre.

Hollow draining, from one shilling and eight-pence to three shillings a score rods.

Much the same husbandry continues till we come to the lighter lands near Braintree; but at Saling the culture of barley, upon the above described principles, is carried to the highest pitch of perfection, by John Yeldham, Esq; who, upon an average of seasons and crops, manured and not manured, has for many years reaped seven quarters per acre; and yet it is not an uncommon custom with him to take a crop of oats after one of barley; and this upon one year's fallow, without any peculiar circumstances besides common good husbandry. His soil a strong clay, as before described, well drained. We mention this remarkable instance of excellent husbandry with due veneration; the worthy author of it well deserves being ranked among the first cultivators of his age, and to receive the same tribute of applause which the Duhamels and the de Chateauxvieux have enjoyed for their attention to objects of a more equivocal merit. We should also remark, that the farmers throughout this tract of country make their hollow drains only one rod asunder.

From Braintree to Chelmsford the soil is rich and fertile, and the country very pleasant. Their course of husbandry is, in general, 1. fallow; 2. barley; 3. clover; 4. wheat. And, 1. fallow; 2. wheat; 3. barley; then manure well and wheat again: sometimes beans thrown in, which they sow broad-cast, and hoe twice. For wheat they plough thrice, sow an amazing quantity, from three and a half to six bushels, and reckon three quarters a middling crop. They give two earths for barley; sow three bushels, and get on a medium three quarters. For oats they plough thrice, sow three bushels; three quarters they reckon the medium. For beans they plough but once; sow two bushels and an half, and get on a medium three quarters and an half, or four quarters. They stir their lands twice for pease; sow two bushels and a half, hoe them twice, and reckon the mean crop at five quarters. In their lighter lands they frequently sow turnips, plough for them twice, hoe them twice, and sow barley after them. They use both foot and wheel-ploughs, frequently with four horses, and do something better than an acre a day. As to the feeding hogs with clover, they know little of the practice, thinking it dangerous. Their dairies are pretty large, and they reckon the profit of a cow at five pounds a year.

A remarkable particular in their husbandry, is the care with which they drain their wet lands. They make hollow drains, the main ones two feet deep, and the branches twenty-two inches. They lay some small wood at the bottom, and a good deal of straw upon it, and then cover the whole with earth. The price of this work is two-pence per rod, and their small-beer. It were much to be wished that this practice was more general; for it is an admirable one, and well deserves imitation. They find their wet lands, and especially those which are flat, to be so difficult to drain with the common water-thoroughs, that their crops are frequently damaged by wet years, unless they lay them dry in this manner.

State of a farm near Braintree :

130 acres.
 100l. rent.
 12 horses.
 120 sheep.
 30 cows.
 2 men.
 1 boy.
 1 labourer constant, besides others

at busy times. The land must be incomparably good to maintain such a stock.

PRICE OF LABOUR.

In winter, one shilling and two-pence a day.
 In hay-time, one shilling and six-pence, and beer.
 In harvest, two shillings, and beer.
 Reaping wheat, eight shillings an acre.
 Mowing barley, one shilling and eight-pence.
 Mowing oats, one shilling and six-pence.
 ———— grafs, two shillings.
 Mow and make hay, five shillings and six-pence.
 Hoeing turnips, two shillings and six-pence each time.
 ———— beans and pease, ditto.

The country between Chelmsford and Billericay is very rich, woody, and pleasant, with abundance of exceeding fine landscapes over extensive vallies. The husbandry is not equal to that in use about Chelmsford; for their principal course is fallowing for wheat, then sowing oats and laying down with clover and rye-grafs; which is a very faulty custom on land which, like this, lets in general from fifteen to twenty shillings an acre; nor did we see many good crops. The principal manure they use about Billericay, is chalk, which they fetch in waggons from Grays, and costs them in general, by the time they get it home, five-pence halfpenny or six-pence a bushel. They seldom use it alone, but mix it with turf fresh dug, and farm-yard dung, and then lay it on for wheat, now and then for turnips, which are, however, seldom sown in that neighbourhood. All this manure is sometimes spread at the expence of ten pounds an acre.

From Billericay towards Tilbury, the husbandry continues much the same: but one thing is very observable, and that is, the prodigious size of the farms; seven, eight, nine hundred, and one thousand pounds a year, are not uncommon. Mr. Finch of Billericay rents thirteen hundred pounds a year; and the famous farmer, Mr. Button of Mucking, near Horndon, farms of his own, and what he hires together, two thousand five hundred pounds a year; and it was said, he was going to increase it, by purchasing two hundred pounds a year more, which he would take into his own hands. He keeps an hundred and two horses. The rent of these large farms runs generally about ten shillings an acre.

In some parts of Essex, especially about Saffron-Walden, they cultivate saffron to great advantage.

The saffron grounds are seldom above three acres, or less than one; and in chusing them, the principal thing they have regard to is, that they be well exposed, the soil not poor, nor a very stiff clay, but a temperate dry mould, such as commonly lies upon chalk, and is of a hazle colour; though, if every thing else answers, the colour of the mould is pretty much neglected.

The ground being made choice of, about Lady-day, or the beginning of April, it must be carefully ploughed, the furrows being drawn much closer together and deeper, if the soil will allow it, than is done for any kind of corn, and accordingly the charge is greater.

About five weeks after, or during any time in the month of May, they lay between twenty and thirty loads of dung upon each acre; and having spread it with great care, they plough it in as before. The shortest rotten dung is the best; and the farmers who have the conveniencies of making it, spare no pains to make it good, being sure of a proportionable price for it. About Midsummer, they plough a third time, and between every sixteen feet and an half, or pole in breadth, they leave a broad furrow or trench, which serves both for a boundary to the several parcels, (when there are several pro-

prietors to one inclosure) and to throw the weeds in at the proper season.

To this head likewise belongs the fencing of the grounds, because most commonly, though not always, that is done before they plant. The fences consist of what they call dead hedges, or hurdles to keep out, not only cattle of all sorts, but especially hares, which would otherwise feed on the saffron leaves during the winter.

About the weather we need only observe, that the hottest summers are certainly the best; and if therewith there be gentle showers from time to time, they can hardly miss of a plentiful rich crop, if the extreme cold, snow, or rain of the foregoing winter, have not prejudiced the heads.

The next general part of the culture of saffron, is planting or setting the roots; the only instrument used for which, is a narrow spade, commonly termed a Spit-shovel.

The time of planting is commonly in the month of July, a little sooner or later, according as the weather answer. The method is this. One man with his spit-shovel raise, between three and four inches of earth, and throws it before him about six, or more inches; two persons, generally women, following him with saffron-heads, place them in the farthest edge of the trench he makes at three inches distance from one another, or thereabouts. As soon as the digger or spitter has gone once the breadth of the ridge, he begins again at the other side, and digging as before, covers the roots last set, and makes the same room for the setters to place a new row, at the same distance from the first, that they are from one another. Thus they go on till a whole ridge, containing commonly one rod, is planted, and the only nicety in digging is to leave some part of the first stratum of earth untouched to lie under the roots; and in setting, to place the roots directly upon their bottoms. What sort of roots are to be preferred, shall be shown under the fourth head; but it must be observed in this place, that formerly when roots were very dear, they did not plant them so thick as they do now; and that they have always some regard to the size of the roots, placing the largest at a greater distance than the small ones.

The quantity of roots planted in an acre is generally about sixteen quarters, or one hundred and twenty-eight bushels, which, according to the distances left between them, as before assigned, and supposing them all to be an inch in diameter one with another, ought to amount to three hundred and ninety-two thousand and forty in number.

From the time that the roots are planted, till about the beginning of September, or sometimes later, there is no more labour about them; but as they then begin to spire, and are ready to shew themselves above ground, which is known by digging a few out of the earth, the ground must be carefully pared with a sharp hoe, and the weeds, &c. raked into the furrows, because otherwise they would hinder the growth of the plants.

In some time after appear the saffron flowers, and this leads us to the third branch of our present method. The flowers are gathered as well before as after they are full blown, and the most proper time for this is early in the morning. The owners of the saffron get together a sufficient number of hands, who place themselves in different parts of the field, pull off the whole flowers, and throw them, handful by handful, into a basket; and so continue till all the flowers are gathered, which happens commonly about ten or eleven o'clock.

Having then carried home all they have got, they immediately spread them upon a large table, and placing themselves round it, they fall to picking out the filaments, styli, or chives, and together with them, a pretty long portion of the stylus itself, or string to which they are joined. The rest of the flower they throw away as useless. The next morning they return into the field again, whether it be wet or dry weather, and so on daily, even on Sundays, till the whole crop be gathered.

The chives being all picked out of the flowers, the next labour about them is to dry them on the kiln. The kiln is built upon a thick plank (that it may be moveable from

from place to place) supported by four short legs. The outside consists of eight pieces of wood, about three inches thick, joined in form of a quadrangular frame, about twelve inches square at bottom on the inside, and twenty-two inches at top, which is likewise equal to the perpendicular height of it. On the fore-side is left a hole about eight inches square, and four inches above the plank, through which the fire is put in. Over all the rest, laths are laid pretty close to one another, and nailed to the frame already mentioned, and then are plastered over on both sides, as is also the plank at bottom very thick, to serve for a hearth. Over the mouth, or widest part, goes a hair-cloth fixed to two sides of the kiln, and likewise to two rollers, or moveable pieces of wood, which are turned by wedges or screws, in order to stretch the cloth. Instead of the hair-cloth, many people now use a net-work of iron wire, with which it is observed, that the saffron dries sooner, and with a less quantity of fuel; but the difficulty of preserving the saffron from burning, makes the hair-cloth be preferred by the nicest judges in drying.

The kiln is placed in a light part of the house, and they begin by laying five or six sheets of white paper on the hair-cloth, upon which they spread the wet saffron, between two and three inches thick. This they cover with other sheets of paper, and over these lay a coarse blanket five or six times doubled, or instead thereof, a canvas pillow filled with straw; and after the fire has been lighted for some time, the whole is covered with a board, having a large weight upon it.

At first they give it a pretty strong heat, to make the chives sweat, as their expression is; and in this, if they do not use a great deal of care, they are in danger of scorching, and so of spoiling all that is on the kiln.

When it has been thus dried for about an hour, they take off the board, blanket, and upper papers, and take the saffron off from that which lies next it, raising at the same time the edges of the cake with a knife. Then laying on the papers again, they slide in another board between the hair-cloth and under-papers, and turn both papers and saffron upside down, afterwards covering them as above.

This same heat is continued for an hour longer; then they look to the cake again, free it from the papers, and turn it; then they cover it, and lay on the weight as before. If nothing happens amiss during these first two hours, they reckon the danger to be over; for they have nothing more to do, but to keep a gentle fire, and turn their cake every half hour, till it be thoroughly dry; for doing which as it ought, there are required full twenty-four hours.

In drying the large plump chives, they use nothing; but towards the latter end of the crop, when these come to be smaller, they sprinkle the cake with a little small beer, to make it sweat as it ought; and they begin now to think, that using two linen cloths next the cake, instead of the two innermost papers, may be of some advantage in drying; but this practice is followed as yet but by few.

Their fire may be made of any kind of fuel; but that which smoaks the least is best, and charcoal for that reason is preferred to any other.

What quantity of saffron a first crop will produce, is very uncertain. Sometimes five or six pounds of wet chives are got from one rod; sometimes not above one or two, and sometimes not enough to make it worth while to gather and dry it. But this is always to be observed, that about five pounds of wet saffron go to make one pound of dry, for the first three weeks of the crop, and six pounds during the last week; and now the heads are planted very thick, two pounds of dried saffron may, at a medium, be allowed to an acre for a first crop, and four and twenty pounds for the two remaining, the third being considerably larger than the second.

In order to obtain these, there is only a repetition to be made every year of the labour of hoeing, gathering, picking and drying, in the same manner as before set down, without the addition of any thing new; except that they let cattle into the fields, after the leaves are

decayed, to feed upon the weeds; or perhaps mow them for the same use.

About the Midsummer after the third crop is gathered, the roots must all be taken up and transplanted; the management requisite for which is the fourth thing to be treated of. To take up the saffron heads, or break up the ground, as their term is, they sometimes plough it, sometimes use a forked kind of hoe called a Pattock, and then the ground is harrowed once or twice over; during all which time of ploughing, or digging and harrowing, fifteen or more people will find work enough to follow and gather the heads as they are turned up.

They are next to be carried to the house in sacks, and there to be cleaned or raised. This labour consists in clearing the roots thoroughly from earth, and from the remains of old roots, old involucra, and excrescencies; and thus they become fit to be planted in new ground immediately, or to be kept for some time without danger of spoiling.

The quantity of roots taken up, in proportion to those that were planted, is uncertain; but at a medium it may be said, that allowing for all the accidents that happen to them in the ground, and in breaking up, from each acre may be had twenty-four quarters of clean roots, all fit to be re-planted. The owners are sure to chuse for their own use the largest, plumpest, and fattest roots; but above all, they reject the longish pointed ones, which they call Spickets or Spickards; for very small round or flat roots are sometimes observed to flower.

This is the whole culture of saffron in the country above-mentioned; and we have only now to consider the charges and profits which may be supposed, one year with another, to attend this branch of agriculture; and of these we have drawn up the following computation for one acre of ground, according to the price of labour in this county.

	l. s. d.
Rent for three years	3 0 0
Ploughing three times	0 18 0
Dunging	3 12 0
Hedging	1 16 0
Spitting and setting the heads	1 12 0
Weeding, or paring the ground	1 4 0
Gathering and picking the flowers	6 10 0
Drying the flowers	1 6 0
Instruments of labour for three years with the kiln, about	0 10 0
Ploughing the ground once, and harrow- ing twice	0 12 0
Gathering the saffron heads	1 00 0
Raising the heads	1 12 0

Total Charge 23 12 0

This calculation is made upon the supposition, that an acre of ground yields twenty-six pounds of neat saffron in three years, which we stated only as a mean quantity between the greatest and the least; and therefore the price of saffron must be adjusted accordingly, which we think cannot be done better than by fixing it at thirty shillings per pound; since in very plentiful years it is sold for twenty, and is sometimes worth between three and four pounds. At this rate, twenty-six pounds of saffron are worth thirty-nine pounds, and the neat profits of an acre of ground producing saffron, will in three years amount to fifteen pounds thirteen shillings, or to about five pounds four shillings yearly. This, we say, may be reckoned the neat profit of an acre of saffron, supposing that all the labour were to be hired for ready money; but as the planter and his family do a considerable part of the work themselves, some of this expence is saved: that is, by planting saffron, he not only may reasonably expect to clear about five pounds yearly per acre, but also to maintain himself and family for some part of each year; and it is upon this supposition only, that the result of other computations which have been made of the profits of saffron, can be said to have any tolerable degree of exactness; but the calculations themselves are undoubtedly very inaccurate.

MANUFACTURES, and TRADE.

The principal manufactures of this county are cloths and stuff; particularly baizes and says, of which, not half a century ago, such quantities were exported to Spain and the Spanish colonies in America, to cloath the nuns and friars, that there has often been a return from London of thirty thousand pounds a week in ready money, to Colchester only, and a few small places in its neighbourhood.

BOROUGH, and MARKET TOWNS, &c.

We entered this county over a bridge built some years since over the river Lee, near Hackney in Middlesex. We passed through several villages finely situated, and full of elegant houses erected by the merchants and tradesmen of London. One of these villages, called Layton, situated about five miles north-east of London, was the ancient Durolitum mentioned in the Itinerary of Antoninus, and was a Roman station, as appears from a great variety of antiquities that have been dug up here, particularly a large Roman urn found in the church-yard, with some ashes in it, and coals sticking to its sides.

Besides the above, several other urns, of various sizes and figures, with ashes in them, mixed with small pieces of bones, which escaped the funeral fires, have been found in the neighbourhood of this place.

One of the Roman ways passed through this place from London. Marks of this causeway were discovered a few years ago in the bottom of Hackney-marsh, between Old Ford and the Wyck, crossing the river Lee, where the Temple-mills now stand.

Leaving this village, we passed to Wanstead, another village full of fine houses belonging to the citizens of London; but remarkable for the elegant seat of earl Tilney. It is built of Portland stone, with a very grand portico in the centre, supported by large Corinthian pillars; under which is the landing-place, from a double stone stair-case, which leads to the grand hall. This room is fifty-three feet long, by forty-five broad. The ornaments consist chiefly of two large antique statues, on marble pedestals, Livia and Domitian; and three large pictures by Casali, Coriolanus, Porfenna, and Pompey taking leave of his family. These pieces are not in that master's best manner; the colours are too tawdry; nor is the beauty and delicacy of the female figures equal to many we have seen by that painter. The door-cases of this room are plain, but little carved, though in a good stile. The chimney-piece heavy.

From the hall, we were conducted to the left, into a dining-room of twenty-seven feet square; out of that into a drawing-room of the same dimensions; from that into a bed-chamber of twenty-four by twenty, and through that into two light closets: these rooms form the front line to the left of the hall. There is nothing remarkable in their furniture; but we observed, among other modern pictures, that of a Turkish lady, which pleases every spectator.

The suite of apartments, to the right of the hall, consists of, first, a dining-room, twenty-five feet square; then a drawing-room, thirty by twenty-five. The chimney-piece in this room is elegant; an eagle taking up a snake, in white marble, is let into the centre of it. The next is a bed-chamber, twenty-five by twenty-two; and out of that we entered the ball-room, which runs the whole breadth of the house, and connects the front line of apartments with the back suite. This room is seventy-five by twenty-seven; very elegantly fitted up with gilded ornaments of all kinds. But we should remark, that the gilding being all on brown, is by no means set off with such lustre and brilliancy as that at Holkam.

From the ball-room, turning to the back suite, we entered another state bed-chamber, twenty-seven by twenty-two. From that into a dressing-room, twenty-seven by twenty-five; then into an antichamber, forty by twenty-seven; the chimney-piece white marble, and elegant; marble tables fine. Next came the saloon, thirty square; chimney-piece white marble, and pretty;

then another dining-room, forty by twenty-seven, ornamented with three large pictures, by Casali: Alexander directing Apelles to paint Campaspe, who is sitting naked in a chair, is beautiful, the naked well coloured, and the whole figure enticing; but there is a strange swelling in her thigh. The next piece is the Continnence of Scipio, a poor one; the lady is by no means tempting, nor has Scipio any thing the least characteristic in his countenance. Sophonisba taking poison, is the third; she is an insipid figure, and takes the poison as she would pluck a rose; but without any of that noble heroism of soul, which speaks a contempt of the fear of death. The colours in all these pieces are too glaring. From this room we entered a drawing-room, twenty seven square; then another bed-chamber, twenty-seven by twenty-one; very elegant, hung with crimson velvet; bed the same, and lined with an Indian sattin, white, trailed with coloured flowers. Lastly, a dressing-room, twenty-six by eighteen; ornaments richly gilt. The suite of rooms on either side, is, in the whole, two hundred and sixty foot.

Under the hall is a very noble arcade, out of which is a common dining-parlour, forty by thirty-five, out of which we entered a breakfast-room, thirty by twenty-five; elegant indeed. Prints pasted on a buff (pale yellow-coloured) paper, with engraved borders; and all disposed in a manner which displays great taste. The prints are of the very best masters, and the ornaments elegant. We cannot help preferring the taste of this room to lady Townshend's dressing-room, above-mentioned.

Wanstead, upon the whole, is one of the noblest houses in England. The magnificence of having four state bed-chambers, with complete apartments to them; and the ball-room are superior to any thing of the kind in Houghton, Holkam, Blenheim, or Wilton. But each of those houses are superior to this in other particulars; and to form a complete palace, something must be taken from all. In respect of elegance of architecture, Wanstead is second to Holkam. What a building would it be, were the wings added according to the first design!

Leaving Wanstead, we directed our course to the northward and visited Waltham Abbey, a small market town situated on the banks of the river Lee, which is here divided into divers channels, forming several small islands, thirteen miles from London.

About the year 1062, Harold, earl of Kent, founded here a monastery for a dean and eleven secular canons, who were by king Henry II. changed into an abbot and regulars of the order of St. Augustine, and their number increased to twenty-four. It was dedicated to the Holy Cross; and its yearly revenue, at the general dissolution, amounted to nine hundred pounds four shillings and three-pence. Harold, the founder of this abbey, was killed in the great battle in Suffex, fought with William the Conqueror; and his mother having begged his body of that prince, it was buried in this abbey. In the reign of queen Elizabeth, as some workmen were digging here, they found his coffin, covered with a flat grave-stone, on which there was no other inscription than *Harold Infelix!*

This abbey is now a gentleman's seat; and the gardens belonging to it were, some years ago, greatly admired; but since the taste for inclosed gardens has been condemned, they have been but little frequented, except by curious persons, to see the tulip-tree, which grows on a grass-plat near the house, and is one of the finest and most flourishing of the species in England, producing annually, in the month of July, a vast quantity of flowers.

Here is a weekly market on Tuesday, and three annual fairs, viz. the fourteenth of May, and the twenty-fifth and twenty-sixth of September, for horses, cows, and hogs.

A few miles to the eastward of Waltham Abbey, is Epping, a small market-town, situated on the borders of a forest of the same name, seventeen miles from London. This forest is a royal chace, and reaches from this town to within five miles of London. It was anciently called the Forest of Essex, and afterwards the Forest of Waltham.

The market of this town, which is on Friday, is held in a hamlet, called Epping street, about a mile and a half from the church. Besides the market, here are two annual fairs, the first held on Whitsun-Tuesday, and the second on the thirteenth of October; both for horses, cows, and sheep.

Hatfield Broadoak, the next place we visited, is twenty-eight miles distant from London. It has its title of Broadoak from a large spreading oak which formerly grew in the town. The church of St. Mary in this town was given, about the year 1140, by Aubrey de Vere, the second of that name, and father to the first earl of Oxford, to the monks of the abbey of St. Melienius, at Redon in Brittany, to which it became a cell; but his son, the earl of Oxford, is thought to have increased its revenues, and to have made it an independent priory of black-monks, for such it was at the suppression, when it contained nine monks, whose annual revenues amounted to one hundred and twenty-two pounds thirteen shillings and two-pence.

Here is a weekly market on Saturday, and an annual fair on the third of August, for lambs.

At Takely, a village to the northward of Hatfield Broadoak, was a priory, given by king Henry I. to the abbey of St. Valery, in Picardy, which, upon the dissolution of alien priories, was made part of the endowment of New College, in Oxford.

At Themhall, a village north-west of Hatfield Broadoak, was a priory of black canons, founded by Gilbert de Montefixo, or Mountfichet, who came into England with the Conqueror. It was dedicated to St. James, and valued, on the dissolution, at sixty pounds eighteen shillings and seven-pence *per annum*.

At Birchanger, a village a little to the north-west of Hatfield Broadoak, Richard, son of Serlo de Newport, founded, in the reign of king John, an hospital for a master and two chaplains. It was dedicated to St. Mary and St. Leonard, and under the peculiar jurisdiction of the dean of St. Martin's, in London. At the suppression, the revenues amounted to thirty-one pounds thirteen shillings and eleven-pence *per annum*.

Dunmow, which we next visited, is called Dunmow Magna, or Great Dunmow, to distinguish it from a village in its neighbourhood, called Dunmow Parva, or Little Dunmow. It stands on a gravelly hill, washed by the Chelmer, thirty-eight miles from London. It gives name to its hundred, the bailiff of which is appointed by the high sheriff of the county. It is a very ancient town, and governed by twelve headboroughs, out of which a bailiff or chief officer is chosen every year. Its chief trade consists in a manufacture of baize; but it is not now equal to what it was about half a century ago.

This place is supposed by some writers to be the Cæsaromagus of the Romans; and in several parts of the road between this place and Colchester, are still to be seen the remains of an old Roman way, which the inhabitants call the Street. Here was formerly a priory; and the place is famous for an ancient custom, of the origin of which we have the following account:

One Robert Fitzwalter, a powerful baron in this county, in the time of Henry III. instituted a custom in the priory here: That whatever married man did not repent of his being married, or differ and dispute with his wife, within a year and a day after his marriage, and would swear to the truth of it, kneeling upon two hard-pointed stones in the Priory Church-yard, set up for that purpose, in presence of the prior and convent, such person should have a fitch of bacon.

This has been actually claimed and received, as appears by the following record there; so that either husbands and wives must be here more suitably matched, or the swearers have harder mouths, than in most other parts of England.

Dunmow Priory, Essex.

At a court baron of the right worshipful Sir Thomas May, knight, there holden on Friday the twenty-seventh day of June, in the thirteenth year of the reign of our Sovereign Lord William III. by the grace of God of England, Scotland, France, and

Ireland, king, defender of the faith, &c. and in the year of our Lord 1701, before Thomas Wheeler, gentleman, steward there.

Homage

Eliz. Beaumont,
Henrietta Beaumont,
Annabella Beaumont,
Jane Beaumont,
Mary Wheeler,

} Spinflters,
jur'.

Be it remembered, That at this court, it is found and presented by the homage aforesaid, that John Reynolds, of Hatfield-Regis, alias Hatfield-Broadoake, in the county of Essex, Gent. and Anne his wife, have been married for the space of ten years last past, and upwards: And it is likewise found, presented, and adjudged, by the homage aforesaid, that the said J. Reynolds, and Anne his wife, by means of their quiet and peaceable, tender and loving cohabitation, for the space of time aforesaid (as appears by reference to the said homage) are fit and qualified persons to be admitted by the court to receive the ancient and accustomed oath, whereby to intitle themselves to have the bacon of Dunmow delivered unto them, according to the custom of the manor: Whereupon, at the court, in full and open court, came the said John Reynolds, and Anne his wife, in their proper persons; and humbly prayed, that they might be admitted to take the oath aforesaid: Whereupon the said steward, with the jury, suitors, and other officers of the court, proceeded, with the usual solemnity, to the ancient and accustomed place for the administration of the oath, and receiving the bacon aforesaid; that is to say, to the two great stones lying near the church-door, within the said manor; where the said John Reynolds, and Anne his wife, kneeling down on the said two stones, the said steward did administer unto them the aforesaid oath, in these words, or to this effect following:

You do swear, by custom of confession,
That you never made nuptial transgression;
Nor, since you were married man and wife,
By household brawls, or contentious strife,
Or otherwise, in bed or board,
Offended each other in deed or word;
Or, in a twelvemonth's time, and a day,
Repented not in thought any way;
Or, since the church clerk said, Amen,
Wish'd yourselves unmarried again;
But continue true, and in desire,
As when you join'd hands in holy choir.

And immediately thereupon, the said John Reynolds, and Anne his wife, claiming the said bacon, the court pronounced sentence for the same in these words, or to the effect following:

Since to these conditions, without any fear,
Both, of your own accord, do freely swear,
A whole gamon of bacon you do receive,
And bear it away with love and good leave:
For this is the custom of *Dunmow* well known;
Tho' the pleasure be ours, the bacon's your own.

And accordingly a gamon of bacon was delivered to the said John Reynolds, and Anne his wife, with the usual solemnity.

And also William Parsley, of Much Eyston, in the county of Essex, and Jane his wife, being married for the space of three years last past, and upwards, by means of their quiet, peaceable, tender, and loving cohabitation for the said space of time, came and claimed the said bacon, and had it delivered unto them, according to the aforesaid order.

THOMAS WHEELER, Steward.

The fitch was also claimed by one John Shakeshanks, wool-comber, and Anne his wife, of Weathersfield, in the same county, on Thursday, June 20, 1751.

Here is a weekly market on Saturday, and two annual fairs, viz. the sixth of May, and the eighth of November, both for cattle.

At Little Dunmow, a village in the neighbourhood of this town, the lady Jaga, sister to Ralph Baynard, erected, in the year 1104, a church, which she dedicated to the Virgin Mary. Two years after, her son, Geoffrey, placed here a society of canons, who observed the rule of St. Augustine. Upon the suppression, here were a prior and ten or eleven religious, whose annual revenues amounted to one hundred and fifty pounds three shillings and four-pence.

At Tiltey, a village near Dunmow, Robert Ferrers, earl of Derby, and Maurice Fitz Jeffrey, founded, about the year 1152, an abbey of white monks, dedicated to the Virgin Mary.

Walden, or Saffron Walden, from the great quantities of saffron cultivated in its neighbourhood, is situated on the borders of Cambridgeshire, forty-two miles from London. It was incorporated by king Edward VI. and governed by twenty-four aldermen, out of whom a principal officer, called Treasurer, and two assistants, called Chamberlains, were annually chosen; but by a charter granted by king William and queen Mary, it has a mayor. It is a very considerable town, has a good church, an alms-house well endowed, and a free-school on a royal foundation. A priory of Benedictine monks was founded here in the year 1136, by Geoffrey Mandevil, the first earl of Essex, and dedicated to St. Mary and St. James. In the time of king Richard I. it became an abbey, and was valued, on the dissolution, at three hundred and seventy-two pounds eighteen shillings and a penny *per annum*.

A great deal of saffron is cultivated in the fields near this town. We have explained the whole process of raising and curing this useful commodity, in our remarks on the husbandry of this county.

Here is a weekly market on Saturday, and three annual fairs, viz. Midlent Saturday, for horses and bullocks; and the first of November, for cows.

Near this town, on the side of the Cambridge road, stands the noble and stately palace of Audley-Inn, or Audley-End, formerly the largest palace of any in England; and though a great part of it has been pulled down, is still one of the most magnificent structures in the whole kingdom. It was built out of the ruins of the above-mentioned monastery, by Thomas, second son of Thomas duke of Norfolk, who married the only daughter and heir of lord Audley. This Thomas was summoned into parliament in queen Elizabeth's time, as lord Audley of Walden; and was afterwards created earl of Suffolk by king James I. to whom he was first chamberlain, and afterwards lord high treasurer. It was designed for a royal palace for that king; and, when it was finished with all the elegance and polite taste of the times, the king was invited to see it; and, as he passed to Newmarket, he took up a night's lodging there: when, after having viewed it with great surprize and astonishment, the earl asked him, How he approved of it? Who answered, Very well. But troth, man, said he, it is too much for a king; but it may do for a lord high treasurer; and so left it upon the earl's hands, who is reported to have had then an estate of fifty thousand pounds a year, which has been gradually decaying ever since, and is now reduced to about three thousand pounds a year, with incumbrances upon it. King Charles II. purchased this house, and so it became, what it was originally designed for, a royal palace. The king mortgaged the hearth-tax to the earl, to answer the purchase-money; and appointed James, then earl of Suffolk, housekeeper thereof, with a salary of one thousand pounds a year; which office continued in the family till the Revolution, when the hearth-tax was abolished. And the exigence of the state being such, as it could not afford to pay the purchase-money, king William III. re-granted the said house to the family; upon which Henry earl of Suffolk (who, in his father's life-time, was created earl of Bindon, to qualify him to hold the marshal's staff) pulled down a great part of this noble edifice, and reduced it considerably; and yet it is still very large, and makes a grand appearance. We enter in at a large wide pair of iron gates, into a most spacious court-yard, on each side of which was formerly a row of cloisters, in

which stood the out-offices belonging to the house, which have been all pulled down, and supplied with a stone wall. We pass in at the fore front, through part of the house, into a large open quadrangle, inclosed by four different parts of the house, and also surrounded with cloisters. The apartments above and below are very lofty and spacious; and there is a gallery, which extends the whole length of the back front of the house, and is judged to be the largest in England. The gardens are indifferent, but very capable of improvement. Behind the house is a fine park, extending to Saffron-Walden, well stored with deer, but not over-burdened with timber; in which there is a rising spot of ground, whereon, if the house had been erected, it would have had a much better effect as to prospect; for its present situation is low, neither are the grounds about it very fertile, nor, we think, healthy.

But however great and magnificent this noble house appears, it bears an indelible stain, if what is said be true, That it was built with Spanish gold, upon the ruin of the great and learned Raleigh, who fell by the revenge of Spain, the arts of Gundamor, the avarice of Suffolk, and the unpardonable weakness of his own king.

At a small town called Littlebury, not far from Audley-Inn, is an house which was erected by the famous Mr. Winstanley, who built Eddystone light-house, and perished in it. Here he had made many odd contrivances of chairs running on springs, &c. which usually much surprized strangers, who came to see the house. The person appointed to shew it generally placed the greatest stranger in a particular chair, which, on touching the spring, ran backward through the house into the garden. The same gentleman was famous also for his water-works, full of whimsical, but ingenious contrivances.

But we ought not to omit, that near Icléton and Stretal, upon the river Cam, lies Chesterford, where, in the year 1719, were discovered the *vestigia* of a Roman city. The foundation of the walls is very apparent quite round, though level with the ground, including about fifty acres. Great part of it serves for a causeway to the public Cambridge road from London. The Crown Inn is built upon it. In the north-west end of the town is the foundation of a Roman temple. Many Roman coins have been found in the Boroughfield, as they term the ancient city, whose name was Camboritum, according to Dr. Stukely. In this parish, they say, has been a royal manor. Not far off, by Audley-Inn, is a great Roman camp, upon an eminence, where now stands an hunting-tower of brick.

Thacksted is a considerable market-town, situated on the river Chelmer, thirty-two miles from London. It was incorporated by Philip and Mary; and the corporation consists of a mayor, bailiff, and commonality. Queen Elizabeth confirmed the charter, and king James I. added several privileges, and granted the corporation a recorder. The church is a regular and stately building, but has nothing very remarkable. Here is a weekly market on Friday, and two annual fairs, viz. the sixteenth of May, and the tenth of August, for horses and black cattle.

Braintry, or Braintree, the next place we visited, is forty-two miles from London. It is a large town, with some good houses, lately built. It abounds with dissenters, and one of their community, Henry Smith, Esq; left two thousand eight hundred pounds to be laid out in the purchase of land for the relief of the poor of this and the neighbouring parishes. This town was, not many years ago, famous for a manufacture of baize and sayes, but it is now greatly declined.

Here is a weekly market on Wednesday, and two annual fairs, viz. the eighth of May, and the second of October, for cattle, butter, cheese, &c.

Near Braintree, is the parish of Black-Notely, in which are a few scattered houses, scarcely worth noticing, except for the memory of the late learned Mr. Ray, who resided many years in this place, and was buried in the church-yard; over whose grave a monument was erected, with an inscription in Latin; which being long, we shall refer the learned to the original, and content ourselves with

with giving the English, for the sake of our common readers, and in regard to so great a man, who was an honour to his country. It may be thus rendered :

“ The mortal part of the most learned John Ray, A. M. is deposited in this narrow tomb: but his writings are not confined to one nation; and his fame, every where most illustrious, renders them immortal. Formerly he was fellow of Trinity College, in Cambridge, and of the Royal Society in London; a singular ornament of both. In every kind of science, as well divine as human, most expert. And, like a second Solomon (to whom alone, perhaps, he was inferior), from the cedar to the hyssop, from the largest of animals to the smallest insects, he arrived at a consummate knowledge. And not only did he most accurately discourse of plants spread over the face of the whole earth; but, making a most strict search, even into its inmost bowels, whatever deserved discussion throughout all nature, he described. While on his travels abroad, he diligently discovered what had escaped the observation of others, and first brought to light many things most worthy of remark. Further than this, he was endowed with so unaffected a manner of behaviour, that he was learned without pedantry; of a sublime genius, and at the same time (which is rarely known) of an humble and modest disposition. Not distinguished by an illustrious extraction; but (which is greater) by his own virtue. Little solicitous about wealth and titles, he chose rather to deserve than to possess them. Content with his own lot, he grew old in a private station, worthy a more ample fortune. In every other respect, he readily observed moderation; in study, none.

“ To conclude: To all these perfections he added a piety free from artifice; bearing an entire and hearty veneration for the church of England, which he confirmed with his last breath. Thus, happily, in a virtuous retirement, lived he, whom the present age reveres, and posterity will admire.”

N. B. This monument, beginning to want repair, by standing exposed in the church-yard, hath been lately removed, and set up in the chancel of Black-Notely church. To the former epitaph is added, on the table on the east side, a Latin inscription, which may be thus translated :

“ This Cenotaph, formerly exposed to the open air in the church-yard, defaced by the injuries of the weather, and just falling into ruins, was, by J. Legge, M. D. repaired, and removed under shelter, March 17, 1737.”

The country hereabout is very pleasant, having many risings and falls, with great plenty of water. The fields are well cultivated, so as to render the whole face of the country like a garden. But what is often very surprising to strangers, is the nakedness of most of the large trees growing in their hedge-rows, and on the sides of the road, even in the month of May, at which time few of them have put out any leaves; but, upon inquiry, we found they were a peculiar sort of elm, which rarely puts out leaves before the middle of May; and this is one of the most common trees of this county.

The manor of Panfield, a village near Braintree, was given by Waleran Fitz-Renulph, in the fourth year of William the Conqueror, to the abbey of St. Stephen at Caen in Normandy; upon which here was an alien priory of Benedictine monks: but in the first year of Henry V. the abbot and convent of Caen granted it in fee to John Woodhouse, Esq; who sold it to Thomas Bourcheir, archbishop of Canterbury; and he gave it, in the year 1473, to the prior and convent of his Metropolitan church at Canterbury.

At Leighs, south-west of Braintree, Sir Ralph Gernoun, in the time of Henry III. is said to have founded a priory of black canons, dedicated to the Virgin Mary, and St. John the Evangelist. It had ten religious in it about the time of the dissolution, when it was valued at one hundred and fourteen pounds one shilling and fourpence *per annum*.

Chelmsford, the next town we visited, gives name both to the deanery and hundred, and is a pretty large and populous place; twenty-nine miles from London.

It is seated at the confluence of two rivers, the Can, which flows from the south-south-west, and the Chelmer from the north. Some have imagined, that the right name of the latter is not Chelmer, but Wink, which appears to be without a sufficient foundation.

However, from a ford here through the river Chelmer, did Chelmsford undoubtedly take its name. In Doomsday-book 'tis written Celmeresfort, and Celmeresforda; and in other records, Chelmeresford, Chelmerford, and Chelmesford.

This town is considerable upon many accounts. It is a great thoroughfare in the road from London to Colchester, Harwich, and Suffolk; and being seated almost in the middle of the county, is much frequented on account of its conveniency for public business. Here the assizes, the general quarter-sessions, petty-sessions, and county-courts, are held: here the commissioners for the land and window-tax sit as often as is required: here elections of knights of the shire are made; and here is the county gaol. It has a very convenient shire-house.

A good and plentiful market is kept on Fridays, and two fairs, one on the first of May, and the other on the first of November annually. It is well supplied with excellent water, there being a conduit in the market-place, from which runs, every minute, above a hoghead and a half, conveyed through the town in a limpid stream; by means of which, and the commendable care of the inhabitants, it is kept clean and neat, and makes as good an appearance as any town in the kingdom.

By an account taken in 1738, there were found to be two thousand one hundred and fifty-one inhabitants; but they have increased since, as well as the buildings. And, according to the poll for knights of the shire printed in 1734, fifty of the voters had their freeholds, as well as residence, in Chelmsford and Moulsham; and twenty-eight others, that dwelt in divers parts, had also freeholds in this town.

In the reign of Edward the Confessor, and at the time of the grand survey, Chelmsford was part of the possessions of the bishops of London, and to them it owes its grandeur, nay, almost its existence: for it was inconsiderable till the reign of king Henry I. about the year 1100, when Maurice, bishop of London, built a bridge over the river here, which brought the road, that before lay through Writtle, this way, and gave some increase to the town, by the resort and benefit of travellers. About a hundred years after, William de Sancta Maria, bishop of London, obtained licence for a market from king John, in the first year of his reign, and for a fair the year following.

Some of the privileges enjoyed by some of their successors, were indeed afterwards questioned by king Edward I. in the thirteenth year of his reign; who issued out a *quo warranto* against bishop Richard de Gravesend, to shew what claim he had to View of Frank pledge, Gallows, Tumbrel, Pillory, free Warren, and the assize of bread. But, five years after, that king confirmed to the same bishop a view of Frank-pledge in his manors of Orsette, Leyndon, and Chelmsford, in this county. And king Richard II. July 26, 1395, granted the return of writs to bishop Robert Braybrooke.

This town returned once members to a council at Westminster, the eleventh of Edward III. viz. William de Mascall, John de Thorpe, John le Marechal, William Wendover.

On the south side of the river, within the hamlet of Moulsham, stood an house of Black or Dominican friars, which might be very ancient, but could not be founded by Malcolm king of Scotland; for the last of that name died long before these monks were known in England. The site of it is now called The Friars, and lies a little above the gaol. The building was of a mixture of flint and free-stone; and the kitchen was curious on account of the roof, it being like that of the theatre at Oxford, but no remains of it now appear.

This house, at the suppression, was valued at nine pounds six shillings and five-pence *per annum*. And king

king Henry VIII. in the thirty-fifth of his reign, granted it to Antony Bonvixi. Afterwards it came into the Mildmay family, where it remains.

In the reign of Edward II. about 1320, lived in this house Thomas Langford, a Dominican friar, who wrote an universal chronicle from the beginning of the world to his own time, and other pieces. A further account of him may be seen in John Bale's Centuries.

A chapel belonging to the abbey of St. Osith, formerly stood in a field called Long Stamps; between Moulsham-hall and Gallow-common; built undoubtedly by that abbey, which had part of the tithes of Moulsham. Several stones, with brasses thereon, have been taken thence. At the dissolution, this chapel and the tithes, valued at five pounds a year, were let to William Aylenoth. King Henry VIII. in the thirty-first of his reign, granted the site of this chapel, with the appurtenances, and a moiety of the tithes of Moulsham belonging to the abbey of St. Osith, to William Gonson, Esq; and his heirs. His daughter Havisia marrying Thomas Mildmay, Esq; brought these into that family.

In 1348, king Edward III. granted licence to Philip de Aungre, and Alice his wife, to give to the keeper and chaplains of the chantry at the altar of St. Mary de Thele in Hertfordshire, and to their successors, three messuages, twenty-six acres of arable, one of meadow, and five of pasture, in Chelmsford and Bromfield. Upon transferring over the revenues and possessions of the college of Thele, to the hospital of Elsing-spittle in London, in the time of Henry VI. there were six messuages, with their appurtenances, lying in Chelmsford, Buers-Gifford, Writtle, and Bromfield, being part of the possessions of the said college, then assigned over to this hospital.

King Edward VI. by his letters patent dated at Westminster the twenty-fourth of March, the fifth year of his reign, A. D. 1552, did, at the humble request of Sir William Petre, Knt. one of his principal secretaries of state, Sir Walter Mildmay, Knt. one of the general supervisors of the court of augmentations, Sir Henry Tirrell, Knt. and Thomas Mildmay, Esq; and the inhabitants of Moulsham and the adjacent parts, found and erect a free grammar-school in the parish of Chelmsford for ever, to be called by the name of the Grammar Free-school of King Edward VI. for the instruction of youth in grammar learning, under the care and inspection of a schoolmaster and an usher. He constituted the four persons above-mentioned, that had been principal instruments in the erecting of it, the first governors during life, and settled the government of it in those four families for ever. And if any of the four governors died, then the surviving governors, or the major part of them, were impowered to chuse another in his room, viz. the heir male of the person deceased. But if any of the governors should die without heir male, it should then be lawful for the surviving governors, or major part of them, to make choice of a fitting person bearing the estate of a knight, whose family lived for the most part in this county. And if it should happen all the governors thus to die without issue male, then he granted power to the bishop of the diocese to nominate and appoint four governors of the order of knights in their room.

He endowed it with Hill's Chantry in Great Badow; Plumborough-Marsh in Southminster; Barries and Squite crofts in Hatfield-Peverel; and the Marsh of Wyke or Cortwyke in West-Tilbury; and Stone house Chantry in East-Tilbury: paying yearly out of them only forty shillings and eight-pence to the poor of Much Badow aforesaid, and seven shillings and ten-pence to the court of Augmentations, for the maintenance of one master, and one usher.

He makes them a body corporate and politic for ever, by the name of the governors of the possessions, revenues and goods of the free school of king Edward, in the parish of Chelmsford.

They have a seal of brass, on which is engraven a rose, something like the privy council's seal; with this inscription round it in capitals: COE. SIGILL. CUB. POSS. REV. E BONOR. LIB. SCHO. GRAM. REG. EDRI VI^{II} IN CHELMSFORD IN COM' ESSEX.

The governors formerly hired of the Mildmay family of Moulsham-hall, a great room at the Friars near the river, for a school-house, paying forty shillings a year rent for the same. It was the refectorium of the monks. About the year 1633, Mr. Durdwin being master, and Mr. Peake usher, the roof of that room fell in, and providentially in the middle of the day, whilst all were gone to dinner, otherwise they might have been crushed to death.

It was then the governor's custom, for each of them to take his turn to be expeditor and manager for five years together, and so to take the round. But at present it is under the joint direction of the trustees, who are, Sir John Tyrell, Sir John Croffe, William Mildmay, and Carew Hervy Mildmay, Esqrs.

When a new school-house was to be provided, Sir John Tyrell was the manager. He purchased part of the George-inn, and of the yard and garden; and built there a new brick school, enlarging; at the same time, the old building, to make it fit for a master to live in.

Since which, it hath been greatly enlarged and improved by the late lord Fitz-Walter, and the subsequent trustees.

There are two charity-schools in this town; one founded August 17, 1713, for fifty boys; the other in April 1714, for twenty girls. The children are educated in the doctrine of the church of England, in reading, writing, psalmody, and arithmetic. The girls are farther taught household-work, to fit them for services; they make up the linen, and knit the stockings for both schools; and are taught to make their own gowns and petticoats. Both schools are cloathed once a year; the children are also frequently and publicly examined in the Church-catechism; and from both schools there have been many bound out to proper trades and employments. But of late, the trustees think it more for the good of society, to procure masters for them in husbandry, or to place them out in yearly services. The number of boys is at present reduced to thirty-two.

The school-house stands at the north-east corner of the church-yard, in a lane leading to the Parsonage, and to Bishop's-hall. And a house hath been lately purchased for the master to dwell in, whose salary is thirty pounds a year.

A little lower, in the same lane, was erected, in 1716, a large brick building, being the Workhouse, for the employment and better maintenance of the poor of this parish.

In Moulsham, on the right side of the road leading from Chelmsford to London, stand alms-houses for six dwellers, founded by Sir Thomas Mildmay, Bart. and his lady Anne, as appears from the inscription in capitals on a free-stone over the door.

But, before that time, the sum they are endowed with, had been granted by his grandfather, Thomas Mildmay, Esq; as appears by the following extract from his will; wherein he gives "twenty marks yearly out of his tithes of Tarling, to the masters, governors, &c. of the free-school of Chelmsford, to be payable at Ladyday and Michaelmas; whereof two pounds towards finding an usher, and six pounds to be divided in equal portions at Easter and Michaelmas, to and amongst six aged and of the poorest people inhabiting in the hamlet of Moulsham, three whereof to be men, and three to be women. And the five pounds six shillings and eight-pence being the remaining part of the [said twenty marks, or] thirteen pounds six shillings and eight-pence, to be laid out in the following manner, viz. two pounds to buy an ox or bullock to be distributed amongst the poor people of Moulsham on Christmas-eve; and three pounds six shillings and eight-pence to buy three barrels of white herrings, and four cades of red herrings, to be distributed amongst the poor people of Moulsham and Chelmsford, the first and second weeks of clean Lent. And it is provided, that the owner of the chief mansion-house of Moulsham, for the time being, shall have the nomination for ever of the usher and alms-folks aforesaid, and also the distribution of the salary and alms aforesaid, by the oversight of the said masters and governors. And he also gives six tenements within the hamlet of Moulsham,

which

which are settled in trust only on the bishop of London for the time being, for the use of six poor people to be called Beadsfolks, or Alms-people; and the naming of the said six poor people to inhabit the tenements to be in the heir of the mansion-house of Moulsham-hall for the time being; the rent of the said six tenements at that time amounting to three pounds six shillings and eight-pence.

These alms-houses standing too near the road, were taken down in 1758, and rebuilt a little more back, and in a better manner than they were before, at the expence of William Mildmay, Esq; the present worthy owner of Moulsham-hall.

The Church is a stately building, situated at the further, or west end of the town. Both church and chancel have north and south isles, leaded. A lofty square tower of stone stands at the west end, with battlements and pyramids at each corner. On the top is a large lanthorn, with a shaft leaded. It has a ring of six bells, and a clock.

It was re-edified about the year 1424, as appears by the following inscription in stone-work, in relievo, on the outside of the wall of the south isle, just under the battlements, in Gothic characters; each letter being about nine inches long: 'Pray for the good estate of all the townshepe of Chelmsford that hath *been liberal* willers and procorers of helpers to thys werke and for ... them that first began and longest shall contenowe ... it ... In the yere of our Lorde I thousand IIII hundredreth xxIIII.' The intermediate spaces are filled with flints, laid in hard mortar.

In the roof of this church, there were the following escutcheons, in 1634; many of them belonging to gentlemen that had contributed to the building.

The east window of the chancel was very fair, and curiously painted with the history of Christ from his conception to his ascension; untouched, as supposed, from the first foundation of the church. And, to perpetuate the memory of the benefactors, in the vacant places there were the escutcheons and arms of the ancient nobility and gentry, who had contributed to the building and beautifying of that fair structure. In August 1641, an ordinance of parliament being made for taking away all scandalous pictures out of churches, the churchwardens took down the pictures of the Virgin Mary, and of Christ on the cross, and supplied the place with white glass. But the mob not thinking this a thorough reformation enough, a great number of them assembled, on the fifth of November, in a riotous manner, and with long poles and stones beat down and defaced the whole window, whereby the memory of the pious benefactors is lost, as Mr. Holman observes. Dr. Michaelson, the rector, was also barbarously used by them.

There were in this church, in the time of popery, four guilds, or chantries, of which the names and yearly value were as follows:

	<i>per annum.</i>
St. John's Guild, (at the altar of St. John)	£. 01 13 4
Corpus Christi Guild, (at the altar called Corpus Christi altar)	08 15 6
Our Lady's Guild, (at the altar of our Lady)	03 10 8
Mountney's Chantry, founded by Sir John Mountney, in Chelmsford church-yard	11 10 0

In this church there were also no less than eighteen obits founded; but the lands that belonged to them cannot be now traced out.

On the north side of the church, and not far from Bishop's-hall, in a field near the way leading from that hall into the town, stood a chapel, dedicated to St. Margaret. It was appendant to the manor of Bishop's-hall; and there are some collations to it by the bishops, registered in the register named Baudake, *alias* Baldock, in the years 1321, 1336, and 1337.

In a chapel, on the north side of this church, which was in all probability erected for one of the chantries, is placed a library, given by John Knightbridge, D. D. a native of this town, and rector of Spofforth in Yorkshire, for the use and benefit of the clergy in this neighbourhood.

Some business calling us to the sea-side, we passed from Chelmsford, and visited the coast near Barking, a town inhabited chiefly by fishermen, whose smacks ride in the Thames, at the mouth of Barking creek; from whence their fish are sent up to London, to the market at Billingsgate, in small boats.

These fishing-smacks are very useful vessels to the public upon many occasions; as particularly, in time of war, they are used as press-smacks, running to all the northern and western coasts to pick up seamen to man the navy; when any expedition is at hand, that requires a sudden equipment. At other times, being excellent sailors, they are tenders to particular men of war, and, on an expedition, they have been made use of as machines, for the blowing up fortified ports, as formerly at St. Malo, and other places.

The parish of Barking is very large, and has two chapels of ease, to wit, one at Ilford, and one on the side of the forest called New-chapel.

A little beyond the town, on the road to Dagenham, stood a great old house, where, tradition says, the Gunpowder Treason was contrived, and where all the first consultations about it were held.

This side of the county is rather rich from the nature of its land, than from the number of its inhabitants; which is occasioned by the unhealthiness of the air; for these low marsh-grounds, which, with all the south-side of the county, have been gained, as it were, out of the river Thames, and the sea, where the river is wide enough to be called so, begin here, or rather at West-Ham, by Stratford, and extend themselves from hence eastward; growing wider, till we come beyond Tilbury, when the flat country lies six, seven, or eight miles in breadth, and is both unhealthy and unpleasent.

However, it is very good farming in the marshes; because the landlords let good pennyworths, though the land is rich; for it being a place where every body cannot live, those that venture it will have encouragement, and it is but reasonable they should.

In passing from Barking to Dagenham, we saw the place where was the famous breach, that laid near five thousand acres of land under water; but which, after near ten years inundation, and the works being several times blown up, was at last effectually stopped by Capt. Perry, who for several years had been employed in the Czar of Muscovy's works at Veronitza, on the river Don.

Great part of the lands in these levels, especially those on this side East-Tilbury, are held by the farmers, cow-keepers, and grasing-butchers, who live in and near London, who generally stock them with Lincolnshire and Leicestershire wethers (which they buy in Smithfield in September and October, when the graziers sell off their stocks) and feed here till Christmas or Candlemas; and though they are not made much fatter here, than when bought in, yet very good advantage accrues by the difference of the price of mutton between Micheelmas, when cheapest, and Candlemas, when dearest; and this is what the butchers call, by way of excellence, right Marsh Mutton. This mutton is generally taken, by persons who are ignorant in the choice of meat, to be turnip-fed, because the fat generally turns yellowish; but this is a great mistake, for the sheep which are fatted with turnips, are by far the best of any killed for the markets.

At the end of these marshes, close to the edge of the river, stands Tilbury-fort, which may justly be looked upon as the key of the city of London. It is a regular fortification: the design of it was a pentagon, but the water-bastion, as it would have been called, was never built. The plan was laid out by Sir Martin Beckman, chief engineer to king Charles II. who also designed the works at Sheerness. The esplanade of the fort is very large, and the bastions the largest of any in England. The foundation is laid upon piles driven down two an end of one another, so far, till they were assured they were below the channel of the river, and that the piles, which were pointed with iron, entered into the solid chalk rock, adjoining to the chalk hills on the other side.

The works to the land-side are complete; the bastions are faced with brick. There is a double ditch or moat,

the innermost of which is one hundred and eighty feet broad; a good counterescarp, and a covered way marked out; with ravelins and tenailles; but they have not been completed.

On the land-side there are also two small redoubts of brick; but the chief strength of this fort on the land-side consists in being able to lay the whole level under water, and so to make it impossible for an enemy to carry on approaches that way.

On the side next the river, is a very strong curtain, with a noble gate called the Watergate in the middle, and the ditch is palisadoed. At the place where the water-bastion was designed to be built, and which, by the plan, should run wholly out into the river, so as to flank the two curtains, on each side, stands an high tower, which, they tell us, was built in queen Elizabeth's time, and was called the Block-house.

Before this curtain is a platform in the place of a counterescarp, on which are planted one hundred and six cannon, generally carrying from twenty-four to forty-six pound balls; a battery so terrible, as to shew the consequence of that place. Besides which, there are smaller pieces planted between them; and the bastions and curtains also are planted with guns, so that they must be bold fellows who will venture in the biggest ships to pass such a battery, if the men appointed to serve the guns do their duty as becomes them.

From hence there is nothing, for many miles together, remarkable, but a continued level of unhealthy marshes, called, The Three Hundreds, till we come before Leigh, and to the mouth of the rivers Chelmer and Blackwater, saving that the towns of Horndon, Rayley, and Rochford, lie near the sea-coast, extending in the order we have named, but are of no note. The above rivers, united, make a large firth, or inlet of the sea, which our fishermen and seamen, who use it as a port, call Malden-water.

In this inlet is Osey, or Osyth island, so well known by our London men of pleasure for producing such vast numbers of wild-ducks, mallards, teals, and wigeons, that the island seems covered with them at certain times of the year, and they go from London for the pleasure of shooting; and often come home with an Essex ague on their backs, which they find an heavier load than the fowls they have shot.

On the shore, beginning a little below Candy Island, or Leigh Road, lies a great shoal or sand called the Black Tayl, which runs out near three leagues into the sea due east: at the end of it stands a pole or mast, set up by the Trinity-house of London, as a sea-mark: this is called Shoe-beacon, from the point of land where this sand begins, which is called Shoeberry-nefs, from a town of that name which stands by it. From this sand, and on the edge of Shoeberry before it, or south-west of it, all along, to the mouth of Colchester-water, the shore is full of shoals and sands, with some deep channels between; all which are so full of fish, that the Barking smacks are well employed here, and the shore swarms, besides, with small fisher-boats, belonging to the villages and towns on the coast, which come in every tide with what they take; and, selling the smaller fish in the country, send the best and largest upon horses, which travel night and day, to London market.

On this shore also are taken the best and most relishing, though not the largest oysters in England. The spot from whence they have their appellation is a little bank called Woelfleet, in the mouth of the river Crouch, called Crooksea-water; but the chief place where these oysters are now had, is from Wyvenhoe, and the shores adjacent, whither they are brought by the fishermen, who take them at the mouth of Colchester-water, and about the sand they call the Spits, and carry them up to Wyvenhoe, where they are laid in beds or pits on the shore to feed, as they call it; and then, being barrelled up, and carried to Colchester, which is but three miles off, they are sent to London by land, and are from thence called Colchester oysters.

The following short account of the nature of these green or Colchester oysters, and the manner of managing them, being very curious, cannot fail of being acceptable.

‘ In the month of May the oysters cast their spawn, which the dredgers call their Spat. It resembles a drop of candle-grease; and is about the bigness of an half-penny. The Spat cleaves to stones, old oyster-shells, pieces of wood; and such-like things at the bottom of the sea, which they call Cultch. It is probably conjectured, that the Spat, in twenty-four hours, begins to have a shell.

‘ In the month of May the dredgers (by the law of the Admiralty-court) have liberty to catch all manner of oysters, of what size soever. When they have taken them, with a knife they raise the small breed from the cultch; and then they throw the cultch in again, to preserve the ground for the future, unless they be so newly spat, that they cannot be safely severed from the cultch. In that case they are permitted to take the stone or shell, &c. that the spat is upon, one shell having many times twenty spats.

‘ After the month of May, it is felony to carry away the cultch, and punishable to take any other oysters, unless it be those of size, that is to say, about the bigness of an half-crown piece, or when, the shells being shut, a fair shilling will rattle between them.

‘ The places where these oysters are chiefly caught, are called the Ponthurnham, Malden, and Coln-waters. The latter takes its name from the river Coln, which passes by Colchester, gives name to that town, and runs into a creek of the sea, at a place called the Hythe, being the suburbs of the town.

‘ This brood, and other oysters, they carry to creeks of the sea, at Brickelsea, Mersea, Lagno, Faringrego, Wyvenhoe, Tolesbury, and Salt Coafe, and there throw them into the channel, which they call their beds, or layers, where they grow and fatten; and in two or three years, the smallest brood will be oysters of the size aforesaid. Those oysters, which they would have green, they put into pits about three feet deep, in the salt-marshes, which have overflowed only at spring-tides, to which they have sluices, and let out the salt-water until it is about a foot and an half deep.

‘ These pits, from some quality in the soil cooperating with the heat of the sun, will become green, and will communicate their colour to the oysters that are put into them, in four or five days, though they commonly let them continue there six weeks or two months, in which time they will be a dark green.

‘ To prove that the sun operates in the greening, Tolesbury pits will green only in summer; but, that the earth hath the greater power, Brickelsea pits green both winter and summer; and, for a further proof, a pit within a foot of a green pit will not green; and those that did green very well, will in time lose their quality.

‘ The oysters, when the tide comes in, lie with their hollow shell downwards; and, when it goes out, they turn on the other side. They remove not from their place, unless in cold weather, to cover themselves in the ouse.

‘ The reason of the present scarcity of oysters, and consequently of their dearness, is, because they are of late years bought up by the Dutch.

‘ There are great penalties by the Admiralty-court laid upon those that fish out of those grounds which the court appoints, or that destroy the cultch, or that take oysters that are not of size, or that do not tread under their feet, or throw upon the shore, a fish which they call a Five-finger, resembling the rowel of a spur, because that fish gets into the oysters when they gape, and sucks them out.

‘ The reason why such a penalty is set upon any that shall destroy the cultch, is, because they find, that if that be taken away, the ouse will increase; and then muscles and cockles will breed there, and destroy the oysters, they having not whereon to stick their spat.

‘ The oysters are sick after they have spat, but in June and July they begin to mend, and in August they are perfectly well. The male oyster is black-sick, having a black substance in the fin; the female, white-sick (as they term it) having a milky substance in the fin. They are salt in the pits, saltier in the layers, but saltiest at sea.’

They

They take also here fine foals, which generally yield a good price at London market; also sometimes middling turbot, with whiting, codlings, and large flounders.

In the several creeks and openings on this shore, are also other islands, but of no great note, except Mersey, which lies between the two openings of Malden-water and Colchester-water; and is a place of such difficult access, that 'tis thought a thousand men might keep possession of it against a great force, whether by land or sea. On this account, and because, if possessed by an enemy, it would shut up all the navigation and fishery on that side, a fort was built on the south-east point of it; and generally, in a Dutch war, a strong garrison is kept there to defend it.

Maldan, or Maldon, is a very ancient town, situated on an eminence near Blackwater-bay, formed by the influx of the Chelmer and Blackwater into the sea, thirty-eight miles from London: It is a borough and corporation, governed by two bailiffs, six aldermen, eighteen headboroughs, a steward, a recorder, and above four hundred commonality and burgeses, who have all votes in the election of members to serve in parliament. The town is large and populous, though it consists chiefly of one street, nearly a mile in length, branching out into many lanes. It formerly had three parish-churches, but now only two. It has a large library for the use of the minister of the place, and the clergy of the neighbouring hundreds, who generally reside here, from the air in their parishes being more unwholesome. Here is a grammar-school, and a work-house, in which the poor weave sackcloth. The town has a convenient harbour for ships not exceeding four hundred tons burden; and some of the merchants carry on a considerable trade in coals, iron, deals, and corn.

Maldon was the ancient Camaladanum, a city of the Romans, and the seat of the kings of the Trenabants, as appears from some coins of Cunobeline dug up here, with *Cuno* upon one side, and *Camu*. on the other. This was the first Roman colony in Britain, being taken by the emperor Claudius in the year 43, who placed a strong band of veterans in it, and called it *Colonia Viêtrecensis*. He also coined money in memory of this exploit, on which was inscribed *COL. CAMALODUN*. A temple was here erected to Claudius, in which was an altar, called, "The altar of eternal dominion;" and certain priests, called *Sedales Augustales*, were appointed to attend it; but the cruelty and oppression of the Roman soldiers of this station so exasperated the Britons, that a few years afterwards, they besieged, plundered, and burnt the city. It was, however, afterwards rebuilt by the Romans, and is accordingly mentioned as a place of consequence by Antoninus.

In a garden of this town was found a piece of gold nearly the size of a guinea, having a bust of Nero on one side, and of Agrippina on the other, not badly executed.

There is a custom in this place, that if a man dies intestate, his lands and tenements descend to his youngest son; or, if he dies without issue, to his youngest brother. This custom is called Borough English, and is said to have been originally much more general, and to have taken its rise from the wanton and diabolical tyranny of the ancient feudal lords, who, when any of those who held under them married, claimed the first night with the bride. As therefore some doubt naturally arose, whether the first born child was legitimate, a custom was established to cut such child off from its inheritance; and, as the most distant from suspicion, the youngest was preferred in its stead.

About the year 1292, Richard Gravesend, bishop of London, and Richard Iseham, a priest, founded a priory here for Carmelite friars. It continued till the general dissolution of religious houses, when it was valued at no more than one pound six shillings and eight-pence *per annum*.

This town sends two members to parliament, has a weekly market on Saturday, and three annual fairs, viz. the fifth of April, the nineteenth of September, and the second of October, all for horses and black cattle.

At Little Maldon, near the town above described,

was an hospital for the leprous townsmen of Maldon, dedicated to St Giles, founded by one of the kings of England some time before the sixteenth of Edward II. The mastership or wardenship of this hospital was in the gift of the crown, and king Richard II. granted the house to the prior of Bicknacre, near Chelmsford; and afterwards, by leave of king Edward IV. it was united to the abbey of Billeigh.

At Stonegate, a village between Maldon and the sea, on the south side of Blackwater, was a priory of monks of the Cluniac order, founded by the predecessor of one of the priors of Lewes, to which the monastery itself was subject. It was dedicated to St. Mary Magdalen, was in being in the year 1176, and made *prioratus indigena* during the reign of Edward III. but was suppressed by cardinal Wolsey in the eighteenth year of K. Henry VIII. when its annual revenues amounted to forty-three pounds eight shillings and six-pence. Upon the Cardinal's attainder, this cell was granted, in consideration of the exchange of some other lands, to the knights of St. John of Jerusalem.

Witham, the next place we visited, stands on the great road from London to Colchester and Harwich, thirty-seven miles from the capital. It is a pleasant town, neatly built, has several very good inns, and in the neighbourhood are several elegant seats. Many people resort hither, during the summer season, to drink a chalybeate water called the Spaw; and the neighbouring gentry have assemblies in the town once a month.

Here is a weekly market on Tuesday, and an annual fair on the tenth of October; both for the sale of cattle.

At Hatfield Peverell, a village situated between Witham and Chelmsford, Ingelrica, the wife of Ranulph Peverell, and concubine to William the Conqueror, founded a college of secular canons in the time of William Rufus. It was dedicated to St. Mary Magdalen, and was changed, in the reign of Henry I. by her son, William Peverell, into a priory of Benedictines, subordinate to the abbey of St. Albans in Hertfordshire, upon which it was dedicated to the Virgin Mary; and at the dissolution, had a prior and four monks, with an yearly revenue of sixty pounds fourteen shillings and eleven-pence.

At Wicke, a village near Witham, Walter Mascherell, Alexander his brother, and his sister Edith, founded, in the reign of Henry I. a nunnery of Benedictines, and dedicated it to the Virgin Mary. It was one of the small monasteries suppressed by Cardinal Wolsey, towards erecting his colleges; and its annual revenues then amounted to ninety-two pounds twelve shillings and three-pence.

At Tiptry, a village to the east of Witham, there was a priory of black canons, dedicated to St. Nicholas, to which Ralph de Munchensi, and Albreda his wife, were great benefactors, in the time of Edward I. It was one of those small monasteries which were dissolved by Cardinal Wolsey, at which time Anthony Darcy claimed the right of founder. It was valued at twenty-two pounds sixteen shillings and eight-pence *per annum*. After the Cardinal's attainder, it was granted, together with Stonegate, in the twenty-fourth year of Henry VIII. in exchange, to the knights of St. John of Jerusalem.

From Witham we passed to Coggeshall, or Coshall, thought by some to have derived its name from a Roman called Coccillus, who was buried here. And in a grotto near this town, a phial was found, containing a lamp, covered with a Roman tile, near fourteen inches long; also some urns, with ashes and bones in them; one of the urns, resembling coral, had this inscription, *Cocilli M.* "To the manes of Coccillus." It is situated on the banks of the river Blackwater, forty-seven miles from London. It had once a very considerable manufacture of baize and sayes, and of a peculiar kind of stuff called Coggeshall whites, said to be finer than any other woollen cloth; and this manufacture, though much diminished, is still considerable.

King Stephen, and Matilda his queen, founded here, in the year 1142, an abbey for Cistercian or White monks, and dedicated it to the Virgin Mary. At the dissolution, it was endowed with a yearly revenue of two hundred and fifty-one pounds two shillings.

Here

Here is a weekly market on Saturday, and an annual fair on Whitfun-Monday and Tuesday, for cattle and boys.

Halsted is a small market-town, situated on a hill, upon the banks of the river Coln, forty-five miles from London. It is a clean, well-built town, but has nothing remarkable.

A college was also begun here by Robert de Bouchier, lord chancellor of England, in the fourteenth year of Edward III. and intended for eight priests; but had never, in all probability, so many in it, for the endowment of this society was valued at no more than twenty-six pounds five shillings and eight-pence *per annum*.

At Henningham-castle, a village on the Coln, north-west of Halsted, Aubery de Vere, the third of that name, and first earl of Oxford; or, according to some, his countess Lucia, who became the first prioress, built, about the year 1190, a small Benedictine nunnery, and dedicated it to the Holy Cross, St. Mary, and St. James. It had five nuns at the time of the suppression, when its revenues were valued at twenty-nine pounds twelve shillings and ten-pence *per annum*.

At Henningham, near Henningham-castle, Hugh de Vere, earl of Oxford, founded, about the year 1250, an hospital, wherein were two or three chaplains, besides a clerk, servant, and the sick and decrepit poor people.

Colchester, to which we passed from Halsted, is situated on the river Coln, which washes the north and east parts of it, fifty-eight miles from London. It is governed by a mayor, a high steward, a recorder, or his deputy, eleven aldermen, a chamberlain, a town-clerk, eighteen assistants, and eighteen common-councilmen. It received its last charter from king William III. and is a liberty of itself, having four wards and sixteen parishes, eight of which are within the walls, and eight without. It is a populous place, and the chief town in the county. It is about three miles in circumference, pleasantly situated on the side of a hill. The streets, two of which run from the top of this hill to the bottom, are spacious; and though not in general remarkably well built, yet there are a great many good houses in it, besides the guild-hall, and a hall, called Dutch-baize-hall, belonging to a corporation for the support of the baize and fay manufactures, both which are fine buildings. Here are ten parish-churches, one Dutch church, and one French church; and five meeting-houses, two of which belong to the Quakers. It was formerly surrounded by a strong wall, and defended by a castle, the ruins of which are still to be seen. Here is a particular corporation for maintaining the poor, consisting of the mayor and aldermen for the time being, and forty-eight guardians. Here are also two charity-schools, one for seventy boys, and the other for fifty boys and girls; a work-house, and two free grammar-schools. Here are also three bridges over the river Coln, which was made navigable by act of parliament for small craft; up to a long street next the water-side, called the Hith, where there is a key, and for ships of large burden to a place called Wyvenhoe, within three miles of the town, where there is a custom-house; and a little further towards the sea, the water may receive a royal navy.

This town has the greatest manufacture of baize and faves of any in England; it is also remarkable for candying eringo roots, but much more for the excellency of its oysters. They are taken near the mouth of the Coln, upon the sands called the Spits, and are carried up to Wyvenhoe, where they are laid in beds or pits on the shore to feed; after they have continued in these pits some time, they are barrelled and brought to Colchester, from whence they are sent in great quantities to London, and other places. Such shoals of sprats are caught and consumed by the woollen manufacturers here, that the common name for this fish in Essex, is, the Weavers Beef of Colchester.

At this place, Eudo, a great officer in the courts of king William the Conqueror, and his two sons and successors, built an abbey of Benedictine monks, dedicated to St. John the Baptist. It was begun in the year 1096, and finished in 1104. Its yearly revenue, at the disso-

lution, was five hundred and twenty-three pounds seventeen shillings.

Eudo also, at the command of king Henry I. erected, just without the town, on the south-east side, an hospital for a master and several leprous people, dedicated to St. Mary Magdalen, and valued, upon the dissolution, at eleven pounds a year.

One Eynulphus, or Ernulphus, in the beginning of the reign of Henry I. founded, on the south side of this town, a monastery of Austin canons, dedicated to St. Julian and St. Botolph, and became prior of it himself. It was deemed the first house of this order in England, and at the suppression was valued at one hundred and thirteen pounds twelve shillings and eight-pence *per annum*.

About the year 1309, Robert lord Fitzwalter built a priory, near the East Gate of this town, for Franciscan or Grey friars, and afterwards took the habit himself. The revenues, upon the suppression, are not known.

This town sends two members to parliament, has two weekly markets, held on Wednesday and Saturday; and four annual fairs, viz. Easter-Tuesday, for wholesale taylors; the twenty-fourth of June, for horses; the twenty-third of July, for cattle and horses; and the twentieth of October, for cattle, horses, cheese, butter, and toys.

The manor of West Mersey, in an island called Mersey Island, situated at the mouth of the Coln, below Colchester, was given by Edward the Confessor to the monks of St. Andoen, at Roan, a town in Normandy, who settled here a convent of Benedictines, that became a cell to that foreign abbey. It is thought to have been dedicated to St. Peter. Upon the dissolution of alien priories, king Henry V. granted this to Henry Chichely, archbishop of Canterbury, who made it part of the endowment of a collegiate church founded by him at Higham Ferrers, a borough town of Northamptonshire, the place of his nativity.

At Chick, a village some miles south-east of Colchester, was a monastery, said by legendary writers to be the most ancient in this county. They tell us, a nunnery was built here by Ofitha, daughter of king Frithwald, and queen to Sighere, king of the East Saxons; that she dedicated it to St. Peter and St. Paul, and lived in it till she was martyred by the Danes in 653; but it appears from better authority, that before 1118, Richard de Belmeris, bishop of London, in honour of the apostles St. Peter and St. Paul, and of St. Ofitha: the supposed original foundress, built a religious house here for canons of the order of St. Austin, which, at the suppression, was endowed with six hundred and seventy-seven pounds one shilling and two-pence a year.

At Horsley Proa, a village north-west of Colchester, was a priory of Cluniac monks, subordinate to the monastery of the same order at Thetford, a borough town of Norfolk, founded by Robert Fitz-Godebold, and Beatrix his wife, in the time of Henry I. It was dedicated to St. Peter, and suppressed by Cardinal Wolsey, when the yearly revenues of it were rated at twenty-seven pounds seven shillings and eleven-pence.

At Layer Marney, a village south of Colchester, there was a small college or chauntry, for a warden and two priests, founded in the church of St. Mary, about the year 1330. by William Marney, lord of the manor.

At Little Hornesly, a village north-west of Colchester, was an hospital, mentioned in a letter of commissioner Kingston's to Bonner bishop of London, in the year 1557.

Harwich derives its name from the Saxon word Hare-rie, a haven or bay where a navy may ride, and is supposed to be so called from a sea-fight between the Saxons and the Danes, in the harbour on which the town stands, in the year 889. It is distant from London seventy-one miles, and was first made a borough by king Edward II. It was afterwards incorporated by king James I. and the corporation now consists of a mayor, chosen annually on the thirtieth of November, eight aldermen, twenty-four capital burgeses, and a recorder. The mayor has a power to keep courts of admiralty, which have a jurisdiction over all naval affairs.

The town is not large, but well-built and populous. It is surrounded by a wall, and the streets are well paved.

Between

Between the town and a high hill called Beacon-hill, not far distant, there is a cliff, consisting of a kind of clay, parts of which are continually falling down into a petrifying water at the bottom, which they imbibe, and being afterwards taken out and dried, they become an impenetrable and durable stone, and of this stone the wells and pavement of Harwich consist. The church, ever since the Reformation, has been a chapel to the mother church, which is at a neighbouring village, called Dover Court.

The harbour is very safe, and so spacious, that an hundred sail of men of war, with their tenders, besides three or four hundred sail of colliers, have frequently been seen here at the same time. The mouth of the harbour, at high water, is near three miles wide; but the channel, by which alone the ships can come into the harbour, is deep and narrow, and lies on the Suffolk side, so that all the ships that come in or go out, are commanded by a strong fort, called Landguard Fort, built by king James I. on a point of land, so surrounded by the sea at high-water, that it looks like an island, lying about a mile from the shore. The town was formerly fortified on the land-side, but in the reign of king Charles I. the fortifications were demolished. An act of parliament has since passed for fortifying this town anew, and ground has been purchased for that purpose, but little or no progress has been made in the work.

Here is a very good yard for building ships, with store-houses, crows, launches, and other necessaries. The packet-boats which carry the mails between England and Holland, are stationed here, and this is the port to pass to and from Holland to Germany. The inns are very good, but the concourse of passengers made accommodations so dear, that sloops were some time since fitted up to sail directly for Holland and Germany from the Thames; and the stage-coaches, that used to pass two or three times a week between this place and London, were, after this regulation, laid down.

On Beacon-hill, south of the harbour, and opposite to the fort, there is a large high-built light-house, whence there is an extensive view of the coasts of Suffolk and Essex. Beacon-hill is about half a mile distant from the town, and there is a walk to it, which in fine weather is extremely pleasant.

There are three islands south-west of Harwich, called Pevet, Horsey, and Holmes; which, however, are separated from the main land only by the winding of a stream, and the influx of the sea into that stream. Upon these islands there is found a sea-fowl, which, when fat, is very delicious food. South of these islands, there are three villages, which are included within a liberty or lordship, anciently the liberty of the Soke, in which the sheriff of the county has no power, and in which no writ can be executed but by the bailiff of the liberty, nor by him, without the consent of the lord.

This town sends two members to parliament, has a weekly market on Friday, and two annual fairs, viz. the first of May, and the eighteenth of October, both for toys.

The spring at the bottom of the cliff between Beacon-hill and the town of Harwich, petrifies not only the earth that falls into it from the top of the cliff, but wood also; and a large piece of wood thus petrified, is preserved in the repository of the Royal Society.

At the bottom of this cliff, in a stratum of stone, have been found a great variety of shells, both of the turbinated and bivalve kinds; and upon the shore, under the hill, is found the stone from which our common copperas is prepared, and which people here, for that reason, call the Copperas Stone. To prepare copperas from these stones, they are mixed with earth, and disposed into light beds, above ground, where they dissolve by the rains and dews. This solution is received into trunks, properly disposed, which conduct it into a large leaden cistern, whence it is again conveyed into a leaden boiler, where, after boiling some time, it is drawn off into coolers, where it shoots into crystals. These stones are also found in some places on the coast of Kent, where there are works of the like kind for making copperas from them.

Manningtree, or Maintree, distant fifty-nine miles from London, is situated on the river Stour, over which it has a bridge. It is a little dirty town, but has a good market. The church is a chapel of ease to a neighbouring village, called Miffley.

Here is a weekly market on Tuesday, and an annual fair on the fifteenth of June, for toys.

We now returned to the southern parts of the county, and first visited the town of Rochford, situated on a small stream that falls into a river called the Crowch, forty miles from London. It gives its name to the hundred in which it lies, and has an alms-house, founded and endowed by lord Rich. To the statutes of this alms-house are subject six other houses built by the earl of Warwick, for five men and one woman, who receive each of them three shillings and six-pence a week, a gown at Christmas, to the value of a guinea, and two loads of wood annually, out of the earl's woods.

Here is a weekly market on Thursday, and two annual fairs, viz. Easter Tuesday, for toys; and Wednesday after the twenty-ninth of September, for wholesale taylors, gloves, and toys.

The church of Prittlewell, a village south of Rochford, was given to the monastery of Lewes, a borough town in Suffex, by Robert Fitz-Swain, in the time of Henry II. when it became a priory of Cluniac monks, subordinate to that great monastery. It was dedicated to St. Mary, and in the time of king Edward III. made denison. Here were about seven monks, whose yearly income was valued, upon the dissolution, at one hundred and fifty-five pounds eleven shillings and two-pence.

Near Rochford, there is a hill called King's Hill, where the lord of the honour of Rayleigh holds a court on the Wednesday morning after Michaelmas, at cock-crowing. This court is called Lawless Court; the steward and suitors are obliged to whisper to each other; they are not allowed either fire or candle; a piece of coal supplies the place of pen and ink; and he who owes service to the court, and does not attend, forfeits double his rent for every hour. Camden says, this attendance is a punishment imposed on the tenants, for having met at the like unseasonable hour in a conspiracy against their lord.

Rayleigh is an ancient, though small town, situated thirty-five miles from London. It has a court-leet and baron, and many other privileges belonging to it; but greatly decayed, many of the buildings being gone to ruin, though one broad handsome street is still standing.

Here is a weekly market on Saturday, and an annual fair on Trinity-Monday, for horses and toys.

At Hadleigh, not far from Rayleigh, are the remains of an ancient castle, built soon after the Conquest.

Billericay is a small market-town, twenty-three miles distant from London. It is only a chapelry to a parish called Great Bursted, and has nothing worthy of note.

Here is a weekly market on Tuesday, and two annual fairs, viz. the twenty-second of July, for horses; and the seventh of October, for most sorts of cattle.

At Woodham Ferris, a village north-east of Billericay, was first an hermitage before the year 1156, and then a priory of black canons, dedicated to St. John the Baptist, built and endowed by Maurice Fitz-Jeffrey of Tiretis, sheriff of Essex, for the most part at the charge of king Henry II. who forgave him on this account several sums of money, which otherwise he must have paid into the Exchequer, out of the farms and profits of his bailiwick. This house being almost forsaken, was, about the latter end of the time of king Henry VII. annexed to St. Mary Spittle without Bishopsgate, London.

Ingotstone, or Ingerstone, is a considerable market-town, situated on the road to Harwich, twenty-three miles from London. Here is an alms-house for twenty poor people, with a chaplain to read service to them every day, founded in the reign of king Henry VIII. by Sir William Petre; and a church, in which Sir William lies buried, under a stately monument.

Here is a weekly market on Wednesday, and an annual fair on the first of December, for cattle in general.

At Blakemore, a village a little way north-west of Ingotstone, was an hermitage or priory of black canons,

built by Adam and Jordan de Samford, and dedicated to St. Laurence, before, or in the beginning of king John's reign. This was one of the small monasteries which Cardinal Wolsey procured to be dissolved, in order to the endowment of his two colleges at Oxford and Ipswich. It was valued at eighty-five pounds nine shillings and seven-pence a year; and upon the Cardinal's attainder, was granted in exchange to Waltham Abbey.

At Thoby, near Ingatestone, was placed a priory of Austin canons, in the time of king Stephen, by Michael Capra, Roife his wife, and William their son. It was dedicated to St. Mary and St. Leonard, and was suppressed in the seventeenth year of king Henry VIII. when it was worth, in spiritualities, eighteen pounds thirteen shillings and four-pence; in temporalities, fifty-six pounds thirteen shillings and six-pence; and in all, seventy-five pounds six shillings and ten-pence *per annum*.

Brentwood, or Burntwood, seventeen miles distant from London, is only a hamlet to, or division of a parish called Southwold cum Brent. It stands on a hill in the road to Harwich, has good inns, and is a populous place. The county assizes have been frequently held here, and there are often horse-races on a neighbouring plain, called Parflow Wood Common.

Here is a weekly market on Thursday, and an annual fair on the eighteenth of July, for horses and black cattle.

At Brooktreet, near Brentwood, there was a free chapel, and an hospital, consisting of a master or warden, and divers poor lepers, dedicated to St. John the Baptist, fixed here before the twentieth of Edward I.

Chipping-ongar is a small market-town, twenty miles distant from London. Here are two charity-schools, one for twenty-six boys, and the other for twelve girls.

Richard Quay, who was protector of England while king Henry II. was in Normandy, built here a castle upon an artificial mount, of great height, and surrounded it with a moat and other fortifications: the greatest part of these fortifications are still to be seen, though the castle has been pulled down, and a good house built in the room of it.

Here is a weekly market on Saturday, and an annual fair on the thirtieth of September, for toys.

Rumford is a considerable market-town, twelve miles from London. It is a great thoroughfare between that city and Harwich, and most towns of note in Suffolk and Norfolk. It is governed by a bailiff and wardens, who, though not incorporated, are empowered by patent to hold a court every week, for the trial of civil and criminal causes. Here is a charity-school for fifty boys and twenty girls; and a church, but it is only a chancel to Horn Church, a neighbouring village.

Here is a weekly market on Wednesday, and an annual fair for horses and black cattle.

The lands of Horn Church, near Rumford, with some other revenues in this neighbourhood, being given to the great hospital de Monte Jovis, in Savoy, a cell for a prior or master, and poor brethren, subordinate to that foreign house, was settled here, and dedicated to St. Nicholas and St. Barnard. This house was, in the time of Richard II. by leave of the Pope and King, bought by William Wickham, bishop of Winchester, for his new college at Oxford.

Barking is so called from a stream of the same name, upon which it is situated. It is ten miles distant from London, and stands upon a creek where the Barking falls into another stream called the Roding, about two miles beyond their confluence with the Thames. The town is large, and chiefly inhabited by fishermen, whose boats, called Smacks, lie at the mouth of the creek, in the Thames, from whence their fish is sent in boats to Billingsgate, the great fish-market at London. The town is included in one parish, which is large, and has been much improved by lands, which the rivers Thames, Barking, and Roding, have left dry. The small tithes are computed at above six hundred pounds a year. It has a church, and two chapels of ease, one at Ilford, a small neighbouring village, and the other on the side of Epping Forest.

A monastery of religious virgins, of the order of St. Benedict, was founded here about the year 675, by Er-

kenwald, son of Anna, king of the East-Angles, and afterwards bishop of London. It was dedicated to the Virgin Mary and St. Ethelburgha. The first abbess was sister to the founder. It continued till the general dissolution, when its yearly revenues amounted to eight hundred and sixty-two pounds twelve shillings and five-pence.

Adelica, the abbess of the convent in this place, about the year 1190, founded here, upon the road to London, an hospital, dedicated to the Virgin Mary, for the leprous tenants or servants of the convent, which consisted of two masters and thirteen brethren, lepers, two chaplains, and one clerk. It was valued, upon the dissolution, at sixteen pounds thirteen shillings and four-pence clear, *per annum*.

Here is a weekly market on Saturday, and an annual fair on the twenty-second of October, for horses.

Stratford is a village in the neighbourhood of London, in the parish of Westham. It has greatly increased of late years in buildings and inhabitants, every vacancy being in a manner filled up, by the addition of two little new-built hamlets, if they may be thus called, on the forest side of the town. These are Maryland Point, and the Gravel Pitts; one facing the road to Woodford and Epping, and the other that to Ilford; while the hither part, in spite of rivers, canals, and marshy grounds, is almost joined to Bow.

At this village, William of Montfitchet built, in the year 1134, or 1135, an abbey for monks of the Cistercian order, dedicated to the Virgin Mary and All Saints. This house being in a low situation among the marshes, the religious were obliged to remove to a cell or grange, called Burghsted, near Billericay, to avoid the floods; but by the care of one of the king Richards, their damages were repaired, and they were brought back to Stratford, which was endowed at the dissolution with five hundred and eleven pounds sixteen shillings and three-pence *per annum*.

In this place Ralph de Stratford, bishop of London, in the twenty-sixth year of Edward III. obtained the king's licence to found and endow a college or large chantry of secular priests, to be governed by a provost, within the chapel of St. Paul, in his castle here.

Curious PLANTS found in Essex.

The greatest English Marsh Fox-tail-grass; *Alopecurus maxima Anglica paladosa*, Park, found in the moist ditches near the river Thames.

Smooth-headed Bastard Poppy; *Argemone capitulo longiore glabro*, Morison; found near Barking.

Jagged Sea-Orrache; *Atriplex maritima lacinata*, C. B. found on the sandy shores in Marley-Island, and elsewhere.

The narrow and serrated leaved Sea-orache; *Atriplex angustifolia maritima dentata*, Mor. found at Maldon by the river, and on the banks of the marshes.

The least Hares-ear; *Auricula leporis minima*, J. B. found at Maldon, in the marshes by the river-side.

The greater Periwinkle; *Clematis Daphnoides major*, C. B. found near Colchester.

Periwinkle; *Clematis Daphnoides minor*, J. B. found between Wittham and Kelvedon, in the hedges and bushes.

English, or common Sea-scurvy-grass; *Cochlearia folio sinuato*, C. B. It grows in great plenty in the marshes about Maldon.

Saffron; *Crocus*, J. B. Planted and cultivated in the fields about Walden.

Marsh-thread; *Conserva palustris Anglica*; found in the marsh-ditches near Maldon, and elsewhere.

The lesser green-leaved Hound's-tongue; *Cynoglossa folio virenti*, J. B. found between Wittham and Kelvedon.

Millet Cyperus-grass; *Cyperus gramineus*, J. B. found by Bocking river, at the corn-mill below the town.

Round-rooted Bastard Cyperus; *Cyperus rotundus, litoreus inodorus*, J. B. found plentifully near Maldon.

English Cow Sea-heath; *Erica maritima Anglica supina*, Park, found on the sandy banks between Heybridge and Goldhanger.

Mountain Oat-grass, with a single spike and reflected awns; *Gramen Avenaceum montanum, spica simplici, aristis recurvis*; found upon Bartlow hills, on the edge of Cambridgehire.

Long-rooted Sea-dogs-grass, with a foliaceous ear; *Gramen caninum maritimum spica foliacea, C. B.* found on the shore in Mersey-island, near Colchester.

Square-eared crested grass; *Gramen cristatum quadratum*; found at Notley, among corn.

Herb Paris, or True-love; *Herba Paris*; found in Chaulkney-wood, seven miles from Colchester.

Rough Hawkweed, smelling like Castor; *Hieracium castorei odore monspeliensium*; found in great plenty near Hanfield.

English Sea-hard Rush; *Juncus acutus maritimus Anglicus, Park.* Grows in the marshy grounds about Maldon, in great abundance.

Dittander, Pepperwort; *Lapidium latifolium, C. B.* Met with on the causeway leading to Hith-bridge, at Colchester.

The great wild Lathyrus, or everlasting Pease; *Lathyrus majoris species flore rubente, J. B.* found in the hedges between Castle-Campes and Partlow.

Rough-codded Chickeling; *Lathyrus filiqua hirsuta, J. B.* found in the fields near Hockley and Ralegh.

Little annual Corn-campion with a small bluish flower; *Lychnis sylvestris annua segetum flore dilate rubente, Monsp.* found in the corn-fields near Colchester.

Spear-mint, with a rugged leaf and strong scent; *Mentha angustifolia spicata glabra, folio rugosiore, odore graviore*; found in two or three places near Bocking-river.

Water-mint with a grosser spike; *Menthastrum aquatici genus hirsutum, spica latiore, J. B.* This is also found near Bocking river.

Horse-mint, or round-leaved Wild-mint; *Menthastrum, seu mentha sylvestris rotundiore folio, C. B.* found in plenty at Great Yeldham.

Long-leaved Horse-mint; *Mentha sylvestris folio longiore, C. B.* found likewise at Great Yeldham.

Common Hogs-fennel; *Peucedanum vulgare, Ger.* found in a wood near Walton.

The yellow sweet, or Musk Orchis; *Orchis odorata moschata, C. B.* found in the fields near Wair-field-hall.

Star-headed Water-plantain; *Plantago aquatica stellata, C. B.* found in the ponds near Rumford.

Treacle-mustard, *Thlaspi Dioscoridis, Ger.* found plentifully in the fields near Wormingford.

Narrow-leaved Wild-creffe; *Thlaspi angustifolium, J. B.* found in many places, particularly near Maldon.

The small smooth-leaved Lime, or Linden-tree; *Tilia folio minore, J. B.* found frequently in the hedges in various parts of the county.

Teasel-headed Trefoil; *Trifolium stellatum glabrum, Ger.* found in plenty near Little Holland, in Tendring hundred.

Eringo, or Sea-holly; *Eryngium marinum, Ger.* found in plenty on the sea-shore in many parts of the county, especially near Colchester.

Common Thorow-wax; *Perfoliata vulgaris, Ger.* found among the corn in various parts of the county.

Creeping Tormentil, with deeply indented leaves; *Tormentilla reptans alata, Plot,* found in some pastures near Braintree.

The greatest Marsh-tree Sow-thistle; *Sonchus arborescens alter, Ger.* found on the banks of the Thames, near Blackhall.

Black Currans, or Squinancy-berries; *Ribes nigrum, J. B.* found by the river's side near Hoppet-bridge, in the neighbourhood of Braintree.

Remarks on the SEA-COAST of Essex.

A great variety of sands and shoals lie in the mouth of the Thames below the Nore, and which are laid down in the sea-charts of this coast. The first navigable creek is that of Barking, where a great number of fishing-smacks, and other small craft, often ride in safety; but there is not depth of water sufficient for ships of burden. The Swatch at Leigh is also frequented by small vessels, but has not water sufficient for large ships, the water not being above three feet deep at low water, at the mouth of the Swatch. From the eastern extremity of Leigh Swatch, a large sand, called the Black-tail, shoots off to a considerable distance from the shore. On this sand several buoys are placed by the corporation of Trinity-house, for the safety of ships passing up and down the Thames. Great part of the Black-tail is dry at low water.

The mouth of Crouch river has also water sufficient for small vessels, but is little frequented, from the number of sands that lie near it.

The Blackwater is much frequented, there being a considerable trade to Maldon, which is situated on the western bank, near the head of this branch of the sea. But there is some danger from two sands, one on the east, and the other on the west side; the tide of ebb setting on the former, called the Eddle; and the tide of flood upon the latter, stiled the Knowl.

The mouth of the Coln, which is navigable for ships of considerable burden, is entered by the same channel between the above sands. It is a good harbour, and there is no other danger but the above sands.

The mouth of the rivers Stow and Orwell, on the south side of which Harwich is situated, forms a good harbour, there being near five fathoms water, and a broad open channel. The road before the harbour, called the Rolling Ground, is very capacious, and capable of holding a large fleet of ships.

MEMBERS of PARLIAMENT for this County.

The county of Essex sends eight members to parliament, two knights of the shire for the county, two burgesses for the town of Colchester, two for Harwich, and two for Maldon.

S U F F O L K.

THE county of Suffolk is bounded by the German Ocean on the east; Cambridgeshire, on the west; by the river Stour, which separates it from Essex, on the south; and by the rivers Ouse the Less, and Waveney, which parts it from Norfolk, on the north. It extends in length, from east to west, forty-eight miles; from north to south, twenty-four miles; and is one hundred and fifty-six miles in circumference. Stow-market, a considerable market-town, stands in the centre of the county, at the distance of seventy-three miles north-east from London.

R I V E R S.

This county is well watered with several rivers, the principal of which are, Ouse the Less, the Waveney, the Stour, the Deben, the Orwel, the Ald, and the Blith. The springs and courses of the Smaller Ouse, and the Waveney, will be described in our account of Norfolk; and the Stour has been reckoned among the rivers of Essex.

The Deben rises near Mendlesham, a market-town; and running south-east, and passing by Debenham and Woodbridge, two other market-towns of this county, falls into the German sea eleven miles south-east of Woodbridge.

The river Orwel, or Gipping, rises not far from Mindlesham, and running south-east, and almost parallel to the Deben, passes by Ipswich, a considerable borough town, to which it is navigable by great ships; and at the distance of ten miles from which, it discharges itself into the German Ocean, together with the Stour, both rivers forming one large mouth or æstuary. The Orwel does not flow much higher than Ipswich, but there the tide generally rises twelve feet, though, at low water, the harbour is almost dry.

The river Ald rises near Framlingham, a borough town of this county; and running south-east, and passing by Aldborough and Orford, two borough towns, falls into the German sea a few miles from Orford.

The Blith rises near Halesworth, a market-town; and running almost directly eastward, falls into the German sea at Southwold, another market-town.

Other less considerable rivers of this county are, the Ore, the Birdon, and the Bourn, or Lark.

Remarks on the INLAND NAVIGATION of Suffolk.

The river Stour is made navigable from Manningtree to Sudbury, and is of very great advantage to the county. Vessels of considerable burden come up to Manningtree, from whence the goods are sent up to Sudbury in barges.

The small river Berton might, with very little expence, be made navigable to Hadley, and could not fail of proving advantageous to that part of the county.

The river Orwel is navigable, for ships of very considerable burden, to Ipswich, where the tide rises to near fifteen feet on a spring-tide; but what is very remarkable, the river is not navigable half a mile above the town for small boats, nor does the tide flow much higher.

The Deben is navigable to Woodbridge for ships of very considerable burden; and boats pass much higher; but there is no artificial navigation, though the river is very capable of it.

The river Ald is navigable to a considerable distance from its mouth, for small vessels; and the town of Aldborough has a quay on its eastern bank. But there is no artificial navigation, though it might be executed at a small expence.

The Waveny is navigable to a very considerable distance from its mouth; but as this river is the boundary between Suffolk and Norfolk, we shall describe its navigation in our account of the latter. And with regard to the several harbours, and other particulars of that kind, a further account will be given of them in our remarks on the sea-coasts of Suffolk.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is pure, pleasant, and healthy, even near the sea-shore; because that being generally sandy and shelly, shoots off the sea, and prevents stagnating water and stinking mud.

The soil of the county of Suffolk is different in different parts of it. The eastern parts bordering on the sea, are sandy, and full of heaths, but yield abundance of rye, pease, and hemp, and feed vast flocks of sheep. The middle part of the county, which is called High Suffolk, or the Woodlands, consists chiefly of deep clay and marle, and produces wood, and good pasture, that feeds great numbers of cattle. The parts bordering on Essex and Cambridge likewise afford excellent pasture, and abound with corn, all except a small tract towards Newmarket, in Cambridgeshire, which is for the most part a green heath. It is said, that the feeding cattle and sheep on turnips, was first practised in Suffolk.

The milk of this county is reckoned the best in England. It has been long observed, that the Suffolk cheese is greatly impoverished to enrich the Suffolk butter. It is, however, found, that the cheese of this county is very proper for long voyages, being preserved by its dryness; but the butter that is made here in great quantities, and sent to all parts of England, is not to be equalled.

It is observed, that more turkies are bred in this county, and that part of Norfolk which borders upon it, than in all the rest of England; London, and the counties round it, being supplied chiefly with those birds from hence.

Fuel is very plenty in this county; High Suffolk affording wood in great abundance; and Low Suffolk, or that part of the county which runs along the sea side, being constantly supplied with coals from Newcastle.

Remarks on the HUSBANDRY of Suffolk.

In the neighbourhood of Stoak and Thetford, a vast quantity of land lies entirely uncultivated, which seems surprising in a country where marle is to be found in many places, though no use is made of it. The landlord of the Crown at Stoak has an acre of burnet, which he sowed broad-cast, kept it perfectly clean from weeds a year, at the expence of above two guineas; but it has answered greatly, for it has every year yielded a great quantity of hay, besides luxuriant food, so early as the month of February, for many horses. It is a regular crop, and appears to grow very quick.

In the neighbourhood of Thetford is an improvement greatly worth seeing; it is a complete farm, entirely gained from the waste, for it was only an old sheep-walk. One of the best farmers in England hired it, and has converted, by means of marle, a vast tract of uncultivated wild into a profitable arable farm: his son at present enjoys the lease. The soil is very sandy, but marle and clay have rendered it fertile, inasmuch, that in years not remarkably dry, he raises as fine crops of rye, cole-seed, and oats, as land of five times the rent yields in heavier soils. He has sown likewise some hundreds of acres with sainfoyn, which has throve finely, and yielded considerable crops of hay. This farm consists of near two thousand acres, employs forty-five horses, nine servants,

servants, and in harvest, fifty in the field. Nine hundred sheep, and twenty-four cows kept: and all this on a tract of land, which, seven years ago, was the habitation of nothing but a flock of sheep, not more considerable than what is now kept on the remaining sheep-walk and the artificial grasses. We should likewise remark, that the marle dug on this farm has proved, that it is not only the fat soapy kind which is of great benefit; for this is in general a hard chalky substance, much mixed with extraneous kinds of earth, and to appearance a very bad sort. It was asserted by many farmers, that it would do no good, but the event has turned out very different. The clay, however, is allowed by all to be exceeding good.

The duke of Grafton's seat at Euston is but three miles from this farm; the park and plantations are well worth viewing: they are very extensive, and sketched with great taste.

The road to Bury lies, for some miles, over a wild heath, over-run with bushes, whins, and brakes, the wild luxuriance of whose growth displays evidently enough how greatly it would answer to break it up, and convert it into arable farms; for a soil that has strength enough to throw out such vigorously growing weeds, would, if cultivated, produce corn in plenty: add to this, there is a stratum of marle under the whole country.

The country round Bury, towards London, is good, well wooded, and not a dead flat. The road to Stowmarket lies through a soil indifferently cultivated; but about a mile from the town, it passes through a newly inclosed farm belonging to John Symonds, Esq; which is done in a very neat manner. The hedges are all of white thorn, and the banks regularly planted with several sorts of timber trees; the gates remarkably good, and all painted. From this farm, which is rented by Mr. Denton, we met with nothing worth observing, until we reached Tostock, a village six miles from Bury, in which there is a farm cultivated in a very masterly manner, by a gentleman who lives at Bury; Mr. Orbel Ray the owner.

There is nothing above mediocrity in the husbandry of the neighbouring farmers; but this gentleman has improved upon their practice greatly. His soil is a light gravel. The first thing he did with it, was to dig and spread an hundred loads of loam and clay over all his arable fields; and then throw them into a regular course of crops, viz. 1. turnips; 2. barley; 3. clover; 4. wheat; and raises exceeding fine crops of each. He ploughs four, five, and six times, for turnips; harrows exceeding fine, and sows broadcast with a machine, which he finds from experience, sheds the seeds infinitely more regular than the nicest hand. In his practice of the turnip husbandry, he has found, that the seed never fails for want of rain, when sown past four o'clock in the afternoon. He hoes the plants out twice, applies them to the stall-feeding of beasts, for which purpose he has built very convenient sheds; and reckons the mean value of them per acre to be two pounds ten shillings. He gives the turnip land three earths for barley and oats, and gets very clean crops of five, five and a half, six, and even seven quarters per acre. The succeeding crop of clover he generally mows twice for hay, and values the crop, on a medium, at two pounds ten shillings per acre. The clover lay he breaks up with one earth, the first year, and harrows in wheat; and of this grain he gets, on a medium, four and a half, or five quarters per acre.

These crops are all very considerable; however, we should observe, that besides the above-mentioned claying, he every year manures all his turnip-land, at the rate of twelve, fifteen, or twenty loads per acre of farm-yard dung, which he likewise manages in a very sensible manner. About October, he carries in and spreads equally over his yard, two hundred loads of moulds, generally loam: upon these he fodders all his beasts with the straw of the crop, and the clover hay, by which means all the urine of the cattle is soaked up, and the gutters of the stables and ox-stalls are all laid into it. When the winter is over, he stirs the whole up together, very carefully mixing it, when it is in good order for

the land. He generally doubles the quantity brought in. The expences of this method appear, at first sight, to be high, but are not in reality; for it is a common one to carry out the dung, and mix it up with turf before it is spread. Now, in point of labour, there is no difference. Was chalk, marle, or turf, used instead of loam, it would be an infinite improvement.

This gentleman has two experiments of the modern kind, which gave us much pleasure; an acre of lucerne, and four of Timothy-grass. The first is in drills, two feet asunder. It was sown last spring two years, cut three times last year; and we found it cutting for the first time this year, an exceeding fine crop, above two feet high. We enquired particularly about the quantity of food it yielded, and found that the exactest calculation, from what was already eat by four cows feeding upon it, was, that it would last them five weeks. The bailey told us, that, in his opinion, it would constantly through the summer maintain two cows; if so, the value of it is considerable, and greatly exceeds clover.

From Tostock we cut across the country to Lavenham, by a winding course through Monks Bradfield, the Welnethams and Bradfield Combust. We walked over the improvements of the Rev. Mr. Lord, rector of Great Welnetham, who has, by means of hollow ditching, and claying, converted an indifferent woodcock brick-earth soil, into a most fertile one; inasmuch, that he has more than once raised ten quarters of barley and oats upon an acre, and five and a half of wheat, which are vast crops. One striking particular in his method, is letting his clover lie three years, which, in a strong soil, is rather uncommon, but we believe a good practice.

Before we leave the neighbourhood of Bury, we must observe, that we never met with any place around which the farmers had such a spirit of purchasing manures: very ordinary sorts sell at Bury at two shillings and sixpence, and three shillings a waggon-load of eighty bushels. We saw all round the town, in different places, heaps of purchased manures.

PRICE OF LABOUR.

- In winter, one shilling, and small-beer.
- In spring to harvest, one shilling and two-pence, and beer.
- In harvest, one shilling and eight-pence, and beer.
- Reaping wheat, from four to five shillings per acre.
- Mowing spring-corn, one shilling and two-pence ditto.
- grass, one shilling and three-pence, and one shilling and four-pence.
- Hoing turnips, four shillings the first time, and two shillings and six-pence the second.
- beans, six shillings the first, and three shillings the second time.
- Threshing wheat, two shillings a quarter.
- barley and oats, one shilling.
- clover seed, five shillings a bushel.

Their course of crops is, 1. turnips; 2. barley; 3. clover; 4. wheat; 5. barley or oats. And, 1. fallow; 2. wheat; 3. oats, or barley. They plough four or five times for turnips, harrow fine, and use them for all sorts of cattle. For barley they stir thrice, sow three or four bushels per acre, and reckon a mean crop at three quarters and a half. Their clover they feed with all sorts of cattle, and particularly hogs, which we mention as a custom not very common. They plough up their clover lays, and harrow in wheat on one earth, sow two bushels, and reckon two quarters and a half the medium of their crops. White oats they manage the same as barley; but for black, they plough but once, sow four bushels of each sort, and consider four quarters the mean produce. When they sow beans, which is an irregular crop with them, they plough twice, sow two bushels after the plough, on ridge-work; so that they come up in double rows on the top of the ridge; hoe them twice, and four quarters the mean produce. For peas they plough but once, sow two bushels, and reckon the medium at two quarters and a half. Their soil is in general a red loam, called here a brick-earth, and loose; with some fields of clay, others of light gravel; the

mean rent is about twelve shillings an acre. Farms rather small; from twenty to one hundred and fifty pounds, with a few of two hundred pounds. As to the general economy and management, the following is a sketch of one: two hundred and fifty acres.

80 of them grafs.
10 horses.
2 men.
2 boys.
5 labourers.
25 cows.
60 sheep.

They seldom use above two horses in a plough, and always do an acre a day in their stiffest fields.

BOROUGH, and MARKET TOWNS, &c.

We entered this county at Sudbury, the Saxon name for Southborough, supposed to have been formerly the chief town in the county. It is thought to have been thus called from its situation in respect of Norwich.

Sudbury is distant from London fifty-four miles, and is an ancient corporation, which has sent members to parliament ever since the reign of Edward IV. It is governed by a mayor, a recorder, seven aldermen, a town-clerk, a bailiff, twenty-four common-councilmen, and two sergeants at mace.

This town stands upon the bank of the river Stour, by which it is almost surrounded, and over which it has a handsome bridge. The buildings in general are pretty good, but the streets being unpaved, are very dirty in bad weather. Here are three handsome large churches; and the town carries on a good trade in perpetuanas, faves, and ferges.

Simon Theobald, surnamed Sudbury, archbishop of Canterbury, translated thither from London, in the year 1275, was a native of this town. He was murdered at the instigation of John Ball, a seditious and fanatical preacher in Wat Tyler's rebellion. He was a prelate of exceeding good character, both for learning and charity. The upper end of St. Gregory's church at Sudbury was built by him, where his head is still shewn, which was, not long since, entire, and covered with the flesh and skin dried by art: the mouth was wide open, occasioned by convulsions through the hard death he died, having suffered eight blows before his head was cut off.

Here was a monastery, dedicated to St. Gregory, before the year 970, which in 1375 was converted into a college for six secular priests, one of whom was to be warden or master. This college was founded by the above-mentioned Simon de Sudbury, and John de Sudbury, his brother, and was endowed, upon the suppression, with one hundred and twenty-two pounds eighteen shillings and three-pence *per annum*.

Amicia, countess of Clare, in the time of king John, founded an hospital in this town, dedicated to Jesus Christ and the Virgin Mary.

Here was also a priory of Dominican friars, founded by Baldwin de Shipling, in the time of K. Edward I.

This town sends two members to parliament, has a weekly market on Saturday, and two annual fairs, viz. the twelfth of March, and the tenth of July, both for toys.

Near this place there was a church or chapel, dedicated to St. Bartholomew, which Walfrie, master of the mint to king Henry II. gave to the abbey of Westminster; and then a priory of Benedictine monks was settled in this church, subordinate to Westminster Abbey.

At Bures, upon the Stour, near this town, there is a church, which had a spire, and a ring of bells; but in 1733, not only the spire was burnt by lightning, but the bells were melted.

Milford, near Sudbury, is a remarkable pleasant village, and one of the largest, perhaps, in England, being near a mile in length. There were formerly two chauntries here. The church, which stands at the north end of the town, is a very beautiful edifice; on the outside of it are these words: "Pray for the souls of John Clopton, and Richard Boteler, of whose goods this church was built." Several of the ancient family of

Clopton are buried here. This town has given two lord mayors to London, Sir John Milbourn, draper, in 1521; and Sir Roger Martin, mercer, in 1567. This village is well inhabited; the houses are in general handsome, and the inns remarkably good.

In the year 1739, one Charles Drew was executed here for the horrid murder of his own father, an attorney of good fortune.

Ipswich, the next town we visited, is situated on the river Gipping, sixty-eight miles from London, and had charters and a mint as early as the reign of king John. It is governed, under a charter of king Charles II. by two bailiffs, a recorder, twelve portmen, of whom the bailiffs are two, a town-clerk, two chamberlains, two coroners, and twenty-four common-councilmen; and the bailiffs, and four of the portmen, are justices of the peace.

This town enjoys several considerable privileges, as the passing of fines, and recoveries, trying causes, both civil and criminal, and even holds pleas of the Crown. The magistrates appoint the assize of wine, bread and beer. No freeman can be compelled to serve on juries out of the town, or bear any office for the king, except that of sheriff for the county. The corporation has an admiralty jurisdiction, and is entitled to all waifs, strays, and all goods cast on shore within that jurisdiction, which extends on the Essex coast beyond Harwich, and includes all the coast of Suffolk.

Ipswich is a neat, well-built, populous town, situated upon the north bank of the river Orwel, or Gipping, in form of a half moon. It is upwards of a mile in length, and about a mile in breadth: the streets are large, and the houses in general built after the ancient fashion. It formerly had twenty-one parish-churches, which are now reduced to twelve; but there are two chapels in the corporation liberty, besides meeting-houses. Here is a free-school, with a good library, and three charity-schools, in two of which are seventy boys, and in the third forty girls. Here also is a work-house, and two hospitals, one for lunatics, called Christ's Hospital; and another for poor old men and women, founded by Mr. Henry Tooty in 1556; besides several alms-houses, and a charitable foundation for the relief of the widows and orphans of poor clergymen, set on foot in the year 1704.

This town has a shire-hall for the county sessions; and in one part of an ancient monastery, are held the quarter-sessions for the Ipswich division, and another part of the same monastery is converted to a gaol.

Here is a town-hall, a council-chamber, and a large market-place, with a handsome cross in the centre; and in this market are commodious shambles, built at the expence of Cardinal Wolsey, who was a butcher's son in this town. The Cardinal also began a college here, which, though he did not finish, still bears his name.

Ipswich has a convenient key, a custom-house, and a stone bridge over the river; but the harbour was formerly much more commodious than it is now, for which reason the number of its ships, as well as its trade by sea, has of late years much decreased. A great quantity of corn is continually shipped off here for London, and sometimes for Holland; and there is a considerable trade to Greenland from this town.

The principal manufactures are linen and woollen cloths. Here are more gentry than in any other town in the county, except St. Edmund's Bury, and this is thought to be one of the best places in England for families that have but small incomes, because of easy house-rent, good company, and plenty of all sorts of provisions.

In a parish-church here dedicated to the Holy Trinity, there was a priory of black canons of the order of St. Austin, founded before the year 1177; and at the suppression, consisted of a prior, and six or seven canons, who had estates valued at eighty-eight pounds six shillings and nine-pence a year.

Here was likewise a priory of black canons, founded about the end of the reign of king Henry II. by ——— Lacy, and Alice his wife. It was dedicated to St. Peter and St. Paul, but suppressed in 1527 by Cardinal Wolsey, who, upon the site of this priory, founded a college for a dean,

dean, twelve secular canons, eight clerks, and eight choristers; together with a grammar-school, which he designed as a nursery to his college at Oxford. This noble foundation was dedicated to the Virgin Mary, but was scarce brought to perfection before the disgrace of that prelate, upon which it was suppressed.

As early as the beginning of the reign of king John, here was an hospital for leprous persons, dedicated to St. Mary Magdalen, to which was afterwards annexed another house of lepers in this town, called St. James's Hospital.

In the east part of this town there was a house of black friars, said to have been founded by Henry de Manesby, and others, towards the end of the reign of Henry III.

About the middle of the town, there was a house of Carmelite friars, founded by Sir Thomas de Londham, and others, about the year 1279.

In the west part of this town there was a church and house belonging to the Friars Minors, founded by Sir Robert Tiptot, in the time of king Edward I.

This place sends two members to parliament, has three weekly markets, held on Wednesday, Friday, and Saturday; and three annual fairs, [viz. the fourth of May, for lean cattle and toys; the twenty-fifth of July, for fruit and toys; and the twenty-fifth of September, for butter and cheese.

At Walton, upon the coast, near the mouth of the Orwel, south-east from Ipswich, there was a church, dedicated to St. Felix, which was given by Roger Bigod, earl of Norfolk, in the time of William Rufus, to the monastery of Rochester in Kent; and that house settled here a convent of Benedictine monks.

Hadley, the next place we visited, is sixty-four miles distant from London, and was formerly a corporation, with a mayor, aldermen, common-councilmen, and other officers; but a *quo warranto* having been issued against its charter, in the reign of king James II. it has not yet been renewed. It is a pretty large, populous town, tolerably well built; but the situation being low, the streets are generally dirty. Here is a handsome church, with a spire. The place is still famous for a manufacture of woollen cloth, and trades much in corn. There was a monastery here in the time of the Saxons, but there are no remains of the structure at present.

Here is a weekly market on Monday, and two annual fairs, viz. Whitfun-Monday, for toys; and the tenth of October, for butter, cheese, and toys.

Neyland is situated on the bank of the river Stour, fifty-four miles from London. It is a large town, has a charity-school for forty boys and twenty girls, and a handsome bridge over the river. Here is a manufacture of faves and baize. The place was formerly much greater than at present.

Here is a weekly market on Friday, and an annual fair on the second of October, for horses, cattle, and toys.

At Edwardston, north of Neyland, is a church, which was given to the monastery of Abingdon, in Berkshire, by Hubert Munchensi, in the year 1114, when two or more black monks from thence were placed here; but in 1160, the religious of this place were removed to the priory of Coln in Essex, to which this church became appropriated, and continued so till the dissolution.

At Stoke, near Neyland, there was a monastery of some note, as early as the middle of the tenth century.

Haveril is a small place, forty-nine miles distant from London; and, by the ruins of a castle and church still to be seen, appears to have been of much greater consequence formerly than it is at present. Here is a charity-school, but nothing else worthy of note, except two annual fairs, on the twelfth of May, and the twenty-sixth of August, both for toys.

At Great Thubow, north of Haveril, there was an hospital founded in the reign of Richard II. and dedicated to St. James, with revenues rated, on the suppression, at three pounds *per annum*.

Bildestone, or Bilstone, is sixty-three miles distant from London. The streets are dirty, and the buildings mean; but here is a good church, and a large woollen manufactory.

Here is a weekly market on Wednesday, and two annual fairs, viz. Ash Wednesday, and Holy Thursday, both for toys.

Brethenham, north of Bildestone, is affirmed by Mr. Camden to be the Combretonium mentioned by Antoninus.

At Briset, east of Bildestone, Ralph Fitz Brien, about the year 1110, erected a priory for canons of the order of St. Augustine. It was dedicated to St. Leonard, and subordinate to the monastery of Nobiliæ, in the duchy of Berry, in Normandy.

At Betisford, about half way between Bildestone and Needham, there was an hospital or preceptory of knights of St. John of Jerusalem, as early as the reign of Henry II. which was valued, upon the dissolution, at fifty-three pounds ten shillings *per annum*.

Lavenham, or Lanham, is sixty-one miles distant from London, and is governed by six capital burgessees, or headboroughs, who are such for life, and have the power of chusing inferior officers.

This is a pretty large town, pleasantly situated in a healthy air, on the bank of a branch of the river Berdon, from whence it rises gradually to the top of a hill. It consists of nine streets, and in the middle of the town is a church, reckoned the finest in the county: it was rebuilt in the time of king Henry VI. and has a steeple one hundred and thirty-seven feet high, with six large bells, as good as any in England. The roof of the church is curiously carved, and the windows finely painted. There are two pews, one belonging to the family of the earl of Oxford, and the other to the family of the Springs, in this county, that are perhaps superior in workmanship to any of the pews in king Henry VII.'s chapel at Westminster; and here is a statue, in brass, of Mr. Thomas Spring, who gave two hundred pounds towards rebuilding the church. This town has a free-school, a bridewell, part of which is a work-house, where the poor of the parish are employed in spinning hemp, flax, and yarn; and some other considerable charities.

Here is a wooll-hall, from whence many hundred loads of wool are yearly sent to London. This place was formerly very famous for a staple trade in blue cloths, and was divided into three guilds or companies, each of which had a hall; and here are still considerable manufactures of serges, shalloons, faves, stuffs, and fine yarn.

At Lavenham, the tenure of land, called Borough English, still obtains.

Here is a weekly market on Tuesday, and an annual fair on the tenth of October, for butter and cheese.

At Glemisford, between Lavenham and Clare, there was a collegiate society of priests, under the government of a dean, as early as the time of Edward the Confessor.

Clare stands upon the river Stour, at the distance of sixty-one miles from London; and is a little, poor, dirty town, with a fine large church, and a manufacture of faves.

Elaric, or Alfric, earl of Clare, who lived in the reign of kings Canute Hardecanuté, and Edward, founded in his castle of Clare a church dedicated to St. John the Baptist, and placed in it seven secular canons; which church, with all its prebends and endowments, Gilbert de Clare gave, in 1090, to the monastery at Bec in Normandy; and it became a cell of Benedictine monks to that abbey, and so continued till the year 1124; when his son Richard removed the religious of this priory to Stoke, near Clare.

Here was a society of Friars Heremites, of the order of St. Austin, before the year 1248.

Here is a weekly market on Friday, and two annual fairs, viz. Easter Tuesday, and the twenty-sixth of July, both for toys.

In digging a grave at Honedon, near Clare, in 1687, there was found a great quantity of Saxon coins.

At Denston, north-west of Clare, there was a college or chantry, consisting of a warden, and a certain number of priests, founded about the fourteenth year of Edward IV. by Sir John Howard, knight, and John Broughton, jun. and endowed at the dissolution with yearly

yearly revenues rated at twenty-two pounds eight shillings and nine-pence.

To Stoke, near Clare, Richard de Clare, earl of Hertford, in 1124, removed the monks of Bec, whom his father had placed in the castle of Clare, and built a church for them here, dedicated to St. John the Baptist. This alien priory was afterwards made denison; but in 1415, by means of Edmund Mortimer, earl of March, it was converted into a college for secular priests, and maintained a dean, six prebendaries, eight vicars, four clerks, six choristers, besides officets and servants, who had revenues, which, upon the dissolution, were valued at three hundred and twenty-four pounds four shillings and two-pence *per annum*.

At Chipley, near Clare, there was a small priory of Augustine canons, dedicated to the Virgin Mary, which, in 1463, was united to the dean and chapter of the college of Stoke

Bury St. Edmund's, St. Edmund's Bury, and commonly Bury, was originally called St. Edmund's Burgh, from an abbey founded here in honour of St. Edmund, king of the East-Angles, who was not only crowned, but buried in this place, after being martyred by the Danes about the year 1012.

This town is seventy-five miles distant from London, and its abbey was reckoned one of the largest and richest in the world. Before the dissolution of monasteries, here were five hospitals, one college, and above forty churches and chapels, most of them well endowed. Here was a mint in the reigns of king Edward I. and II. and in that of king John; and this town has been famous for several parliaments or conventions of the states. In the reign of king Edward VI. here were three thousand householders; but the town was first incorporated by king James I. and is governed by an alderman, a recorder, a town-clerk, a coroner, twelve capital burgeses, and twenty-four common-councilmen, with other officers; and the county-affizes and quarter-sessions are usually kept here.

St. Edmund's Bury stands upon the west side of the river Bourn or Lark, which, by an act of parliament in the year 1701, was made navigable from Lynn in Norfolk, to Farnham, about a mile distant from that place.

It is so beautifully situated, has so good an air, and so fine a prospect, that it is called the Montpellier of England. This town, with its suburbs, extends in length, from north to south, one mile and a half; in breadth, a mile and a quarter; and is three miles in circumference. It is walled in, and has five gates, one of which, the Abbey Gate, is still a fine monument of that superb building. It is divided into five wards, and contains thirty-four streets, which are all straight, spacious, well paved, and generally cut one another at right angles.

There are two good parish-churches in the same church-yard; one dedicated to the Virgin Mary, the other to St. James. St. Mary's church was first built in the year 1105, and rebuilt in 1430. St. James's was begun in 1500, but not quite finished till the Reformation. Both these churches are remarkable for their just symmetry, beautiful large windows, neat pillars, and noble roofs. Here is a grammar-school founded by king Edward VI. and three charity-schools, one for forty boys, and the other two for fifty girls.

Here is a guild hall, a wool-hall, a shire-house, an assembly-room, and an hospital or work-house, for thirty boys and girls, which was a synagogue of the Jews, till they were expelled the kingdom in 1179.

This place, which is much frequented by the nobility and gentry of the county, has in the middle of the market-place a fine cross, with a lanthorn and clock. Spinning is almost the only manufacture in this town.

In 1608, a fire broke out in this town, by which several hundred houses were burnt down; and in 1636, it was so depopulated by a pestilence, that the grass grew in the streets.

King Sigebert, about the year 633, quitting his crown, and turning monk, retired into a monastery which he had founded here. There is no account of the state of this monastery after his death, though it is probable

some religious persons continued in it, because in the year 903, the body of St. Edmund the King was translated from Hoxon, near Eye, where he was murdered by the Danes, to a church here, as to a place of some note. Soon after this translation, the town changed its name, and several secular priests settling here, built a new church to the honour of the royal martyr, which was made collegiate in 925, as it is said by king Athelstan. In 1020, king Canute expelled the secular priests, and placed here a convent of Benedictine monks, with an abbot, from Holm, in Norfolk, which afterwards became endowed with so many estates, royalties, and immunities, that its revenues, upon the dissolution, were valued at sixteen hundred and fifty-nine pounds thirteen shillings and eleven-pence *per annum*.

Here was an hospital, founded about the beginning of the reign of king Stephen, by abbot Anselm, for the maintenance of aged, infirm, and diseased priests, and others. It was dedicated to St. Peter, and was at first under the management of the almoner of the abbey, but afterwards had a secular priest, for a master, and revenues, which, at the suppression, were valued at ten pounds eighteen shillings and eleven-pence *per annum*.

Without the north gate of this town, abbot Samson, and the convent, in 1184, began a new hospital, which was dedicated to our Saviour, and about the year 1300, maintained seven poor priests.

Without the east gate, there was an hospital, founded by an abbot of Bury, and dedicated to St. Nicholas. It consisted of a master and several brethren, and was rated, upon the dissolution, at six pounds nineteen shillings and eleven-pence *per annum*.

About the year 1257, the grey friars built a church and office-houses in the north-west part of this town, but they were removed hence in 1263, by order of Pope Urban IV. and built a house without the town, called the Toll-gate, where they continued till the dissolution.

In the beginning of the reign of king Edward I. there was an hospital without the south gate of this town, dedicated to St. John the Evangelist, and called God's House.

In the time of Edward IV. here was a college of priests.

This town sends two members to parliament, has a weekly market on Wednesday, and an annual fair, the greatest perhaps in England: it begins on St. Matthew's day, and lasts a fortnight, during which time all manner of public diversions are exhibited.

St. Edmund's Bury is generally believed to have been the Villa Faustini mentioned by Antoninus; but what this Faustinus was, does no where appear.

At Great Wheltham, near Bury, several remains of Roman antiquity have been found, as potsherds and platters of Roman earth, some of which had inscriptions, urns with coals and ashes in them, bones and horns of cattle, that were offered in sacrifice, and a sacrificing knife.

At Whipted, south of St. Edmund's Bury, there was a monastery, of which there are no particulars upon record.

A little out of the road that leads from Thetford to Bury, lie Lifermere and Ampton, the seats of Baptist Lee and — Calthorpe, Esqrs. The two parks join, and the owners, with an harmony very unusual, made a noble serpentine river through both, and built a large handsome bridge over it at their joint expence, by which means they ornamented their grounds to a degree otherwise impossible. In Mr. Calthorp's park, the water forms a bend against a slope of wood, which has a very noble effect. Upon the whole, the river, considering it is formed out of a trifling stream, is one of the finest waters that can be seen in the grounds of any private gentleman. Mr. Lee has a shrubbery of about twenty acres, cut out of his park, laid out in a very just and elegant taste. The water and slope are particularly beautiful; the former winds through a thick wood, with a very bold shore, in some places wide, in others so narrow, that the overhanging trees join their boughs across the stream, and even darken the scene, and by that means produce a charming effect. The banks are every-where uneven;

uneven; first wild, rough, and covered with bushes; then a fine green lawn, laid out in gentle swells, interspersed with scattered trees and shrubs, to the banks of the water, and seats disposed with great judgment.

Mildenhall, the next place we visited, is a large populous town, situated on the Lark, sixty-eight miles from London. The streets are spacious, and the town well built. It has a handsome church, with a lofty steeple, and a good harbour for boats. In 1507, the greatest part of the town was consumed by fire; but was soon after rebuilt, in a much better manner than before the accident.

Here is a weekly market on Friday, and an annual fair on the tenth of October, for cattle and wool.

At Herringfleet, two miles from Mildenhall, there was a priory of black canons, founded, in the beginning of the reign of Henry III. by Roger Fitz-Osbert, and dedicated to St. Mary and St. Olave. About the time of the dissolution, it was inhabited by five or six religious, whose annual revenues amounted to forty-nine pounds eleven shillings and six-pence *per annum*.

From Mildenhall we passed on to Ixworth, a small town situated in the high road from London to Yarmouth, seventy-three miles from London; but has nothing remarkable. Here was a priory of black canons, founded by Gilbert Bland, who came into England with William the Conqueror. It was dedicated to the Virgin Mary, and valued, upon the dissolution, at one hundred and sixty-eight pounds nineteen shillings and six-pence *per annum*.

Wulpit, south of Ixworth, is supposed to have been the ancient *Sitomagus*. Here are large deep trenches, which appear to have been thrown up by the Romans.

Stowmarket, the next place we visited, stands upon the river Orwel, near the centre of the county, seventy-three miles from London. It has several good inns, a spacious beautiful church, with a fine steeple, in which are eight tuneable bells; a manufacture of temmies, and other Norwich stuffs; and a charity-school.

Here is a weekly market on Thursday, and two annual fairs, viz. the tenth of July, for shop-goods and toys; and the tenth of August, for sheep and black cattle.

At Haughley, north-west of Stow-market, on a high hill, are the remains of an old castle, which was called Horn-castle, and occupied two acres of ground; but when, or by whom it was built, is unknown.

Near Stow-market are two villages, one called Creeping St. Mary, and the other Creeping St. Olave, at each of which there appears to have been a distinct alien priory of the Benedictine order. The priory of Creeping St. Mary was a cell to the abbey of Bernay in Normandy; and that of Creeping St. Olave was subject to the abbey of Grestein, in the same country.

At Combs, near Stow-market, Theobald de Valoins founded, some time before the seventh year of Richard I. a nunnery of the order of St. Augustine, in which, at the time of the dissolution, there were nineteen nuns, who were endowed with a yearly revenue of one hundred and eighty-two pounds nineteen shillings and three-pence.

Here was also a collegiate chantry, consisting of a warden and four secular priests, in a chapel dedicated to the annunciation of the Virgin Mary, within the monastery founded in the twenty-first year of Edward III. by Maud, countess of Ulster. The religious continued seven years in this house; but finding the place inconvenient on several accounts, they were removed to Bruscard, north-east of Fromlingham, where they built a chapel, dedicated to the Annunciation, and proper offices for a warden and priests. But this college, in the fortieth year of Edward III. was surrendered to the use of an abbess and sisters, nuns minorettes of the order of St. Clare, who continued here till the general suppression of religious houses, when their yearly revenues were estimated at fifty-six pounds two shillings and a penny.

From Stow-market we proceeded to Needham, situated on the banks of the river Orwel, seventy-five miles from London. It had once a good trade in broad-cloths for

Russia, Turkey, and other foreign markets; but it has lost that trade many years, though it has still some considerable dealers, and consists of one long wide street, tolerably well built.

Here is a weekly market on Wednesday, and an annual fair on the twenty-eighth of October, for toys.

South-west of Needham, is a village called Offton, which, in the Saxon language, signifies the town of Offa; and here are the ruins of an old castle, said to have been built by Offa, king of Mercia.

At Great Blakney, south-east of Needham, Walter Giffard, earl of Buckingham, in the time of William Rufus, founded an alien priory, subject to the abbey of Bec in Normandy.

The next place we visited was Mindlesham, a small market-town, situated seventy-six miles from London. It has a handsome church, but nothing else remarkable, except a weekly market on Tuesday, and an annual fair on Holy Thursday, for cattle.

Buddesdale, or Batefdale, is situated on the borders of Norfolk, in the road from St. Edmund's Bury to Yarmouth, eighty-one miles from London. It is a straggling, mean, dirty town; but has a free-school, founded in the reign of queen Elizabeth, by Sir Nicholas Bacon, and endowed with several scholarships for students at Cambridge.

Here is a weekly market on Wednesday, and an annual fair on Holy Thursday, for cattle and toys.

At Gisligham, south of Buddesdale, there was a house or preceptory of the Knights Templars, before the thirty-fourth year of Edward I.

Eye, the next town we visited, is almost surrounded by the brook, in the road from Ipswich to Norwich, ninety-two miles from London. It was incorporated by king John, and is governed by two bailiffs, a recorder, a town-clerk, ten principal burgeses, and twenty-four common-councilmen. The buildings are mean, and the streets dirty; but here is a large handsome church, and a charity-school. The chief manufactures of this town are bone-lace.

There was a priory here of Benedictine monks, founded in the time of William the Conqueror by Robert Mallet, and dedicated to St. Peter. It was at first a cell to Bernay Abbey in Normandy, but was made denison by king Richard II. and so continued till the suppression, when here were ten monks, whose yearly revenues were rated at one hundred and sixty-four pounds two shillings and three-pence.

This town sends two members to parliament; has a weekly market on Saturday, and an annual fair on Whitsun-Monday, for cattle and toys.

Without this town there was an hospital for leprous persons, founded in the beginning of the reign of Edward III. and dedicated to St. Mary Magdalen.

At Redlingfield, near Eye, Manasse, earl of Ghiffness, and Emma his wife, in 1120, founded a Benedictine nunnery, dedicated to St. Andrew, which, about the time of the suppression, had a prioress and eight nuns, with yearly revenues valued at sixty-seven pounds and a penny.

At Wickham Skeyth, south-west of Eye, there was a priory, founded in the reign of king Stephen, by Robert de Saleo Villa, knight, and subordinate to the abbey of St. John at Colchester, in Essex; but in the next reign, Jordan, the son of Robert de Saleo Villa, consented that the religious of this place should be removed to Colchester.

At Wingfield, north-east of Eye, there is a parish-church, in which a college, consisting of a master and several priests, was founded in 1362, by the lady Alianor, relict of Sir John Wingfield, agreeable to the desire and last will of her husband. It was dedicated to St. Mary, St. John Baptist, and St. Andrew; and valued, upon the dissolution, at sixty-nine pounds fourteen shillings and five-pence *per annum*.

Debenham, eighty-six miles from London, has its name from the river Deben, which runs by it. The town stands upon a rising ground, which keeps it clean. It has a good church, but the houses in general are meanly built. Here is a charity-school, founded by Sir

Robert Hitcham, who, by his will, provided, that some of the poor of this place should be employed at a work-house in Framlingham, and that some of the poor children should be sent to a free-school in the same town, in order to be fitted for apprenticeships, and left ten pounds to be given with each to a master. Here is a good market-place, but the town is not much frequented, the road to it being extremely bad.

Here is a weekly market on Friday, and an annual fair on the twenty-fourth of June, for braziers and toys.

Bungay, the next place we visited, is situated upon the river Waveney, by which it is almost surrounded, one hundred and eleven miles from London. It is a large, handsome town; the houses, in general, are well built, but the streets are, for the most part, unpaved. Here are two parish-churches, one of which is a good structure, with a beautiful steeple; and a grammar-school, endowed with ten scholarships for Emanuel College in Cambridge. This town has a good market-place, a bridge over the Waveney, and is much frequented by people from Norfolk.

On the first of March 1689, this whole town, except one little street, was burnt down in the space of four hours, and the damage sustained by this fire was computed at near thirty thousand pounds.

There are still to be seen at this place large ruins of a very strong castle, built by the family of the Bigods, earls of Norfolk, before the reign of king Stephen. Of this castle Hugh Bigod, earl of Norfolk in the wars between king Stephen and the empress Maud, used greatly to boast. But notwithstanding this confidence in his castle, the same earl was soon after compelled to pay king Henry II. a great sum of money, to save it from being demolished.

Roger de Glanvil, and the countess of Gundreda, his lady, in the time of king Henry II. founded a Benedictine nunnery here, dedicated to the Virgin Mary. In the time of Edward I. here were a prioress and fifteen sisters; but at the dissolution, not above seven sisters, who had a yearly income rated at sixty-two pounds two shillings and a penny.

Here is a weekly market on Thursday, and two annual fairs, viz. the fourteenth of May, for horses and lean cattle; and the twenty-fifth of September, for hogs and toys.

At Mittingham, near Bungay, there was a college for a master and eight chaplains, founded in the sixth year of Richard II. by Sir John de Norwich. It was dedicated to the Virgin Mary, and about the time of the dissolution, had a master and eleven fellows, with yearly revenues valued at two hundred and two pounds seven shillings and five-pence.

At this place likewise are the remains of a castle, built by Sir John de Norwich, who died about the beginning of the reign of king Richard II.

Beccles is situated on the river Waveney, one hundred and seven miles from London. It is a large, populous town, and the streets well paved; but the buildings mean, and many of them thatched. Here is a large church, and two free-schools, well endowed; one of which is a grammar-school, with ten scholarships for Emanuel College in Cambridge, appropriated by Sir James Leman, in the reign of king James I. A common belongs to this town, of no less than a thousand acres.

Here is a weekly market on Saturday, and three annual fairs, viz. Ascension-day, the twenty-ninth of June, and the second of October, all for horses and toys.

Leystoff, Leystoff, Leostoff, or Lowestoff, is a small straggling town, situated on a rock which seems to hang over the sea, one hundred and thirteen miles from London. This place having been part of the ancient demesne of the Crown, has a charter, by which the inhabitants are exempted from serving on juries, either at the sessions or the assizes. About a mile westward of this place, there is a church, and in the town a chapel, for the ease of the inhabitants, whose chief business is fishing for cod in the North Sea, and for herring, mackarel, and sprats, at home.

Here is a weekly market on Wednesday, and two annual fairs, viz. on May-day, and Michaelmas-day, both for toys.

About ten miles north-west of Leostoff, upon the river Waveney, is Burgh Castle, a fortification built by the Romans to guard the coast against the Saxon pirates; and is supposed to have been the Gavanonum where the Stableian horse had their station. There are still very considerable remains of this castle standing; the eastern wall continues yet in its original length, which is six hundred and sixty feet, and about seventeen or eighteen feet high. On the outside of this wall are four solid round towers, each about fourteen feet in diameter, and of an equal height with the wall. These towers are joined to the wall, but in such a manner, that only a small part of the periphery is within it. The remains of the southern wall are still three hundred and sixty feet in length, and those of the north side are about the same extent, but the western is totally demolished. The materials of these walls and towers are flints, and Roman and British bricks, each of which is a foot and a half long, and almost a foot broad.

At Flixton, near Leostoff, there was a nunnery of the order of St. Austin, founded about the year 1258, by Margery, widow of Bartholomew de Creyk. It was dedicated to the Virgin Mary and St. Catharine, and at the time of the dissolution, had a prioress and six or seven nuns, with yearly revenues valued at no more than twenty-three pounds four shillings and a penny.

Southwold, the next place we visited, is situated in a peninsula, formed by the river Blith upon the west, and the sea upon the east and south, one hundred and five miles from London. It is a corporation, governed by two bailiffs, and other officers; and is a pleasant, populous town, strong by its situation, and fortified by a few pieces of cannon. It has a draw-bridge over the river Blith, and a large, strong-built church. In 1747, an act of parliament passed for effectually cleansing and opening the haven of this place, which had been long choked up with sand. On the east side of this town is a bay called Solebay, that affords good anchorage, and is sheltered by a promontory about two miles farther south, called Easton-Nefs. On the south side of Easton-Nefs is an excellent harbour, which, in the Dutch war, was a place of rendezvous for our fleets. The promontory of Easton-Nefs is by some thought the most easterly point of Britain, but others suppose it to be Leostoff.

Here is a weekly market on Thursday, and two annual fairs, viz. Trinity-Monday, and the twenty-fourth of August, both for toys.

At Blithborough, upon the river Blith, near Southwold, several Roman urns were dug up not many years ago. This is thought to have been a Roman station; and in the time of the Saxons, was famous for being the burying-place of Anna, a Christian king of the East Angles, who was slain in battle by Penda the Mercian.

There was also at this place a church dedicated to the Virgin Mary, which was given to the abbey of St. Osyth in Essex, by king Henry I. upon which this church became a cell to that abbey, and was valued at the dissolution, when it had five religious, at forty-eight pounds eight shillings and ten-pence *per annum*. Here was a house of black friars.

At Roydon, near Southwold, there was a priory of Cluniac monks, cell to Thetford in Norfolk, said to have been founded before the year 1160, by Dondo Afini, steward to the king's household. It was dedicated, according to some writers, to St. Mary; but to St. Peter and St. Paul, according to others; and had yearly revenues, on the suppression, reckoned worth thirty pounds nine shillings and five-pence.

Halesworth stands at the distance of ninety-seven miles from London, and is an ancient, populous town, with a very neat church, and a charity-school. Here is a large weekly market on Tuesday, famous for vast quantities of linen yarn, which is spun in this town and neighbourhood, and bought up here; and an annual fair on the eighteenth of October, for Scotch cattle.

At Romborough, north-west of Halesworth, there was a small priory of Benedictine monks, founded about the time

time of the Conquest, and subjected to the abbey of Holm in Norfolk; but it was given, in the time of Henry I. by Stephen, or his son Alan, earls of Richmond and Brittany, to the abbey of St. Mary, in the city of York.

Dunwich is situated on the coast of the German ocean, at the distance of ninety-five miles from London, and is the oldest town in the county, having been an episcopal see in the year 630. It has sent members to parliament ever since the first establishment of that part of the English constitution, in the reign of Edward I. and was made a free borough by king John, to whom the burghesses gave three hundred merks of silver, besides ten falcons and five gersfalcons for his charter; and they moreover gave him two hundred merks, and five hundred eels, for the grant of wrecks. This borough is governed by two bailiffs, and was formerly fortified. Here are said to have been fifty-two churches and monasteries, but all the churches have been swallowed up by the sea, except one, dedicated to All Saints. This now is a poor place, consisting only of a few wretched cottages; but it has a charity-school, and an hospital for a master, and five poor persons. Sprats are cured here in the same manner as herrings at Yarmouth in Norfolk.

This place, in the year 630, was made the episcopal seat for the kingdom of the East-Angles; and after the division of this diocese in 678, the bishops of Suffolk continued their residence here, till the whole kingdom was re-united, under the bishop of Elmham in Norfolk, in the tenth century; after which the cathedral of this see became a cell of monks, subordinate to a monastery at Eye; but this church, with many other churches and religious houses in this place, were, several ages ago, swallowed up by the sea.

Here was a priory of Black friars, founded by Sir Roger de Holish, before the time of king Richard II. and here was also a house of Grey friars, supposed to have been founded by the corporation of this borough.

The Knights Templars formerly had a house here, with a handsome church, called the Temple of our Lady, to which belonged great rents and privileges, and which is supposed to have passed to the Knights Hospitalers upon the dissolution of the Knights Templars.

Dunwich is supposed to have been a Roman station, from several Roman coins which have at different times been found in this place.

This town sends two members to parliament, has a weekly market on Saturday, and an annual fair on the twenty-fifth of July, for toys.

Saxmundham, or Saxlingham, is eighty-six miles distant from London, and is a little, obscure, dirty town, containing nothing worthy of note. It has, however, a weekly market on Thursday, and two annual fairs, viz. Holy Thursday, and the twenty-third of September, both for toys.

At Snape, south of Saxmundham, William Martel, and Albrede his wife, in 1155, founded a priory of Benedictine monks, from the abbey of St. John at Colchester. It was dedicated to the Virgin Mary, and continued a cell to the abbey of St. John till the year 1400. It was then made conventual, but suppressed by Cardinal Wolsey in 1524, when its revenues were rated at forty-nine pounds one shilling and eleven-pence *per annum*.

At Layston, east of Saxmundham, there was an abbey of Premonstratensian canons, built and endowed by Ranulph de Glanvil, founder of Butley priory, in 1182. It was dedicated to the Virgin Mary, and at the time of the dissolution had fourteen or fifteen monks, with yearly revenues rated at one hundred and eighty-one pounds seventeen shillings and a penny.

Framlingham is a name of Saxon original, and signifies a Habitation of Strangers. It is eighty-six miles distant from London, and is a large, ancient town, pleasantly situated, though but indifferently built, upon a clay hill, in a fruitful soil, and a healthy air. There is a large stately church, built of black flint, with a steeple upwards of a hundred feet high; and a free-school, founded by Sir Robert Hitcham, for forty boys, who are fitted for apprenticeships, and then put out with ten pounds each. Here also are two hospitals, one founded

in 1654 by the same Sir Robert Hitcham, and the other about the year 1704, by the trustees of Mr. Mills, an Anabaptist minister, for eight poor persons, who have two shillings and six-pence a week each, an outer garment once a year, and thirty shillings a-piece for firing. This town has a very handsome and spacious market-place.

It is universally agreed, that Framlingham is a town of British original, which was conquered by the Romans, after the defeat of Boadicea, the famous British Amazon. Here are still to be seen noble remains of a castle, supposed to have been built by some king of the East-Angles. It was a large, beautiful fabric, and very strong: the walls are still standing, and are forty-four feet high, and eight feet thick; they support thirteen towers, each of which are fourteen feet high above the walls, and two of them are watch-towers. The area inclosed by the walls of this castle, contains above an acre and a rod of land.

Here is a weekly market on Saturday, and two annual fairs, viz. Whitsun-Monday, and Michaelmas-day, for millinery goods, cloaths, and toys.

At Sibton, north-east of Framlingham, William de Cheney, in 1149, founded an abbey for Cistercian monks, dedicated to the Virgin Mary, and endowed at the dissolution with two hundred and fifty pounds fifteen shillings and seven-pence *per annum*. At the gate of the abbey there was an hospital.

Aldborough is generally supposed to have taken its name from the river Ald, upon the bank of which it stands, though some think that Aldborough is a corruption of Oldborough.

This town is distant eighty-eight miles from London, and is an ancient corporation, governed by two bailiffs, twelve capital burghesses, and twenty-four inferior members. It is pleasantly situated in a peninsula, called Slangden Valley, formed by the river on the west side, and the sea on the east and south. It consists chiefly of two streets near a mile long, running parallel to each other, the sea having lately swallowed up a third street, that was parallel to the other two. The streets are clean, but the buildings in general very mean. Here is, however, a handsome church upon a hill, on the west side of the town, and a good key on the river Ald, with warehouses: the harbour is defended by some pieces of cannon; and a good trade is carried on in fish, particularly sprats, soles, and lobsters. From this town there is a great export of corn, and a trade to Newcastle upon Tyne for coals.

This town sends two members to parliament, has a weekly market on Saturday, and two annual fairs, viz. the first of March, and the third of May, both for toys.

Orford derives its name from a ford over the river Ore, near the mouth of which it stands. It is eighty-eight miles distant from London, was incorporated by king Henry III. and is governed by a mayor, eighteen portmen, twelve chief burghesses, a recorder, a town-clerk, and two serjeants at mace. It was once a large, populous town, with a castle, of which there are still some towers remaining, that serve as land-marks to vessels at sea. Here is a church; and on a promontory, not far from the town, called Orfordness, there is a light-house for the direction of seamen sailing near the coast; and this promontory is a great shelter to ships when a north-east wind blows hard upon the shore. Orford formerly had a good harbour, but the sea has withdrawn from it many years, and the place has proportionably decayed.

This town sends two members to parliament, has a weekly market on Monday, and an annual fair on Midsummer-day, for toys.

Among the curiosities of this county may be reckoned the periodical rendezvous of swallows along this coast, from Orfordness to Yarmouth; for, about the end of summer, an incredible number of these birds gather here in a body, where they wait the first northerly wind to transport themselves out of Britain, probably to some warmer climate. They are sometimes wind-bound for several days, but it no sooner blows fair, than they all take wing together, and never appear till the following spring, when they arrive here in vast bodies, and from

hence

hence distribute themselves all over Britain.—It is said, that in the time of king Henry I. a fish was caught in the sea near Orfordness, by the fishermen's nets, which, in shape, exactly resembled a human body, but was rough and hairy, with a picked beard. It was brought alive on shore, but soon after escaped to sea again, and was never after heard of.

At Butley, near Orford, Ranulph de Glanvil, justiciary of England, founded, in 1171, a priory of Black canons, dedicated to the Virgin Mary, with revenues, which, at the dissolution, amounted to three hundred and eighteen pounds seventeen shillings and three-pence *per annum*.

Woodbridge stands upon the west bank of the Deben, at the distance of seventy-five miles from London. Its extent is about half a mile every way. The chief streets are well built and paved, but the rest are dirty, and the houses old and low. It has a fine church with a steeple, a good grammar-school, and an alms-house, founded in 1587 by Thomas Seckford, master of the Requests, for thirteen poor men, and three women. Here is a market-place, in the middle of which is a handsome shire-hall, where the quarter-sessions are held for a district of this county, called the Liberty of Etheldred and Audrey; and under the shire-hall is a corn-croft. The river is navigable hither for ships of considerable burthen, and this town has four or five docks for building ships, with commodious quays and warehouses. It carries on a good trade to London, Newcastle upon Tyne, and Holland, in butter, cheese, salt, and plank; and the Woodbridge pinks and hoys go to and from London once every week.

At Woodbridge there was a small priory of five or six black canons, founded by one Ernaldus Rufus, about the end of the twelfth century. It was dedicated to the Virgin Mary, and on the suppression, had yearly revenues rated at fifty pounds three shillings and five-pence.

This town has a weekly market on Wednesday, and two annual fairs, viz. Lady-day, and the twenty-first of September, both for toys.

At Letheringham, north-east of Woodbridge, a small priory of three or four black canons was founded by William de Bodeville. It was dedicated to the Virgin Mary, was a cell to the monastery of St. Peter at Ipswich, and had an income rated, upon the suppression, at twenty-six pounds eighteen shillings and five-pence *per annum*.

At another place, called Alenborne, now depopulated, there was a small priory of Augustine canons, dedicated to the Virgin Mary; and before the general suppression, annexed and appropriated to the monastery at Woodbridge.

Rendlesham, north-east of Woodbridge, was a royal seat in the Saxon times; and here Redwald, king of the East-Angles, is said to have kept his court.

Curious PLANTS found in Suffolk.

Wild Sothernwood, or fine-leaved Mugwort; *Abrotanum campestre*, C. B. found at a place called Elden, in Suffolk, twelve miles beyond Newmarket.

Yellow-berried Holly; *Agrifolium baceis luteis*; found at Wiston, in this county, not far from Buers.

Woolly-headed Thistle; *Carduus tomentosus corona fratrum*, Park; found in great plenty near Clare, in Suffolk.

Fine-leaved Bastard-parsley, with a small purple flower; *Cauculis tenuifolia flosculus subrubemibus*, Hist. nosl. found amongst the corn at Norley, and other places.

Golden-flowered Samphire; *Crithmum crysanthemum*, Park; found on the bank of the river, above Falbridge, at Maldon in Essex.

Spanish Catchfly; *Lycnis viscosa flore muscosa*, C. B. found in and about the gravel-pits on the north side of Newmarket town.

Night-flowering Campion; *Lycnis noctiflora*, Park; found among the corn about Saxmundham.

The Water Aloe; *Aloe palustris*, C. B. found in the lake in Loving-land.

English Sea-peas; *Pisum marinum*, Ger. found on the stone-beach between Orford and Alburgh, called the Shingle.

Long-leaved Water-hemlock; *Sium alterum olusairi facie*, Ger. found in the lake in Loving land.

Knotted Trefoil, with round heads; *Trifolium cum glomeratis ad Caulium nodos rotundis*; found in gravelly places about Saxmundham.

Hedge-hog Trefoil, with rundles resembling a thin segment of a cone; *Trifolium cochleatum modiolis spinosis*; found on the sea-bank of Orford.

Upright Speedwell, with divided leaves; *Asine foliis hederacis ruta modo divisis*, Lob. found at Mewell, between the two wind-mills and the Warren-lodge.

Common Roman Nettle; *Urtica Romana*, Ger. found at Alburgh, and elsewhere, on the sea-coast.

Small mild white-flowered Stone-cup; *Sedum minimum non acre flore albo*; found in the barren grounds between Yarmouth and Donevich.

Remarks on the SEA-COASTS of Suffolk.

The sea-coast of Suffolk, which extends from Harwich to Leostoff, has very few harbours, but several sands, which render the navigation somewhat difficult to those unacquainted with that part of England. The Shipwash lies about three leagues to the eastward of Harwich. It is a large sand, the sides of it pretty steep, and there are ten fathoms water close to it, so that large ships are very careful not to come in less than twelve or thirteen fathoms, if they sail without it. There is, however, a channel between the Shipwash, and another sand called Alborough Knaps, and the shore, in which there are nine or ten fathoms water.

The Knaps, above-mentioned, are several round eminences on a pretty large sand, lying about five miles from Orfordness, and due east from Aldborough. There are not above two fathoms and a half upon these Knaps at low water; but without, sixteen or seventeen fathoms.

The Whiting is a small long sand, lying in the passage to the southward of Orfordness, about a league from the shore. The south end lies farther from the land than the north end, and there are not above six feet water upon it at low water. Ships coming from the northward generally sail to the westward of it, or between the land and the Whiting; but there is also a good channel between it and the Boudsey sand, a pretty large shoal about two miles to the south-east of the Whiting. Part of Boudsey sand is dry at low water. It lies about three miles and a half from the shore, and has nine fathoms water almost close to it. The north end of the Whiting is so exceeding steep and sharp, that you have sometimes nine fathoms at one cast of the lead, and the next not above five; but when this happens, you are not above a ship's length from the sand, and before you can heave the lead again, you will be upon it.

Between the two sands above mentioned is a small sand, called the Kettle-bottom, on which there is not water sufficient for a ship of five hundred tons burden at low water.

Near the land, almost due west of Covehith, a village with a pretty lofty steeple, is a shoal called the Bernard, which is almost dry at low water; but small ships sail between it and the land at half flood, when there are two fathoms water. The outside of it is so steep, that it is not safe to come nearer to it than nine or ten fathoms.

About a cable's length to the northward, is another sand called the Newcome; and about the same distance to the northward of the Newcome, is another called the Stamford. There is a channel between these sands and the shore, through which ships often pass. About a league to the westward of the Newcome, is a round shoal called the Red-sand, between which and the Newcome there is a channel about half a league broad, in which there are sixteen fathoms water.

On the point of land near Leostoff are two light-houses; one situated on the beach, and the other on a small eminence somewhat farther within the land. They are of great use to the navigation among these sands, and form a leading mark for sailing through the channel above described. There is also a light-house upon

upon Orfordness, erected also for the preservation of ships passing along this coast in the night.

On this coast there are four havens, viz. Baussey, Orford, Mizmore, and Southwold.

Baussey haven is capable of receiving ships of considerable burden, some of which pass up to Woodbridge; but those of Orford and Mizmore are only tide-harbours, and of very little use but to small vessels, which pass in and out with the tide. Orford haven was formerly capable of receiving large ships, but has been many years since almost choaked up with sandy beach thrown in by the sea. Mizmore is also nothing more than a tide-harbour, and frequented only by small vessels, and even very few of these put in here, as there is no place of trade near it. Southwold is a much better harbour than any of the two last, and capable of receiving a considerable fleet of large ships. It divides itself into three channels a little within its mouth. Upon the northermost branch is Southwold; on that of the middle, Walderwick; and on the southern, Dunwich.

Other Curious PARTICULARS found in Suffolk.

Besides the antiquities, and other curious objects already mentioned in the descriptions of the several towns, &c. in this county, the following particulars must not be omitted.

Huxon, a small place situated eastward on the river Waveney, is famous for the martyrdom of king Edmund. That Christian king, because he would not renounce his Saviour, was, by the most inhuman Danes, to use the words of Abbo, "bound to a tree, and his body all over mangled with arrows; and they, to increase the pain and torture, did, with showers of arrows, make wound upon wound, till the darts gave place to one another." And, as a poet of the middle age has sung of him:

*Jam loca vulneribus desunt, nec dum furiosis
Tela, sed hyberna grandina plura volant.*

Now wounds repeated left no room for new,
Yet impious foes still more relentless grew,
And still, like winter-hail, their pointed arrows flew. }

There is something very particular in that part of the river Waveney, where it approaches towards its influx. No one would doubt, when they see the river growing broader and deeper, and going directly towards the sea, even to the edge of the beach, and within a mile of the main ocean, but that it would make its entrance into the sea at that place, and afford a noble harbour for ships at the mouth of it; when on a sudden the land rising high by the sea-side, crosses the head of the river like a dam, checks the whole course of it, and it returns, bending its course west, for two miles, and then turning north through a long course of meadows, seeks out the river Yare, joins its water with that, and both return to the sea together.

It is the opinion of some of our historians, that this river was once open, and formed a famous harbour for ships belonging to the town of Leostoff adjoining; but that Yarmouth, envying the prosperity of Leostoff, made war upon them; that after many bloody battles, both by sea and land, they came at last to a decisive action at sea; but the Leostoff fleet being vanquished, and utterly destroyed, the Yarmouth men either actually stopped up the mouth of the said river, or obliged the conquered Leostoff-men to do it themselves; and bound them, by an oath, never to attempt to open it again.

MEMBERS of PARLIAMENT for Suffolk.

Two knights of the shire for the county; and two burgeses for each of the following boroughs: Ipswich, Dunwich, Orford, Alborough, Sudbury, Eye, and St. Edmund's Bury.

N O R F O L K.

THIS county is bounded by the German Ocean on the east and north; by Cambridgeshire on the west; and by Suffolk on the south. It is above fifty-seven miles in length from east to west, thirty-five in breadth from north to south, and one hundred and forty in circumference, containing an area of fourteen hundred and twenty-six square miles. It is divided into thirty-one hundreds, in which are one city, thirty-two market-towns, one hundred and sixty-four vicarages, six hundred and sixty parishes, seven hundred and eleven villages, and about forty-seven thousand one hundred and eighty houses. It lies in the diocese of Norwich, and province of Canterbury; and East Dereham, a considerable market-town, near the centre of the county, is ninety-seven miles north-east of London.

R I V E R S.

The principal rivers of this county are, the Greater and the Smaller Ouse, the Yare, and the Waveney.

The Greater Ouse rises in Northamptonshire, and running through the counties of Buckingham, Bedford, and Cambridge, and dividing this last county from Norfolk, falls into a part of the German sea, called the Washes, at Lynn Regis, a considerable borough town of this county.

The Smaller Ouse rises in Suffolk, and separating that county from Norfolk on the south-west, discharges itself into the Greater Ouse near Downham, a market-town of Norfolk.

The Yare rises about the middle of this county, and running eastward, passes by the city of Norwich, and falls into the German sea at Yarmouth, a very considerable borough and sea-port.

The Waveney rises in Suffolk, and runs north-east; and parting that county from Norfolk, falls into the Yare near Yarmouth.

Remarks on the INLAND NAVIGATION of Norfolk.

The Waveney, which separates this county from that of Suffolk, is navigable to Thetford, passing by a great number of places, both on the Norfolk and Suffolk sides of the stream, and by that means is of great service to the inland trade of these parts. But it wants many of the modern improvements, which would render the navigation much more expeditious, and consequently lower the prices paid for the carriage of goods.

The Yare is navigable to Norwich without the help of locks, and carries barges of considerable burden up to that city. By these a very considerable trade is carried off with Yarmouth, where many of the goods are landed and shipped off for London, and other home and foreign markets. But though there are no locks on this river, and therefore no expence necessary for repairs, &c. yet the navigation might be so far improved by assistances of that kind, that the expence attending their first erection and subsequent repairs, would be soon saved by the certainty and expedition of the passing and repassing of the barges up and down this river.

The Ouse is navigable to some distance above Downham, where there is a good harbour for barges, and by this river a considerable trade is carried on to Lynn Regis, and other towns. These rivers are of great advantage to this county, especially as great quantities of grain are produced in this county.

A I R A N D S O I L.

The air of this county, near the sea-coast, is aguish, and otherwise unsalutary; but in the inland parts, it is both healthy and pleasant, though frequently piercing.

The soil is more various than perhaps that of any other county, and comprehends all the sorts that are to be found in the island, arable, pasture, meadow, woodlands, light sandy ground, deep clays, heaths and fens. The worst of these are far from being unprofitable, the sandy heaths feeding sheep and breeding rabbits, and even the fens affording rich pasture for cattle.

Remarks on the HUSBANDRY of Norfolk.

Norfolk is famous for the improvements lately made in husbandry, and by these the county now wears a different face from what it did a century ago.

All the country from Holkam to Houghton was a wild sheep-walk before the spirit of improvement seized the inhabitants; and this glorious spirit has wrought amazing effects; for instead of boundless wilds, and uncultivated wastes, inhabited by scarce any thing but sheep, the country is all cut into inclosures, cultivated in a most husband-like manner, richly manured, well peopled, and yielding an hundred times the produce that it did in its former state. What has wrought these vast improvements, is the marling; for under the whole country run veins of a very rich soapy kind, which they dig up, and spread upon the old sheep-walks, and then, by means of inclosing, they throw their farms into a regular course of crops, and gain immensely by the improvement.

The farms are all large, and the rents low; for the farmers having been at a great expence in improvements, they could not afford them without very long leases; so that most of the farms are let at present at rents much under their value: add to this, a considerable part of the country belongs to landlords, who have a vanity in not raising their rents, and others are supposed to have taken moderate fines. All together the farmers have managed to raise considerable fortunes, and to bid fair for being the possessors of the whole county.

The farms run from three to nine hundred pounds a year, for which sums they have a great quantity of land. It is very difficult to discover the rents among such large farmers, who all make a great secret of it; but we have very good reasons for believing, that they are in general from two shillings and six-pence to six shillings per acre. Many farms under a modern let are rented at ten shillings and more per acre, but they are not very common. We speak of a large tract of country stretching from Holkam to the sea westward, and south to Swafham.

The principal farms (at least those that are most commonly mentioned) are Mr. Curtis's of Sommerfield, two thousand five hundred acres. Mr. Mallet's of Dunton, as much. Mr. Barton's of Rougham, three thousand. Messrs. Glover's of Creek and Barwic. Messrs. Savary's of Sydderstone, and Mr. Rogerfon's of Narford, each eleven hundred acres. Cultivation in all its branches is carried on by these men, and many others, in a very complete manner. But marling is the great foundation of their wealth.

They lay about an hundred loads on an acre, which cost them for digging from one pound five shillings to one pound ten shillings, and they reckon the expences of the team, and other labour, to be as much more. The improvement lasts in great vigour above twenty years, and the land is always the better for it. Their course of crope is--marle, and break up for wheat; 2. turnips; 3. barley; 4. laid down with clover and ryegrass for three years, or sometimes only two. They dung or fold for all their winter-corn, and reckon two nights fold equal to a dunging; the quantity of the latter they lay upon an acre, is twelve loads. For some years after the marling, they reap, on a medium, four quarters

quarters of wheat per acre, and five of barley; and fifteen or eighteen years after marling, three quarters of wheat, and four and a half of soft corn.

The general œconomy of their farms will appear from the following sketch of one of eleven hundred acres.

The farmer generally has

100	acres of winter-corn.	
250	- - -	barley and oats.
50	- - -	peafe.
200	- - -	turnips.
400	- - -	grasses.
100	- - -	sheep-walk.
<hr/>		
1100		

He keeps
 6 Servants.
 6 Labourers.
 30 Horses.
 20 Cows.
 900 Sheep.
 5 Ploughs.

And in harvest-time has in all about forty people in the field.

The culture of turnips is here carried on in a most extensive manner, Norfolk being more famous for this vegetable than any county in the kingdom; but we have seen much larger turnips grow in Suffolk, in gravelly loams, than ever we saw in Norfolk. The use to which they apply their vast fields of turnips, is the feeding their flocks, and expending the surplus in fattening Scotch cattle, which they do in several methods; by stall-feeding; in bins in their farm-yards; in pasture-fields: and lastly, hurdle them on the turnips as they grow, in the same manner as they do their sheep. By stall-feeding they make their crop go much the furthest; but the beasts so fed, are apt to founder on the road to London, the expences of it are great, and the soil loses the urine: but all these methods are yet in use. When the marle begins to wear out of the soil, many of the great farmers have latterly got into a method of manuring with oil-cakes for their winter-corn, which they import from Holland, and spread on their fields at the expence of about fifteen shillings per acre.

There is no great conjuration necessary to discover the reasons of such large fortunes being made in this country by farmers; for hiring unimproved lands at a small rent, and finding very fine marle every-where under them, they made thereby such a vast improvement, that nothing less than a perpetual drought could prevent large crops. Their soil is in general a very light sandy loam, which, in years which are more inclined to wet than dryness, throws out immense crops, the very wettest that can come are not too much for their lands. Every one will allow, that the chances of the seasons, in this moist climate, are infinitely more in their favour, than if their soil was of the heavy cast. Let us instance the farm above specified:

	<i>l. s. d.</i>
One hundred acres winter corn, at three quarters and a half per acre, three hundred and fifty quarters; and as a small part of it is rye, say the price is one pound ten shillings,	525 0 0
Two hundred and fifty acres barley and oats, by far the most of the former, at four quarters and a half per acre, eleven hundred and twenty-five quarters, at sixteen shillings,	900 0 0
Fifty peafe, four quarters per acre, two hundred quarters, at one pound four shillings per quarter,	240 0 0
The methods of laying the profit by a flock, are so various in different counties, that we believe the medium of what is generally known is nearest the truth; and that is ten shillings per sheep in lamb and wool, upon an average; that on nine hundred is	450 0 0
Twenty cows, at five pounds,	100 0 0
Hogs,	50 0 0
	<hr/>
	2265 0 0

This slight calculation takes in no beasts fattened with turnips, because these are uncertain, and a variable crop; and other branches of profit are purposely omitted, that no one might, on the whole, think it over-strained. As to his expences, a few of the principal articles will shew, that no one can run them up to any thing considerable.

	<i>l. s. d.</i>
Rent, tythe, and town-charges, at six shillings per acre,	330 0 0
Oats for his horses, as all soft corn is before charged; all the thirty are not in constant food; but run in the farm-yard; say therefore, one hundred and twenty quarters at twelve shillings,	72 0 0
Seed for four hundred acres of corn, including the grasses sown with two hundred, on a medium at nine shillings per acre,	180 0 0
Six servants,	120 0 0
Six labourers,	150 0 0
Wear and tear, say	70 0 0
Harvest, on a medium, four shillings an acre,	80 0 0
	<hr/>
	1002 0 0

	<i>l.</i>
Produce,	2265
Expences,	1002
	<hr/>
Profit,	1263

Here we find a regular income of near thirteen hundred pounds a year, on a medium of prices and seasons. What therefore has it been for these four or five wet years last past! We have no doubt but that thirteen hundred pounds has some years been carried to near three thousand pounds. But without advancing it so high, it is very plain, that a long lease of a good Norfolk farm is infinitely preferable to the fee simple of it; and that there is the greatest prospect of seeing this kingdom a land of yeomenry; a thing not to be dreaded, for better landed property, while it lasts, can never exist. The change, however, presently ensues. In addition to this remark, we might observe, that a Norfolk farmer, Mr. Mallet, above mentioned, has lately purchased estates in the parishes of Middleton, Testerton, and Hockham, to the amount of seventeen hundred pounds *per annum*. This remarkable person has made his fortune in less than thirty years, and on a farm consisting of not above fifteen hundred acres of land, which is by no means the largest in this county.

We may add, that Mr. Mallet, in January, &c. 1768, had two hundred and eighty steers fattening on turnips, and artificial grass hay; and this on a corn-farm!

PRICE OF LABOUR.

In winter, one shilling a day.
 In spring, one shilling and two-pence.
 In harvest, two pounds twelve shillings and six-pence, or three pounds for the harvest, besides meat, drink, and lodging. It lasts from a month to five weeks.
 Hoeing of turnips, three shillings the first time, and two shillings the second.
 Ploughing per acre, two shillings and six-pence.

In the road from Houghton to the sea-coast, by Hunston, &c. is much barren land, or rather reputedly barren; for a really barren soil we do not believe exists in any large quantities: the Norfolk improvers might turn these tracts of warren and sheep-walks into profitable farms. One of the greatest improvements in the country is Mr. Curtis's farm of Sommerfield, belonging to Mrs. Henley of Docking. It consists of two thousand five hundred acres of land, all gained from sheep-walks, and which now is regularly inclosed, and yields immense crops of corn. Inasmuch, that this farm has been mentioned as the best in Europe. The rent is said to be very small, and the produce exceeding great; the profit may therefore be easily conceived. The home stall is worth viewing. It is prettily planted, and very neat.

NATURAL PRODUCTIONS, and MANUFACTURES.

The natural productions of this county are corn, cattle, wool, rabbits, honey, saffron, herrings, and other sea-fish, in great abundance; and in the river Yare is caught a delicious fish, peculiar to itself, called the Ruffe. Jet and ambergris are sometimes found on the coasts of this county; and the principal manufactures are worsted, woollens, and silks, in which all the inland parts are employed; the Norwich stuffs being a very considerable article in our trade.

CITY, MARKET TOWNS, &c.

We began our tour through this county at Yarmouth, called Great Yarmouth, to distinguish it from a small village in its neighbourhood, called Little Yarmouth. It took its name from its situation at the mouth of the river Yare.

This town is distant from London one hundred and twenty-two miles, and was anciently one of the Cinque-ports. By an old custom, Yarmouth appoints certain bailiffs, as commissaries, who, in conjunction with the magistrates of the town, hold a court here, during a fair, called the Herring Fair, to determine all controversies, execute justice, and keep the peace. Yarmouth had a provost anted it by king Henry I. and was made a borough by king John. It began to send members to parliament in the time of king Edward I. and was walled and ditched round in the time of king Henry III. and in that of Edward III. it sent forty-three ships, and one thousand and seventy-five seamen, to the siege of Calais. King Richard II. gave it leave to build a key, after which it had great quarrels with the Cinque-ports, for being excluded out of their number, and consequently deprived of their privileges. By a charter of king Henry III. it was governed by two bailiffs and a recorder, who were justices of the peace. The inhabitants were about six thousand at the accession of king James I. who incorporated it by the name of a Bailiff, Aldermen, and Common-council. King Charles II. granted it a new charter, by which the bailiffs were changed into a mayor, and is now governed by a mayor, seven aldermen, a recorder, and thirty-six common-councilmen. The mayor returns the members elected to represent it in parliament, who are chose by the freemen, in number about five hundred.

The corporation has particular and extensive privileges. It has a court of record and admiralty. In the court of record are tried civil causes, for unlimited sums; in the court of admiralty, they can try, condemn, and execute in some cases, without waiting for a warrant. The mayor and aldermen are conservators of the river Ouse, in this county; the Humber, the Derwent, the Wherfe, the Air, and the Dun, rivers of Yorkshire.

This town is bound by its charter, granted by Hen. III. to send to the sheriffs of Norwich every year one hundred herrings baked, in twenty-four pasties, which the sheriffs are to deliver to the lord of the manor of East Carlton, a village near New Buckenham; he gives the sheriffs his receipt for them, and by his tenure is obliged to present them to the king, wherever he is.

This town, which makes a very good appearance from the sea, is the neatest, the most compact, and the most regularly built of any town in England; the streets being straight, and parallel to each other; and there is a view across all the streets, from the key to the sea, the town standing in a peninsula between the sea and the harbour. Yarmouth is walled, but the chief strength by land is the haven, or river, which lies on the west side of it, with a draw-bridge over it. The port or entrance secures the south, and the sea the east; but the north, which joins it to the main land, is open, and only covered with a single wall, and some old demolished works.

Here is a market-place, the finest and best furnished of any in England, for its extent; and the key is the largest and handsomest of any perhaps in Europe, that of Seville in Spain only excepted: it is so commodious, that people may step directly from the shore into any of

the ships, and walk from one to another, as over a bridge, sometimes for a quarter of a mile together; and is at the same time so spacious, that in some places it is near an hundred yards from the houses to the wharf. On the wharf is a custom-house and town-hall, with several merchants houses that look like palaces.

Here are two churches, of which St. Nicholas, built in the reign of king Henry I. has so high a steeple, that it serves as a sea-mark. There is a fine hospital in this town, and two charity-schools, for thirty-five boys and thirty-two girls, all clothed and taught; the boys to make nets, and the girls spinning, knitting, and plain-work.

There is a small platform of guns on a slip of land, at the entrance of the harbour, which is all the security of this town: the great guns that were round the walls of the town, having been removed by king Charles II.

The seamen employed by the merchants here, are reckoned the best in England.

The situation of this town is very commodious for trade. It stands upon the German Ocean, at the mouth of the river Yare, which is navigable from hence to Norwich; besides, there is a navigation from this town by the Waveney, to the south parts of Norfolk, and the north of Suffolk; and by another river, called the Thyne, which falls here into the Yare, it trades to the north part of the county.

Though Yarmouth is not so large a town as Norwich, it is generally thought superior in traffic and wealth; and upwards of half a century ago, above eleven hundred vessels belonged to this port, besides the ships which its merchants were owners of, or concerned in, at other ports.

This is the chief rendezvous of the colliers between Newcastle and London: the roads on the east side of the town are so safe, that they are very much frequented by vessels that pass and repass, though there are some dangerous banks of sand in the neighbourhood; and it costs the inhabitants of Yarmouth between two and three thousand pounds a year to keep the harbour clean.

This town carries on a great trade to France, Holland, and the North and East Seas; and exports such quantities of corn and malt, that they are said to have amounted, many years ago, to more than two hundred and twenty thousand quarters a year. Yarmouth has the whole herring-fishery of this coast, in which it employs one hundred and fifty vessels, and between forty and fifty sail in the exportation. Fifty thousand barrels of herrings, which some magnify to seventy thousand lasts, containing no less than forty millions of herrings, are generally taken and cured here in a year. These herrings are for the most part exported by the merchants of Yarmouth, the rest by those of London, to Italy, Spain, and Portugal; which, with the camblets, crapes, and other Norwich stuffs, which the merchants of this town export, occasion much business, and employ abundance of hands and shipping.

The fishing-fair here, or the season for catching herrings, begins at Michaelmas, and continues all the month of October; during which time, every vessel that comes to fish for the merchants from any part of England, as many do from the coasts of Kent, Sussex, and other counties, is allowed to catch, bring in, and sell their fish, free of all duty or toll.

In the spring, here is almost as great a fishing for mackarel: besides which, this town has a fishing-trade to the North-seas for white fish, called the North Sea Cod; and it has a considerable trade to Norway and the Baltic, for deals, oak, pitch, tar, and all naval stores, which are mostly consumed in this port, where a great many ships are built every year.

Except Hull, in Yorkshire, Yarmouth has more trade than any other town on the east coast of England.

This town is generally believed to have risen out of the ruins of an ancient Roman city, called Garianonum, where the Stableian horse lay in garrison against the ancient Britons; but the site of the ancient Garianonum is thought to have been at Burgh Castle, on the other side of the river Yare, about two miles from Yarmouth.

In the reign of king Henry III. a pestilence raged here, which swept off seven thousand of the inhabitants in one year.

On the north side of St. Nicholas church, at Yarmouth, bishop Herbert, before the year 1101, placed a priory of three or four black monks, subordinate to the monastery at Norwich.

At the south end of this town, there was a house of Black friars, built about the fifty-fifth year of Henry III.

Here was likewise an hospital, dedicated to the Virgin Mary, in the beginning of the reign of Edward I. It was founded by Thomas Falstaff, and consisted of a warden, eight brethren, and eight sisters.

There were also in this town two spittels or houses, for the maintenance of poor lazars, or lepers, before the year 1374.

This town sends two members to parliament, has a weekly market on Saturday, and an annual fair on the Friday and Saturday in Easter-week, for pedlars ware.

The manor and church of St. Marget of Tost-monachorum, eight miles south-west of Yarmouth, were given by Robert earl of Mellent and Leicester, in the time of king Henry I. to the abbey of St. Peter and St. Paul, at Preaux in Normandy.

There had been an ancient free chapel in the manor-house of Castor, near Yarmouth, dedicated to St. John the Baptist, as early as the reign of Edward I. and there is said to have been a chauntry in Castor-hall, of the foundation of Sir John Falstaff, Knt. which, upon the dissolution, was valued at two pounds thirteen shillings and seven-pence *per annum*.

According to the last will and testament of Hugh Attefenne, made in 1475, a college or hospital, called God's Poor Alms-house, was founded at Heringby, near Yarmouth, for a master, three priests, eight poor men, and two servants; which was valued, upon the dissolution, at twenty-three pounds six shillings and three-pence *per annum*.

Having surveyed every thing remarkable in Yarmouth, we pursued our journey, along the banks of the Yare, to Norwich, by the Saxons called Northwic, which, according to different interpretations of the termination *wic*, signifies a northern bay, a northern station, a harbour, or a northern castle or fort. It may be considered as a bay of the river Yare, and its situation is north, in relation to another very ancient castle or fortified town, about three miles distant, which is still called Castor, and from the ruins of which Norwich is generally believed to have risen.

This city is one hundred and eight miles distant from London. It was spoiled and burnt by Sueno king of Denmark, but soon recovered itself; so that in Edward the Confessor's time, it had thirteen hundred and twenty burgesses. It suffered very much by the insurrection of Ralph, earl of the East-Angles, against William the Conqueror, in whose time it was besieged, and reduced by famine; but that damage was abundantly repaired, upon its being erected into a bishop's see in 1096, as it continues to this day. In the reign of king Stephen, it was in a manner rebuilt, and made a corporation. King Henry IV. made this city a county of itself, and granted the inhabitants leave to chuse a mayor and two sheriffs, instead of bailiffs, by whom they had till then been governed, according to the charter of king Stephen. It is now governed by a mayor, recorder, steward, two sheriffs, twenty-four aldermen, and sixty common-councilmen, with a town-clerk, sword-bearer, and other inferior officers. The mayor is always nominated on May-day, by the freemen, who return two aldermen to their court, one of whom is elected and sworn into his office with great pomp, on the Tuesday before Midsummer-eve. The mayor, during his mayoralty, the recorder, and the steward for the time being, are each a justice of the peace, and of the quorum, within the city and its liberties; and the mayor, after his mayoralty, is justice of the peace during his life. The sheriffs are also annually elected, one by the aldermen, the other by the freemen, on the last Tuesday in August, and sworn on the twenty-ninth of September; and the common-councilmen are chosen in Mid-Lent.

Norwich stands upon the side of a hill, and is reckoned near two miles in length from north to south, one mile in breadth, and six in circumference. Though it is a populous city, yet the houses are but thinly scattered; and from the intermixture of gardens and trees, it has been compared to a city in an orchard. The town, upon the whole, is irregular; but the buildings, both public and private, are very neat and beautiful.

This city had a flint-stone wall, which was finished in 1309, and is now very much decayed; but has, however, twelve gates in it: it is three miles in compass, and had forty towers.

Here formerly were fifty-eight parochial churches and chapels; these are now reduced to thirty-six churches, besides the cathedral. This is a large, venerable, ancient structure, of excellent workmanship, founded in the year 1096 by bishop Herbert, who laid the first stone. The choir is spacious, and the steeple strong, and very high. The roof is adorned with historical passages of scripture, pressed in little lineages, well carved. The bishop's palace, with the prebends houses round the close of this cathedral, make a very good appearance. The church of St. Peter of Mancroft has an admirable ring of eight bells, and is reckoned one of the finest parish-churches in England. Some of the churches, however, are thatched, and all of them are crufted with flint stone, curiously cut, in the manner that the churches in Italy are crufted in marble. There are two churches for the Dutch and French Flemings, who have had particular privileges granted them, which are carefully preserved.

This city has a stately market-cross of free-stone, and a beautiful town-house near the market-cross; and on a hill near the cathedral, in the heart of the city, there is a castle, surrounded by a deep ditch, over which there is a strong bridge, with an arch of an extraordinary size. This castle is supposed to have been built in the time of the Saxons, and is now the common gaol for the county. On the hill near this castle stood the shire-house of the county, which having been burnt down by accident some years ago, an act of parliament passed in 1746-7 for holding the summer assizes, and general quarter-sessions in the city, till a new shire-house could be built, and for raising money for defraying the charges of such a building.

Here is an ancient palace belonging to the duke of Norfolk, which was formerly esteemed one of the largest houses in England.

Here is also a house of correction, or bridewell, which is a beautiful structure built of square flint-stones, so nicely joined, that no mortar can be seen. And there is a grammar-school, founded by king Edward VI. the scholars of which are to be nominated by the mayor for the time being, with the consent of the majority of the aldermen.

There are twelve charity-schools in this city, where two hundred and ten boys and one hundred and forty-four girls are taught, clothed, and supplied with books. Here are also four hospitals, one of which, St. Helen's, founded originally for the entertainment of strangers, was, by king Henry VIII. appropriated for the poor of the city, and maintains eighty poor men and women, who are all clothed in grey, and must be sixty years of age before they can be admitted. Another of the hospitals, called Doughty's, is for sixteen poor men and eight women, clothed in purple. Of the other two hospitals, one is for the teaching, maintenance, and apprenticing thirty boys; and another for making the same provision for thirty girls; each founded by a mayor of this city.

There is now but one parochial church in the suburbs of this city. The river Yare, which runs through the middle of it, is navigable to Norwich, without locks, though no less than thirty miles distant from its mouth.

Here are six bridges over the river; and on the banks of it two houses and gardens were opened some years ago, called Spring Gardens, for the entertainment of the public, in the manner of Vauxhall gardens near London.

The worsted manufacture, for which this city has been long famous, and in which even children earn their subsistence, was first brought hither by the Flemings,

in the reign of king Edward III. and afterwards very much improved by the Dutch, who fled from the duke of Alva's persecution; and being settled here by queen Elizabeth, taught the inhabitants to make great variety of worsted stuffs, as sayes, baize, serges, and shalloons, in which this town carries on a vast trade, as well foreign as domestic. Camblets, druggets, and crapes, are woven here in great perfection, besides other curious stuffs, of which it is said this city exports to the value of two hundred thousand pounds a year. Four wardens of the worsted weavers are chosen yearly out of the city, and four out of the neighbourhood, who are sworn to take care that there are no frauds committed in the manufacture.

Here is also a body of woollen manufacturers, called the Russia Company, who employ persons in all the counties round to spin yarn for them.

There is likewise a stocking manufacture here. It has been computed this city vends to the value of sixty thousand pounds a year.

The inhabitants of Norwich are generally so employed in their manufactures within doors, that this city looks as if it was deserted, except on Sundays and holidays, when the streets swarm with people.

The markets of this city are affirmed to be the greatest in England, being furnished with corn, live cattle, and prodigious quantities of all sorts of provisions, with abundance of yarn, worsted, leather, and whatever else a market can afford.

By an act of parliament passed in the year 1726, certain duties are laid on goods brought into this city, for the repair of its bridges, walls, gates, city, waftes, wharfs, and roads.

An hospital, dedicated to St. Paul, called also Norman Spittel, was begun in this city by the prior and convent, and finished in 1221. It was under the government of a master or warden, appointed by the monks of the cathedral.

Here was an ancient hospital or nunnery, dedicated to St. Mary and St. John, to which king Stephen having given lands and meadows without the south gate, Seyna and Lestelina, two of the sisters, in 1146, began the foundation of a new monastery, called Kairo, or Carow, which was dedicated to the Virgin Mary, and consisted of a prioress and nine Benedictine nuns, who were endowed, upon the suppression, with sixty-four pounds sixteen shillings and six-pence *per annum*.

On the west side of Conisford-street was Hilburn, or Hildebrond's Spittel, sometimes called Joy Hall, or St. Edward's Hospital, founded about the year 1200 by Hildebrond le Mercer, citizen of Norwich. It was dedicated to the Virgin Mary, and had a master or warden, and some brethren; but was so decayed, that the revenues of it, upon the suppression, were valued at no more than fourteen shillings and two-pence *per annum*.

The black friars came first to this city about the year 1226, and were first seated in the church of St. John the Baptist, by the favour of Sir Thomas Gelham, knight, and other benefactors; but about the first of Edward II. they obtained, by gift of that king, the ground on the south side of the river, in the parish of St. Andrew, where the Friars de Sacco had their house; and here these black friars built a noble church, and all proper offices for the convent.

The Grey Friars coming to this city in the year 1226, one John de Haltingford is said to have founded a house for them, which was upon the east side of North Conisford.

Walter de Saffield, alias Calthorp, bishop of Norwich before the year 1249, built and endowed an hospital near his palace, dedicated to St. Giles, for a master, some priests and lay-brethren; the revenues of which were computed, upon the dissolution, at one hundred and two pounds fifteen shillings and two-pence *per annum*.

The White Friars came to this city in 1256, when Philip Congate, a merchant here, founded a house for them, between the river and St. James's church, on the east side of a street anciently called Congate.

The Friars de Pica, who had a house in Conisford, are mentioned in the tax of Walter bishop of Norwich, about the fortieth year of Henry III.

The Friars de Sacco, who settled here about the year 1266, had a house, partly in St. Andrew's parish, and partly in St. Peter's of Hangate; which, upon the suppression of these friars, was given to the Black Friars, and became part of the site of their new house.

The Friars Austins were settled here, between the parishes of St. Peter Permonter-gate, and St. Michael in Conisford, before the eighteenth of Edward I. It is not agreed who the founder of this house was.

Norwich sends two citizens to parliament, has three weekly markets, on Wednesday, Friday, and Saturday; and three annual fairs, viz. the day before Good Friday, and the Saturday before, and the Saturday after Whitsunday; all for horses, sheep, lambs, and toys.

Herbert Lofing, bishop of Thetford, having obtained, near the castle of Norwich, ground on which to build a church, a bishop's palace, and offices for monks, in 1094, translated the episcopal see hither. Two years after, he began the cathedral in this city, which he dedicated to the Trinity; and on the south side of it he built houses for a prior and sixty Benedictine monks, who were settled here about the year 1100, and continued till the general dissolution, when the yearly revenues of the bishoprick were valued at one thousand and forty pounds seventeen shillings and six-pence; and the revenues of the prior and convent were rated at one thousand and sixty-one pounds fourteen shillings and three-pence *per annum*.

On a hill near the city, in Thorp-wood, bishop Herbert built a little priory and church, dedicated to St. Leonard, in which he placed several monks, whilst the cathedral church and priory were building; and a succession of others were continued here, as a cell to the great monastery, till the dissolution.

An hospital for leprous persons, under the government of a master or warden, was built and endowed about half a mile out of this city, towards the north-east, by bishop Herbert, dedicated to St. Mary Magdalen, and valued, at the dissolution, at ten pounds *per annum*.

In the fields, on the south-west part of this city, about the year 1250, a chapel was built and dedicated to the Virgin Mary, by one John Brown, a priest, which at first was designed only for an hospital, but in a short time became a noble college, consisting of a dean, chancellor, precentor, treasurer, four prebendaries, six chaplains, and other officers; whose revenues, upon the suppression, were valued only at eighty-six pounds sixteen shillings *per annum*.

About the end of the reign of king Edward III. mention is made of several hospitals, spittles, or lazar-houses, for the reception of leprous people, without the gates of this city, which were every one of them under the government of a master, and supported by the voluntary alms of the inhabitants.

At Horsham St. Faiths, north of Norwich, there was a priory of Black monks, dedicated to St. Faith, the Virgin and Martyr, by Robert Fitz-Walter, and Sibill, his wife, about the year 1105. Its revenues, upon the suppression, were valued at one hundred and sixty-two pounds nineteen shillings and eleven-pence *per annum*.

Here was an hospital, belonging formerly to the knights of St. John of Jerusalem, and by them granted to the prior and convent of St. Faith.

At Baketon, or Bromholm, south-west of Norwich, William de Glanvill, in 1113, built a priory for Cluniac monks from Castle-acre, to which this house was for some time subordinate. It was dedicated to St. Andrew, consisted of seven or eight monks, and was endowed, upon the dissolution, with one hundred pounds five shillings and eight-pence *per annum*.

At a place called Weybridge, in the parish of Accle, between Norwich and Yarmouth, there was a small priory of Austin canons, founded by some of the family of Bygod; but at what time, is uncertain. It was dedicated to the Virgin Mary, and the revenues of it rated, on the suppression, at seven pounds thirteen shillings and four-pence *per annum*.

In the year 1348, near fifty thousand persons died at Norwich by a pestilence; and in 1507, this city was almost entirely consumed by fire.

Castor, near Norwich, was the Vinta Icenorum, or capital city of Icenii, the broken walls of which contain a square of about thirty acres. In these walls there are still visible the remains of four gates and a tower; and several Roman urns, coins, and other relics of antiquity, have at different times been found in this place.

Warsted, or Worsted, the next town we visited, is one hundred and seventeen miles from London, and remarkable for the invention, or first twining of that sort of woollen yarn or thread, which from hence is called Worsted. Here is a manufacture of worsted stuffs, and stockings are in great quantities both knit and woven in this place.

The manor of Horsted, a village south-west of Warsted, and the advowson of a church here, were given by king William Rufus to the abbess and nuns of the Trinity, at Caen in Normandy.

In a meadow near Buxton, not far from Warsted, the lady Margery de Cressy, about the end of the reign of king John, built a small monastery for a prior and abbot, and four Austin canons, dedicated to the Virgin Mary, and valued, upon the dissolution, at forty-three pounds two shillings and four-pence *per annum*.

The manor of Chessel, north-east of Snetcham, belonged to the brethren of St. Lazarus, who had a master preceptor of that order here. It was afterwards annexed to Burton Lazars, in Leicestershire.

At Horning, south-east of Warsted, in the beginning of the reign of king Henry III. there was an hospital, dedicated to St. James, under the government of the almoner of St. Bennet's abbey, in the neighbourhood.

The manor of Lefingham, north-east of Warsted, was given by Gerard de Gourney, in the time of William Rufus, to the abbey of Bec in Normandy; upon which here was an alien priory, which was subordinate to Ogborn, on the north side of Marlborough, in Wiltshire; but it was given by king Edward IV. to King's College in Cambridge, to which it still belongs.

Hickling, the next place we visited, is a small town, one hundred and nineteen miles from London, and contains very little worthy of notice.

Here was formerly a priory of Black canons, dedicated to the Virgin Mary, St. Austin, and All Saints, and founded in the year 1135, by Theobald de Valentia. Here were nine or ten religious, endowed, upon the suppression, with one hundred pounds eighteen shillings and seven-pence *per annum*.

This town has a weekly market on Saturday, but no annual fair.

A college, or priory, of the order of the Trinity, for the redemption of captives, was founded by Sir Miles Stapleton, about the year 1360, in the parish-church of Ingham, near Hickling, which he rebuilt, and procured to be made collegiate. This religious society consisted of a prior, sacrist, and six canons, who were endowed at the suppression with sixty-one pounds nine shillings and seven-pence *per annum*.

At West Sumerton, between Hickling and Yarmouth, there was an hospital for thirteen leprous persons, founded by Ranalps de Glanvill, and Barta his wife, in the time of king Henry II. and annexed to their monastery at Batley, near Orford, a borough town of Suffolk, in the first year of Henry IV.

Alesham, one hundred and nineteen miles from London, is a populous, but poor town, inhabited chiefly by knitters of stockings. Here is a court kept for the duchy of Lancaster, the manor having been granted to John of Gaunt, duke of Lancaster, by king Edward III.

Alesham has a weekly market on Saturday, and two annual fairs, viz. the twenty-third of March, and the last Tuesday in September, for horses, lean cattle, and toys.

At Oxenhead, a little way south-east of Alesham, in 1667, there were discovered several urns, about three quarters of a yard under the surface of the ground; also a square piece of brick-work, each side of which measured near two yards and three quarters: there were upwards of thirty holes in it, each about two inches in diameter; and as it was one entire piece, without any joining, it was thought to have been formed, and burnt

in the place where it was found. Upon breaking it open, there appeared several stories or apartments, one above another, in which were placed small pots; and in the lower partition was one larger than the rest, with a very small mouth, and containing near two gallons of water, which was clear, and without either smell or taste. After the water was poured off, there remained in the vessel a heavy lump, of a crusty substance.

North Walsingham, so called to distinguish it from a village not far from this town, called South Walsingham, is one hundred and twenty-one miles distant from London, and has a plentiful market for corn, flesh, and all sorts of provisions, on Thursday; and a free-school, but nothing else remarkable.

Cromer, which we next visited, is a sea-port town, one hundred and twenty-seven miles from London. It has a pretty good harbour, and was formerly a much larger town than it is at present, having had two parish-churches, one of which, with many houses, was swallowed up by an inundation of the sea. It is, however, still a pretty large town, chiefly inhabited by fishermen, especially for lobsters, which are caught here in great quantities, and carried to Norwich, and sometimes to London.

Here is a weekly market on Saturday, and an annual fair on Whitfun-Monday, for toys.

The church of Sheringham, near Cromer, being given by Walter Giffard, earl of Buckingham, in the time of king Henry II. to the abbey of Nuthall, in Buckinghamshire, here was a cell of Black canons for some time belonging to that abbey.

At Gimingham, not far from Cromer, is still preserved the ancient tenure by foccage; that is, instead of money, the tenant pays his rent by a certain number of days labour, in husbandry, or other service.

Holt is a small, obscure town, one hundred and sixteen miles distant from London, in which there is nothing that deserves notice, except a weekly market on Saturday, and two annual fairs, viz. the twenty-fifth of April, for horses, black cattle, sheep, and toys.

Maud de Harcolye, in the time of king Henry II. gave the manor of Fieldawling, near Holt, to the abbot and convent of Savigny, in Normandy; upon which there came over hither some Cistercian monks of that house, to which this was a cell or priory, as it was afterwards of Long Benington, in Lincolnshire.

At Blakeney, north-west of Holt, about the twenty-fourth year of Edward I. Richard and John Stormier, and Thomas Thober, built and endowed a church and habitation for friars of the Carmelite order.

Walsingham, the next place we visited, is one hundred and sixteen miles from London, and is a pretty good town, famous for the ruins of an ancient monastery, where was a shrine of the Virgin Mary, as much frequented at one time as was that of Thomas Becket at Canterbury; and here are two wells still called by her name. The soil round this town is remarkable for producing good saffron and southernwood.

A famous chapel, dedicated to the Annunciation of the Virgin Mary, was built here in the year 1061, by the widow of Richaldis de Favarches, in imitation of the chapel at Nazareth; and here were placed a prior and a convent of Black canons, by her son, Jeffrey, in the time of William the Conqueror. The possessions belonging to this convent were valued, upon the dissolution, at three hundred and ninety-one pounds eleven shillings and seven-pence *per annum*, besides the offerings to our Lady, valued, in one manuscript, at two hundred and sixty pounds twelve shillings and four-pence *per annum*, but in another, at twenty-six pounds fifteen shillings only.

Great Walsingham has a weekly market on Friday, and an annual fair on Whitfun-Monday, for horses and pedlars wares.

Peter de Valoies, nephew to king William the Conqueror, and Albreda his wife, in the beginning of the reign of king Henry I. gave the church of St. Mary, and the manor of Binham, near Walsingham, to the abbey of St. Albans, in Hertfordshire, to the intent that here might be settled a priory of Benedictine monks.

This

This cell, about the time of the dissolution, had six monks, and estates to the value of one hundred and forty pounds five shillings and four-pence *per annum*.

In the church of St. Mary, at East Rudham, between Walsingham and Castlerising, William Cheney founded a priory of regular canons, of the order of St. Austin, early in the reign of king Stephen, who were, about the beginning of the reign of king Henry III. removed to the extremity of the parish, eastward to a place called Cokesford, dedicated to the Virgin Mary; and here a prior, and about nine Black canons, continued till the time of the dissolution, when their income was valued at one hundred and twenty-one pounds eighteen shillings and ten-pence *per annum*.

At Little, or Old Walsingham, north of Great or New Walsingham, there was an house of Franciscan friars, founded about the year 1346, by Elizabeth de Burgo, countess of Clare, and the foundress of Clarehall in Cambridge. It had houses and gardens valued, upon the dissolution, at three pounds *per annum*.

Not far from Walsingham is Rainham, the seat of lord Townshend. The situation, the park, and the water, are very agreeable; but the building itself rather resembles a good habitable house, than a magnificent structure. Here is the famous picture of Belisarius by Salvator Rosa, the expression of which is amazing. The whole country round this seat is rich, and finely cultivated.

From Walsingham we proceeded to Welles, or Wells, a sea-port town, which had once a market, and still carries on a very considerable trade to Holland, especially in corn, with which this part of the county abounds. The shore, in the neighbourhood of this town, is so flat, that the tide ebbs out near two miles.

Two miles west of Wells is Holkam, or Holkham, the celebrated house of the countess of Leicester, built by the late earl, and which cannot be viewed with too much attention. We were informed, that it appeared by much the most magnificent when entered by the southern approach, and therefore went a small round for that advantage, nor did we in the least repent it. The first objects are a few small clumps of trees, which just catch your attention, and give you warning of an approach: they sketch out the way to the triumphal arch, under which the road runs. This structure is in a beautiful taste, and finished in an elegant manner; it is extremely light, and the white flint rustics have a fine effect. A narrow plantation on each side a broad vista, leads from hence to the obelisk, at the distance of a mile and an half. This plantation ought to be much broader, for you see the light through many parts of it; but it is only a sketch of what the late earl designed, and not meant as complete. At the bottom of the hill, on which the obelisk stands, are the two porters lodges, small, but very neat structures. Rising with the hill, you approach the obelisk, through a very fine plantation; and nothing can be attended with a better effect than the vistas opening at once. There are eight. 1. To the south front of the house. 2. To Holkam church, on the top of a steep hill, covered with wood; a most beautiful object. 3. To the town of Wells, a parcel of scattered houses appearing in the wood. 4. To the triumphal arch. The rest to distant plantations. Vistas are by no means the taste of the present age, but such a genius as lord Leicester might be allowed to deviate from fashion in favour of beauty and propriety. Nothing can be more regular than the front of a great house, the approach to it ought therefore to partake of this regularity; because straight cuts are out of fashion, it would be an absurdity to take a winding course to the house-door, for the sake of catching objects afloat and irregularly: such management is to the full in as false a taste, as regular cuts where the house is out of the question. For instance, those from the temple at Holkam, which, however, command exceedingly beautiful objects; amongst others, Wells church. The lake in the park, which is seen from hence through some spreading trees in a most picturesque manner. A planted hill; the sea; and the rest distant plantations.

The house may be said to consist of five quadrangles,

the centre, and the four wings; not that they are squares, but we use the term to give a general idea. Each of the two fronts thereof present a centre and two wings. That to the south, and the grand approach, is as beautiful, light, airy, and elegant a building, as can be viewed. The portico is in a fine taste, and the Corinthian pillars beautifully proportioned. This central front, in every respect that can be named, appears all lightness, elegance, and proportion: but when you advance near, you find no entrance to the house; there are no stairs up to the portico; and this circumstance, after so fine an approach, and so long seeing the portico, and expecting it to be the entrance, becomes a disappointment, and is a fault in the building.

We have spoken hitherto of the central front alone. The whole, including the two wings, we cannot think so perfect, for there appears a great want of unity. The several parts are not so nicely connected as to form one whole. The centre must be seen distinct, each wing the same, and likewise the small parts which join the centre to the wings. These are all distinct parts, though joined together; nor is there any similitude of taste between the centre and the wings. All the pieces of this front are light and elegant to a great degree; but when considered as the connected parts of one whole, the want of unity is striking. The centre is uniform, and, if we may be allowed the expression, elegantly magnificent: no building can deserve these epithets more than this: but they cannot be applied to the whole front, because the parts are not of a uniform taste, and the wings are at best but light and elegant; they have nothing magnificent in them: as to the joining pieces, they are pretty. The north front consists of one row of Venetian windows, over another of common sashes in the rustics. This front is not so pleasing as the south one, but it is by far more of a piece with the wings, &c.

You enter what they call the great hall, but what is in reality a passage. It is called a cube of forty-eight feet; but eighteen very large and magnificent Corinthian pillars, having their pedestals rested on a marble passage around it, and eight or ten feet high from the ground, the area at bottom is but an oblong passage, walled in with Derbyshire marble, and upon that wall are the pillars, six in a line on each side, and six in front in a semicircle around a flight of steps up to the saloon door. The passage or gallery, as it may be called, runs around these pillars, and both together take up so much room, that all sort of proportion is lost: to look from it into the area, it appears exactly like a bath. The south front was one proof, and this hall is another, that the architect's genius was not of the magnificent or sublime stamp, for in both he aimed at greatness. The impression of the front is varied, and consequently weakened by the wings; and the want of proportion in the hall ruins the vast effect which would otherwise attend the magnificence of such pillars so nobly arranged; but in the elegant, the pleasing, the agreeable, his taste has never failed throughout the whole building. The hall is entirely of Derbyshire marble.

The saloon is forty-two feet by twenty-seven, a proportion much condemned, but it is by no means displeasing. Some call it a gallery, and perhaps a gallery is infinitely preferable to a cube, or to any proportion near a square enormously high. One of the finest rooms in England is the double cube at Wilton, which is more of a gallery than the saloon at Holkam, and yet no one ever entered it without being struck with the justness of the proportions. This saloon is hung with crimson caffoy; the pier-glasses small, on account of the narrowness of the piers, each against a pillar of the portico, but in a very elegant taste. The rooms to the left of the saloon are, first, a drawing-room thirty-three by twenty-two, hung with crimson caffoy. The pier-glasses very large, and exceedingly elegant; the agate tables beautiful beyond description. From thence we entered the landscape-room, which is a dressing-room to the state bed-chamber; it is twenty-four by twenty-two, hung with crimson damask. A passage-room leads to the anti-room to the chapel, and then into the state-gallery. The walls are of Derbyshire marble; the altar,

and all the decorations, in a very fine taste. Returning to the landscape-room, you pass into the state bed-chamber, thirty by twenty-four, which is fitted up in a most elegant taste. It is hung with French tapestry, except between the piers, which is by Mr. Saunders of Soho-square; the colours of the whole exceedingly brilliant. The bed is a cut velvet, upon a white fawn ground, and as it appears in common, is a very handsome gilt fettee, under a canopy of state: the design of this bed is equal to any thing in England. The chimney-piece remarkably beautiful; pelicans in white marble. The next apartment is lady Leicester's, consisting of a bed-chamber, dressing-room, closet with books, and a smaller one. The bed-chamber twenty-four by twenty-two, purple damask, French chairs of Chiffel-street velvet tapestry; the chimney-piece a basso relievo of white marble, finely polished. The dressing-room twenty-eight by twenty-four, hung with blue damask. So much for the suite of rooms to the left of the hall and saloon.

On the other side you enter from the latter, another drawing-room thirty-three by twenty-two, hung with a crimson-flowered velvet. The glasses, tables, and chimney-pieces, are well worth attention. From this room you enter the statue-gallery, which is, without exception, the most beautiful room we ever beheld: the dimensions are to the eye proportion itself—nothing offends the most criticising. It consists of a middle part seventy feet by twenty-two, and at each end an octagon of twenty-two, open to the centre by an arch; in one are compartments with books, and in the other, statues: those in the principal part of the gallery stand in niches in the wall, along one side of the room, on each side the chimney-piece. Among these, the Diana is extremely fine, and the arms inimitably turned. The Venus in wet drapery is likewise exquisite; nothing can exceed the manner in which the form of the limbs is seen through the clothing. The slabs are very fine; the ceiling, the only plain one in the house, the rest being all gilt fret-work and mosaic.

The entrance we have already mentioned from the drawing-room, is into one octagon, and out of the other opens the door into the dining-room, a cube of twenty-eight feet, with a large recess for the side-board, and two chimney-pieces exceedingly elegant; one a sow and pigs, and wolf; the other a bear and bee-hives, finely done in white marble; the nose of the sow was broke off by a too common misapplication of sense, feeling instead of seeing. Returning into the statue-gallery, one octagon leads into the strangers wing, and the other to the late earl's apartment, consisting of, 1. The anti-room. 2. His lordship's dressing-room. 3. The library, fifty by twenty-one, and exceedingly elegant. 4. Her ladyship's dressing-room. 5. The bed-chamber. 6. A closet with books. The rooms are about twenty-two by twenty. The strangers wing consists of an anti-chamber, dressing-room, bed-chamber, closet with books, bed-chamber, dressing-room, bed-chamber, dressing-room. The fitting up of the whole house, in all particulars not mentioned, is in the most elegant taste, the Venetian windows beautiful, ornamented with magnificent pillars, and a profusion of gilding.

But now we come to what, of all other circumstances, is in Holkam infinitely the most striking, and what renders it so particularly superior to all the great houses in the kingdom, convenience. In the first place, with respect to the state-apartments. From the hall to the saloon, on each side a drawing-room: through one of them to the state dressing-room and bed-chamber; this is perfectly complete. Through the other drawing-room to the statue-gallery, which may be called the rendezvous room, and connects a number of apartments together, in an admirable manner; for one octagon opens into the private wing, and the other into the strangers on one side, and into the dining-room on the other. This dining-room is on one side of the hall, on the other is lady Leicester's dressing-room, and through that her bed-chamber and closets. From the recess in the dining-room opens a little door on to a stair-case, which leads immediately to the offices; and we should add, that in

the centre of the wings, by the centre of the house, by the saloon door, and behind lady Leicester's closet, are stair-cases quite unseen, which communicate with all the rooms, and lead down into the offices: we say, down; for the hall is the only room seen on the ground-floor: you step directly from a coach into it, without any quarry of winding steps to wet a lady to the skin before she gets under cover. From the hall you rise to the saloon, or first floor, and there is no attack. Thus there are four general apartments, which are all distinct from each, with no reciprocal thoroughfares; the state; her ladyship's; the late earl's; and the stranger's wing. These severally open into what may be called common rooms, the hall, statue-gallery, and saloon, and all immediately communicate with the dining-room. There may be houses larger, and more magnificent, but human genius can never contrive any thing more convenient.

In this structure are the following paintings:

- Joseph and Potiphar's wife; a good piece. By Cignani
 Virgin and child. P. Pietris
 Two large landscapes. Pouffin
 A smaller one. Ditto
 Three others in the landscape-room; fine. Ditto
 Two others. Ditto
 Duke of Aremberg; a very fine piece. Vandyke
 Coriolanus: the figure of the old man kneeling before Coriolanus, and hiding his face with his hands, is extremely fine; but the figure of Coriolanus himself, without dignity, haughtiness, or any great expression. The wife leading her two children, and smiling on them, forms a figure of no expression: the colouring, however, and the back ground, are good; the disposition indifferent. P. Cortona
 Jacob and Esau, dark and disagreeable. Ditto
 Continence of Scipio. The profile of the Spanish lady wonderfully graceful and fine. Scipio's, a very bad figure, his countenance without expression; but the disposition of the group very well imagined. Giuseppi Chierera
 Perseus and Andromeda: Andromeda's figure a very good one, and the whole piece well coloured. Ditto.
 Death of Lucretia; the lights and shades very bad. Procochiano
 Quintus Cincinnatus. Ditto
 Joseph and Potiphar's wife: none of this famous painter's bright and glowing manner; the colouring hard and disagreeable. Guido
 A saint's head. Ditto
 Cupid. Ditto
 Assumption; vile. Ditto
 Flight into Egypt: a good picture; but the figures disagreeable, especially Mary's, who is a female mountain. The drawing appears to be bad. Rubens
 Birds. Ditto
 Venus; the colouring gone off, hard and disagreeable. Titian
 Venetian lady; colours gone. Ditto
 Woman's head; ditto. Ditto
 Lot and his daughters; dark and disagreeable. Dominichino
 Abraham and Isaac (in the landscape-room) rather in a dark stile. Ditto
 A landscape; not in his bright manner. Carlo Maratt.
 Judith and Holofernes; dark. Ditto
 Madona, reading. Ditto
 Apollo and Daphne. Ditto
 Magdalen and angel. Ditto
 Two views of a storm; both exceeding fine. Vernet
 A rock; very fine. Salvator Rosa
 A rock. F. Bolonese
 St. John Baptist. Ditto
 Two landscapes. Onionte
 St. John preaching. L. Giordano
 Landscapes; river and bridge. Claud Loraine
 Pegasus. Ditto
 Argus. Ditto
 Apollo keeping sheep. Ditto
 Three others. Ditto
 Repose in Egypt. Ditto

In these landscapes, Claud's elegant genius shines with uncommon lustre.

Two landscapes. Lucatelli

Jupiter and Juno; colouring bad; her neck and face the best. Hamilton

Polypheme and Galatea; the drawing strong and fine. An. Carrach.

Two altar-pieces; indifferent colouring. Conca Holy family. Albano

Two pieces of boys and flowers. P. Laura

Madona and child; drawing and colouring very fine. Raphael

Holy family: but *quere* of both to the connoisseurs in originality. Ditto

Woman in a cave; more pleasing than any piece in this collection: the face very expressive, extremely delicate, finely turned, and the drapery exquisite, displaying the roundness of the limbs through it in the happiest taste. Parmegiano

Mary Magdalen, washing our Saviour's feet. P. Veronese

Christ carrying the cross. Bassan

Youth and Old Age, two pieces; the old man very fine. Lanfranco

Angel appearing to Joseph in a dream; dark stile. Ditto

Abraham, Ishmael, &c. And. Sacchi

St. Anne, and St. Cecilia: the colouring very fine; the attitudes admirable, and the drapery graceful. Cypriani.

The object most striking on the north side of the park, is the lake, which is of great extent, and extremely beautiful. The shore is a very bold one, all covered with wood to a great height, and on the top stands the church. The plantations in general are sketched with more taste than any to be seen: in the number of acres, many exceed them; but they appear to various points of view infinitely more considerable than they really are. At the north entrance into the park, they show prodigiously grand; you look full upon the house with a very noble back ground of wood; the obelisk just above the centre; with an extent of plantation on each side that renders the view really magnificent. Nothing can be more beautiful than that from the church; the house appears in the midst of an amphitheatre of wood, the plantations rising one above another. Another point of view is the vale on the east side of the park. The north plantation stretches away to the right, with vast magnificence, the south woods to the left, and joining in the front, form an extent of plantation that has a noble effect.

Burnham-Market is thus called on account of its being a market-town, and to distinguish it from seven villages in its neighbourhood, all known by the name of Burnham, and distinguished from each other by the name of the ancient lord of the manor. This town stands in the north-west part of the county, on the sea-side, at the distance of ninety miles from London: it has a fine harbour, and, together with the other villages of the same name, drives a great trade in corn to Holland.

Here is a weekly market on Saturday, and two annual fairs, viz. the fifteenth of March, for cheese and toys; and the first of August, for horses, black cattle, sheep, and toys.

Brancafter, in the north-west part of this county, and near Burnham, was the ancient Brannodunum of the Romans, and the station of a body of Dalmatian horse. Several coins have been found here, and the remains of a Roman camp are still visible.

At a place formerly called Peterston, in the parish of Burnham, there was a house of canons, of the order of St. Austin, before the year 1200: it was dedicated to St. Peter, and subordinate to the monastery of Walsingham, to which it was wholly annexed in 1449.

In a field near North Creke, not far from Burnham, in 1206, a church was built, dedicated to the Virgin Mary, by Sir Robert de Nerford, governor of Dover-castle, in Kent, who some time after founded here also a chapel, dedicated to St. Bartholomew, with an hospital

for a master, four chaplains, and thirteen poor lay-brethren; which being farther endowed by his widow, it was changed into a priory of regular canons, of the order of St. Austin. About the year 1226, king Henry III. in the fifteenth year of his reign, made it an abbey; but it was dissolved about the twenty-second year of king Henry VII. and its land and revenues settled by that prince's mother upon Christ's College in Cambridge.

At some place near Burnham, in 1241, there was a house of White, or Carmelite friars, founded by Sir Ralph de Hemenhale, and Sir William de Calthorp, knights, valued, upon the dissolution, at two pounds five shillings and four-pence *per annum*.

From Burnham we continued our journey towards Sneltham, and in our way visited Houghton Hall, the seat of the earl of Orford; the gardens and plantations of which are very large and beautiful. Many of the trees were planted by the late Sir Robert Walpole himself.

The whole extent of the building, including the colonnade and wings, which contain the offices, is four hundred and fifty feet; the main body of the house extends one hundred and sixty-six feet. The whole building is of stone, and crowned with an entablature of the Ionic order, on which is a balustrade. At each corner of the house is a cupola surmounted with a lantern.

This stately structure was begun in the year 1722, and finished in 1735; during which interval, the founder continued first minister of state.

The common approach to the house is by the south-end door, over which is engraved this inscription:

Robertus Walpole
Has Ædes
Anno S.—1722.
Inchoavit
Anno—1735.
Perfecit.

On the right hand you enter a small breakfast-room. Over the chimney is a very good picture of hounds, by Wootton.

A concert of birds, by Mario di Fiori; a very uncommon picture, for he seldom painted any thing but flowers: it belonged to Gibbins the carver, and is four feet seven inches high, by seven feet nine and a quarter wide.

The Prodigal Son returning to his father; a very dark picture, by Pordenone, the architecture and landscape very good: it is five feet five inches high, by eight feet eleven and a half wide. This picture belonged to George Villiers, the great duke of Buckingham.

A horse's head, a fine sketch, by Vandyke.

A greyhound's head, by Old Wyck, who was Wootton's master.

Sir Edward Walpole, grandfather to Sir Robert Walpole. Robert Walpole, son to Sir Edward, and father to Sir Robert Walpole.

Horatio lord Townshend, father to Charles lord viscount Townshend.

Mr. Harold, gardener to Sir Robert Walpole, a head, by Ellis.

The Supping Parlour.

The battle of Constantine and Maxentius, a copy, by Julio Romano, of the famous picture in the Vatican, which he executed after a design of Raphael. It is four feet eight inches and a half high, by nine feet seven and a quarter wide.

Over the chimney, Horace Walpole, brother to Sir Robert Walpole; three quarters length, by Richardson.

Sir Robert Walpole, when secretary at war to queen Anne; three quarters, by Jervase.

Catherine lady Walpole, his first wife, ditto.

Sir Charles Turner, one of the lords of the treasury; three quarters, by Richardson.

Charles lord viscount Townshend, secretary of state to king George I. and II. three quarters, by Sir Godfrey Kneller.

Dorothy, his second wife, and second sister to Sir Robert Walpole; three quarters, by Jervase.

Anne Walpole, aunt to Sir Robert Walpole, (a head.)

Dorothy Walpole, ditto.

Mary Walpole, ditto.

Elizabeth Walpole, ditto.

The Hunting Hall.

Sufannah and the two elders, by Rubens; five feet eleven inches and a half high, by seven feet eight inches and a quarter wide.

A hunting-piece: Sir Robert Walpole is in green; Col. C. Churchill in the middle; Mr. T. Turner on one side, by Wootton.

The Coffee Room.

Over the chimney, a landscape with figures dancing, by Swanivelt; two feet three inches high, by three feet three wide.

Jupiter and Europa, after Guido, by Pietro da Pietris; four feet ten inches high, by six feet two wide.

Galatea, by Zimeni; four feet ten inches high, by six feet two wide.

Horatio Walpole, uncle to Sir Robert Walpole, three quarters.

Galfridus Walpole, younger brother to Sir Robert.

Returning through the arcade, you ascend the great stair-case, which is painted in chiaro oscuro, by Kent. In the middle, four Doric pillars rise and support a fine cast in bronze of the gladiator, by John of Boulogne, which was a present to Sir Robert from Thomas earl of Pembroke.

The Common Parlour.

This room is thirty feet long by twenty-one broad. Over the chimney is some fine pear-tree carving, by Gibbins; and in the middle of it hangs a portrait of him by Sir Godfrey Kneller: it is a master-piece, and equal to any of Vandyke: three quarters.

King William, an exceeding fine sketch, by Sir Godfrey—for the large equestrian picture which he afterwards executed very ill at Hampton Court, and with several alterations, four feet three inches high, by three feet six wide.

King George I. a companion to the former, but finished: the figure is by Sir Godfrey, which he took from the king at Guilford horse-race: the horse is new painted, by Wootton.

A stud of horses, by Wouvermans; two feet one inch and three quarters high, by two feet nine.

Venus bathing, and Cupids with a carr, in a landscape, by Andrea Sacchi, one foot ten inches and a half high, by two feet six inches wide: it was lord Hallifax's.

A holy family, by Raphael da Reggio, a scholar of Zuccherò; two feet two inches and three quarters high, by one foot one quarter wide.

A fine picture of architecture in perspective, by Steenwyck, one foot nine inches high, by two feet eight wide.

Cook's shop, by Teniers: it is in his very best manner: there are several figures, in particular his own, in a hawking habit, with spaniels; and in the middle an old blind fisherman, finely painted; five feet six inches and three quarters high, by seven feet seven and three quarters wide.

Another cook's shop, by Martin de Vos, who was Snyders's master, and in this picture has excelled any thing done by his scholar: it is as large as nature: there is a greyhound snarling at a cat, in a most masterly manner, five feet eight inches high, by seven feet ten and a half wide.

A Bacchanalian, by Rubens: it is not a very pleasant picture, but the flesh of the Silenus, and the female satyrs, are highly coloured; two feet seven inches and a half high, by three feet six wide.

The Nativity, by Carlo Cignani: the thought of this picture is borrowed (as it has often been by other painters) from the famous *Notte* of Correggio at Modena, where all the light of the picture flows from the child; three feet seven and a half high, by two feet ten and a half wide.

Sir Thomas Chaloner, an admirable portrait, three quarters, by Vandyke.

Sir Thomas Gresham, the founder of Gresham-college, by Antonio More; two feet six inches and a quarter high, by two feet and a half wide.

Erasmus, by Holbein, a half length smaller than life.

A Friar's head, by Rubens.

Francis Halls, Sir Godfrey Kneller's master: a head by himself.

The School of Athens, a copy of Raphael's fine picture in the Vatican; three feet two inches high, by four feet two and three quarters wide.

Joseph Carreras, a Spanish poet, writing; an half length, by Sir Godfrey Kneller.

Rembrandt's wife, half length, by Rembrandt.

Rubens's wife, a head, by Rubens.

A man's head, by Salvator Rosa.

Mr. Locke, a head, by Sir Godfrey Kneller.

Inigo Jones, a head, by Vandyke.

Over the door, a daughter of Sir Henry Lee, three quarters, by Sir Peter Lely.

Over another door, Mrs. Jenny Deering, mistress to the marquis of Wharton: these two came out of the Wharton collection.

Over the two other doors, two pieces of ruins, by Viviano.

The Library.

This room is twenty-one feet and an half, by twenty-two feet and a half. Over the chimney is a whole length, by Sir Godfrey Kneller, of king George I. in his coronation robes, the only picture for which he ever sat in England.

The Little Bed-Chamber.

This room is all wainscotted with mahogany; and the bed, which is of painted taffaty, stands in an alcove of the same wood.

Over the chimney is a half length, by Dahl, of Catharine Shorter, first wife of Sir Robert Walpole. This is an extreme good portrait.

On the other side, a portrait of Maria Skerret, second wife to Sir Robert Walpole, three quarters, by Vanloo.

The Little Dressing-Room.

A landscape, by Wootton, in the stile of Claude Lorrain, over the chimney.

The Blue Damask Bed-Chamber

Is of the same dimensions with the Library, and is hung with tapestry. Over the chimney, Sir Robert Walpole, afterwards earl of Orford, prime minister to king George I. and George II. a whole length in the garter robes, by Vanloo.

The Drawing-Room

Is thirty feet by twenty-one, and hung with yellow caffoy. The ceiling is exactly taken, except with the alteration of the paternal coat for the star and garter, from one that was in the dining-room of the old house, built by Sir Edward Walpole, grandfather to Sir Robert.

Over the chimney is a genteel bust of a Madona in marble, by Camillo Rusconi.

Above, is carving by Gibbins, gilt, and within it a fine picture, by Vandyke, of two daughters of lord Wharton, out of whose collection these came; with all the other Vandykes in this room, and some others at lord Walpole's at the Exchequer: five feet four inches high, by four feet three wide.

The Judgment of Paris, by Luca Jordano. There is an odd diffusion of light all over this picture: the Pallas is a remarkable fine figure, eight feet high, by ten feet eight and a quarter wide.

A sleeping Bacchus, with nymphs, boys, and animals, its companion.

King Charles I. a whole length, in armour, by Vandyke. By a mistake, both the gauntlets are drawn for the right hand.

Henrietta Maria of France, his queen, by ditto.

Archbishop

Archbishop Laud, the original portrait of him, three quarters, by ditto.

Philip lord Wharton, three quarters, by ditto.

Lord chief baron Wandsford, head of the Castlecomer family; three quarters, sitting, by Vandyke.

Lady Wharton, three quarters, by ditto.

Jane, daughter of lord Wenman, ditto. The hands, in which Vandyke excelled, are remarkably fine in this picture.

Robert lord Walpole, eldest son to Sir Robert Walpole by Catharine his first wife; a head in crayons, by Rosalba.

Edward Walpole, second son to Sir Robert Walpole, ditto.

Horace Walpole, third son to Sir Robert, ditto.

Mary lady viscountess Malpas, second daughter to Sir Robert Walpole, by his first wife: a profile sketch, by Jervase.

Lady Maria Walpole, only child to Sir Robert Walpole, earl of Orford, by Maria his second wife, married to C. Churchill, Esq; in crayons, by Pond.

The Saloon

Is forty feet long, forty high, and thirty wide; the hanging is crimson flowered velvet; the ceiling painted in Kent, who designed all the ornaments throughout the house. The chimney-piece is of black and gold marble, of which too are the tables. In the broken pediment of the chimney stands a small antique bust of a Venus; and over the garden door is a large antique bust.

On the great table is an exceeding fine bronze of a man and woman, by John of Boulogne.

On the other tables are two vases of oriental alabaster.

Over the chimney: Christ baptized by St. John, a most capital picture of Albano. His large pictures are seldom good, but this is equal, both for colouring and drawing, to any of his master Caracci, or his fellow scholar Guido: it is eight feet eight inches high, by six feet four and a half wide. This picture belonged to Mr. Laws, first minister to the regent of France.

The stoning of St. Stephen, a capital picture of Le Sœur: it contains nineteen figures, and is remarkable for expressing a most masterly variety of grief. The saint, by a considerable anacronism, but a very common one among the Roman Catholics, is dressed in the rich habit of a modern priest at high mass, nine feet eight inches and a half high, by eleven feet three and three quarters wide.

The Holy Family, a most celebrated picture of Vandyke. The chief part of it is a dance of boy-angels, which are painted in the highest manner: the Virgin seems to have been a portrait, and is not handsome, it is too much crowded with fruits and flowers, and birds. In the air are two partridges, finely painted; seven feet and half an inch, by nine feet one and three quarters.

Mary Magdalen washing Christ's feet; a capital picture of Rubens, finished in the highest manner, and finely preserved. There are fourteen figures as large as life: the Magdalen is particularly well coloured, six feet three quarters of an inch high, eight feet two wide.

The Holy Family, in a round, by Cantarini: the child is learning to read; three feet six inches every way.

The Holy Family, by Titian. It belonged to Monsieur de Morville, secretary of state in France; four feet seven and a half high, by three feet four and a half wide.

Simeon and the child; a very fine picture of Guido. The design is taken from a statue of a Silenus with a young Bacchus, in the Villa Borghese at Rome. This was in Monsieur de Morville's collection; three feet two inches and a half high, by two feet seven and a half wide.

The Virgin, with the child asleep in her arms, by Augustine Caracci; three feet six inches high, by two feet nine and three quarters wide.

An old woman giving a boy cherries, by Titian: it is his own son and nurse; four feet ten inches high, by three feet six and three quarters wide.

The Holy Family, by Andrea del Sarto. This and the last were from the collection of the Marq. Mari, at Genoa; three feet one inch and a quarter high, by two feet seven and a quarter wide.

The Assumption of the Virgin, a beautiful figure supported by boy-angels, in a very bright manner, by Morello; six feet four inches and three quarters high, by four feet nine and a half wide.

The adoration of the shepherds, its companion: all the light comes from the child.

The Cyclops at their forge, by Luca Jordano. This belonged to Gibbins; six feet four inches high, by four feet eleven wide.

Dædalus and Icarus, by Le Brun: in a different manner from what he generally painted; six feet four inches high, by four feet three wide.

The Carlo Maratti Room

Is thirty feet by twenty-one. The hangings are green velvet, the table of Lapis Lazuli; at each end are two sconces of massive silver.

Over the chimney is Clement the Ninth, of the Rospigliosi family; three quarters sitting, a most admirable portrait, by Carlo Maratti. It was bought by Jervase the painter out of the Arnaldi palace at Florence, where are the remains of the great Pallavicini collection, from whence Sir Robert bought several of his pictures. Nothing can be finer than this, the boldness of the penciling is as remarkable as his delicacy in his general pictures, and it was so much admired, that he did several of them.

The Judgment of Paris, drawn by Carlo Maratti, when he was eighty-three years old, yet has none of the rawness of his latter pieces; the drawing of the Juno is very faulty, it being impossible to give so great a turn to the person as he has given to this figure: it came out of the Pallavicini collection; five feet nine inches and three quarters high, by seven feet seven and a quarter wide.

Galatea sitting with Acis, Tritons, and Cupids, its companion; five feet eight inches and three quarters high, by seven feet seven and a half wide.

The Holy Family, an unfinished picture, large as life, by Carlo Maratti, in his last manner; three feet two inches and three quarters high, by two feet eight and a quarter wide.

The Virgin teaching Jesus to read, by Carlo Maratti; two feet three and a quarter, by one foot ten and a quarter.

St. Cœcilia with four angels playing on musical instruments, companion to the former. These two last are most perfect and beautiful pictures, in his best and most finished manner, and were in the Pallavicini collection.

The Assumption of the Virgin, by Carlo Maratti; she has a deep blue veil all over her; two feet three inches and three quarters high, by one foot ten and a quarter wide.

The Virgin and Joseph with a young Jesus, a fine picture by Carlo Maratti, in the manner of his master, Andrea Sacchi; two feet five inches and a quarter high, by two feet wide.

The marriage of St. Catharine, by Carlo Maratti; two feet seven inches high, by one foot ten and a half wide.

Two saints worshipping the Virgin in the clouds, by Carlo Maratti; two feet three inches and a half high, by one foot nine and a half wide.

St. John the Evangelist, its companion.

A naked Venus and Cupid, by Carlo Maratti, in a very particular stile; three feet one inch and a half high, by four feet four and a half wide.

The Holy Family, by Nicholo Beretoni, Carlo's best scholar. This picture is equal to any of his master's. The grace and sweetness of the Virgin, and the beauty and drawing of the young Jesus, are incomparable; three feet one inch and a quarter high, by four feet four and a quarter wide.

The assumption of the Virgin, by ditto; two feet two inches and a quarter high, by one foot eight and a quarter wide.

The pool of Bethesda, by Gioseppe Chiari, another of Carlo's scholars; three feet three inches high, by four feet five wide.

Christ's sermon on the mount, ditto.

Apollo and Daphne, ditto.

Bacchus and Ariadne, the best of the four, ditto: the Bacchus seems to be taken from the Apollo Belvedere, as the ideas of the Ariadne and the Venus evidently are from the figures of Liberality and Modesty, in the famous picture of Guido, in the collection of the Marquis del Monte at Bologna.

Apollo in crayons, by Rosalba; two feet two inches high, by one foot eight wide.

Diana, its companion.

A profile head of a man, a capital drawing in a great file, by Raphael.

A profile head of St. Catharine, by Guido.

The birth of the Virgin, by Luca Jordano; two feet one inch high, by one foot and a quarter of an inch.

The presentation of the Virgin in the temple, its companion: these two are finished designs for two large pictures, which he painted for the fine church of the Madonna della Salute at Venice.

The flight into Egypt, by Morello, in the manner of Vandyke; three feet two inches and a quarter high, by one foot eleven and a quarter wide.

The crucifixion, its companion.

Hercules and Omphale, by Romanelli; three feet one inch and a half high, by four feet three wide.

The Velvet Bed-Chamber

Is twenty-one feet and a half by twenty-two and a half. The bed is of green velvet, richly embroidered, and laced with gold; the ornament designed by Kent: the hangings are tapestry, representing the loves of Venus and Adonis, after Albano.

Alexander adorning the tomb of Achilles, by Le Mer. The head of Alexander is taken from his medals, the figures are in the true antique taste, and the buildings fine; eight feet two inches and three quarters high, by five feet two and a half wide.

Over one of the doors, a sea-port, by Old Griffier; three feet two inches and a half high, by four feet one inch wide.

A landscape over the other door, by ditto.

The Dressing-Room

Is hung with very fine gold tapestry, after pictures of Vandyke. There are whole length portraits of James I. queen Anne his wife, daughter to Frederick the second king of Denmark, brother to queen Anne, they have fine borders of boys, with festoons, and oval pictures of the children of the Royal Family. At the upper-end of the room is a glass-case filled with a large quantity of silver philegree, which belonged to Cath. lady Walpole.

Over the chimney, the consulting the Sibylline oracles, a fine picture, by Le Mer; companion to that in the bed-chamber: the architecture of this is rather the better.

The Embroidered Bed-Chamber.

The bed is of the finest Indian needle-work.

Over the chimney, the Holy Family, large as life, by Nicolo Pouffin. It is one of the most capital pictures in this collection, the airs of the heads, and the draperies, are in the finest taste of Raphael, and the antique. Elizabeth's head is taken from a statue of an old woman in the Villa Borghese at Rome; the colouring is much higher than his usual manner; the Virgin's head, and the young Jesus, are particularly delicate; five feet seven inches, by four feet three and three quarters wide.

Over the doors, two pieces of cattle, by Rosa di Tivoli.

The Cabinet

Is twenty-one feet and a half, by twenty-two and a half, hung with green velvet. Over the chimney is a celebrated picture of Rubens's wife, by Vandyke; it was fitted for a pannel in her own closet in Rubens's house. She is in black fatten, with a hat on, a whole length; the hands and the drapery are remarkably good.

Rubens's family, by Jordaens of Antwerp: Rubens is playing on a lute, his first wife is sitting with one of her children on her lap, and two others before her. There are several other figures and genii in the air: five feet nine inches high, by four feet five and a half wide. This picture belonged to the duke of Portland.

A winter-piece, by Giacomo Bassan; three feet eight inches and a half high, by five feet eleven and three quarters.

A summer-piece, by Leonardo Bassan; three feet eight inches and a half high, by five feet eleven and three quarters. These two were in the collection of M. de la Vrilliere.

Boors at cards, by Teniers; one foot four inches high, by one foot ten inches wide.

Christ appearing to Mary in the garden, an exceeding fine picture, by Pietro da Cortona; one foot nine inches and a half high, by one foot eight inches wide.

The judgment of Paris, by Andrea Schiavone. (Note, that all the pictures in this room, except the portraits, that have not the sizes set down, are very small.)

Midas judging between Pan and Apollo, by ditto.

Christ laid in the sepulchre, one of the finest pictures that Parmegiano ever painted, and for which there is a tradition, that he was knighted by a duke of Parma: there are eleven figures; the expression, the drawing, and the colouring, the perspective, and chiaroscuro, are as fine as possible. The figure of Joseph of Arimathea is Parmegiano's own portrait.

The adoration of the Magi, by Velvet Brughel: there are a multitude of little figures, all finished with the greatest Dutch exactness; the ideas too are a little Dutch, for the Ethiopian king is dressed in a surplice with boots and spurs, and brings for a present a gold model of a modern ship.

The Virgin and child, a very pleasing picture, by Baroccio; but the drawing is full of faults.

A naked Venus sleeping, a most perfect figure, by Annibal Caracci; the contours and the colouring excessive fine.

Head of Vanderdort, by Dobson.

St. John, a head, by Carlo Dolci.

Head of Innocent X. by Velasco.

A boy's head with a lute, by Cavalier Luti.

Friars giving meat to the poor, by John Miel; one foot seven and a half high, by two feet two inches wide.

Its companion.

Boors at cards, by Teniers.

Boors drinking; its companion, by Ostade.

A dying officer at confession, by Bourgnone; very bright colouring and fine expression; one foot seven inches and a half high, by two feet one inch and three quarters wide.

Its companion.

Christ laid in the sepulchre, by Giacomina Bassan, a very particular picture; the lights are laid on so thick, that it seems quite basso-relievo. It is a fine design for a great altar-piece which he has painted at Padua. This picture was a present to lord Orford, from James earl of Waldegrave, knight of the garter, and ambassador at Paris.

Holy Family, by Rottenhamer.

Holy Family, with St. John on a lamb, by Williberts, a scholar of Rubens, who has made a large picture, from whence this is taken, now in the Palace Pitti, at Florence: This is finely finished, and the colouring neater than Rubens.

The Virgin and child, by Alexandro Veronese; painted on black marble.

Three soldiers; a fine little picture, by Salvator Rosa, in his brightest manner.

The Virgin with the child in her arms; by Morello, on black marble; a present from Sir Benjamin Keene, ambassador at Madrid.

The Virgin with the child in her arms asleep, by Sebastian Concha.

Edward VI. an original small whole length, by Holbein; Edwardus Dei gratia sextus rex Anglia, & Francia, & Hibernia.

Laban searching for his images, by Sebastian Bourdon; three feet one inch and three quarters, by four feet four inches and a half wide.

The banquetting-house ceiling: it is the original design of Rubens for the middle compartment of that ceiling, and represents the assumption of king James I. into Heaven. It belonged to Sir Godfrey Kneller, who

studied it much, as is plain from his sketch for king William's picture in the parlour; two feet eleven inches high, by one foot nine inches and a half wide.

Six sketches of Rubens for triumphal arches, &c. On the entry of the Infant Ferdinand of Austria into Antwerp; they are painted with a description of the festival: they are two feet and a quarter square.

Bathsheba bringing Abishag to David; an exceeding high-finished picture in varnish, by Vanderwerff; a present to lord Orford from the duke of Chandos: two feet ten inches high, by two feet three wide.

Two flower-pieces most highly finished, by Van Huyfum; two feet seven inches high, by two feet two wide.

Christ and Mary in the garden, by Philippo Laura.

The Holy Family, by John Bellino: it belonged to Mr. Laws.

Landscape with figures, by Bourgoynone, in the manner of Salvator Rosa.

Its companion, with soldiers.

Two small landscapes, by Gaspar Pouffin.

Over the door into the bed-chamber, the Holy Family, by Matteo Ponzoni, a most uncommon hand, and a very fine picture; three feet seven inches and a half high, by five feet two and a half wide.

Over the parlour door, the murder of the innocents, by Sebastian Bourdon; four feet and one half inch high, by five feet eight wide.

Over the other door, the death of Joseph, by Velasco; three feet three inches high, by four feet ten wide.

St. Christopher, a very small picture, by Elzheimer.

The Marble Parlour.

One entire side of this room is marble, with alcoves for side-boards, supported with columns of Plymouth marble. Over the chimney is a fine piece of alto-relievo in statuary marble, after the antique, by Rysbrack, and before one of the tables, a large granite cistern.

Henry Danvers, earl of Danby; a fine whole length in garter robes, by Vandyke.

Sir Thomas Wharton, brother to Philip lord Wharton, and knight of the Bath, whole length, by Vandyke, (from the Wharton collection.)

Two fruit-pieces over the door, by Michael Angelo Campidoglio, from Mr. Scawen's collection.

The Ascension, by Paul Veronese, over a door.

The Apostles after the Ascension, ditto.

The Hall

Is a cube of forty, with a stone gallery round three sides: the ceiling and the frieze of boys are by Altari: the bas-reliefs over the chimney and doors are from the antique.

The figures over the great door, and the boys over the lesser doors, are by Rysbrack. In the frieze are bas-reliefs of Sir Robert Walpole, and Catharine, his first lady, and of Robert lord Walpole, their elder son, and Margaret Rolle, his wife.

Over the chimney is a bust of Sir Robert Walpole, earl of Orford, by Rysbrack.

Before a nich, over-against the chimney, is the Laocoon, a fine cast in bronze, by Girardon, bought by lord Walpole at Paris.

On the tables, the Tiber and the Nile in bronze, from the antiques in the Capitol at Rome.

Two vases in bronze, from the antiques in the Villas of Medici and Borgheze at Rome.

The bust of a woman, a most beautiful antique.

The bust of a Roman empress, antique.

On terms and consoles round the hall, are the following busts and heads:

Marcus Aurelius, antique.

Trajan, ditto.

Septimus Severus, ditto.

Commodus, ditto.

A young Hercules, ditto.

Baccio Bandinelli, by himself.

Faustina senior, antique.

A young Commodus, ditto.

Heads.

Homer, modern.

Hesiod, ditto.

Jupiter, antique.

A philosopher, ditto.

Hadrian, ditto.

Pollux, ditto.

Going from the Saloon, down the great steps, through the garden, you enter a porch adorned with busts of Rome, by Camillo Rusconi.

Minerva, ditto.

Antinous, ditto.

Apollo Belvedere, ditto.

A philosopher's head, antique.

Julia Pia Severi, ditto.

Out of this you go into a vestibule, round which, in the niches, are six vases of Volterra alabastr. This leads into

The Gallery,

Which is seventy-three feet long, by twenty-one feet high; the middle rises three feet higher, with windows all round; the ceiling is a design of Serlio's in the inner library of St. Mark's at Venice, and was brought from thence by Mr. Horace Walpole, jun. the frieze is taken from the Sybils temple at Tivoli. There are two chimnies, and the whole room is hung with Norwich damask. It was intended originally for a green-house; but on Sir Robert Walpole's resigning his employments, on the ninth of February, 1742, it was fitted up for his pictures, which had hung in the house at Downing-street.

Over the farthest chimney is that capital picture, and the first in this collection, the Doctors of the Church: they are consulting on the immaculateness of the Virgin, who is above in the clouds. In this picture, which is by Guido in his brightest manner, and perfectly preserved, there are six old men as large as life. The expression, drawing, design, and colouring, wonderfully fine. In the clouds is a beautiful virgin all in white, and before her a sweet little angel flying; eight feet eleven inches high, by six feet wide. It was in the collection of the Marquis Angeli.

Over the other chimney, the Prodigal Son, by Salvator Rosa; eight feet three inches high, by six feet five and a half wide.

Meleager and Atalanta, a cartoon, by Rubens, larger than life; brought out of Flanders by general Wade: it being designed for tapestry, all the weapons are in the left hand of the figures; ten feet seven inches high, by twenty feet nine and a half wide.

Four markets, by Snyders; one of fowl, and another of fish, another of fruit, and the fourth of herbs. There are two more of them at Munich, a horse and a flesh market; each six feet nine inches and a half high, by eleven feet one and a half wide.

Marcus Curtius leaping into the gulph, an exceeding fine picture, by Mola. There are multitudes of figures, fine attitudes, and great expressions of passion. This picture is six feet four inches and a quarter high, by eleven feet four inches wide; and, with the next, belonged to Gibbins the carver.

Horatius Cocles defending the bridge; its companion.

A lioness and two lions, by Rubens. Nothing can be livelier, or in a greater stile than the attitude of the lioness; five feet six inches high, by eight feet wide.

Architecture; it is a kind of a street with various marble palaces in perspective, like the Strada Nuova at Genoa; the buildings and bas-reliefs are extremely fine, the latter especially are so like the hand of Polydore, that we should rather think that this picture is by this master, than by Julio Romano, whose it is called. There are some figures, but very poor ones, and undoubtedly not by the same hand as the rest of the pictures: there is an officer kneeling by a woman, who shews the Virgin and Child in the clouds sitting under a rainbow. This picture was a present to lord Orford, from general Charles Churchill; five feet six inches and three quarters high, by six feet eleven inches wide.

An old woman sitting in a chair, a portrait three quarters, by Rubens, bought at Mr. Scawen's sale.

An old woman reading, an extreme fine portrait, by **Boll**, bought at the duke of Portland's sale, when he went governor to Jamaica.

Cupid burning armour, by **Elisabetta Sirani**, Guido's favourite scholar; two feet one inch and a half high, by two feet seven and a half wide.

An usurer and his wife, by **Quintin Matsis**, the blacksmith of Antwerp. This picture is finished with the greatest labour and exactness imaginable, and was painted for a family in France; it differs very little from one at Windsor, which he did for Charles I. two feet eight inches and a half high, by one foot ten and three quarters wide.

Job's friends bringing him presents; a fine picture, by **Guido**, which he has executed in large, and in his brightest manner, in the church of the Mendicants at Bologna: this is dark, but there is most masterly skill in the naked, and in the disposition of the figures; three feet one inch high, by two feet four and a half wide.

Europa, a fine landscape, by **Paul Brill**, the figures by **Dominichini**; two feet five inches high, by three feet five and three quarters wide.

Africa, its companion.

Dives and Lazarus, by **Paul Veronese**. There are few of him better than this; the building is particularly good: two feet seven inches and a half high, by three feet five wide. It belonged to Monsieur de Morville, secretary of state in France.

The exposition of **Cyrus**, by **Castiglione**, a very capital picture of this master; two feet four inches and a quarter high, by three feet six and a quarter wide.

Its companion.

The adoration of the shepherds, by **Old Palma**, from the collection of Monsieur de la Vrilliere, secretary of state in France; two feet six inches high, by three feet ten wide.

The Holy Family, by ditto; two feet seven inches and a quarter high, by four feet five wide, from Monsieur **Flinck's** collection.

A fine moon-light landscape, with a cart overturning, by **Rubens**; two feet ten inches high, by four feet one wide. (It was lord Cadogan's.)

Nymph and shepherd, by **Carlo Cignani**; three feet four inches high, by four feet one and a quarter wide.

Two women, an emblematical picture, by **Paris Bourdon**; three feet six inches high, by four feet two wide; from Mr. **Flinck's** collection.

Abraham, Sarah, and Hagar, by **Pietro Cortona**.

The Great Duke has a small sketch of this, but reversed, and with the Sarah and other figures at a distance; the Hagar is much fairer than in this; six feet ten inches high, by six feet one wide.

Abraham's sacrifice, by **Rembrandt**. Abraham's head, and the naked body of Isaac, are very fine: the painter has avoided much of the horror of the story, by making Abraham cover the boy's face, to hide the horror from himself; six feet three inches high, by four feet three and three quarters wide.

The old man and his sons with the bundle of sticks, by **Salvator Rosa**, in his finest taste; six feet high, by four feet two and a half wide.

The adoration of the shepherds, octagon, a most perfect and capital picture of **Guido**, not inferior to the Doctors: the beauty of the Virgin, the delicacy of her and the child, (which is the same as in the Simeon's arms in the Saloon) the awe of the shepherds, and the Chiaro Oscuro of the whole picture, which is in the finest preservation, are all incomparable. This belonged to Monsieur de la Vrilliere; three feet three inches and a half every way.

The continence of **Scipio**, by **Nicolo Pouffin**; painted with all the purity and propriety of an ancient bas-relief. This picture belonged to Monsieur de Morville, and is three feet eight inches and three quarters high, by five feet two wide.

Moses striking the rock, by **Nicolo Pouffin**. There is a great fault in it; Moses is by no means the principal figure, nor is he striking the rock angrily, and with a great air, but seems rather scraping out the water. The

thirst in all the figures, the piety in the young man lifting his father to the stream, and the devotion in others, are extremely fine; three feet eleven inches and a half high, by six feet three and a half wide.

The placing Christ in the sepulchre, over the door, by **Ludovico Caracci**; six feet three inches high, by five feet one wide.

Moses in the bulrushes, by **Le Soeur**; a present to lord Orford from the duke of Montague; seven feet one inch high, by four feet eight and a half wide.

The adoration of the Magi, by **Carlo Maratti**. He has painted another of them in the church of the Venetian St. Mark at Rome; six feet eleven inches high, by four feet four wide.

Cows and sheep, by **Teniers**, in his best manner; one foot eleven, by two feet nine.

Landscape, with a cascade and sheep; a very fine picture, by **Gaspar Pouffin**. It was bought at the late earl of Halifax's sale; one foot eleven inches high, by two feet nine wide.

The last supper, by **Raphael**: it is in fine preservation; one foot eight inches high, by two feet eight and a half wide.

Solomon's idolatry, by **Stella**: it is painted on black and gold marble, which is left untouched in many places of the ground. There are many figures finely finished, and several beautiful airs of womens heads; one foot ten inches high, by two feet five and a quarter wide.

A sea-port; a fine picture of **Claude Lorrain**. There is a bright sun playing on the water, and the whole shine of the picture is in his very best manner. It belonged to Monsieur Morville; three feet one inch and a quarter high, by four feet two and a half wide.

A calm sea, ditto. A most pleasing and agreeable picture. There are two figures on the fore ground, Apollo and the Sybil; she is taking up a handful of sand, for every grain of which she was to live a year. Apollo granted her this boon, as the price of her person, which afterwards she refused him. The promontory is designed for **Cumæ**, the residence of the Sybil. Among the buildings are the ruins of the Castellum Aquæ Martiæ, with the trophies of Marius, which are now placed in the Capitol: the remains of the building itself stands near the Coliseum; three feet two inches and three quarters high, by four feet one wide.

Two landscapes, by **Gaspar Pouffin**, in his dark manner; that at the upper end of the gallery is fine. These two, and the latter **Claude**, were in the collection of the Marquis di Mari; three feet three inches and a quarter high, by four feet five and a quarter wide each.

The **Ioconda**, a smith's wife, reckoned the handsomest woman of her time: she was mistress to Francis I. king of France; by **Lionardo da Vinci**. This was Monsieur de Morville's; two feet nine inches high, by two feet and a quarter wide.

Apollo, by **Cantarini**, a contemporary of **Guido**, whose manner he imitated; two feet seven inches high, by two feet and a quarter wide.

The Holy Family, with angels, by **Valerio Castelli**, who studied **Vandyke**; two feet five inches high, by one foot eleven and a half wide.

The Eagle and **Ganymede**, by **Michael Angelo Buonarotti**; two feet eleven inches high, by one foot eleven wide.

The Virgin and Child, a most beautiful, bright, and capital picture, by **Dominichino**; bought out of the **Zambeccari** palace at Bologna, by **Horace Walpole, jun.** two feet four inches high, by one foot eleven and a half wide.

The Salutation, a fine finished picture, by **Albano**; two feet high, by one foot six inches and a half wide.

The late emperor of Germany, when duke of **Lorrain**, being in England, was entertained at **Houghton** with the most magnificent repast that was perhaps ever given in England, though there was not a single foreign dish in the whole entertainment; relays of horses being provided on the roads to bring rarities from the most remote parts of the kingdom.

Snettſham, which we viſited after viewing the magnificent ſeat of Houghton-hall, is ninety-nine miles from London, was once a royal demefne, and enjoyed many privileges; but has nothing now remarkable, but the ſeat of Nicholas Styleman, Eſq; whoſe lady has here formed ſome exceeding pretty plantations; particularly thoſe upon a ſtream, which ſhe calls New-bridge and Catherine's-iſland. This ſtream is managed with true taſte; naturally, it is only a ditch, but where this lady has improved it, it is a winding river, and the greateſt ornament to her plantations. On one part of its banks ſhe has a very neat circular cottage for breakfaſting, and near it a menagery, with a great variety of birds: in this part of the plantation are all ſorts of water-fowl. From her menagery you croſs the ſtream, and paſs along its winding banks to the grotto, which is very prettily contrived out of a boat, by cutting it into two equal parts, and fixing it together, with a little addition: it is ſtuck full of ſpar, ſhells, ſea-weed, coral, glaſs, ore, &c. all diſpoſed with taſte and elegance. The front is pretty, but too regular, and not ſufficiently ruſtic, compoſed of the ſame materials, on a ground of powdered ſea-ſhells, ſtuck in cement. The ſituation is very agreeable by the ſide of the river, and in the ſhade of ſeveral large weeping willows. The ſtream is ſtill more beautiful in the other plantation called Catherine's-iſland; it forms five little woody iſlands, in which are ſeveral cool, ſhady, ſequeſtered walks, in a taſte which does great honour to the fancy of this ingenious lady. The plantations behind the houſe have great variety, and are ſtretched out with taſte.

Here is a weekly market on Friday, but no annual fair.

The manor of Choffel, north-eaſt of Snettſham, belonged to the brethren of St. Lazarus, who had a maſter or preceptor of that order here. It was afterwards annexed to Burton Lazars, in Leiceſterſhire.

In the beginning of the reign of king Henry III. one William de Bec founded a chapel and an hospital in the pariſh of Billingford, near Harleſton, dedicated to St. Thomas the Martyr. It had thirteen beds for accommodating poor travellers with lodgings.

Caſtle-Riſing, the next place we viſited, took its name from an old caſtle near it, which, together with the town, is ſituated on a high eminence, ninety-seven miles from London.

It is an ancient borough by preſcription, governed by a mayor and twelve aldermen; and though now there are ſcarce twelve families in it, was formerly a conſiderable place, till its harbour was choaked up with ſand: here, however, is an hospital for twelve poor men, and an alms-houſe for twenty-four poor widows, both founded by the family of the Howards. In the neighbourhood of this town there is a park, and a large chace, with the privilege of a foreſt.

Caſtle-Riſing, and ſome of the neighbouring pariſhes, retain the old Norman cuſtom, by which all teſtaments muſt be proved before the parſon of the pariſh.

This town ſends two members to parliament, but has neither market nor fair.

At Flitcham, on the eaſt ſide of Caſtle-Riſing, there was a priory or hospital of the order of St. Auguſtine, ſubordinate to Waſſingham, to which it was given by Dametta de Flitcham, niece to Emma de Bellofago, in the time of king Richard I. It was dedicated to the Virgin Mary, and endowed at the diſſolution with fifty-five pounds five ſhillings and ſix-pence *per annum*.

Lynn Regis, or King's Lynn, to which we paſſed from Caſtle-Riſing, is thus called to diſtinguiſh it from three villages in this county, called Weſt Lynn, North Lynn, and Old Lynn. Lynn Regis, or King's Lynn, was formerly called Biſhop's Lynn, becauſe it belonged to the biſhop of Norwich; but having come, by exchange, into the hands of king Henry VIII. it aſſumed its preſent name.

This town is ninety-eight miles from London, and was a borough by preſcription before the time of king John, who, becauſe it adhered to him againſt the barons, made it a free borough, with large privileges; appointed it a provoſt, and gave it a ſilver cup of about eight ounces, double gilt and enamelled, and four large ſilver

maces that are carried before the mayor. K. Henry VIII.'s ſword, which he gave to the town, when it fell into his hands, by exchange with the biſhop of Norwich, is alſo carried before the mayor. King Henry III. made it a mayor town for its ſervices to him againſt the barons; and in the late civil war, it held out for king Charles I. and ſuſtained a formal ſiege againſt upwards of eighteen thouſand men, for above three weeks; but for want of relief, was obliged to ſurrender, and pay ten ſhillings a head for every inhabitant, and a month's pay to the ſoldiers, to prevent it from being plundered.

This town has had fifteen royal charters, and is governed by a mayor, high ſteward, under-ſteward, recorder, twelve aldermen, and eighteen common-councilmen, with other inferior officers; and every firſt Monday of the month, the mayor, aldermen, the reſt of the magiſtrates, and the preachers, meet to hear and determine all controverſies between the inhabitants, in an amicable manner, in order to prevent law-ſuits. This cuſtom was firſt eſtabliſhed in 1588, and is called the Feaſt of Reconciliation.

Lynn is a rich, large town, well built, and well inhabited; and from the ruins of the works demolished in the late civil wars, it appears to have been a ſtrong place. It has a ſpacious market-place, in the quadrangle of which is a ſtatuette of king William III. and a fine croſs, with a dome and gallery round it, ſupported by ſixteen pillars. The market-houſe is a free-ſtone building, after the modern taſte, ſeventeen feet high, and adorned with ſtatues, and other embellishments.

Here is a theatre, very convenient and neat, neither profuſely ornamented, nor diſguffingly plain; and although not free from faults, yet has none but what reſulted from the architect being confined to fill up the ſhell of an old building which was raiſed for another purpoſe. The aſſembly-rooms are capacious, and handſomely fitted up: they conſiſt of three on a line; the firſt an old town-hall, fifty-eight feet by twenty-seven, and of a well-proportioned loftineſs, would be a very good ball-room, had it a boarded floor, but at preſent forms a very noble anti-room. It opens into the ball-room, ſixty feet by twenty-seven, and twenty-two feet high, which would have been a proper one, if the architect had thought proper to give his muſic-gallery a hitch backwards, for at preſent it is a mere ſhelf ſtuck in between the chimnies, an eye-ſore to the room. If he did it through confinement, for want of ſpace, he ſhould undoubtedly have formed his muſic-ſeats upon the plan of thoſe at Almacks, at the end of the room; they might have waved in a ſcroll round the door of the card-room, mingled with branches of candles, which might eaſily have been rendered a great ornament.

The card-room is twenty-seven by twenty-seven, and twenty-two high.

As the three are upon a line, it would have given them an uncommon elegance, had the openings from one into another been in three arches in the centre ſupported by pillars, inſtead of the preſent glaſs-doors, which are mean.

The eye would then have commanded at once a ſuit of one hundred and forty-five feet, which, with handſome luſtres properly diſpoſed, would have rendered theſe rooms inferior to few in England.

Here are two pariſh-churches; St. Margaret's, which has a fine library, and All Saints. There is alſo a chapel of eaſe, dedicated to St. Nicholas, which is eſteemed one of the handſomeſt of the kind in England: it has a bell-tower of free-ſtone, and an octagon ſpire over it, which together are one hundred and ſeventy feet high; and there is a library in it erected by ſubſcription. Here is likewiſe a Preſbyterian and a Quaker meeting-houſe, with a Bridewell, a work-houſe, and ſeveral alms-houſes; a free-ſchool, a good cuſtom-houſe, and a convenient quay and warehouses.

In the pariſh of All Saints there is a ſmall hospital, where four men live rent-free; and another, called St. Mary Magdalen's, which was anciently a priory, but rebuilt in 1649, and now under the care of two ſenior aldermen, choſen by the other governors. In 1682, a ruinous old chapel here was turned into a workhouſe, where

where fifty poor children are taught to read, and spin wool, and, at a fit age, are put out apprentices, by an act of parliament settled in the guardians of the poor. In September 1741, the spires of both churches in this town were blown down by a storm of wind, but both have been since rebuilt. Here is a town-house, called Trinity-hall, which is a noble fabric; and there is an Exchange of free-stone, with two orders of columns, built at the expence of Sir John Turner.

The fortifications of this town are not so much demolished, but that they might easily be repaired, and the town made defensible in a very few days. A platform at the north end of the town, called St. Ann's Platform, mounts twelve great guns, and commands all the ships passing near the harbour; and towards the land, besides the wall, there are nine regular bastions and a ditch.

Four rivulets run through this town; and the tide of the Ouse, which is about as broad as the Thames at London-bridge, rises twenty feet perpendicular. The town is supplied with water by conduits and pipes.

The situation of this town, near the fall of the Ouse into the sea, gives it an opportunity of extending its trade into eight different counties, so that it supplies many considerable cities and towns with heavy goods, not only of our own produce, but imported from abroad. It deals more largely in coals and wine than any other town in England, except London, Bristol, and Newcastle. In return for these commodities, Lynn receives back for exportation all the corn which the counties it supplies them with produce; and of this one article Lynn exports more than any one port in the kingdom, except Hull in Yorkshire. Its foreign trade is very considerable, especially to Holland, Norway, the Baltic, Spain and Portugal.

The harbour is safe when once ships get into it; but the passage having many flats and shoals, it is difficult to enter.

The King's Staith or quay, where the greatest part of the imported wines are landed, and put into large vaults, is a handsome square, with brick buildings, in the centre of which is a statue of king James I.

Here was formerly a cell of a prior and three Benedictine monks, belonging to the cathedral monastery of Norwich, founded by bishop Herbert about the year 1111, and dedicated to St. Margaret.

Petrus Capellarius founded an hospital here in 1145, for a prior, and twelve brethren and sisters, nine of whom were to sound, and three leprous. It was dedicated to St. Mary Magdalen, and is still in being.

About the year 1261, a convent of Grey friars was founded here by Thomas de Fletsham.

The Friars de Pœnitentia Jesu Christi were settled in this town before the fifth of Edward I. and continued here till the suppression of that order.

In the time of Edward I. not before, here was the hospital of St. John the Baptist, consisting of a warden or master, and several poor brothers and sisters; the revenues of which were valued, on the dissolution, at seven pounds seven shillings and a penny *per annum*.

There was also in this town a house of Austin friars in the reign of king Edward I. valued, upon the dissolution, at only one pound four shillings and six-pence *per annum*.

Here was a house of Black friars before the twenty-first of Edward I. said to have been founded by Thomas Gedney, the valuation of which, upon the dissolution, does not appear.

Not far from the town-house, called Trinity-Hall, but nearer to the river, here was a college of twelve priests, founded about the year 1500 by Thomas Thursby, mayor of this town.

This town sends two members to parliament, has two weekly markets, held on Thursday and Saturday; and one annual fair, viz. the second of February, called Lynn Mart, for wearing apparel, and all sorts of goods from London: it lasts a fortnight.

At a place called Blackborough, in the parish of Middleton, south-east of Lynn Regis, Roger de Scales, and Muriel his wife, in the time of Henry II. built a priory, dedicated to the Virgin Mary and St. Catharine,

in which there were religious of both sexes; but Robert, son to the said Roger de Scales, before the year 1200, settled this house upon the nuns of the order of St. Benedict, who being about ten in number, continued here till the general suppression, when their revenues were rated at forty-two pounds six shillings and seven-pence *per annum*.

At South Lynn, near King's Lynn, mention is made of a house of White friars, founded in the thirteenth century; but the foundation is ascribed by different authors to different persons. It had a prior and ten brethren upon the dissolution, and was valued at only one pound fifteen shillings and eight-pence *per annum*.

Over-against Lynn Regis, on the other side the river, lies the town of Marsh Land, a peninsula almost surrounded by navigable rivers, and an arm of the sea. It is a marshy tract, of about thirty thousand acres, with ditches to carry off the water; over which there are three bridges, and the widest part is about ten miles over. Sir Henry Spelman says, he remembered it to have been twice overflown, once by salt, and another time by fresh water; but it is now fenced by a substantial wall, turns to good account both by corn and pasture; and it is said, that in Tilney Smeeth are fed to the amount of thirty thousand sheep.

Swaffham is remarkable for having a very sumptuous church, the north isle of which is said to have been built by a travelling pedlar. Here is a famous manufacture of spurs, and in the neighbourhood are frequent horse-races. It is ninety-nine miles distant from London, and stands in an air highly commended by physicians. Here is a weekly market on Saturday, and three annual fairs, viz. the twelfth of May, for sheep, cattle, and toys; the twenty-first of July, and the third of November, for cattle and toys.

At Castleacre, north-west of Swaffham, William Warren, first earl of Surrey, in, or before the year 1085, built a priory of Cluniac monks, dedicated to the Virgin Mary, and subordinate to the house of Lewis, a borough town of Suffex, the annual revenues of which were valued, on the suppression, at three hundred and six pounds eleven shillings and four-pence.

At West-acre, to the west of Castle-acre, there was a priory of Black canons, who afterwards became canons of the order of St. Austin, begun by Oliver, the parish-priest, and his son Walter, in the time of William Rufus, and dedicated to St. Mary and All Saints: its annual revenues, upon the suppression, were valued at two hundred and sixty pounds thirteen shillings and seven-pence.

Sir Ralph Meyngaryn, knight, in the time of king Henry II. founded a small priory of Black canons at a place near Swaffham, formerly called Waburn. It was at first subordinate to West-acre; was dedicated to the Virgin Mary and All Saints, and had estates, which, upon the suppression, were rated at twenty-four pounds nineteen shillings and six-pence *per annum*.

At Spote, on the north side of Swaffham, there was an alien priory of Black monks, belonging to the abbey of St. Florence, near Salmur in France, dedicated to the Virgin Mary.

At Marham, west of Swaffham, there was a nunnery of the Cistercian order, built and endowed by Isabella de Albini, countess of Arundel, in 1251, and dedicated to the Virgin Mary; and about the time of the dissolution, here were an abbess and eight nuns, who had yearly revenues to the amount of thirteen pounds six shillings and a penny.

About two miles from Swaffham, lies Narford, the seat of Price Fountain, Esq; built and furnished by the late Sir Andrew Fountain. The house is a good one, but not the object of view so much as the curiosities it contains; amongst which nothing is so striking as the cabinet of earthen ware, done after the designs of Raphael; there is a great quantity of it, and all extremely fine. The collection of antique urns, vases, sphinxes, &c. &c. is reckoned a good one; but what gave us more pleasure than the venerable remains of this kind, is a small modern sleeping Venus in white marble, by Delveau, which, in female softness and delicacy, is ex-

ceedingly beautiful. The bronzes are very fine, and the collection of prints a capital one. As to pictures, there are a considerable number, but the following are the most remarkable. As to the masters names, we minute them as they pass at Narford, and without answering for their originality. We hint this, because the most pleasing picture in the house, the Virgin and Child, said to be by Guido, is precisely the same in figures, attitude, airs, &c. as Mr. Butler's Correggio, as appears by a print of the latter. However, whether it is a copy or an original, the colouring is fine, and the air of the head and attitude admirably graceful.

A fruit-piece by Snyders, the figures by Rubens; very good.—Christ taken down from the cross; exceedingly fine, the heads strongly expressed. Albano.

St. Jerome: the head fine, but the stile dark and unpleasing. Tintoretto.

Children of Israel gathering manna; fine. Bloemart.

Marriage of Cana; a striking instance of wretched grouping. Old Franc.

Henry VIII. and Anne Boleyn at a concert; very fine. Holbein.

Two old men's heads; strongly expressive. Quin. Matfis.

Pharaoh's daughter finding Moses; one of the best pieces of this indifferent master. Pelligrino.

The library is a very elegant one for a private gentleman.

Dereham, Market-Dereham, or Dereham-East, thus distinguished from a village named Dereham, near Downham. It is a fine large town, with several hamlets belonging to it, and distant from London ninety-seven miles.

St. Wilburga, the youngest daughter of king Anna, founded a monastery here, before the year 748, which was destroyed by the Danes.

This town has a weekly market on Fridays, and three annual fairs, viz. the third of February, and the twenty-eight of September, for cattle and toys.

In 1188, Hubert, then dean of York, but afterwards archbishop of Canterbury, built at West-Dereham an abbey for Premonstratensian canons, dedicated to the Virgin Mary, and valued, upon the dissolution, at two hundred and twenty-eight pounds *per annum*.

At Wendling, on the west side of East-Dereham, there was an abbey of the Premonstratensian order, built by William de Wendling, clerk, before the fifty-second year of king Henry III. and dedicated to the Virgin Mary. Not long before the dissolution, here were an abbot and four canons, who had revenues valued at fifty-five pounds eighteen shillings and four-pence *per annum*.

Repeham was formerly famous for having three churches in one church-yard, belonging to three several lordships; but they have been long demolished, so that there is now only the ruins of one remaining. This town is one hundred and eleven miles distant from London: the chief trade carried on here is in malt, of which great quantities are sold in its weekly market, held on Saturday. Here is an annual fair on the twenty-ninth of June, for ordinary horses and petty chapmen.

St. Bennets in the Holm, south-east of Repeham, was given by a petty prince, called Horn, to a society of religious Heremites, under the government of Suneman, about the year 800, who built a chapel here; but those religious were all destroyed by the Danes in 870. In the next century, a religious, named Wolfric, brought some other religious to this place, and rebuilt the chapel and houses; and before the year 1020, king Canute endowed this place for an abbey of Black monks, dedicated to St. Benedict, the revenues of which, upon the dissolution, were valued at five hundred and eighty-three pounds seventeen shillings *per annum*. This monastery was so fortified by the monks, that it was more like a castle than a cloister, and held out so long against William the Conqueror, that he could not take it, and it was at last betrayed to him by one of the monks, on condition that he should be made an abbot; but instead of being rewarded, he was hanged by the Conqueror for his treachery.

At Montjoy, south-west of Repeham, William de Gisneto, in the time of king John, founded a chapel, dedicated to St. Laurence, and gave it to the prior and convent of Windham, who settled in it a prior and several Black canons.

Caston, or Cawston, is a small town, remarkable only for a bridge over a little river called the Bare. It is distant one hundred and twenty-eight miles from London, has a weekly market on Tuesday, and three annual fairs, viz. the tenth of January, the fourteenth of April, and the twenty-eighth of August, for sheep and petty chapmen.

Loddon contains nothing that merits notice. Its distance from London is one hundred and five miles. It has a weekly market on Friday, and three annual fairs, viz. Easter-Monday, for petty chapmen; Monday after Martinmas, and the eleventh of November, for horses and hogs.

At Thurton, near Loddon, several Roman coins have been dug up at different times.

Bishop Herbert, or Agnes de Belfo, the wife of Robert de Ria, in the time of king Henry I. gave the church of St. Mary at Alaby, south-west of Loddon, upon the borders of Suffolk, to the cathedral monastery of Norwich; upon which there were placed a prior and three Black monks, as a cell to that house, which continued till the dissolution.

At Longby, north of Loddon, in 1198, an abbey of Premonstratensian canons was built and endowed by Robert Fitz-Roger Helk, dedicated to the Virgin Mary, in which were fifteen religious at the suppression, when their yearly revenues were rated at one hundred and four pounds sixteen shillings and five-pence.

At Ravehingham, south-west of Loddon, Sir John of Norwich, knight, about the seventeenth of Edward III. founded a chantry or college of eight secular priests, who were to perform divine service in the parish-church of St. Andrew. But this college was, not long after, removed to the neighbouring village of Norton-Sub-Cross, where a chapel, and other necessary buildings for the priests, were erected, the number of which, in 1387, were thirteen; but in the seventeenth year of Richard II. they were once more translated to the castle of Mettingham, near Bangay, a market-town of Suffolk.

Windham, or Wimundham, to which we next passed, is a small town, at the distance of ninety-nine miles from London. The inhabitants are generally employed in making of spiggots and fossets, spindles, spoons, and other wooden ware. They enjoy their writ of privilege, as an ancient demesne, from serving at assizes or sessions. Here is a house of correction, the keeper of which, in the reign of queen Elizabeth, had forty shillings a year paid him by the treasurer of the county. There is a free-school in this town, founded and well endowed by Henry I.'s butler; and Matthew Parker, archbishop of Canterbury, gave a scholarship in his college of Corpus Christi in Cambridge, in favour of a scholar born in this town, provided he continued in Windham school two years, without interruption, and was fifteen years old. Here is also a charity-school for teaching thirty children.

This town was set on fire on the eleventh of June 1615, by certain incendiaries, when above three hundred dwelling-houses were consumed; and in 1631, it was visited by a severe pestilence.

Before the year 1107, William de Albin, or Daubeney, chief butler to Henry I. founded a priory of Black monks here, from the abbey of St. Albans, to which it was a cell till 1443, when it was made an abbey. It was dedicated to the Virgin Mary, and at the dissolution had ten or twelve monks, whose yearly revenues were valued at two hundred and eleven pounds sixteen shillings and six-pence.

Here is a weekly market, held on Friday; and three annual fairs, viz. the second of February, the sixth of May, and the seventh of September, for horses, lean cattle, and petty chapmen.

Hingham had the misfortune, about the beginning of this century, to be burnt down; but it was soon rebuilt in a much handsomer manner, and the inhabitants were,

not many years ago, reckoned a genteel sort of people, and so fashionable, that this town was called in the neighbourhood Little London. It is ninety-four miles distant from London, has a weekly market on Saturday, and an annual fair on the tenth of June, for horses and petty chapmen.

Watton is remarkable for the smallness of its church, which is only twenty yards long, and eleven broad; and the steeple, which has three large bells, is round at bottom, and octangular at top. This town is eighty-nine miles distant from London. In 1673, a dreadful fire happened here, by which upwards of sixty houses were burnt down. Great quantities of butter are sent from hence to Downham-bridge, from whence it is sent by water to London.

This town has a weekly market held on Wednesday, and three annual fairs, viz. the twenty-ninth of June, the twenty-ninth of September, and the twenty-eighth of October, for toys, &c.

Maud, countess of Clare, having given the churches of St. Peter and St. John Baptist, at Carbrook, near Watton, to the knights of St. John of Jerusalem, in the time of Henry II. some sisters of their order were placed in an hospital near the smaller church, but they were afterwards removed, and a preceptor of a master and several brethren continued here till the dissolution, when the estate belonging to it was valued at sixty-five pounds two shillings and eleven-pence *per annum*.

In the twenty-third of Edward III. Sir Thomas de Shardelow, knight, and his brother John, established and endowed a perpetual chantry or college, of a master and five chaplains, in the parish-church of Thomson, south of Watton, dedicated to the Virgin Mary and All Saints; and, upon the dissolution, endowed with fifty-two pounds fifteen shillings and seven-pence *per annum*.

Fakenham, which we next visited, is a small, clean town, and had anciently salt-pits, though six miles from the sea. On a hill in the neighbourhood, are kept the sheriff's-term, and a court for the whole county. It is distant one hundred and ten miles from London, and has two weekly markets, held on Tuesday and Thursday; the latter for cattle.

At Hempton, a little village not half a mile distant from hence, are two annual fairs, viz. Whitsun-Tuesday, and the twenty-second of November, for horses and cattle. Here was formerly an ancient hospital, dedicated to St. Stephen, which afterwards became a small priory of three or four canons of the order of St. Austin. It is said to have been founded by Roger de St. Martino in the time of Henry I. and its possessions, upon the dissolution, were valued at thirty-two pounds fourteen shillings and eight-pence *per annum*.

In the parish of South Rainham, near Fakenham, at a place called Normannesberch, was a cell of Cluniac monks, belonging to the priory of Castle-acre, dedicated to St. Mary and St. John the Evangelist, and founded by William de Lifewis, about the year 1160.

Near Cokesford, north-west of Fakenham, Hervey Belet, in the beginning of the reign of king John, founded an hospital for a warden, being a priest, and thirteen poor people, dedicated to St. Andrew.

We now directed our course towards the sea-coast, in order to visit Clay, a sea-port town, near which are large salt-works, whence salt is not only vended all over the county, but sometimes exported in considerable quantities to Holland and the Baltic. This town is one hundred and fifteen miles from London, has a weekly market, held on Saturday, and an annual fair on the nineteenth of July, for horses, &c.

The manor of Wells, between Clay and Burnham, being given to the abbey of St. Stephen, near Caen in Normandy, by William de Streis, in the time of William the Conqueror, here was fixed an alien priory of Benedictine monks from that foreign house; but king Edward IV. gave it to the dean and chapter of St. Stephen's, Westminster, who enjoyed it till the general dissolution.

Foulsham is a little obscure town of no note, at the distance of one hundred and two miles from London, has

a market on Tuesdays, and an annual fair on Easter-Tuesday, for petty chapmen.

At Linge, south of Foulsham, there was a nunnery at or near the chapel of St. Edmund, from whence the religious were removed, in 1160, to Thetford.

Secky, or Seecking, is distant ninety-four miles from London, and is remarkable only for a good market once a fortnight, for the sale of fat bullocks. It has likewise a weekly market, held on Tuesday.

At Shouldham, south-east of Secky, Jeffrey Fitz-Piers, earl of Essex, in the time of king Richard I. founded a Gilbertine monastery for canons and nuns, under the government of a prior. It was dedicated to the Virgin Mary, and endowed, at the suppression, with one hundred and thirty-eight pounds eighteen shillings and a penny *per annum*.

There was likewise a priory of Black canons at Wormgay, or Wrangay, near Secky, built by William, the son of Reginald de Warren, in the time of K. Richard I. or king John, dedicated to the Virgin Mary, the Holy Cross, and St. John the Evangelist; and in 1468, united to the priory of Pentney.

At Hardwich, in the parish of North Rungton, near Secky, there was an hospital for leprous persons, dedicated to St. Laurence.

Attleborough was anciently not only a city, but the chief town of the county, and had a palace and collegiate church. It is ninety-three miles distant from London, and is still a considerable town, has a good weekly market for fat bullocks, sheep, and other cattle, held on Thursday; and three annual fairs, viz. the eleventh of April, Holy Thursday, and the fifteenth of August, for cattle and toys.

The executors of Sir Robert Mortimer, knight, according to his will, built a chantry or college, in the parish-church of Attleborough, dedicated to the Exaltation of the Cross; and endowed the same for a master or warden, and four secular priests, about the seventh of Henry IV. the revenues of it, upon the dissolution, were valued at only twenty-one pounds sixteen shillings and three-pence *per annum*.

Harleston is a little dirty town, situated on the river Waveney, over which there is a bridge, at the distance of ninety-four miles from London. It has a weekly market on Wednesday, and two annual fairs, viz. the fifth of July, and the ninth of September, for horses, cattle, sheep, and petty chapmen.

In the beginning of the reign of king Henry III. one William de Bec founded a chapel and an hospital in the parish of Billington, near Harleston, dedicated to St. Thomas the Martyr. It had thirteen beds for accommodating poor travellers with lodgings.

Disse is a small town, situated on the river Waveney, in the most southerly part of this county, at the distance of ninety-three miles from London, and has a charity-school, the only thing worthy of notice.

Here is a weekly market held on Friday, and an annual fair on the twenty-eighth of October, for cattle and toys.

Buckenham is thus called by way of distinction from Old Buckenham, a village in its neighbourhood: they are supposed to have derived the name of Buckenham from the great number of bucks in the neighbouring woods. Here was formerly a fine strong castle; and the lords of this manor claim the privilege of being butlers at the coronation of our kings. This town is seventy-nine miles distant from London, and has a weekly market on Saturday, and two yearly fairs, viz. the twenty-ninth of May, for cheese and cattle; and the twenty-second of November, for cheese and toys.

William de Albin, earl of Chichester or Arundel, in the time of king Stephen, built a priory of Black canons, dedicated to St. James the Apostle, at Old Buckenham. About the time of the dissolution, here were a prior and eight canons, who had revenues to the yearly amount one hundred and eight pounds ten shillings and two-pence.

East Harling is thus distinguished in respect of its situation to two villages lying west of it, called West Harling and Middle Harling. It is distant eighty-eight miles from

from London, and has a weekly market held on Tuesday, chiefly for linen yarn and linen cloth; and two annual fairs, viz. the fourth of May, for cattle and toys; and the twenty-fourth of October, for sheep and toys.

At Rushworth, on the south-west side of East Harling, about the year 1342, St. Edmund de Gonville, rector of this parish, upon the site of the parsonage-house, built a chapel or college for a master or warden, and six secular priests. It was dedicated to St. John the Evangelist, and rated, on the suppression, at eighty-five pounds fifteen shillings *per annum*.

Thetford, which we next visited, took its name from its situation upon a small river called the Thet. It is divided by the Little Ouse, which also divides the counties of Suffolk and Norfolk, and stands in a pleasant open country, at the distance of eighty miles from London. In 672, the archbishop of Canterbury held a synod here. The Saxon kings made it the metropolis of the kingdom of the East Angles, but it was three times ruined by the Danes.

The chief magistrate found here at the Conquest, was styled a consul, whence it is supposed to have been a Roman town. In the twelfth century, it was the see of a bishop, and then was a place of great note, but declined on the translation of the see to Norwich; yet in the reign of Henry VIII. it was a place of such consequence, as to be made a suffragan see to Norwich, but it continued so only during that reign.

It had formerly a mint, and was incorporated by queen Elizabeth, with a mayor, recorder, ten aldermen, twenty common-councilmen, two of whom are generally chamberlains, a town-clerk, a sword-bearer, and two serjeants at mace; and the Lent assizes for Norfolk are commonly held in its guild-hall.

It is a pretty large town, though not so populous as it was in the time of Edward III. when it had twenty churches, six hospitals, and eight monasteries. There now remains only three churches, one on the Suffolk, and two on the Norfolk side of the town. In the reign of king James I. an act of parliament passed for founding an hospital and a grammar-school here, and for maintaining a preacher, to preach four days in the year for ever, agreeable to the will of Sir Richard Tulmerston. Sir Joseph Williamson, secretary of state to K. Charles II. built a council-house here, and gave the corporation a sword and a mace. Here are a common gaol, a bridewell, and a workhouse; and there is an hospital for six poor persons, built and endowed by Sir Charles Harbord, and his son William, for ninety-nine years.

The chief manufacture in this town is woollen cloth. The Ouse is navigable hither from Lynn, by lighters and barges.

This place has been honoured with the presence of many of our sovereigns, particularly Henry I. and II. Queen Elizabeth, and king James I. made it one of their hunting-seats; and king James had a palace here, which is still called the King's House.

In the church of St. Mary at Thetford, there was a society of religious persons as early as the reign of king Edward the Confessor, if not before; and hither Arsfatus, bishop of the East Angles, removed his episcopal seat from North Elmham, in 1075, as was before observed; but continued here only nineteen or twenty years, and then was translated to Norwich; after which, about the year 1104, a monastery for Cluniac monks was built here by Roger Bigod, or Bigot, and made subordinate to the abbey of Cluney in France; but this house and place being found inconvenient, the same Roger Bigod began a most stately monastery without the town, and on the other side of the river, dedicated to the Virgin Mary. This monastery was finished in 1114, and was made denison the fiftieth of Edward III. and, upon the dissolution, was found to be endowed with yearly revenues to the amount of three hundred and twelve pounds fourteen shillings and four-pence.

A priory of canons regular, of the order of the Holy Sepulchre, or the Cross, was founded in a church here, dedicated to St. Sepulchre, by William, third earl of Warren, in the time of king Stephen. Here were six religious at the time of the suppression, who had

thirty-nine pounds six shillings and eight-pence *per annum*.

On the Suffolk side of this town, there was an ancient house of regular canons, dedicated to St. George; but being ruinous and forsaken, Hugh de Norwold abbot, and the convent of St. Edmund's-Bury in Suffolk, placed nuns here; and at the dissolution there was a prioress and ten Black nuns, who had estates worth forty pounds eleven shillings and two-pence *per annum*.

Without this town there was an hospital, dedicated to St. Mary, or St. Mary Magdalen, endowed upon the suppression with no more than one pound thirteen shillings and six-pence *per annum*. Here was an hospital, called God's House, before the twenty-fourth of Edward I.

A house of Friars Preachers is said to have been founded in this town by Henry, earl, and afterwards duke of Lancaster, towards the beginning of the reign of king Edward III.

In the time of king Richard II. here was an house of Friars Augustines, founded by John of Gaunt, duke of Lancaster.

Here was a college, consisting of a master and fellows, dedicated to St. Mary, and valued at one hundred and nine pounds and seven-pence *per annum*, at the suppression.

Thetford arose from the ruins of the ancient Sitomagus, a Roman city, which was destroyed by the Danes. Here are still visible many marks of great antiquity, particularly a large mount called Cattle-Hill, thrown up to a great height, and fortified by a double rampart, supposed to have been a Danish camp.

This town sends two members to parliament, has a weekly market on Saturdays, and three annual fairs, viz. the fourteenth of May, the second of August, and the twenty-fifth of September, for cheese, cattle, and toys.

Methwold, the next town we visited, is remarkable for breeding excellent rabbits, called Mewil rabbits. It is distant from London ninety-seven miles, and has a weekly market, held on Thursday, and an annual fair on the twenty-fifth of April, for cattle and toys.

At a place called Stevesholm, then an island in the parish of Methwold, William earl Warren, about the year 1222, placed a prior and some Cluniac monks; and here was a cell or hospital, dedicated to the Virgin Mary, and subordinate to Castle-acre.

There was likewise at Bromhill, near Methwold, a priory of Austin canons, dedicated to the Virgin Mary, and St. Thomas the Martyr, in the beginning of the reign of king Henry III. but suppressed in May 1528, by a bull of Pope Clement.

At a place called Newbridge, north-east of Methwold, there was a chapel, dedicated to St. Mary and St. Laurence, with a small religious house adjoining, in which lived a master and brethren, lepers, about the year 1373; but afterwards a master, wardens and friars, Heremites, about the year 1449; and in process of time, it so decayed, that upon the dissolution, it was valued, as a free chapel, at only three pounds seven shillings and six-pence *per annum*.

Downham took its name from its hilly situation, and is commonly called Downham-Market, because of its being a market-town. It stands upon the Great Ouse, at the distance of eighty-nine miles from London. It has a bridge, though but an indifferent one, over the Ouse, and a port for barges.

Here is a weekly market held on Saturday, and two annual fairs, viz. the twenty-seventh of April, for horses and toys; and the second of November, for toys.

In the chapel of St. Mary de Bello Loco, said to lie near Downham, there was a priory of Benedictine monks, who, in the twenty-fourth year of Henry VI. were united to the monastery of Ely, in Cambridge-shire.

In the parish of Wearham, south-east of Downham, there was a Benedictine priory, as ancient as the time of king Richard I. or king John, subordinate to the convent of Mustereil, in the diocese of Amiens,

Amiens in France, which convent sold it, in 1321, to one Hugh Scarlet of Lincoln, who gave it to the abbey of West Dereham. It was dedicated to St. Wimwaloe, or St. Guenold.

At Medney, in the parish of Helgay, near Downham, there was a small priory of Black monks, with a cell to Ramsey abbey, in Huntingdonshire.

Curious PLANTS growing in Norfolk.

Sea Orrache with small basil leaves; *Atriplex maritima nostras Ocima minoris folio*; found near King's Lynn.

The sweet-smelling Flag, or Calamus; *Acorus verus sive calamus officinarium*, Park; observed in the river Yare, near Norwich.

Spanish Catchfly; *Muscipula salamantica major*, Park; found in great plenty by the way-side, between Barton-mills and Thetford.

Branched River-sponge; *Spongia ramosa fluviatilis*; observed in the river Yare, near Norwich.

Tower-mustard; *Turritis*, Ger. Grows in the hedges between Norwich and Yarmouth.

Hoary Mallein; *Verbascum pulverulentum flore luteo parvo*, J. B. Met with about the walls of Norwich.

Shrub Stone-cröp; *Vermicularis frutex minor*, Ger. found upon the sea-coast of Norfolk.

Roman Nettle; *Urtica Romana*, Ger. found at Yarmouth, in lanes not far from the key.

CURIOSITIES, &c. in Norfolk, not mentioned in the foregoing Account.

The Great Ouse, in this county, is remarkable for its sudden and impetuous inundations, particularly at the full moon in the autumnal and vernal equinoxes; when a vast body of water runs up against the stream, through the channel of this river, with prodigious violence, overflowing the banks, and sweeping off every thing in its way.

The kingdom of the East-Angles, from its first conversion to Christianity, was under one bishop, till about the year 673, when it was divided into four dioceses; and one of the episcopal seats was fixed at North Elmham, a village on the north side of Repeham. Here was a constant succession of ten bishops, till the martyrdom of Humbert by the Danes, in 870. About the year 950, the other see, which was at Dunwich, a borough town of Suffolk, appears to have been united with this at Elmham, the jurisdiction of which extended over the whole East-Anglian kingdom. This bishopric was translated from hence to Thetford in the year 1075, and from thence it was soon after removed to Norwich; and the above manor continued part of the revenues of the bishopric of Norwich, till the dissolution.

Remarks on the SEA-COAST of Norfolk.

The coast of Norfolk is remarkable for being one of the most dangerous and fatal to ships of any round the whole. This is sufficiently evident to the traveller; for most of the sheds, out-houses, pales, partitions, and the like, for twenty miles along the shore, from Winterton-ness to Cromer, are made out of the wrecks of ships, and exhibit the melancholy ruins of the merchants and sailors fortune; and in some places there are even large piles of wrecks, laid up for the purposes of building. There are no less than eight light-houses, kept flaming every night, within the distance of about six miles; two of which are near Goulston, between Yarmouth and Leostoffe; two more at Castor, a little to the north of Yarmouth; two more at Winterton town; one more on Winterton-ness, the most easterly point of land in Norfolk, and called the Lower Light; and the last still farther to the northward, where the shore falling off to the north-west, warns the sailor, as he comes from the north, to keep off from the shore, that he may weather the ness of Winterton, and go clear of the land into Yarmouth roads; for from that point the shore falls off for near sixty miles to the west, as far as Lynn and Boston. There are also abundance of sea-marks, beacons, and other objects, erected along the shore, from Yarmouth to Cromer; for if ships coming from the northward are taken with a hard gale of wind on any point between the north-east and south-east, so that they cannot weather Winterton-ness, they are kept in Cromer bay, formed between Winterton-ness and the Spurn-head, in Yorkshire; and if the wind blows hard, are often in danger of running ashore upon the rocks about Cromer, or stranding on the flat shore between Cromer and Wells. They have nothing, in that case, to trust to, but their anchors and cables, to ride out the storm, unless they have the good fortune to run into Lynn or Boston; but this is very difficult to be done in bad weather, and a dark night. Great numbers of ships have been lost in attempting this; particularly in the year 1696, when near two hundred sail of colliers and coasters, being too far embayed to weather Winterton-ness, stood away for Lynn deeps; but missing their way in the night, they were all driven on shore, dashed to pieces, and near a thousand persons perished. Ships bound to the northward are in the same danger; for if, after passing by Winterton-ness, they are taken short with a north-east wind, and cannot put back into Yarmouth roads, which very often happens, they are driven on the same coast, and embayed in the same manner.

MEMBERS of PARLIAMENT for this County.

Norfolk sends twelve members to parliament; two knights of the shire for the county, two citizens for Norwich; and two burgesses for each of the following boroughs, Lynn-Regis, Yarmouth, Thetford, and Castle-rising.

C A M B R I D G E S H I R E.

THIS county is bounded on the west by Huntingdonshire and Bedfordshire; on the south, by Hertfordshire and Essex; on the north, by Lincolnshire; and on the east, by Norfolk and Suffolk. It extends about forty miles in length from north to south, twenty-five in breadth from east to west, and one hundred and thirty in circumference, containing about five hundred and seventy thousand acres. It is divided into seventeen hundreds, in which are one city, nine market-towns, one hundred and sixty-three parishes, about seventeen thousand four hundred houses, and eighty-nine thousand inhabitants. It lies in the province of Canterbury, and diocese of Ely, except a small part, which is in the diocese of Norwich.

Cambridgeshire is one of the counties that was anciently inhabited by the Iceni, who by some are supposed to have derived their name from the British word, *Iken*, a wedge, the country which they inhabited having a wedge-like figure. Others, with apparently more reason, derive the name, Iceni, from the Isle, now called the Ouse, which runs through this part of the island. It has been common for the people of all countries to distinguish themselves by the name of the river near which they first settled: thus, in Asia, the Indians were named from the river Indus; in Greece, the Mœonians from the Mœonia; in Scythia, the Alenæ from the Alanus; in Germany, the Alsatians from Alsa; in France, the Sequani from the Sequana; and in England, the Lancastrians from the Lun or Lon; and the Northumbrians, from the Humber. The change of *Ise* into *Ice*, was very natural and easy, because the Britons, instead of the Greek *S*, used *ch*, and wrote *Ichen* for *Ijan*, *Soch* for *Sus*, and *Buch* for *Bous*.

Under what division Cambridgeshire, and the other counties inhabited by the Iceni, fell, when Britain became a Roman province, is not certainly known; but it is generally believed to have been Flavia Cæsariensis, though the Notitia of the Western Empire places the Tribantes and Simeni, or Iceni, in the Britannia Secunda. When the Saxons settled their heptarchy, the Iceni was included in the kingdom of the East-Angles.

The inhabitants of the fenny part of the county of Cambridge, now called the Isle of Ely, and of the rest of the great level in Huntingdonshire, Northamptonshire, and Lincolnshire, were, in the time of the Saxons, distinguished by the name of Gervii, or Fen-men; and the county was then in such a condition, that these Gervii used to walk aloft on a kind of stilts, to keep them out of the water and slime. There is a kind of happy prejudice which has such a remote kindred to virtue, as bigotry has to religion, by which men are induced to consider their own country, whatever are its disadvantages, as the best in the world; and it would not have been strange, if these walkers on stilts, who breathed the noxious vapour of stagnant water instead of air, had regarded those who walked upon the ground in a happier situation, with an air of contempt; especially as the fruitfulness of the country, when the rivers were not obstructed, made them rich; but Camden says, "They were a rugged, uncivilized race, who, though they did not repine at their own situation, at least envied that of their neighbours, whom they called Upland Men, not however as a name of honour, but distinction."

R I V E R S.

The principal river of this county is the Ouse, or Ise, which, running from west to east, divides it into two parts. The little river Cam runs through the middle of the county, from south to north, and falls into the Ouse at Streathamere, near Thetford, by Ely. The Ouse

derives its name from *Issis*, as will be described in Bedfordshire. The Cam is supposed to have been so called from its winding course, the British word, *Cam*, signifying, crooked; to a river in Cornwall, that is remarkable for its irregularity, is called the Camel.

Besides these rivers, there are many channels and drains; for almost all the water from the middle of England, except what is discharged by the Thames and the Trent, falls into part of this county. They have been called the Gleane, the Welland, the Neane, the Grant, the Mildenhall, the Brunton, and the Stoake, besides the water called Moreton's Leam, which is now navigable from Peterborough to Wisbich.

Remarks on the INLAND NAVIGATION of Cambridgeshire.

The only rivers navigable in this county are the Ouse and the Cam. The former falls into the German ocean at Lynn-Regis, in Norfolk, and is navigable all the way through Huntingdonshire to Bedford. The Cam falls into the Ouse at Thetford, a village in Cambridgeshire, and is navigable to the town of Cambridge; so that there is a communication by water between Cambridge and Lynn. This navigation passes by the city of Ely, and a number of small places in this county; and by means of it a very considerable trade is carried on from Lynn to places in this and the adjacent counties of Huntingdon and Bedford. The navigation has, however, all the advantages it is capable of. The current of the river is often so rapid, that it is not without great difficulty the horses can draw the boats up against it. The navigation is also frequently obstructed by floods; but, with these imperfections, it is of great service to the county.

A I R A N D S O I L.

A considerable tract of land in this county is distinguished by the name of the Isle of Ely. It consists of fenny ground, divided by innumerable channels and drains, and is part of a very spacious level, containing three hundred thousand acres of land, and extending from this county into Norfolk, Suffolk, Huntingdonshire, Northamptonshire, and Lincolnshire. The Isle of Ely is the northern division of the county, and extends southward almost as far as Cambridge. The whole level, of which this is part, is bounded on one side by the sea, and on the others by uplands, which taken together, form a rude kind of semicircle, resembling a horse-shoe.

This level is generally supposed to have been overflowed in some violent convulsion of nature: a preternatural swelling of the sea, or an earthquake, which left the country flooded with a lake of fresh water, has frequently happened in other places. It is certain that the fens of Cambridgeshire were once very different from what they are now. William Somersct, who was a monk of the abbey of Malmesbury, in Wiltshire, and was therefore called William of Malmesbury, an historian of great credit, who wrote in the twelfth century, says, that in his time this country was a terrestrial paradise. He describes it as a plain that was level and smooth as water, covered with perpetual verdure, and adorned with a great variety of tall, smooth, taper and fruitful trees: here, says he, is an orchard bending with apples, and there is a field covered with vines, either creeping upon the ground, or supported by poles. In this place art also seems to vie with nature, each being impatient to bestow what the other with-holds. The buildings are beautiful beyond description, and there is not an inch of ground that is not cultivated to the highest degree. It must however be remarked, that William of Malmesbury

bury, who was himself a recluse in another part of the island, is here describing the county about Thomey-Abbey, which was the dwelling of other solitary devotees like himself. He therefore described a place which it is probable he never saw, and which his zeal might induce him to mention in the most advantageous terms. It must also be observed, that he describes the country as a level, and mentions marshes and fens, though he says the marshes were covered with wood, and the fens afforded the most stable and solid foundation for the buildings that were erected upon them.

It must also be remarked, that the celebrated Abbo Floriacensis, an historian of the year 970, near two hundred years before William of Malmesbury, in a description of the kingdom of the East-Angles, in which this county lies, says, that it is encompassed on the north with large wet fens, which begin almost in the heart of the island; and the ground being a perfect level for more than an hundred miles, the waters of these fens descend in great rivers to the sea. He adds, that these large fens make a prodigious number of lakes, which are two or three miles over; and by forming a variety of islands, accommodate great numbers of monks with their desired solitude and retirement.

That the flat country might easily be overflowed to a great extent, merely by an accidental obstruction of the rivers through which the waters of the fens were carried off, is very evident; and that such an inundation actually happened there, is indubitable evidence, yet more authentic than that of any history; for timber trees of several kinds have been found rooted in firm earth, below the slime and mud that lie immediately under the water. In other places a perfect soil has been found at the depth of eight feet, with swatches of grass lying upon it as they were first mowed. Brick and stone, and other materials for building, have also been found at a considerable depth, by the workmen who were employed in digging drains for the water; and in setting a sluice, there was found, sixteen feet below the surface, a complete smith's forge, with all the tools belonging to it. And when the channel at Wisbich was repaired and improved, in the year 1635, there was found, eight feet below the bottom, a stratum of firm ground, which had once been the bed of the river, as appeared by many large stones and old boats which were lying upon it, and had been buried in the slime.

But whatever was the condition of this country and its inhabitants before the inundation, it was undoubtedly extremely bad afterwards; the waters stagnating for want of proper channels to run off, became putrid, and filled the air with noxious exhalations; the inhabitants of the neighbouring town could have no communication with each other by land, and a communication by water was in many places difficult, and in others impracticable; for though the water covered the ground to a considerable height, yet it was so choaked by mud, sedge, and reeds, that a boat could not every where make way through it; and in the winter, when the surface was so frozen as to prevent all navigation, and yet not hard enough to bear horses, the inhabitants of many islands among these fens were in danger of perishing for want of food.

To remedy these evils, many applications were made to the government for cutting rivers and drains, which was many times attempted, but without success.

In the reign of Charles I. Francis Ruffel, who was then earl of Bedford, agreed with the inhabitants of the several drowned countries to drain the whole level, in consideration of a grant of ninety-five thousand acres of the land that he should drain, to his own use. The earl admitted several other persons to be sharers with him in this undertaking, and they proceeded in the work till one hundred thousand pounds had been expended, but the ground was still under water. It was then undertaken by the king, who engaged to complete the work for sixty-nine thousand acres more, and proceeded on the attempt till the civil war broke out, which first put an end to his project, and then to his life. During the civil war, the work stood still; but in the year 1649, William earl of Bedford, and the other adventurers, who had been associated with Francis, resumed the un-

dertaking upon their original contract for ninety-five thousand acres; and after having expended three hundred thousand pounds more, the work was completed. But the expence being more than the value of the ninety-five thousand acres, many of the adventurers were ruined by the project; and the sanction of the legislature was still necessary to confirm the agreement, and invest the contractors with such rights and powers as would enable them to secure such advantages as they had obtained. King Charles II. therefore, upon application, recommended it to his parliament; and in the fifteenth year of his reign, an act was passed, intitled, An act for settling the drains of the great level, called, from the first private undertaker, Bedford Level. By this act, the proprietors were incorporated by the name of The Governor, Bailiffs, and Commonalty, of the Company of the Conservators of the Great Level of the Fens. The corporation consists of one governor, six bailiffs, and twenty conservators. The governor and one bailiff, or two bailiffs without the governor, and three conservators, make a quorum, and are empowered to act as commissioners of the sewers, to lay taxes on the ninety-five thousand acres, to level them with penalties for non-payment, by sale on a sufficient part of the land on which the tax and penalty are due: but by this act, the whole ninety-five thousand acres were not vested in the corporation. The king reserved twelve thousand acres to himself, ten thousand of which he assigned to his brother, the duke of York, and two thousand he gave to the earl of Portland.

In the Isle of Ely the air is damp, foul, and unwholesome; but in the south-east parts of the county, it is more pure and salubrious; the soil is also very different. In the Isle of Ely it is holly and spongy, yet affords excellent pasturage. In the uplands to the south-east, the soil produces great plenty of bread, corn, and barley. The dry and barren parts have been greatly improved by sowing the grass called Saint-foin, Holy-grass, from its having been first brought into Europe from Palestine.

Remarks on the HUSBANDRY of Cambridgeshire.

The soil, in most of the arable parts of Cambridgeshire, is a light gravel; though most of the occupiers of land possess some fields of stronger land, upon which they raise better wheat than on the light gravelly soil. The farms in general are from about seventy and eighty, to one hundred and forty pounds a year; and the rent, upon an average, about twelve shillings an acre. Their course of crops is, in general, 1. fallow; 2. wheat; 3. pease, or oats; 4. fallow; 5. turnips; 6. barley. For wheat they plough four times, sow two bushels and a half of seed, and reap, upon a medium, twenty-five bushels. For barley they plough their turnip-land generally but once, unless the soil is not in good order; in which case they stir it twice, sow four bushels, and gain about four quarters. For oats also they plough but once, sow four bushels, and reap four quarters. Pease have the same tillage; the same quantity is sown, and the produce is generally about twenty bushels. They stir the ground three times for turnips, hoe them once, and feed them off with sheep.

In other parts of the county, both the husbandry and soil are different; particularly, in there being a great deal of cold clay land. The farms are of all sizes, from fifty to seven hundred pounds a year. Land in general lets from eight to ten shillings an acre. Their course of crops, with some variations, are, 1. fallow; 2. wheat; 3. pease, or oats; and in light lands, it continues; 4. turnips; 5. barley. They plough four times for wheat, sow two bushels and a half, and reap, upon a medium, twenty-three bushels. For barley they stir the ground three times, sow four bushels, and gain thirty-six. They chuse to plough twice for oats, though this cannot always be done; sow four bushels, and reckon the mean produce the same with that of barley. For barley they plough once or twice, according as the weather permits; sow two bushels and a half, and gain about thirty bushels in return. They give two earths for beans; sow about two bushels and a half per acre in every furrow after the plough; never hoe them, and

the crop, upon an average, is about twenty bushels. For turnips three or four ploughings are given; hoe them always once, and sometimes twice, feeding them off with sheep. They always use four horses in a plough, with two men, and turn up an acre in a day.

The price of labour is as follows:

In harvest, thirty-five shillings, and board. In hay-time, nine shillings a week, and small beer. In winter, one shilling a day, with beer. Reaping wheat, five shillings per acre. Mowing corn, one shilling and six-pence. Mowing grass, two shillings. Hoeing turnips, four shillings, and four and six-pence.

In the southern parts of the county, bordering upon Essex, they raise great quantities of saffron; but having already given a particular account of the method pursued in cultivating that vegetable in our account of Essex, it need not be repeated here.

NATURAL PRODUCTIONS, and MANUFACTURES.

The principal commodities of Cambridgeshire are, corn, malt, butter, saffron, coleseed, hem, fish, and wild-fowl. The wild-fowl are taken in duckoys, places convenient for catching them, into which they are led by tame ducks that are trained for that purpose; and in the Isle of Ely there is such plenty of these birds, that three thousand couple are said to be sent to London every week; and there is one duckoy near Ely that lets for five hundred pounds a year. The principal manufactures of this county are paper and wicker-ware.

CITY, and MARKET TOWNS.

The city is Ely; and the market-towns are, Cambridge, Laxton, Lynton, Mersh, Newmarket, Royston, Soham, and Wisbich.

Wisbich is situated among the fens and rivers in the Isle of Ely. It is distant from London eighty-eight miles, and is a well-built, populous town. Here is a good public hall, and an episcopal palace, belonging to the bishop of Ely. It has a navigation by barges to London, which has made it a place of considerable trade. Its principal commodity is oats, of which more than fifty-two thousand quarters are annually sent up to this metropolis, besides one thousand tons of oil, and eight thousand firkins of butter.

There was a castle erected here by William I. in the eleventh century, to overawe the outlaws of these fenny parts, who made frequent incursions, and did much mischief. In the year 1236, this castle, together with the town, was destroyed by an inundation of the sea. Cardinal Morton, who was bishop of Ely in the beginning of the sixteenth century, rebuilt the castle of brick, which was used in the time of queen Elizabeth as a prison for Popish priests.

Here was formerly an hospital, dedicated to St. John the Baptist, before the year 1343.

This town has a weekly market held on Saturday, and seven annual fairs, viz. Monday and Saturday before Palm-Sunday, for hemp and flax; Monday before Whitfun-Sunday, for horses; Saturday before ditto, for hemp and flax; the twenty-fifth of July, for horses; and the first and second of August, for hemp and flax.

At Newton, near Wisbich, in the chapel of St. Mary Super Casteram Maris, there was a large chauntry, consisting of a warden and several chaplains, founded by Sir John Colville, in the reign of Henry IV. and being particularly excepted in the act of dissolution, the lands became annexed to the rectory of Newton.

At Liverington, not far from Newton, there was an old hospital, which is long since decayed, and the revenue sunk.

Saxulph, the first abbot of Peterborough, is said to have built a monastery, or rather an hermitage, at Thorney, near Wisbich, the place described by William of Malmesbury as a terrestrial paradise, so early as the time of Etheldreda. In the year 870, the house was destroyed, and the prior and several anchorites were murdered by the Danes. In 972, Ethelwold, bishop

of Winchester, refounded it for Benedictine monks, and dedicated it to the Virgin Mary. At the dissolution, its revenue was valued at four hundred and eleven pounds twelve shillings and six-pence *per annum*. At this place there was also an hospital for poor persons, under the government of the abbey.

Mersh, or Marsh, is in the Isle of Ely, and has a church that belongs to the neighbouring parish of Dodington. Its distance from London is sixty-seven miles.

When a road was making from hence to Wisbich, the workmen found two urns; in one of them there were bones and ashes, and in the other about three hundred pieces of silver coin, no two pieces of which were perfectly alike, but all appeared by their dates to be more than two thousand years old.

Here is a weekly market held on Fridays, and three annual fairs, viz. Whitfun-Monday, for household goods; the second of June, for horses; and the twenty-seventh of October, for cheese.

The city of Ely is situated in that part of the county called the Isle of Ely, which is supposed to derive its name either from Eel, a fish, with which the waters of the fenny country abounded; from Elos, a marsh; or from Helig, the British word for willows or fallows, which grow in great plenty in this place, where scarce any other tree is now to be found.

Ely is sixty-nine miles distant from London. It is governed by the bishop, who has not only the ecclesiastical, but civil jurisdiction; and though a city, is not represented in parliament; two particulars in which it differs from every other city in the kingdom.

The sovereignty of this place was settled upon the bishop by Henry I. who also made Cambridgeshire his diocese, which before was part of the diocese of Lincoln. From this time the bishop appointed a judge to determine all causes, whether civil or criminal, that should arise within his Isle, till the time of Henry VIII. who took this privilege away.

It stands on a rising ground, yet being in the midst of fenny lands, and surrounded with water, it is deemed an unhealthy place. It is very ancient, but neither beautiful nor populous. The principal street, which is on the east side of the town, is full of springs; and at the distance of almost every hundred yards, there are wells, which, though they are bricked up about two feet high, yet generally overflow, and form a stream from one to the other, which is continually trickling down the hill. The principal buildings are, the cathedral and the episcopal palace.

The church is four hundred feet long, and has a tower at the west end, about two hundred feet high: it has also a stately cupola, which is seen at a great distance, and has a fine effect, though it seems to totter with every blast of wind.

It has a free-school, for the maintenance and education of forty-two boys; and two charity-schools, one for forty boys, and the other for twenty girls, which are supported by voluntary subscription. All the environs of the city are gardeners grounds, which produce such abundance, that the country, as far as Cambridge, is supplied from thence; and greens and garden-stuff are sent even to St. Ives, in Huntingdonshire.

Here are no remains in this city of profane or secular antiquity, except a very high round mount on the south side of the church. It is now the site of a wind-mill; but when, or for what purpose it was thrown up, is not known.

There is a weekly market held here on Saturday, and two annual fairs, viz. Ascension-day, for horses; and Thursday in the week in which St. Luke's day falls, for horses, cheese, and hops.

At Sutton, a small village in the neighbourhood of Ely, several pieces of antiquity were discovered by some peasants, who were ploughing, in the year 1694. The plough-share first brought up a thin plate of lead, with several small, ancient coins; and one of the labourers thrusting his hand into the earth, which was light and moorish, found three thin plates of silver, of a circular shape, two of which were locked together by a small rivet that passed through their centres. One of these plates

plates appears to have been about six inches diameter, and has a Dano-Saxon inscription round it; of which the three first words are supposed to be magical terms, and the rest have been thus translated :

“ O Lord, Lord, him always defend, who carrieth
“ me about with him : grant him whatever he desires.”

On the other side of the plate there are many knots and figures, which concur with the inscription, to prove that the whole was intended for a charm. With these plates there were also found some rings of gold, supposed to have been the treasure of some noble person who fled into this fenny country for safety.

At Audre, formerly called Erith and Athered, not many miles south of Ely, there is a rampire, very large, but not high, called Belsar's Hill, from one Belifar, a person unknown.

There is a tradition, that king Ethelbert founded a church, or monastery, at a place called Cradindene, about one mile from Ely, at the instance of St. Augustine; but it is, with good reason, rejected as fabulous. It is believed, upon better authority, that a religious society was first founded here about the year 673, by Etheldreda, one of the daughters of king Anna, who married Tombert, prince of this country, and after his death, became the wife of Egfrid, king of Northumberland. The church was dedicated to the Virgin Mary, and the service of God was performed in it both by monks and nuns, who lived together under the government of an abbeys, as was the custom in those early times. The royal founders was herself the first abbess; and the society, which soon became famous, continued near two hundred years, when the country was over-run, and all the religious houses destroyed by Habba, in 870. Some years after, a few of the monks, who had escaped the massacre, returned; and having repaired some part of the church and buildings, lived in them as secular priests, under the government of provosts, or arch-priests, for about one hundred years. In the year 970, Ethelwold, bishop of Winchester, wholly rebuilt the monastery with great magnificence; and having amply endowed it, partly by his own donations, and partly by the munificence of king Edgar, he once more introduced an abbot and regular clergy. In 1108, the see of a new bishoprick, taken out of the diocese of Lincoln, was established here; the bishop was substituted in the place of the abbot, as governor of the monastery; and the revenues were divided between him, the prior, and monks. The share of the bishop was valued, at the dissolution, at two thousand one hundred and thirty-four pounds eighteen shillings and six-pence *per annum*; and that of the convent at one thousand and eighty-four pounds six shillings and nine-pence. There was then in it a prior, and between thirty and forty Benedictine monks; and upon their surrender, king Henry VIII. placed here a dean, and eight secular canons, or prebendaries, with vicars, lay-clerks, choristers, a schoolmaster and usher, and twenty-four king's scholars; and endowed them with the site, and great part of the lands belonging to the priory. The old monastery was dedicated to St. Peter, and St. Etheldreda, commonly called St. Audrey. It is said that Ely, as a city, gradually rose out of this monastery, as the buildings and inhabitants increased after the bishoprick was settled there, and the depredations of the Danes had been repaired.

There was also an old hospital here, probably founded by some of the bishops, and maintained out of the episcopal revenue. This hospital was one of the two that were dedicated, one to St. John the Baptist, the other to St. Mary Magdalen; both were united by bishop Norwold about the year 1242, and managed by some of the monks of the priory, till 1458, when bishop Gray made one of his secular chaplains master or warden. It was valued at twenty-five pounds five shillings and three-pence *per ann.* and granted by Q. Elizabeth to Clare Hall.

At Upwell, in the Isle of Ely, formerly called Mirmaud, there was a small priory of Gilbertines, dedicated to the Blessed Virgin, and given as a cell to Sempringham, by Ralph de Hanville, in the time of Richard I. or John. It was valued at ten pounds seven shillings and seven-pence *per annum*.

Soham is a little town on the east side of the river Cam, near a fen which lies in the road to Ely, and was once extremely dangerous to pass; but a good causeway is now made through it. It is sixty-eight miles distant from London, and has a charity-school for near one hundred children.

Here are the ruins of a church which the Danes burnt with the inhabitants, whom they forced into it before they set it on fire.

It is said, that St. Felix the apostle, and the first bishop of the East Angles, founded a monastery, and placed the episcopal see at Soham, where a great church was also built by Luttingus, a noble Saxon. A monastery of monks flourished here, and became famous under abbot Wenefrid; but they were all destroyed; and the church laid in ashes, by the Danes under Inguar and Habba, about the year 870.

Soham has a weekly market held on Saturday, and an annual fair on the twenty-eight of April, for cows and horses.

At Spinney, near Soham, there was a priory for three regular canons of the order of St. Augustine. It was built and endowed in the time of Henry III. by Sir Hugh de Malebisse, who married the lady of the manor; and it was dedicated to the Blessed Virgin and the Holy Cross. In 1449, it was united to the cathedral monastery of Ely.

At Iselham, a little to the north-east of Soham, there was a priory, which, like Lynton, was a cell to the abbey of St. Jacutus, in Brittany. It was valued at ten pounds thirteen shillings and four-pence *per annum*.

There was a house at Wicken, near Soham, which the lady Mary Bassingburn, in the fifteenth of Edward II. gave, with several parcels of land, to the convent of Spinney, upon condition that seven poor old men should be maintained in it, with an allowance to each of one farthing loaf, one herring, and one penny-worth of ale every day; and three ells of linen, one woollen garment, one pair of shoes, and two hundred dry turf every year.

Newmarket, notwithstanding its name, is of considerable antiquity; for in the time of Edward III. the bishop of Carlisle, who was afterwards so troublesome to Henry IV. was called Thomas of Newmarket. It is sixty miles from London, and consists principally of one street, which is long, and well built; the south side of it only is in this county, the north side is in Suffolk. The air of this place is very healthy, and the heath which surrounds the town is remarkable for the finest course in England, where there are horse-races in April and October every year.

There are two churches in Newmarket; one on the Cambridge side, which is a chapel of ease to Ditton, a neighbouring parish; and one on the Suffolk side, which is parochial. There are also two charity-schools, one for twenty boys, and the other for twenty girls; and on the heath there is a royal palace, which was built by king Charles II. The town was burnt in the year 1683, but was soon after rebuilt by a brief.

This town has a weekly market, held on Thursday, and two annual fairs, viz. Whitfun-Tuesday, and the twenty-sixth of October, for horses and sheep.

At Burwell, near Newmarket-heath, there was anciently a castle, of which scarce any vestige is remaining.

There is a remarkable long ditch, called Seven Mile-dyke, because it is seven miles from Newmarket. It is situated at the end of a causeway three miles long, which was thrown up by Henry Hervy, doctor of laws, master of Trinity Hall, leading from Stourbridge fair towards Newmarket. This dyke begins on the east side of the river Cam, and runs in a straight line as far as Balsam. Five miles to the east, and one mile and an half distant from Newmarket, is another ditch, which being a stupendous work, much superior to the one above-mentioned, has obtained the name of Devil's Dyke, the common people supposing it to be more adequate to the power of spirits than men. It begins at Rich, and running many miles over Newmarket heath, it ends near Cowlidge. Some writers have thought, that Seven Mile Dyke, and Devil's Dyke, were the work

of Canutus the Dane; but the Devil's Dyke is mentioned by Abbo Floriacensis, an historian who died in the tenth century, and Canutus did not begin his reign till the beginning of the eleventh. They were called St. Edmund's Ditches in ancient times, and were probably the work of St. Edmund, king of the East-Angles.

At Chippenham, near Newmarket, there was a preceptor of the Knights Hospitalers, subordinate to their great house in London, the manor being given them by William de Mandeville, earl of Essex, in 1184. It was used as a country house for the sick, and the revenue was valued at thirty-three pounds six shillings and eight-pence *per annum*.

At Swaffham Bulbec, a little west of Newmarket, there was a Benedictine nunnery, dedicated to St. Mary, by one of the Bulbecks, a family of great distinction in this county before the time of king John. At the dissolution, there were found in it a prioress and eight nuns, who had a revenue of forty pounds *per annum*.

At Fordham, a little to the north-west of Newmarket, was a small convent of Gilbertine canons, dedicated to St. Peter and St. Mary Magdalen. King Henry III. gave the church, and Sir Hugh Malebisse was a considerable benefactor. It was endowed at the suppression with forty pounds thirteen shillings and four-pence *per annum*.

Lynton is a little obscure town, near which it is said a considerable coal-mine was discovered some years ago. It is distant from London forty six miles.

Here was formerly an alien priory, subordinate to the abbey of St. Jacutus de Insula in Brittany, before the time of Henry III. It was seized by the crown during the French wars, and at the suppression was valued at twenty-three pounds eight shillings and ten-pence *per annum*.

There is a Roman way at Lynton, which runs into the Ikenild.

This town has a weekly market held on Thursdays, and two annual fairs, viz. Holy Thursday, and the thirtieth of August, for horses.

At Bareham, in the parish of Lynton, in the time of Edward I. there was a priory of Crouched or Crossed friars, which was a cell to Welnetham in Suffolk, and Welnetham was subordinate to the great house of that order in London.

A little to the south-west of Lynton, there is a remarkably wide, deep, and long ditch. It begins at Hinkelston, or Hinxton, and runs eastward by Hilderham to Horseheath, at the distance of about five miles.

Cambridge, the county town, is situated on the river Cam, which divides it into two parts that are again joined by a stone bridge. It is governed by a mayor, high steward, recorder, thirteen aldermen, a common-council of twenty-four, a town-clerk, and other officers.

The situation of this place is low; and as the adjacent soil is somewhat moist, the air is too gross to be in the highest degree healthful. The town, which is fifty-two miles distant from London, is dirty and ill built, but it has fourteen parish-churches. In the market-place there is a public conduit, which was built by Hobson the carrier, who in the time of James I. acquired a great estate. A new building, called the Shire-house, was lately erected contiguous to the old town-hall, at the expence of the county. There are in this town two charity-schools, in which three hundred children are taught and fifty clothed. These schools are supported by a subscription of two hundred and thirty pounds *per annum*, an estate of thirty pounds a year, which was left them for ever by William Wortes; and by the money at the sacrament in some of the college chapels, which has been appropriated for that purpose.

The university of Cambridge consists of sixteen colleges, four of which are distinguished by the name of Halls, though the privileges of both are in every respect equal. It is a corporation, consisting of about one thousand five hundred persons, and is governed by a chancellor, a high-steward, two proctors, and two taxers. All these officers are chosen by the university. The chancellor is always a peer of the realm, and generally continues in his office for life, by the tacit consent of

the university, though a new choice may be made every three years. As the chancellor is a person of such high rank, it is not expected or intended that he should execute the office; but he has not the power of appointing his substitute: a vice-chancellor is chosen annually on the third of November, by the university; he is always the head of some college, the heads of each college returning two of their body, of which the university elects one. The high-steward is chosen by the senate, and holds his place by patent from the university. The proctors and taxers are also chosen every year, from the several colleges and halls by turns.

The public schools, of which there is one to every college, are in a building of brick and rough stone, erected on the four sides of a quadrangular court. Every college has also its particular library, in which, except that of King's College, the scholars are not obliged to study, as in the libraries at Oxford, but may borrow the books, and study in their chambers. Besides the particular libraries of the several colleges, there is the university library, which contains the collections of the archbishops, Parker, Grindal, and Pancroft; and of Dr. Thomas Moore, bishop of Ely; consisting of thirty thousand volumes, which was purchased for seven thousand pounds, and presented to the university by his late majesty king George I. in the year 1715.

Each college has also its particular chapel, where the masters, fellows, and scholars, meet every morning and evening, for the public worship of God; though on Sundays and holidays, when there is a sermon, they attend at St. Mary's church.

The names of the colleges are, Peter House, Clare Hall, Pembroke Hall, Corpus Christi, or Benedict College, Trinity Hall, Gonvil and Caius College, King's College, Queen's College, Catharine Hall, Jesus College, Christ's College, St. John's College, Magdalen College, Trinity College, Emanuel College, and Sidney Sussex College.

I. Peter House, is a large quadrangular building, well contrived, and adorned with porticos. It has a master, twenty-two fellows, and forty-two scholars; and was founded by Hugh Balsam, bishop of Ely, *anno* 1257, when only prior of Ely. The scholars at first had no other conveniences than chambers, which exempted them from the high rates imposed on them by the townsmen for lodgings. The endowment was settled by the same Hugh, when bishop, *anno* 1284, for a master and fourteen fellows; which number might be increased or diminished according to the improvement or diminution of their revenues.

II. Clare Hall was founded in the year 1340, by Richard Badow, chancellor of the university, with the assistance of the lady Elizabeth Clare, countess of Ulster. He had before built an house called University Hall, wherein the scholars lived, at their own expence, for sixteen years, till it was accidentally destroyed by fire. The founder finding the charge of rebuilding would exceed his abilities, sought the kind assistance of the aforesaid lady, through whose liberality it was not only rebuilt, but endowed.

It has lately been new built, and is now one of the neatest and most uniform structures in the university: it is a square of building three stories high; the materials are free-stone, and the work is Doric: it reaches quite to the banks of the river Cam, which runs through the garden; and the court is entered by a lofty gate-house, adorned with two rows of pillars. There is another building contiguous to the college, the upper story of which is the library, and the lower the chapel. To this college belongs a meadow on the other side of the river, which communicates with it by a bridge. It has a master, eighteen fellows, and sixty-three scholars.

III. Pembroke Hall, was founded in the year 1347, by the lady Mary St. Paul, countess of Pembroke, third wife to Audomare de Valentia, earl of Pembroke; who having been unhappily slain at a tilting on his wedding-day, she entirely sequestered herself from all worldly delights, and, amongst other pious acts, built this college, which has been since much augmented by the benefactions of others. It has a master, five fellows, and thirteen

thirteen scholars. In the building there is nothing worthy of note.

IV. Corpus Christi, or Benedict College, was founded by the society of friars in Corpus Christi, in the year 1246. This arose out of two guilds or fraternities, one of Corpus Christi, and the other of the Blessed Virgin; which, after a long emulation being united into one body, by a joint interest built this college, which took its name from the adjoining church of St. Benedict. Their greatest modern benefactor was Dr. Matthew Parker, once master of the college, and afterwards archbishop of Canterbury, who by his prudent management, recovered several rights of the college; and, besides two fellowships, and five scholarships, gave a great number of excellent MSS. to their library, which were mostly collected out of the remains of the old abbey-libraries, colleges, and cathedrals; and chiefly relate to the history of England.

It is a long square of buildings, containing two courts, and two rows of lodgings. It has a chapel and library under the same roof; and maintains a master, twelve fellows, and forty scholars.

V. Trinity Hall was founded about the year 1253, by William Bateman, bishop of Norwich. It was built upon a place which once belonged to the monks of Ely, and was a house for students before the time of bishop Bateman, who, by exchange for the advowsons of certain rectories, got it into his own possession. He was a great master of civil and canon law; whereupon the master, two fellows, and three scholars, the number appointed by him at the first foundation, were obliged to follow those two studies. It has been since much augmented by benefactors, and the number of its members are proportionably increased.

The building of this hall is but irregular, yet it has convenient lodgings for the master and fellows, and pleasant gardens, inclosed by walls of brick; and maintains twelve fellows, and fourteen scholars.

VI. Gonvil and Caius College. In the year 1348, Edmund Gonevil founded an hall, called after his name, upon the place where are now the orchard and tennis-court of Bennet College: but within five years after it was removed into the place where it now stands, by bishop Bateman, founder of Trinity Hall. *Anno* 1607, John Caius, doctor of physic, improved this hall into a new college, since chiefly called by his name; and it has, of late years, received considerable embellishments. It has twenty-six fellows, and seventy-four scholars.

VII. King's College was founded in the year 1451, by king Henry VII. It was at first but small, being built by that prince, for a rector, and twelve scholars only. Near it was a little hostel for grammarians, built by William Bingham, which was granted by the founder to king Henry, for the enlargement of his college: whereupon he united these two; and having enlarged them, by uniting the church of St. John Zachary, founded a college for a provost, seventy fellows and scholars, and three chaplains. The chapel belonging to this college is deservedly esteemed one of the finest buildings of its kind in the world: it is three hundred and four feet long, seventy-three broad, and ninety-four feet high on the outside; yet it is supported wholly by the symmetry of its parts, having no pillar within to sustain the roof, which, as well as the sides, is of free-stone. It has twelve large windows on each side, finely painted; and the choir is adorned with excellent carving. It constitutes one side of a large square; for the royal founder designed that the college should be a quadrangle, all of equal beauty; but the civil wars, in which he was involved with the house of York, prevented his accomplishing this noble design. What has been added to this college within these few years past, is a great ornament to it. This new building, which is of stone, runs from the west end of the chapel, a little detached from it, to the southward; forms another side of the square, and contains spacious chambers and apartments, being two hundred and thirty-six feet in length, and forty-six in breadth. The new senate-hall makes the angle parallel to the chapel. This college has a master, fifty fellows, and twenty scholars.

The workmen, in digging for the foundation of the new buildings of this college, found a great number of broad pieces of gold, of the coin of king Henry V. exceeding fair. As soon as it was known, the college got out of the workmen's hands a considerable number of them, which they made presents of to their particular factors, and divided among themselves, and the fellows of the college; but it is supposed that the labourers secreted many; for this coin, which before was very scarce, could afterwards be obtained without much difficulty.

VIII. Queen's College, was founded by queen Margaret of Anjou, wife to king Henry VI. in the year 1448; but the troublesome times which followed prevented her completing this fabric. The first master of it, Andrew Ducket, procured great sums of money from different persons towards finishing this work; and so far prevailed with queen Elizabeth, wife to king Edward IV. that she perfected the work her professed enemy had begun. The reverend Mr. Ferdinando Smithes, senior fellow of Queen's College, who died in November 1725, gave fifteen hundred pounds to the same, to be appropriated to the use of three bachelors of art, till the time of their taking their master's degree. This is one of the pleasanter colleges in the university; it has the most convenient lodgings, delightful gardens, orchards, and walks; and was the residence of the celebrated Erasmus, of Rotterdam, who chose this college for his last retreat. It maintains a master, nineteen fellows, and forty-four scholars.

IX. Catharine Hall was founded in the year 1459, by Robert Woodlark, third provost of King's College; and the hall was built over-against the Carmelites House, for one master and three fellows. The numbers have been since greatly increased, as well as the revenues; for it at present maintains a master, six fellows, and thirty scholars. A great part of it has been lately new built, and may now be said to be a beautiful and regular fabric.

X. Jesus College was founded in the year 1499, by John Alcocke, bishop of Ely, out of an old nunnery dedicated to St. Radegund, given him by king Henry VII. and pope Julius II. on account of the scandalous incontinence of the nuns, in order to be by him converted to this use: and this prelate established in it a master, six fellows, and six scholars; but their numbers have since been greatly increased by considerable benefactions. It maintains at present a master, sixteen fellows, and thirty-one scholars.

XI. Christ's College was founded by the lady Margaret, countess of Richmond, mother to king Henry VII. in the year 1506, upon the same spot of ground where God's House formerly stood. She settled there a master and twelve fellows, &c. which number, in the time of king Edward VI. being complained of, as favouring of superstition, by alluding to our Saviour and his twelve disciples; that prince added a thirteenth fellowship, and increased the number of scholars. This college has been, within these few years past, adorned with an elegant new building; and now maintains a master, fifteen fellows, and fifty scholars.

XII. St. John's College was likewise founded by the countess of Richmond, about the year 1560, upon the same spot where Nigel, or Neal, second bishop of Ely, in the year 1134, founded an hospital for canons regular, which, by Hugh de Balsam, was converted into a priory dedicated to St. John, and, by the executors of the said countess, into a college, under the name of the same saint; but she dying before it was finished, the work was retarded for some time: it was however carried on by her executors; and in the beginning of the reign of king James I. was greatly enlarged. The building at present consists of three spacious courts: it has a noble library, which has, of late years, been greatly augmented by the accession of that of Dr. Gunning, late bishop of Ely, who bequeathed the same to it. This college, which is pleasantly situated by the river, is no less remarkable for its beautiful groves and gardens, than for the number of its students, and the strict and regular discipline of them. There are at present a master, fifty-four fellows, and one hundred scholars.

XIII. Magdalen College was founded in the year 1542, by Thomas Audley, lord chancellor of England, who endowed it with lands belonging to the priory of the Holy Trinity of London, and called it the College of St. Mary Magdalen. It was at first only a hall, consisting of three houses; but in the year 1519, the eleventh of Henry VIII. Edward Stafford, duke of Buckingham, purchased these houses, in which the monks of several neighbouring abbeys had been used to study; from whence it was formerly called Monks Hall; and converted them to the use of the university, by the name of Buckingham Hall. It has been remarked, that the founder's name is contained in the word M-audley-n, which is the orthography of Magdalen, according to the vulgar pronunciation. A fellowship of a considerable value has lately been founded at this college, which is appropriated to gentlemen of the county of Norfolk, and called The Travelling Norfolk Fellowship. To the library of this college were left a valuable collection of pamphlets, by — Pepys, Esq; and likewise a great number of papers relating to the Navy and Admiralty; and with them he bequeathed the presses, which are carefully preserved to this day. This college was considerably enlarged, and its revenue increased by Sir Christopher Wrey, who was some time afterwards lord chief justice of England. A new building was begun some years ago, to be added to this college, but was never finished. It stands on the north-west side of the river, separated from all the rest; and now maintains a master, thirteen fellows, and thirty scholars.

XIV. Trinity College was founded in the year 1546, by king Henry VIII. who converted three ancient halls, called St. Michael's, King's, and Physwick's Halls, into this stately college, which he dedicated to the Holy Trinity, and endowed it for the maintenance of a provost, sixty fellows, forty scholars, and ten almoner orators; reserving to himself and his successors the right of appointing the warden.

The college, or house of St. Michael the Archangel, was founded in 1324, by Henry, or Hervey Stanton, canon of St. Peter's at York, and chancellor of the Exchequer to king Edward II. This place was in all respects a college, and the fellows of it took their degrees in the public schools of this university.

King's Hall was completed and endowed by Edw. III. in the year 1376, and the fiftieth year of his reign; and the fellows of this hall also took their degrees in the university, as fellows of a college.

Physwick Hostel, or Hall, was the dwelling-house of William Physwick, Esq; beadle of the university, who, in the year 1393, gave it to Gonvil Hall, and converted it into a little college, to receive such scholars belonging to Gonvil Hall, as that house could not conveniently contain.

The above halls being formed into a college, queen Mary presented it with a revenue of three hundred and seventy-six pounds ten shillings; and in the reign of queen Elizabeth, Nevill, dean of Canterbury, the eighth master of this college, expended three thousand pounds in repairing, or rather rebuilding it, which he did with such magnificence and splendor, that for spaciousness, beauty, and uniformity, it is hardly to be equalled. It has lately been much improved by the addition of a library. This building is of free-stone, supported by two rows of pillars, and said to be one of the most noble and elegant structures of the kind in the world. This college is rendered famous on account of several great men it has educated; the most illustrious of which were, the lord Bacon, Sir Isaac Newton, Dr. Barrow, Mr. Ray, and Dr. Bently. In this college are maintained three royal professors, sixty fellows, and ninety-one scholars.

XV. Emanuel College was founded in the year 1584, the twenty-sixth of Elizabeth, by Sir William Mildmay, who was chancellor and treasurer of the Exchequer to that princess; where there had been formerly a convent of Dominicans, instituted in the year 1280, and the sixth of Edward I. by Alice, then countess of Oxford. This college he dedicated to Emanuel, and placed in it a master, three fellows, and four scholars. Here is

a very neat chapel, built chiefly by the bounty of Dr. William Sancroft, archbishop of Canterbury, who left to the library, at his decease, a very valuable collection of books. This college maintains a master, fourteen fellows, and sixty scholars.

XVI. Sidney Sussex College was founded in the year 1589, the thirty-first of Elizabeth, pursuant to the will of the lady Francis Sidney, countess of Suffex, who bequeathed five thousand pounds for the building and endowing this college, for the maintenance of a master, ten fellows, and twenty scholars, to be called by the name it now bears.

In consequence of this will, a college was soon after built by the countess's executors, upon the spot where a monastery of Franciscans, commonly called Grey Friars, built by king Edward I. had formerly flourished; but the generous gift of this lady was insufficient to fulfill her good intentions: the deficiency, however, was so far supplied by the liberality of her executors, Henry Grey, earl of Kent, and John lord Harington, that it immediately received a master, eight fellows, and twenty scholars. Sir Francis Clerk was afterwards a great benefactor to this college; he not only made a considerable addition to the building, but likewise augmented the scholarships, by founding four fellowships, and eight scholarships more; and Sir John Brereton left it, by will, two thousand pounds. It now maintains a master, twelve fellows, and twenty-eight scholars.

The whole number of fellows is four hundred and six, and of scholars, six hundred and sixty; besides which, there are two hundred and thirty-six inferior officers and servants of various kinds: these are all maintained upon the foundation. The whole number of students belonging to the university are not, however, here included: there are two sorts of students, called Pensioners, the greater, and the less; the greater pensioners are in general the young nobility, and are called Fellow Commoners; because, though they are scholars, they dine with the fellows: the less, called Commoners, are dieted with the scholars, but both live at their own expence. There are also a considerable number of poor scholars, called Sizar, who wait upon the fellows, scholars, and pensioners of both ranks, by whom they are in a great degree maintained; but the number of these it is impossible to ascertain, being in a state of perpetual fluctuation.

The university, by a special grant of Henry VI. has the privilege of printing books of every kind at their own press.

The schools of this university were at first in private houses, hired from ten years to ten years for that purpose, by the university; in which time they might not be put to any other use. Afterwards public schools were built at the charge of the university, in or near the place where they now stand; but the present fabric, as it is now built of brick and rough stone, was erected partly at the expence of the university, and partly by the contributions of several benefactors.

The University Library was first built by Rotheram, archbishop of York, who, with Tostal bishop of Durham, furnished it with choice books, few whereof are to be found at present: but it contained, nevertheless, about fourteen thousand books, when his late majesty king George I. was graciously pleased, in the beginning of his reign, to purchase the large and curious library of Dr. John Moor, bishop of Ely, who died on the thirtieth of July, 1714; and, as a mark of his royal favour, to bestow it upon this university.

There have been very lately great additions and alterations made in the library, for the better disposition of this valuable royal present, which consisted of upwards of thirty thousand volumes, and cost the king six thousand guineas. And we cannot but observe, in this place, that the late lord viscount Townshend, having understood that the university, to shew their gratitude, and do honour to the memory of his late majesty king George I. intended to erect a statue of that monarch, was pleased to offer to cause the same to be carved, and set up in the said library at his own expence; which generous tender was received by the university in the manner it deserved, and with circumstances equally to their

their own and his lordship's honour. And in the month of October 1739, in pursuance thereof, a fine marble statue of this great prince was accordingly erected in the senate-hall of King's College; on which are the following inscriptions, viz. On the front:

GEORGIO
Optimo principi,
Magnæ Britanniæ regi,
Ob insignia ejus in hanc academiam
Merita,
Senatus Cantabrigiensis
In perpetuum
Grati animi testimonium
Statuam
Mortuo ponendam
Decrevit.

That is,

By the senate of Cambridge it was decreed, that a statue should be erected to his late most excellent majesty George I. king of Great Britain, as a perpetual monument of their gratitude for his signal benefits to this university.

On the Left:

CAROLUS
Vicecomes TOWNSHEND,
Summum tum academix, tum
Reipublicæ decus,
Pro eximia, qua regem coluerat,
Pietate, proque singulari,
Qua academiam foverat,
Caritate, statuam
A senatu academico decretam
Sumtibus suis e marmore
Faciendam locavit.

That is,

Charles lord viscount Townshend, a principal ornament both of the university and the state, agreeably to his singular loyalty towards his prince, and the particular affection wherewith he had favoured the university, engaged to have the statue, which was decreed by the senate of Cambridge, made of marble at his own expence.

CAROLUS filius
Vicecomes TOWNSHEND,
Virtutum æque ac honorum
Paternorum hæres,
Statuam,
Quam pater morte subita abreptus
Imperfectam reliquerat,
Perficiendam,
Atque in hoc ornatissimo
Academix loco collocandam,
Curavit.

Charles the son, lord viscount Townshend, heir alike to the virtues and dignities of his father, caused this statue, which his father, surpris'd by sudden death, had left imperfect, to be completed, and erected in this most honourable place of the university.

The same beneficent king, not contented with having given this noble instance of his royal bounty to the university of Cambridge, in the year 1724, was graciously pleas'd to confer another mark of his favour upon them, and which extended to the university of Oxford; in creating a new establishment in a most useful branch of learning, which was much wanted, and for which, till that time, there had been no provision: this was to appoint two persons, not under the degree of master of arts, or bachelor of laws, skilled in modern history, and in the knowledge of modern languages, to be nominated King's Professors of Modern History, one for the university of Cambridge, and the other for that of Oxford; who are obliged to read lectures in the public schools, at particular times; each of which professors to have a stipend of four hundred pounds *per annum*, out of which each professor is obliged to maintain, with sufficient salaries, two persons at least, well qualified to teach and instruct in writing and speaking the said languages, *gratis*,

twenty scholars of each university, to be nominated by the king, each of which is obliged to learn two, at least, of the said languages.

The same excellent prince also was pleas'd to appoint twelve persons, chosen out of each of the universities, to be preachers in the royal chapel of Whitehall, at stated times, with handsome salaries; and declared, that he would cause a particular regard to be had to the members of the two universities, in the dispositions of those benefices which fell into the royal gift.

Some other benefactions to this university, within these few years past, are as follow:

Dr. John Woodward, who died on the twenty-fifth of April 1728, left to the university of Cambridge a sum of money, for erecting a professorship for Natural Philosophy, with a provision of one hundred and fifty pounds *per annum* for the support and maintenance of the same for ever. He likewise bequeathed to the said university his collection of fossils, and other natural curiosities; and such a part of his library, moreover, as was necessary to illustrate his said collection.

On the death of Mrs. Addenbroke, (March 1720) widow of an eminent physician of that name, the sum of about four thousand pounds devolved to this university; which, by the doctor's will, were to be applied to the building and furnishing a physical hospital in Cambridge, in which poor diseas'd people were to be admitted for cure, *gratis*. The master and fellows of Catharine-hall were appointed trustees of this charity.

In the centre, on the south side of the senate-house; opposite to the statue of George I. already described, is another noble statue of George II. erected by the late duke of Newcastle, then chancellor of the university. On the front of the pedestal is the following inscription:

GEORGIO SECUNDO
Patrono suo, optime merenti,
Semper venerando;
Quod volenti populo,
Instititissime humanissime,
In pace, & in bello.
Feliciter imperavit;
Quod academiam Cantabrigiensem
Fovit, auxit, ornavit;
Hanc statuam
Æternum, faxit Deus, monumentum,
Grati animi in regem,
Pietatis in patriam,
Amoris in academiam,
Suis sumptibus, poni curavit,
THOMAS HOLLES
Dux de Newcastle.
Academix Cancellarius,
A. D. M. DCC. LXVI.

Cambridge is supposed to have risen out of the ancient Camboritum, or Grantcester, from one of which names it is thought originally to have derived that which it bears at present. This place was a fortified town in the time of the Saxons; and being afterwards seized by the Danes, they kept a garrison there till the year 921, when they were driven out by Edward the elder. Towards the end of the eleventh century, William the Conqueror built a castle here, which is said to have been a large, strong, and stately building; some traces of it are still to be seen, and the gate, which remains intire, is now the county gaol. In the succeeding reign of William Rufus, the town was burnt by Roger de Montgomery, to revenge a supposed injury he had received from the king; but Henry I. the successor of Rufus, rebuilt it, and made it a corporation. During the civil contentions, called the Barons Wars, which happened in the twelfth century, it was often ravaged by outlaws, who took refuge in the Isle of Ely; but king Henry III. about the year 1219, secured it against these incursions, by a deep trench, which in Camden's time was called the King's Ditch; but houses having been since built on both sides of it, the name was at length forgotten.

There is also an artificial mount of considerable height, flat on the top, but steep on the sides, and surrounded by a deep ditch. In the reign of Richard II.

near the end of the fourteenth century, during the insurrection of Wat Tyler and Jack Straw, a rebellious rabble entered this town, and burnt the records of the university in the market-place. The round church in this town is thought to have been a synagogue of the Jews, who having been invited hither by the Conqueror and his successor, settled here, and were very numerous for many generations, and inhabited all that part of the town which is now called the Jewry.

Of the antiquities of the university of Cambridge, there are many accounts manifestly fabulous, and many more of doubtful authority.

There is an history of the origin and antiquities of the university of Cambridge by Nicholas Cantalupe, who is said to have been a Carmelite friar of Northampton, and to have died at that place on the twenty-seventh of September, 1441. The account given by Cantalupe, who has always been considered as a fabulous writer, is in substance as follows :

In the year of the world 4321, being three hundred and seventy-five years before the Christian æra, Gurgunt, the son of Belin, who was then king of Britain, sailed with a fleet to Denmark, the Danes having refused the tribute which they had paid to his father.

When he had reduced the Danes to subjection, he embarked again for England; and as he was returning by the Isles of the Orcades, he discovered thirty ships full of men and women. Upon enquiring who they were, he learned that they were the relations and friends of Partholaym and Canteber, two brothers, the sovereigns of Cantabra in Spain, who had been expelled their country by their people. When Partholaym and Canteber discovered Gurgunt to be king of Britain, they apologized for being found so near his coast, by assuring him that they had been driven about upon the ocean, without knowing whither they went, near a year and a half, and earnestly intreated him to allot them some small part of Britain for an habitation. Gurgunt, taking pity on their distress, sent Partholaym, with his fleet of fugitives, to settle in Ireland, which was then desolate; and brought Canteber with him to England, because he understood, that though a Spaniard, he had been educated at Athens, and was a great scholar. How these Britons and Spaniards came so readily to understand each other, does not appear; however, we are told that Canteber recommended himself so much to Gurgunt, that he gave him his daughter Guenolena to wife, and with her the eastern part of Britain, as a dowry. Canteber soon improved his new territory by planting and building, and founded a large city, which the Britons called Caergrant, from his son the earl of Grantin, but which in Latin was called the city of Cante, from Canteber, the founder, whence it came afterwards to be called Cantebrigia.

To this place Canteber invited many astronomers and philosophers from Athens, and appointed them stipends. The university of Cambridge being thus founded, continued to be a seminary of heathen learning till the time of pope Eleutherius, when two doctors were sent into England, who converted Lucius the king, and baptized three thousand of the philosophers of Cambridge in one day.

In the year 529, king Arthur granted many privileges to Cambridge, by the name of the City of Scholars.

Not long afterwards, Cambridge was totally destroyed, and both the students and citizens extirpated by the Picts and Saxons: but St. Austin, who came into England in 596, established other learned men in this place, to whom Cadwald granted a new charter in the year 685.

Cambridge was again wasted by Hubba, in 869; but was rebuilt, and its privileges restored by Edward the Elder, the son of Alfred, in the year 915. The several charters of Arthur, Cadwald, and Edward, are inserted by Cantalupe: but having thus far gratified the curiosity of the reader, his opinion must be formed by himself.

We have no account of the university of Cambridge generally allowed to be authentic, that goes farther back than the reign of Henry I. who succeeded William Rufus in August 1100. About this time the monastery of Crowland, or Croyland, in Lincolnshire, being con-

sumed by fire, Joffred, or Geoffrey, the abbot, who was possessed of the manor of Catenham, near Cambridge, sent thither Gislebert, his professor of divinity, and three other monks.

These monks, being well skilled in philosophy and the sciences, went daily to Cambridge, where they hired a barn, and read public lectures: a number of scholars were soon brought together, and in less than two years, they were so multiplied, that there was not a house, barn, or church in the place, large enough to hold them. Inns and halls were soon after built for the accommodation of the students, with chambers, which exempted them from the high rents which the townsmen had taken occasion to exact; the scholars were then divided into different classes. The boys and young men were assigned to friar Odo, an excellent grammarian and satyric poet, who read them lectures in grammar early in the morning. At one o'clock, Terricus, another of the monks, read Aristotle's Logic to a second class: at three, friar William read Tully's Rhetoric and Quintilian's institutions to a third; and Gislebert, the principal master, preached to the people on all Sundays and holidays.

The society, still increasing, was called an University, before any college was founded for the scholars, or any pecuniary encouragement given to the institution, as appears by a record in the Tower, of the fifty-second of Henry III. which was in the year 1268, where it is styled *Universitatis Scolarium*, though Robert of Remington says, "Grantbridge was from a study made an university like Oxford, by the court of Rome, in the reign of Edward I." But at whatever time it was first considered as an university, it is certain that the first college was founded in 1257, by Hugh Balsbam, then prior of Ely, who endowed it in 1284, the twelfth of Edward I. when he was become bishop of that diocese, for a master, fourteen fellows, two students in divinity, and eight poor scholars, directing the number to be either increased or diminished, as the revenue should be improved or abated.

At Cambridge there were many religious houses, both for monks and nuns. There was a Benedictine nunnery near Greencroft, so early as 1130; which being afterwards forsaken, was converted into the college now called Jesus College; the revenue of which, at the dissolution, was no more than eighty-seven pounds eighteen shillings and three-pence *per annum*. There was an old hospital for a master and brethren, founded in the time of Niggellus, who was bishop of Ely in the reign of Henry II. to the honour of St. John the Evangelist; the revenue of which, just before the dissolution, was valued at eighty pounds one shilling and ten-pence *per annum*. It was dissolved by Henry VII. for the irregularity of the members, and the site was granted to the lady Margaret, countess of Richmond, who made it the foundation of St. John's College. There was also a house of Mendicant Franciscan friars, commonly called Grey friars. These friars were first placed in an old synagogue near the common prison, by the magistrates of the town, in the time of Henry III. and were afterwards removed to the spot on which Sidney College has been since built. The original founder is said to have been king Henry III. and Edward I. was probably the donor of their new situation. Another order of Mendicant friars, called Bethleemites, fixed themselves in a house in Trumpington-street, about the year 1257. In the same street also stood a house and church of Friars de Penitentia Jesu Christi, who were founded by Henry III. and continued till the suppression of the order at the council of Lyons in 1307. A priory of Black Dominican, or Preaching Friars, was founded in this town by the charity of several devout people, before the year 1275, and was much enlarged by Alice, the widow of Robert de Vere, the second earl of Oxford. The revenue does not appear. The friars Heremites, of the order of St. Augustine, had a house in or near the Peas Market, in St. Edward's parish, about the year 1290: the founder was Sir Jeffrey Picheford, knight. The value does not appear. About the year 1291, a convent of White canons from Semplingham, settled themselves at the old chapel of St. Edmund the King, over against Peter-House, which they had of B. fil. Walteri. The annual value, at the dissolution, was

was fourteen pounds eight shillings and eight-pence. About the year 1324, Herveus de Stanton, chancellor of the Exchequer, founded a college for a master and several students, to the honour of St. Michael. This, with all its revenues, valued at one hundred and twenty-four pounds fifteen shillings and six-pence *per annum*, was included in the royal foundation of Trinity College, by Henry VIII. in 1546.

Cambridge sends four members to parliament, two for the town, and two for the university; has two weekly markets, on Wednesday and Saturday; and an annual fair on the twenty-fourth of June, for horses, wood and earthen ware.

At Denny, not far from Cambridge, some Benedictine monks from Ely had a house and church, dedicated to St. James and St. Leonard, before the year 1169: in the next century they were succeeded by Templars; and in the century following, by nuns; for the manor of Denny being given by Edward III. to Mary de St. Paulo, widow to Adomare earl of Pembroke, she founded a monastery for an abbess and nuns Minorites, to the honour of the Blessed Virgin and St. Clare; and to this monastery another from Waterbech was soon united. At the general dissolution, there were in the abbey of Denny twenty-five nuns, who were endowed with lands to the value of one hundred and seventy-two pounds eight shillings and three-pence *per annum*.

At Great Wilberham, a little to the north-east of Cambridge, there was a habitation of Knights Templars, which, with their other estates, came into the possession of the knights of St. John of Jerusalem.

At Horningsey, near Cambridge, there was a monastery of some note in the time of the early Saxons, which, after its destruction by the Danes, was never rebuilt.

At Chatteris, near Yarter's Bridge in the fens, a nunnery of Benedictines was founded to the honour of the Blessed Virgin, by Alswin, wife of Ethelston earl of the East Angles, and nurse to king Edgar about the year 980. At the suppression, it was endowed with ninety-seven pounds three shillings and four-pence *per annum*.

There was an old nunnery at Ellesly, now called Ellisley, or Ellsey, near St. Neats, in the neighbourhood of Cambridge. This structure was destroyed at the Conquest.

Near the town of Cambridge is Grantchester, an obscure village, which Bede, an ecclesiastical historian in the year 700, says, was in his time a little desolate city. It is thought to have been the Camboritum of the Romans, and that it was the origin of Cambridge, as we have already observed.

About a mile north-west of Cambridge, is the village of Barnwell, remarkable for its abbey, built by St. Payne, or Paganus Pavarel, standard-bearer to Robert duke of Normandy in the Holy War; but we have no account when it fell to decay. It was dedicated to St. George and St. Andrew, and endowed for six canons regular. Near this abbey he built a handsome church; and as the revenues were afterwards enlarged, the number of canons was increased to thirty, who had the power of chusing their own prior with the patron's leave and approbation. At the dissolution, the annual revenues amounted to two hundred and fifty-six pounds eleven shillings and ten-pence.

One of the most remarkable events that appears to have happened in this county, except those of a public nature, fell out in this village on the eighth of September, 1727. Some strollers having brought hither a puppet-show, the performance was exhibited in a large thatched barn; but just as the show was about to begin, an idle fellow attempted to enter the barn without paying, which the owners of the show prevented, and a quarrel ensued. After some altercation, the fellow departed, and the door being fastened, all was quiet; but this execrable villain, to revenge the supposed injury he had received from the show-men, went to a heap of hay and straw which stood close to the barn, and secretly set it on fire. The spectators of the show, who were in the midst of their entertainment, were soon alarmed by the flames, which had now communicated themselves to the

barn. In this sudden terror, which instantly seized the whole assembly, every one rushed towards the door, which unfortunately happened to open inwards; and the crowd that was behind still urging those that were before, they pressed so violently against it, that it could not be opened; and being too well secured to give way, the whole company, consisting of more than one hundred and twenty persons, were kept confined in the building till the roof fell in, which covered them with fire and smoke: some were suffocated in the smoldering thatch, and others were consumed alive in the flames: six only escaped with life; the rest, among whom were several young ladies of fortune, and many innocent children, were reduced to one undistinguishable heap of mangled bones and flesh, the bodies being half consumed, and totally disfigured. The surviving unhappy friends of the dead, not knowing which were the relics they sought, a large hole was dug in the church-yard, and all were promiscuously interred together. As it is not easy to conceive any circumstances of greater horror and distress than those which attended this catastrophe, neither is it possible to form an idea of wickedness more aggravated than what concurred in the perpetration of it.

The favour which was refused, was such as the wretch had neither pretence to ask, nor reason to expect. The barn which he fired did not belong to the man who had offended him; and the people who were in it were admitted only on such terms as he refused to comply with; he had therefore no provocation, either to envy or malice; yet he was guilty of a crime, which only a diabolical excess of both could commit.

It might reasonably have been supposed, that indignation would have prompted the first relators of this event to have expressed some satisfaction in the punishment of the criminal, or some regret at his escape; and that this particular would, from the same emotion, have been constantly preserved with the story; yet this interesting circumstance is wholly omitted.

There is in the neighbourhood of Cambridge, on the east side, a village called Stourbridge, from the little brook Stour, or Sture, which runs by it. Here was formerly an hospital for lepers, called St. Mary Magdalen's. It was leased by Henry VIII. at the dissolution, to the town of Cambridge; but the annual value does not appear.

This village is remarkable for a fair, which was once the greatest temporary mart in the world, and is now so considerable, as to deserve particular notice. It is held in a corn-field about half a mile square, which is covered with booths, that are built in regular rows, and divide the area into many streets, which are called Cheapside, Cornhill, the Poultry, and by the names of many other streets in London, to distinguish them from each other. Among these booths, there are not only warehouses and shops for almost every kind of commodity and manufacture, but likewise coffee-houses, taverns, eating-houses, music-shops, building for the exhibition of drolls, puppet-shows, legerdemain, wild beasts and monsters. There is an area of about an hundred yards square, called the Duddery, where the clothiers unload, that is scarce inferior to Blackwell Hall; and in this place woollen goods have been sold to the value of one hundred thousand pounds in a week; and the manufacturers of Norfolk, Suffolk, and Essex, generally lay out sixty thousand pounds in wool. The upholsterers and ironmongers wares amount to a considerable sum, and hops to still more, the price of which, all over the kingdom, is generally settled at this fair; and large commissions are negotiated for all parts of the kingdom. This fair begins on the eighth of September, and lasts a fortnight. The last day is appropriated to the sale of horses, and to horse and foot races, for the diversion of the company.

The heavy goods from London are brought by sea to Lynn, in Norfolk, whence they are carried in barges up the Ouse to the Cam, and so to the fair. The concourse of people, whom business and idleness concur to bring to this place, is so great, that not only Cambridge, but all the neighbouring towns and villages, are full; and even the barns and stables are converted into drinking-rooms and

and lodgings for the meaner sort of people. More than fifty hackney coaches from London have been frequently found plying at this place; and even wherries been brought from the Thames in waggons, to row people up and down the Cam. Yet, notwithstanding the multiplicity of business, and the concourse of people, there is very seldom any confusion or disorder, by which either life or property is endangered; for a court of justice is held here every day by the magistrates of Cambridge, who proceed in a summary way, and with such steadiness and diligence, that this fair is in many respects like a well ordered city.

Near this place there is an excellent causeway, which reaches near four miles, and was begun by Dr. Hervey, master of Trinity Hall, and finished by William Wortes, Esq; of Cambridge.

Anglesea Abbey, seven miles north-east of Cambridge, received its name from a priory of Augustine canons. The real founder of it is not known: some affirm it to have been Richard de Clare; others suppose it was his kinswoman, Elizabeth de Burgo; and others again, king Henry I. perhaps they might all, at different times, be benefactors to it. It was dedicated to the Blessed Virgin and St. Nicholas; and there were, at the dissolution, eleven canons in it, the annual revenue being estimated at one hundred and seventy-one pounds four shillings and six-pence.

Near the bridge at Wittlesford, a village south of Cambridge, in the road from London to Newmarket, there was an hospital as early as the time of Edward I. It appears to have been founded by one William Colville, and was dedicated to St. John the Baptist.

At Trumpington, about one mile distant from Cambridge, there is a place called Dam Hill, where a great number of human bones have been found, and many urns, pateras, and other Roman antiquities.

About a mile north of Cambridge, at a place called Arbury, or Arborough, there are the remains of a Roman camp, in a figure inclining to a square, and of a very considerable extent. In this camp there have been found many Roman coins, particularly one of silver, with the head of Rome on one side, and Castor and Pollux on horseback on the other. Near this spot is the place called Chesterton, probably from this camp, or castrum.

Opposite Arborough, to the south-east of Cambridge, and at a small distance from it, are certain hills, called by the students of the university, Gog Magog Hills. On the top of these hills there is an intrenchment of a rude circular figure, which is two hundred and forty-six paces in diameter: it is fortified with three rampires, having two ditches between them, after the manner of those times; and it is supposed, that if it could have been supplied with water, it would at that time have been impregnable.

Some have imagined this camp to be Roman, as the Romans did not always reject a circular figure, when the situation made it more convenient than another. Others think it was a summer retreat of the Danes, who are known to have committed great barbarities in this country: and some are of opinion, that the work is British, and was thrown up to check the Romans, who were encamped at Arborough, over-against it. Gervase of Tilbury, an historian of the thirteenth century, thinks it was a camp of the Vandals, when they destroyed the Christians, and desolated great part of the country; he therefore gives it the name of Vandelbiria, which has since been corrupted into Wandlebury. Gervase relates also, that this place was haunted by some perturbed spirit, which assumed the appearance of a man in complete armour. Near this camp, from the brow of the hill southward, there runs a Roman way; and in the year 1685, many Roman coins were found in an adjacent spot.

Royston is a market-town, distant from London thirty-eight miles, situated partly in Cambridgeshire, and partly in Hertfordshire: a particular description of it has already been given in Hertfordshire.

Caxton is a small town, distant from London fifty miles. It is remarkable for nothing but being the birth-

place of William Caxton, the first who practised the noble art of printing in this kingdom: he took his surname from this place, where he died in the year 1486. Matthew Paris, the historian, was likewise born here.

The Roman high way, called Ikenild Street, runs through this town to Royston.

Here is a weekly market on Tuesday, and two annual fairs, viz. the fifth of May, and the twelfth of October, for pedlary.

Curious PLANTS found in Cambridgeshire.

Common Stone Basil; *Acinos multis*, J. B. found in the plowed land, on the borders of Gog Magog hills, and Newmarket heath.

Upright male Speedwell; *Veronica mas erecta*, C. B. Grows in several places on Newmarket heath.

The true Saffron; *Crocus sativus*, C. B. cultivated in this county, and is a plant of value.

Water Sengreen, or fresh water Soldier, or water Aloe; *Aloe palustris*, C. B. grows plentifully in the rivers and fen ditches, in the Isle of Ely.

Fine leaved Chickweed; *Alfane foliis minoribus*; met with on the corn fields of Tripoly heath.

Long leaved rough Chickweed, with a large flower; *Alfane pilosa foliis longioribus flore majore*; frequently met with in several parts of the county, on heaths and dry banks, among bushes, and in gravelly grounds.

Round leaved water Pimpernel; *Samolus valerandi*, J. B. found in the ditches, in Trumpington Moors.

Female blue flowered Pimpernel; *Anagallis cœrulea flore*, C. B. The plant is very rare, but found near Iliston, in Chesterton hundred.

Goose Grass with a smooth seed; *Aparine semine levi*, Tourn. grows commonly among the corn, especially in chalky grounds.

Violet coloured horned Poppy; *Glaucium flore violaceo*, Tourn. grows in the corn fields between Swaffham and Burwell.

Marsh St. Peterwort, with hoary leaves; *Ascyrum palustre foliis hirsutis*; grows on boggy grounds near Gamlinghay.

Marsh Twy blade; *Ophys bifolia pratensis*; found in the same places.

Yellow sweet or musk Orchis; *Orchis odorata moschata sive monorchis*, C. B. found at Cherry-hinton, and in pits above Gog Magog hills.

Green winged humble bee Satyrion; *Orchis sive Testiculus sphaegodes hirsuto flore*, J. B. found near Shelford, in the foot-way from Trumpington.

Fly Orchis; *Orchis muscam referens*, C. B. found on the banks of the Devil's Ditch, on Newmarket heath.

Dwarf Orchis; *Orchis minor Zealandiæ*; found in watery places in Hinton and Feverham moors.

Little purple flowered Dog-stone; *Orchis minima flore purpureo*; grows on Gog Magog hills, and Newmarket heath.

Woolly headed Thistle, or Friars Crown; *Carduus eriocephalus*, Dod. grows about Madingley, Childerley, Kingston, and other parts of the county.

Maiden Pink, or Mated Pink; *Caryophyllus minor repens*, Raii. found near Hilderham.

Purple flowered great Bastard Parsley; *Caucalis major flore purpureo*; frequently grows among the corn in this county.

The least cut leaved wild Lettuce; *Prenanthes minima foliis dentatis*; found in a little lane near Cambridge, leading from the London road to the river.

Great jagged Fleabane; *Conyza major vulgaris*, C. B. grows in the fen ditches about Merth and Chateris, in the Isle of Ely.

Marsh Fleabane, or Birds Tongue; *Conyza palustris*; found in the same places.

The least Bindweed, or Gravel Bindweed; *Convolvulus minor arvensis*, C. B. met with among the corn between Harleston and Little Eversden.

Sweet Willow, Dutch Myrtle, or Gale; *Gale frutex odoratus Septentrionatum*, J. B. grows in the fens of the Isle of Ely.

Horsetail water Millfoil; *Achillea, equisetia aquatica*; grows in almost all parts of the county, in slow or stagnating water.

Hooded water Millfoil; *Achillea velata aquatica*; found in several of the fen ditches.

Bush-headed horse-shoe Vetch; *Ferrium equinum Germanicum Siliquis in summitate*, C. B. grows on Gog Magog hills, and Newmarket heath.

Bloody Cranebill, with larger, paler, and more deeply divided leaves; *Geranium hæmatodes foliis majoribus pallidis, et valde dentatis*; grows on the banks of the Devil's Ditch.

Wild Liquorice, or Milk Vetch; *Astragalus luteus perennis procumbens vulgaris silvestris*, Mor. found near the castle hill, at Cambridge.

Mountain Cudweed, or Catsfoot; *Elichrysum montanum longiore, et folio, et flore albo*, Tourn. found on Newmarket heath.

Herb Paris, True-love or One berry; *Paris foliis quaternis*; found in Kingston and Everiden woods.

The everlasting Pea, or chichling Vetch; *Lathyrus latifolius*, C. B. grows naturally in Mainerly wood.

Wild perennial blue Flax, with larger heads and flowers; *Linum perenne, majus cæruleum, capitulo majore*, Mor. grows on the borders of the corn fields, about Gog Magog hills.

Wild perennial blue Flax, with smaller heads and flowers; *Linum perenne, cæruleum capitulo et flore minore*; found in the same part of the county.

Medic vetchling, Cockhead, or wild Saintfoin; *Onobrychis Sylvestris*; grows on Gog Magog hills.

Great Burnet Saxifrage; *Tragose linum majus, umbellâ Candidâ*, Tourn. found in coples, about Hatley St. George.

Common or English Pasque flower; *Pulsatilla folio crassiore et majore flore*, C. B. grows in plenty on Gog Magog hills.

Water Germander; *Scordium*, C. B. found in many ditches in the Isle of Ely.

Deadly Night Shade; *Solanum Lethale*, Clus. This noxious plant, which is a strong poison, grows in the lanes about Fulborn.

Sage leaved black Mullein; *Verbascum nigrum flore ex luteo purpurascente*, C. B. found in many places about Gog Magog hills.

Of the ancient INHABITANTS of Cambridgehire.

Cambridgehire is one of the counties which were inhabited by the Iceni; but under what division this and the other counties inhabited by the same people fell, when Britain became a Roman province, is not certainly known. It is however generally believed to have been Flavia Cæsariensis, though the Notitia of the western empire places the Tribantes and Simeni, or Iceni, in the Britannia Secunda.

We are acquainted by Tacitus, that the Iceni were a courageous warlike people; and that when they submitted to the Romans, they received little damage from them till they were disarmed by Ostorius, in the reign of Claudius: this provoked them to rebel; and then the Romans, breaking through their fortifications, killed great

numbers of them, and compelled them to subjection. However, in thirty years time, they threw off the yoke; Prasutagus, king of the Iceni, being willing his family should live in peace after his death, bequeathed his kingdom to the emperor Nero; the centurions paying no regard to his will, ravaged the country, plundered his house, whipped his wife Boadicea, ravished his daughters, disinherited the principal men, and treated the royal family as slaves. This usage caused the Iceni to take up arms again; and they invited the Trinobantes, and others, to their assistance, who were weary of the Roman yoke. Boadicea placed herself at the head of the British army, and fell upon the Romans with irresistible fury: she slew eighty thousand of them, ravaged their colony at Camalodunum, now Malden, in Essex; as also at Verulam, near St. Albans, in Hertfordshire: she also routed the ninth legion, and put the procurator, Catus Decianus, to flight. Paulinus Suetonius, the Roman lieutenant, was absent at that time; but after his return, he got together an army, and marched against Boadicea, who was at the head of two hundred and thirty thousand Britons. He came off conqueror; upon which, some say, the queen died of grief, but Tacitus affirms it was by poison. After this they remained quiet, under the government of the Romans, till the Saxons infested the sea-coasts.

These people at first acted as pirates, and gave great proof of their courage; but when the Britons were plundered by the Picts and Scots, they sought for the assistance of the Saxons, who soon vanquished their enemies; but after this, settled themselves first in one part of this island, and then in another, till at length they got possession of the south part, now called England, and divided it into seven kingdoms. Cambridgehire became part of the kingdom of the East Angles; and Uffa, a great Saxon commander, was the first king. Besides this county, it also included Huntingdon, Norfolk, and Suffolk. This island was next invaded by the Danes, who conquered and kept possession of it fifty years, till Edward the Elder regained it from them by force, and added this county to his own kingdom of the West Saxons. He and his successors put it in the hands of deputies; and one of these was Ralph, a Briton, who was possessed of it when William the Conqueror invaded this island. He was one of those who conspired against the Conqueror; but his design being discovered, William seized on several of his confederates, many of whom he beheaded; but Ralph himself fled: however, he was deprived of his honour, and afterwards attainted.

The fenny country was, in the time of the Saxons, inhabited by a people distinguished by the name of Girvii or Fenmen; and the country in general was then in such a condition, that they used to walk about their business aloft, on a kind of stilts. Camden says, they were a rugged, uncivilized race, full of envy, for the more advantageous situation of their neighbours, whom, for the sake of distinction, they called Upland-men.

MEMBERS of PARLIAMENT for this County.

This county sends two members to parliament; two knights of the shire, two burgeses for the town of Cambridge, and two representatives for the university.

B E D F O R D S H I R E.

BEDFORDSHIRE is bounded on the north by the counties of Northampton and Huntingdon; on the east, by Cambridgehire; on the west, by Buckinghamshire; and on the south, by Hertfordshire. It is of an oval form, being about twenty-two miles long, about fifteen broad, and nearly seventy-three in circumference; and Ampthill, a market-town, and the most central in the county, is distant about forty-three miles north-west of London.

R I V E R S.

The principal river of this county is the Ouse, or Ise, which enters it on the west side, and after many meanders, leaves it on the east. It is navigable all the way, and divides the county into two parts, of which that to the south is most considerable. In its course it is joined by a small stream, called the Ivel, which runs through part of the county from north to south.

The Ouse, or Ise, is supposed to receive its name from Isis, a name of Proserpine, an infernal goddess, whom the ancient Britons worshipped; and it was very usual for the ancient Heathens to consecrate rivers, as well as woods and mountains, to their infernal deities, and call them by their names.

Remarks on the INLAND NAVIGATION of Bedfordshire.

The Ouse is the only river navigable in this county, the navigation of which is continued to Bedford, from its mouth, at King's Lynn, in Norfolk. This navigation is of the utmost importance to the county, as all kinds of heavy goods, particularly coals, are brought to Bedford and the neighbouring places, at a very small expence: but the navigation is very incomplete, and consequently, often tedious; it might, however, be easily improved, and extended to Newport Pagnel, in Buckinghamshire.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air is pure and healthful, and the soil in general a deep clay. The county on the north side of the Ouse is fruitful and woody; on the south side it is less fertile, though not barren. It produces wheat and barley in great abundance, and of an excellent kind: woad, a plant used by dyers, is also cultivated here; and the soil affords plenty of fuller's earth, an article of so much importance to our woollen manufactory, that the exportation is prohibited by act of parliament.

Remarks on the HUSBANDRY of Bedfordshire.

The husbandry in this county is different in different parts. About Luton, they plough three times for wheat, sow two bushels and a half of seed upon an acre, and reap about sixteen bushels on a medium. For barley they stir three times, sow four bushels, and reap on an average three quarters. They give for oats but one ploughing, sow four bushels, and reap two quarters and a half. They plough but once also for pease, sow four bushels, and gain from ten to twenty-four bushels in return. They sow a great many turnips, plough three times, hoe them but once, and reckon the value per acre from thirty-five shillings to three pounds. They feed them all off with sheep. They never plough without four horses and two men, and do but an acre a day: this terrible custom, which is such a bane to the profit of husbandry, cannot be too much condemned; for the whole expence (on comparison with the common custom) of tillage might be saved by the farmer, if he would

adopt the rational method of tilling with a pair of horses, and one man to hold the plough, and drive at the same time. The product of a cow is reckoned here at four pounds ten shillings. The particulars of a farm were

300 Acres in all
280 Arable
20 Grass
50 Of wheat
100 Of spring corn
30 Of turnips
£. 70 Rent
6 Horses
6 Cows
220 Sheep
5 Servants
4 Labourers

L A B O U R.

In winter, one shilling a day.

In hay time, one shilling, and board.

In harvest, two pounds a month, and board.

Reaping, per acre, five shillings.

Mowing corn, one shilling and six-pence.

————— Grass, two shillings.

Hoing turnips, four shillings, and a quart of ale per day.

From Luton we crossed the country, through very bad roads, to Dunstable; the soil continuing a gravelly loam, and the culture pretty good. At that place is a manufacture of basket-work, which they have carried to a great perfection of neatness, and make of hats, boxes, baskets, &c. a large quantity annually, but not a great number of hands are employed by it. From this town to Wooburn, the soil is various; chalk, clay, loam, and sand. At Houghton it is chalk on the high grounds, and a black clay in the low lands. The farms are in size from fifty to three hundred pounds a year; land lets about fourteen shillings an acre. Their course in general is,

1. Fallow
2. Wheat
3. Pease and beans, or oats
4. Turnips
5. Barley

They plough three times for wheat, sow two bushels, and reap, upon a medium, about fifteen bushels. For barley they plough twice, sow three bushels of seed, and reckon twenty-three a middling crop. They likewise stir twice for oats, sow two bushels and a half, which is very little, and get on an average three quarters and a half in return; twenty-four bushels a middling crop. For pease and beans mixed they plough twice, sow three bushels, and get on an average thirty-two in return. When beans alone, they stir twice, sow some broad cast, and some after the plough: two bushels and a half per acre, but never hoe; twenty-five bushels the medium produce. They give two tilths for turnips, hoe them twice, and always feed off with sheep. They plough their land with three horses at length, and use a driver; do an acre and a half a day, in light work. The particulars of a farm as follows:

300 Acres in all
£. 200 Rent
9 Horses
12 Cows
60 Sheep
9 Servants
3 Labourers

L A B O U R.

In harvest, forty shillings a month, board and lodging.
 In hay-time, six shillings a week, and board.
 In winter, six shillings a week, and small beer.
 Reaping per acre, five and six shillings.
 Hoeing turnips, four and five shillings.

We found many variations before we reached Milton in the way to Wooburn; at that place and neighbourhood the soil is a mixture of clay and gravel; farms are in general much smaller than before, from fifty to one hundred pounds a year; land lets at an average of about ten shillings the arable, and from fifteen to twenty the grafs. They plough four times for wheat, sow two bushels per acre, and reap at a medium twenty bushels. For barley also four times, sow two bushels, and reckon three quarters a middling crop. They sow but few oats; when they do, they plough but once, sow four bushels, and reckon four quarters a middling crop. For pease and beans mixed they stir but once, sow four bushels, and gain in return, on an average, three quarters. When they sow beans alone, they plough but once, sow them broad cast, three or four bushels per acre, hoe them sometimes, but oftener turn their sheep in to feed off the weeds. For turnips they stir thrice, hoe once, and feed off with sheep. They use four or five horses in a plough at length, with a driver, but do seldom more than an acre in a day. They reckon the product of a cow at four pounds. The following are the particulars of a farm here:

- 150 Acres
- 120 Arable
- 30 Grafs
- £. 90 Rent
- 9 Horses
- 10 Cows
- 100 Sheep
- 4 Servants
- 2 Labourers
- 30 Acres of wheat
- 30 Barley, &c.
- 40 Beans and pease

L A B O U R.

In harvest, thirty-five shillings a month and board, and carriage of a load of wood.
 In hay-time, one shilling and four-pence a day, and small beer.
 In winter, ten-pence a day, and small beer.
 Reaping wheat, three shillings to four shillings and six pence.
 Mowing grafs, one shilling and four-pence, and one shilling and six-pence.

From Wooburn to Newport Pagnell, the soil has a great variety; for some miles it is quite a light sand, and then a gravel with some light loams. About Wanden the soil is chiefly sand, but few of their farms are very large, they run from thirty to two hundred pounds a year; their field land lets at an average for about seven shillings and six-pence an acre, and their inclosures from ten to twelve shillings. Their course of crops is,

1. Fallow
 2. Wheat or barley
 3. Beans and pease
- And
1. Fallow
 2. Rye
 3. Turnips
 4. Barley

They plow four times for wheat, sow two bushels an acre, and reap on a medium three quarters. For barley they stir four times, sow four bushels, and get in return about three quarters. For oats they plough but once, sow four bushels, and reap at an average three quarters. For pease and beans mixed they likewise plough but once, sow four bushels, their crop not above two quarters and a half. They give but one tilth for beans alone, sow them broad-cast, never hoe them, but turn in sheep to feed off the weeds, and reckon three quarters a middling crop. For turnips they stir three or four times, hoe them twice, reckon the value at about forty shillings

an acre, and feed them off with sheep alone. They use four or five horses at length in their ploughs, and yet do no more than an acre a day: this miserable management cannot be too much condemned. The product of a cow they lay at near four pounds. They let their dairies at three pounds a head. The particulars we gained of a farm, are,

- 100 Acres
- £. 60 Rent
- 8 Horses
- 12 Cows
- 200 Sheep (a walk)
- 2 Servants
- 3 Labourers

L A B O U R.

In harvest, thirty-five shillings the month, and board.
 In hay-time, one shilling a day, and victuals.
 In winter, from eight-pence to one shilling a day, and no beer.
 Reaping wheat, five shillings and six-pence.
 Mowing corn, one shilling and six-pence.
 ——— grafs, two shillings, and two shillings and six-pence.

M A N U F A C T U R E S.

The principal manufactures of this county are bone-lace; and straw-wares, particularly hats. The town of Bedford alone employs above five hundred women and girls in the lace manufacture. They make it of various sorts, up to twenty five shillings a yard: women that are very good hands, earn one shilling a day, but in common only eight-pence, nine-pence, and ten-pence. Girls from eight to fifteen, earn six-pence, eight-pence, and nine-pence a day. This manufacture is of infinite use to the town, employing advantageously those who otherwise would have no employment at all.

P R I N C I P A L T O W N S.

The market-towns are, Potton, Biggleswade, Bedford, Luton, Dunstable, Tuddington, Leighton-Belford, Wooburn, Amphthill, and Bedford.

Potton is esteemed the second town, for magnitude, in this county: there is nothing in it worthy of notice. It is pleasantly situated, and well watered, but the soil about it is sandy and stéril. It is distant from London forty-three miles.

The carcase butchers of this town carry on a great trade, and send a surprizing quantity of veal to the London markets. The weekly market here is held on Saturday, for corn, cattle, and fowls. Here are four annual fairs, viz. the third Tuesday in January, a large horse fair; Tuesday before Easter, the first Tuesday in July, and the Tuesday before the twenty-ninth of October, for all sorts of cattle.

Biggleswade is pleasantly situated on the river Ivel, which is navigable for coal-lighters, and is crossed by a handsome stone bridge. It is distant from London forty-three miles, and five from Bedford; and lies in the high road between London and York. It has many good buildings, and two charity-schools.

Here was formerly a college, dedicated to the Holy Trinity, and valued at seven pounds *per annum*. Here is a weekly market held on Thursday, and six annual fairs, viz. the thirteenth of February, Saturday in Easter week, Whitsun-Monday, the twenty-second of July, St. Simon and St. Jude, and the twenty-eighth of October, for cattle of all sorts.

Sanday, or Salny, three miles north of Biggleswade, supposed to be the ancient Salenæ. Here was once a British fort, near which the Romans had afterwards a camp. Many urns of glass, and one of a red substance like coral, with an inscription, have been dug up in a field called Chesterfield, which is now a gardener's ground. They all contained ashes, and were some years ago in the possession of a gentleman at Bedford. Many Roman coins, and amongst them a brass Otho, with vases, lamps, and urns, were also dug up near the camp, about the year 1670, some of which were presented by Mr.

Thomas

Thomas Cryfty to the university of Oxford. About forty years ago, there was in the possession of the Rev. Mr. Hooker, who was then rector of Sandy, a ring, which had been brought him by a poor woman, who dug it out of the ground as she was weeding. What the substance of the ring was, he could never discover; but he says it was exceeding light, very black, and exquisitely polished. It had a seal, in which was represented a crucifix, with a figure in the posture of worship on each side. Round the seal was written, in letters of gold, *In Hoc Signo Vinces*. The figures of the seal were likewise of the same colour. The fort at Salnay was destroyed by the Danes, when they took winter quarters in this county: their camp was at Tempsford, near the conflux of the Ouse and the Ivel, where they also built a castle, the ruins of which are still to be seen.

About three miles south-west of Biggleswade, lies Warden, at which place there was an abbey of Cistercian monks, founded by Walter Espec in the year 1135, and dedicated to the Blessed Virgin. Its annual revenues are not certainly known; Dugdale rates them at three hundred and eighty-nine pounds sixteen shillings and six-pence; and Speed at four hundred and forty-two pounds eleven shillings and eleven-pence.

At North-hill, about the same distance from Biggleswade, the parish-church, dedicated to St. Mary, was, in the time of Henry IV. made collegiate, and endowed for the support of a master or warden, and several fellows and servants, as an offering for the peace of the souls of Sir John Trolly, knight, and Reginald his son, by his executors. The revenue was sixty-one pounds five shillings and five-pence *per annum*.

Shefford lies between two rivulets, over each of which there is a bridge. In this town, which is distant forty miles from London, the parish of Compton has a chapel of ease. Here is a weekly market held on Friday, and four annual fairs, viz. the twenty-third of January, Easter-Monday, the nineteenth of May, and the tenth of October, for cattle.

Chickland priory, about a mile west from Shefford, was founded by Raife, wife of Paganus de Beauchamp, baron of Bedford, in the reign of king Henry I. for nuns of the order of St. Gilbert of Sempringham, and dedicated to the Blessed Virgin. Paganus and his wife gave divers lands, and bestowed many privileges on this house; which was confirmed by king Edward II. who, in the tenth year of his reign, granted licence to John Blundel, to settle the manor of Chickland, with all its appurtenances, thereon.

We continued our journey from Shefford towards Luton; and in our way passed through Silfoe, formerly a market-town, but the market has been for some time disused: there are, however, still two annual fairs, viz. the twelfth of May, and the twenty-first of September, for all sorts of cattle. In the neighbourhood of this town lies Wrest Park, the seat of the earl of Hardwicke. It formerly belonged to the noble family of Grey, but the male line being extinct, it came to the present noble possessor, who married the present marchioness of Grey.

At Pollux-hill, about a mile from Silfoe, a mine of gold is said to have been discovered in the year 1700, which was seized for the king, and granted by lease to some refiners; who, though they produced gold from the ore, found the quantity so small, that it was not equal to the expence of the separation.

Luton is pleasantly situated between two hills, has a large market-house, and a considerable manufactory of straw-hats. Here is a weekly market held on Monday, and two annual fairs, viz. the twenty-fifth of April, and the eighteenth of October, for cattle of all sorts.

At Farle, near this town, was an hospital, consisting of a master and several brethren, subordinate to the great hospital of Santingfield, in Picardy, to whom the place was given by Henry II. but Henry IV. afterwards granted it to the fellows of King's College, Cambridge.

Barton, a seat belonging to Mr. Wilbourn, eight miles beyond Luton, in the road from London to Bedford, is noted for a petrifying spring.

In the neighbourhood of Luton is Luton Hoo, a seat belonging to the earl of Bute. We entered through the

lodge from the town of Luton, and drove along the banks of the river, which was naturally a trifling stream, but is here now making, and is made further on, the finest water we have any where seen. The plantations on the top of the hills to the right as we entered, are very beautiful; on the left, the winding hollow, which is prettily diversified with scattered trees, is nobly traced for continuing the water, and is a spot wonderfully capable. Where the lake is finished, which is just before you come to the island, the view is very fine; the stream bends in a noble manner, is seen a long way without wanting irregularity, and from its breadth makes a magnificent appearance. The island is large, has many full-grown trees upon it, with young plantations, and adds prodigiously to the beauty of the scene. The road winds among some scattered trees towards the right, the river appearing through them in an elegant manner. There are many very fine beeches as you advance up to the house, from the dark shade of which the water is seen at a distance in a very picturesque manner. When you come pretty near the house (which we should remark; is now rebuilding upon a more extended plan) turning to the right, a gravel road leads down again to the water; it passes through several clumps of beech and other trees, through the openings of which the opposite hills are viewed in a very pleasing stile; the water at the bottom of these hills has a most noble appearance; it is about a quarter of a mile broad, forming a prodigious fine bend, which has a charming effect: two boats, and a sloop with sails and flying colours, lie at anchor here, but are by no means equal to the size of the water. Turning a little to the right, the bridge fronts you; it is of wood, and though ornamented, is light, and has here a good effect. A little further is the cascade, which yet is but a capability; when a little improved, and caught from a proper point of view, will add greatly to the variety of these scenes.

Returning from the water, you take a different road, which leads through a pleasing valley, and gives you a very elegant view of the monumental pillar which is seen among the trees in a picturesque manner. It is a plain one of the Tuscan order, on a square pedestal, upon which is the following inscription:

In Memory of
Mr. FRANCIS NAPIER.

Upon the top is an urn; and although it is quite unornamented, this pillar is peculiarly beautiful; from the road in the valley it appears to great advantage, with that beautiful simplicity which results alone from an harmony of proportion. The urn rests on it with a lightness and airy elegance, that is infinitely pleasing. We do not remember seeing so well proportioned a pillar of this kind. The view from hence is very picturesque; the breaks in the woods are fine; and the hollow dales, grouped with fine beeches, are perfectly rural.

Dunstable is a populous town, thirty-four miles distant from London, built on the spot where two Roman ways, called Watling Street and Icknild Street, cross each other. Watling Street has been thought to derive its name from its remarkable windings. Icknild Street is supposed by some to have been *Icen-elde-street*, the old street of the *Iceni*, a people who anciently inhabited Suffolk, Norfolk, Cambridgeshire, and Huntingdonshire; and this is the more probable, as there appears to have been many ancient ways so called, which would naturally happen as new ways were successively thrown up. There are also several ancient ways called Watling Street, and all of them are remarkably crooked.

Dunstable is situated on a hill of chalk, just at the end of a long ridge of hills called the Chiltern. In this place no springs have ever been found, though they have been sought at the depth of one hundred and fifty feet; yet the neighbourhood is constantly supplied with water from four public ponds, which, though they are reservoirs for the rain, are yet never dry. This place is a great thoroughfare to the northern and western counties. Some have supposed its name to have been derived from one Dun, or Dunninge, a famous robber; but others, with more reason, imagine that its name is from its situation,

situation, as the British word, *Dunnum*, and the Saxon word, *Dun*, signify a hill, or a town on a hill.

The parish-church of Dunstable is the remains of a priory of canons regular, and now consists of many parts of it connected together. It was once a noble structure of very large extent, as appears from the foundation of the walls. It is recorded upon a tomb-stone in this church, that a woman of this town had nineteen children at five births, having been thrice delivered of three, and twice of five. Here is a manufactory of straw-hats, carried on by women, who make many other things of the same materials. This place is remarkable for larks, which are found in the low grounds in amazing quantities, and much larger than in any other part of the kingdom.

King Henry I. built and endowed a priory of Black canons here, to the honour of St. Peter, whose yearly revenues amounted to three hundred and forty-four pounds thirteen shillings and three-pence. There was also at this place a house of Preaching friars, which was established about the year 1259, and valued at four pounds eighteen shillings and four-pence *per annum*. The sentence of divorce of queen Catharine from Henry VIII. was pronounced at Dunstable by bishop Cranmer.

Dunstable has a weekly market held on Wednesday, for corn and cattle; and four annual fairs, viz. Ash-Wednesday, the twenty-second of May, the twelfth of August, and the twelfth of November; all for cattle.

About a mile from this town, on the descent of the Chiltern hills, there is a round fortification, supposed to have been a town of the ancient Britons: it includes about nine acres; the rampart is pretty high, but there is no appearance of a ditch. This place is called Madning-bower, Madin-bower, or Maiden-bower; and coins of the emperors are frequently found here by the peasants, who call them Madning-money. Camden supposes it to have been the Roman station, which Antoninus, in his Itinerary, calls Magionincum, Magiovinium, and Magintum, for which he assigns several reasons; first, it stands upon a Roman way; secondly, Roman coins have been found there; and thirdly, there is a great affinity between the names *Madin-boure* and *Magintum*.

After Magintum was destroyed, either by war or by time, another town was built by Henry I. where Dunstable now stands. In the middle of the town stood one of the crosses which Edward I. erected to the memory of Eleanor of Castile, his first queen. These crosses are pillars adorned with statues. The queen died at Hareby in Lincolnshire, from whence her body was brought, with great funeral pomp, to Westminster; and one of these crosses or pillars was erected in every town where the procession stopped by the way.

In a wood near Market-street, about three miles from Dunstable, was a nunnery of the Benedictine order, dedicated to the Holy Trinity. The site and some adjacent lands were given by the dean and chapter of St. Paul's, London, in 1145; and it was soon after built and endowed by Geoffery, abbot of St. Albans. Dugdale values this nunnery at one hundred and fourteen pounds sixteen shillings and a penny *per annum*; and Speed, at one hundred and forty-three pounds eighteen shillings and three-pence.

At Bushmead, near Dunstable, there was likewise a priory of Black canons, founded by Hugh, the son of Oliver Beauchamp, and dedicated to St. Mary. Its annual revenue is not certainly known. Dugdale rates it at seventy-one pounds thirteen shillings and nine-pence; and Speed, at eighty-one pounds thirteen shillings and five-pence.

Five miles from Dunstable, in the road to the city of Coventry, lies Hoclytt, now called Hockley in the Hole, where there was a master and seven brethren, in the time of king John, dedicated to St. John the Baptist.

Speed mentions a college at Eaton-ford, near Dunstable, dedicated to the Body of Christ; but bishop Tanner is of opinion, this was only a guild, to which belonged one or more chantry priests. The lands were rated at seven pounds sixteen shillings *per annum*.

Tuddington is situated on one of the highest hills in this county, and distant from London thirty-nine miles,

It is remarkable only for a fine seat built by Sir Henry Cheney in the reign of queen Elizabeth, who afterwards created him lord Cheney of Tuddington.

Here is a weekly market on Saturday, and five annual fairs, viz. the twenty-fifth of April, the first Monday in June, the fourth of September, the second of November, and the sixteenth of December; all for cattle.

At Wood-end, in the neighbourhood of this town, stood the seat of Sir Samuel Luke, some time high sheriff of Bedfordshire, and a commander of the parliament forces in the civil wars: it is confidently asserted, he was the Hudibras of the inimitable Putler.

Leighton-Beaufort, vulgarly called Leighton-Buzzard, is thirty-nine miles distant from London, and has nothing in it deserving particular notice. It is supposed to have been the Saxon Lyzeanburgh. Here was formerly a house of Cistercian monks, which was a cell to Wooburn Abbey.

This town has a weekly market held on Tuesday, and six annual fairs, viz. the fifth of February, Tuesday before Easter, Whitfun-Tuesday, the twenty-sixth of July, the twenty-fourth of October, and the second Tuesday in April, for horses, and all sorts of cattle.

At Groverbury, in the parish of Leighton, there was a convent of foreign monks, the manor having been given by Henry II. to the nuns of Fontevralt in Normandy. It suffered the fate of all foreign priories during the wars with France; and after having been several times granted to private persons for life, was at last given to the dean and canons of Windsor in Berkshire, in whose possession it still remains. Within half a mile of Leighton, there are the remains of a Roman camp, a place of eminence even in the remote times of the Saxons.

Wooburn, which we next visited, is a small town, distant from London forty-four miles; and is remarkable only for a manufactory of jockey-caps. It suffered considerable damage by a fire in June 1724, when above one hundred houses were consumed; but it has since been rebuilt, with a handsome market-house. Here is a free-school, and a charity-school for thirty boys and fifteen girls, where they are both taught and clothed. For these, and many other advantages, this town is indebted to the dukes of Bedford.

Here is a weekly market held on Friday, and four annual fairs, viz. the first of January, unless it falls on a Sunday, and then the Monday following, for horses, cattle, sheep, and hogs; the twenty-third of March, the thirteenth of July, and the sixth of October; all for cattle.

In the neighbourhood of this town is Wooburn Abbey, now a seat of his Grace the Duke of Bedford. This abbey was originally built by Hugh Bólbec, in the year 1145, for monks of the Cistercian order. It was dedicated to the Virgin Mary; and the annual revenues, according to Dugdale, amounted, at the dissolution of religious houses, to three hundred and ninety-one pounds eighteen shillings and two-pence: Speed says, they were valued at four hundred and thirty pounds thirteen shillings and eleven-pence. Upon the site of this abbey the present seat is erected.—The house forms a large quadrangle, with a handsome court in the centre; the front to the basin is the best. Behind are two large quadrangles of offices distinct from the house, which are very beautiful buildings; plain and simple, but extremely proper for their destination: they are built like the house, of white stone; in the centre of their principal fronts is a small dome rising over a portico'd centre supported by Tuscan pillars, which have a very good effect. Upon the whole, these are the most elegant detached offices we remember any where to have seen.

In the house you enter first the hall, which, though not a well-proportioned or elegant room, is handsome. It is forty by thirty-seven and fifteen high, the ceiling supported by eight pillars. The chimnies bas relieves in white stone.

The green drawing-room is twenty-two by thirty-five, extremely elegant; between the windows are fine glasses, and two very noble slabs of Egyptian marble. The chimney-piece is of white marble polished, very handsome. Here are three large pictures; the plague of Egypt, dark;

David and Abigail, ditto; as are the colouring and general expression. Two large landscapes, fine.

The decker worked room twenty-five by twenty: nothing can be more elegant than this bed of decker-work lined with green silk; the work is exquisite, and the representation of the birds and beasts in it admirable. The chimney-piece very elegant, the scroll of polished white marble in a light and elegant taste.

The dining-room thirty-five by twenty-two, a very noble room; the chimney-piece very elegant, a festoon of flowers carved in white marble, and finely polished. In this room are four large pictures of the battles of Alexander. The repast is not a disagreeable one, were the heroes grouped with more taste, but they sit at as square a table as any Dutch painter could ever have designed. The opposite piece to it is the best; the group of three horsemen, with a large rock in the back ground, is very fine; the fire and spirit of the horses well done.

In the yellow drawing-room are two portraits by Reynolds; one the late marquis of Tavistock, the other the present dutchess of Marlborough; the latter a very fine one. The chimney-piece is very elegant, and the pier-glass frame finely carved, of plated silver: here is also a portrait of the present duke of Bedford.

The coffee-room thirty by twenty; in this room remember to observe a small portrait of Francis earl of Bedford, which is exceedingly fine, the face and hands admirably painted.

The grotto is pretty of its kind; the rustics are well cut, but the figures of bas-reliefs in shells are strangely incongruous with the idea of a grot. The china jars are very fine.

The billiard-room is hung with very fine tapestry, and designed from Raphael's cartoons.

The dutchess's dressing-room, extremely elegant, hung with embossed work on white paper, which has a very pleasing effect: the chimney-piece a carved scroll in wood, the marble black, and veined: the pier-glass large, and the frame very elegant. Over the chimney, lady Offory, by Hudson. The chairs and sofas of painted tafeta.

The French bed-chamber, twenty-six by twenty-two, exceedingly elegant; the bed and hangings a very rich belmozeen silk. The chimney-piece light and beautiful; the cornice, festoons of gilt carving on a white ground, and the ceiling the same on a lead ground; the pier-glass and frame, and the frame of the landscape over the chimney, very elegant.

The dressing-room, of the same dimensions, is likewise hung with the same silk, the ceiling and cornice richly ornamented with scrolls of gilding on a white ground: the chimney-piece all of white marble polished, but a very quarry for heaviness. The doors, door-cases, and window-shutters, &c. all ornamented like the ceiling, &c. in white and gold. In this room, remember to observe four very large blue and white china jars; the two by the windows are prodigiously fine.

The state bed-chamber is most magnificently furnished. It is thirty by twenty-two, the bed and hangings of very rich blue damask; the ceiling ornamented in compartments of rich gilding on a white ground. The chimney-piece of marble polished, is very elegant, and the carved and gilt ornaments around the landscape over it in a beautiful taste. The toilette is all of very handsome Dresden work, the glass frame and boxes of gold. An India cabinet on each side of old japan, with coloured china jars exquisitely fine.

The dressing-room twenty-one by twenty, hung with green damask; the chimney-piece very handsome; the pier-glass fine.

The drawing-room exceedingly elegant, thirty-three by twenty-two; the ceiling a mosaic pattern of rich carving on a white ground; the chimney-piece excessively handsome, the cornice supported by double pillars of very fine Siena marble. The pier-glasses immensely large, and in one plate; under them most noble slabs of Siena. In this room are several exquisite paintings, particularly a landscape by Claude Loraine, representing a ship partly appearing from behind a building amazingly

beautiful, the diffusion of light, the general brilliancy and harmony of the whole, admirable.

A holy family; very fine, the turn of the boy's head inimitable.

Virgin and child; the air of the Virgin's head, and her attitude, most sweetly elegant and expressive.

A Magdalen; very fine. The inside of a church; the minute expression of the architecture, and the rays of light, finely done.

A rock, with the broken branches of trees hanging from its clefts; (we apprehend by Salvator) the expression very noble, and romantic wildness of the scene most excellently caught.

A holy family; child standing in the cradle: very pleasing.

Joseph interpreting the dreams of Pharaoh, by Rembrandt; most admirable; in a greater style than common with this master.

Rembrandt, by himself; inimitable.

Her Grace presenting lady Caroline to Minerva, by Hamilton; a very large picture, and some of the figures not inelegantly done for this master.

The saloon thirty-five by twenty-two, and of a good height; it is most magnificently fitted up, and elegantly furnished; the ceiling beautiful, of gilt carving on white; the door-case finely carved and gilt, the cornices supported by Corinthian pillars in a noble, but a light and pleasing style; the chimney-piece of white marble beautifully polished: in the centre hangs a magnificent gilt lustre. Remember to observe the picture, representing the last supper; it is fine; the drawing in a free and bold style.

A piece of angels; we imagine by Albano; fine.

Dining-room forty by twenty-two, a very noble room; the ceiling white and gold; the chimney-piece very elegant; over it a landscape, a water-fall, which has merit.

Second drawing-room, twenty square; this, like the rest, is very elegantly fitted up; and among other pictures, contains

Two landscapes, morning and evening, by Marrat; capital.

Lyons, by Rubens; fine.

Two battles, we apprehend by Borgognone.

The picture gallery in three divisions, an hundred by sixteen, ornamented by a vast number of excellent portraits of the Russel family: among others, remark that of the countess of Somerset, the face and hands very finely done; also William earl of Bedford, and lady Catherine Brook, excellent. The ornaments of this room are all carving painted white: there are four statues, among them a Venus of Medicis, but not pleasing; and a Venus plucking the thorn out of her foot, but with none of that expression of pain in her countenance which is so fine in the antique at Wilton.

Woburn park is ten miles around, and contains variety of hill and dale, with prodigiously fine woods of noble oaks. We drove from the house through them towards the south, and looked up the great glade which is cut through the park for several miles, and catches at the end of it a Chinese temple; then winding through the woods, we came to the dutchess's shrubbery, containing sixteen acres of land beautifully laid out in the modern taste, with many most glorious oaks in it. From thence we advanced to the hill at the north end, from which is a vast prospect into Buckinghamshire, Hertfordshire, and Bedfordshire. Turning down the hill to the left, the riding leads to the evergreen plantation of above two hundred acres of land, which thirty years ago was a barren rabbit-warren, but now a very beautiful winter's ride, on a dry soil, with all sorts of ever-greens of a noble growth. About the middle, on the left hand side, is an handsome temple, retired and pleasing. At the end of this plantation, we came to the lower water, which is about ten acres, and in the centre an island with a very elegant and light Chinese temple, large enough for thirty people to dine in; and in the adjoining wood is a kitchen, &c. for making ready the repasts his Grace takes in the temple. In the front of the house is a large basin of water, with several handsome boats; formerly

formerly a large yacht swam in it, but rotting, it has not been rebuilt.

This park, which is one of the largest in the kingdom, contains three thousand five hundred acres of a great variety of soils, from a light sand to a rich loam, which yields grass good enough to fat large beasts: it is all walled in; was there a greater variety of water, it would be much more beautiful, but the nature of the soil in the low parts makes that acquisition very difficult; but what might be much easier gained, are buildings scattered about it, which would give a great and pleasing variety to the rides, and for want of which most of them are very melancholy.

In the parish of Apley-Guise, about a mile and a half from Wooburn, it is said the earth has the peculiar property of turning wood into stone: as a proof of the truth of this report, a ladder was formerly shewn at Wooburn, which having been some time buried in the earth was dug up petrified; but notwithstanding this testimony, the assertion is in general believed fabulous.

In this parish likewise are several pits of fullers earth, called also Wooburn-earth, so essential an article for our woollen manufacturers.

Amphill is delightfully situated between two hills at the distance of forty-three miles from London. Here is a charity-school for the teaching of thirteen poor children; and an hospital for ten poor men, founded and endowed by Mr. Stone, some time principal of New-Inn-Hall, in Oxford. Queen Catharine, after she was divorced, chose this town for one of her retirements: and Camden says, there was in his time a stately royal seat here, surrounded with parks, built in the reign of Henry VI. by John Cornewall, baron of Fanhope; who being attainted in the reign of Edward IV. it was granted to Edmund Grey, lord of Ruthyn, afterwards earl of Kent, from whose grandson, Richard, it came to Henry VIII. who annexed it to the crown, and styled it, The Honour of Amphill.

This town has a weekly market on Thursday, and two annual fairs, viz. the fourth of May, and the eleventh of December; both for cattle.

In the neighbourhood of Amphill is Houghton-Conquest Park, formerly a seat belonging to the countess of Pembroke, built after a model designed by Sir Philip Sidney, in his *Arcadia*. It became afterwards the seat of the earls of Aylesbury, and was sometime since purchased by the duke of Bedford, who gave it to his late son, the much esteemed and justly lamented marquis of Tavistock. It was repaired and ornamented by that great architect, Inigo Jones; but in the year 1765, underwent another reformation, under the inspection of the celebrated Mr. Chambers. There is in this house a capital collection of pictures made by the marquis, when on his travels in Italy. It stands on the side of an hill, and has a very extensive prospect over the rich vale of Bedford. Next the entrance of the park, from Amphill, is a lodge; and near it a pear-tree, in which it is reported the illustrious Sidney wrote his *Arcadia*; and Pomfret, one of our minor poets, his verses. The stairs by which this tree used to be ascended, have, of late years, been removed.

At Milbrook, near Amphill, was a small cell of Benedictines, dedicated to St. Mary, which belonged to the abbey of St. Albans, a market-town of Hertfordshire.

Bedford, the county town, where the assizes are always held, is clean, well built, and populous. Its distance from London is forty-eight miles. It is divided by the Ouse into two parts, which crosses it in the direction of east and west; so that it has, in some respects, the appearance of two distinct towns; the north and south parts are joined by an handsome stone-bridge, on which were formerly two gates, but they were taken down in the year 1765, in order to make the passage over it more commodious. The buildings of this town are in general good, and the streets broad, particularly the high street: it is well inhabited, and contains five parish-churches; St. Paul's, the principal, is a noble structure; St. Peter's and St. Cuthbert's; these are on the north side the river, and St. Mary's and St. John's on the south. Here are

likewise an Independent meeting-house, a Methodist tabernacle, and an elegant chapel for the *Unitas Fratrum*, or Moravians, with apartments for the brothers and sisters. The other public buildings are, a free-school, founded in the reign of queen Elizabeth, by Sir William Harper, a native of Bedford, and some time lord mayor of London: two hospitals, one of them founded by Thomas Anisly, one of their representatives in parliament; a charity-school, an alms-house, and a very elegant sessions-house. Bedford gives the title of duke to the noble family of Russell: it is governed by a mayor, twelve aldermen, a recorder, two bailiffs, two chamberlains, a town-clerk, and two serjeants. The liberties of the corporation extend about nine miles in circuit round the town: a member thereof, many years since, bequeathed a field or two on the spot now called Theobald's Row, Red Lion-street, Eagle-street, and its environs, near Red-Lion-square, London; the leases whereof expiring some years since, the estate is become so considerable, that the corporation obtained an act of parliament to empower them to give portions to servant-maids, for the encouragement of population; fees with poor children, to bind them out to apprenticeships, and other charitable donations. The coal trade here is very considerable, extending above twenty miles distance; and coals are sold in Bedford at all times cheaper than in London, owing to the navigation of the river Ouse, and their not paying the London duties.

Some writers are of opinion, that this town was the *Laetodorum* of Antoninus; but this is not probable, because it neither stands on a Roman military way, nor have any Roman coins been dug up here: it was, however, certainly a place of repute during the Saxon Heph-tarchy, since Offa, a powerful king of the Mercians, chose this spot for the place of his burial. It is said that his tomb was of lead, and that a chapel was built over it; but the Ouse some time afterwards overflowing its banks, swept away both the chapel and tomb.

Bedford having been formerly destroyed by the Danes, was repaired and enlarged by Edward I. surnamed the Elder, in the beginning of the tenth century, who also built a small town on the south side of the river, which was then called Mikegate.

When William the Conqueror had obtained the sovereignty of England, he gave Bedford to Hugh de Beauchamp, who came over with him, and was called Baron of Bedford. Pagan de Beauchamp, a younger son of Hugh, who succeeded his elder brother, and was third baron of Bedford, built a strong castle after the Norman conquest, which suffered greatly in the civil wars that happened afterwards. King Stephen took it in the year 1138, but not till after he had lost many of his men. Milo de Beauchamp maintaining it against him in favour of the king of the Scots, to revenge himself on Stephen, who would have taken the government from him. William de Beauchamp, then lord of the castle, delivered it into the hands of the barons, who took up arms against king John; but in the space of two years, they were forced to surrender it to Fulco de Brent, after a close siege, to whom, for that service, it was given by the above-mentioned monarch. Fulco afterwards rebelling against his prince, the better to fortify his castle, pulled down all the religious houses near the town. Henry III. however, after a siege of sixty days, took it, and hanged William de Brent, Fulco's brother, with twenty-four other knights, on the spot; and immediately ordered the ditches to be filled up, and the works to be demolished; preserving only the inner part of the castle standing, which he gave as a residence to William de Beauchamp, from whom Fulco de Brent had taken it. In Leland's time it was level with the ground, and the site whereon it stood is now a fine bowling-green, shewn to travellers as a great curiosity.

There is now at Bedford a priory or hospital adjoining to St. John's church: it consists of a master, who is rector of the church, and ten poor men. This house is thought by some to have been founded in 980, by one Robert Deparis, who was the first master; but others are of opinion, that it was built and endowed by some townsmen in the time of Edward II. It is dedicated

to St. John the Baptist; and at the dissolution, the yearly value was rated at twenty-one pounds and eight-pence. The patronage is in the mayor, aldermen, bailiffs, and common-council of Bedford.

Some townsmen founded an hospital here, in the fourth part of the town, some time before the thirtieth of Edward I. and dedicated it to St. Leonard. In this hospital there were six chaplains, and the revenue was valued at forty-six pounds six shillings and eight-pence; and in the time of Edward II. Mabilia de Patehall, lady of Bletnehoe, founded a house of Franciscan friars in the north-west part of the town; valued by Dugdale at three pounds thirteen shillings and two-pence; and by Speed, at five pounds *per annum*.

The town of Bedford sends two members to parliament, has two weekly markets, the first held on Tuesday, on the south side of the river, for cattle, &c. and the second on Saturday, on the north side, for corn, &c. and six annual fairs, viz. the first Tuesday in Lent, the twenty-first of April, the fifth of July, the twenty-first of August, the eleventh of October, and the nineteenth of December, for cattle of all sorts.

About two miles distant from Bedford, there were the traces of a castle, called by Leland Risingham-castle, and supposed by him to have anciently belonged to D'Espece, founder of Warden abbey: no part of it was standing in his time; but the area might easily be traced; and the great round hill, where the dungeon stood, was complete. By whom, or when this fortress was built, does not appear.

The religious house, called Newenham, about a mile distant from this town, was the place where Roisia, wife of Pagan de Beauchamp, baron of Bedford, founded a priory of the order of St. Austin, for the reception of the secular canons or prebendaries from St. Paul's, Bedford, which was a college founded before the Norman conquest. These religious were obliged to remove their habitation, because one of them had unfortunately killed a butcher in a quarrel. Simon de Beauchamp, son of Roisia, has by some been considered as the founder of this priory; and was stiled on his tomb, which stood before the high altar of the old church, that was demolished in the time of king John, "Fundator de Newenham." This monastery was dedicated to St. Paul, and according to Dugdale, had yearly revenues to the value of two hundred and ninety-three pounds fifteen shillings and eleven-pence; but Speed says, they amounted to three hundred and forty-three pounds fifteen shillings and five-pence.

At Ellow, about the distance of a mile from Bedford, and opposite to Newenham, was an abbey of Benedictine nuns, founded in the reign of William I. by Judith, niece to the Conqueror, and wife of Walthe earl of Huntingdon. It was dedicated to the Holy Trinity, St. Mary, and St. Helena, the wife of Constantine the Great; and was valued, at the suppression of religious houses, at two hundred and eighty-four pounds twelve shillings and eleven-pence *per annum*, according to Dugdale; but by Speed, three hundred and twenty-five pounds two shillings and a penny.

Harewood, or Harold, distant about eight miles north-west of Bedford, was formerly a market-town, but the market has for some time past been discontinued: here are still, however, three annual fairs, viz. Tuesday before the twelfth of May, Tuesday before the fifth of July, and the Tuesday before the tenth of October; all for cattle. Here was formerly a priory of canons and nuns, according to the institution of St. Nicholas of Aronaia, which afterwards consisted only of a prioress, and three or four nuns of the order of St. Austin, dedicated to St. Peter. It was founded in the year 1150, in the reign of king Stephen, by Sampson le Fort. Malcolm, king of Scotland, as earl of Huntingdon, confirmed certain lands to the prior, canons, and sisters of this priory, and his example was followed by William, king of Scotland. Henry IV. king of England, gave to the prior and nuns one messuage of land, in Chalkenstone, of the yearly value of two shillings, together with the advowson of that church. Part of the priory is still remaining. At the dissolution, the lands were rated at forty-seven pounds

three shillings and two-pence *per annum*; but the clear value was no more than forty pounds eighteen shillings and two-pence.

At Odhill, or Woodhill, which was formerly called Wohull, and lies on the banks of the Ouse, near Harewood, there was anciently a castle belonging to certain persons called the Barons of Wohull, having had a barony granted to them of three hundred knights fees in several counties: a knight's fee was an inheritance in land sufficient at that time to maintain a knight, and was by the statute of king Edward II. fixed at twenty pounds a year. This castle has been long since in ruins.

At Melchburne, about eight miles north-west of Bedford, was a preceptory of the Knights Hospitalers of St. John of Jerusalem, which, in the time of Henry I. was endowed by the lady Alice de Claremont, countess of Pembroke; and at the dissolution, had lands to the value of two hundred and forty-one pounds nine shillings and ten-pence *per annum*.

At Caldwell, near this town, there was a house of religious brethren of the order of the Holy Cross, founded by Robert, the son of William of Houghton, in the time of king John, and dedicated to the honour of the Blessed Virgin. Some time before the dissolution, it was converted into a priory for about eight Augustine canons, and was dedicated to St. John the Baptist, and John the Evangelist. Dugdale says, it was valued at one hundred and nine pounds eight shillings and five-pence *per annum*; and Speed, at one hundred and forty-eight pounds fifteen shillings and ten-pence.

Bedfordshire is one of the three counties, whose ancient inhabitants were called *Catticuchiani* by the Romans; some suppose they were originally called *Cassii*, from *Gessi*, a word signifying, in the British language, Men of Valour; the inhabitants of this district having been remarkable for military prowess. Bellinas is likewise supposed to have been a name of honour, assumed by all their princes. It was a Cassibellinus or Cassivellannus, who was chosen to command all the armies of Britain, when Cæsar invaded the island. The Greeks therefore might very probably give the name of *Catticuchiani*, or *Cattaellani*, to the people those princes governed.

Dr. Slare, in the Philosophical Transactions, tells us, that his grandfather, a gentleman of this county, at the age of eighty-five years, had a complete new set of teeth; and his hair, which was as white as snow, became gradually darker; after which, he lived above fourteen years in great health and vigour; and in the hundredth year of his age, died of a plethora, for want of bleeding.

CURIOUS PLANTS found in Bedfordshire.

Maiden Pinks, or, as the seedsmen call it, Mated Pink; *Caryophyllus minor refrans nostras*, Raii; found on the Sandy hills, near the Roman camp.

Later Autumnal Gentian, with leaves like centaury; *Gentianella fugax Autumnalis elatior*. *Centaurii minoris foliis*, Park; found on Barton hills, not far from Luton.

Milk-tare of Dioscorides; *Glaux Dioscoridis*, Ger. found on the same hills.

Crested Cow-wheat; *Melampyrum Cristatum*, J. B. found plentifully near Blunham, in Wixamtree hundred.

Black Currans, or Quinzy Berries; *Ribes nigrum*, vulgo dictum olente, J. B. found wild near Blunham.

White Lilly of the Valley; *Lilium convallium album*, C. B. found plentifully in the woods near Wooburn.

Woad; *Isatis sativa vel latifolia*, C. B. This plant has been long cultivated in England for the uses of dying: the ancient Britons painted their bodies with it, calling it by the name of *Glasse*, which signifies blue, or sky colour. Some have thought that the plant used for dying, and the wild plant, were no ways different, except by the effects of cultivation; but this Mr. Miller, after many years experience, proved to be a mistake. The same ingenious writer gives very ample directions, with respect to the improvements necessary to be made in the culture of this plant; and we have reason to hope, that, since the society for the encouragement of

arts, &c. has taken it in hand, it may soon be brought to perfection. It may not, however, be unpleasing in this place, to say a few words respecting the preparation of it. It yields three or four crops of leaves in a season; the two first of which are by far the best, therefore generally mixed. When the leaves are gathered, they are carried to the mill, to be ground and fitted for making into balls, which is next done; these balls are commonly dried on hurdles, and afterwards reduced into powder, which is spread on a floor and watered; this is called *couching*: here it heats and smoaks, till by constantly turning, it becomes dry; this they term *silvering* it. When this process is over, it is bagged, and valued according to its goodness.

Remarkable PARTICULARS, not mentioned in the foregoing Account of Bedfordshire.

We would advise any traveller, who passes through the county of Bedford, to make Northill in their route, were it only for the satisfaction of viewing two small pieces of painted glass done by J. Oliver in 1660, belonging to the rector, the Rev. Mr. Maxey. They are very small, but each has a fly, so exquisitely painted, as to exceed the power even of imagination to conceive; the wings are coloured on one side, and the bodies on the other of the glass, and are touched in so lively and spirited a manner, (especially one, which is superior to the other, that without fruit) that it is difficult to believe them but painting, and not life itself; the light appears through the body at the junction with the tail in the most inimitable manner; and the roundness of the fly, with the lightness of its claws, are represented in the boldest and fullest relief. In a word, it is truly admirable. In the chancel of the church is a very fine painted window, in good preservation, by the same master.

The parish of Sandy, near Northill, is much noted for its gardens; there are above one hundred and fifty acres of land occupied by many gardeners, who supply the whole country, for many miles, with garden stuff, even to Hertford. We examined their grounds with much attention, and inquired concerning their practice of a very sensible gardener, respecting two or three articles of their culture, which are, or ought to be the business of farmers in many situations.

Their soil is a rich black sand, two or three feet deep. Carrots they sow about New Lady-day, upon ground dug one spit deep, hoe them very carefully three times; they do it by the day, and the three costs them from twenty to thirty shillings an acre, as the crop happens to be; they set them out about eight or ten inches from plant to plant, and get on a medium two hundred bushels upon an acre. We drew several roots, and found them from one foot to eighteen inches long. Parsnips they cultivate exactly in the same manner, but the product never equals that of carrots, by fifty or sixty bushels. The prices of carrots vary from one shilling to four shillings a bushel, but the first is very low. Potatoes they plant at the same time; twenty bushels plant an acre, at the distance of about one foot every way; they hoe them three times, but not at all before they come up, which is practised in Essex about Ilford. They reckon the midsummer dun sort to yield best; a middling crop is two hundred and fifty bushels upon an acre; they always manure for them, either with dung or ashes, about twenty loads, but ashes they prefer. The price varies from one shilling and four-pence to two shillings a bushel.

Of onions, they sow vast quantities; the time, about a fortnight before Lady-day; they hoe and weed them always five times, at the expence of four pounds an acre, set them out six inches asunder, and their crops rise to above two hundred bushels, but their price from sixteen pence (which is very low) to two shillings. They always manure for them with great care. These gardeners give from forty shillings to five pounds rent per acre, for their land; it is, as we before observed, a rich loose black sand of a good depth, and very favourably protected from adverse winds by several considerable hills. It is a remarkable, and a very pleasing sight, to behold crops of onions, potatoes, French beans, and even whole fields of cucumbers, intermixed with crops of wheat, barley, turnips, &c.

MEMBERS of PARLIAMENT for Bedfordshire.

The county of Bedford sends four members to parliament; two knights of the shire for the county, and two burgessees for the town of Bedford.

HUNTINGTONSHIRE.

THIS county is one of the smallest in England. It is bounded on the north and west sides by Northamptonshire; on the east, by Cambridgeshire; and on the south, by Bedfordshire. It measures twenty-four miles from north to south, eighteen from east to west, and about sixty-seven in circumference. It contains four hundreds, six market-towns, seventy-nine parishes, about eight thousand two hundred and fifty houses, and fifty thousand inhabitants. It lies in the province of Canterbury, and diocese of Lincoln.

RIVERS and MEERS.

The chief rivers of this county are the Ouse and the Nen. The Ouse derives its name from Isis, already described in our account of Bedfordshire. It rises near Brackley, a borough town of Northamptonshire; and running north-east through Bedfordshire, enters this county at St. Neots, a market-town, from whence, in the same direction, it continues its course by Huntingdon, and some other towns; and traversing Huntingdonshire, Cambridgeshire, and Norfolk; and being joined by several other rivers in its course, it falls into the German ocean near Lynn Regis, a considerable borough of the county of Norfolk.

The Nen rises near Daventry, a market-town of Northamptonshire; and running north-east, and almost parallel to the river Ouse, winds round the north-west and north boundaries of this county, where it forms several large bodies of water, called by the inhabitants, Meers. The first of these meers or lakes is that called Wittlesey Meer, not far from Peterborough, a city and bishop's see in Northamptonshire. This meer is no less than six miles long, and three broad; and other considerable meers formed here by this river, are Ug meer, Brick meer, Ramsfey meer, and Benwick meer; from whence the river Nen, continuing its course through Cambridgeshire and Lincolnshire, falls into the German ocean not far from Wisbich, in the county of Cambridge. These large bodies of water, particularly Wittlesey meer, are frequently thrown into the most violent agitations, without any apparent cause, to the great terror and danger of those who pass the lake, particularly the fishermen. These agitations are generally supposed to arise from eruptions of subterranean winds.

Remarks on the INLAND NAVIGATION of Huntingdonshire.

The only navigable river in this county is the Ouse. The navigation passes by Erith, St. Ives, Huntingdon, St. Neots, &c. to Bedford; and has been already mentioned in our accounts of Bedfordshire and Cambridgeshire.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is rendered less wholesome than that of some others, by the great number of fens, meers, and other standing waters with which it abounds, especially in the north part.

The soil is in general very fruitful. In the hilly parts, or dry lands, it yields great crops of corn, and affords excellent pasture for sheep. In the lower lands, the meadows are exceeding rich, and feed abundance of fine cattle, not only for slaughter, but for the dairy; and the cheese made at a village called Stilton, near Yaxley, a market-town, known by the name of Stilton cheese, is usually stiled the Parmesan of England. The inhabitants of Huntingdonshire are well supplied with fish and water-fowl, by the rivers and meers; but they have scarce any firing besides turf.

Remarks on the HUSBANDRY of Huntingdonshire.

From Sandy to St. Neot's the country is chiefly open, and the crops not equal to those around Bedford.

About Hale Weston, the soil is a gravelly loam, with variations. The open fields let at seven shillings and seven shillings and six-pence per acre, and the inclosed pastures about seventeen shillings. The farms run from forty to two hundred pounds a year. Their course of crops,

- 1 Fallow
 - 2 Wheat
 - 3 Pease, &c.
- And
- 1 Turnips
 - 2 Barley
 - 3 Pease, &c.

They plough four times for wheat, sow two bushels, and reap at a medium fifteen. For summertilth barley they stir four times, and twice the turnip land, sow four bushels, and reckon the mean produce at three quarters. They give but one earth for oats, sow four bushels, and get at an average two quarters. For pease they plough but once, sow four bushels, and reckon twelve bushels the mean produce. For beans they likewise stir but once, sow them broad-cast, four bushels to the acre, never hoe them, but sometimes hook out the rank weeds, and turn sheep in; fifteen bushels the medium. For turnips they give three earths, hoe them once; reckon the mean value per acre at thirty-five shillings, and feed all off with sheep: they use from three to six horses in a plough at length, and do, after the breaking the fallow, five rood a day. The profit of a cow they reckon at four pounds. The particulars of a farm,

660 Acres
60 Grafs
600 Arable
£. 300 Rent
20 Horses
20 Cows
650 Sheep
8 Servants
10 Labourers.

LABOUR.

In harvest, thirty-six to forty shillings the month, and board.

In hay-time, one shilling and six-pence a day, and beer.

In winter, one shilling a day, and small beer.

Reaping wheat, five to seven shillings.

Mowing corn, one shilling.

————— grafs, one shilling and six-pence, to one shilling and eight-pence.

Hoeing turnips, four shillings and six-pence to five shillings.

Ditching (the reparation) four-pence a pole.

Threshing wheat, one shilling a load, or five bushels.

————— spring corn, one shilling a quarter.

From Kimbolton to Thrapston, in Northamptonshire, the country is in general open, very little inclosed besides their pastures: we should observe, that quite from Newport Pagnel to Thrapstone, the lands are all ploughed into broad arched lands about a perch and a half over, and a yard higher in the centre than the furrows. This custom is a very good one, where the water is let clean out of the furrows, but we have more than once, in winter, seen such furrows two feet deep in water. About Great Catworth, the soil is very good; clay in general, but some gravelly loams. It lets the arable for about fourteen shillings an acre, and the grafs twenty shillings.

Farms,

Farms, from thirty to one hundred pounds a year.
Their course of crops,

- 1 Fallow
- 2 Wheat or barley
- 3 Beans, pease or oats.

They plough three times for wheat, sow two bushels, and reap about two and a half, or three quarters. For barley they give the same tillage, sow four bushels, and reckon three quarters the mean produce. For oats they stir but once, sow four bushels, and gain at an average two quarters and a half. They sow but few pease; but when they do, they plough but once, sow four bushels, and reap on a medium two quarters. For beans they plough likewise but once, sow all broad-cast, four bushels, never hoe, but sometimes feed the weeds off with sheep. They never sow turnips. In their ploughs, which are all foot ones, they use from four to eight horses, and after one or two earths, do an acre and an half a day. All their dung they lay on their barley lands, but seldom mix it with earth. The particulars of a farm were,

250 Acres
£.100 Rent
11 Horses
20 Cows
200 Sheep
4 Servants
2 Labourers

LABOUR.

In harvest, thirty shillings a month and board, with carriage of a load of wood.

In hay-time, one shilling and six-pence a day, and small beer.

In winter, eight-pence a day, and small beer, and a mess of milk of a morning.

Reaping of wheat, four shillings.

Mowing corn, one shilling.

— grass, one shilling and four-pence.

Ditching, five-pence per pole.

Threshing wheat, two shillings per quarter.

— spring corn, one shilling.

TRADE.

This county is not remarkable for any manufacture; its trade therefore chiefly consists in such commodities as are its natural productions.

MARKET TOWNS, &c.

The market-towns are, St. Neots, Kimbolton, Huntington, St. Ives, Ramsey, and Yaxley.

St. Neots, vulgarly stiled St. Needs, and in the Saxon annals, St. Neod, was so called from a monastery of the same name in this place, which was burnt by the Danes. It is fifty-six miles from London, and is a large, well-built; populous town. It has a handsome church, with a remarkable fine steeple; and an elegant stone bridge over the Ouse, by which river coals are brought here, and sold throughout the county. Here is a charity-school for twenty-four poor children, which was opened in the year 1711.

According to the Ely historian, St. Neot first placed monks in this town; but being dispersed by the Danes, they were afterwards restored, and the monastery again endowed by the bounty of Leofric, and his wife Leofeda, upon the encouragement of Ethelwold, bishop of Winchester, and Brithnod, abbot of Ely. It was a priory of Black monks, subordinate to Ely, till after the Conquest, when Gilbert, earl of Clare, violently expelled these religious; but about the year 1113, Bohesia, wife of Richard, son to the said earl Gilbert, gave this manor to the abbey of Bec in Normandy, to which it became a cell. It was seized during the wars with France, among other alien priories; but made *prioratus indigena* by king Henry IV. being then in the patronage of the earl of Stafford. Its revenues were valued, on the suppression, at two hundred and fifty-six pounds one shilling and three-pence a year.

This town has a weekly market on Saturday, and six annual fairs, viz. Ascension Thursday, Corpus Christi Thursday, the eighteenth of June, and the seventeenth of December, for cattle of all sorts and pedlary ware; and the first of August, for hiring servants.

At Hailwellton, near this town, there are two springs, one of which has a brackish taste, and is recommended in all cutaneous disorders; the other is fresh, and said to be serviceable against dimness of sight.

Kimbolton is the *Kinnibantum* of the Romans, and the modern name is probably a variation of the ancient. It is distant from London sixty-two miles, and has a castle, the seat of his Grace the duke of Manchester, situated close to the town. It is a quadrangular building: the hall is fifty feet long by twenty-five broad, and hung round with family portraits, some of which are very good. Out of it you enter, on the right hand, the blue drawing-room, thirty-five by twenty; over the chimney-piece hangs a very fine picture of Prometheus, the horrible expression of which is very great. Between the windows are six small portraits, excellently done, particularly the man and woman in the middle; his face is very expressive, and the finishing in her's the same. The yellow drawing-room thirty-five by twenty-two, with a handsome glass lustre in the centre. Here are, A most admirable portrait of lord Holland, with an attendant officer, and a person adjusting his fash; the heads and hands, the drapery and the relief of the figures, are all fine.

A Virgin and sleeping child. Strange attitude.

Virgin and child. Eyes very bad.

The saloon is forty by twenty-seven, hung with crimson velvet; the pillars in two corners, we suppose, were necessary to the building, but they are handsome ones; the slabs are of various marbles in mosaic: over the chimney, a picture of Hector and Andromache, the colours, attitudes, and expression of which, are by no means pleasing.

The state bed-chamber, twenty-seven by twenty-one, is hung with cut velvet, the pier glass and slab glasses from Venice; the border of the first is pretty. In the closet is a Magdalen; the expression of pain in her countenance is not amiss; the thought seems borrowed from lord Pembroke's Venus.

Through the stair-case is a small room hung with very fine drawings after Raphael and Julio Romano.

The dining-room is thirty by twenty-seven.

The library twenty-four square; the book-cases pretty.

Kimbolton has a weekly market held on Friday, and a small annual fair on the eleventh of December, for cattle and hogs.

At Stonely, a small distance east of Kimbolton, William earl of Essex, who lived about the year 1180, is said by Leland to have founded a priory of canons, of the order of St. Austin, dedicated to the Virgin Mary. This house consisted of seven canons, and was valued, on the dissolution, at forty-six pounds five shillings *per annum*.

Huntington, or Huntningdon, is a derivation from the Saxon *Huntandune*, or *Hunters Down*, a name which was acquired from the convenience of this district for hunting, which was one intire forest, till it was destroyed by the kings Henry II. and III. and finally by Edward I. who cut all the trees down, except what stood on his own ground. Huntington is the shire town, situated on a hill on the north side of the river Ouse, over which there is a fine stone bridge. It is distant fifty-seven miles north from London, and had formerly fifteen churches, which, in Mr. Camden's time, were reduced to four, and since, by the civil wars, to two. This decay is ascribed by Speed to the alteration of the course of the river, by the villainy of one Grey, who maliciously obstructed its navigation to the town, which had before been enriched by it: it is, however, still navigable for small vessels, as high as Bedford. King John granted to this town, by charter, a coroner, toll and custom, a recorder, town-clerk, and two bailiffs; but it is at present incorporated by the stile of a mayor, twelve aldermen, and burgeses. The assizes are always held here, and in this place is the county gaol. It is a populous,

trading

trading town, and consists chiefly of one long street, tolerably well built. It is a thoroughfare in the great north road; and for the accommodation of travellers, here are several good inns. Here is a handsome market-place, and a good grammar-school.

One Mr. Richard Fishbourn, a citizen of London, but a native of this place, gave two thousand pounds to the town; to be laid out in charitable uses.

The meadows on the banks of the river Ouse are not to be surpassed for beauty by any in England; and in summer, they are covered with such numerous herds of cattle and flocks of sheep, as is almost incredible.

This town is remarkable for having been the birth-place of Oliver Cromwell, and for giving the title of earl formerly to some princes of Scotland, as it has to the Hastings family ever since Henry VIII.

About the time of the Conquest, here was a mint for coinage; and near the bridge there is a mount, and the ground plot of a castle, built by king Edward the Elder, in the year 917, and enlarged with several new works by David king of Scotland, to whom king Stephen gave the borough of Huntington, for an augmentation of his estate; but this castle was demolished by king Henry II. to put an end to the frequent quarrels that arose from a competition for the earldom of Huntington, between the Scottish kings and the family of St. Liz.

Here were formerly several religious houses. The empress Maud founded an abbey; and there was a priory of Black canons here, dedicated to St. Mary, and founded in or near the parochial church of that saint, before the year 973, which was removed to a place without the town by Eustace de Luvetot, in the time of king Stephen or Henry II. where it continued till the dissolution, when it consisted of a prior, eleven canons, and thirty-four servants; and the revenues of it were valued at one hundred and eighty-seven pounds thirteen shillings and eight-pence *per annum*. Here was likewise an ancient hospital dedicated to St. Margaret, for the maintenance of a master, brethren, and several leprous and infirm persons; to whom Malcolm king of Scotland, and earl of Huntington, was a considerable benefactor, if not founder; he died in the year 1165; and this hospital was annexed by king Henry VI. in the twenty-fourth year of his reign, after the death or cession of the master, to Trinity Hall in Cambridge, and confirmed by king Edward IV. in the first year of his reign. There was also another hospital here, founded by David earl of Huntington, in the time of Henry II. dedicated to St. John; and on the suppression, valued at nine pounds four shillings a year. At the north end of the town, there was a house of Friars Augustines, founded before the nineteenth year of Edward I.

Huntington sends two members to parliament, has two weekly markets, held on Monday and Saturday; and an annual fair on the twenty-fifth of March, for pedlars wares.

Opposite to this town, on the other side of the Ouse, lies Godmanchester, situated in a fertile soil abounding with corn. It is allowed to be the largest village in England; and so remarkable for husbandry, that no town in the kingdom employs so many ploughs: this useful art has received greater improvement from the inhabitants of this place, than from any other people in the world; they are said to hold their lands by a tenure, which obliges them, when any king of England passes that way, to attend him, with their ploughs and horses adorned with rustic trophies. They have boasted, that upon some occasions they presented a train, consisting of no less than nine score ploughs. When king James I. passed through this town, on his journey from Scotland, the farmers of Godmanchester met him with a cavalcade of seventy new ploughs, each drawn by a team of horses; this so pleased the king, that he incorporated them by the name of Two Bailiffs, twelve Assistants, and the Commonalty of the Borough of Godmanchester. Here is an annual fair held on Easter Tuesday, for all sorts of cattle; and a school, called the Free Grammar School of Queen Elizabeth. Near this place, in the London road between Huntington and Caxton, is a tree, well known to travellers by the name of Beggar's Bush; from

whence it derived this name, is uncertain; but it is reported, that king James I. being on a progress this way, with Sir Francis Bacon, his lord chancellor; and hearing that he had lavishly rewarded a man for some mean present, told him, "He would soon come to Beggar's Bush, and be the means of his coming there too; if they continued both so very bountiful;" and 'tis now a proverb common in the county, when a man is observed to squander his fortune, "That he is in the way to Beggar's Bush."

Antiquarians have almost all agreed, that Godmanchester, or Godmancester, is the same city which Antoninus, in his Itinerary, calls *Durolosponte*, by the mistake only of one letter; for *Durosponte*, in the British language, signifies a bridge over the Ouse, which bridge Godmanchester has to this day. In the time of the Saxons, this town lost the British or Roman name, and acquired that of Gormancester, from a castle built here by Gorman the Dane, to whom these parts were ceded by the peace with king Alfred; and from the Saxon name, Gormancester, the present name is immediately derived. Many Roman coins have been dug up in this place, and some human skeletons, said to have been of a gigantic size. In the road between this place and Huntington, is a wooden bridge erected over a rivulet, from motives of gratitude and public charity; with this inscription:

Robertus Cook, emergens aquis, hoc viatoribus sacrum.
A. D. 1636.

That is,

Robert Cook, having escaped the danger of drowning, consecrated this for the use of travellers, in the year 1636.

In the neighbourhood of this village, the ancient family of the Goldboroughs had a seat not many years ago; and on the west side of it is at present a noble, though antique seat of the earl of Sandwich, called Hinchinbrooke House. The gardens are very fine, and kept in excellent repair; but the situation is much obscured by the town of Huntington.

To this place William the Conqueror is said to have removed the nuns of Ectesley, in Cambridgeshire, and is therefore reckoned the founder of the little priory here, which was of the Benedictine order, dedicated to St. James, and valued upon the dissolution, when there were only four nuns in it, at seventeen pounds one shilling and four-pence *per annum*.

At a small distance from Godmanchester lies a little village called Bugden, in which stands the ancient palace of the bishops of Lincoln. The house is pleasantly situated, and the garden very large, and surrounded by a deep moat of water. The chapel, though small, is remarkably pretty; in it is an organ painted against the wall, in a seeming organ-loft, so properly placed, and well executed, that it is impossible at first to discover the deception.

St. Ives derived its name, according to Camden, from one Ivo, a Persian bishop, who, about the year 600, came over to England, where he preached the gospel, and died at this place. It was formerly called Slepe. It is distant from London fifty-seven miles, and stands upon the Ouse, over which it has a fine stone bridge. In the ninth century it had a mint, as appears by the Saxon coin found here, and not many years past, was a flourishing town, but part of it was unfortunately burnt down: it was however rebuilt, and is at present a pretty neat market-town. It was once remarkable for its medicinal waters. Here Cromwell the usurper rented a farm, before he obtained a seat in parliament, where he endeavoured to repair his fortune, after having wasted his paternal estate by a life of profligacy. About the year 1001, Ednoth, the abbot of Ramsey abbey, built a church here, dedicated to St. Ives, in which he placed a prior and some Benedictine monks, subordinate to Ramsey.

This town has a weekly market held on Monday, and two annual fairs, viz. Whitsun-Monday, and the tenth of October, for cheese, and all sorts of cattle.

Somerham is a small village about three miles north-east of St. Ives, situated among the fens. Here was formerly a large palace belonging to the bishops of Ely, from whose see it was alienated many years since, and was in the possession of Anthony Hammond, Esq; one of the commissioners of the navy, in the reign of queen Ann. The palace was called Somerham Place. Mr. Wood, in his *Athenæ Oxoniensis*, says, that Somerham, with its appurtenances, was part of the jointure of queen Henrietta-Maria; but that Cole Walton, one of the king's judges, obtained a settlement of it on himself and his descendants, in return for the great service he had done the parliament.

Ramsfey, or Rams Isle, called by the Saxons Ramerige, is every where encompassed with fens, except on the west side, where it joins the *Terra firma* by a causeway, two miles long, inclosed with elders, reeds, and bulrushes, that in the spring make a beautiful appearance; to which the gardens, corn-fields, and rich pastures adjoining, are no small addition. It is sixty-nine miles distant from London, and was of extraordinary note, being proverbially called *Ramsfey the Rich*, before the dissolution of a wealthy abbey which stood in this place, the abbots of which were mitred, and sat in parliament. Here is a charity-school for poor girls. The meers in the neighbourhood of this town abound with water-fowls, and fish, particularly eels, and large pikes, an advantage which renders the market of this place one of the most plentiful and cheap in England for such commodities. Upon the twenty-first of May, 1763, this town was greatly impaired by a fire, which destroyed upwards of an hundred houses. Here was formerly a rich and famous abbey, of which some part of the old gate-house, together with the tomb of Ailwin, the founder, is still standing. This tomb is adorned with a statue of him, which is thought to be the most ancient piece of English sculpture now extant, and has the following remarkable inscription: HIC REQUIESCIT AILWINVS INCLITI REGIS EADGARI COGNATUS, TOTIVS ANGLIÆ ALDERMANNVS, ET HVIVS SACRI COENOBII MIRACVLOSVS FVNDATOR. Ailwin is represented holding two keys and a ragged staff in his right hand, as the ensigns of his offices. He is stiled alderman of all England, and duke and earl of the East-Angles. In the year 969, he built an abbey of Benedictine monks, and dedicated it to St. Mary and St. Benedict. Its yearly revenues, about the time of the dissolution, were valued at seventeen hundred and sixteen pounds twelve shillings and four-pence a year.

In the year 1721, a great quantity of Roman coins were found here; thought to have been hidden by the monks on some incursions of the Danes. Mr. Camden says, that the Danish king Canute raised a paved causeway, at a vast expence, from Ramsfey to Peterborough, which run ten miles: he thinks it was called Lingerdarp, or King's Delf; but another author observes, that the name of King's Delf is found upon record in Edgar's time, and that *Delf* does not signify *paved way*, but *ditch*, as appears by a ditch between Ramsfey and Wittlesey Meer, which is sometimes called Swerdes Delf, and sometimes Knoul Delf, but now Steeds Dike. It parts this county from Cambridgehire, and is said to be occasioned by the following accident. King Canute's family passing over Wittlesey Meer, in their way from Peterborough to Ramsfey, their vessel was cast away in one of the commotions that frequently happen in these meers, and several lives were lost; upon this the king, to prevent the like disasters in future, ordered his army to mark out a ditch with their swords and spears, which gave rise to the name of Swerdes Delf; and afterwards employed labourers to dig, clean, and perfect this undertaking.

This town has a weekly market on Wednesday, and an annual fair on the twenty-second of July, for pedlary wares.

Yaxley is situated in the fens, at the distance of seventy-two miles from London; and on Wittlesey Meer there is a fen of its own name. It is a neat little town, has a church with a handsome and lofty spire; and the houses in general are well built. Here is a weekly market on Tuesday, and an annual fair on Ascension Thursday, for hories and sheep.

South of Yaxley lies a village called Connington, or Cunnington, where was formerly the seat of Sir Robert Cotton, the learned antiquarian and friend of the great Camden. This gentleman had a choice collection of Roman inscriptions from all parts of the world. The house was built in a magnificent manner, of hewn stone; but now lies in dismal ruins. Near it is a most beautiful church, with a tower, the windows of which are most curiously painted. Sir Robert was founder of the Cotton library: he ordered a pool to be dug here, wherein was found the skeleton of a fish, near twenty feet long, lying six feet below the surface of the ground, and as much above the level of the fens. At this town are to be seen, within a square ditch, the relics of an ancient castle, which was given by king Canute to Turkill, a Danish lord, who called in Sueno, king of Denmark, to plunder the nation. To Sattry Abbey, a village about a mile south-east of Connington, Simon earl of Northampton, in the year 1146, brought a convent of Cistercian monks, out of the abbey of Wardon, or Sartis, in Bedfordshire; and erected a monastery for them in this place, dedicated to the Virgin Mary. At the time of the dissolution, here was an abbot, twelve monks, and twenty-two servants, who were endowed with an yearly income of one hundred and forty-one pounds three shillings and eight-pence.

Dornford, a village upon the river Nen, north-west of Yaxley, was the city of Durobrivæ, mentioned by Antoninus. Here are many remains of a city, and a Roman portway, leading directly to Huntington, which, near Stilton, appears with a very high bank, and in an old Saxon charter is called Ermin Street. At Stilton it runs through the middle of a square fort, defended by a wall on the north, and on the south by ramparts of earth, near which several stone coffins have been dug up. Some are of opinion, that the city Durobrivæ stood upon both sides the river Nen; and that the little village Caster, upon the other side the river, was part of this city; a conjecture which ancient history seems to justify. A great number of Roman coins have at different times been dug up at this place.

This county is part of that district anciently inhabited by the Icenæ, who extended their dominion likewise over the counties of Suffolk, Norfolk, and Cambridgehire. Under the Saxons, however, Huntingtonshire was separated from that tract of country formerly possessed by the Icenæ, and became part of the kingdom of Mercia.

Huntington formerly abounded with ancient families of great property, but they are so reduced, that few surnames can be traced higher than the time of king Henry VIII. Various conjectures have been made to account for the cause of such a decay, but all are trifling, and the greatest part absurd. Many eminent men have been produced here; among others, John Dryden, the poet; and Sir Oliver Cromwell, elder brother to Oliver, the usurper's father, whose legal attachment to the crown was such, that when under sequestration, he would not accept any favour, if he was to obtain it through the interest of his rebellious nephew.

There are no plants known in Huntingtonshire that are not also found in Cambridgehire; so that it will be needless to repeat what has been already observed of that county.

MEMBERS of PARLIAMENT for Huntingtonshire.

This county sends four members to parliament; two knights of the shire for the county, and two burgesses for the town of Huntington.

N O R T H A M P T O N S H I R E .

THIS county, which is situated in the very centre of the kingdom, was, at the time of the Conqueror's survey, somewhat larger than it is now; because in Doomday-book we meet with towns under the title of this county, which are in the south part of Rutlandshire.

It is bounded on the south by Buckinghamshire, on the west by Warwickshire and Oxfordshire; and as it runs in a narrow tract towards the north-east, in the form of a boot, it therefore borders upon more counties than any other in England; for on the north it is bounded by Leicestershire, Rutlandshire and Lincolnshire, from which it is parted by the rivers Welland and Little Avon; and on the east by Bedfordshire, Huntingdonshire and Cambridgeshire.

Some make it fifty-five miles from south-west to north-east, twenty-six in the broadest part from east to west, and one hundred and twenty-five in compass. Others reckon it forty-five where longest, and twenty where broadest, and about one hundred and twenty in circumference, containing five hundred and fifty thousand acres. Mr. Templeman computes the length at fifty-one, the breadth at twenty-one, and the square miles at six hundred and eighty-three. In this area it is said to contain three hundred and thirty parishes, including one city, and eleven market towns, twenty-five thousand houses, and one hundred and fifty thousand inhabitants.

R I V E R S .

It is well watered with fresh rivulets and rills, besides the five greater rivers, the Nen, Welland, Ouse, Leam, and Charwell; the two last of which and the Nen spring out of one hill near Catesby and Helliden, in the hundred of Fausley, from whence the Charwell runs to the south and the Leam to the west, which, as it hastens towards the Severn, is received by the Avon; and the Nen towards the east. The Nen, which is the most considerable of these rivers, crosses the country from Peterborough, where it is widest, to Daventry. The Welland, which runs, as has been said, on the north border of the county, rises in the hundred of Rothwell, and is navigable to Stamford in Lincolnshire; and from thence, by the help of locks, to Spalding. The Ouse, which is one of the principal rivers of this kingdom, rises near Brackley, from the spring called Ousewell, in the hundred of Sutton, but runs at some distance from this county till it comes near Stony-Stratford, where it passes near the hundred of Cleley, and a little lower receives the river Tove, which having watered Towcester, runs, after a winding course of many miles, into the Ouse near Cosgrove. The Little Avon rises in the same hundred as the Welland; and falling westward with a small stream, leaves this county near Lilburn, and passes into Warwickshire; as does also the Leam, which, with the Charwell, makes up the west border, dividing it from Oxfordshire. The Leam rises from a spring at Helliden, called the Little Down; hastens by Catesby and Staver-ton into Warwickshire, where it gives name to the two Leamingtons, and then loses both its water and name in the Ouse.

Remarks on the INLAND NAVIGATION of Northamptonshire.

The only rivers navigable in this county, are the Nen and the Welland. The Nen is navigable to Allerton Mills, about six miles above Peterborough: it might, however, be easily made navigable to Northampton, and consequently prove of the greatest advantage to this

county. The river Welland is, as we have already observed, navigable to Spalding in Lincolnshire; but as this river is a boundary between the counties of Northampton and Lincoln, and the principal places situated on its banks are in the latter county, we shall be more particular in describing the navigation of the Welland in our account of Lincolnshire.

A I R A N D S O I L .

The air of this county is so exceeding pleasant and wholesome, by reason of its distance from the sea, and all manner of marshes, (excepting that small tract called the Fen-land about Peterborough) that the nobility and gentry have more seats and parks here than there are in any other county in England of equal bigness, there being scarce a village in it but has one or more. And though the low grounds in the above-mentioned tract, towards Lincolnshire and Cambridgeshire, are often overflowed by great falls of water from the uplands in the rainy season, yet the inhabitants never suffer it to stay long, even in the winter, so as to prejudice the air, of which the healthfulness of the people is a plain proof.

Its soil is very fruitful, both in tillage and pasturage; but it is not well stocked with wood, nor, by reason of its distance from the sea, can it be supplied with coal as duly as other counties, so that winter fuel here is extremely dear. It abounds with sheep and other cattle, wool, pigeons, and salt-petre; and it has been observed, that there is less waste ground in this than in any other county of England, there being but one barren heath in it, and that near Whittering. It is a plain, level country, and so populous, that from some places may be seen no less than thirty steeples at one view. Its manufactures are serges, tammies, shalloons, boots and shoes.

Remarks on the HUSBANDRY of Northamptonshire.

The country between Kimbolton and Thrapstone is extremely pleasant, and more scattered with villages and churches than any we ever saw; from one level plain, which rises above the surrounding country, we counted with ease twelve steeples. It likewise continues very pleasant and well diversified to Oundle. About Ay-church, between Thryston and the latter named place, the soil is a strong clay. The farms are small in rent, in general from twenty to sixty pounds; land lets at five shillings an acre. Their course of crops,

- 1 Fallow
- 2 Wheat or barley
- 3 Beans

For wheat they plough four times, sow two bushels of seed, and get at a medium three quarters. They plough three times for barley, sow four bushels, and reap four quarters. They sow scarce any oats, and no turnips. For beans they plough but once, sow four bushels broad-cast; never hoe, but the slovenly practice of feeding off the weeds with sheep yet continues; three quarters they reckon the medium produce. They manure only for wheat and barley, spread it on the fallows the end of July or beginning of August, and plough it in. They use three horses at length, and do an acre a day. The particulars of a farm we gained, were,

- 180 Acres, all arable
- £. 50 Rent
- 10 Horses
- 30 Cows
- 200 Sheep
- 3 Servants
- 2 Labourers.

L A B O U R.

In harvest, thirty to thirty-six shillings a month, and board.

In hay-time, one shilling a day, and board.

In winter, eight-pence a day, and small beer, and a mess of milk in the morning.

Reaping wheat, four shillings and six-pence, and five shillings.

Mowing barley, oats and beans, one shilling.

—————grafs, one shilling and four-pence,

Threshing wheat, one shilling and four-pence per quarter.

————— spring corn, one shilling.

This whole track of country, quite to Stamford, is chiefly open and uninclosed, except in small parcels around the villages, which however give a pleasant variety to it in travelling; but it is melancholy to think, that in an age wherein the benefits of inclosing are so well known and understood, such vast tracks should remain in such a comparatively unprofitable state.

CITY, MARKET TOWNS, &c.

We entered this county near Peterborough, seventy-six miles distant from London, reckoned the least city, as its see is the poorest bishoprick in England. It stands upon the river Nen, over which it has a bridge, and has its name from a monastery begun there by Peada, and finished by Wulpher, two kings of the Mercians, and dedicated to St. Peter. The Danes destroyed both the monastery and monks together, so that it lay destitute for above an hundred years. Then Ethelwald, bishop of Winchester, rebuilt it, and restored the monks, who lived very sumptuously with a mitred abbot at the head of them, till the dissolution by king Henry VIII. who converted the abbey into a bishop's see, giving this county and Rutlandshire for its diocese, which contains two hundred and ninety-three parishes, whereof ninety-one are impropriate, and was originally in the diocese of Lincoln. The cathedral is a most noble Gothic fabric, but was much more so before the civil wars, when it was defaced, and deprived of many considerable ornaments. It is said to be above a thousand years old, though it seems to be more modern. It is above four hundred and seventy-nine feet long, two hundred and three broad in the transept from north to south, and the breadth of the nave and side-ayles is ninety-one. The west front, which is one hundred and fifty six feet in breadth, is the most stately of any in England, being supported by three of the tallest arches that are to be seen, and columns curiously adorned. The windows of the cloisters are finely stained with scripture-history, that of its founder; and the succession of its abbots. Among other noted monuments in it, are those of queen Catharine, who was divorced from Henry VIII. and of Mary Queen of Scots, though the body of the latter was, as it is said by some, but denied by others, removed to Westminster Abbey by her son, king James I. And here is also the figure of one Scarlet, the sexton, who died *ætat.* 95, after having, as his epitaph declares, buried both those queens, and all the house-keepers of the town twice over. The city is governed by a mayor, recorder, and aldermen, pursuant to a charter granted it, together with the privilege of sending members to parliament by king Henry VIII. All the city officers are elected by the dean and chapter, consisting of six prebendaries, who are the lords of the manor; and the justices of the peace are nominated by the Custos Rotulorum. It gives title of earl, as well as Monmouth, to the family of the Mordaunts. The river Nen, whose ancient name is Aufona or Avon, according to Camden, is navigable to it by barges, in which they import coal, corn, &c. and export to the amount of six thousand quarters of malt in some years, besides many other goods, but especially of the woollen manufacture, either of cloth or stockings, in which the poor are constantly employed. This river was made navigable in pursuance of an act of parliament in the twelfth of queen Anne. The streets are fair, and well built; and besides its ca-

thedral, here is one parish-church, and a handsome market-house, over which the assizes and sessions are kept. The air here indeed is not very wholesome, but the water fresh and good, the highest spring-tide never coming within five miles of the town; and moreover, they have plenty of excellent water in their wells. Besides the dean and chapter, who are an ecclesiastical corporation distinct from the bishop, here are eight petty canons, four students in divinity, one epistler, one gospeller, a sub-dean, sub-treasurer and chanter, eight choristers, and as many singing-men, two chancellors, a master, usher, and twenty scholars at a grammar-school; besides a steward, organist, and other inferior officers. There are two charity-schools, one founded and endowed by Mr. Thomas Deacon of this city, for twenty boys, who, after being taught to read and write, are put out apprentices; and another for teaching forty poor children to spin and read, the charge of whose education is chiefly defrayed by their own labour.

The author of the Addenda to Mr. Camden tells us, that just before the Danes destroyed the monastery here, as above mentioned, the abbot of Croyland and his monks fled hither for protection, but were overtaken and murdered in a back court of the monastery, called the Monk's Church-yard, because they were all buried there; and that a tomb-stone with their effigies was erected over their common grave, which is to be seen at this day.

About the year 1108, Benedict, abbot of Peterborough, founded, near the gate of the abbey, an hospital, dedicated to St. Thomas a Becket.

A spittel, or hospital for leprous persons, dependent on the abbey, is found upon record as early as the time of king Stephen.

Peterborough sends two citizens to parliament, has a weekly market on Saturday, and two annual fairs, viz. the tenth of July, and the second of October, for horses, and other cattle, &c.

Cordyke, near Peterborough, is an ancient trench cut by the Romans, for draining the fens, and facilitating commerce in those parts, its dimensions being sufficient to render it navigable.

Briccleshworth, Bredon, Wermundsey, Repengas, and Wockingas, were all so many daughter abbeys, that had their rise from the abbey of Peterborough, and were cells to it, or dependent upon it, about the year 690, and are supposed to have been situated near Peterborough, but this is not certainly known: they were, however, all destroyed by the Danes in 870, and never restored.

At Peakirk, south-west of Peterborough, St. Pega, in the year 714, settled herself in a cell, which was afterwards improved into a monastery, dedicated to the Trinity, and endowed by Edmund Atheling. It suffered greatly from the Danes in 870, and was totally destroyed in 1013.

At Oxney, near Peterborough, there was a priory of Benedictine monks, dedicated to the Virgin Mary, before the time of Edward I. It was a cell to the abbey of Peterborough.

Castor, about three miles from Peterborough, is supposed to have been part of the ancient city called by the Romans Durobrivæ, and by the Saxons Dormancester: it extended anciently on both sides to the river Nen, though the remains of it, now called Castor, are on the north side only of the river. Chequered pavements, Roman copper coins, urns, bricks, and tiles, have been found here: and on a hill where the church now stands, there was anciently a castle, the seat of the Roman governor.

Having surveyed every thing curious in Peterborough, and its neighbourhood, we passed along the Roman road, called, from its breadth, Forty-foot-way. It begins at Peterborough, and passes by Burleigh park-wall into Stamford in Lincolnshire.

Burleigh House is a very ancient building, in the form of a quadrangle, very spacious, surrounding a large court, and in the old stile of building very handsomely ornamented with turrets, carving in stone, &c. &c. Many of the rooms are but small, and therefore we have minutely but few of them distinctly; nor have we marked

all the paintings as they hang in each room, as it would be difficult to distinguish them by peculiar phrases. Some are little more than closets.

The Billiard-room, newly fitted up, thirty-three by twenty-one, the chimney-piece of white marble polished, and a rounding of Siena; it is light and pretty.

The Chapel, not finished; thirty-three by thirty-four; besides the Anti-room, which is ornamented with very elegant carved wainscot.

The Bow-window-room, forty-five by thirty-three, painted by Le Guere, who, with Verrio, painted all the ceilings, &c. in the house. Out of this you enter into another, thirty by twenty-four, with silver sconces around it, and furniture of the hearth the same. Next is a bed-chamber, rich work on a black satin, and lined with yellow silk; the fringe of the counterpane, and ornaments at the head of the bed, are in a pretty taste. In the closet are

Three pieces by Giuseppe Chierera.

Adoration of the Shepherds, by Bassan; the colouring good.

Two landscapes, by Gaspar Pouffin; one of them excellent.

In the small closet adjoining are two pieces by Smith, of Derby; boys blowing bladders, and girls dressing a cat; admirable: the diffusion of light strongly expressed, and very striking.

In the Dressing-room, eighteen by twenty-seven,

Two flower-pieces, by Baptist, very fine.

Henrietta, king Charles's queen, by Vandyke; the drapery very well done.

Two fruit-pieces; Michael Angelo; very fine.

A bunch of grapes, by Miss Grey, in worsted; inimitable.

Honey-suckles, by ditto; very pretty.

Landscape, a water-fall, by Harding; the water well done.

Here are likewise a Chinese pagoda in ivory and mother of pearl, very pretty; and some prodigious fine china jars. Nor should we forget to remark the India cabinets in these apartments, and the japan card tables, both which, with a great variety of furniture, are vastly elegant. In the following rooms are,

Fruit and flowers, by M. Angelo; fine.

Mars and Venus; Jordans.

Pan, by Carlo Marratt.

Venus and Cupid; N. Pouffin; fine, but the sky-blue a strange one indeed.

Four pictures, by Carlo Marratt, but not in his best manner.

Descent of the Holy Ghost, by Le Brun; heads amazingly fine.

Virgin and child, Correggio; the colouring, &c. of this picture does not equal the idea one has formed of this great master's genius.

Wisemen's offerings; Carlo Dolci. The finishing of this picture is very fine; the airs of the heads noble, the attitude of the child excellent, and the colours and clear obscure of great merit.

Martyrdom of St. Catharine, by Julio Romano; a piece containing numerous figures, and is very fine.

Virgin and Child, by Carlo Cignani; very noble.

A sleeping Christ, by Pouffin; most exquisite.

Virgin's head; a sketch by Raphael.

Joseph's head; a ditto by ditto. The name of Raphael is great; but these sketches will not answer any one's idea who has seen these alone of this master.

Virgin and Child; Schiedone; very fine.

Ditto, Albano; excellent.

St. Eustachius's vision, by Albert Durer; a prodigious expression of the minute sort.

Virgin and Child; Correggio; the attitude fine.

Christ blessing the elements, by Carlo Dolci. To desire the reader to make a pause when he comes to this picture, would surely be needless; for all, from the connoisseur to the clown, must be struck with astonishment at the first entering the room: sure never piece was finished in so perfect a manner, and at the same time the great expression so little damaged by it: in short, the expression of the soul is as great as the finishing of

the mouth; and the whole piece most superlatively excellent. The divine resignation—attention to the moment—religious complacency of soul—all is most exquisite: there is not only a picturesque beauty in this piece, but an ideal one, and in a noble stile; for the sentiments in the countenance of our Saviour are rather those of an imaginary existence, something superior to humanity, than a representation of what is ever beheld. The finishing and colouring down to the bread and napkin, are inimitable; the general glow and brilliancy exquisite; the bold relief of the right hand beyond expression; the hollowness of the opened mouth surprisingly touched. In a word, every part of this amazing work proves that Carlo Dolci deserves to be ranked among the first of painters.

Adoration of the Shepherds by ditto, amazingly fine.

Christ in the garden; Bassan. The strong reflection of the light very striking, but the stile of painting coarse, and almost like tapestry.

Martyrdom of St. Catharine, by Parmegiano, after Correggio; most sweetly elegant.

Virgin and Christ's body, Hani. Carrache; very fine.

Holy family; Andrea del Sarto; fine. The old female head excellent.

Head; a sketch by Correggio; disagreeable.

Morning and Evening, two landscapes, by Tempesta, fine.

Venus and Adonis; Giuseppa Chierera: Venus's flesh is well painted; clear, but natural.

The Dressing-room hung with green cut velvet, with elegant gilt paper machée borders, is very handsomely fitted up: the chimney-piece a small bas relief let into the centre, with a border around the whole of Siena marble; very elegant.

Christ's head; Carlo Marratt; very fine.

Adoration of the Shepherds; Ferrara. This picture is a good one, but the principal action strangely absurd: the Virgin holds the child in her lap, as a crier would a parcel of oranges.

Virgin supporting the dead body of Christ; Vandyke: a small, but astonishing picture. The body is painted in the most admirable stile; the expression exact, but great; the colouring exquisite; the group and general effect surprisingly fine. In a word, this piece is truly capital, and worthy of infinitely greater encomiums than in my power to give.

Virgin, by Ferrato; fine.

Virgin, Christ, and St. John.

Christ appearing to Mary Magdalen.

Holy Family.—These four by Carlo Marratt, and very fine.

Virgin, copied by Patours; attitude, colours, and turn of the shoulders, good.

The offering the tribute-money, in two colours, by Vandyke. The group, airs of the heads, and attitudes, admirably fine.

Elisha; Carlo Dolci; prodigious fine. The colouring, expression, and general effect, great.

Assumption, Hanibal Carrache.

Virgin at our Saviour's tomb; Carlo Marratt, after Raphael; very fine.

Virgin and Child; Correggio; a fine, but an unpleasing picture; the faces very ugly.

Flight into Egypt; Carlo Dolci. The thought, manner, colours, and expression, very beautiful.

A Satire on the Capuchines; David Teniers; very great expression.

Adoration of the Shepherds, and Offering of the Wise Men; two pieces by Polenburgh; colouring, finishing, and the design of the heads, very fine.

St. John, by Parmegiano; very fine.

Centaur and Dejanira; Jordanus; finely expressive. The female flesh soft and beautiful, and well contrasted with the roughness of the Centaur.

St. Sebastian and St. Lucia, by Carlo Dolci; fine.

A cat and dead birds, and pigeons in a basket, by Dav. Conich; extremely well done.

Venus rising from the sea, by Titian; very capital. Most of the pictures we have seen of this master are either in bad preservation, or the colouring gone off and hard.

hard. We look in vain for that glowing brilliancy of pencil, of which we read so much in many works on painting: but in this exquisite piece, the colours are admirable; nothing can be more beautiful than the expression of the naked; the roundness and elastic softness of the breasts are inimitable; the beauty of the face very great, and most elegantly painted; her attitude very pleasing. In a word, this picture is viewed with uncommon pleasure.

Albano. Amphitrite; fine.

Roleant Savary, landscape; very fine. It is painted in the stile of Salvator Rosa.

In the blue damask drawing-room are several exquisite pieces; and the glasses, frames, &c. very elegant.

Carlo Marratt. Our Saviour and the Samaritan woman; fine.

Celesti. Adam and Eve lamenting over the dead body of Abel; very fine.

Guido. The Persian Sybil; prodigiously fine; the colouring and expression wonderfully great.

Jordanus. Isaac blessing Jacob; amazingly fine. The dying expression in Isaac's face, and that of the whole piece, very capital.

Carlo Marratt. Virgin, with the dead body of Christ; exquisitely fine.

Salutation. The colouring very fine; but the clear obscure appears very faulty.

Jordanus. Tobit; exquisite.

Carlo Marratt. Magdalen; inimitable.

Titian. Virgin and Child; the colouring a good deal gone off.

Girendo de la Nocte. The reconciliation of St. Peter and St. Paul; the heads and hands very fine.

Ludovico Carrache. Virgin, Christ, and John; extremely fine.

Carlo Marratt. Magdalen.

In another drawing-room, thirty by twenty-seven, is a most noble chimney-glass in one plate, seven feet by four; it is hung with crimson damask: here are several very fine pictures.

Jordanus. Jupiter and Europa.

Marcus Curtius.

Fortune.

Death of Seneca.

These four pieces are all fine; but the last most inimitable. The expression in the whole of Seneca's figure is wonderfully great; nothing can be truer than the representation of the muscles, and the pleats and folds of the aged body.

Guerchino. Christ, the Virgin, and St. John; very fine.

The dining-room is an excellent one, forty by twenty-five, richly fitted up; the recess is within some very elegantly carved and gilt pillars. Here are, by

Ferrara. Passage of the Children of Israel over the Red Sea; fine.

Morello. Diogenes dashing his cup to the ground; prodigiously fine attitude and expression: it is life itself.

Jordanus. The beheading St. John; fine.

Genaria. Armida enchanting the sword of Rinaldo; extremely pleasing.

Jordanus. Diana and Acteon; the figure of Diana prodigiously fine; the naked backs done inimitably; the clear obscure excellent, and the general effect very striking.

A head in Mosaic; the only piece in that noble invention that we remember having seen: at a small distance the colours are natural and fine; but near, the effect is by no means good.

This collection, upon the whole, will afford any spectator the greatest entertainment; for here are pictures that must kindle raptures in those who remark nature alone; and others sufficient to afford the most noble enjoyment to the most learned eye. The pieces are extremely numerous; very few of them indifferent, and many exquisitely fine. The collection of the works of Jordanus is most capital; they are in great numbers, and of amazing expression. The death of Seneca is one of the finest pieces of this master that is any where to be seen. Carlo Dolci is likewise seen here in sur-

prizing perfection; his pieces in this collection are all good, and some of them superlatively so; particularly our Saviour blessing the elements. The two historic pieces by Vandyke are particularly valuable, as that painter did so few of them: the dead Christ is of most capital merit. Of Carlo Marratt we find many very fine pieces, but not upon the whole equal to those we see at Houghton. Titian is exhibited in the Venus rising from the sea, to very great advantage, considering how few of his capital pictures are to be found in England. Guido's Sybil is worthy of the highest admiration; and Poussin appears to advantage in several pieces. In a word, many of the greatest painters are here to be studied with profit and delight, and their works here to be seen the lasting admiration of every spectator. Among such a number of exquisite pictures, it is difficult to draw comparisons; but we believe the spectator will be best pleased with Christ blessing the elements, by Carlo Dolci; the dead Christ, by Vandyke; and Seneca, by Jordanus.

Near this seat, and on the south side of the bridge leading to Stamford, but in this county, stood an ancient free chapel or hospital, dedicated to St. John and St. Thomas the martyr; consisting of a master and brethren, founded about the end of king Henry II.'s reign, by Richard de Humet, Betram de Verdun Syword, or Brandon de Fossato.

At Barnack in this county, and near Burleigh, there was an ancient college; of which there is no particular account.

Rockingham, the next place we visited, is situated on the river Willand, at the distance of eighty-three miles from London; and has a charity-school for 12 boys. Upon a hill stands the forest called Rockingham forest, reckoned one of the largest and richest in the kingdom; in which William the Conqueror built a castle; this wood, in the time of the ancient Britons spread itself almost from the Willand to the Nen; and was noted formerly for iron works, great quantity of slags, that is, the refuse of the iron ore, being met with in the adjacent fields. Its extent, according to a survey in 1641, was near fourteen miles in length, from the west-end of Middleton-Woods to the town of Wansford, and five miles in breadth, from Brigstock to the Willand; but it is now divided into small parcels, by the interposition of fields and towns, and separated into three bailiwicks. In several of its woods a great quantity of charcoal is made of the tops of trees, of which many waggon-loads are sent yearly to Peterborough. Here is a spacious plain in this forest called Rockinghamshire, which is a common to the four towns of Cottingham, Rockingham, Corby, and Getton. King William Rufus called the council here of the great men of the kingdom. King John's son, Richard earl of Cornwall, was constituted governor of the castle, and warden of the forest; in which he was succeeded by his son, Edmund earl of Cornwall, who had likewise the manor of the town, which, after his death, was assigned to his relict, Margaret, as part of her dower, by king Edward I. King Edward II. gave this town and manor to his son John, when he was created earl of Cornwall in parliament; from which time it went along with the said earldom, and still continues so, unless it was with the castle alienated to Sir Lewis Watson, the earl of Rockingham's ancestor.

This town has a weekly market on Thursday, and an annual fair on the twenty-fifth of September, for horses, cows, sheep, hogs, pewter, black hats, and cloths.

At Dean, about three miles from Rockingham, there was an ancient priory before the Conquest, which was a cell to the abbey of Westminster, and was suppressed soon after the Conquest; and at Cotes, about the same distance from this town, mention is made of a house for leprous persons.

Weldon is a small market-town, situated in the forest of Rockingham, at the distance of eighty-three miles from London, in which there is nothing deserving particular notice. The market-house is a handsome building, with a sessions-chamber over it, built, by the encouragement

couragement of the lord Hatton, of stone, from some excellent quarries near it.

Here is a weekly market on Thursday, and four annual fairs, viz. the nineteenth of February, the twenty-first of May, the twentieth of August, and the seventeenth of September, for brags, pewter, hats, and linen and woollen cloth.

Oundle is a corruption of Avondale, or the Riverdale, the original name of this town. It is a clean, uniform, well-built town, at the distance of sixty-five miles from London, and almost surrounded by the river Nen, over which it has two handsome stone bridges; one of these, called the North Bridge, is remarkable for the number of its arches, and a fine causeway leading to it. The church is extremely neat: here is a free-school, and an alms-house, both founded by Sir William Laxton, lord mayor of London, and supported by the Grocers Company of that city. Here is a charity-school for thirty boys, and another for twelve girls. Here is likewise another alms-house, built by one Nicholas Latham.

There is a well in this town, in which it is said there is frequently heard a noise like the beat of a drum, which the lower class of people in the neighbourhood regard as a presage of some great calamity, though it may easily be accounted for, from the water's passing through some aqueduct opening into the well.

Here was a monastery before the year 711, generally thought to have been founded by Wilfrid, archbishop of York: it afterwards became a cell to the abbey of Peterborough. In the church-yard of this place there was an alms-house, founded by Robert Viate, in 1485.

Oundel has a weekly market on Saturday, and three annual fairs, viz. the twenty-fifth of February, Whitfun-Monday, and the twenty-first of August, for horses, sheep, and cows.

Fotheringhay Castle, near this town, is a very ancient building, where king Richard III. was born, and Mary Queen of Scots beheaded. There was formerly a nunnery here, the nuns of which were translated to De la Pre, near Northampton. King Henry IV. in 1511, began in this town a noble college, dedicated to the Virgin Mary and All Saints, for a master, twelve chaplains or fellows, eight clerks, and thirteen choristers. At the dissolution, it was endowed with lands to the yearly value of four hundred and ninety-nine pounds fifteen shillings and nine-pence.

At a place called Wolthrop, not far from Oundle, there appears to have been a small Benedictine nunnery, dedicated to St. Mary, as early as the reign of king Henry I.

There was a priory of Black canons at Finhead, near this town, founded by Richard Engain, about the beginning of the reign of king John, and dedicated to the Virgin Mary. Upon the dissolution of religious houses, it was valued at fifty-six pounds ten shillings and eleven-pence *per annum*.

At Armefton, not far distant from this town, Ralph de Trableville, and Alice his wife, founded an hospital, with a chapel, before the year 1231, dedicated to St. John the Baptist.

And at Wittering, near this place, there was a priory in the year 1308.

At Cotterstock, on the north side of Oundle, there is a church dedicated to St. Andrew, where John Gifford, canon of York, about the year 1336, founded a college or large chauntry, consisting of a provost, twelve chaplains, and two clerks.

Thrapston is a corruption of the original name *Thorpston*. It is situated in a pleasant valley, upon the river Nen, over which it has a fine stone bridge, at the distance of sixty-five miles from London. The water, air, and soil of this place, are so remarkably healthy, that there could scarce be found a more eligible retreat for those who chuse a country life. The river Nen having been made navigable to this town by act of parliament, boats came up to it for the first time in November 1727.

This town has a weekly market on Tuesday, and three annual fairs, viz. first Tuesday in May, for sheep,

sheep, horned cattle, and merchandize; St. James's day, and the fifth of August, for pedlary, shoes, &c.

North-west of Thrapston, is Drayton-House, a seat belonging to the earl of Peterborough.

Higham-Ferrers, or Ferris, signifies the High House of Ferrers, and is a name derived from a castle upon a rising ground here, anciently in possession of the family of Ferrers, the ruins of which are still visible. It stands on the east side of the Nen, at the distance of fifty-nine miles from London. In the reign of Philip and Mary, it was made a borough, the corporation whereof consists of a mayor, steward, recorder, seven aldermen, thirteen capital burgeses and commonalty. It is a small, but clean, healthy, and pleasant town; and is a royal manor, as part of the duchy of Lancaster. Here is a handsome church, with a lofty spire, a free-school, and an alms-house for twelve men and one woman. Henry Chichele, archbishop of Canterbury, a native of this town, in the last year of the reign of Henry V. founded a college for eight secular chaplains or canons, four clerks, and six choristers. It was dedicated to the Virgin Mary, St. Thomas of Canterbury, and St. Edward the Confessor. Its revenues were valued, upon the dissolution, at one hundred and fifty-six pounds two shillings and seven-pence *per annum*. He likewise founded an hospital for the poor.

This town sends one member to parliament, has a weekly market on Saturday, and eight annual fairs, viz. Tuesday before the fifth of February, the seventh of March, the third of May, the twenty-eighth of June, and Thursday before the fifth of August, for horses and horned cattle; the tenth of October, for horses, horned cattle, sheep, and hogs; St. Catharine, and the seventeenth of December, for cattle of all sorts.

At Artleborough, near this town, on the other side the river Nen, there is a church, in which John Pyel, in the time of Edward III. began, and after his decease, his executrix, in the time of Richard II. perfected a college for six secular canons or prebendaries, and four clerks. This collegiate church was endowed at the dissolution with yearly revenues to the amount of seventy pounds sixteen shillings and ten-pence.

At Mill-cotton, not far from Higham-Ferrers, there are the remains of a Roman encampment; and in the neighbouring fields Roman coins and urns have been dug up.

Wellingborough, the next town we entered, is thought to have derived its name from the great number of wells and springs in and near it. This town was destroyed by the Danes, but it was afterwards re-established; and made a market-town by king John, at the intercession of the monks of Crowland, who were then in possession of the manor. It afterwards suffered greatly by a dreadful fire, in July 1738, which, in the space of six hours, consumed upwards of eight hundred houses. It has since been rebuilt with great elegance, of a kind of red stone, and their foundation is chiefly on a rock of the like stone. It is at present a large, populous, trading town; has a handsome church, and a charity-school for forty children, who are maintained, clothed, and taught to read and write. It stands at the distance of sixty-five miles from London, on the south side of a hill, about a quarter of a mile from the river Nen: the country round it yields great quantities of corn; its chief trade therefore lies in this article: it likewise has a considerable manufacture of lace, which, it is said, one week with another, returns fifty pounds each week. This town is celebrated for medicinal waters: Queen Mary, wife to king Charles I. is said to have continued many weeks here, by the advice of her physicians, to drink them.

There is a weekly market held here on Wednesday, and three annual fairs, viz. Easter-Wednesday, for horses and hogs; Whitfun-Wednesday, and the twenty-ninth of October, for horses, horned cattle, sheep, &c. and cheese.

At Chester, near this town, there are the traces of a Roman camp, of near twenty acres extent, inclosed by a strong stone wall. In the area of this camp have been found Roman pavements, coins, bricks, and other remains of antiquity.

Kettering is a handsome, populous town, with a sessions-house for the county, a small hospital, and a charity-school for twenty girls, who are employed in spinning jerseys. Near two thousand hands are said to be employed here in the manufacture of shalloons, tammies, and serges. The woollen manufactory was introduced here in the last century, by one Mr. Jordan. This town is situated upon a small river, which runs into the Nen, at the distance of seventy-two miles from London. The trade of this place is now very considerable.

Here is a weekly market on Friday, and three annual fairs, viz. Thursday before St. Thomas's day, Thursday before Easter, and Tuesday before Old Michaelmas-day, for cattle of all sorts, and pedlary wares.

Among the many noble seats in this county, is the magnificent house at Broughton, built by the first duke of Montague, after the model of the palace of Versailles. It has treble wings which project and expand, forming three courts, which increase in dimensions as the spectator approaches the front of the house, which terminates the prospect. The hall is a noble, spacious, and elegant room; on the ceiling is represented a convocation of the gods, inimitably well painted. The ceilings are in general well-executed, as are the stair-cases and galleries. Here are a great number of portraits, and other curious pictures, performed in a masterly manner.

The gardens, containing ninety acres of ground, are beautifully laid out, and most agreeably diversified with statues, flower-pots, urns of marble and metal, many very large basins, with a variety of fountains, reservoirs, fish-ponds and canals, aviaries, wilderesses, and terraces, a remarkable fine cascade, and a river which runs throughout the garden. The park is encompassed with a brick wall, and finely planted with trees.

In the neighbourhood of Broughton there is a petrifying well, from whence a skull, perfectly petrified, was in the last century brought to Sidney College in Cambridge, where it is still preserved.

There is a remarkable echo at Oxendon, near Kettering, formed by the tower of a church, that will repeat twelve or thirteen syllables very distinctly.

Rothwell, or Rowell, is situated on the side of a rocky hill, whence it is plentifully supplied with springs of pure water. It is a tolerable good town, at the distance of sixty-nine miles from London. Here is a fine market-house, consisting of a square building of ashler stone, adorned with the arms of most of the nobility and gentry of the county, carved under the cornish on the outside, the contrivance of Sir Lewis Tresham. Here was formerly a small priory for three or four nuns, dedicated to St. John the Baptist, and valued, upon the suppression, at five pounds nineteen shillings and eight-pence *per annum*.

There is a weekly market held here on Monday, and a remarkable large annual fair, particularly for horses: it begins on Trinity-Monday, and continues all the week; the last day is for leather only.

At Dingley, near Rothwell, there was a preceptory belonging to St. John of Jerusalem, which was endowed with lands, that, at the time of the dissolution, were valued at one hundred and eight pounds thirteen shillings and five-pence *per annum*.

There was an abbey for Cistercian monks at Pipewell, near this town, founded by William de Boutevylein in the year 1143, and dedicated to the Virgin Mary: its yearly revenues, on the suppression, were rated at two hundred and eighty-six pounds eleven shillings and eight-pence.

At Weekly, a little to the north-east of Rothwell, there is an alms-house built and endowed by Sir Edward, whom king James I. created lord Montague of Boughton.

Northampton was anciently called *Hamton*, as appears by the Saxon annals; the preposition *North* was added soon after the Conquest, to distinguish it from Southampton, which was also, before that time, known by the name of *Hamton* only.

Northampton appears to have been but an obscure place till after the Conquest: it has, however, sent members to parliament ever since the reign of Edward I.

and as it is the county town, and situated in the heart of the kingdom, several parliaments have been held here. In this town the barons began their rebellion against king Henry III. who took it by assault. Some discontented scholars came hither from Oxford and Cambridge about the end of that reign, and with the king's leave prosecuted their studies here academically for three years; so that there was the appearance of an university in Northampton, till this society was suppressed by a special prohibition, as injurious to both universities. This town has several old charters of incorporation, which were confirmed by king James I. It was once destroyed by the Danes, and again, on the twentieth of September, 1675, laid in ashes by fire; but by contributions from all parts of the kingdom, was soon rebuilt, and is now esteemed one of the neatest towns in England. It is distant sixty-six miles from London, and is governed by a mayor, two bailiffs, four aldermen, twelve officers, peculiarly called Magistrates, a recorder, town-clerk, and council, with fifty-eight burgesses, and five sergeants. It was formerly encompassed by a wall, two miles in circumference: there were seven churches within the walls, and two without; of these four only remain; the largest of which, called Allhallows, stands in the centre of the town, at the meeting of four spacious streets: it has a stately portico, supported by eight lofty Ionic columns, with a statue of king Charles II. on the balustrade. Here is a sessions and assize-house, which is a beautiful building in the Corinthian stile. The market-place, a regular and spacious structure, is accounted one of the finest in Europe. On the west-side of the town are still to be seen the remains of an old castle. Here is a county goal, and three hospitals, and an inn, called the George Inn, the building of which cost two thousand pounds, which was given by John Dryden, Esq: towards the endowment of a charity-school for thirty boys and ten girls. This town is very advantageously situated, being a great thoroughfare both to the north and west countries from London, which contribute greatly to its wealth and popularity; but being eighty miles from the sea, prevents having any commerce by navigation; nor can coals be brought hither by water-carriage, and little wood growing upon the island, renders firing very expensive in this place; here are two bridges over the Nen.

The principal manufactures of Northampton are shoes and stockings, of which great quantities are exported. On a neighbouring down, called Pye-Legs, there are frequent horse-races; and in and about the town are great numbers of cherry-gardens. In 1460, a battle was fought here, wherein Henry VII. was taken prisoner by Nevil, earl of Warwick. Here were formerly several religious houses.

In the west-part of the town William Peverill, natural son to William the Conqueror, before the year 1112, built an abbey of Black canons, dedicated to St. James, which, upon the dissolution, was valued at one hundred and seventy-five pounds eight shillings and two-pence *per annum*; and on the south-side there was an hospital before the year 1240, dedicated to St. Leonard, for a master and leprous brethren. At the suppression, it was rated at ten pounds *per annum*.

In 1084, a priory, dedicated to St. Andrew, was repaired, endowed, replenished with Cluniac monks, and made subordinate to the foreign abbey of St. Mary de Caritate, by Simon Scinliz, the first earl of Huntingdon, and Maud his wife. This house was made denison the sixth of Henry IV. and appeared at the dissolution to have been endowed with two hundred and sixty-three pounds seven shillings and a penny *per annum*. Here was an hospital for poor and infirm persons, founded about the year 1137, by Walter, archdeacon of Northampton, dedicated to St. John the Baptist, and rated, on the suppression, at twenty-five pounds six shillings and two-pence a year.

Without the walls of this town there was an abbey de la Pre, for Cluniac nuns, founded in the time of king Stephen, by Simon Scinliz, second earl of Northampton, and dedicated to St. Mary. At the time of the suppression, here were ten nuns, who were endowed with

one hundred and nineteen pounds nine shillings and seven-pence *per annum*.

The Friars Minors, in 1224, hired an habitation in the parish of St. Giles, but fixed afterwards northward of the market-place, upon ground given them by the town. At the dissolution, this house was valued at six pounds thirteen shillings and four-pence *per annum*. In the Horse-market there was a priory of Friars Preachers before the year 1240, to which John Dabyngton was either a founder, or a considerable benefactor; and which, upon the suppression, was valued at five pounds eleven shillings *per annum*.

Here was a priory of White friars, founded by Simon Montfort and Thomas Chitwood, in 1271; and rated, on the dissolution, at ten pounds ten shillings *per annum*. In Brigg-street, near the South gate in this town, John Longvile, in the year 1322, gave a messuage, with the appurtenances, on which to build a chapel and priory for friars Augustines. An hospital near the west gate was founded about the year 1450, by the citizens. The college of All Saints here was valued, upon the dissolution, at two pounds thirteen shillings and four-pence *per annum*.

Northampton sends two members to parliament, and has three weekly markets, held on Wednesday, Friday, and Saturday; one of which, for horses, is allowed to be the most considerable in the rendezvous of the jockies of both places. Here are eight annual fairs, viz. the twentieth of February, for horses, horned cattle, and toys; the fifth of April, the fourth of May, and the fifth of August, are great horse fairs; the twenty-sixth of August, for all sorts of merchandize; the nineteenth of September, chiefly for cheese and sheep; the twenty-eighth of November, and the nineteenth of December, for cattle of all sorts.

Near this town is the ancient royal house of Holmeby, which was formerly in great esteem, and by its situation is capable of being made a truly royal palace. But the melancholy reflexion of king Charles I. in this house, and his being violently taken hence again by the rebels, has cast a kind of disgrace upon the place, so that it has been in a great measure forsaken: the house and estate was purchased by the late dutchess of Malborough, and is at present possessed by a farmer, who has pulled down part of the out-houses, and converted the remainder into barns, stables, &c.

At a little distance from Northampton lies Naseby, where the bloody and fatal battle was fought between the royalists and parliamentarians, upon a fine plain, where at present stands a windmill; and on it are the marks of several large holes where the slain were buried. North-west from hence is Guileborough, where are the traces of a Roman camp, the situation of which is the more remarkable, as it is between the Nen and the Avon, a river of Warwickshire, the only pass from the north to south parts of England not intercepted by any river. This camp was secured only by a single entrenchment, but that of a considerable breath and depth.

Within half a mile of Northampton, at a place called Geddington, there is in a trivium, one of the crosses erected by Edward I. in memory of his queen Eleanor, whose corps was rested here in its way to Westminster; and at a small distance to the north of this cross, several Roman coins have been dug up. At Cogenhoo, upon the river Nen, not far from hence, a family urn and several Roman coins have been dug up.

At Little Billing near this town, was a priory built by William the Conqueror, and dedicated to St. Augustine. It was a cell to the priory of St. Andrew at Northampton.

William de Wideville, in 1155, gave the church of Sulby not far from hence, with some lands adjacent, to Robert de Querceto, bishop of Lincoln, to found an abbey of the Premonstratensian order; it was dedicated to the Virgin Mary, and valued upon the dissolution at two hundred and fifty-eight pounds, eight shillings and five-pence, *per annum*. A place called Keyland, in the parish of Cottisbrook, near Sulby, was given to the abbot and convent of that place, by William de Buttevilan; and here was a cell of Premonstratensian canons, dedicated to St. John.

At Kingsthorp, near Northampton, in the year 1200, there was an hospital erected at the joint expence of one Walter, the convent of St. Andrew's in the town of Northampton, and the prior, for the reception of pilgrims, and poor, indigent, and sickly persons, to be taken care of by a procurator, two chaplains, and six lay-brothers. There were two chapels in this house, one dedicated to the Trinity, the other to St. David. It was valued, upon the dissolution, at thirty-two pounds four shillings and two-pence *per annum*.

At Althrop in the neighbourhood of Northampton is the noble seat belonging to the family of the Spencers, built by Robert earl of Sunderland; and is particularly noted for a magnificent gallery, furnished with a large collection of curious paintings by the best hands; but those done by the greatest masters, and of course the most valuable, are in the apartments below; upon the whole there are very few collections of pictures in England better worth seeing.

The house is situated in the middle of a charming park, laid out and planted like that of Greenwich, in Kent, on the skirts of a beautiful down. There is a noble piece of water, on which is a vessel completely equipped; a fine Venetian gondola, canoes, &c.

At a convenient distance from the house, there is an handsome square of offices; and near these is a large kitchen-garden finely walled and planted, in which is an elegant building, for the residence of the gardener, being the model of an Italian villa.

Daventry, or Daintry, is a considerable market town in the high road to Chester, and is consequently a great thoroughfare; and well furnished with inns, which are its chief support. It is distant from London seventy-three miles, has a charity school, and is governed by a mayor, aldermen, steward, and twelve freemen.

Roman coins have been frequently dug up here, and the military ways, called Watling street, runs through the town in its course to Warwickshire. After the Romans the Saxons made use of the same camp. It is said, that in Daventry-park stood a castle of John of Gaunt; the banks in it resemble those of ponds and canals, with a watry squasy ground, between them.

Daventry has a weekly market on Wednesday, and five annual fairs, viz. Easter-Tuesday, for horses and horned cattle; the sixth of June, for swine and all sorts of goods; the third of August, for horned cattle, horses and sheep; the second of October, for cattle, cheese, onions, &c. and the twenty-seventh of October, called Ram-fair, chiefly for sheep.

On Borough-hill, half a mile from this town, are still to be seen the ruins of a Roman fortification, three miles in compass; it is at present a course for the horse-races.

Weedon-Beek, south-east of Daventry, near the source of the Nen, over which it has a bridge, was the seat of Wolfere king of the Mercians, whose daughter converted it into a monastery. A military way runs north from this place, with a causey in many places broken and worn away, from whence it is called Weedon in the Street. It is the ancient Bannavenna mentioned by Antoninus.

Lylborn, near Daventry, is supposed to have been a Roman station, by its situation on the Watling-street, and by Roman pavements, trenches, ruins of walls and houses, and military mounts of various dimensions, at or near this place; but more especially from the traces of a fort, at a mount called the Round-hill. Upon digging a barrow here there were found some coals, from whence some have concluded, that the barrow was raised for a boundary, upon the authority of some ancient writers, who mention such a custom.

In a field near Whitton, about three miles from Daventry, old foundations of houses have been dug up, and great numbers of Roman coins, which the people here call Danes money. The Roman Watling-street runs near this town.

At Chipping-Warden, not far from Daventry, there are the remains of a rampart of earth, which is supposed to have been a fence raised by the Romans, from its form, and the great number of Roman coins dug up here.

In a field in the neighbourhood of Woodford, near Daventry, there are manifest tokens of Roman buildings, such as dice-like bricks, engraven tiles, and some years ago a Roman urn was turned up here by the plough.

In the church of Preston-Capes, near Daventry, Hugh de Leicester, sheriff of the county, about the end of the Conqueror's reign, placed four Cluniac monks; who labouring under great want of water, and suffering much from other inconveniencies, were in a few years removed to the town of Daventry, where the same Hugh, near the parish-church, built a priory dedicated to St. Augustine; the monks were subordinate to the foreign abbey of St. Mary de Caritate. It was dissolved by Cardinal Wolsey, when its revenues were valued at two hundred and thirty-six pounds seven shillings and six-pence *per annum*.

At Cateby, south-west of Daventry, Robert, the son of Philip de Eesseby, as early as the time of king Richard I. built a priory of Benedictine nuns, dedicated to St. Mary and St. Edmund. At the time of the dissolution, here were ten religious, who had revenues to the amount of one hundred and thirty-two pounds ten shillings and eleven-pence *per annum*.

At Ashby-Canons, near Daventry, there was a priory of Black canons, dedicated to the Virgin Mary, before the reign of king John. It is uncertain who the founder was; but about the time of the dissolution, here were thirteen religious, endowed with an annual income of one hundred and nineteen pounds and four-pence.

The manor of Everton, near Daventry, was, before the year 1217, given to the abbey of Berney in Normandy; and here was for some time an alien priory.

Towcester, or Tosseter, in all probability derived its name from *cester*, a fort. It is a handsome, populous town, of considerable antiquity; and stands in the great road from London to Chester, at the distance of sixty-one miles from London. Here are several good inns, and a large, well-built church. There is a considerable manufacture of lace and silk here, which employs the chief part of the inhabitants; and here are annual horse-races. Towcester is supposed to have been the *Triponium* of Antoninus: it has three bridges over three streams, into which the little river Tove, or Wedon, is divided, and which encompass the town. Many Roman coins have, at different times, been dug up in this place; and the military way, called Watling-street, runs through it, and may be traced in many parts between this town and Stony-Stratford, in Buckinghamshire. In the year 917, this town was besieged by the Danes, but was not taken: king Edward the Elder afterwards encompassed it with a strong stone wall, but there are not now the least remains of it. Here was an hospital, dedicated to St. Leonard, before the year 1240; and likewise a college or chantry, founded in the time of king Henry IV. by William Sponne, D. D. and rector of this place; which, upon the dissolution, was valued at nineteen pounds six shillings and eight-pence *per annum*.

Towcester has a weekly market on Tuesday, and two annual fairs, viz. the twelfth of May, and the twenty-ninth of October, for cattle of all sorts, and merchandize.

About four miles south-west of this town, there are some old fortifications, called Castle-dykes, which take up near eleven acres of ground, on the highest part of which have been found the ruins of a fortress. In searching among the stones, two rooms were discovered, of which one had stone walls and an arched roof; but from the other issued a stench like that of putrified carcasses, which prevented any farther examination.

At Weedon-Pinkney, on the west side of Towcester, there was a Benedictine priory, dedicated to St. Mary, which was a cell to St. Lucian, near Beauvois in France, as early as the reign of Henry I. It was suppressed by Henry V. and the estate given by Henry VI. to All-Saints College, Oxford. Abundance of very fine stone, and many Roman coins, have been dug up here. Weedon now contains two parishes, and was once a market-town.

At Eston Neston, in the neighbourhood of Towcester, is a villa belonging to the earl of Pomfret, designed by

the famous Inigo Jones. It is a stately building, pleasantly situated, amidst delightful plantations of woods and vistas, and commands a fine prospect. Below the gardens, the meadows, which are of great extent, lie open to the view of the house; and the river serpentine through these, gives an additional beauty to the seat. In the grand view to the back front, beyond the garden, is a large and long canal. The hall is a fine lofty room, and the great stair-case is painted in fresco by Sir James Thornhill. The house contains several curious pictures; but the principal glory of this seat is the magnificent collection, we here meet with, of Greek, Roman, and Egyptian statues, of white marble, being the most ornamental part of the *Marmora Arundeliana*, which was lately presented by the countess dowager of Pomfret to the university of Oxford.

Brackley is surrounded with brakes or fern, from whence, in all likelihood, it takes its name. It was once famous for tilts and tournaments, and was likewise formerly a great staple for wool. It is supposed to be the third borough erected in England; and is governed by a mayor, six aldermen, and twenty-six burgesses. The mayor is chosen annually by the burgesses, at the court-leet of the lord of the manor.

Brackley is distant fifty-seven miles from London, and situated near the head of the river Ouse, with which it is pleasantly watered. Here are two parish-churches, and a free grammar-school. The family of the Zouches built a college here, which, though much decayed, is kept from falling into ruins by Magdalen College in Oxford, as a retreat in times of trouble and infection; and it likewise serves as a charity-school. Robert, earl of Leicester, about the year 1150, gave ground in this town to build an hospital on, which was endowed by Robert his son, and dedicated to St. John the Evangelist. It consisted of a master or prior, and secular brethren; and in the year 1484, was united to St. Mary Magdalen's College in Oxford. Here was likewise an hospital, founded before the year 1291, dedicated to St. Leonard.

This town sends two members to parliament, has a weekly market on Wednesday, for fat hogs, boots and shoes; and five annual fairs, viz. Wednesday after the twenty-fifth of February, for horses, cows, and sheep; the third Saturday in April, for horses, cows, and swine; Wednesday after the twenty-second of June, for horses and cows; Wednesday before the tenth of October, for horses and cows, and hiring servants; and the eleventh of December, for horses, cows, and sheep.

Astrop Wells, on the borders of Oxfordshire, but in the neighbourhood of Brackley, were once much recommended by very eminent physicians in scorbutic and asthmatic cases. At Culworth, likewise in this neighbourhood, are found the astroites, or star-stones, in great abundance.

At Charlton, near Brackley, there is a fortification called Rainsborough, which is supposed to have been a Danish camp.

In the time of William the Conqueror, Hugh de Anaf, or de Chacomb, founded at Chalcomb, west of Brackley, a priory of Black canons, dedicated to St. Peter and St. Paul; the yearly revenues of which, upon the suppression, were rated at eighty-three pounds eight-pence and nine-pence.

At Lutfield, a village in this neighbourhood, but partly in Buckinghamshire, a Benedictine priory was founded by Robert Bossa, earl of Leicester, in the time of king Henry I. and dedicated to the Virgin Mary. It was suppressed in the year 1494, and its revenues annexed to the abbey of Westminster.

At Ayns, not far distant from Brackley, in an angle of the county next to Oxfordshire, there was an hospital dedicated to St. John and St. James, founded or endowed by Roger, the son of Richard de Humet, and his son Robert, in the time of Henry II. and united to Magdalen College in the year 1484.

This county, in the time of the Romans, was part of the territory inhabited by the Coritani; and under the Saxons it belonged to the kingdom of Mercia.

CURIOUS PLANTS found in Northamptonshire.

Bugloss; *Anchusa*; found on the sides of the hills near Bufield.

Sweet-cane; *Calamus aromaticus*; found in several of the brooks near Towchester.

Sun-dew; *Ros Solis*; found in the meadows near Peterborough.

Water-mint with a spicy smell; *Mentha arvensis verticillata folio rotundiore odore aromatico*, Ray; found near King's-cliff.

Butterwort with a small flesh-coloured flower; *Pinguicula flore minore carneo*, Ray; found in the meadows near Northampton.

Wood-forrel; *Acetosellum*; found in the woods near Towchester.

Wood-sage; *Salvia agrestis, seu scorodonia*, Ger. found in the woods near Horton.

Tender ivy-leaved Bell-flower; *Campanula palustre cymbalariae foliis*, Ger. found in several places on the banks of the Nen.

Later autumnal Gentian, with leaves like Centaury; *Gentianella fugax autumnalis elatior, centaurii minus foliis*, Park; found on the hills near Watford.

Crested Cow-wheat; *Melampyrum Crystatum*, J. B. found on the hills near Daventry.

Common or English Pasque-flower; *Pulsatilla folio crassiore et majore flore*, C. B. found on the hills near Naseby.

Bush-headed Horse-shoe Vetch; *Ferrum equinum Germanicum siliquis in summitate*, C. B. found on the hills near Ashby.

Water Germander; *Scordium*, C. B. found in many of the meadows along the river Nen.

Mountain Cudweed, or Cats-foot; *Elichrysum montanum longiore, et flore albo*, Tourn. found on Barnake-heath, near Stamford.

Everlasting Pea, or Chickling Vetch; *Lathyrus latifolius*, C. B. found in the woods near Horton.

Common Stone Basil; *Acinas multis*, J. B. found near Rowel.

Fine-leaved Cheekweed; *Alfne foliis minoribus*, Ger. found in the ploughed fields near Northampton.

Violet-coloured horned Poppy; *Glaucium flore violaceo*, Tourn. found in the corn-fields near Daventry.

Upright male Speedwell; *Veronica mas erecta*, C. B. found on the waste grounds near Harington.

Marsh Twy-blade; *Ophys bifolio pratensis*, Ger. found in the watery meadows near the Nen.

Maiden Pink, or mated Pink; *Caryophyllus minor repens*, Raii. found near Wellingborough.

The least Bindweed, or Gravel Bindweed; *Convolvulus minor arvensis*, C. B. found among the corn near Northampton.

Hollow-leaved Gentian; *Anglica folio convoluto*, Park; found in a small wood called the Spinney, near Lichbarrow.

MEMBERS of PARLIAMENT for Northamptonshire.

This county sends nine members to parliament; two knights of the shire for the county, two citizens for Peterborough, two burgessees for each of the boroughs of Northampton and Brackley, and one for Higham-Ferrers.

L I N C O L N S H I R E.

THIS county is bounded on the east by the German ocean; on the west, by part of Yorkshire, Nottinghamshire, and Leicestershire; on the north by Yorkshire, from which it is separated by the æstuary of the Humber; and on the south by the counties of Northampton and Cambridge. The shape of Lincolnshire is like a bended bow; it is about sixty miles from north to south, about sixty-five in breadth from east to west, and one hundred and eighty miles in circumference. It is divided into three provinces; 1. Holland, comprehending the south-east part of Lincolnshire; 2. Kesteven, comprehending the southern part of this county; 3. Lindsey, comprehending the whole northern part of the county. The whole county is divided into thirty hundreds or wapentakes; one city, thirty-one market-towns, six hundred and thirty parishes, about forty thousand five hundred and ninety houses, and two hundred and forty-five thousand five hundred and forty inhabitants. It lies in the province of Canterbury, and diocese of Lincoln; and the city of Lincoln, which is nearly in the centre of the county, is one hundred and twenty-eight miles from London.

R I V E R S.

The principal rivers that water this county, are the Welland, the Witham, the Trent, the Dun, and the Ankam. The Welland rises in Northamptonshire; and after running across that county, enters Lincolnshire; then passing by several market-towns, discharges itself into the German ocean, called by Ptolemy Metaris Astuarium, now called the Washes. The Witham rises near Grantham, a considerable borough town of this county; whence directing its course south-east, it falls into the German ocean near Boston, another borough town of Lincolnshire. The Trent rises in Staffordshire; and running north-east through the counties of Derby and Nottingham, and parting Nottinghamshire from Lincolnshire, falls into the mouth of the Humber. The Dun rises in Yorkshire; and inclosing with the Trent, a considerable piece of ground, in the north-east part of this county, known by the name of the Isle of Axholm, falls into the Trent near its conflux with the Humber. The Ankam rises a little to the northward of Lincoln, and directing its course due north, falls into the Humber a little to the northward of the river Humber.

Remarks on the INLAND NAVIGATION of Lincolnshire.

The river Trent, which separates this county from that of Nottingham, is navigable to a great distance from its influx into the Humber; but as the navigation of this river chiefly regards Nottinghamshire, and other counties through which it passes, we shall consider its navigation when we come to treat of these respective shires. The principal navigation in this county is that called the Fosse-dike, which extends from Lincoln to the Trent, and is of very great advantage to that city. Besides these, the mouths of several rivers are navigable, and which we shall particularly describe in our remarks on the sea-coasts of Lincolnshire.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of Lincolnshire is different in different parts of the county. In the middle, and along the borders of the Trent, it is very healthy; but upon the sea-coast it is bad, particularly in the south-east division, which is not only boggy, and full of fens, but great part of it is under water, and for that reason it is distinguished by the name of Holland. Here are great plenty of wild fowl,

such as duck and mallard, teal and wigeon, brand-geese, wild-geese, &c. For the taking of the four first kinds, here are a great many decoys, from all which the vast number of fowls they take are sent up to London.

The accounts which the country people give of the numbers they sometimes take, are such, that one scarce dares report it from them. But this we can say, that some of these decoys are of so large an extent, and take such great numbers of fowl, that they are let from one, to three, four, and five hundred pounds a year rent.

The art of taking the fowls, and especially of breeding up a set of creatures, called Decoy-ducks, to entice, and then betray their fellow ducks into the several decoys, is very ingenious; and though it is not very easy to describe it, we will give it in as few words as we can.

The decoy-ducks are hatched and bred up in the decoy-ponds, in which are certain places where they are constantly fed; and being made tame, they are used to come to the decoy-man's hand for their food.

When they fly abroad, it is not known whither they go; but some conjecture they fly quite over into Holland and Germany, where they meet with others of their own kind, and sorting with them, they, by some art unknown to us, draw together a vast number of the fowls, and, in a word, kidnap them from their own country; for being once brought out of their knowledge, they follow the decoys, as a dog follows the sportsman; and it is frequent to see these subtle creatures return with a vast flight of fowls along with them, after they have been absent several weeks together.

When they have brought them over, the first thing they do is to settle with them in the ponds, to which the decoy-ducks belong. Here they chatter and gabble to them in their own language, as if they were telling them, that here they should soon see how well they should live.

When the decoy-men perceive they are come, and that they are gathering and increasing, they go secretly to the pond's side, under the cover which they have made with reeds, so that they cannot be seen; where they throw over the reeds handfuls of corn, in such shallow places as the decoy-ducks are usually fed, and whither they are sure to come for it, and to bring their new guests with them for their entertainment.

This they do for two or three days together, and no harm follows to the poor strangers; till throwing in this bait one time in an open wide place, another time in another wide place, the third time it is thrown in a narrower place, where the trees, which hang over the water and the banks, stand closer together; and then in another yet narrower, where the said trees are over-head like an arbour, though at a good height from the water.

Here the boughs are so artfully managed, that a large net is spread near the tops of the trees, among branches, and fastened to hoops, which reach from side to side. This is so high, and so wide, and the room is so much below, and the water so open, that the fowls do not perceive the net above them.

Here the decoy-man, keeping unseen behind the hedges of reeds, which are made perfectly close, goes forward, throwing corn over the reeds into the water. The decoy-ducks greedily fall upon it, and calling their foreign guests, seem to tell them, that now they may find how well the ducks live in England; so inviting, or rather wheedling them forward, till by degrees they are all gotten under the arch or sweep of the net which is on the trees, and which by degrees, imperceptibly to them, declines lower and lower, and also narrower and narrower, till at the farther end it comes to a point like a purse, tho' this farther end is quite out of sight, and perhaps two or three hundred yards from the first entrance.

When

When the whole flight of ducks are thus greedily following the decoys, and feeding plentifully as they go, and the decoy-man sees they are all so far within the arch of the net, as not to be able to escape, on a sudden a dog, which till then keeps close by him, and which is perfectly taught his business, rushes from behind the reeds, and jumps into the water, swimming directly after the ducks, and barks as he swims.

Immediately the frightened ducks rise upon the wing, to make their escape, but are beaten down again by the arched net, which is over their heads. Being then forced into the water, they necessarily swim forward, for fear of the dog; and thus they crowd on, till by degrees the net growing lower and narrower, they are hurried to the very farther end, where another decoy-man stands ready to receive them, and who takes them out alive with his hands.

As for the traitors that drew the poor ducks into this snare, they are taught to rise but a little way, and so not reaching to the net, they fly back to the ponds, and make their escape; or else, being used to the decoy-man, they go to him fearless, and are taken out as the rest; but instead of being killed with them, are stroked, made much of, and put into a little pond just by him, and plentifully fed for their services.

The soil of this county is in general rich; the inland parts producing corn in great plenty, and the fenny country yielding excellent pasture. It abounds in game of all kinds; and the rivers, as well as the sea, afford great plenty and variety of fish.

Remarks on the HUSBANDRY of Lincolnshire.

About Stamford, particularly northwards, at Caster-ton, &c. the soil is clay, and what they call Creech, which is a poor sandy loam: farms are from twenty to five hundred pounds a year: rents are, for field land, from five to seven shillings per acre; and for inclosures, as high as one pound. Their course is,

1. Fallow
2. Wheat
3. Trefoile and clover mixed for two years.
4. Barley, sometimes wheat
5. Turnips
6. Barley

For wheat they plough four times, sow two bushels and an half, and two and three quarters, and reap on a medium two quarters and an half. They give four tilths for barley, sow four bushels, and reckon four quarters the average. They plough but once for oats, sow four bushels, and get at a medium five quarters. For pease they give one stirring, sow three bushels, and gain in return about two quarters and a half. For beans they likewise plough but once, sow them broad-cast, never hoe, and get about three quarters or three and an half at an average. They sow many turnips, plough for them three times, hoe them once, reckon the mean value at two guineas an acre, and feed them with nothing but sheep. They cultivate a great deal of sainfoine, sow it generally with barley that succeeds turnips, four, four and a half, and sometimes five bushels of seed to the acre; they reckon that the land cannot be made too fine for it; it lasts twenty years. They always mow it once, and never more, and get for about a dozen years two loads of hay per acre at an average, but for the first year only one load. If they cut it oftener, they reckon that it damages it much. The particulars we gained of a farm were,

£. 100 Rent
200 Acres
150 Arable
50 Grafs
6 Horses
10 Cows
160 Sheep
4 Servants
2 Labourers

L A B O U R.

In harvest, seven shillings and six-pence a week, and board.

In hay-time, one shilling a day and board, for carting, &c.

In winter, one shilling. Only three miles off, it is seven-pence.

Reaping per acre, five shillings.

Mowing corn, one shilling.

———— grafs, one shilling and three-pence.

Hoeing turnips, five shillings.

Threshing wheat, one shilling and six-pence, to one shilling and eight-pence per quarter.

———— barley, &c. one shilling.

Between Grimsthorpe and Stamford the country is mostly open, and the roads execrably bad. About Little Byten, their husbandry is but indifferent; however, their soil is the same; it is clay and gravelly loam: farms run from forty to eighty pounds a year; rent of land about four shillings an acre. Their course,

1. Fallow
2. Wheat
3. Beans, pease, or lentils.

They plough five or six times for wheat, sow from four to six bushels per acre. Their measure is random-work, some acres very large, and others small, but the largeness of the above quantity made us observe their fields; and enquiring the size, believe that their acres in general contain near one and half, or better, but still the quantity of seed is very great: they reap on a medium about two and an half quarters. For barley they stir three or four times, sow five or six bushels, and gain in return two quarters. For oats they plough but once, sow three bushels, and don't get above one and an half, or two quarters at an average; from which it is plain their soil does not suit them, and we observed the crops to be very poor. They plough twice for pease, sow four bushels, and gain in return two quarters. They cultivate but few beans; plough once for what they do sow in the broad-cast manner, and never hoe, nor have any idea of feeding the weeds off with sheep, which slovenly custom we have minuted so long; their mean crop two quarters and an half; scarce any turnips sown. Their clover they commonly sow over wheat in the spring, and if it takes well, let it lie a year, mow it twice for hay, the second of which they reckon best, contrary to general ideas; but their reason is the number of weeds they cut with the first crop, a proof by the by of bad husbandry. At Michaelmas they plough up the sward, and harrow in wheat, which is running the land to impoverishment; but this is not however universal. Their dung they never mix with earth, but carry it directly on to their wheat fallows; they fold their sheep likewise on them, and reckon that one thousand will fold on an acre and an half, never on the same spot twice; one hundred and sixty sheep they calculate will in a summer fold twenty acres. They plough with four horses at length, and sometimes six, and do an acre a day.

L A B O U R.

In harvest, six shillings a week, and board.

In hay-time, one shilling and six-pence a day.

Reaping per acre, five shillings.

Mowing corn, one shilling.

Threshing wheat, one shilling and six-pence.

———— spring corn, one shilling and six-pence.

About Paonton, the soil is a loamy gravel, lets from five to fifteen shillings an acre; farms from twenty to one hundred pounds a year; their course,

1. Fallow
2. Wheat
3. Pease
4. Turnips
5. Barley,

which is excellent. They stir twice or thrice for wheat, sow ten pecks, and reap on a medium three quarters and a half. For barley they plough twice, sow four bushels, and gain three quarters and a half in return. For oats
but

but once, sow four bushels, and get four quarters. For pease they give two earths, sow four bushels, and reap three, four, and five quarters. They sow few beans, but their method is to plough once, sow them broad-cast, four bushels, never hoe, and get about three quarters. For turnips they stir thrice, hoe once; value from one to three pounds; feed them with sheep alone. They mix ray-grass with their clover, and sow it both on barley and wheat, mow it once, and seldom get more than one load and a half per acre: their dung they lay on their turnip land.

L A B O U R.

From the beginning of June to Michaelmas, nine shillings a week.

In winter, one shilling a day.

Reaping, four shillings and six-pence, to five shillings and six-pence.

Mowing grass, two shillings.

Hoeing turnips, four to five shillings.

Ditching twenty-four yards, from eight-pence to twenty-pence.

Threshing wheat, two shillings a quarter.

———— spring corn, one shilling and two-pence.

It is a common practice around Grantham, to pare and burn their old turf when they convert it into arable land. The operation costs about twenty shillings an acre.

The country between Grantham and Newark is all open. About Fossen, the soil is a rich clay, which slacks after rain like lime; a strong mark of excellent land. Farms are small, from twenty to thirty-six pounds a year: they do not hire or reckon by the acre, but by what they call Orse-skins, which generally contains nine acres, but varies: the rents generally from four to six pounds. Their course;

1. Fallow
2. Wheat or barley
3. Beans

For wheat they plough four times, sow two bushels, and reap from twenty-four to thirty. For barley they plough four times, sow four bushels, and gain about the same quantity as of wheat. They sow no oats, considering their land as too good. For beans they stir but once, sow them broad-cast, four bushels to the acre, never hoe them, but sometimes hand-weed the largest; mean crop twenty bushels. Their manure they lay all upon their barley fallows. In their ploughs they use four horses at length, and do an acre a day. The particulars we gained of a farm were,

- 81 Acres in all
- 20 Acres grass
- 61 Arable
- £.36 Rent
- 9 Horses
- 6 Cows
- 72 Sheep
- 3 Servants
- 2 Labourers

In the parish are,

- 1080 Acres
- 20 Farms
- 80 Horses
- 60 Cows
- 960 Sheep.

L A B O U R.

In hay and harvest, one shilling a day, and board.

In winter, six-pence to eight-pence a day, and board.

Reaping wheat, five shillings to seven shillings and six-pence.

Threshing wheat per quarter, two shillings to two shillings and six-pence.

———— spring corn, one shilling and six-pence.

From Newark the country is mostly inclosed to Tuxford, and appears to be pretty well cultivated. Around Cromwell the soil is sandy, but lets from ten to twenty shillings per acre; farms from twenty to one hundred pounds a year. Their course is,

1. Turnips
2. Barley or oats
3. Rye

They plough three or four times for turnips, hoe them once or twice, value a crop at about forty shillings, and feed them off with sheep. They give the turnip land but one stirring for the barley, sow four bushels, and reap about four quarters. Oats they manage in the same manner, and gain at an average four quarters. The few pease they sow they plough once for, sow three or four bushels, and get in return three quarters. When they sow beans, which is not often, and only upon particular pieces of land, they sow them broad-cast, four or five bushels an acre, never hoe them, and get about three quarters per acre.

L A B O U R.

In hay-time and harvest, one shilling a day, and board.

In winter, eight-pence, and board.

Reaping per acre, four shillings to six shillings.

Mowing corn, one shilling and three-pence.

———— grass, one shilling and six-pence, to two shillings.

Threshing wheat, two shillings, to two shillings and six-pence.

———— spring corn, one shilling and four-pence, to one shilling and six-pence.

About West-Drayton the soil is a rich sandy gravel; the arable lets from ten to twelve shillings an acre, and the grass from fifteen to twenty shillings. The farms are not large, being in general from forty to one hundred pounds a year. Their principal course is,

1. Turnips
2. Barley
3. Clover one year
4. Wheat

which, for land rich enough for wheat, and light enough for turnips, is an excellent course. They lay all their dung upon their turnip land, but never mix it with turf or clay. They very often lime their lands for all sorts of crops; sow four quarters on an acre, which cost one shilling and ten-pence per quarter, and the carriage they reckon as much more; but it lasts only one year. Sometimes they pare and burn the old sward, which is done for ten shillings and six-pence to fifteen shillings an acre, surprizingly cheap. For turnips they plough three, four, and five times, hoe once, reckon the mean value at thirty-five shillings an acre, and use them for feeding sheep and rearing young cattle. They give the turnip land two earths for barley, sow three bushels per acre, and gain on a medium four quarters and an half, sometimes six, and even seven quarters. For oats they plough once, sow five bushels, and five quarters the average produce; have now and then ten quarters. For pease they give two stirrings, sow three bushels of seed, and get from two to four quarters. They sow few beans, but plough once, use four bushels of seed, never hoe them; the crop about two quarters and a half; clover at two cuttings gives three loads of hay. The particulars of a farm as follows:

- 55 Acres in all
- 12 Of grass
- 43 Of arable
- £.40 Rent
- 6 Horses
- 7 Cows
- 1 Servant
- 1 Labourer

Has annually

- 8 Acres of wheat
- 14 Of spring corn
- 7 Of turnips

In the whole parish are

- 250 Acres
- 3 Farms
- 18 Horses
- 20 Cows
- £.200 Rent
- £. 20 Poor's Rate

L A B O U R.

In hay-time and harvest, one shilling a day, and board.
 In winter, eight-pence, and ditto.
 Reaping per acre, four shillings and six-pence.
 Mowing corn, one shilling.
 ———— grafs, one shilling and six-pence.
 Hoeing turnips, four shillings.
 Ditching, one shilling and two-pence the acre, or twenty-eight yards.
 Threshing wheat per quarter, one shilling and eleven-pence.
 ———— spring corn, one shilling and four-pence.

CITY, MARKET TOWNS, &c.

The city is Lincoln; and the market-towns are, Alford, Barton, Binbroke, Boston, Bourn, Bullingbrook, Burgh, Burton, Caistor, Corby, Crowland, Deeping-Market, Dunnington, Fokingham, Ganefborough, Glandford-bridge, Grantham, Grimsby, Holbeck, Horncastle, Kirkton, Louth, Rasen-Market, Saltfleet, Sleaford, Spalding, Spilsby, Stanton, Tatterthall, and Wainfleet.

Stamford is so called from its ancient Saxon name, Steanford. It is situated on the river Welland, upon the borders of Northamptonshire and Rutlandshire, at the distance of eighty-three miles from London; and is governed by a mayor, a recorder and his deputy, a town-clerk, twelve aldermen, twenty-four capital burgesses, and two serjeants at mace. Its first charter was before Edward IV. It had a charter from that prince, and others from Charles II. and James II. but these last being only temporary, they are expired.

The inhabitants have very great privileges, particularly a freedom from the jurisdiction of the sheriff of the county, and from being impannelled on juries out of town; they are entitled to have the returns of all writs, are exempted from the government of all lords lieutenants, and claim the privilege of having the militia of the town commanded by their own officers, the mayor being the king's lord lieutenant, and immediately under his majesty's command: he is esteemed, within the liberties and jurisdiction of the town, the second man in the kingdom.

This town is large, rich, and populous; and has a fine stone bridge over the Welland, into Northamptonshire. It had fourteen parish churches, but they were reduced to seven, by an act of parliament in the time of king Edward VI. One of these churches, St. Martin's, stands upon the east side of the river, in a part of the town called Stamford-Baron, which in reality is in Northamptonshire, but is rated within the jurisdiction of this corporation, and on that account goes all by the name of Stamford. In this church of St. Martin, the great Cecil, lord Burleigh, the favourite of queen Elizabeth, lies buried in a splendid tomb: There is a church near the bridge, in which is a fine monument of the earl and countess of Exeter, in white marble, with their figures in a cumbent posture, as big as the life, done at Rome; and over-against this church is an inn, known by the sign of the George, esteemed the largest in England; but there is another, called the Bull Inn, far more noble and elegant: it is a handsome free-stone quadrangle, with fashed windows, and has the appearance of a palace. Here is a fine town-hall. The houses are most of them covered with slate, and the whole town taken together, is the most considerable, compact, and best built in the county.

Here is a charity-school, in which eighty children are taught and employed, twenty of them wholly maintained and clothed, and the rest are supplied with wheels, reels, fire and candles: they are said to earn four hundred pounds a year. In the reign of K. Hen. VII. William Brown, who had been twice mayor, erected and endowed an hospital here, for a warden, twelve men and a nurse. The lord Burleigh likewise erected and endowed an hospital here—The chief trade of this town is in malt, free-stone, and sea-coal. Here is a new course for horse-races.

The Danes, in the beginning of their depredations, burnt this town; and in the old war between the houses of York and Lancaster, the party of the latter destroyed it with fire and sword; since which, though it is still a flourishing town, it has never recovered its former glory. In the reign of king Richard I. all the Jews in this place, of which there were many, were barbarously murdered by the inhabitants. It was here the barons met to levy war against king John, in whose reign here was the first bull-baiting. The circumstance which gave rise to it is as follows: William earl of Warren, then lord of the town, observing two bulls in the cattle meadow fighting for a cow; and that all the butchers dogs, alarmed at their bellowing, ran out, and singling one of them, pursued it through the streets; was so pleased at the diversion, that he gave all the meadow for a common to the butchers of the town, on condition that they should find a mad bull six weeks before every Christmas, for the continuance of that sport; from whence arose the proverb of, *As mad as the baiting bull of Stamford.*

Mr. Neal, who has taken great pains to trace the antiquities of this county, produces a fragment of an ancient manuscript, to prove that this town was an university long before the birth of Christ, and continued so till the year 300, when it was dissolved by the pope for adhering to the doctrines of Arius. It was certainly an university before the reign of Edward III. as appears by the remains of two colleges, one called Blackhall, and the other Brazen-nose: on the gate of Brazen-nose College there is still a brass nose, with a ring through it, like that upon the gate of the college of the same name at Oxford, which was not built till the reign of Henry VIII. and therefore took its name, as well as this distinguishing circumstance, from Brazen-nose College of Stamford. It appears also, that several of the students of Oxford removed to this place, upon some quarrel between some students of the north and those of the south, in the time of Edward III. when it is probable there were some colleges here to receive them, as they did not stay long enough in the place to build any.

By some remains of Roman antiquity found here, it appears that this was no inconsiderable place in the time of the Romans; and there are the traces of a Roman highway from south to north, passing through this town, which seem to indicate, that here once was a ferry over the Welland.

In the reign of king Stephen, there was a castle in the middle of Stamford, of which the foundation plot is still visible; and here the remarkable custom of Borough English still subsists, by which the youngest son is heir to his father. Here was formerly a mint, and several monasteries.

Here was a priory of Benedictine monks, cell to the monastery of Durham, and dedicated to St. Leonard: it was valued, upon the suppression, at twenty-five pounds one shilling and two-pence *per annum*; and is now a farm-house, and still called St. Cuthbert's Fee.

On the east side of the town, near the river, there was a convent of Dominican, or Black friars, founded before the year 1240.

Here was an house of White or Carmelite friars, founded, as Speed thinks, by king Edward III. but Tanner thinks it more likely to have been founded by Edward I. in whose time it occurs.

Near the Green Ditch, in the west suburb of this town, close to St. Peter's Gate, was a priory of friars Austins, said to be begun by one Fleming, and finished by an archdeacon of Richmond: it was in being before the year 1340.

On the east side of the town, north of St. Leonard's, without Paul Gate, stood a house of Grey or Franciscan friars, founded before the forty-eighth of Edward III.

The old bead-house, or hospital, for a warden, a chaplain, twelve poor old men, and a nurse, founded and liberally endowed by William Brown, merchant of the staple, in 1493, was dedicated to All Saints, and valued at fifty-four pounds twelve shillings and two-pence *per annum*: it is yet standing.

Stamford sends two members to parliament, has two weekly markets, held on Monday and Friday; and nine annual fairs, viz. Tuesday before the thirteenth of February, Monday before Midlent, Monday before the twelfth of August, for horses, and stock of all sorts; Midlent-Monday, for all sorts of haberdashery; Monday before the twelfth of May, Monday after Corpus Christi, the thirteenth of June, the fifth of August, and the eighth of November, for horses, and all sorts of stock.

Bridgecafterton, a village north-west of Stamford, where a small river, called the Guash, or Wash, crosses a Roman highway, is supposed to have been the Guafenæ of Antoninus.

Between Stamford and Lincoln there are many spaws or chalybeat mineral springs.

Deeping-Market is an ill-built, dirty town, situated among the fens, on the north side of the river Welland, at the distance of eighty-seven miles from London. It is supposed to have taken its name from a vale here, many miles in compass, and the deepest in all this marshy county, *Deeping* signifying a *deep meadow*. It is remarkable, that the channel of the river Glen, which runs from the west, lies much higher than this plain. Here was formerly a cell of Black monks, belonging to Thorney abbey, in Cambridgeshire, to which it was given by Baldwin, the son of Gislebert, in the year 1139. It was dedicated to St. James.

Here is a weekly market on Thursday, and three annual fairs, viz. the second Wednesday after the eleventh of May, Wednesday before Lammas, the eleventh of August, and the tenth of October, for horses, stock, and timber of all sorts.

Crowland, the next town we visited, is so surrounded with bogs, that it is accessible only on the north and east sides, and even there not for carriages, which gave rise to the proverb, that "all the carts which came to Crowland were shod with silver." This town, however, notwithstanding the above-mentioned disadvantage, is well inhabited: it is distant eighty-eight miles from London, and consists of three streets, separated by water courses, planted on each side with willows, and built on piles, having a communication with each other by a triangular bridge of curious contrivance, standing on the conflux of the Welland, and a river called the Nine. This bridge is formed on three segments of a circle, meeting in one point; and it is said that the extremity of each segment, opposite to the point of contact, stands in a different county, one in Lincolnshire, another in Cambridgeshire, and the third in Rutlandshire.

Here is a church, which belonged formerly to a famous abbey in this place, the roof of which fell in about half a century ago, and was found to consist of Irish oak, finely carved and gilt; pieces of this are to be found in almost every house. This church, in the time of the civil war, was made a garrison: over the west gate of it are the images of divers kings and abbots, among which is that of St. Guthliac, to whom the abbey was dedicated, with a whip and knife, his usual symbols. Not far from the abbey is a little stone cottage, called Anchor Church-house, which had formerly a chapel, in which St. Guthliac lived as a hermit, and in which it is said his body lies buried. The soil round this town is much improved of late by drains and sluices, and most of the ponds are now turned into corn-fields.

The greatest gain that accrues to the inhabitants of this town, is from fish and wild-ducks; of the latter they sometimes drive three thousand into a net at once by dogs, and they are brought hither by decoy-ducks, bred for that purpose. For the liberty of fishing in the many pools in and near the town, they pay now to the king, as they did formerly to the abbot, three hundred pounds a year.

Ethelbald, king of Mercia, in the year 716, built an abbey here for Black monks, dedicated to St. Mary, St. Bartholomew, and St. Guthliac. It was afterwards burnt by the Danes in 870; but king Edred, about the year 948, rebuilt it, and it continued in great splendor and wealth till the general dissolution, when the manors and estates belonging to it were reckoned worth one

thousand and eighty-three pounds fifteen shillings and a penny *per annum*.

Upon laying the foundation of the new abbey-church at this place, in the year 1114, Alan de Croun gave it the advowson of the church of Freestone, near Boston; and in a little time after, some other lands and churches, and placed here a prior and some Black monks, subordinate to the great monastery, whom he farther endowed before his death, in the time of king Stephen. This cell was dedicated to St. James.

This town has a weekly market on Saturday, and an annual fair on the fourth of September, for cattle, hemp, and flax.

A causeway leads from hence, between the river Welland and the marshes; on which, about two miles from Crowland, stood a pyramid, with an inscription, denoting, that it was the utmost boundary of the abbey's jurisdiction, which was in a kind of island, three miles in length, and three in breadth.

The skeleton of a crocodile, fixed in a flat stone, now to be seen in the museum of the Royal Society at London, is said to have been discovered in this county; the particular place is not mentioned, but it is thought to have been near this town.

Holbeck has nothing in it deserving particular notice. It is ninety-eight miles distant from London, and has a parish-church, near which Sir John de Kirketon, Knt. founded an hospital for a warden, and fifteen poor persons, dedicated to All Saints, about the year 1351.

Here is a weekly market on Thursday, and two annual fairs, viz. the seventeenth of May, and the second Tuesday in September, for horses, cattle of all sorts, corn, and flax.

At Tyd St. Mary's, on the bank of the Nine, in the south-east point of this county, near Holbeck, Nicholas Breakspear was rector, who preached the Christian faith to the Norwegians, for which he received a Cardinal's hat; and in the year 1155, was advanced to the papal chair, and took the name of Adrian the Fourth.

Spalding is a more neat and populous town than might be expected from its situation, being encompassed with lakes, canals, and rivers, the drains of Boston and Langtoft centering as it were upon it: besides these, it is almost surrounded by the Welland, which is navigable through it, and has a bridge over it, with a small port; to which several barges belong, that are chiefly employed in carrying coals and corn: vessels of fifty or sixty tons may come up to it. This town is distant ninety-eight miles from London, and has a handsome large market-place, a free grammar-school for the sons of the inhabitants, and a charity-school.

Egelriek, one of the abbots of Crowland, afterwards bishop of Durham, made a firm causeway from hence to Deeping, through a vast forest of deep marches, which was from him called Elrick-road: there is at this time no remains of it.

Thorold de Buckenhale gave a place in this town, in the year 1052, for the habitation, and lands for the maintenance of a prior and five monks from Crowland, who were forced to abandon their cell after the Conquest, from the barbarous usage of Yvo Tailboys, earl of Angiers in France, then lord of this town; and great part of the adjacent country. The same Yvo, about the year 1074, gave the church of St. Mary, and the manor of this place, to the abbey of St. Nicholas at Angiers, whence were sent over some Benedictine monks; and became an alien priory to that foreign monastery, dedicated to St. Mary and St. Nicholas. It was given, in the twentieth year of Henry VI. to King's College, in Cambridge; and in the first of Edward IV. to Sion abbey, in Middlesex; but being made a *prioratus indigena*, and even at last an abbey, it continued till the general suppression, when its yearly income was rated at seven hundred and sixty-seven pounds eight shillings and eleven-pence.

Spalding has a weekly market on Tuesday, and five annual fairs, viz. the twenty-seventh of April, for hemp and flax; the twenty-ninth of June, for horses and beasts; the thirtieth of August, for horses; the twenty-fifth of September and seventeenth of December, for hemp and flax.

At Fleet, in the fens, a village north-east of Spalding, there were found, not many years ago, three pecks of Roman copper coins, piled down edge-wise, most of them of the emperor Gallienus.

Bourn is situated on a plain adjoining to the fens of Lincolnshire, and is remarkable only for tanning leather, and for a horse-course. It is distant from London ninety-three miles, and has a pleasant river belonging to it, which runs to Spalding. Here was a castle, built by the Wakes, formerly the lords of the manor, who in the reign of king Edward I. obtained a licence for a market and fair. Here was once a chalybeat spring, famous for its medicinal virtues.

Baldwin, the son of Gislebert de Gaunt, afterwards earl of Lincoln, on or before the year 1138, settled an abbot and canons in a monastery in this town, of the order of St. Austin, dedicated to St. Peter and St. Paul, and rated at one hundred and ninety-seven pounds seventeen shillings and five-pence *per annum*, at the time of the dissolution, when it contained eleven canons.

This town has a weekly market on Saturday, and three annual fairs, viz. the seventh of March, the sixth of May, and the twenty-ninth of October, all for horses and horned cattle.

Near this place is Grimsthorp, remarkable for an elegant seat belonging to the duke of Ancafter. The park is of great extent: the road leads through it for the course of about three miles: the house appears at first view extremely magnificent, being admirably situated on a hill, with some very fine woods stretching away on each side; many hills and slopes seen in different directions, and all pointing out as it were an approach to the dwelling. In the vale before the house is a noble piece of water, with two pretty yachts upon it; the banks are boldly indented with creeks in a fine stile, and the breadth and length considerable; but two circumstances are much wanted to render it complete: the principal end of it appears in full view, instead of being lost behind a hill or a plantation, which this might easily be, and would add infinitely to its beauty and magnificence; for the conclusion of a water being seen, is painful at the very first view. The other point is, the break in the water by the road; for in fact it is two lakes, and one being higher than the other, a real bridge cannot be thrown over: at present it is a causeway, but it might very easily be made to appear so like a bridge, as to deceive even those who pass it, and this would be attended with a great effect.

The house is a very convenient, and a good one, and some of the apartments very elegantly fitted up. The hall is fifty feet long by forty broad, and of a very well proportioned height; at each end is a stone stair-case, parted from the room by stone arches; but these are heavy. The chapel is neat. The tea-room, with a bow window, is pretty; the chimney-piece, of marble dug out of the park. Returning through the hall, you are conducted up the stair-case, into the principal apartment: the first is a tea-room richly ornamented with fluted pilasters of the Corinthian order, finely carved and gilt; the ceiling, cornices, &c. in a most light and elegant taste, gilt scrolls on a light lead colour. Next is the dining-room, forty by twenty-seven, with two bow windows, fitted up with gilt ornaments on a blue ground. The ceiling ditto on white in compartments. The festoons of gilt carving among the pictures, &c. is in a light and pleasing taste. The chimney-piece one of the most elegant in England; under the cornice three basso-relievos in white marble, but not polished; the centre, a man pulling a thorn out of a lions paw, well executed: these are upon a ground of Siena marble, and have a fine effect; they are supported on each side by a fluted Ionic pillar of Siena. In this room are several family portraits, and

King Charles and his family, by Vandyke; a large picture, and fine.

The next is a bad proportioned room, being much too narrow and low for its height, but the fitting up is handsome. Here are,

Cocles defending the bridge. His attitude is a very tame one; nor is there any great expression in it.

Two landscapes in a showy stile, containing each a large trunk of a tree; pretty.

A fire at night in a town, fine; the figures in the front ground are numerous and well grouped, and the light not badly expressed.

Christ crowned with thorns; the minute expression good, but never were ideas more truly Dutch.

A battle; fine. We suppose by Bourgognone.

Two large pieces of cattle; we apprehend by Bassan. The diffusion of light is in his stile, and likewise the roughness of the tints.

A Dutch fair.

The blue damask bed-chamber is elegant; it is hung with blue paper, upon which are painted many different landscapes in blue and white, with representations of frames and lines and tassels in the same; the toilette in a bow window, all blue and white. Out of this room we enter the breakfasting closet, which is extremely elegant, quite original, and very pleasing. It is hung with fine India paper; the ceiling in arched compartments, the ribs of which join in the centre in the gilt rays of a sun; the ground is prettily dotted with coloured India birds; the window-shutters, the doors, and the front of the drawers (let into the wall) all painted in scrolls and festoons of flowers in green, white and gold; the sofa, chairs, and stool-frames of the same. Upon the whole, it is in real taste.

Grantham is a rich, neat, populous town, much frequented, and has several good inns. It stands at the distance of one hundred and four miles from London, and is governed by an alderman, twelve justices of the peace, a recorder, a coroner, an escheator, twelve second-twelve-men, who are of the common council, and twelve constables to attend the court. Here is a fine church, with a stone spire, one of the loftiest in England, being two hundred and eighty feet high; and is so constructed, as to appear inclining from the perpendicular, on which side soever it is viewed. Here is a good free-school, built and endowed by Richard Fox, bishop of Winchester, a native of this place. The illustrious Sir Isaac Newton was also born here, and received the first rudiments of learning at this school. Here are likewise two charity-schools. There are frequent horse-races here.

This is supposed to have been a town belonging to the Romans, by the remains of a castle which has been formerly dug up here; and here was anciently a house for Franciscan or Grey friars, thought to be about the year 1290.

Grantham sends two members to parliament, has a weekly market on Saturday, and five annual fairs, viz. the fifth Monday in Lent, for horned cattle, horses and sheep; Holy Thursday, for sheep and horses; the tenth of July, the twenty-sixth of October, and the seventeenth of December, for horned cattle and horses.

Paunton, a village south of this town, is supposed to have been the *Ad Pontem* of the Romans, not only from the similitude of the names, but from the distances assigned to other places in regard to this. Chequered Roman pavements, and other marks of antiquity, have been frequently dug up here.

Ancafter, another small town, situated on the same Roman highway, was a village of the Romans, and is thought to have been the ancient Crococalana. This place abounds with such numerous remnants of antiquity, that the inhabitants, after a hasty shower, go in search of them on the declivities of the town, and in the neighbouring quarries, and have many years carried on a kind of trade by the sale of them.

Near Harlaxton, a village within two miles of Grantham, a brazen vessel was ploughed up, containing some silver beads, and an antique helmet of gold, studded with jewels; all which were presented to Catharina of Spain, queen dowager of Henry VIII.

About five miles from Grantham, near Hannington, there is a Roman camp, called Julius Cæsar's Double Trench: and in the year 1691, here were found as many Roman coins in an urn, or earthen pot, as would fill a peck.

In the year 1147, William earl of Albemarle brought to Bitham, south-east of Grantham, a convent of Cistercian monks, from Fountain abbey, in Yorkshire; but these monks finding some inconvenience here, quickly removed to a more pleasant situation in the parish of Edenham, called Vandy abbey, a little way north-east of Bitham. It was given them by Jeffry de Brache-court, or the lord Gilbert de Gant, earl of Lincoln. About the time of the suppression, here were an abbot and thirteen monks, whose yearly revenues were valued at one hundred and twenty-four pounds five shillings and eleven pence. It was dedicated to the Virgin Mary.

At Catley, near Grantham, Peter de Belingey built a priory, in the time of king Stephen, for nuns and brethren of the Sempringham order. It was dedicated to the Virgin Mary, and on the suppression was endowed with an yearly income of thirty-three pounds eighteen shillings and six-pence.

There was a preceptory of Knights Templars at South Witham, near the source of the river Witham, about nine miles from Grantham, as ancient as the year 1164, to which Margaret de Percy, and Hubert de Ria, were great benefactors, if not founders. It came afterwards to the Hospitales.

About the year 1164, king Henry II. gave the manor of Haugh on the Mount, near Grantham, to the abbey of St. Mary de Voto at Cherburgh, in Normandy, which was founded by his mother, the empress Maud, and himself; and here was an alien priory of some Austin canons, subordinate to that foreign monastery.

The church, and four carucates of land in the town of Long Benington, north-west of Grantham, being by Ralph Filgeriis, or Fulgeriis, given to the abbey of Savigney in Normandy, before the year 1175; here was an alien priory of Cistercian monks, subordinate to that foreign monastery.

Being in the neighbourhood of Belvoir-castle, we determined to view it. About three miles from Grantham, in the way the road rises up a small hill, at the summit of which suddenly appears an immense prospect over a prodigiously extensive vale, which those who delight in extent will be highly pleased with. It is not, however, equal to that from Belvoir Castle, which is seen almost in the clouds on the top of a vast hill, for many miles around. From the rooms may be seen Lincoln Minster, at thirty miles distance, perfectly clear; Newark appears in the centre of the valley, and Nottingham is easily discerned.

The house is old, and the sitting up and furniture the same; inasmuch that we may venture to advise all who, being at Grantham, and having some inclination to see it, but not a determined one, to give up the scheme, for the road is dreadfully bad, and the prospect infinitely exceeded in real beauty by many in England. We remarked the following pictures:

Two pieces of fruit and flowers, with a china basin in one, well done, in the stile of Michael Angelo.

Landscape, a rock, and a water-fall; good.

Virgin and Child; pleasing.

Portraits of the Hereditary Prince, the Count de la Lippe, and Duke Ferdinand; very good ones, especially the last.

Landscape; the glowing light between the trees fine.

Oxen ploughing, by a Dutch painter.

Storks; good.

A witch's cave, in the Dutch stile; romantic ideas, and expressive execution.

A cattle-piece; good.

The setting sun, a large landscape; the glowing warmth of the sky is fine; and the architecture and trees well done.

The Holy Virgin; a large picture, in the manner of Guido, the turn of the head admirable, and the general attitude fine.

Gods and goddesses; we apprehend by Rubens, but not in his best manner.

The inside of a church; the architecture and light very fine.

Miracle of the five loaves; the figures numerous, and well grouped; the finishing and colours good.

Landscape, in a dark stile, but good.

Two small ditto; pleasing.

Leander, borne by sea nymphs.

Cards; not so Dutch as in common.

A sleeping Bacchus.

This castle was formerly a priory of four Black monks, subordinate to the abbey of St. Albans, in Hertfordshire, to which it was annexed by its founder, Robert de Belvidier, or de Todenci, in the time of William the Conqueror. It was dedicated to St. Mary, and at the suppression, valued at one hundred and four pounds nineteen shillings and ten-pence *per annum*.

The astorites, or star-stone, so called from their resemblance to a star, are frequently found here.

The city of Lincoln, which we next visited, is built on the side of a hill, at the bottom of which runs the river Witham in three small channels, over which there are several bridges. It is one hundred and twenty-eight miles from London; and the evident marks of a rampire and deep ditch still remaining, shew that the ancient Lindum of the Britons stood on the very top of the hill, and extended farther north than the gate Newport. Vortimer, that warlike Briton, who so often defeated the Saxons, died, and was interred here, though he left it in charge, that he should be buried on the sea-shore; believing, as it is related by Ninnius, &c. that his very ghost would be the Britons' safeguard against the Saxons. The Saxons took and demolished this Old Lindum, and then built on the south side of the hill, and even down to the river, fortifying it with a wall, where it was not defended by the river. The Danes took it twice by storm, and the Saxons as often retook it; the last time they did so, was under king Ethelred, who drove king Canute out of the town, and recovered England when it was almost totally lost. In Edward the Confessor's time, this place is said, in Doomsday Book, to have had one thousand and seventy houses; and Malmsbury relates, that in the Normans time it was one of the most populous cities in England, and a mart for all goods coming by land or water. King William I. built a castle upon the ridge of the hill; and about the same time, the bishop's see was translated hither from Dorchester in Oxfordshire, pursuant to a public order, that no bishops should have their seats in obscure villages. The diocese, which was exceeding large, contained so many counties, that it sunk under its own weight; and though Henry II. took that of Ely out of it, and Henry VIII. those of Peterborough and Oxford, yet it still takes in Leicestershire, Huntingdonshire, Bedfordshire, Bucks, and part of Hertfordshire, and is reckoned the biggest in all England; containing no less than twelve hundred and fifty-five parish-churches, whereof five hundred and seventy-seven are impropriations; and there are in these bounds six archdeaconries, viz. Lincoln, Leicester, Bedford, Buckingham, Stow, and Huntingdon.

King Edward III. made this city a staple or mart for wool, leather, lead, &c. It was once burnt, once besieged, but in vain, by king Stephen, who was defeated, and made prisoner here; and once taken by Henry III. from his rebellious barons. It is said to have had formerly fifty-two churches, which, by act of parliament in the reign of Edward VI. were reduced to eighteen, which are now only thirteen; and the meanest that are to be seen any where, except indeed the cathedral or minster, which, as well as the ruins of the old castle, is a most venerable piece of antiquity, being a stately Gothic pile, of excellent workmanship, brought to perfection by several of its bishops.

In the years 1072, 75, and 78, when the episcopal sees were decreed by the provincial synods to be removed into great towns and cities, Remigius, then bishop of Dorchester, fixed upon Lincoln, and in the Conqueror's time, bought the ground for the cathedral church, bishop's palace, and houses for the dignitaries and officers; and began the buildings, which were not finished till some years after, by his successor, Robert Bloet, who increased the number of prebends, which was twenty-one, to forty-two. Remigius died four days before the consecration of this cathedral, in the year 1092. The revenues of this bishoprick were valued, upon the dis-

lution, at two thousand and ninety-five pounds twelve shillings and five-pence a year; and the common revenues of the chapter at five hundred and seventy-eight pounds eight shillings and two-pence. But many of the manors and estates having been granted from the bishopric, chiefly in the time of Edward VI. it is now rated only at eight hundred and thirty pounds eighteen shillings and a penny a year; and the dividend money of the chapter, from which little or nothing seems to have been taken, at five hundred and forty-six pounds two shillings and six-pence. There now belongs to this noble cathedral, besides the bishop, a dean, precentor, chancellor, sub-dean, six archdeacons, fifty-two prebendaries, four priest-vicars, eight lay-vicars, or singing-men, an organist, seven poor clerks, eight choristers, and seven burghurst chanters.

There was formerly a monastery of nuns upon the place where now stands this cathedral. Here is the finest great bell in England, called Tom of Lincoln, which is near five ton in weight, will hold four hundred and twenty-four gallons ale measure, and is near twenty-three feet in compass: Dr. Fuller calls it the Stentor of England, and says fifty lesser bells might be made out of it. Among other tombs, it contains one of brass, in which are the bowels of queen Eleanor, wife to Edward I. and another of Catherine Swinford, the third wife of John of Gaunt, duke of Lancaster, and mother of the Somerset family. It is so lofty a pile, and the hill it stands on so high, that it may be seen in five or six counties, fifty miles to the north, and thirty to the south, and is one of the largest in England. The Middle or Rood Tower is also reckoned the highest in the kingdom.

But what exceeds all others in it, is the cathedral church, which, for magnificence of structure, challenges the pre-eminence of all other Gothic churches, not only in this kingdom, but throughout Europe, if we may rely upon the opinion of a gentleman, who had seen the churches at Strasbourg, Milan, and Notre Dame in Paris.

The city of Lincoln indeed contends with that of York for a preference to its cathedral; and as this is a point in which both cities are very tenacious, we will distinguish the particulars wherein each of them have the advantage over the other.

In the first place, then, Lincoln cathedral has greatly the advantage of York, in the height of its situation; and by different accounts given by several authors, of the dimensions of both churches, it appears Lincoln exceeds York in length, from east to west, either fourteen, or eleven, or three feet and an half: in the middle cross or transept from north to south, five feet; in the outward breadth of the west end, by the addition of two chapels, as at St. Paul's, London, fifty-three feet; in the height of the west towers and spires, seventy-two feet; and of the middle tower, including the pinnacles, seventy-five feet.

York exceeds Lincoln in the breadth of its middle nef, and side-ises, within-side, twenty-six feet; in the height of the middle nef to its canopy, seventeen feet; and in the inside height of the middle lantern, sixty-four feet and an half.

The breadth of the west end of Lincoln will not the least avail in this dispute, as it has so many egregious defects, not to say absurdities. The two steeples are crowded together, instead of being placed at the extremities of the front, which by that means would have had an appearance much more grand. They rise up above the body of the church, as if behind a screen, without the least affinity to any part of the building below. Their ornaments are but mean, and the leaden spires upon them still meaner. The whole front, extending in a strait line, wants boldness when viewed at some distance; and there is such an expansion of solid wall, without windows, or any sort of aperture, as gives an heaviness throughout. The cloistered work, or niches for images, which is the chief ornamental part of Gothic structures, is disposed with a shameful disregard to every thing like design: in one place, crowded with needless profusion; in another, wanted to fill up

where now there is nothing but a naked and dead space; and in the ornaments the fancy is so irregularly varied, that all kind of connexion and harmony is destroyed; so that the building, to appearance, has the same effect, as if it were pieces of different structures patched up together.

The plan of the church is very irregular, the middle transept from north to south having no isles on the west side, to answer those on the east. The upper transept, or double cross, can never be considered as a beautiful addition, especially since this, and the eastern parts beyond, are surrounded with chapels and vestries, erected without uniformity, and the windows of the church are meanly small, crowded, and out of proportion.

It is to be observed, there is a great resemblance between the ground-plat of Lincoln, and that of Canterbury; and the one was certainly built after the model of the other.

The only defect objected to York, is, that the middle tower or lantern wants height, and that the cross or transept, from north to south, is built in a different stile and manner from the rest of the cathedral. Both these must be admitted to be faults; but, by the way, the middle lantern is as lofty as the celebrated towers of Canterbury and Gloucester, exclusive of their pinnacles, though not sufficiently high in proportion to its breadth, being seventy feet square, or to the height of the church. They have a tradition in this city, that a wooden spire was once intended to have been raised upon this tower; which in that case would have exceeded the height of Salisbury steeple, as the present battlements are higher by six feet, and of a larger square than the present tower at Salisbury.

We are not sorry this project failed, because it is obvious all wooden spires have a most wretched aspect.

The only amendment that can be made, would be to pull down the bell-turret at one corner, and to raise the battlements about twenty feet, piercing them through with proper ornaments; and carry four pinnacles above them, about twenty feet more.

However, this building has two remarkable beauties not to be found in any other Gothic edifice; which are, that the height and breadth of the nef and side isles of the church, and of all the arches and windows, come very near, if not agree with, the dimensions laid down by the established rules of Roman architecture; that the span of the roof, from east to west, rises very near equal to the modern proportion; the excessive height of the roofs being the chief blemishes in most cathedrals, as may be seen at Lincoln, Salisbury, Westminster, and particularly Winchester.

The plan of the whole church is uniform, as well as the superstructure, especially from east to west: the windows are of a size and distance proper to the magnitude of the structure, and are admirable for their workmanship; neither is it crowded and encumbered on the outside by its buttresses, but every part is enriched with ornaments, which receive an additional beauty from the colour of the stone, as it retains almost its original whiteness.

Thus far what we have said of this building in general was necessary, in comparing it with Lincoln. We will now take some notice of its several parts distinctly, both within and without, beginning first at the outside.

The west end, which is one hundred and twenty-four feet in breadth, shews a grandeur inexpressible: this front contains two uniform towers, diminished by several contractions, all cloistered for imagery, and enriched with other ornaments. In the south tower hangs a deep peal of twelve bells, the tenor weighing fifty-nine hundred weight.

Between these towers, over the principal entrance into the church, is a large window, whose tracery in masons work is of a figure so beautiful, that it cannot be equalled any where. The several windows in the towers are large, and their tracery and ornaments well fancied.

The south entrance is ascended by several courses of steps; and tradition assures us, there was once as great an ascent to the west door. Here a remarkable spiral turret

turret is erected on the middle of the pediment, and called the Fiddlers Turret, from an image of a fiddler on the top. Over the door is a dial both horary and solar, on each side of which two images strike the quarters on two bells.

In viewing the building from this part eastward, we easily discerned it to be much newer than that westward, though conformable to it.

The east front is exceeding noble, and has the finest window in the world.

The north side is the same as the south; only a wall is built to prevent night-walkers, and other disorderly persons, from nesting and intriguing in the obscure corners of the buttresses.

The lantern steeple is ornamented in a fine taste, wanting nothing but a better finishing at the top: it has eight windows, two on each side, to give light within: these windows, from top to bottom, are forty-five feet high.

We now entered the inside, at the west door, opening into the middle nef of the church, under the largest Gothic arch in Europe, which binds and supports the two towers. The nef is the most spacious of any in Europe, except St. Peter's at Rome; it exceeds the dimensions of the nef of St. Paul's cathedral four feet six inches in width, and eleven feet in height; and that of Westminster-abbey, sixteen feet six inches in breadth, but its height is two feet less. This is an instance of what we took notice of before, with regard to the justness of the proportion of York cathedral; and at the same time shews the extravagance of that of Westminster-abbey, in this particular. The canopy at top is enriched with curious knots of carving.

From thence we proceeded under the middle lantern, to a stone screen, that parts the choir from the body of the church, adorned with curious workmanship, among which are placed the statues of the British kings, from the Conquest to Henry VI.

Over the entrance into the choir stands the organ, having a double front: it had before been removed from thence by king Charles I. to one side, opposite to the bishop's throne. The reason his majesty gave for doing it, was, that it spoiled the prospect of the fine east windows from the body of the church.

The choir is adorned with ancient wood-work carved, and set up with clusters of knotted pinnacles of different heights. The ascent from the body of the church, through the choir to the altar, is by a gradation of sixteen steps. The altar has lately received a considerable improvement as to its situation, and the whole church in its beauty, by taking away a large wooden screen, which almost obstructed the view of the east window. By this means it was carried one arch farther back, to a stone screen of excellent Gothic architecture, which now not only shews a beauty in itself, before hid, but opens a view to one of the noblest lights in the world, both for masonry and glazing; which is the aforementioned east window.

This window is thirty feet nine inches broad, and seventy-five feet high: the upper part is a piece of fine tracery, but not so beautiful as that at the west end. Below the tracery are one hundred and seventeen partitions, wherein is represented, in fine painted glass, most of the history of the Bible. This window was glazed in 1405, by one John Thornton, glazier, of Coventry; who received, for his own work, four shillings a week, and contracted to finish the whole in three years.

In a circular window, at the south end of the church, is another fine piece of masonry, in the form of a wheel, called The Marygold Window, from its painted glass, which resembles the colour of that flower. The north end has five noble lights: each constitute one large window, and reach almost from top to bottom. There is a tradition, that five maiden sisters were at the expence of these lights. The painting of the glass represents a kind of embroidery, or mosaic needle-work, which might perhaps give occasion to the story.

We ought not to omit mentioning, that all the windows of the church, except one or two, are adorned with painted glass, representing the Sacred History, and

the portraitures of eminent persons. This painting was preserved at the time of the civil wars, by the lord Fairfax, general of the parliament's army, who, at the request of the gentry and citizens of York, placed a guard of soldiers about the church for that purpose.

The body of the church has been lately new-paved, the plan of which was drawn by that ingenious architect Mr. Kent, under the direction of the earl of Burlington. The figure is mosaic, and properly adapted to a Gothic building.

The monuments in this church are numerous, many of them very ancient, and several very magnificent; but to enumerate them distinctly, would take up more room than we can spare.

After taking this view of the cathedral, we were conducted into the Chapter-house; a building which, for a Gothic piece, disdains to allow an equal in the universe, and well deserves the encomium bestowed upon it, as is said, by a great traveller, in an old Monkish verse inscribed on the wall, in golden letters, as follows:

Ut rosa phlos phlorum, sic est domus ista domorum.

As shines the rose above all meaner flow'rs,
So above common piles this building tow'rs.

It is an octagon of sixty-three feet diameter. The height to the middle knot of the roof is sixty-seven feet ten inches, unsupported by any pillars, and entirely dependent upon one pin geometrically placed in the centre. The whole roof has been richly painted, and the knots of carved work gilt; but is now defaced and sullied by time. Over the roof is a spire of timber-work, covered with lead, admired as a masterly piece of work in the carpenters art. The eight squares of the octagon have each a window beautifully adorned, and embellished with painted glass.

The next place we saw was the Vestry-room; its dimensions forty-four feet by twenty-two; wherein are kept several antiquities, particularly the famous horn so called, made of an elephant's tooth; which is indeed the greatest piece of antiquity the church can exhibit, and to which they ought to pay an high veneration, on account of the benefit they reap from the act that it witnessed to. The account Camden gives of it, is: "That Ulphus, the son of Toraldus, who governed in the west parts of Deira, by reason of a difference likely to happen betwixt his eldest son and his youngest, about his lordship, when he was dead, presently took this course: without delay, he went to York, and taking the horn, wherein he was wont to drink, with him, he filled it with wine; and kneeling before the altar, bestowed upon God, and the blessed St. Peter, all his lands."

The lands are still called De Terra Ulphi. The horn was imagined to have been quite lost; but Thomas lord Fairfax was the occasion of its being preserved. Where it had lain, or where he got it, is uncertain; but, stripped of its golden ornaments, it was restored by his successor. The chapter thought fit to decorate it anew, and bestowed the following inscription to the memory of the restorer upon it:

CORN HOC VLPBUS IN OCCIDENTALI PARTE
DEIRÆ PRINCEPS, VNA CVM OMNIBVS TERRIS
ET REDITIBVS SVIS, OLIM DONAVIT.
AMISSVM, VEL ABREPTVM,
HENRICVS DOM. FAIRFAX DEMVM RESTITVIT.
DEC. ET CAPIT. DE NOVO ORNAVIT,
A. D. M. DC. LXXV.

Ulphus, prince of the west part of Deira, formerly dedicated this horn, together with all his lands and revenues. Being lost or stolen, Henry lord Fairfax at length recovered it; and the dean and chapter repaired it, in the year 1675.

We will now conclude our account of this noble pile of building, with the character given of it (as Mr. Camden informs us) by Æneas Sylvius, afterwards pope Pius II. "It is, says he, famous for its magnificence and workmanship, all the world over, but especially
" for

“ for a fine lightsome chapel, with shining walls, and
“ small thin waisted pillars quite round.”

The south side of the church is enriched by a library, to which archbishop Matthews's widow was a great benefactress. A bishop was her father, and an archbishop her father-in-law: she had four bishops for her brethren, and an archbishop for her second husband.

The bishop had a palace in the minster-yard, where great hospitality was wont to be kept; but it has long since been leased out.

In the archbishop's register and prerogative office, is a noble repository of ancient ecclesiastic records, bearing date ninety-three years earlier than any at Lambeth or Canterbury.

This cathedral, in short, is the glory of Lincoln. Its magnificence and elevation made the monks conclude, that the devil, who could not but take notice of so noble a structure for divine worship, must needs look four on it; from whence it became a proverb with them to say, of a man who has malice and envy, that “ he looks as “ the devil over Lincoln.”

This city abounded with monasteries and other religious houses; the ruins whereof appear in many barns, stables, out-houses, and even in some hogstyes, which are observed to be all built church-fashion, *i. e.* with stone walls, and arched windows and doors. The river on the west side of the town, below the hill, forms itself into a great pool, called Swan Pool, from the multitude of swans on it. The Romans north gate, called Newport Gate, still remains entire, and is the noblest remnant of the kind in Britain. It is a vast semicircle of stones not cemented, but as it were wedged in together: and by this gate there is another curious piece of Roman workmanship, called the Mint Wall, with alternate lays of brick and stone, which is still sixteen feet high, and above forty long. In other parts of the city are divers fragments of the old Roman wall; and here were many funeral monuments of the Normans, some of which are dug up to this day. Over-against the castle, to the west, is an intrenchment made by king Stephen; and here are carved in stone the arms of John of Gaunt, duke of Lancaster, who lived here like a king, and had a mint.

The communication betwixt the upper and lower towns is very troublesome, the street being so steep and strait, that coaches and horses are obliged to fetch a compass round; yet the steepest part of the ascent is said to be the best for trade and business. The little river Witham, that runs through the town, flows sometimes into the main street, but it is so arched over, that it is not to be seen as one goes through it at other times. It makes a large canal on the west side, and has another called the Fossdyke, by which it has a communication with the Trent. There are very good buildings of the modern taste in the upper city, where many gentlemen have houses, besides the prebendaries, and others of the clergy; but in the lower part, they are generally old. In the centre of the ruined old castle, there is a handsome modern structure for holding the assizes.

This city is a county in itself, and has a viscountial jurisdiction twenty miles round, which is a privilege that no other city in England can equal. It is governed by a mayor, twelve aldermen, who are all justices of the peace, two sheriffs, a recorder, four chamberlains, a sword-bearer, four coroners, and above forty common-council; and has given title of earl to the family of Clinton ever since the reign of queen Elizabeth. Here are four charity-schools, in which one hundred and twenty poor children, *viz.* thirty in a school, are taught by the widows of clergymen. The neighbouring course is noted for frequent horse-races. On the Down of Lincoln, as we go towards Boston, they sometimes see that large, but rare bird, called the Bustard. The country hereabouts is very rich and agreeable; that noble tract of Lincoln-heath, extending like Salisbury plain, above fifty miles, *viz.* from Sleaford and Ancaster south, to the bank of the Humber north, though it is hardly more than three or four miles over where broadest.

In the south suburb of this city there was a priory for Gilbertine canons, founded soon after the confirmation of that order, in the year 1148, by Robert, second bi-

shop of Lincoln. It was dedicated to St. Catharine; and upon the general dissolution, valued at two hundred and two pounds five shillings *per annum*.

Here was an hospital, dedicated to the Holy Sepulchre, of the order of Sempringham, but distinct from the priory of St. Catharine, to which the care and government of this house was committed by Robert, second bishop of Lincoln, who probably was the founder of both.

In the large confirmation by king Henry II. of the lands and houses which had been given to the church of St. Mary at York, are several donations of the city and fields of Lincoln, one of which was probably the place on which was built the priory of St. Mary Magdalen, a cell to the church of York, containing only two or three Benedictine monks. Upon the general dissolution, it was valued at twenty-three pounds six shillings and three-pence *per annum*.

In or before the year 1230, the Grey friars, or Friars Minors, of the order of St. Francis, came to this city, and had a place given them to dwell in by William de Benningworth, near which the citizens of Lincoln gave them a piece of ground belonging to their guild-hall, and thereon a church and house of these Franciscans were built.

A priory, dedicated to St. Bartholomew, is mentioned as belonging to this city, in the thirty-ninth year of Henry III. and in the year 1269, here was a house of White friars, founded by Gualterus, dean of Lincoln, a Scotsman.

On the east part of the city was a priory of Black or Preaching friars, as early as the twelfth of Edward I. and a little without the gate, on the north-east, was an hospital dedicated to St. Giles, the mastership of which was annexed by Oliver, dean of Lincoln, about the year 1280, to the vicars who performed divine offices in the cathedral.

On the south side of the suburb joining to Newport-gate, was an house of Austin friars, as early as the year 1291; and about the year 1355, Sir Nicholas de Cantilupe, knight, founded a college of priests within the close.

In one of the suburbs of this city, there was an house of the friars de Sacco, or de Pœnitentia Jesu Christi, before the dissolution of that order. In the fifth of Edward III. leave was granted to the vicars of the cathedral church of Lincoln, to take the church of Repham, near this city, in mortmain, upon condition that they kept three chaplains constantly to officiate in the chapel, which sometime belonged to those friars, for the soul of Edward I. In the thirty-second of Edward III. Joan, who had been the wife of Sir Nicholas Cantilupe, had leave to found a college or large chantry, for five priests, dedicated to St. Peter, upon the ground where formerly the house of the friars de Sacco stood.

The city of Lincoln sends two members to parliament, has a weekly market on Friday, and four annual fairs, *viz.* the second Tuesday after the twelfth of April, the fifth of July, the first Wednesday after the twelfth of September, and the twelfth of November; all for horses, cattle, and sheep.

Torksey, a small town near Lincoln, situated upon the river Trent, at the influx of the Fosse Dyke into that river, was a town once famous for many privileges which it enjoyed, upon condition that the inhabitants should, whenever the king's ambassadors came that way, carry them down the Trent in their own barges, and conduct them as far as the city of York.

At the village of Stow, between this city and Ganesborough, there was a church or minster for secular priests, built, and dedicated to the Virgin Mary, by Eadnoth, bishop of Dorchester, and much augmented by the benefactions of Leofric, and his lady Godisa. After the Conquest, the religious here were changed into Benedictine monks, under the government of an abbot, by bishop Remigius, who procured for them, from William Rufus, the abbey of Eynsham in Oxfordshire; whither his successor, Robert Bloet, removed this abbot and his monks, reserving Stow, and some other estates, to the see of Lincoln, for which he gave them other lands in exchange.

There

There was also near this city a house for leprous persons, which is thought to have been built by bishop Remigius, to which he assigned a yearly revenue of thirteen marks.

At Eagle, south-west of Lincoln, there was a commandry of the Knights Templars, who had the manor of this place by the gift of king Stephen. It afterwards came to the Hospitalers; and upon their dissolution in the thirty-third year of Henry VIII. it was valued at one hundred and twenty-four pounds two shillings *per annum*.

In a park at Bullington, north-east of this city, Simon Fitz William, or de Kyme, in the time of king Stephen, built a religious house for a prior and convent of both sexes, under the rule of St. Gilbert of Sempringham. It was dedicated to the Virgin Mary, and at the dissolution was endowed with one hundred and fifty-eight pounds seven shillings and eleven-pence *per annum*.

At Nocton, near Lincoln, Robert de Arcy, or D'Arcy, in the time of king Stephen, built a priory for Black canons, dedicated to St. Mary Magdalen. It had, about the time of the dissolution, five canons, with possessions worth forty-three pounds *per annum*.

There was an abbey of Premonstratensian canons at Berlings, near this city, dedicated to St. Mary, founded about the year 1154, and valued, upon the suppression, at two hundred and forty-two pounds five shillings and eleven-pence *per annum*.

And at Cameringham, north-west of Lincoln, there was an alien priory, cell to the Premonstratensian abbey of Blanch Landed in Normandy, the manor here being given to that abbey by the founders, Richard de Haya, and Maud his wife, pretty early in the reign of Henry II. About the nineteenth of Richard II. Elizabeth, widow of Sir Nicholas Audley, purchased this priory, and settled it on the abbey of Hilton, near Brewood, a market-town of Staffordshire.

At Mere there appears to have been a house of Temp-lars, and afterwards of Hospitalers; to which Swane le Rich, and Sir William Viley, were great benefactors, in the reign of king Henry II. and John.

On the east side of the New Town, near Lincoln, at a place called Torkfey, stood a priory of Black canons, built by king John, and dedicated to St. Leonard. It consisted only of four religious about the time of the dissolution, when its yearly revenues were valued at thirteen pounds one shilling and four-pence.

The church of Saxelby, near the city of Stamford, south of Glanford-bridge, and that of a place formerly called Bondeby, or Bonby, being granted to the priory of St. Fromund in Normandy, by the prior and convent of Merton, in exchange for other revenues, in the beginning of king John's reign, there was soon after an alien priory erected at Bondeby.

At Toffey, near Torkfey, there was a small Benedictine nunnery, begun by the inhabitants of Tarkfey, upon some demesne lands belonging to the crown, early in the time of king John; but king Henry III. confirming it, is said to have been the founder. It was dedicated to the Virgin Mary; and about the time of the dissolution, had in it eight nuns, whose yearly revenues were rated at no more than seven pounds three shillings and six-pence.

At Dunstan, south-east of Lincoln, there was an ancient hospital for leprous persons in the time of Henry III. which perhaps may be the same with one at Mere, in or near the parish of Dunstan, founded by Simon de Roppele before the year 1246. The mastership was in the gift of the bishop of Lincoln; and when the fee was vacant, of the dean and chapter. It seems to have escaped the general suppression, and to be yet in being.

In the year 1676, the wife of Charles Gays, an inn-keeper of the town of Wragby, near Lincoln, was delivered of a male child with two heads, which lived some hours.

Sleaford, or New Sleaford, so called to distinguish it from a neighbouring town called Old Sleaford, is situated near the source of a small river, which runs with such rapidity through the town, that it is never frozen,

and which, within the compass of two miles, including the town, turns five corn mills, two falling mills, and one paper mill, and then falls into the Witham. This town is distant one hundred and ten miles from London; it is very populous, and its buildings are continually improving. It has a large handsome church, and a free-school, which was founded, and liberally endowed in 1603, by Robert Carr, Esq; who also erected and endowed an hospital in this place, for twelve poor men: for the management of the hospital, he constituted the vicar of the town, together with the rectors of five places in the neighbourhood, for the time being, perpetual governors.

Here is a considerable weekly market, held on Monday, stored with all sorts of cattle and provisions; and five annual fairs, viz. Plow-Monday, Easter-Monday, Whitfun-Monday, for horses, horned cattle, and sheep; the twelfth of August, for provisions; and the tenth of October, for horned cattle and sheep.

Haverholm, a village north-east of Sleaford, was first given by Alexander, bishop of Lincoln, to the Cister-tian monks of Fountain Abbey, near Borrowbridge, in Yorkshire, about the year 1137, to build an abbey for monks of that order; but after having made some progress in the building, the monks pretended not to like the situation, and removed to Louth-Park. The bishop afterwards disposed of this place to the nuns and canons of the new order of St. Gilbert of Sempringham, who settled here in the year 1139, and continued till the general dissolution, when their yearly income was rated at seventy pounds fifteen shillings and ten-pence. It was dedicated to the Virgin Mary.

At Temple Bruer, north-west of Sleaford, before the year 1185, there was a preceptory, first of the Knights Templars, and afterwards of the Hospitalers, who had annexed such possessions to it, as were valued, upon the suppression, at one hundred and eighty-four pounds six shillings and eight-pence *per annum*.

Fokingham stands on a rising hill, in a wholesome air, at the distance of one hundred and four miles from London. It has several good springs round it, but is a place of no trade.

Here is a weekly market on Thursday, and seven annual fairs, viz. Ash-Wednesday, Palm-Monday, for horses and sheep; the twelfth of May, for ditto, and tradesmens goods; the sixteenth of June, for horses and horned cattle; the third of July, for hemp, hard-ware, and bafons; the tenth and twenty-second of November, for horses, horned cattle, and tradesmens goods.

At Walcot, a small village near Fokingham, is a chalybeat spring, formerly famous for its medicinal virtues.

At Sempringham, near this town, Sir Gilbert, son of Sir Joceline de Sempringham, knight, rector of the church of St. Andrew here, having instituted a new mode of religious life, from him, and from this place, called the Gilbertine or Sempringham order, about the year 1189, obtained, by the gift of Gislebert, three carucates of land, each of which is supposed to be one hundred acres, on which he built a priory for his nuns and canons, dedicated to the Virgin Mary. This was the head house of the order where their general chapters were held; and had revenues, upon the dissolution, to the yearly value of three hundred and seventeen pounds four shillings and a penny.

Two miles south of Fokingham, at a place called Aflackby, there seems to have been a preceptory or commandry of the Templars, founded by John de Marschal, about the time of king Richard I.

At Holland Bridge, or Bridgend, not far from Fokingham, there was a Gilbertine priory, founded in the time of king John, by Godwinus, a rich citizen of Lincoln, dedicated to our Saviour, and valued, upon the dissolution, at five pounds one shilling and eleven-pence *per annum*.

Corby is a town of very little trade, nor has any thing in it worthy of particular mention, except a school, which is endowed for the sons of deceased clergymen. It is distant from London ninety miles, has a weekly market on Thursday, and two annual fairs, viz. the

twenty-sixth of August, and Monday before the tenth of October, for horses and horned cattle.

Dunnington is famous for the large trade it carries on in hemp and flax. It is distant from London ninety-nine miles; and has a port for barges, by which goods are carried to and from Boston and the Washes.

Here is a weekly market on Saturday, and four annual fairs, viz. the twenty-sixth of May, for horses, flax, and hemp; the seventeenth of August, for horses only; the sixth of September, for cattle, flax, and hemp; and the seventeenth of October, for horses, cattle, flax and hemp.

Boston is a corruption of *Botolph's Town*, a name derived from Botolph, a Saxon, who is supposed to have founded a monastery here, from which the town took its rise. It stands at the distance of one hundred and fourteen miles from London, upon the Witham, which is navigable from hence to Lincoln. It has long been a flourishing town, and is said to have been first incorporated by king Henry VIII. Queen Elizabeth gave the corporation a court of admiralty, over all the neighbouring sea-coasts. It is governed by a mayor, who is chief clerk of the market, and admiral of the coast, a recorder, deputy recorder, twelve aldermen, a town-clerk, eighteen common-councilmen, a judge, and marshal of the admiralty, a coroner, two serjeants at mace, and other officers, and is pleasantly situated, and well built. About the end of the reign of Henry I. one Robert Chamberlain, at the head of some desperate villains, disguised like monks and priests, set fire to this place in several parts, while a tournament was proclaiming at the fair, with a view to plunder the inhabitants, many of whom were wealthy merchants, while they were removing their goods. Chamberlain was taken, confessed the fact, and was executed for it, but would not discover his accomplices. Here is a church, reckoned the largest parochial church, without cross isles, in the world, being three hundred feet long within the walls, and one hundred wide. The ceiling is of English oak, supported by tall slender pillars. This church has three hundred and sixty-five steps, fifty-two windows, and twelve pillars, answering to the days, weeks, and months of the year. Its tower, which was built in the year 1809, is two hundred and eighty-two feet high, and has a beautiful octagon-lantern at the top, which serves as a guide to mariners when they enter the dangerous channel called Lynn Deeps, and Boston Deeps, in the Washes; and is the admiration of travellers, being seen at the distance of forty miles round. Here are two charity-schools, and a high wooden bridge over the Witham.

The town has a commodious harbour, is supplied with fresh water by pipes from a pond, in a great common called the West Fen, where a water-house and a mill were erected in the reign of queen Anne, by act of parliament. It is the residence of many considerable merchants, and carries on a good trade, both inland and foreign, yet many of the inhabitants apply themselves to grazing of cattle with great advantage. All the country in the neighbourhood of this town is marsh lands, which are very rich, and feed vast numbers of large sheep and oxen.

Here was a well endowed hospital for poor men, before the tenth of king Edward I. and before the year 1288, here was a house of Black friars.

In that part of the town west of the river, there was a priory of Carmelite friars founded by Sir — Orreby, knight, about the year 1300.

Here was a priory of Austin friars, which seems to have been the foundation of king Edward II.

A house of Grey or Franciscan friars was founded here by the Esterling merchants, according to Leland; but Stow says, John le Pychede was the founder.

Boston sends two members to parliament, has two weekly markets, on Wednesday and Saturday; and three annual fairs, viz. the fourth of May, chiefly for sheep; the eleventh of August, the town fair; and the eleventh of December, for cattle, and all sorts of merchandize: this last continues nine days, and, by way of eminence, is called a Mart.

At Icanhoe, or Ycanno, and corruptly Wenno, a

place thought by some to be in or near the town of Boston, and by others to be part of the city of Lincoln, St. Botolph built a monastery in the year 654, upon a desert piece of ground, said to have been given him for that purpose by Ethelmund, king of the South Angles, which continued till the devastation of these countries by the Danes in the year 870.

In the year 1134, an abbey of Cistercian monks was founded in the marches near Swineshed, south-west of Boston, by Robert de Gressei, dedicated to the Virgin Mary. About the time of the dissolution, here were eleven religious, whose yearly revenues were worth one hundred and sixty-seven pounds fifteen shillings and three-pence.

At Shirbeck, near this town, there was an old hospital for ten poor people, dedicated to St. Leonard; which being given, with the manor, in the year 1230, to the Knights Hospitalers of St. John of Jerusalem, by Sir Thomas Multon, knight, some of that order soon after settled here; upon which the hospital was called St. John Baptist's.

Binbroke is a small, poor town, at the distance of one hundred and fifteen miles from London; in which there is nothing worthy of note. Here is a charity-school, a weekly market on Wednesday, and an annual fair, but not worth mentioning.

Tattershal is situated in a marshy country, but tolerably commodious: most of the houses are of brick; and here is a castle, famous for its ancient barons. Its distance from London is one hundred and eighteen miles.

Here was a college for a master and warden, six priests, six clerks, and six choristers; and an alms-house next the church-yard, for thirteen poor persons, built and endowed by Sir Ralph Cromwell, knight, in the seventeenth of Henry VII. It was dedicated to the Trinity, St. Mary, St. Peter, St. John the Evangelist, and St. John the Baptist; and valued, the twenty-sixth of Henry VIII. at three hundred and forty-eight pounds five shillings and eleven-pence *per annum*.

Tattershal has a weekly market on Tuesday, and two annual fairs, viz. the fourteenth of May, and the twenty-fifth of September, for horses, cattle, and cloth.

At Stukeswold, north-west of Tattershal-Chace, the countess Lucy, relict of Yvo de Tuilbois; Roger de Romary, and Ranulf, the first earl of Chester, built, in the time of king Stephen, a monastery of Cistercian nuns, under the direction of a master: it was dedicated to the Virgin Mary; and at the time of the dissolution, had in it thirteen nuns, whose possessions were rated at one hundred and fourteen pounds five shillings and two-pence *per annum*.

Hugh Brito, the son of Eudo, lord of Tattershal, founded a Cistercian abbey at Kirksted in the year 1139, dedicated to the Virgin Mary: its possessions were valued, upon the dissolution, at two hundred and eighty-six pounds two shillings and seven-pence *per annum*.

At Kyme, south-west of Tattershal, Philip de Kyme, in the time of king Henry II. built a priory of Black canons, dedicated to the Virgin Mary: it consisted of about eight religious, and was possessed of lands and rents, at the time of the dissolution, worth one hundred and ten pounds four shillings *per annum*.

Horncastle, the next town we entered, is large, and well-built; situated on a small river called the Bame, by which it is almost surrounded. It is distant from London one hundred and twenty-two miles, and appears to have been a camp or station of the Romans, not only from the remains of the castle, which was a Roman work, but from the Roman coins often dug up near the place where the castle stood. The compass of this castle appears by the foundation of the whole, and by a part of the wall yet standing, to have taken up about twenty acres.

This town has a weekly market on Saturday, and two annual fairs, viz. the twenty-second of June, and the twenty-first of August, for horses, and other cattle.

At a village called Yarburgh, near this place, are the remains of a large Roman camp; and such quantities of Roman coins have been dug up here, that one Howson of Kennington, another village in the neighbourhood,

is said at one time to have been in possession of some pecks of them.

Scrivelsby-hall, not far from Horncastle, is the manor of the Dincocks, who hold it upon condition, that at the coronation, the then lord, or some person in his name, if he be not able, shall come, well armed, into the royal presence, on a war-horse, and make proclamation, that if any one shall say, the sovereign has no right to the crown, he is ready to defend his right against all that shall oppose it.

Ranulph de Meschines, earl of Chester, before the year 1129, gave the church of St. Andrey at Minting, a village north-west of Horncastle, to the abbey of St. Benedict upon the Lyre, in France; upon which an alien priory of Benedictine monks was fixed here.

There was an abbey of Premonstratensian canons at Tapham, dedicated to the Virgin Mary, founded by Alande Nevill, and Gilbert his brother, in the time of Henry II. in which there were nine religious at the final dissolution, who had a yearly income of one hundred pounds fourteen shillings and ten-pence.

West of Horncastle, at a place called Stanfield, Henry Piercy, about the end of the reign of king Henry II. built and endowed a priory for nuns of the Benedictine order, which had sixteen religious belonging to it at the time of the dissolution, whose possessions were then valued at ninety-eight pounds eight shillings *per annum*.

Spilsby is a town of no considerable note. Here is a charity-school, which was erected in the year 1716, for teaching and cloathing twenty-four boys, and sixteen girls: it stands at the distance of one hundred and twenty-two miles from London. Here was a chapel, which was made collegiate for a master and twelve priests, by Sir John Willoughby, in the twenty-second of Edward III. It was dedicated to the Trinity.

Here is a weekly market on Monday, and three, and sometimes four annual fairs, viz. Monday before Whitfun-Monday, Monday after ditto, Monday fortnight after Whitfun-Sunday, if it falls in May; if not, there is no fair; and the second Monday in July, for all sorts of cattle and clothing.

Bullingbrook is noticed for having been the birth-place of king Henry IV. from thence furnamed Henry of Bullingbrook. It is distant one hundred miles from London; and has an excellent weekly market held on Thursday, but no annual fair.

At Reaby, south-west of this town, William de Ramara, earl of Lincoln, in the year 1142, founded an abbey of Cistercian monks, which was dedicated to the Virgin Mary and St. Laurence, and endowed at the suppression with two hundred and eighty-seven pounds two shillings and four-pence *per annum*.

Hubert, the son of Alard de Orreby, and the lady Agnes, his wife, in the year 1175, built a Premonstratensian abbey at Hagney, near Bullingbrook, dedicated to St. Thomas of Canterbury; in which, a little before the suppression, were nine canons, whose possessions were then valued at eighty-seven pounds eleven shillings and four-pence *per annum*.

Burgh is an inconsiderable town, and has nothing in it worth notice, but a charity-school. It is distant from London one hundred and four miles.

Here is a poor weekly market on Thursday, and three annual fairs, viz. the twelfth of May, for sheep, horses, and cattle of all sorts; the sixteenth of August, the town fair only; and the second of October, for cattle, and cloathing of all sorts.

Wainfleet is situated upon the borders of the fenny country called Holland, at the distance of one hundred and twenty-four miles from London. It is neatly and compactly built, and remarkable for a fine free-school, founded by William Patin, a bishop of Winchester, and a native of this place.

Here is a weekly market on Saturday, and four annual fairs, viz. the third Saturday in May, for all sorts of cattle; the fifth of July, and the twenty-fourth of August, small fairs, chiefly for pleasure; and the twenty-fourth of October, for sheep.

Alford is a little, obscure town, about five miles from the sea, and one hundred and seven from London.

Here is a weekly market on Tuesday, and two annual fairs, viz. Whitfun-Tuesday, and the eighth of November, for cattle and sheep.

At Maltby, near this town, there was a preceptory of the Templars, and afterwards of the Hospitalers. Randal, earl of Chester, was the first donor.

North-west of Alford, at a place called Green-field, Eudo de Greenesby, and Ralph de Abi, his son, built a priory for nuns of the Cistercian order, before the year 1153, dedicated to St. Mary; in which, about the time of the suppression, there were ten nuns, who had an estate worth sixty-three pounds four shillings and a penny *per annum*.

At Markby, near Alford, there was a priory of Black canons, built before the fifth of king John, by Ralph Fitz Gilbert, dedicated to St. Peter, and rated, upon the suppression, at one hundred and thirty pounds thirteen shillings *per annum*.

Four miles west of Alford, at a village called Burwell, there was an alien priory of Benedictine monks, given by some of the lords of Kyme to the abbey of St. Mary Silvae Majoris, near Bourdeaux. After the general seizing of these houses, this came to the college of Tatterthall.

At Hayham, near Burwell, there was an estate and priory belonging to the Cluniac or Benedictine abbey of St. Mary San Sever, in the diocese of Constance, which was of the foundation of Hugh, the first earl of Chester. This cell, then valued at twelve marks *per annum*, was, about the twentieth of Richard II. settled upon the Carthusian priory of St. Anne, near Coventry.

Rafen, called Rafen-Market, to distinguish it from East, West, and Middle Rafen; all four situated near the source of the Ankam. This town is distant one hundred and thirty-nine miles from London, but has nothing in it worthy of note.

Here is a weekly market on Tuesday, and an annual fair, held on the sixth of October, for horned cattle.

At Omby, near this town, in some fields joining to a great road between Stamford and Hall, a borough town of Yorkshire, brass and silver coins have been ploughed up, having a view of the city of Rome on one side, with the inscription, *Urbs Roma*; and on the reverse, *Pax et tranquillitas*.

South-east of this town, at Sixhill, there was a Gilbertine priory of nuns, dedicated to the Virgin Mary, and said to have been founded by — Grelle, or Gressei. At the time of the suppression, its revenues were valued at one hundred and thirty-five pounds nine shillings *per annum*.

At Irford, north-east of Rafen-Market, there was a small priory for nuns of the Premonstratensian order, founded by Ralph de Albin; in the time of king Henry II. It was dedicated to the Virgin Mary, and had in it six or eight religious about the time of the dissolution, when the revenues of it were estimated at thirteen pounds nineteen shillings and nine-pence *per annum*.

Stanton is a little obscure town of no note, distant one hundred and twenty-nine miles from London.

Here is a weekly market on Monday, and an annual fair on the twenty-ninth of October, for hemp and sheep.

Louth, the next town we visited, is said to have derived its name from a small river called the Lud, upon the bank of which it is situated. It is distant from London one hundred and thirty-three miles, and is a corporation town of great resort; but how it is governed, does not appear: it has a large church, with a fine steeple, which is thought by some to be as high as Grantham spire. Here is a free-school, founded by king Edward VI. and a charity-school for forty children.

Here are two weekly markets on Wednesday and Saturday, and three annual fairs, viz. the twenty-fourth of May, and the sixteenth of August, for sheep; and the third of December, for horses.

Alexander, bishop of Lincoln, in the year 1139, built an abbey in a park near Louth, for the Cistercian monks, whom he had brought from Fountain Abbey to Haverholm: it was dedicated to the Virgin Mary; and

in the time of king Henry III. here were no less than sixty-six monks, and one hundred and fifty converts; but about the time of the suppression, the number of religious was reduced to twelve, and their revenues valued at one hundred and forty-seven pounds fourteen shillings and six-pence *per annum*.

At North Ormesby, north-west of Louth, William earl of Albemarle, and Gilbert, son of Robert de Ormesby, founded, in the time of king Stephen, a monastery of nuns and brethren of the Sempringham order: it was dedicated to the Virgin Mary, and valued, upon the general suppression, at eighty pounds eleven shillings and ten-pence *per annum*.

Hugo de Evernuce, or Wake, gave the manor of Willesford to the abbey of Bec in Normandy, in the time of king Stephen; upon which a priory of Benedictine monks from thence was fixed here. It being seized into the king's hands during the wars with France, it was at length, by the favour of Thomas Holland, earl of Kent, settled on the abbey of Bourn, in this county.

At Alvingham, near Louth, there was, about the end of king Stephen's reign, a priory of Gilbertine nuns and canons, dedicated to the Virgin Mary and St. Adelwold, but by whom founded, is not certainly known. It was valued, at the dissolution, at one hundred and twenty-eight pounds fourteen shillings and two-pence *per annum*.

At one or more of the three following places near Louth, viz. Kerledale, Keddington, and Harlington, there was a nunnery as early as the year 1150, which seems to have been removed to Legborn, not far from Alford, by Robert Fitz Gilbert of Legborn, or Tadwelle, before the first year of king John. Here were ten nuns, upon the suppression of the Cistercian order, whose yearly revenues were rated at thirty-eight pounds eight shillings and four-pence. It was dedicated to the Virgin Mary.

Saltfleet has an harbour upon the ocean, which, except its being a market-town, is the only circumstance that entitles it to notice. It stands at the distance of one hundred and thirty-eight miles from London. One Mr. John Watson, who died in 1693, aged an hundred and two, was minister seventy four years. in which time he buried three successive generations in his parish, except three or four persons.

This town has a weekly market on Saturday, but no annual fair.

Some lands at Covenham, on the west side of Saltfleet, being given, about the year 1082, to the abbey of St. Kahilefus, in the diocese of Mains, in Normandy, by king William the Conqueror, a priory of Benedictine monks was settled here from that foreign monastery, to which it continued a cell, under the patronage of the bishops of Durham, till it was made over, in the thirty-first of Edward I. to the abbot and convent of Kirkstede, with whom it remained till the dissolution.

Grimby is said, in point of antiquity, to be the second, if not the first corporation in England. It is distant from London one hundred and fifty-eight miles, and is governed by a mayor, high-steward, recorder, twelve aldermen, twelve common-councilmen, two bailiffs, two coroners, a town-clerk, and three sergeants at mace. The mayor holds a court here every Tuesday, and the bailiffs every Friday. Here are several streets of good houses, and a church, which has the appearance of a cathedral. It was formerly a place of great trade, but its harbour has been long choaked up: the road, however, still remains a good station for ships that wait for a wind to put to sea. It has a trade in coals and salt by the navigation of the Humber.

Here was formerly a Benedictine nunnery, dedicated to St. Leonard, and founded before the year 1185; in which, about the time of the suppression, were a prioress and seven or eight nuns, who were endowed with no more than nine pounds fourteen shillings and seven-pence *per annum*.

Here was a house of Friars Heremites, or Austin friars, about the year 1304; and likewise a convent of Franciscan or Grey friars, founded in the beginning of the reign of king Edward II. if not before.

This town sends two members to parliament, has a weekly market on Wednesday, and two annual fairs, viz. the seventeenth of June, for sheep; and the fifteenth of September, for horses.

At Wellow, near this place, Henry I. built and endowed an abbey for Black canons, dedicated to St. Augustine, which was valued, upon the dissolution, at ninety-five pounds six shillings and a penny *per annum*.

At Cotham, about eight miles from Grimby, Alan Muncels, or Monceaux, about the end of the reign of king Henry I. built a Cistercian nunnery, dedicated to the Virgin Mary; in which, at the dissolution, were a prioress and twelve nuns, with revenues rated only at forty pounds *per annum*.

South-east of this town, at Hamerstone, there was an abbey of Benedictine monks, built in the time of king Henry II. by William, the son of Randolph. It was dedicated to St. Mary and St. Peter; and had yearly revenues, upon the suppression, rated at thirty-two pounds eleven shillings and three-pence.

Alan, the son of Henry earl of Brittany, in the year 1202, gave the town and church of West Ravendale, near Grimby, to the Premonstratensian abbey of Beaufort, in Brittany; in consequence of which, it became a cell to that monastery. This alien priory was, upon its dissolution, the seventeenth of Henry VI. valued at fourteen pounds *per annum*.

Castor, originally Thuang-Castor, or Thong-Castle, is said to have derived its name from the following circumstance: Hengist the Saxon, as a reward for having driven back the Scots and Picts, obtained from Vortigern a grant of as much ground here as he could encompass with the hide of an ox cut into small thongs: on this ground he built a castle, which for that reason was called Thong-Castle. This town is one hundred and twenty miles distant from London, but has nothing in it worthy of note.

Here is a weekly market on Monday, and two annual fairs, viz. the first of June, for sheep; and the sixteenth of October, for sheep and horned cattle.

Glanford-Bridge is remarkable only for having a bridge over the river Ankam. It stands at the distance of one hundred and fifty-three miles from London.

Here was an ancient hospital, founded by Adam Paynel, in king John's time, subordinate to the abbey of Selby, a market-town of Yorkshire, one of the monks of which was master.

Here is a weekly market on Thursday, but no annual fair.

North-east of this town, near the mouth of the Humber, are the remains of Thornton college or abbey, where, in taking down a wall, not many years ago, the workmen found the skeleton of a man, with a table, a book, and a candlestick: the man is supposed to have been immured there for some heinous crime.

At Thorneham, north-west of this town, there was a priory of canons of the order of St. Austin, founded by king Stephen, dedicated to the Virgin Mary, and endowed, at the dissolution, with one hundred and five pounds thirteen shillings *per annum*.

At Newsham, north-east of the town, there was the first monastery of the Premonstratensian order in England, which was built by Peter de Gonfla, or Gonfel, in the year 1143, or 1146, dedicated to the Virgin Mary and St. Martial. Here were maintained, about the time of the dissolution, an abbot and eleven canons, having yearly revenues to the amount of ninety-nine pounds two shillings and ten-pence.

King Henry II. before the year 1173, gave to St. Gilbert, and the canons of Sempringham, an island called Ruckholm, within the bounds of Cadney, upon the river Ankam, south of Glanford-Bridge, to found a priory of their order, which was called Newstede, dedicated to the Trinity, and endowed, at the dissolution, with thirty-eight pounds thirteen shillings and five-pence *per annum*.

In the beginning of the reign of king Henry III. here was an hospital or priory for canons of the order of St. Austin, and certain poor persons, built, and dedicated to the Virgin Mary, by William de Albini the third.

Its yearly revenues, upon the suppression, were valued at thirty-seven pounds six shillings.

At Gokewell, north-east of Glandford-Bridge, there was a Cistercian nunnery founded by William de Alta Ripa, before the year 1185. It had a prioress and six nuns about the time of the dissolution, with a yearly income of seventy-six pounds twelve shillings and ten-pence.

At Wingall, south of this town, there was an alien priory, dedicated to St. John, cell to the abbey of Sees, in Normandy, to which it belonged in the beginning of the reign of Henry III.

Adjoining to Milwood Park, in the isle of Axholm, south-west of Glandford-bridge, stood a monastery of the Carthusians, called the Priory in the Wood, or the House of the Visitation of the Virgin Mary, founded, about the nineteenth year of king Richard II. by Thomas Mowbray, earl of Nottingham, and earl marshal of England, afterwards duke of Norfolk; and dedicated to St. Mary, St. John the Evangelist, and St. Edward the King and Confessor: the yearly revenues of this priory, upon the dissolution, were rated at two hundred and thirty-seven pounds fifteen shillings and two-pence.

Barton is a large, straggling town, mostly noted for the horse-ferry to Hull, a borough town of Yorkshire, crosses the Humber, which is here six miles over; and for the cock-matches which are frequently made here with the people of Axholm. It is distant from London one hundred and sixty-three miles.

Here is a weekly market held on Monday, and an annual fair kept on Trinity Thursday, for cattle.

At Thornton, south-east of this town, William Le Gros, earl of Albemarle, and lord of Holderness, founded, in the year 1139, a monastery of Black canons, dedicated to the Virgin Mary, which was valued, upon the suppression, at five hundred and ninety-four pounds seventeen shillings and ten-pence *per annum*.

At a place formerly called Aisefham, or Ellefham, near Thornton, and not far from Barton, Beatrix de Amundeville began a hospital for several poor brethren, which her son Walter confirmed and augmented, and committed to the care of a prior and regular canons of the order of St. Austin, before the year 1166. This priory was dedicated to St. Mary and St. Edmund; and had but five canons a little before the suppression, when its possessions were valued at seventy pounds and eight-pence *per annum*.

Wulpher, king of the Mercians, about the middle of the seventh century, built a monastery at Burrow, a village near Barton.

Burton, called also Burton Stather, is well situated for trade on the east of the Trent, on which it has several mills. The houses are pleasantly intermixed with trees. It stands at the distance of one hundred and forty-nine miles from London; and has two churches, one of which is so low in respect to the precipice over it, that a person may almost leap from thence on the steeple.

Here is a weekly market on Monday, but no annual fair.

North of this town, at Alkborough, were found abundance of sea-shells and subterraneous trees, thought to be the reliques of the universal deluge.

Near Wintringham, a village north of Burton, the foundations of an old Roman town were lately ploughed up, and many remains of antiquity found.

At Hyrst, in the isle of Axholm, near Burton, there was a cell of one or two Black canons, belonging to the abbey of Nostel, near Wakefield, a market-town of Yorkshire, to which it was given by Nigel de Albitri, in the time of Henry I. This small house was dedicated to the Virgin Mary, and at the dissolution was rated but at five pounds ten shillings and a penny *per annum*.

Kirkton derives its name from a kirk or church here, which is a spacious edifice, built in the form of a cathedral. It stands at the distance of one hundred and thirty-six miles from London, and is famous for a sort of apple called the Kirkton Pippin.

This town has a weekly market on Saturday, and two annual fairs, viz. the eighteenth of July, and the

eleventh of December, for cattle of all sorts, and merchandizing goods.

At a village called Hiberstow, near Kirkton, upon the Roman highway, are still to be seen the foundations of several Roman buildings, with tiles, coins, and other remains of Roman antiquity. Several such remains have also been discovered about Boughton, a village near Glandford-Bridge. At Roxby, a village near Burton, was lately discovered a Roman pavement. At Winter-ton-cliff, in the north-west extremity of the county, are many remains of Roman buildings; and at Alkborough, two miles more to the west, there is still a small square intrenchment or camp, now called Countess Close, from a countess of Warwick, who, it is said, lived there, or owned the estate. The castle here, it is observed, was very conveniently placed by the Romans, in the north-west angle of the county, as a watch-tower; to overawe Nottinghamshire and Yorkshire.

At a place formerly called Tunstal, supposed to have been near Kirkton, there was a house of Gilbertine nuns, founded by Reginald de Grevequer, in the time of king Stephen, which seems to have been united to Ballington by his son Alexander.

Ganefborough is a well built town, and reckoned the most flourishing in the county. It has a church, which being ruinous, was pulled down in 1735 by act of parliament, and rebuilt. Here are several meeting-houses of Protestant Dissenters, and a fine market-place. This town is situated at the distance of one hundred and thirty-seven miles from London, upon the river Trent, by means of which it has a good trade, ships of considerable burden being brought up by the tide, though it is near forty miles from the Humber by water. It is remarkable for the Danes having landed here when they came up the Trent.

Here is a weekly market on Tuesday, and two annual fairs, viz. Easter-Tuesday, and the twentieth of October, for beasts, sheep, and all sorts of shop-goods.

The North-Marsh, in the neighbourhood of this town, is remarkable for horse-races.

At Stratton, a village between Ganefborough and Lincoln, are found the Ophites, or serpent stones, being a kind of variegated marble, of a dusky green ground, with here and there spots of a lighter green.

At Merton, near Ganefborough, are still some remains of a Roman highway, leading from Doncaster, a market-town of Yorkshire, to Lincoln; and about a quarter of a mile from the town, there are two or three considerable pieces of Roman pavement.

Stow, a village near Ganefborough, was formerly a city called Sidnacester, and is supposed to have been a Roman station.

Littleborough, a small town about three miles from Ganefborough, is thought to be the Agelocum or Segelocum of the Romans. An urn was found here full of the coins of the emperor Domitian; and many other coins have been ploughed up in the neighbouring fields.

On some hills between Ganefborough and a neighbouring village called Lea, many Roman coins, and pieces of Roman urns, have been dug up; and one of these hills, called Castle-hill, is surrounded with intrenchments, said to inclose above an hundred acres.

At a place formerly called Heyninges, or Heixnynges, two miles distant from this town, there was a Cistercian nunnery, founded by Robert Evermue, about the year 1180. It was dedicated to the Virgin Mary, had a prioress and twelve nuns, with a yearly revenue of forty-nine pounds five shillings and two-pence.

At Spittle, in the street between Ganefborough and Market-Rasen, there was a chapel and hospital, dedicated to St. Edmund, founded before the sixteenth of Edward II. and augmented by Thomas Aston, canon of Lincoln, in the reign of king Richard II. It is yet in being, and under the care of the dean and chapter of Lincoln.

CURIOUS PLANTS found in Lincolnshire.

Chickweed Knot-grass with very narrow leaves, and flowers set along the stalks, as it were in spikes; *Polygonum angustifolium graminis folio cretium*, Bot.

Caraways; *Carum vulgare*, Park; found plentifully in the marshy and fenny grounds.

Fair-flower'd Nettle-hern; *Cannabis spuria flore amplo, labio purpureo*; met with in great plenty about Spalding.

Garden Scurvy-grafs; *Cochlearia major rotundifolia*; in the marshes in Holland, and in many other places near the sea-side.

Golden Dock; *Lepathum folio acuto, flore aureo*, C. B. found about Crowland, and in other places of the fens.

Marsh Gentian, or Calathian Violet; *Gentiana palustris angustifolia*, C. B. found in a park at Fattishall, and on the heathy grounds thereabout.

Sallow-thorn; *Rhamnus vel Oleaster Germanicus*, J. B. found in plenty on the sea-banks on Lindsey-coast.

Woad; *Glastrum*; grows wild at Fotherby, near Louth. Samphire, used as a pickle; found at Boston, Scalp, and other places.

Wild Strawberries; *Fragaria*; found plentifully in the woods near Tatterthall.

Cranberries; *Vacinium*; found plentifully on the edge of the fens near Tatterthall.

Other Curious PARTICULARS, not mentioned in the foregoing Account of Lincolnshire.

Near the middle of the large tract of barren land called Lincoln Heath, (which is about fourteen miles long) stands the Light-house, situated in the road from Sleaford to Lincoln, as a guide for travellers, built about fifteen years ago by a gentleman who lost his way in going over the heath. It is a very tall square pillar, perhaps about one hundred and twenty, or one hundred and forty feet high. There are stairs to the top, which is lighted every night. It stands in a square court, walled round: at each corner of the court is a small house, all four being of a size; they are square, with a square tiled roof, and a weathercock at top; and in one of these live the people who put up the light. The light-house is built of square stone; and behind the court it stands in, is a plantation of firs of about forty or fifty acres. Some part of the heath is now inclosed, and sown with corn; and in the south part of it are great numbers of rabbit warrens. All over the wolds are a great many rabbit warrens, which are sold in several places for three-pence a couple. In Holland, land lets from twenty to sixty shillings per acre; and hemp and flax land for seventy shillings per acre. In Kesteven, from eight to twenty-two shillings; and in Lindsey, from one penny to sixteen shillings per acre; hundreds of acres being let for four-pence or six-pence per acre; besides many more hundreds of acres of barren heaths, inhabited by rabbits.

A great deal of woad is now cultivated in the division called Holland. Cole-seed is also sown in several parts of the same division, and sent to the oil-mills at Boston, &c.

To the foregoing account of Lincoln cathedral, we must beg leave to add, That several new windows, curiously painted, were added to that famous structure in the year 1766; and that the church was also then new roofed in a very elegant manner. A manufacture of camblets is also lately established in Lincoln.

Remarks on the SEA-COASTS of Lincolnshire.

The sea-coasts of Lincolnshire extend from the mouth of the Nen to the mouth of the Humber.

Ships of very large burden come up to Boston, situated near the mouth of the Witham. A sand of some length stretches along the shore, on both sides of the harbour; but this is the only danger attending ships bound to this port. The tower of Boston is of great service to ships bound to this port; for in clear weather, it is seen at the entrance of the channel called Boston Deeps, the navigation of which is considered as difficult as that of any place on the eastern shore of Britain.

The town of Wainfleet stands at the mouth of a tide-harbour, frequented by small coasting vessels.

Saltfleet stands also at the mouth of another tide-harbour, frequented, like the former, by small vessels.

The next harbour on this coast is that of Grimsby, where there is water sufficient for ships of considerable burden, and a considerable trade is carried on here. Several sands lie near the mouth of the Humber; one of them, called the Nefs-sand, stretches off several miles from the shore, and has a buoy on the outer point of it, for the direction of ships bound either to Grimsby harbour, or up the Humber.

About three miles to the eastward of the Nefs-sand, is another, called Ball-sand, which is also often dangerous to ships of burden.

A mile beyond the Nefs-sand, is another, called Burrow-sand, which must be also avoided in sailing up the Humber. But we shall be more particular in describing the mouth of the Humber in our account of Yorkshire.

Barton stands farther up the Humber, and is frequented by small vessels.

About ten miles above Barton, the Trent falls into the Humber. Ships of two hundred tons burden pass up the Trent as far as Gainborough; and at Stockworth, a village about four miles above Gainborough, there is a dock, where vessels of two hundred and sixty tons are often built.

MEMBERS of PARLIAMENT for Lincolnshire.

The county of Lincoln sends twelve members to parliament; two knights of the shire for the county, two citizens for Lincoln, and two burgesses for each of the following boroughs, Stamford, Grantham, Boston, and Grimsby.

N O T T I N G H A M S H I R E.

THIS county is bounded by Yorkshire on the north; by Leicestershire on the south; by Lincolnshire on the east; and by Derbyshire on the west. It extends in length, from north to south, about forty-three miles; from east to west, about twenty-four miles; and is one hundred and ten miles in circumference. Southwell, a market-town near the middle of the county, is distant one hundred and fourteen miles north-north-west from London.

R I V E R S.

The principal rivers of this county are, the Trent, the Erwash, and the Idle. The Trent rises in the highlands of Staffordshire; and dividing Derbyshire from Leicestershire, runs from the south-west to the north-east part of Nottinghamshire; and being joined by many less considerable rivers, enters Lincolnshire, in the account of which county the course of it has been already described. The Erwash is a river of Derbyshire, and will be described in the survey of that county. The Idle, or Iddle, rises near Mansfield, a market-town; and running north-east, falls into the Dun, a river of Lincolnshire, on the west side of the isle of Axholm.

Remarks on the INLAND NAVIGATION of Nottinghamshire.

The only river in this county is the Trent, which is navigable for ships of large burden for near forty miles from its influx with the Humber. The barges go up as high as Nottingham without the assistance of locks or stops; and to Burton, in Staffordshire, by the assistance of art. The stream is full, the channel deep and safe, and the tide flows up to Gainsborough, and on spring-tides, to Newark. By these advantages, the navigation is of great service to the trade of the several counties which border on this river; especially the cheese trade from Cheshire and Warwickshire, which have otherwise no navigation but from the parts about West Chester to London; whereas, by means of this river, it is brought by water to Hull, and shipped there for all the ports on the south and east coast of Britain. A navigable canal is now making for joining the Trent and the Mersey; but as that canal will be carried through the counties of Cheshire, Stafford, and Derby, we shall defer our account of that great and useful undertaking till we come to describe these counties.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of Nottinghamshire is esteemed as good as that of any county in England; but it is divided, by the different qualities of the soil, under two denominations. The east side, which is very fruitful in corn and pasture, is called The Clay: this division is subdivided into the North and South Clay; and the west part of the county, which is generally woody or barren, is called The Sand.

There is a large forest, called Sherwood Forest, which comprehends almost all the western parts of this county, and contains several parks, towns, and seats. The officers of the forest, in 1675, were a warden, his lieutenant and steward, a bow-bearer, and a ranger, four verdurers, twelve regarders, four agisters, and twelve keepers or foresters, all under a chief forester. Besides these, there are several woodwards for every township within the forest, and one in every principal wood.

The western parts, however, besides wood, yield some coal and lead. Here are also found marbles of several sorts, and a stone not unlike alabaster, but softer, which, when burnt, makes a plaster harder than that of Paris, and this plaster the inhabitants of Nottinghamshire gene-

rally use for flooring. Other productions of this county are liquorice, cattle, abundance of fowl and fresh-water fish.

Remarks on the HUSBANDRY of Nottinghamshire.

The husbandry of this county is nearly the same with that practised in Lincolnshire, and which therefore it will be needless to repeat. In some parts, however, where the soil is light and sandy, the course is something different, viz. 1. turnips; 2. barley; 3. clover; 4. rye, and some wheat. They plough four or five times for their turnips, hardly ever hoe them, value their crop at twenty-five or thirty shillings an acre, and feed them off with both sheep and black cattle. For barley they stir the ground twice, sow three bushels, and gain at a medium three quarters and a half. Their clover they mow twice in the year, and get about two loads of hay at the two cuttings. For wheat they give the clover land but one stirring, sow three bushels of seed, and reap on an average about two quarters. For rye they also plough but once, sow two bushels, and gain in return about the same quantity as of wheat. For oats they give but one tith, sow four bushels, and gain in return about three quarters. For pease they plough twice or thrice, sow three bushels, and reckon the mean crop from twelve to sixteen bushels: they lay all their manure on their turnips; use three horses at length in a plough, and turn up about an acre a day.

P R I C E O F L A B O U R.

In hay-time and harvest, one shilling a day, and board.

In winter, ten-pence, and board.

Reaping wheat, four shillings and six-pence an acre.

Mowing corn, one shilling, to one and two-pence.

—————grass, one shilling and two-pence, to one shilling and six-pence.

Ditching, one shilling and five-pence the acre of twenty-one yards.

Threshing wheat, eight-pence for three bushels.

—————barley, &c. one shilling and four-pence per quarter.

The particulars of a farm of fifty pounds a year, are, six horses, five cows, three servants, and one labourer.

M A N U F A C T U R E S.

The principal manufactures of this county are stockings, glass, and earthen wares. The inhabitants also make great quantities of malt, and fine strong ale.

M A R K E T T O W N S.

The market-towns are, Bingham, Blith, Mansfield, Newark, Nottingham, Redford-east, Southwell, Tuxford, and Worktop.

We entered this county from Beckingham, in Lincolnshire; and first visited Newark, situated on the river Trent, one hundred and eighteen miles from London. It is a great thoroughfare on the York road, is a handsome, well-built town, with bridges over that river, which here forms an island, by dividing itself into two streams, two miles above the town, which meet again two miles below it. A castle, now in ruins, was built here in the reign of king Stephen, by Alexander, bishop of Lincoln, from which new work the town took its name. It is supposed, however, to have been a town of the Romans, and to have been walled about with the remains of their neighbouring cities. The north gate is built of stones that seem to be of the Roman cut, and many

many antiquities have been found about it, particularly four urns by the side of the fosse road, and a brass lar or household god an inch and a half in length. The castle held out stoutly in the barons wars for king John, who died here in his way to Lincoln. It held out as obstinately for king Charles I. to the last, and so cut off the greatest pass into the north that is in the whole kingdom; but after he had put himself into the hands of the Scots army, which lay before it, the governor, by his command, surrendered it, after which it was demolished, that the great road might be free and open.

Its church, which was built in the reign of Henry VI. has a lofty spire, and is reckoned one of the finest parish churches in England. Among other monuments, it has one of the family of Markham's, which took its name from a village near the river Idle, and flourished in these parts in several reigns; the last of whom, Sir George Markham, Bart. left a very great estate to the reverend Mr. Bernard Wilson, the present vicar. Here is a noble market-place, so spacious, that lord Bellasyfe drew up ten thousand men in it, when he defended this town for king Charles I. against the Scots army.

King Edward VI. incorporated this town by the name of one alderman, and twelve assistants; but king Charles II. turned the alderman into a mayor, and the assistants into aldermen; and in gratitude to the town for its loyalty to his father, gave it the privilege of sending two members to parliament. It is a town (with a noble market-place) of pretty good trade, in corn, cattle, wool, &c. and the people are flourishing, and it gives title of Viscount to the duke of Kingston. Here is a charity-school for thirty-six boys, supported by contributions.

There was an hospital at this town, founded by Alexander, bishop of Lincoln, about the end of the reign of king Henry I. and dedicated to St. Leonard: it had revenues, on the suppression, valued at twenty-seven pounds thirteen shillings and seven-pence *per annum*.

Here also was an ancient hospital for sick persons belonging to the Knights Templars, before the year 1185.

Here was an house of Austin friars; and king Henry VII. about the year 1499, is said to have founded a convent of Observant Friars in this place.

Newark sends two members to parliament, has a weekly market on Wednesday, and seven annual fairs, viz. Friday before Passion-Sunday, Friday in Midlent, the fourteenth of May, Whitfun-Tuesday, the second of August, and the first of November, for horses, cattle, sheep, pigs, and linen and woollen cloth; Monday before the eleventh of December, for sheep, horses, cattle, and pigs.

At Stoke, south-west of Newark, there was a very ancient hospital, dedicated to St. Leonard, and consisting of a master, brethren, chaplains, and several sick persons; but valued, at the time of the dissolution, at no more than nine pounds *per annum*.

In a field at Collingham, near the Fosse-way, and north of Newark, there is the appearance of a Roman station; and several coins of the emperor Constantine have been found here.

Leaving Newark, we passed along the banks of the Trent, and visited Southwell, situated on a small stream called the Greet, one hundred and fourteen miles from London. This place, which is supposed by Mr. Camden to be the Vul-Fingacester of Bede, is divided into two parts, viz. the Burridge, as it is called for the burgage, which comprehends all that part of the town betwixt the market-place and the river Greet, and the prebendage or liberties of the church. It has a famous church called a Minster, which is both parochial and collegiate, and supposed to have been founded by Paulinus, the first archbishop of York, *anno* 630. There belong to it sixteen prebendaries or canons, six vicars choral, an organist, six singing men, six choristers, besides six boys, who attend as probationers, a register to the chapter, a treasurer, an auditor, a verger, &c. It was surrendered at the dissolution to king Henry VIII. but it appears, from an inscription on a pillar in the church, erected by Gervase Lee, that the said king, at the instance of Lee, archbishop of York, refounded it, and restored it to its

ancient privileges, and that both queen Elizabeth and king James I. confirmed them. The chapter has a peculiar jurisdiction over twenty-eight parishes, to most of which it has the right of presentation, besides others in Lincolnshire and Yorkshire. This jurisdiction is exercised by a commissary or vicar general, chosen by the chapter out of their body, who holds visitations, &c. twice a year. Besides these, there are two yearly synods, to which all the clergy of Nottingham there pay their attendance; and a certain number of the prebendaries, and others of the clergy, are appointed commissioners by the archbishop of York to preside at the synods.

The civil government of its jurisdiction is distinct from the county at large, and is called the Soke of Southwell cum Scrooby, which is another town in this county. There are about twenty towns subject to this jurisdiction. The Custos Rotulorum, and the justices of the peace, are nominated by the archbishop of York, and constituted by a commission under the great seal of England, who hold their session both at Southwell and Scrooby, and perform all other judiciary acts distinct from the county. The church is built in form of a cross, with a great tower in the middle, in which are eight bells, and two spires at the west end. It being a plain Gothic building, without painted windows, images, or so much as niches, it is therefore supposed to have been built before Christianity was infected with idolatry. On the fifth of November, 1711, the ball of one of the spires being set on fire by lightning, the wind drove it so upon the body of the church, that in a few hours it burnt down the spire and roof, and consumed even the organ, but stopped at the choir, after it had done near four thousand pounds damage. It is three hundred and six feet in length from east to west. The length of the cross isle from north to south is one hundred and twenty-one feet, and the breadth of the church is fifty-nine. It being reputed the mother church of the town and county of Nottingham, king Henry VIII. allowed it to be Sedes Archiepiscopalis, and on the south side of it are the ruins of a very grand palace, which belonged to the archbishops of York, who had three parks here, which, though disparked, still retain the name. It was supposed to have been built by one of the archbishops of the name of Booth, there being a chapel by the south wall, which to this day is called Booth's Chapel; but though the archbishops have no seat, they have been all along from before the Conquest lords of the manor, and by the grants of several kings, enjoy great privileges here; for they have the returns of writs upon all and singular their lands, tenements, and fees here; and besides a great leet, which they do or may hold over divers townships, they have a sessions of peace kept by turns (at this place and Scrooby) by certain justices of peace of their own nomination, though under the king's commission. Adjoining to the church is a free-school, under the care of the chapter, where the choristers, with other boys belonging to the town, are taught gratis. The master is chosen by the chapter, and must be approved by the archbishop of York. There are also two fellowships and two scholarships in St. John's College in Cambridge, founded by Dr. Keton, canon of Salisbury, in the reign of king Henry VIII. to be presented by the master and fellows of the said college to such as have been choristers of the church at Southwell.

This place, which stands on a rivulet that falls into the Trent, has given name to a very considerable family, dispersed into divers counties, of which the greatest ornament was Sir Robert Southwell, the grandfather of Edward Southwell, Esq; at King's-Wellton, near Bristol.

Southwell has a weekly market on Saturday, and an annual fair held on Whitfun-Monday, for horses, horned cattle, sheep, swine, and merchandize.

South of this town, at Thurgorton, Ralph de Ayncourt, about the year 1130, founded a convent, consisting of a prior and canons of the order of St. Augustine, who were endowed at the suppression with two hundred and fifty-nine pounds nine shillings and four-pence *per annum*.

The manor of Fiskarton, near this place, having been given by Ralph de Ayncourt to the convent of Thurgorton,

Thurgarton, here was a priory of some Black canons, belonging to that monastery, who had a chapel dedicated to the Virgin Mary.

At a place called Bradebush, in the parish of Gonalston, near Southwell, William Herit, in the time of Henry III. built an hospital, dedicated to St. Mary Magdalen, which is still in being, and is called Gonalston Spittle.

There was likewise another hospital near this town, dedicated to St. Mary Magdalen, as early as the year 1313.

The next place we visited was Nottingham, one hundred and twenty-two miles from London: It gives name to the shire, is a borough by prescription, and a town and county of itself by charter. It is reckoned one of the neatest in England, and has as good a trade as most inland towns. It stands pleasantly on the ascent of a rock overlooking the river Trent, which runs parallel with it about a mile to the south, and has at a great expence been made navigable to it by barges. Though it be much more ancient, there is no distinct account of this town before the year 852, when the Danes got possession of it, but after a long siege, surrendered it to the Mercians and West Saxons. The Danes nevertheless came hither again a few years after; and though they were again drove from it farther to the north, they returned to it a third time, and kept possession of it till 940, when it submitted to William the Conqueror, whose natural son, William de Peverel, built a strong castle on a deep precipice on the west side of the town, which was rebuilt by king Edward IV. and king Richard III. made considerable additions to it. Camden observes, that it was never taken by storm: it was once besieged in vain by Henry of Anjou, at which time the garrison burnt down all the buildings about it. In the barons war in 1175, it was taken through surprize by Robert Count de Ferrers, who stripped the townsmen of all they had, and gave it to his soldiers. King James I. granted it to Francis earl of Rutland, who pulled down many of the good buildings, of which the iron and other materials were sold; yet at the beginning of the civil wars, king Charles I. thought it the fittest place to set up his standard. Shortly after, it became a garrison for the parliament; and though at the end of the war orders were given to pull the castle down, yet it was not quite demolished. After the Restoration, the duke of Buckingham (George Villiers) sold it to William Cavendish, then marquis, afterwards duke of Newcastle, who in 1674 erected a most stately fabric in the place of part of it. From him it came to the Pelham family, and some years ago it was improved and adorned at a great expence by the late duke of Newcastle, who has made it one of the best seats in England, and in a sporting country, which is a second Newmarket for races and all other diversions, there being a fine plain for a horse-course on the north side of the town.

It is a large, well-built place, with three neat churches, the chief of which, St. Mary's, is built like a collegiate church; a grand town-house erected on piazzas; a fine spacious market-place, with two crosses in it, and a gaol for the town and county. Besides the cheese which they receive in great quantities from Warwickshire and Staffordshire, by the river Trent, it brings them all their heavy goods from the Humber, and even from Hull.

This river being rendered very large by the addition of the Dove, the Derwent, the Erwash, and the Sour, after it has passed Burton in Staffordshire, has a stately stone bridge of nineteen arches over it; and as it sometimes overflows the neighbouring meadows, a causeway is erected, with arches at proper distances, for near a mile long, quite from the river to the town. The corporation is governed by a mayor, recorder, six aldermen, two coroners, two sheriffs, two chamberlains, and twenty-four common-councilmen, eighteen of the senior council, and six of the junior, a bill-bearer, and two pindars, one for the fields, the other for the meadows. The first is also the town woodward, and attends the forest courts, for this town is within the jurisdiction of the forest. Here is an uncertain number of persons called the Clothing, and above twelve hundred other common burgessees. Glass and earthen wares are made here; but its chief

manufacture is weaving of frame-flockings, besides glass and earthen ware.

This town has the honour of giving title of earl, as well as Winchelsea, to the noble family of Finch. It has an alms-house, built about 1640, by Henry Hanley, Esq; and endowed with one hundred pounds a year, for twelve poor people. The rock it stands on was anciently called the Dolorous Hill, or Golgotha, because of the great slaughter of the ancient Britons there by king Humber, a piratical monarch of the north.

The name of the town is derived from the Saxon word *Snottingham*, i. e. *Caves*; which the ancients dug under steep rocks towards the Lind for places of retreat. Some of them are cut out with great art into convenient apartments, with chimnies, windows, &c. many of which lie under the castle. One of them is noted for the history of Christ's Passion, cut out by David II. king of Scots, when prisoner here; and there is a winding stair-case to the bottom, leading to a place called Mortimer's Hole, in which Roger Mortimer, earl of March, is said to have absconded, when he was taken by order of Edward III. and afterwards hanged for betraying his country to the Scots for money, and for other ambitious villainous designs; and, as some say, in particular for debauching the queen mother. The rock on which the town stands, being so soft as to yield easily to the pick-ax and spade, affords excellent cellaridge, with two or three vaults, one under another; and steps are hewn out of it, to the number, in some places, of eighty in depth, which are great conveniencies for storing their malt liquors, whereof the inhabitants make a vast advantage, by sending them to most parts of England; for which purpose all the low-lands hereabouts are sowed with barley. The best malt is made here of any town in this part of England, and sent by land-carriage to Derby, through all the Peak as far as Manchester, and to other towns in Lancashire, Cheshire, and even into Yorkshire. There is one curiosity here very much taken notice of by travellers, viz. a house built on the side of a hill, where one enters at the garret, and ascends to the cellar, which is at the top of the house. Marshal Tallard, who was taken prisoner by the English forces under the duke of Marlborough, at the battle of Hockstet, was confined to this beautiful town and country, if such a charming spot might be called a confinement, for seven years. As the castle has oftener been the residence of our monarch than any place so far from London, so the town has more gentlemen's houses than any other of its bigness in Britain. In the duke of Newcastle's park there is a ledge of perpendicular rocks hewn into a church, houses, chambers, dove-houses, &c. The altar of the church is natural rock, and there appears to have been a steeple and pillars; and between this and the castle there is a hermitage of the like workmanship. The assizes, sessions, and other assemblies for the public business of the county, are held at that called King's Hall, near St. Mary's church-yard, which is not in the county of the town; and the sessions and courts for the corporation are kept in the town-hall. Dr. Thornton says, that the scavenger of this town is not only to see that the streets be kept clean, but upon extraordinary occasions, he has the honour of attending the mayor's wife. The corporation has very good estates, some for general, others for particular uses; as for the maintenance of their free-school, and their costly bridges over the Trent, called Heathbret Bridges. There are in all four bridges, but the fairest, which is built of stone, lies over the Lind, and is kept in repair at the charge of the town and county. There is a noted hospital here, called Plumtree's, from its founder John Plumtree, Esq; in the reign of Richard II. who built and endowed it for thirteen poor old widows; which falling to decay, was pulled down in 1654, and rebuilt by his descendant, Dr. Huntington Plumtree, a learned poet and physician. Here are three charity-schools (one for thirty-five boys, who are clothed as well as taught, and twenty girls) all maintained by subscriptions and collections.

In the reign of king John, there was an hospital in this town for a master or warden, two chaplains, and several sick poor persons, dedicated to St. John the Baptist,

and valued, upon the dissolution, at five pounds six shillings and eight-pence *per annum*.

Here was another hospital, as old as the reign of king Henry III. dedicated to St. Leonard.

In a chapel here, dedicated to St. Mary, in the rock under the castle, there was a cell of two monks, about the time of king Henry III. and about this time there seems also to have been a college of secular priests in the castle.

In a place called Broad Marsh, in the west part of this town, there was a house of Grey friars, said to have been founded by king Henry III. in the year 1250.

Here was a house of Carmelite, or White friars, of which Reginald, lord Grey of Wilton, and Sir John Shirley, knight, were reputed founders, about the year 1276.

Nottingham sends two members to parliament, has three weekly markets, on Wednesday, Friday, and Saturday; and four annual fairs, viz. Friday next after the thirteenth of January, the seventh of March, Thursday before Easter, and the second, third, and fourth of October, for horses, horned cattle, and the latter likewise for cheese.

At Wilford, near this town, a large pot was dug up not many years ago, with a great number of Roman copper coins in it.

On a hill in a field near Barton, south of Nottingham, there is a camp, supposed to have been British, with several ancient coins found in it.

At Linton, near Nottingham, in the beginning of the reign of king Henry I. William Peverell built a priory, dedicated to the Trinity, and subordinate to the abbey of Cluny in Normandy. It was made denison in the sixteenth of Richard II. and continued till the general dissolution, when the yearly revenues of it were valued at three hundred and twenty-nine pounds fifteen shillings and ten-pence. Here was an hospital dedicated to St. Anthony; and a house of Carmelite friars; but there are no particulars relating to them upon record.

North-west of this town, at a place called Beanvale, Nicholas de Cantilupe, in the seventeenth year of Edward III. founded a Carthusian monastery, dedicated to the Trinity. About the time of the dissolution, here was a prior, and near nineteen monks, who had possessions valued at one hundred and ninety-six pounds six shillings *per annum*.

South of this town, at Ruddington, William Babbington, Esq; in the time of king Henry VI. founded a college for a warden and four chaplains, which was endowed, upon the suppression, with revenues valued at thirty pounds *per annum*.

It has been a general observation, that a custom has prevailed among all nations, of stigmatizing the inhabitants of some particular spot, as remarkable for stupidity. Among the Asiatics, it was Phrygia; Abdera, among the Thracians; Boeotia, with the Greeks; and in England, it is Gotham, a village a little to the south of Nottingham. Of the Gothamites, ironically called, The Wise Men of Gotham, many ridiculous fables are traditionally told; particularly, that having often heard the cuckow, but never seen her, they hedged in a bush, whence her note seemed to proceed; that being confined within so small a compass, they might at length satisfy their curiosity. What gave rise to this story, is not now remembered; but there is, at a place called Court-hill, in this parish, a bush still known by the name of Cuckow Bush.

Clifton, in this neighbourhood, is a good seat, with pretty gardens, and a noble prospect; and in the church are many old brasses of the Clifton family.

As this house is situated on the side of an hill, so the gardens, which were above the house, rise in three terraces. The levelling of the ground on each of these, so as to make them into so many flat parterres, was attended with a great expence, and is a proof that the designer had very little taste; for, had the natural slope of the hill been preserved, the whole surface might have been viewed either from the top or bottom, which is now cut off by the terraces, one of which can only be seen at any one point of view.

On the top of the hill has been lately built a fine room, which is opposite to the castle at Nottingham, and commands a fine view of that, and the adjoining meadows, with the Trent serpentine through them, which renders the prospect very delightful. The plantations about this seat, which were made by the late Sir Gervas Clifton, deserve to be mentioned, as an example for other gentlemen; since, by a very inconsiderable expence, they may greatly beautify and increase the value of their estates.

Three miles from Nottingham is Wollaton-hall, the seat of lord Middleton, and the noblest building in this county.

The park, inclosed within a brick wall, is much finer than the great park adjoining to the castle of Nottingham, being much better planted with timber; whereas that at Nottingham was all cut down, and sequestred in the late wars.

There is a pretty summer-house, pannelled and cieled with looking-glass, which produces a pleasant effect. Underneath is a water-house, with grotesque work of shells, &c. The hall, at the first entrance into the house, is so high, that a man on horseback might exercise a pike in it.

The late Sir Thomas Parkyns, of Bunny-park, about six miles from Nottingham, so noted for his athletic exercises, particularly for the art of wrestling, of which he wrote a treatise, lies buried in Bunny chancel, under a marble monument, on which is represented the sturdy baronet in a wrestling posture, old Time with his scythe mowing him down, as if nothing else could subdue him. He had caused a stone coffin to be deposited for himself in the family vault for years before he died.

These verses are inscribed on his monument:

*Quem modo stravisti longo in certamine, Tempus,
Hic recubat Britonum clarus in orbe pugil.
Jam primum stratos præter te vicerat omnes:
De te etiam victor, quando resurget, erit.*

Which may be thus translated;

Here lies, O Time, the victor in thy hand,
The noblest boxer on the British strand:
His nervous arm each bold opposer quell'd,
In feats of strength by none but thee excell'd;
Till, springing up, at the last trumpet's call,
He conquers thee, who wilt have conquer'd all.

Tuxford stands in the post-road between London and York, at the distance of one hundred and thirty-one miles from London. Great part of it was burnt down on the eighth of September 1702. The situation is in a miry, clayish country, and the buildings are mean. Here, however, is a good free-school, built by Charles Reed, and endowed with fifty pounds a year, for a master and usher, twenty pounds a year for the boarding and teaching four boys, the sons of ministers, or decayed gentlemen; and twenty pounds more for teaching the poor boys of the town. The mayor and aldermen of Newark, and six other neighbouring gentlemen, are trustees for this charity.

In the thirty-first year of Edward III. John de Lungvillers gave an advowson to the priory of Newsted, on condition that they should find five chantry priests, three of which were to be settled in the town of Tuxford, and two in their own conventual church.

This town has a weekly market on Monday, and two annual fairs, viz. the twenty-fifth of September, for horses and pigs; and the twelfth of May, for cattle, sheep, and pigs, and likewise for millinery.

At Broadholm, on the borders of Lincolnshire, east of Tuxford, Agnes de Camvile, wife of Peter Gosfla, founded a priory, consisting of a prioress and nuns of the Premonstratensian order, about the end of the reign of king Stephen. It was dedicated to the Virgin Mary, and had possessions valued, upon the dissolution, at sixteen pounds five shillings and two-pence *per annum*.

East of Tuxford, at a place called Clifton, upon the Trent, a small college for a warden and three priests was begun by Sir Robert, and finished by his son, Sir Gervas

vase de Clifton, in the time of Edward IV. It was dedicated to the Trinity, and valued, upon the dissolution, at twenty-one pounds two shillings and six-pence *per annum*.

Redford-East took the name of Redford from a ford here over the river Idle, upon which it stands, and had the addition of *East* from its situation on the east bank of that river, and to distinguish it from another Redford, situated on the opposite bank, and therefore called West Redford.

It is situated at the distance of one hundred and thirty-five miles from London, among large plantations of hops, in which, and barley for malt, it carries on a great trade. King Edward I. granted this town in fee-farm to the burgesses, with power to chuse bailiffs for its government. King Henry III. granted it a fair for eight days, which has long been discontinued. They had other privileges from several of our kings, particularly of being exempted from tolls, and all foreign services, holding pleas for any sums, &c. King James I. incorporated it anew by the names of Bailiffs and Burgesses, and appointed it to be governed by two bailiffs, a steward, and twelve aldermen, to make a common council for the town. The two bailiffs, who are distinguished by senior and junior, are chosen on the first of August, and enter into their office on the twenty-ninth of September; the senior being chose from among the aldermen, and the junior from the freemen, who have been chamberlains. These bailiffs, and the steward, who is generally some person of quality, are to be justices of the peace and quorum within the borough. They have likewise two chamberlains, a town-clerk, and two sergeants at mace. Here is a free grammar-school, and a good town-hall, in which are held the sessions for the town, and sometimes for the county; and under the town-hall are shambles, the best in the county. This town is connected with West Redford by a good stone bridge over the Idle; but they are different parishes; and West Redford is remarkable only for an hospital, founded in 1666, by Dr. Dorrel, and governed by a master and ten brethren, inhabitants of the hospital, who have each a garden and orchard.

This town sends two members to parliament, has a weekly market on Saturday, and two annual fairs, viz. the twenty-third of March, and the second of October, for horses and beasts.

At Tilney, north of Redford, there was found not long ago a Druidical amulet, consisting of a transparent stone of an aqueous colour, with streaks of yellow: there were at the same time discovered a Roman stylus, and several cornelians and agates, with engravings and Roman inscriptions.

Little Borough, upon the river Trent, about seven miles east of Redford, which has been long famous for a ferry over the river into Lincolnshire, is thought to have been a Roman town, called Agelocum. Several Roman pavements and foundations of ancient buildings have been discovered on the east side of the town, part of which has been washed away by the river. Roman urns have been dug up here, one of which had the figure of a woman's head upon it.

In 1718, two altars were found in this place; and great numbers of Roman coins have from time to time been discovered here, with many remains of antiquity. On the east side of the river, over-against Littleborough, there are still to be seen the traces of an ancient camp.

Leaving Redford, we continued our journey to Blith, a small town on the borders of Yorkshire, one hundred and forty-four miles from London. It has a capacious church, and an hospital, called Blith Spittle, built by William de Cressy, lord of Holdesac, and dedicated to St. John the Evangelist. Here was formerly a convent of Benedictine monks, built by Roger de Builly, and Muriel his wife, about the year 1088. It was dedicated to the Virgin Mary, and was, in some respects, subordinate to the abbey of the Trinity, on St. Catharine's Mount, near Rouen in Normandy: it however continued till the general dissolution, when the yearly revenues of it amounted to one hundred and thirteen pounds eight shillings.

Here is a weekly market on Wednesday, and two annual fairs, viz. Holy Thursday, for horses and black cattle; and the sixth of October, for sheep and hogs.

At Mattersey, a village in the neighbourhood of Blith, there was a priory of Gilbertine canons, founded by Roger, the son of Ranulph de Marefay, about the year 1192, and dedicated to St. Hellen. At the general suppression of religious houses, its annual revenues amounted to fifty-five pounds two shillings and five-pence.

Workfop, the next town we visited, is situated at the head of a small river called the Ryton, one hundred and thirty-three miles from London. Here was formerly a priory of Black canons, founded by William de Luvetot, in the reign of Henry I. and dedicated to St. Mary and St. Cuthbert: it continued till the dissolution of religious houses, when its annual revenues amounted to two hundred and thirty-nine pounds fifteen shillings and five-pence.

Workfop has a weekly market on Wednesday, remarkable for great quantities of liquorice and malt; and three annual fairs, viz. the twentieth of March, the twenty-first of June, and the third of October, for cattle, horses, and pedlars ware.

In the neighbourhood of this town is Workfop Manor, a seat belonging to his grace the duke of Norfolk, and long considered as one of the finest in England, containing above five hundred rooms; but in October 1761, it was burnt to the ground, together with a fine library of books, a curious collection of pictures, and other valuable furniture: the loss was computed at one hundred thousand pounds.

At Welbeck, about a mile and a half south of Workfop, there was an abbey for Premonstratensian canons, founded in the year 1153, by Thomas le Flemangh, and dedicated to St. James: it was the chief abbey of this order in England; and its annual revenues, at the dissolution, amounted to two hundred and forty-nine pounds six shillings and three-pence.

At Wallingwells, north of Workfop, Ralph de Capreocuria built and endowed a small Benedictine nunnery, in the reign of king Stephen: it was dedicated to the Virgin Mary, and valued, on the dissolution, at fifty-eight pounds nine shillings and ten-pence *per annum*.

Leaving the town of Workfop, we followed the Nottingham road to Mansfield, anciently a royal demesne, and was formerly honoured with the presence of our kings, for the pleasure of hunting in Sherwood Forest. King Henry III. granted the town a market, together with the privilege of houbote and haybote out of his forest of Sherwood. It is a large, well-built town, and has a good charity-school for thirty-six boys. By the ancient customs of this manor, the tenants, both men and women, were at liberty to marry: the heirs of estates were declared to be at full age as soon as they were born; and the lands were equally divided among the sons; and, in failure of male issue, among the daughters.

Here is a weekly market on Thursday, well stocked with corn, malt, and cattle; and two annual fairs, viz. the twenty-ninth of June, for black cattle and hogs; and the second Thursday in October, for horses and cheese.

At Rufford, north-east of Mansfield, Gilbert, earl of Lincoln, founded an abbey of Cistercian monks about the year 1148: it was dedicated to the Virgin Mary, and, upon the dissolution, valued at one hundred and seventy-six pounds eleven shillings and six-pence *per annum*.

At Felley, a village to the south of Mansfield, there was a convent of Black canons, founded about the year 1156, by Ralph Brito, and his son, Reginald de Annesley. It was dedicated to the Virgin Mary, and continued till the dissolution, when it was inhabited by six religious; and the annual revenues were valued at forty pounds nineteen shillings and a penny.

At another village, called Newsted, situated to the south of Mansfield, there was a priory of Black canons, built about the year 1170, and dedicated to the Virgin Mary.

Mary. At the dissolution, its annual revenues amounted to one hundred and sixty-seven pounds sixteen shillings and eleven-pence.

Bingham, the next town we visited, is situated to the southward of the Trent, one hundred and eight miles from London. It is but a small town, but has a charity-school, and a parsonage of great value, in the gift of the earl of Chesterfield, who is lord of the manor. Here was formerly a college, dedicated to St. Mary, the annual revenues of which were valued, on the dissolution, at forty pounds eleven shillings.

Bingham has a weekly market on Thursday, and three annual fairs, viz. the twentieth and twenty-first of February, for draught horses, the first Tuesday in May, for hunters, black cattle, sheep, and hogs; and the eighth of November, for colts and hogs.

At East Bridgeford, north of Bingham, on the Fosse-way, there are still the remains of a Roman station, and where a great variety of Roman coins and other antiquities have been found.

At Sheltord, about two miles north-west of Bingham, there was a priory of Augustine monks, founded by Ralph Hanselyn, in the reign of Henry II. It was dedicated to the Virgin Mary; and not long before the suppression, was inhabited by twelve canons, who were endowed with yearly revenues amounting to one hundred and fifty-one pounds fourteen shillings and a penny.

At Sibthorp, a village north-east of Bingham, there is a church dedicated to St. Peter; and in this church a chapel dedicated to St. Mary, where a chauntry of several priests was founded by Geoffrey le Scroop in the

reign of Edward II. and in the succeeding reign, this chauntry was raised to a considerable collegiate body, consisting of a warden, and eight or nine chaplains, with three clerks, and other officers, by Thomas le Sibthorp, rector of Beckingham, in Lincolnshire. This collegiate body continued till the dissolution, when their annual revenues were valued at thirty-one pounds one shillings and two-pence.

CURIOUS PLANTS found in Nottinghamshire.

Purple creeping Mountain Pink; *Caryophyllata repens rubra*, *J. B.* found plentifully by the way-side of a sandy hill, in the road leading from Linton to Nottingham.

Common English Liquorice; *Glycyrrhiza vulgaris*, *Ger.* This vegetable is planted and cultivated for sale, near the town of Worktop.

White wild-Catchfly; *Lychnis sylvestris alba nona Clusii*, *Ger.* found on the walls of Nottingham Castle, and in the adjacent grounds.

Hoary Mullein with small flowers; *Verbascum pulverulentum flore luteo parvo*, *J. B.* found about Wollaton-hall.

MEMBERS of PARLIAMENT for the County of Nottingham.

This county sends eight members to parliament; two knights of the shire for the county; and two burgesses for each of the boroughs of Nottingham, East-Redford, and Newark.

THE END OF THE FIRST VOLUME.

ENGLAND DISPLAYED.

B E I N G

A New, Complete, and Accurate Survey and Description

O F T H E

KINGDOM of ENGLAND,

A N D

PRINCIPALITY of WALES.

C O N T A I N I N G,

I. A full and ample Account of whatever is remarkable in every COUNTY, CITY, *Town, Village, Hamlet,* and Parish in ENGLAND and WALES.

II. Description of the various Manufactures and other useful Arts established in different Parts of this Kingdom.

III. Accounts of the Nature and Produce of the various Kinds of Land, with a complete History of the modern Improvements in Agriculture, Gardening, &c.

IV. An historical Account of all the Forts, Castles, Roman Military Ways, Docks, Harbours, Creeks, Bays, &c. with the Particulars of their ancient and present State.

V. A full Description of all the natural and artificial Curiosities of this Kingdom; such as Rocks, Mines, Caverns, Lakes, Grottos, Fossils, Minerals, Abbeys, Cathedrals, Churches, Palaces, and the Seats of the Nobility and Gentry.

VI. A faithful Narrative of all Improvements made in the Roads, Rivers, and Canals of this Kingdom, for the Convenience of Travelling, and the Benefit of Inland Navigation.

The whole forming such an accurate and comprehensive Account of this Country, as has never yet been published, and will be equally entertaining and instructive.

By a SOCIETY of GENTLEMEN:

Each of whom has undertaken that Part for which his Study and Inclination has more immediately qualified him.

The Particulars respecting ENGLAND, revised, corrected, and improved,

By P. RUSSELL, Esq;

And those relating to WALES,

By Mr. OWEN PRICE.

Historia vero testis temporum, lux veritatis, vita memoriae, magistra vitae.

Cic. de Orat. Lib. ii. § 9.

V O L. II.

By the King's Authority.

L O N D O N:

And sold by S. BLADON, No. 28, T. EVANS, No. 54, and J. COOTE, No. 16, in Pater-noster Row;
W. DOMVILLE, and F. BLYTHE, at the Royal Exchange.

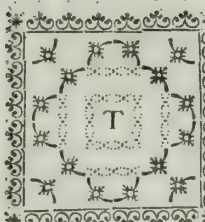

MDCCLXIX.

England Displayed.

L E I C E S T E R S H I R E.

 HIS county is bounded by parts of Derbyshire and Nottinghamshire on the north; by Northamptonshire on the south; by parts of Staffordshire and Warwickshire on the west; and by Lincolnshire and Rutlandshire on the east. It extends, from west to east, about thirty miles; from north to south, about twenty-five miles; and is about ninety-six in circumference; and the town of Leicester, which is nearly in the centre of the county, stands at the distance of ninety-eight miles north-north-west of London.

R I V E R S.

The principal rivers of this county are, the Welland, the Sour, and the Anker. The Welland, rising near Harborough, a market town of this county, runs north-east; and dividing Leicestershire from Northamptonshire, enters Rutlandshire; and continuing its course through that county, runs cross the south part of Lincolnshire, into a bay of the German ocean called the Wash.

The Sour, or Soure, anciently called the Leire, rises about half way between Lutterworth and Hinckley, two market-towns of this county; and running north-east by Leicester, receives the Eye, another river of this county; and then directing its course north-north-west, it falls into the Trent a few miles north of Ashby de la Zouch, another market-town of Leicestershire.

The Anker rises near the source of the Sour; and running north-west, and dividing Leicestershire from Warwickshire, falls into the Avon, a river of Warwickshire.

Among all these rivers, there is not one that is made use of for carrying goods from one part of the county to another; though the Sour might be easily made navigable to Leicester to the Trent, and by that means open a communication with the other parts of the kingdom.

AIR; SOIL, and NATURAL PRODUCTIONS.

This being an inland county, without standing waters, though washed by several streams, the air is sweet and healthy, and the face of the country agreeable.

The soil is in general very good, and yields plenty of corn, grass, and beans; the beans are excellent, even to a proverb. The north-east part bordering upon Lincolnshire, which is more hilly and gravelly, is however not remarkable for its fertility; but the abundance of pit-coal in this part of the county, and the vast number of cattle, particularly sheep, whose wool is much esteemed, that feed upon the mountains, make ample amends for other deficiencies. The south-west part bordering upon Warwickshire, though it abounds with corn and pasture, is but indifferently provided with fuel. Leicestershire in general is well provided with corn, fish, fowl, and cattle, particularly horses for the collar.

Remarks on the HUSBANDRY of Leicestershire.

The soil of Leicestershire is different in different parts of the county. They plough three or four times for wheat, sow two bushels, and gain upon an average three quarters and a half. For barley they stir the ground twice or thrice, sow two bushels and a half, and gain, upon a medium, four quarters. For oats they plough but once, sow the same quantity as of barley, and generally gain six quarters and a half. They give but one earthen for beans, sow two bushels, generally dibble them by a line in rows twenty inches asunder: they hand-hoe them twice, and sometimes hand-weed them. The price for dibbling is four shillings an acre; the hoeing, four shillings each time; and the weeding, three shillings. The produce, on an average, is five quarters. They also plough but once for pease, often dibble them in the same manner as beans, setting a bushel and three quarters on an acre; hoe them twice, and weed them when necessary: the mean crop is four quarters. They sow rye on one ploughing, on a wheat stubble; not for a crop of the grain, but to mow green for cattle, and also to feed sheep in the spring. For turnips they plough from twice to five times, according to the nature of the soil, and the condition it is in; hoe them once or twice, and reckon the average value at two pounds ten shillings an acre: they generally use them for feeding their sheep. Clover they sow with barley or oats; mow it once, and get, on an average, two tuns of hay from each acre. Tares they sow for mowing green: they feed horses in
the

the stable with them; they also tether bullocks on them, which fattens them greatly.

Their course of crops are, 1. fallow; 2. wheat; 3. beans; 4. barley. Or, 1. turnips; 2. barley; 3. wheat; 4. beans; 5. barley; 6. clover. Or, 1. turnips; 2. barley; 3. clover; 4. wheat; 5. turnips; 6. wheat. Land lets from ten to twenty shillings per acre.

MANUFACTURES.

The principal business of this county is agriculture: it has but one manufactory, which is of stockings, and of which they receive considerable advantage.

MARKET TOWNS.

The market-towns are, Ashby de la Zouch, Billesdon, Bosworth, Hallaton, Harborough, Hinckley, Leicester, Loughborough, Lutterworth, Milton-Mowbray, Mount-forel, and Waltham on the Would.

On leaving Nottinghamshire, we crossed the Sour, and visited Loughborough, situated near the banks of that river, one hundred and seven miles from London. It is the second town in the county, and, in the time of the Saxons, was a royal village. It was formerly a much more considerable town than at present, having been greatly diminished by fires: it is still, however, an agreeable, good town, surrounded with rich meadow-ground. Here is a large church, and a free-school, besides a charity-school for eighty boys, and another for twenty girls.

Here is a weekly market on Thursday, and five annual fairs, viz. the twenty-eighth of March, and the twenty-fifth of April, for horses and cows, and the latter for sheep likewise; Holy Thursday, the twelfth of August, and the thirteenth of November, for horses and cows; and the latter for foals also.

At a place near this town, called Garanton, Robert Boffin, earl of Leicester, in the year 1133, built an abbey for Cistercian monks, dedicated to the Virgin Mary; in which, at the time of the dissolution, were fourteen monks, whose possessions were rated at one hundred and eighty-six pounds fifteen shillings and two-pence *per annum*.

At Grace de Dieu, about half way between Loughborough and Ashby de la Zouch, Roefia de Verdon, about the twenty-fourth of Henry III. founded a priory for nuns of the order of St. Austin, dedicated to St. Mary and the Trinity. Here were fifteen nuns at the time of the dissolution, with a yearly revenue of eighty-three pounds sixteen shillings and six-pence.

In the neighbourhood of Loughborough, is the seat of the earl of Huntingdon, finely adorned with wood and water. The house is old, and not so well situated as could be wished; but the park is esteemed one of the most beautiful in this county; and the seat is from it called Dennington Park.

From hence we passed on to Ashby de la Zouch, so called from the Zouches, its ancient lords, to distinguish it from another Ashby in this county, called also Ashby-Folville. It is pleasantly situated between Preston-Park and the Great-Park, on the borders of Derbyshire, at the distance of ninety-six miles from London. Here is a large handsome church, and a neat stone cross in the principal street. Here is likewise a free-school, the master of which has a handsome stipend. This place is remarkable for the excellency of its ale.

Here are the ruins of a palace, formerly belonging to the earls of Huntingdon, built by lord Hastings, who was beheaded by king Richard III. Here king James I. with his whole court, quartered with the earl of Huntingdon for several days; during which time, dinner was always served up by thirty poor knights, with gold chains and velvet gowns. This palace being a garrison for the king in the time of Charles I. was demolished by the parliament forces in 1648.

This town has a weekly market on Saturday, and six annual fairs, viz. Easter-Tuesday and Whitfun-Tuesday, for horses, cows, and sheep; St. Bartholomew, the twenty-fourth of August, St. Simon and Jude, and the twenty-eighth of October, for horses and cows.

At Collerton, or Colecoverton, a small town on the east of Ashby de la Zouch, there is a mineral spring, called Griffy-dam; and some coal mines, which, in the reign of king Henry VIII. burnt so many years together, till the sulphureous and bituminous matter which fed the flame was exhausted.

At Breedon on the Hill, upon the borders of Derbyshire, north-east of Ashby de la Zouch, there is a church, which is dedicated to St. Mary and St. Harduff, and was given by Robert Ferrers, earl of Nottingham, about the year 1144, to the monastery of St. Oswald at Nosthell, or Nostel-hall, near Wakefield, a market-town of Yorkshire; upon which here was a cell of Black canons, subordinate to that monastery, consisting of a prior and five religious. Its revenues, upon the dissolution, were rated at twenty-four pounds ten shillings and four-pence *per annum*.

At Charley and Ulvescros; two solitary places in the forest of Churnwood, south-east of Ashby de la Zouch, there were settled in each three Friars Heremites, by Robert Blanchmains, earl of Leicester, in the time of Henry II. but by the consent of the earl of Winchester, patron of both houses, in the time of king Edward II. they were united at Ulvescros, where continued a priory of regular canons, of the order of St. Austin, dedicated to the Virgin Mary, till the time of the dissolution, when there were eight religious in it, who were endowed with eighty-three pounds eleven shillings and six-pence *per annum*.

North-east of Ashby de la Zouch, at a place called Langley, William Pantulph, and Burgea his wife, in the beginning of the reign of king Henry II. or before, built a priory for Benedictine nuns, dedicated to the Virgin Mary, the yearly revenues of which were rated, on the suppression, at twenty-nine pounds seven shillings and four-pence.

There was a house, with lands, belonging to the Knights Hospitalers, at Heather, south-east of Ashby de la Zouch, the gift of Ralph de Grisely, before the first year of king John. It had a distinct preceptory for some time, and afterwards was accounted part of the preceptory of Dalby. The valuation of this preceptory, about the time of the dissolution, is said to have amounted to thirty-nine pounds one shilling and five-pence *per annum*.

A roll of the fifth of Henry III. quoted by Mr. Burton, says, that at Castle Dunnington, north of Ashby de la Zouch, upon the borders of Derbyshire; "there was an hospital erected by J. sometime constable of Chester, of which Humphrey the chaplain was master; and that there ought to be in it thirteen brothers and sisters, but that they had no regular habit, nor observed any rule, but received a portion of the tithes of the parish." The founder appears to have been John Lacy, constable of Chester in the time of Henry II. It was dedicated to St. John the Evangelist, and valued at three pounds thirteen shillings and four-pence *per annum*.

Bosworth, the next town we visited, is pleasantly situated in a wholesome air and fruitful soil, both for corn and grass. It stands at the distance of one hundred and four miles from London, and has a good free-school, founded by Sir Wolston Dixey, but nothing else worthy of notice.

Here is a weekly market on Wednesday, and three annual fairs, viz. the twenty-seventh of April, the twenty-fourth of June, and the fifth of October.

Mr. Burton, who wrote a natural history of this county, remarks, that upon the manor of Lindley, near Bosworth and Hinckley, no adder, snake, or lizard, was ever seen, though they are common enough in the neighbourhood.

Bosworth-field, known likewise by the name of Redmore-plain, three miles from Bosworth, was rendered famous by the memorable battle which was fought on that spot between king Richard III. in which he lost his life, and Henry earl of Richmond, afterwards K. Henry VII. which put a period to the long and bloody contention between the Red Rose and the White, or the two royal houses of York and Lancaster; which, if we may credit report,

report, had cost the lives of eleven princes, twenty-three earls and dukes, three thousand noblemen, knights, and gentlemen, and two hundred thousand of the common people. On the spot where the battle was fought, are frequently dug up pieces of armour, whole weapons, and other warlike accoutrements; particularly arrow-heads of very large dimensions. Here is likewise a little mount, from which, it is said, Henry earl of Richmond made a speech to his army before the engagement.

South of Bosworth, at Hingham, near the Watling-street-way, in the year 1607, there were found, by turning up a great stone, two hundred and fifty pieces of silver, of king Henry III. of the value of three-pence each; two gold rings, one with a ruby, and the other with an agate; and a third of silver, in which was a flat ruddy stone, engraven with Arabic characters, which have been thus explained: "By Mahomet, magnify him; turn from him each hand that may hurt him." Among this treasure were also found several silver hooks, with links of a large gold chain. These things were found by the side of the stone; and underneath it two or three pieces of silver coin, of Trajan the Roman emperor. The stone itself is thought to have been the basis of some altar dedicated to Trajan, according to the custom of the Romans, who, under the foundations of their buildings and monuments, laid some of the coins of the reigning emperor. The English money, rings, and other matters deposited by the side of the stone, are thought to have been the treasure of some Jew, which he buried here when that people were banished by king Edward I.

Leaving Bosworth, we entered Hinckley, situated on the borders of Warwickshire. The assizes were formerly held here, but now it is a place of very little note. It stands at the distance of ninety-one miles from London. At the east end of the church are to be seen trenches and ramparts cast up to a considerable height, which the inhabitants call Hugh's Castle, supposing them to be the vestiges of a castle built by Hugh Bigot, the first earl of Norfolk. Here was formerly an alien priory of two Benedictine monks, belonging to Lyra, in Normandy, to which it was given by Robert Blanchmains, earl of Leicester, before the year 1173.

This town has a weekly market on Monday, and an annual fair, held on the twenty-sixth of August, for horses, cows, sheep, and cheese.

A college for a warden and priests, said by Mr. Burton to have been built at Sapcote, south-east of Hinckley, by Sir Simon Basset, in the time of king Henry III. seems to be only the chantry of three priests, founded in the chapel of St. Mary's parish-church here, by Ralph Basset.

In passing from Hinckley to Lutterworth, we visited High-crofs, which seems to be situated as it were in the centre of the highest ground in that part of England; for rivers run from hence in almost every direction. Here are several Roman antiquities: its ancient appellation was Benonis. The late earl of Denbeigh (whose seat is near this road), and the gentlemen in the neighbourhood, erected here a cross of an handsome design, but of mouldering stone, through the deceit of the architect. It consists of four Doric columns, regarding the four roads, with a gilded globe and cross at top, upon a sun-dial. On two sides, between the four Tuscan pillars, which compose a sort of pedestal, are these inscriptions:

Vicinarum provinciarum, Veruicensis scilicet & Leicestrensis, ornamenta, proceres patriiique, auspiciis illustrissimi Basilii Comitis de Denbeigh, hanc columnam statuendam curauerunt, in gratiam pariter & perpetuam memoriam Jani tandem a Serenissima Anna clausi, A. D. M.DCC.XII.

Thus translated:

The noblemen and gentry, ornaments of the neighbouring counties of Warwick and Leicester, at the instances of the right honourable Basil earl of Denbeigh, have caused this pillar to be erected, in grateful as well as perpetual remembrance of PEACE at last restored by her Majesty Queen Anne, in the year of our Lord M.DCC.XII.

The inscription on the other side runs thus:

Si veterum Romanorum vestigia quæras, hic cernas, viator. Hic enim celeberrimæ illorum viæ militares sese mutuo secantes ad extremos usque Britannicæ limites procurrunt: hic stativa sua habuerunt Vennones; & ad primum adhinc lapidem castra sua ad Stratam, & ad Fossam tumulum, Claudius quidam cohortis præfectus habuisse videtur.

Which may be thus rendered:

If, traveller, you search for the footsteps of the ancient Romans, here you may behold them. For here their most celebrated ways, crossing one another, extend to the utmost boundaries of Britain: here the Vennones kept their quarters; and, at the distance of one mile from hence, Claudius, a certain commander of a cohort, seems to have had a camp toward the Street, and toward the Fosse a tomb.

The Watling-street, measuring from Chester through London and Dover, makes a strait line with Rome. Which seems to have been so contrived by the great founders, that in travelling upon it, they might have the satisfaction of reflecting; that they were going upon the line which led to the capital of the empire.

This road is not passable but just in the middle of summer, after the coal-carriages have beaten the way; for as the ground is a stiff clay, so, after rain, the water stands as in a dish, and horses sink into it up to their bellies.

Having viewed every thing remarkable at High-crofs, we passed on to Lutterworth, a small market-town situated on the borders of Warwickshire, eighty-four miles from London. John Wickliff, the morning-star of the Reformation, was many years rector of this parish. The church, which is a very handsome structure, and has a lofty spire, was beautified about twenty years ago with new pavements, pews, &c. but the pulpit was continued, in memory of that learned and pious preacher, who died and was buried here in peace; though, about forty years after he had paid the debt of nature, his bones were taken out of his grave, and burnt, by order of the council of Constance.

Here was formerly an hospital, built and endowed by Raife de Verdon, and Nicholas her son, in the reign of king John, for a prior, or master, and brethren: it was dedicated to St. John the Baptist, and valued, upon the dissolution, at twenty-six pounds nine shillings and five-pence *per annum*.

This town has a weekly market on Thursday, and two annual fairs, viz. the second of April, for horses, cows, and sheep; and the sixteenth of September, for all sorts of cattle and cheese.

Near the town of Lutterworth is one of the most remarkable curiosities in this county: it is a petrifying spring, the water of which is exceeding cold, and so strongly impregnated with petrifying particles, that in a very little time, it converts wood, and several other substances, into stone.

Cleybrook, a village north-west of Lutterworth, is supposed by the inhabitants to have been formerly a part of Cleycester, at the distance of one mile from that place, which, in the time of the Romans, was a flourishing city. Large foundations, consisting of square stones, have been discovered here, and Roman bricks and coins have been often dug up. It is observed, that the earth, so far as the city extended, is of a darker colour than that beyond it, and so rich, that it has been used by the husbandmen in the neighbourhood for manure.

These particulars, with the distance of Cleycester from Banaventa, now Weedon, a village near Towcester, a market-town of Northamptonshire, and the name of a bridge upon the Avon, near Lutterworth, called Bensford, have inclined Mr. Camden to believe, that this was the settlement of the Bennones or Venones, which Antoninus places next after Banaventa; and he is confirmed in that opinion by an assertion of Antoninus, that the Roman way called Watling-street parted there into two branches, which it is found to do here; for a branch of it, now called the Fosse-way, leads to Ratæ,

supposed to be the town of Leicester; and to Vernometum, supposed to be Burrowhill, near Billesdon, while the other passes into Wales.

At Swinsford, south-east of Lutterworth, there is a church, which was given to the Hospitalers, before the first of John, by Robert Rivell; and here was settled a small preceptory of that order.

Harborough, the next town through which we passed, is a great thoroughfare in the road from London to Derby. It was anciently called Haverburg, and is distant from London eighty-four miles. Here is a good free-school, and a handsome chapel of ease to Great Bowden, its parish. This place, in the time of Camden, was famous for its great beast-fair, and it is still remarkable for producing the best horses and colts in the county. It is observed of this town, that there are no lands belonging to it, which gave rise to a proverb among the inhabitants, "That a goose will eat up all the grass in Harborough;" and children are threatened with being "thrown into Harborough field."

Here is a weekly market on Tuesday, and two annual fairs, viz. the twenty-ninth of April, for horses, cows, sheep, and hogs; and the nineteenth of October, for cattle, cheese, pewter, brass, hats, cloaths, and the last day for leather: this fair continues ten days.

Leicester, the next place we visited, is situated on the river Soare, ninety-eight miles from London. It was a considerable town in the time of the Romans, and is supposed to be the *Ratae*, or *Ragæ Coritanorum* of Antoninus, because it stands on the military road called the Fosse-way, as well as from the Roman coins and other antiquities that have been discovered here at several times, and its exact correspondence with the distances in the Itinerary. In the time of the Saxon heptarchy, it was the see of a bishop, which being removed to Dorchester, in Oxfordshire, after the succession of eight prelates, when it fell to decay, till the year 914, when it was repaired and fortified with new walls by the noble lady Edelfleda; and then, says Matthew Paris, it became a most wealthy town, and is said to have had thirty-two parish-churches. It was well peopled and frequented at the coming in of the Normans; but in the reign of Henry II. the same historian says, that for joining in rebellion against him with Robert earl of Leicester, it was besieged and taken, the castle dismantled, and the walls quite thrown down. The citizens were some of them fined, others banished, and some fled for sanctuary to St. Albans and Edmund's Bury. It remained thus in ruins till the reign of Edward III. when, being favoured by Henry Plantagenet the earl, and his son Henry duke of Lancaster, it began to recover; for the duke founded and endowed a collegiate church and hospital, without the South-gate, in which he placed a dean and twelve canons, as many vicars and other ministers; a hundred poor sick men and women, and ten able women to assist them; but at the dissolution the church was demolished.

The first law for burning heretics, and by which the lord Cobham and others suffered death, was made in a parliament held in this town in the reign of Henry V. declaring the favourers of Wickliff's doctrine (who had been rector of Lutterworth, in this county) heretics and traitors. In the civil wars, this town was besieged by king Charles I. and taken by storm on the thirty-first of May, 1645, when his army gave no quarter to the garrison, hanged some of the committee, and plundered the inhabitants. Sir Thomas Fairfax coming too late to relieve it, besieged it again, and forced the new garrison to surrender upon terms. Thus was this town harrassed by two sieges, one upon the back of another; but it has pretty well recovered, and the present state of it is thus:

It is the largest, best built, and most populous town in the shire.

It is a borough and corporation, governed by a mayor, recorder, a steward, bailiff, twenty-four aldermen, forty-eight common-councilmen, a solicitor, a town-clerk, two chamberlains, &c. and had its first charter from king John. Its market is well furnished with provisions, especially corn; the freemen are exempt from all toll in all the fairs and markets of England. There is an ex-

quisite piece of workmanship in the high-street, in form of our Saviour's cross. Here are six parishes, though but five churches; and the hospital, built by Henry Plantagenet, duke of Lancaster, continues in a tolerable condition, being supported by some revenues of the duchy of Lancaster, and it is capable of maintaining a hundred aged people decently. But the most stately edifice of this kind now is, the new bede-house or hospital, built in the reign of Henry VIII. and endowed by Sir William Wigiston, a merchant of the staple in this town, for twelve poor lazars, which has a chapel and a library for the use of the ministers and scholars belonging to the town; and there is another near the abbey for six widows.

Here is a charity-school for thirty boys and ten girls, all taught and cloathed at the expence of a private gentlewoman, the register, and the commissary.

The inhabitants have greatly improved the manufacture of stockings, vast quantities of which are wove by frames in this and many other neighbouring towns and villages, and in some years it has returned sixty thousand pounds.

It has had the honour of being an earldom, as long almost as any city or town in England; and upon the extinction of the noble family of the Sidneys, who were the last earls, now gives that title to Thomas Coke, lord Lovel, who was created earl of Leicester in May 1744.

Before the castle was dismantled, it was a prodigious building, it being the court of the great Henry duke of Lancaster, who added twenty-six acres of ground to it, which he inclosed with a strong wall of square stone eighteen feet high, and called it his *Norman opus*, now vulgarly Newark, where are the best houses in or near Leicester; and they still continue extra-parochial, as being under castle-guard, by an ancient grant from the crown. Its hall and kitchen still remain intire; the former of which is so lofty and spacious, that the courts of justice which are held here at the assizes, are at such a distance, as to give no disturbance to one another. One of the gateways of this palace has an arch of curious workmanship, and in the tower over it is kept the magazine for the county militia.

In the meadows, near the town, was anciently a famous monastery, from its situation, called St. Mary de Pratis, or Prez, since turned into a dwelling-house and garden, where the only thing that is worth seeing is a pleasant terrace-walk, supported by an embattled wall, with lunets hanging over the river, and shaded with trees. The adjacent meadow is the place for the horse-races. It is said that king Richard III. who was killed in the battle at Bosworth, was interred in St. Margaret's church, near which was formerly the see of its bishop, as appears by a ground there still called the Bishop's Barn-Close, and a royalty called to this day the Bishop's Fee. This church is a noble and elegant structure, and famous for a ring of six of the most tuneable bells in the kingdom. There is a remarkable epitaph in St. Martin's, another of its churches, which shews, that Mr. Heyric, who died in 1589, in the seventy-sixth year of his age, lived in one house with his wife fifty-two years, and in all that time buried neither man, woman, nor child, though they were sometimes twenty in family. And the widow, who lived to be ninety-seven, saw before her death (in December 1711) of her children, grandchildren, and great-grandchildren, to the number of one hundred and forty-three.

Here is a church dedicated to All Saints, near which, about half a century ago, a curious piece of Roman antiquity was discovered, supposed by some to be the fable of Diana and Acteon, as related by Ovid, wrought in little stones, some white, and others of a chestnut colour.

Here have been frequently found medals and coins, both of silver and copper, in great abundance; particularly of the emperors Vespasian, Domitian, Trajan, and Antoninus.

Leicester sends two members to parliament, has two weekly markets, on Wednesday and Saturday; and four annual fairs, viz. the twelfth of May, and the fifth of July, for horses, cows, and sheep; the tenth of October, for cattle, but chiefly for cheese; and the eighth of December, a small fair for cattle.

Near this town was discovered the remains of what is supposed to have been a hot bath in the time of the Romans. It is constructed of small stones, each about an inch long, half an inch broad, and half an inch thick: the roof is arched, and the whole perforated by several small earthen pipes, through which the water is supposed to have been conveyed: the stones are finely cemented with a thin mortar; and the whole work, which was considerably below the surface of the ground, is said to have been about six yards long, and four broad: the height we are not told, either to the springing of the arch, or the top of it.

Near St. Nicholas's church, in this town, there is an old wall, called the Jewry Wall, composed of rag-stones and Roman bricks. There are several niches in it of an oval figure, which probably were the receptacles of Roman urns, though the inhabitants have an extravagant notion, that in these niches the ancient Britons offered up their children to idols.

From hence we passed on to Mountforel, properly called Mount-Sour-Hill, from the river Sour on the west side of it, and a hill in the middle of the town. It is distant from London one hundred and four miles; and situated partly in the parish of Burrow, and partly in that of Rodely. Here were formerly two chapels, but at present there is but one: there is a bridge over the Sour, and the remains of a castle, which originally belonged to the earls of Leicester; but in the year 1217, was besieged and demolished by the inhabitants of these parts, who had suffered much by the excursions of the garrison.

This town has a weekly market on Monday, and an annual fair, called Holiday-fair, for toys.

King Henry III. gave the manor and church of Rodely, near Mountforel, to the Knights Templars, who settled a commandry of their order here, which, with other lands, came afterwards to the Knights Hospitalers, who enjoyed the same till the general dissolution, about which time this preceptory was valued at eighty-seven pounds thirteen shillings and four-pence *per annum*.

Waltham on the Would is situated near a hilly, heathy, barren tract, called Wrekin in the Would, at the distance of ninety-one miles from London. It is a mean, poor town, but has a charity-school, a weekly market on Thursday, and an annual fair on the nineteenth of September, for horses, horned cattle, swine, and goods of all sorts.

At Croxton-Kyriel, north-east of Waltham on the Would, Porcarius de Linus, in the year 1162, built an abbey of Premonstratensian canons, dedicated to St. John the Evangelist, which, at the suppression, was endowed with three hundred and eighty-five pounds and ten-pence *per annum*.

Continuing our journey, we passed on to Milton-Mowbray, so called from its ancient lords, the noble family of Mowbray. It is a large, well-built town, situated in a fertile soil, at the distance of one hundred and four miles from London, and is almost encompassed with the river Eye, over which it has two fine bridges. The church here is remarkably large and handsome, built in the form of a cross; and in the opinion of Dr. Gibson, was formerly collegiate. Here is a free-school, and this place is noted for frequent horse-races. There was an estate here, which, with the advowson of the rectory, was given to Lewis, a considerable borough-town in Suffex; here was a small priory or hospital, a cell to that monastery.

Here is a weekly market on Tuesday, the most considerable for cattle of any in this part of England; and three weekly markets, viz. the first Monday and Tuesday after the seventeenth of January; on the Monday a shew of horses, and Tuesday, horses and horned cattle; Whitfun-Tuesday, for horses, horned cattle, and sheep; and the twenty-first of August, for swine, and other cattle.

In the neighbourhood of this town is Burton-Lazars, so called from its ancient hospital for lazars, or lepers; so rich, that all the inferior lazar-houses in England were in some sort subject to its master, as he himself was to the master of the lazars of Jerusalem. It is said to have been built in the time of the Normans, by a general col-

lection throughout England, but chiefly by the assistance of Roger de Mowbray, who, in the time of king Stephen, gave two carucates of land, an house and a mill. Leland says, it was founded by lord Mowbray, for a master, and eight brethren of the Augustine order, in the reign of Henry I. at which time, says Camden, the leprosy, by some called Elephantiasis, ran by infection all over England, and was believed to have come originally from Egypt. This hospital was dedicated to the Virgin Mary and St. Lazarus; and its possessions, upon the dissolution, were valued at two hundred and sixty-five pounds ten shillings and two-pence *per annum*.

At Dalby, in the same neighbourhood, there was a preceptory of the Knights Hospitalers, thought to have been founded by Robert Bossa, earl of Leicester, in the former part of the reign of king Henry II. and valued, upon the dissolution, at the yearly revenues of ninety-one pounds two shillings and eight-pence.

Roger Beller, in the ninth year of Edward II. begun a small chauntry in the chapel of St. Peter, near his manor-house at Kirkby Bellers, on the north-west side of Milton-Mowbray, which some few years after he increased into a sort of college for a warden and twelve secular priests. It was made conventual for a prior and regular canons of the order of St. Augustine, in the year 1359; and so it continued till the dissolution, when here were ten religious, who were endowed with one hundred and forty-two pounds ten shillings and three-pence *per annum*.

Billeston, the next place we passed through, is a little, obscure town, in which there is nothing worthy of note, at the distance of seventy-two miles from London.

Here is a weekly market on Friday, and two annual fairs, viz. the twenty-third of April, and the twenty-fifth of July, for pewter, brass, and toys.

At Tilton on the Hill, east of this town, there was an hospital, annexed by Sir William Burdet, to Burton Lazars, in the time of king Henry II.

Hallaton is situated in the midst of a rich soil, notwithstanding which, it is remarkable for its poverty. It stands at the distance of eighty miles from London, and has a charity-school.

This town has a weekly market on Thursday, and three annual fairs, viz. Holy Thursday, the twenty-third of May, and the thirtieth of June, for horses, horned cattle, pewter, brass, and cloaths.

At Loddington, north-east of Hallaton, Richard Basset, and Maud Ridell, his wife, in the latter part of the reign of king Henry I. founded a priory of canons of the order of St. Augustine, dedicated to John the Baptist. At the suppression, its yearly revenues were valued at three hundred and ninety-nine pounds three shillings and three-pence.

At Oweston, about half a mile between this town and Milton-Mowbray, Sir Robert Grimbald, in the time of king Henry II. built and endowed a small abbey for canons regular of the order of St. Austin, which he dedicated to St. Andrew, and in which, about the time of the dissolution, there were twelve canons, whose yearly revenues were valued at one hundred and sixty-one pounds fourteen shillings and two-pence.

South-east of this town, at a place called Bradley, a small priory of the order of St. Austin was founded by Robert Bundy, or Burneby, in the time of king John. It had but two canons at the time of the suppression, whose lands were rated at twenty pounds fifteen shillings and seven-pence *per annum*.

Sir Anketine de Martival, in the second year of Edward I. founded a college or chauntry, in the chapel of the manor-house of Nofely, north-west of Hallaton, and dedicated it to the Ascension of our Lord, and the Assumption of the Virgin Mary. This college was farther endowed by Rojer, the son of the above-mentioned knight, archdeacon of Leicester, and afterwards bishop of Salisbury, about the thirty-fourth of Edward I. It consisted of a warden and certain brethren, according to Mr. Burton; but according to other writers, of three priests, who had distinct prebends, three clerks, and four choristers. Upon some occasion, it was valued, in the twenty-fourth of Henry VI. at six pounds thirteen shillings

shillings and four-pence *per annum*. But the estate must have been worth more before the dissolution, because, in the year 1553, above seventeen pounds were yearly paid to the members of this college then alive, and not otherwise preferred.

There is a church at Stokerston, not far from Hallaton, near which John Boyvile, lord of the manor, in the fifth of Edward IV. built an alms-house, dedicated to the Virgin Mary, for a chaplain and three poor persons, and settled lands on them to the value of ten pounds *per annum*.

CURIOUS PLANTS found in Leicestershire.

The narrow and serrated leaved Sea-orache; *Atriplex angustifolia maritima dentata*, *Mor.* found on the banks of the river Soure.

Periwinkle; *Clematis Daphnoides minor*, *J. B.* found in the hedges and bushes near Bilsden.

Millet Cyperus-grass; *Cyperus graminus*, *J. B.* found by the side of the river Wreke.

English Cow Sea-heath; *Erica maritima Anglica supina*, *Park*; found on sandy banks near the river Sence.

Narrow leaved Wild-creffe; *Thlaspi angustifolium*, *J. B.* found in many places of this county.

Spear-mint, with a rugged leaf and strong scent; *Mentha angustifolia spicata glabra, folio rugosiore, odore graviore*; found in several places near the river Soure.

Water-mint with a grosser spike; *Mentastri aquatici genus hirsutum, spica latiore*, *J. B.* found also by the side of the river Soure.

Horse-mint, or round leaved Wild-mint; *Mentastrum, seu mentha sylvestris rotundiore folio*, *C. B.* found near Lutterworth.

The greatest Marsh-tree Sow-thistle; *Sonchus arborifescens alter*, *Ger.* found by the side of the river Soure.

Square-eared crested Grass; *Gramen aristatum quadratum*; found among corn, near Leicester.

Mountain Oat-grass, with a single spike and reflected awns; *Gramen avenaceum montanum, spica simplici, arifis recurvis*; found in the fields near Milton-Mowbray.

Common Thorow-wax; *Perfoliata vulgaris*, *Ger.* found among corn near Mountforel.

Wood-forrel; *Luzula vulgaris*, *J. B.* found in the woods.

White-flowered Bastard Hellebore; *Elleborine minor, flore albo*, *Park*; found near Loughborough.

Penny-royal; *Palegium vulgare*, *J. B.* found on the borders of springs, and other watery places in this county.

Calamint; *Calamintha vulgaris, flore magno*, *J. B.* found in several parts by the road-side, in dry places, under hedges, especially near Leicester.

Hoarhound; *Marrubium album vulgare*, *C. B.* found near Kegworth.

Hedge-Mustard *Erysimum vulgare*, *J. B.* found in plenty by the way-sides, near Bilsden.

Purging Flax; *Linum pratense floribus exiguis*, *C. B.* found on the upland pastures, near Mountforel.

Pimpernel; *Anagalis mas*, *Ger.* found frequently in corn-fields near Milton-Mowbray.

Ground-pine; *Chamæpitys odora lutea*, *Ger.* found on the hills near Mountforel.

MEMBERS of PARLIAMENT for Leicestershire.

This county sends four members to parliament; two knights of the shire for the county, and two burgessees for the borough of Leicester,

R U T L A N D S H I R E.

THIS county is bounded on the north and north-east by Lincolnshire; on the south and south-east by Northamptonshire; and on the west, north-west, and south-west, by Leicestershire. It is the least county in England, measuring from north to south only fifteen miles; from east to west, but ten; and is no more than forty in circumference. Okeham, the county town, is distant ninety-six miles north-north-west from London.

Rutlandshire, in the time of the Romans, was part of the district inhabited by the Coritani, of whom mention will be made in the account of Derbyshire; and under the Saxons it was part of the kingdom of Mercia.

R I V E R S.

This county is watered by two rivers, the Welland and the Gwash. The Welland, which runs on the south and south-east, has been described in the account of Lincolnshire.

The Gwash, or Wash, as it is commonly called, rises near Okeham, in a district of the county surrounded by hills, and called the Vale of Catmose, a name supposed to have been derived from *Caet Maes*, which, in the ancient British language, signifies a woody territory. This river runs eastward; and dividing the county nearly into two equal parts, falls into the Welland near Stamford in Lincolnshire.

These rivers are of great use to the county, but neither of them is navigable.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is esteemed as good as that of any in England; and being quite free from the fogs and mists which arise from ditches, meers, and large rivers, is rendered remarkably healthy. The soil is very fruitful, both in corn and pasture, which feeds great numbers of cattle, particularly sheep, whose wool is observed to be more red than in any other county, from the redness peculiar to the soil. The Vale of Catmose more especially is noted for the richness of its land, being equal to any in the kingdom. Here is abundance of wood for firing; and the rivers, whose waters are remarkably good, yield great plenty of fish.

Remarks on the HUSBANDRY of Rutlandshire.

The soil is various in various parts of the county. In general, it is light and dry, and with good tillage and manure, bears large crops of corn, turnips, &c. The rent is from eight to twelve shillings an acre, but the grass and pasture land considerably dearer. Their course of crops is, 1. fallow; 2. wheat; 3. barley; 4. clover and trefoil. Or, 1. turnips; 2. barley; 3. grasses, two years; 4. fallow; 5. wheat; 6. barley. They plough three times for wheat, sow three bushels, and reckon two quarters a middling crop. For barley they plough twice, sow four bushels, and reckon the return two quarters and a half at a medium. They very seldom give above one earthen for oats; sow four bushels and a half, or five bushels, and reckon three quarters the mean produce.

MARKET TOWNS.

The market-towns are, Okeham and Uppingham.

Okeham is supposed to be so called from some oak trees which grow in its neighbourhood. It is tolerably well built, and pleasantly situated in the Vale of Catmose, at the distance of ninety-six miles from London. Here is an ancient castle, almost in ruins, which was

built by Walkelin de Ferrariis, in the reign of William the Conqueror. In this castle is a hall, called the Shire-hall, where the assizes are held, and the public business of the county transacted. Here is a church, dedicated to All Saints, which is a fine structure, with a lofty spire. A free-school and an hospital were built here, and endowed in the reign of king James I. by Mr. Robert Johnson, parson of North Luffenham, about four or five miles south-east of this town: and a charity-school was opened in 1711, for teaching and cloathing twelve boys and twelve girls. Here is likewise an hospital, very much decayed, which was founded and endowed in the reign of king Richard II. about the year 1398, by Mr. William Dalby, merchant of Exton, about three miles from this place.

The only subject of curiosity for which this county is remarkable, is one Jeffrey Hudson, a man born in this town in the year 1619, who, when he was seven years of age, was but fifteen inches high; though his parents, who had several other children of a common size, were tall and lusty. At that age, he was taken into the family of the duke of Buckingham; and to divert the court, who, on a progress through this county, were entertained at the duke's seat at Burley on the Hill, he was served up to table in a cold pye. Between the seventh and thirtieth years of his age, he did not advance many inches in stature; but soon after he was turned of thirty, he grew to the height of three feet nine inches, which he never exceeded. He was given to Henrietta Maria, consort of king Charles I. probably at the time when he was served up in the pye; and that princess kept him as her dwarf, and is said to have often employed him on messages abroad. When the civil war broke out, he was made a captain of horse in the king's service; but going with the queen into France, he killed the brother of lord Crofts in a duel, on horseback, for which he was expelled that court. In consequence of this disgrace, he went to sea, was taken by a Turkish pirate; and after having remained a slave in Barbary several years, was redeemed, and came to England, where he lived many years upon pensions from the duke of Buckingham, and other noblemen; but being a Papist, he was, in 1678, upon suspicion of being concerned in Oates's plot, taken up, and committed prisoner to the Gatehouse in Westminster, where he lay a considerable time, but was at last discharged, and died in 1682, at the age of sixty-three.

There is an ancient custom still preserved at Okeham, which requires, that every peer of the realm, the first time he comes within the precincts of this lordship, shall forfeit a shoe from the horse he rides on, or from one of his coach-horses, if he be in a carriage, to the lord of the castle and manor; if he refuse, the bailiff of the manor has power to stop his coach, and take one off from one or other of the horses, unless he agrees to redeem it with money; in which case, a shoe is made according to his directions, and ornamented, in proportion to the sum given, by way of fine, and nailed to the castle hall door. Some shoes are of curious workmanship, and stamped with the names of the donors: some are made very large, and some gilt. Over the judge's seat, where he sits at the assizes, there is one of very curious workmanship; it is five feet and a half in length, and of a proportionable breadth.

The ancient lords of the place were of the family of Ferrers, the arms of which are three horse-shoes; and the name Ferrers is derived from the Latin *Ferrarius*, which signifies A Worker in Iron, or a Smith, and such are Farriers, the shoe-makers for horses.

As the ancient lords, therefore, must be supposed to have had a right of exacting some forfeiture upon enter-

ing their manor, as an acknowledgment of their right, the name and arms will account for making the forfeiture in this place a horse-shoe.

Okeham has a weekly market on Saturday, and three annual fairs, viz. the fifteenth of March, for horned cattle and sheep; the sixth of May, for cattle, and a shew of stone-horses; and the eleventh of September, for horses and swine.

Market Overton, a village three miles distant from this town, is supposed to have been the Roman station, called by Antoninus Margedunum. That this was a Roman station, seems pretty certain, from the number of Roman coins that have at different times been dug up here; and that it was a Margedunum, is conjectured from the exact correspondence of the distance between this place and other Roman stations, as laid down in the Itinerary, as well as from the etymology of the name; *Margedunum* being supposed to have been derived from the ancient word *Marga*, which signifies *Limestone*, a sort of marle or stony substance, with which this place so abounds, that the inhabitants manufacture their ground with it.

At Ketton, a village south-east of Okeham, there is a rent collected yearly from the inhabitants, by the sheriff of the county, of two shillings, *pro ocreis reginæ*, that is, *for the queen's boots*. The occasion of this tax does not appear.

There was formerly an alien priory of Benedictine monks at Edyweston, south-east of this town, cell to the abbey of St. George at Bangueruil, in Normandy, to which it was given by William de Tankervill, chamberlain to Henry I. About the fourteenth year of Richard II. it was conveyed to the Carthusians of Coventry, a city of Warwickshire.

South of this town, at a place called Brook, there was a small priory of regular canons, of the order of St. Augustine, founded by Hugh Ferrers, in the time of king Richard I. It was subordinate to the monastery of Kenelworth, near the city of Coventry, in Warwickshire, and dedicated to the Virgin Mary. Its revenues, on the suppression, were valued at forty pounds *per annum*.

At Manton, south-east of this town, there was a chauntry or college, founded about the twenty-fifth year of Edward III. Here also appears to have been an hospital; but no farther particulars relative to either house are known.

In the neighbourhood of Okeham is an elegant seat belonging to the earl of Exeter, called Burley on the Hill, overlooking the Vale of Catmos. It was erected by John lord Harrington, but was indebted for first improvements to George Villiers, duke of Buckingham, who made it one of the finest seats in England. There was a garrison in it in the time of the civil wars; but on the army's being at too great a distance to support it, as soon as the king's forces came, they quitted it, after setting fire to the house and furniture, which was remarkably rich. The stables, however, being at some distance from the house, escaped, and remain to this day one of the noblest buildings of the kind in England. It lay, many years after the restoration, in ruins, till the late earl of Nottingham rebuilt it at a great expence, and made it more beautiful and convenient than ever. It has a park, walled in, of five or six miles in compass, with fine woods in it, rich pasture, and store of game. The gardens are fine, the paintings good, and the library superior to most, and inferior to none. These, and many other advantages, give it a place among the principal seats in England, and renders it in particular the grace and ornament of this county.

Leaving Okeham, we passed on to Uppingham, the second town in the county, and the only remaining one which has a market. It is situated on a rising ground, from whence it derives its name, at the distance of eighty-

seven miles from London; and is a neat, compact, well-built, modern town, with an hospital and a free-school, both founded in 1584, by Mr. Johnson, the founder of the free-school of Okeham. The standard of the weights and measures for the county, was, by a statute of Henry VII. appointed to be kept in this town. Its church is a rectory, of which the bishop of London is patron. The Brand here is noted for horse-races.

Here is a well frequented weekly market on Wednesday, for cattle and corn; and two annual fairs, viz. the seventh of March, and the seventh of July, for horses, horned cattle, and coarse linen cloth.

CURIOUS PLANTS found in Rutlandshire.

Bird's-foot; *Ornitopodium majus*, Ger. found in the fields near Okeham.

Tender ivy-leaved Bell-flower; *Campanula palustre cymbulariæ foliis*, Ger. found frequently on watery banks of the river Gwash.

Maiden Pinks; *Caryophyllus minor repens nostras*, Ray. These flowers, which the seedsmen call Matted Pinks, grow in plenty on sandy hills near Alesthorp.

Water-mint of a spicy smell; *Mentha arvensis verticillato folio rotundiore odore aromatico*, Ray. This is a very scarce plant, but found at the foot of the hills near Preston.

Blue sweet smelling Toad-flax; *Linaria odorata monspassulana*, J. B. found in the hedges near Preston.

Roman Nettle; *Urtica pilulifera semine magno lini*, seu *urtica Romana*, Ray; found in shady ditches near Uppingham.

Self-heal; *Prunella vulgaris*, Park; found in pasture grounds near Langham.

Wild Thyme; *Thymus sylvestris*, Ger. found in great plenty on most of the downs and upland pastures of this county.

Squinancy-wort; *Synanchica Lugduniensis*, Ger. found in several parts of the forest of Liffield.

Wild-rue; *Ruta montana*, Ger. found in some parts near Lynden.

The later autumnal Gentian, with leaves like centaury; *Gentianella fugax autumnalis elatior centaurii minoris foliis*, Park; a scarce plant, found near Normanton.

Pellitory of the wall; *Parietaria*, Ger. found on old walls in several parts of the county.

Osmund Royal; *Tilix floribus insignis*, J. B. found in the boggy parts near the river Gwash.

Male Satyrion; *Cynoforchis morio mas*, Ger. found in the meadows near Uppingham.

Female Satyrion; *Cynoforchis morio femina*, Ger. found in the same fields with the former.

Male Satyrion Royal; *Orchis palmata non maculata*, Ray; found in moist meadows near Empingham.

Butterfly, or German Satyrion; *Orchis hermaphraditica*, Ger. found in the woods near Polton.

Marsh Marygold; *Caltha palustris, flore pleno*, C. B. found in watery places near Pilton.

Greek Valerian, or Jacob's Ladder; *Valeriana Græca*, Ger. found in the woods near Flitteris.

Self-heal; *Prunella vulgaris*, Park; found in the pasture-grounds near Manton.

Buckthorn; *Rhamnus cathartica*, J. B. found frequently in hedges in several parts of the county.

Wild-rue; *Ruta montana*, Ger. found on the downs near Alesthorp.

Wild Valerian; *Valeriana sylvestris*, Ger. found in the hilly parts, and also in several watery places in this county; but that found in the higher situations is esteemed the best.

MEMBERS of PARLIAMENT for Rutlandshire.

This county sends only two members to parliament, who are knights of the shire.

WARWICKSHIRE.

THIS county is bounded by Staffordshire and Derbyshire on the north; by Gloucestershire and Oxfordshire on the south; by Worcestershire on the west; and by Leicestershire and Northamptonshire on the east. Its figure inclines to an oval, extending in length, from north to south, thirty-three miles; from east to west, twenty-six; and is one hundred and twenty-two miles in circumference; in which are five hundreds, one city, thirteen market-towns, and one hundred and fifty-eight parishes. The town of Warwick, which is situated nearly in the centre, is eighty-eight miles north-west of London. It lies in the province of Canterbury, and partly in the diocese of Litchfield and Coventry, and partly in that of Worcester.

This is one of the five counties which, in the time of the Romans, were inhabited by the Cornavii, of whom mention will be made in the account of Cheshire; and under the Saxon heptarchy, it was part of the kingdom of Mercia.

Of the ancient military ways of the Romans, three pass through this county; Watling-street, Ikenild-street, and the Fosse-way; and upon each of these, which are still visible in many places, there have been discovered several considerable remains of Roman antiquity.

Watling-street parts this county from Leicestershire; Ikenild-street passes through it, along the borders of Worcestershire, into Staffordshire; and the Fosse-way crossing Watling-street out of Leicestershire, at a place now called High-Cross, and formerly the Benones of the Romans, as has been mentioned in the account of Leicestershire, runs south-west through Warwickshire, into Gloucestershire.

R I V E R S.

The most considerable rivers of Warwickshire are the Avon and the Tame. The Avon, which is navigable by barges to Warwick, and which runs through this county from north-east to south-west, and divides it into two unequal parts, will be described in the account of Gloucestershire; and the Tame will be noticed among the rivers of Staffordshire.

Other less considerable streams in this county are, the Anker, the Arrow, the Alne, the Leam, the Swift, and the Stour.

Remarks on the INLAND NAVIGATION of Warwickshire.

The only navigable river in this county is the Avon, the navigation of which is extended to Warwick: but a navigable canal is now making, which is to extend from the city of Coventry, by Nuneaton, Atherstone, and Tamworth, to Fradley Heath near Litchfield, and there to communicate with the Staffordshire navigation, which is to connect the Trent and the Mersey. Another canal is intended to be cut from Coventry, by Warwick, to Stratford, there to communicate with the navigation of the river Avon. A navigable canal is also now making from the Coventry canal, already mentioned, to the city of Oxford; particulars of which have been already given in our account of Oxfordshire. These canals, when finished, will be of the greatest importance to this county, as they open a communication with many parts of the kingdom.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of Warwickshire is mild, pleasant, and healthy; the soil rich and fruitful. It is divided by the Avon into two parts, the Feldon and the Woodland: the name *Feldon* signifies a *champain country*: the division lies

south of the Avon, and produces excellent corn and pasture. The Woodland, which is the largest of the two divisions, lies north of that river, and affords plenty of timber; but the iron-works in the adjacent countries have in so great a degree consumed the wood, that they have long since made way for the plough; and at present, by the assistance of marle, and other good contrivances, all this part yields abundance of corn and pasture. The chief commodities of this county are, corn, malt, wool, wood, iron, coal, and cheefe: the latter of these articles is equal, if not superior to that of any county in England.

Remarks on the HUSBANDRY of Warwickshire.

The soil of this county is various, consisting of light loams, sand, and cold, stiff, spongy clays. The average rent is about twenty shillings an acre: there is some arable that lets at thirty shillings, and some meadows so high as three pounds. Farms from fifty to two hundred pounds a year.

The courses,

1. Turnips
2. Barley
3. Pease
4. Wheat
5. Barley
6. Clover two or three years, and then some add
7. Wheat on one earth.

Also,

1. Fallow
2. Wheat
3. Oats
4. Clover and rye-grass.

They plough four times for wheat, sow two bushels on cold lands before Michaelmas; and gain, upon an average, twenty-eight bushels. For barley they stir three times, sow three bushels and a half in March or April, and gain, upon an average, thirty-five; sixty have been gotten. They stir but once for oats, sow four bushels before barley seed-time; the mean crop thirty-six. They likewise give but one ploughing for pease, sow three bushels and a half, or four; never hoe them, and get thirty in return. For rye they plough twice, sow two bushels and a half; the crop twenty.

For turnips they give three ploughings; do not hoe them; the average value thirty shillings per acre; use them chiefly for sheep. Clover they sow with barley or oats; mow the first crop, of which they get three ton of hay per acre, and graze it afterwards. Many farmers mix trefoile with it.

Some few tares sown, for feeding horses with, green. Very few potatoes.

Lime is the principal manure; they lay one waggon-load per acre; formerly they had as much as they could carry for nine or ten shillings, but now only sixty bushels for thirteen or fourteen shillings: they use it for turnips, and find it answers best on light land; some few farmers mix earth with it.

Draining is pretty well understood here, and that chiefly owing to the excellent example of lord Littleton, who ordered many drains to be dug of various depths, and three or four inches wide at bottom. The method used in filling them on grass land (where they were chiefly made) was to take the first spit of turfs, and wedge them into the drains, and then throw in the moulds, without stone, wood, or any thing; and the drains thus made have stood exceedingly well, and never yet failed. It is an excellent contrivance, and highly worthy of imitation, and especially in countries where stones and wood are scarce.

The common farmers also drain their morassy lands in a very effectual manner, by cuts a yard wide at top, sixteen inches at bottom, and four feet deep; they fill up eighteen inches deep, with logs of wood and faggots, and then the moulds. The cost of these drains is one shilling, the perch of eight yards. The improvement is extremely great; they make land of five shillings an acre worth thirty shillings at once.

They stack their hay at home; and some few have got into the way of chopping their stubbles; convinced not only of the importance of littering cattle well, but also of raising large quantities of manure.

Good grass land lets in general from two to three pounds an acre, and is used mostly for dairying; but the country, however, is chiefly in tillage. An acre will summer-feed a cow, or keep seven sheep. They universally water their grass fields whenever it can be done, which they find the greatest improvement of all. Their breed of cattle is the long horns. The product of a cow they reckon six pounds, or six pounds ten shillings. They used to be let at three pounds rent, but now it is much higher. The average quantity of milk, four or five gallons. To three cows they generally keep two pigs; and seven they reckon the proper number for a dairy-maid. Barley straw is the winter food till Candlemas, then some hay, of the latter about a ton to a cow. They are kept all winter in the farm-yard, the summer joint is two shillings a week. The calves suck in general four or five weeks.

The flocks of sheep rise from forty, to four, five hundred, and a thousand, on commons. The profit in inclosures, they reckon doubling their money, or about ten or twelve shillings a head, and on the commons about two shillings, or two shillings and six-pence. There is no folding. The average fleece about one pound and a half, or two pounds, sells at one shilling a pound.

In their tillage, they reckon seven horses necessary for a hundred acres of arable land. They use three at length in a plough with a driver, and do an acre a day.

PRICE OF LABOUR.

In harvest and hay-time, one shilling, and board.

In winter, one shilling, and beer.

Reaping, five shillings and six-pence, to six shillings per acre.

Mowing corn, one shilling and six-pence.

————— grass, two shillings, to two shillings and six-pence.

Threshing wheat, three-pence halfpenny per bushel.

————— barley, two-pence.

————— oats, three half-pence.

————— pease, two-pence.

MANUFACTURES.

The city of Coventry, in this county, has a manufacture of tammies and ribbands; and Birmingham, a market-town, is famous for the manufacture of small iron and steel ware.

CITY, and MARKET TOWNS.

The city is Coventry; and the market-towns are, Atherston, Aulcester, Birmingham, Poitford, Colehill, Henly, Kineton, Nuneaton, Rugby, Stratford, Sutton Cosfield, and Warwick.

We entered this county from Oxfordshire, at Mollington, following the road to Kineton; and passed through Warmington, where was an alien priory of Benedictine monks, subject to the abbey of St. Peter and St. Paul de Pratellis, in Normandy, to which the church and manor of this place was given, by Henry Newburgh, earl of Warwick, in the time of king Henry I. Near this place, at the end of the hills, is a large square military intrenchment, of about twelve acres, where a brazen sword and battle-ax were dug up some years ago.

Kineton is by some supposed to be called Kine-Town, from its market for black cattle: others are of opinion,

that it was called King's-Town, from having been in possession of the kings of England, particularly of Edward the Confessor, and William the Conqueror. King John kept his court here; under which, at the foot of the hill, there is a spring, which to this day is known by the name of King John's Well. This town has nothing in it deserving particular notice. Its distance from London is eighty-nine miles.

Here is a weekly market on Tuesday, and two annual fairs, viz. St. Paul, the twenty-fifth of January, for seed and corn; St. Luke, the eighteenth of October, for cattle and cheese.

At Shuckborough, north-east of this town, the astorites or star-stones are frequently found.

In the neighbourhood of this town, to the south of it, is Edgehill, famous for the first battle between the forces of king Charles I. and the parliament, in the year 1642. It is called the Vale of the Red Horse, from the rude figure of a horse cut out upon a red soil on the side of a hill, and supposed, like the white horse in Berkshire, to have been a Saxon monument. The trenches, which form this figure are trimmed and kept clean by a freeholder in the neighbourhood, who enjoys his lands by that service.

At Miton, not far from Kineton, there appears to have been a collegiate church or chapel, with several secular canons, before the end of the reign of king Henry I.

North-west of Kineton, at a place called Thelesford, William de Cherlecote, in the time of king John, founded a church and hospital for Maturines, or friars of the order of the Trinity, towards the redemption of captives. This foundation was dedicated to St. John the Baptist; and St. Radegund; and valued, upon the suppression, at twenty-three pounds ten shillings *per annum*.

Southam is a small, well-accommodated town, in the road from Banbury to Coventry. It stands at the distance of seventy-eight miles from London, and belonged formerly to the monks of Coventry. Here is a charity-school, but nothing else worthy notice.

This town has a weekly market on Monday, and an annual fair on the tenth of July, for horses, cows, and sheep.

Leaving this place, we passed on to Rugby, situated upon the river Avon, at the distance of seventy-six miles from London. Here was formerly a small castle, supposed to have been built in the reign of king Stephen; and the inhabitants have a tradition, that it was Sir Henry Rokeby's castle, who gave some lands here to the abbey of Pipwell. Here is a grammar-school, with four alms-houses, founded in the reign of queen Elizabeth, by Laurence Sheriff, a haberdasher of London. Here is likewise a charity-school for teaching and cloathing thirty poor children; and an alms-house, for maintaining six poor widows, built and endowed by Richard Elborow of this place, in 1707. But this town is chiefly remarkable for the number of butchers it contains.

Here is a weekly market on Saturday, and three annual fairs, viz. the fifteenth of May, for cattle; the twenty-first of August, and the twenty-second of November, for horses, cows, sheep, and cheese.

King's Newham, near this town, is remarkable for three medicinal springs, the water of which is strongly impregnated with a burn of a milky colour, and esteemed an excellent remedy for the stone. It is observed of this water, that being drank with salt, it is aperient; but with sugar, refringent.

North-west of this town, at a place called Comb, Richard de Camvilla, in the year 1150, founded a Cistercian abbey, dedicated to the Virgin Mary; in which were thirteen or fourteen religious, who, upon the general dissolution, were endowed with three hundred and eleven pounds fifteen shillings and a penny *per annum*.

At Bretford upon Avon, likewise north-west of this town, Jeffery de Clinton, in the reign of king Henry II. founded a small cell of two or three Black nuns; but it was soon afterwards annexed to Keneleworth priory. Here was also a kind of hospital, or chapel, dedicated to St. Edmund.

Coventry,

Coventry, the next place we visited, is pleasantly situated in a fertile country, ninety miles from London. A famous convent of nuns flourished here in the time of the Saxons, under the government of St. Osburgh, which was destroyed by the Danes in 1016. But about the year 1043, Leofric, earl of Mercia, and his lady, Godiva, founded a noble abbey here for an abbot and twenty-four Benedictine monks, dedicated to the Virgin Mary, St. Peter, and St. Osburgh. Upon the vacancy of an abbot, in 1095, Robert de Limesy, bishop of Litchfield and Chester, obtained not only the custody of the abbey, but also leave to remove his episcopal see hither; and in consequence of that removal, this monastery became a cathedral priory; and the prior and convent formed one of the chapters to the bishop of this diocese, many of whom stiled themselves bishops of Coventry only. After a few years, however, the see returned back to Litchfield, but on condition that the bishops should take their title from both places; and accordingly they have ever since been stiled the Bishops of Litchfield and Coventry. The above Leofric seems to have been the first lord of this city; and his lady its greatest benefactor: for there is a tradition, which is firmly believed at Coventry, that her husband being offended with the citizens, laid heavy taxes on them, which his devout lady Godiva, who was the daughter of Thorold, a sheriff of Lincolnshire, earnestly importuned him to remit; but could not prevail, unless she would consent to ride naked through the most frequented parts of the city. The earl was so fully convinced of her modesty, that he was sure this was a condition she would never comply with; but in compassion to the city, she undertook it; and as the tradition says, after having ordered all the doors and windows to be shut, upon pain of death, she rode through the streets on horseback naked, with her loose hair about her, which was so long, that it covered all her body but her legs. We read in Camden, that nobody looked at her; yet it is said elsewhere, that a poor taylor would be peeping, and was struck blind. Be this as it will, this figure is put up in the same window to this day. The pictures, both of the earl and his countess, were set up in the windows of Trinity-church, with this inscription:

I Lurick, for the love of thee;
Do set Coventry toll-free.

The inhabitants, in commemoration of this their great patroness, have a yearly procession through the town, with the figure of a naked woman on horseback. We read, that the earl and his wife were buried in the two porches of the monastery.

After Leofric's death, which was in the thirteenth of Edward the Confessor, this city came into the possession of the earls of Chester, who granted the same privileges to Coventry that Lincoln enjoyed, and gave a great part of the city to the monks. It was afterwards annexed to the earldom of Cornwall, and began to flourish very much: it had divers immunities and privileges from several kings, especially Edward III. who granted it a mayor, and two bailiffs; and Henry VI. who having laid several towns and villages to it, granted by his charter, that it "should be an intire county incorporate by itself in deed and name, and distinct from the county of Warwick;" and that the bailiffs of the said city should be sheriffs of the county of the city for ever; yet still to continue to officiate as bailiffs in the city; and should hold a monthly court within their liberties, like the sheriffs of other counties. Now it was that the citizens began to inclose it with walls. Edward IV. for its disloyalty, took the sword from the mayor, and seized the citizens liberties and franchises, which they redeemed with five hundred marks: but he was so well reconciled about four years after, that he kept St. George's feast here, and stood godfather to the mayor's child. King James I. granted it a charter, by which ten aldermen were to preside over ten wards of the city, who were to be justices of the peace within the city, and its county. After the restoration of Charles II. the walls and towers were demolished, and only the gates left standing, which are very noble and beautiful. The

Prince of Wales has a large park and domain here, but very ill kept, the park being used for horse-races.

Two remarkable parliaments were formerly held in this city, stigmatized in our history with very scandalous epithets; the one in the reign of Henry IV. called *Parliamentum Indolentium*, or the Unlearned Parliament, because the lawyers were excluded; the other in the reign of Henry VI. called *Parliamentum Diabolicum*, or the Devilish Parliament, from the attainders of the duke of York, and the earls of Salisbury, Warwick, and March, and their adherents, and the ruin thereby intended to so many great families.

In the reign of Henry VIII. a stately cross was erected in the middle of its spacious market-place, by a legacy of Sir William Hollis, lord mayor of London; and one of the ancestors of the late duke of Newcastle, which, for its workmanship and beauty, is inferior to few in England. It is sixty-six feet high, and adorned with the statues of most of the English kings, as big as the life. The city is large, populous, and rich; but the buildings, though many of them are grand enough, are generally old; and some of them, which are built of timber, project so forward, that in the narrow streets they almost touch at the top. The chief of its churches are St. Michael's and Trinity church, which, for their architecture, seem to rival each other; the former is large, and well lighted, but not handsome, its greatest beauty being its high spire, of excellent workmanship, and all of stone, which is about three hundred feet high, and, it is said, was more than twenty-two years in building.

Though here are three parish-churches only, there are four steeples; for at the south end of the town stands a tall spire by itself, which is the only remains of a church that belonged to its monastery of Grey friars. On the dissolution of the priory, the citizens contended a good while, that the church, viz. St. Michael's, might be made collegiate, and called a Cathedral, but it was reduced to a parish-church, as it is at this day. The Protestant dissenters are a considerable body in this city, there being almost as many meeting-houses here as churches. The town-house is worth seeing, the windows being of painted glass representing some of the old kings, earls, &c. who have been benefactors to the city. Besides its sheriffs and aldermen, here are a recorder, steward, coroner, two chamberlains, two wardens, and other officers.

It was formerly the only market-town of this country, at which time it was of greater resort than could be expected from its midland situation, and its chief manufacture then was cloth and caps, but now both those trades are much decayed. Their employment now is in the manufacture of tammies, and the weaving of the ordinary sort of ribbands, especially black. Here is a free-school, (with a good library) founded by John Hales, Esq; with the name of King Henry VIII's School, the master of which is always to be the minister of Bab-lack's church, which was made parochial by the title of St. John's, pursuant to act of parliament, anno 1734. Here are also a charity-school, and an hospital.

Here was an ancient college or hospital, consisting of a master or warden, and several brothers and sisters. It was founded in the beginning of the reign of Henry II. chiefly at the expence of Edmund, archdeacon of Coventry, dedicated to St. John the Baptist, and valued, upon the dissolution, at ninety-nine pounds thirteen shillings and six-pence a year.

On the west side of this city, at a place called Spone; there was an hospital for lepers, founded in the time of king Henry II. by Hugh Keveliske, earl of Chester: it was dedicated to St. Mary Magdalen.

In the south-west part of this city there was a house of Grey friars, before the year 1234, by Sir John Poultney, knight, lord mayor of London. It was valued, upon the dissolution, at seven pounds thirteen shillings and eight-pence *per annum*.

In 1385, king Richard II. founded here a monastery of Carthusian monks, dedicated to St. Anne, and valued, upon the dissolution, at one hundred and thirty-one pounds six shillings and four-pence *per annum*.

The city of Coventry sends two members to parliament, has a weekly market on Friday, and three annual fairs, viz. the second of May, for horses, cows, and sheep; Friday in Trinity-week, for flannels, linen, and woollen: at this fair the lady Godiva is represented on horseback: and the first of November, for linen, woollen, and horses.

At Brinklow, south-east of Coventry, near the Roman Fosse-way, there are still to be seen a Roman tumulus, and the remains of a fort, which is thought to have been built by the Romans.

At Chestover, east of Brinklow, and between the Fosse-way and Watling-street, several Roman urns have been found.

At Monks Kirby, east of Coventry, upon the Fosse-way, are the remains of a Roman station, consisting of the foundations of old walls, and Roman bricks; and here are three or four little hills, which appear to be sepulchral monuments of some military persons.

There was an alien priory at this place, of Benedictine monks, belonging to the abbey of St. Nicholas, at Angiers in France, founded by Gosfred de Wirchia, in 1077, and dedicated to St. Nicholas. It was annexed by king Richard II. to the priory of Carthusians, in Axholm, in Lincolnshire.

South-east of Coventry, at a place called Wolfston, there was a priory of Black monks, belonging to the abbey of St. Peter Super Divam, in Normandy, supposed to have been the gift of Roger de Montgomery, soon after the Conquest. In the reign of Richard II. this priory was sold by the abbey of St. Peter Super Divam to the prior and convent of Carthusians near Co-

ventry. South-east of this city, Robert de Pillar, in the time of king Henry I. founded a nunnery dedicated to the Virgin Mary. This house contained six prioresses, and three or four nuns, who had revenues, upon the dissolution, at twenty-two shillings and four-pence *per annum*.

At Hathell, west of this city, Roger de Mowbray, in the time of king Stephen, founded a commandry of Knights Templars.

At Stanley, a Cistercian abbey at Stanley, near Coventry, was removed hither from Redmore in Staffordshire, in the year 1154. It was dedicated to the Virgin Mary, and had about fourteen or fifteen hundred marks yearly revenues rated, on the suppression, at three hundred and fifty-one pounds and three-pence.

At Haswell, on the south-east side of this city, in the beginning of the reign of king Edward I. there was a cell subordinate to the Cistercian abbey of Stanley.

Leaving Coventry, we continued our journey to Nuneaton, which is said to have been originally called *Eaton*, a word which, in the ancient English language, signifies the *Water-Town*, and may have been applied to this place from its situation on the river Anker. The epithet *Nun* was afterwards prefixed to the name of *Eaton*, from a nunnery founded here by Robert Boslu, earl of Leicester, in the time of Henry II. of the order of Fontevraud: it was dedicated to the Virgin Mary. Nuneaton is a large, well built, good town, at the distance of one hundred miles from London. Here is a good free-school, founded by the inhabitants in the reign of Edward VI. who gave to it three closes of ground in the liberty of Coventry, to be held of the crown, as belonging to the manor of East Greenwich, in soccage. Here is likewise a manufacture of woollen cloth.

This town has a weekly market on Saturday, and an annual fair on the fourteenth of May, for horses, cows, and sheep.

At Erdbury, or Ardbury, near this town, Ralph de Sudley, in the time of Henry II. founded a priory of the order of St. Austin, dedicated to the Virgin Mary; and endowed upon the suppression, when it had a prior, and about six or seven canons, with ninety-four pounds six shillings and a penny *per annum*.

At Astley, near this place, Sir Thomas de Astley, in the seventh year of the reign of king Edward III. founded a collegiate church, dedicated to the Assumption of the Virgin Mary. It consisted only of a dean, two prebendaries or canons, and three vicars, besides clerks

and servants; and was valued, upon the dissolution, at forty-six pounds and eight-pence a year.

From Nuneaton we passed on to Sutton Cofield, or Coldfield, called Sutton, which is a corruption or contraction of South-Town, in respect of its situation south of Litchfield; and the additional name of Cofield, or Coldfield, is supposed to be derived from a remarkable black and barren common which lies directly west of it. It stands at the distance of one hundred and five miles from London, and, notwithstanding the barrenness of the soil, is delightfully situated among pleasant woods, and in an excellent air. This town was incorporated by king Henry VIII. and is governed by a warden and society, consisting of twenty-four members, a clerk of the market, a steward, and a serjeant at mace. The warden, for the time being, is coroner within the corporation, and no sheriff or bailiff must interfere within its liberties.

Sutton Cofield contains about three hundred and sixty houses, and the inhabitants are computed at eighteen hundred. Here is a church, dedicated to the Trinity, consisting of a nave, chancel, and two side-isses. The isles were built in the reign of Henry VIII. by John Herman, alias Vesfy, bishop of Exeter, a native of this town. The nave was lately rebuilt; and at the west end of the church there is a handsome square tower, sixty feet high, in which is a deep peal of six bells, together with a clock and chimes, lately erected. In this church are three vaults, remarkable for the quick consumption of the dead bodies therein deposited. Here is also a monument, belonging to the family of Jessons, supposed to be well executed. This town has a grammar-school, founded by bishop Vesfy, and endowed with an estate now worth one hundred pounds *per annum*. The school-house was rebuilt in an elegant manner in the year 1728. This town has the manor and lordship of the parish, together with a large tract of waste ground called the Park, which is exceeding useful for pasturage, and has besides five thousand pounds worth of wood growing in it.

Here is a weekly market on Monday, and two annual fairs, viz. Trinity-Monday, and the eighth of November, for sheep and cattle.

Near this town is an old building called the Manor-house, which is said to have been one of the hunting-seats of William the Conqueror.

At Polefworth, eight miles from this town, king Egbert, about the beginning of the ninth century, founded a nunnery, dedicated to the Virgin Mary, over which his daughter Editha presided as abbess; but she being afterwards canonized, this monastery was dedicated to her. It was of the order of St. Benedict, and maintained an abbess, and thirteen or fourteen nuns, who, upon the suppression, were possessed of one hundred and nine pounds six shillings and six-pence a year.

After viewing in this place all that was worthy of notice, we continued our route, and entered Birmingham, called also Bretingham, and Bromicham. It is a large, well built, populous town, at the distance of one hundred and nine miles from London. The upper part of it stands on the side of a hill, and of course dry, but the lower part is watery. This place is famous for the most ingenious artificers in all sorts of iron and steel small wares, and in the manufactures of snuff-boxes, buckles, buttons, and other goods of the like kind, which are made here in immense quantities, and exported to all parts of Europe. This town is much improved of late years by many new buildings. In its neighbourhood are annual horse-races.

Here was formerly an hospital dedicated to St. Thomas, consisting of a prior or warden, and several brethren. It was in being before the thirteenth year of king Edward I. and was valued, upon the dissolution, at eight pounds five shillings and three-pence *per annum*.

Birmingham has a weekly market on Thursday, and two annual fairs, viz. Thursday in Whitfun-week, and the tenth of October, for hard-ware, cattle, sheep, and horses.

A few miles from Birmingham is Hagley, the seat of lord Littleton. The structure is an excellent dwelling-house; a well-designed mean between the vast piles raised

raised for magnificence, and those smaller ones, in which convenience is alone considered.

The hall is thirty feet square: it is ornamented with statues of Venus de Medicis, Bacchus, &c. &c. and various busts: the Hercules's which support the cornice of the chimney-piece are heavy: here are likewise bas-relievs, &c.

The library, thirty-three by twenty-five, is a good room; the ceiling ornamented with scrolls of stucco-work. Here are pictures:

Richardson. Pope, and his dog Bounce.
Aickman. Thompson.
Gilbert West.

The dressing-room is twenty-one feet square.

Van Capen. Poultry.
Wotton. Landscape, fine; but there is a light on the goats in the corner, which does not seem in unison with the rest.
Jonson. Lady Littleton, wife of Sir Thomas.
Zuccharo. Sir John Littleton.
Van Somer. Sir Thomas Littleton.
Jonson. Sir Alexander Temple.
Mirevelt. Prince of Orange.
Greenhill. Mr. Henry Littleton.
Corn. Jonson. Lady Crompton. Very fine.
Ditto. Queen of Bohemia.
Ditto. A lady unknown.
Dobson. Prince Maurice.
Honthrust. Sir R. Stainmore.

In the Crimson Bed chamber.

Le Fevre. Dutchess of Portsmouth.
Reynolds. Lord Littleton.
Williams. Miss Fortescue, his first lady.

In the best dressing-room, twenty square, an elegant chimney-piece of white marble, the cornice supported by Ionic pillars; the ceiling white ornaments in stucco on a lead-coloured ground. Here are,

Vandyke. The three Marias, and a dead Christ. Exceedingly fine; admirably grouped; the colours most expressive.
Storck. A sea-piece.
Lely. A lady unknown.
Brughel. A landscape; most minutely expressive.
Unknown. A sea-piece: also views of Persfield.
Houfeman. Charles II. and Queen.
Wotton. A landscape; very fine.
Glow. Horses.
Cypriani. Arcadian shepherds. The attitudes and groupes exceedingly pleasing. Colours brilliant.
Viviano. An alto relievo; fine and spirited.
Lely. L. Cary.
Wyck. A battle-piece; in the stile of Borgognone.
Cypriani. The triumph of Bacchus; a drawing, fine.

The Saloon, thirty-six by thirty. The chimney-piece very beautiful, of Siena and white marble; the cornice supported by Ionic pillars. In the centre of the frieze three boys in white marble polished, and on each side a scroll of white on a Siena ground. Here are,

Rubens. The marriage of Neptune and Cybele. The lady is a Rubens figure with a vengeance, and her attitude disgusting.
Vandyke. Earl and countess of Carlisle; very fine.
Titian. Venus reconciling herself to Psyche. Her figure clumsy, but somewhat more delicate than Rubens's: his attitude very expressive, but not of the subject. Colours fine, but their brilliancy gone off.
Bassan. Jacob and his family: prodigious fine: the minute strength of expression in the figures to the left great.
Vandyke. The royal family.
Jervois. Charles I. and his Queen.

The drawing-room, thirty-four by twenty-two. The chimney-piece scrolls of white marble trailed on Siena; elegant. Lord Bath, by Ramsay, over it, inclosed in ornaments, elegantly carved and gilt. The ceiling an oval; in the centre, Flora, by Cypriani; and in the corners, the Seasons: her attitude elegant, and the colours pleasing. The glass frames in this room are elegantly carved and gilt. Slabs of Siena marble.

Ramsay. Earl of Hardwicke.
Vanloo. Earl of Chesterfield.
Ditto. Lord Cobham.
Unknown. Mr. Pelham.

The Gallery, eighty-five by twenty-two, in three divisions, formed by double Corinthian pillars. The chimney-piece, glass, table frames, and the girandoles carved in black and white.

Vandyke. Virgin and child. Very noble: her attitude incomparably fine: the air of her head great: the child noble.
Ditto. Countess of Bedford.
Lely. Miss Brown.
Ditto. Lord Brouncker.

The Dining-room thirty-three by twenty-six. Here are,

Zuccharelli. Landscape; a water-fall, and bridge; pleasing.
Ditto. Another; water, and a boat. Ditto.
Wilson. Landscape; ditto.

But what at Hagley is most worthy of notice, is the grounds, which lord Littleton has disposed with the utmost taste.

The walk from the house leads through a wood, by the side of a purling stream, which meanders over grass from out a dark hollow; you pass a gush of water which falls into it, and winding higher up the hill, turn by the side of another brook, which gurgles through a rocky hollow: another gushing fall, over bits of rock, attracts your notice; which passing, you come to the Prince of Wales's statue. This spot commands a fine view of the distant country over the house.

Winding from hence through the wood, you look to the left upon distant grounds, until you come to a seat, inscribed to Thomson, in these lines:

Ingenio immortali
JACOBI THOMSON,
Poetae Sublimis,
Viri boni

Ædiculam hanc in secessu quem vivus dilexit,
Post mortem ejus constructam,
Dicat dedicatque,
GEORGIUS LITTLETON.

From hence you look down on a fine lawn, and, in front, upon a noble bank of hanging wood, in which appears a temple. To the left a distant view of Malvern hills.

From hence passing a well, called after the patriarch, from which you have a distant view of a hill over the wood, you enter a grove of oaks, in which you catch a glance at the castle, through the trees, on the top of the hill, beautifully rising out of a bank of wood.

Next we came to an Ionic rotunda, inclosed in a beautiful amphitheatre of wood; it looks down upon a piece of water in the hollow of a grove, at the end of which is a Palladian bridge. The scene is pleasing. From hence the path winds through a fine wood of oaks, in which is a bench, by the side of a trickling rill, with this inscription:

Inter cuncta leges, et per cunctabere doctos,
Qua ratione queas traducere leniter œvum,
Quid minuatur curas, quid te tibi reddat amicum,
Quid pure tranquillet, honos an dulce lucellum,
An secretum iter, et fallentis femita vitæ.

Which

Which lines are well suited to the sequestred retired spot in which they are placed. The path then leads, by the stream, and under the trees, to a fine open lawn inclosed by wood: at one end an urn inscribed to Pope:

ALEXANDRO POPE,
Poetarum Anglicanorum elegantissimo, dulcissimaque.
Vitiurum Castigatori acerrimo,
Sapientiae doctori suavissimo.
Sacra esto.

1744.

Passing two benches, and a slight gush of water, you rise to the ruined castle, from the top of which is a very beautiful view, down upon the woods, lawns, slopes, &c. and prodigiously extensive prospect over the country. Worcester, Dudley, the Clee Hills, are a part of the scene; the Wrekin, at forty miles, and, it is said, Radnor-tump, at eighty miles distance.

Following the path, you pass a triangular water, the meaning of which we do not understand; and walk down under the shade of oaks, by the side of a winding woody hollow, to the seat of contemplation.

*Sedes Contemplationis,
Omnia Vanitas.*

The view is only down into the hollow among the trees. Next we came to the hermitage, which looks down on a piece of water, in the hollow, thickly shaded with tall trees, over which is a fine view of a distant country. This water is somewhat too regular. In the hermitage this inscription:

“ And may, at last, my weary age
“ Find out the peaceful hermitage,
“ The hairy gown, and mossy cell,
“ Where I may sit, and rightly spell
“ Of every star that heaven doth shew,
“ And every herb that sips the dew,
“ Till old experience do attain,
“ To something like prophetic strain,
“ These pleasures, Melancholy, give,
“ And I with thee will chuse to live.”

Il Penseroso.

Winding down, you come to a root cave by the water's edge, a retired spot; and at the other end of the pond, a cave of grotto-work.

Coming out of the grove, and rising the hill, you command to the left, as you move, a most beautiful view of the country, a noble sweep of inclosures of a charming verdure, to a bench, from which you look into the vale on the house at your feet, with a sweet little stream serpentine by it. Next you come to another bench inscribed from Milton:

“ These are thy glorious works, Parent of Good!
“ Almighty! thine this everlasting frame,
“ Thus wondrous fair! Thyself how wondrous then,
“ Unspeakable! who sits above these heavens
“ To us invisible, or dimly seen
“ In these thy lowest works; yet these declare
“ Thy goodness beyond thought, and power divine.”

You look down on an exquisite lawn thinly scattered with trees, on one side of which is the house; around the whole a vast range of inclosures: to the right you catch a most beautiful small green hill, with a clump of trees upon it. This view is noble indeed!

From hence you turn to the right into a grove, and presently come to a view most delicious! At your feet is spread forth a lawn of the finest verdure; a cool sequestred hollow, surrounded with thick wood, above which, in front, you catch Thomson's Seat, in the very spot of elegance itself, on a sweet little green hill, the top of which just shews itself above the trees, and half discloses the temple almost embosom'd in wood. A little to the left of it, and higher, is the Grecian portico, finely backed with a spreading grove. Over that, on a noble sweep of irregular hills, rises the obelisk, backed with a vast range of wood, in the noblest stile. The

variety of ground fine; and the whole of it ornamented with surprizing taste, as well as magnificence. A better assemblage of unconnected objects managed most skillfully to form one whole, can scarcely be imagined; yet have we read a description of Hagley, in which it is thus mentioned: “ You turn into a thicket, and have “ a look at the Doric Pavilion, Thomson's Seat, and “ the Obelisk.”

Leaving this noble scene, the path brings you to a bench under a very fine oak, which looks down, as before, on the hollow lawn; in front you view the green hill, with the clump of trees on it, which here appears most exquisitely beautiful: on one side of it distant water peeps most picturesquely among the trees, and over all the Wrekin rears his venerable head.

Pursuing the walk through the grove, you come to the seat inscribed

Quieti & Musis,

which commands most elegant scenes: you look down on a green hollow, surrounded by fine oaks: to the right you see some water through the trees: rising above this lower scene, you look to the left upon Thomson's Seat, thickly backed and surrounded with wood; above it the obelisk appears nobly. To the right a Gothic house (the parsonage) seen obscurely among the trees; likewise inclosures broke by wood rising most elegantly one above the other.

Next you come to a bench under a stately oak, commanding a lawn; to the right Pope's urn, and a rising hill crowned with a clump of trees; and following the path, it brings you to a very fine dell arched with wood, and a great variety of water in a hollow at your feet. To the right, close to you, a spring gushes out of the ground on rock-work, and falls into a stream in the hollow. Further on, another rill murmurs over broken rocks; and uniting with the same stream, it falls again, and winds away most beautifully among the wood. Upon the seat is this inscription:

“ Hic gelidi fontes, hic mollia prata Lycori;
“ Hic nemus: hic ipso tecum consumere ævo.”

Crossing the dell, you rise to another seat, the stream winding in the hollow beneath, and the whole under the shade of large oaks: to the right you catch an urn, and look back upon the Ionic rotunda, which is seen very beautifully. Turning to the left, and coming to the urn, you find it inscribed as follows:

To the Memory of
WILLIAM SHENSTONE, Esq;
In whose Verses
Were all the natural Graces,
And in whose Manners
Was all the amiable Simplicity
Of pastoral Poetry,
With the sweet tendernefs
Of the Elegiac.

Passing on, you come to a bench by the side of the winding stream, thickly covered with wood; and entering a grove almost impervious to the sun, meet with a bench around a vast oak, that commands a fine variety of scenery. To the right you look upon the river, and rising among the wood, the rotunda strikes your eye; the situation admirable: to the left you command the Palladian bridge, having a fresh view of the water, in a hollow all overhung with wood: behind you, on a fine hill, is the seat *Quieti & Musis*.

Returning through the grove, you pass several benches, and arrive at one surrounded by the most bewitching scenes: it is a moss seat, with this inscription:

“ Ego lauda ruris amœni
“ Rivos & musco circumlita saxa nemusque.”

The spot is totally sequestered, and might almost be called the paradise for contemplation to indulge in: the whole is over-arched with the shade of tall spreading trees; it is surrounded with banks of shrubby wood,

of moss, and ivy; the eye cannot wander from the beautiful, in search of the sublime; nor will one sigh ever be heard on this bench, for distant prospect. In front you look upon a cascade, breaking from out a perpendicular bank of ivy, and presenting to the eye a beautiful fall of transparent water, that glitters in this dark grove; the effect amazingly fine. It takes a natural course, and breaking over a ground of rock moss and ivy, loses itself among the shrubs at your feet. To the right is a sweet little watery cave of rock moss, &c. in which is a small statue of Venus; the rest of the scene is a fine dark shade of wood.

Winding up the side of the hill, you look down on a romantic irriguous woody valley; hearing the noise of falling water, but seeing none. Coming to a bench, you just look down to the right on a gushing stream half covered with trees; in front, Venus embosom'd in a sweet hollow of wood.

Winding round the sides of the river, you come to the Palladian bridge; a portico'd temple of the Ionic order; the view admirably fine. You look full upon a beautiful cascade, broke into two sheets by a rock, which falls into the water over which the bridge is thrown. A little above this a piece of wild ground is half seen; and further on, a beautiful lawn, at the end of which a fine green swelling hill, upon which stands the rotunda: the line of view to these objects is through a thick tall wood, which gives a solemn brownness to the whole scene, very noble. The inscription:

“ Viridantia Tempe,
“ Tempe quæ sylvæ cingunt super impendentes.”

Leaving this exquisite spot, you turn through a grove by several slight water-falls, and come out not far from the house.

The church stands in the park, retired, and covered by trees. It is chiefly remarkable for the elegantly simple monument erected by his lordship for his beloved Lucy; on which is this inscription:

Luciæ Lyttelton.
Ex antiquissimo Fortescutorum genere ortæ
Quæ annos nata viginti novem.
Formæ eximix, indolis optimæ; ingenii maximi:
Omnibus-bonis artibus, literisque humanioribus.
Supra ætatem et sexum exultati.
Sine superbia, laude florens.
Morte immature
Vitæ pie, pudice, sanctæ actam.
In tertio puerperio clausit.
Decimo nono die Januarii
Anno Domini 1746--7.
Fleta etiam ab ignotis.
Uxori dilectissimæ
Quinquennio felicissimi conjugii nondum absoluto.
Immensi amoris ac desiderii hoc qualecunque monumentum
Posuit Georgius Lyttelton.
Adhuc eheu superstes.
At in eodem sepulchro ipse olim sepeliendus.
Et per Jesum Christum Salvatorem suum.
Ad vitæ melioris diuturnum gaudium
Lachrymis in æternum absterfis
Se cum illa resurrecturum confidens.

Leaving Hagley Park, we proceeded to Colehill. The name of the town is probably derived from its situation on the side of a hill, near the bank of a small river called the Cole, over which it has a stone bridge. It is distant from London one hundred and three miles; and has two charity-schools, and a piece of land called Pater-noster Piece, on account of its having been given by one of the family of Digby, who was lord of the manor, for encouraging children to learn the Lord's Prayer. In consequence of this donation, all the children in the town are sent by turns, one at a time, every morning to church, at the sound of the bell, when each kneeling down, repeats the Lord's Prayer to the under master, and is by him rewarded with a penny. This

town being situated upon the Ikenild-street, copper coins of the emperor Trajan have been dug up here.

This place has a weekly market on Wednesday, and three annual fairs, viz. Shrove-Monday, for horses; the sixth of May, for horses and cattle; and the second of October, for cattle of all sorts.

At Henwood, south of this town, Kittelbern de Langdon, in the time of king Henry II. founded a nunnery of the Benedictine order, dedicated to St. Margaret. At the dissolution, here were only a prioress, and four or five nuns remaining, whose revenues were valued at no more than twenty-one pounds two shillings per annum.

On the north-east side of Colehill, at a place called Makestoke, Sir William de Clinton, afterwards earl of Huntingdon, in the reign of Edward III. founded a convent, consisting of a prior and twelve regular canons of the order of St. Austin, dedicated to the Trinity, the Virgin Mary, St. Michael and All Saints; and endowed, on the suppression, with annual revenues amounting to eighty-seven pounds twelve shillings and three-pence.

Leaving Colehill, we proceeded towards Warwick; and in our way stopped at Kennelworth, where there was formerly a monastery, founded by Geoffrey de Clinton, lord chamberlain to Henry I. who also built a castle here, which was encompassed with a chace and park, and the glory of all this part of England; but his grand-nephew sold it to king Henry III. who granted it to Simon de Montfort, earl of Leicester, with Eleanor his sister, for her portion; but the castle being taken by that king in the barons wars, he gave it to the family of Lancaster. At this time came out the edict, which our lawyers call *dictum de Kenelworth*, by which it was enacted, that all who had taken arms against the king, should pay five years value of all their lands; and balls of stone sixteen inches diameter are still found here, which are supposed to have been thrown in slings during the wars above-mentioned. King Edward II. was here while kept prisoner here. At the dissolution, the castle and its monastery was given by king Henry VIII. to Andrew Flamock, by whose daughter it came to Sir John Colborn, Esq; who having bought horses that had been stolen out of the stables of the earl of Leicester, was frightened into a surrender of it to the said earl, who obtained a grant of it from queen Elizabeth, who granted him the castle. He is said to have laid out sixty thousand pounds in rebuilding and adorning it, and to have entertained that queen and her court here seventeen days, in a most gay and splendid manner, with the greatest variety and magnificence of feasts and shews, there being drank no less than three hundred and twenty hogsheads of common beer, which is mentioned only to shew the largeness of the royal retinue. From that earl it passed to Sir Robert, his natural son, who sold it to Prince Henry, on whose death, without issue, it came to Prince Charles, who committing the custody of it to lord Carey, his eldest son, and Thomas Carey, Esq; the inheritance was granted to Lawrence Hyde, afterwards created baron of Kenilworth-Castle, and earl of Rochester; but the castle, in the late civil wars, was demolished by those who purchased it of the parliament, in order to make money of the materials. Before the Conquest, Kenelworth was a member of Stoneley, being an ancient demesne of the crown, and had a castle on the bank of the Avon, in the woods opposite to Stoneley-abbey, which stood upon a place called Hom-Hill, but was demolished in the wars between king Edmund and Canute the Dane. The aforesaid earl of Leicester, who got the grant of the second castle, as above, obtained a market here of queen Elizabeth, for Wednesday, and a fair on Midsummer-day; but the former, if not the latter, has been long disused. Upon a survey of the castle before the purchase of it by Prince Henry, it was seven acres in compass within the walls, which were in many places from fifteen to twenty feet thick. The castle and four gatehouses were all built of hewn free-stone. By the castle-walls runs a pool of one hundred and eleven acres, through which run several

pretty streams, abounding both with fish and fowl. The circuit of the castle, manors, parks, &c. all together, is nineteen or twenty miles.

Warwick, which is the shire town, and gives name to it, stands on the Avon, eighty-eight miles from London, on an ascent, which is so rocky on all sides, that the ways leading to it are all cut through the rock; but it has rich pleasant meadows to the south, and lofty groves and spacious parks to the north. It is a town of great note, and such antiquity, that it is said to have been founded by Kimbeline, one of the British kings, cotemporary with our Saviour. Be it so or not, it seems to have been very eminent in the time of the Romans. Mr. Camden thinks this was their *Præsidium*, where, as the Notitia says, the prefect of the Dalmatian horse was posted by order of the governor of Britain. The Picts and Scots demolished it; and when it was repaired, it was besieged, taken, and garrisoned by Oforius; after which it was again plundered and laid waste, till Constantine, father of Uther Pendragon, rebuilt it. It suffered very much after this from the Saxons and Danes; but, *anno* 911, Ethelfleda, the noble lady of the Mercians, restored it to that flourishing state in which it was found by the Normans.

On the fifth of September 1694, this city was almost burnt down by an accidental fire, when the damage was computed at near one hundred thousand pounds; but it was after rebuilt with much more magnificence by the liberal contributions of the nation, in pursuance of an act of parliament; and the free-stone for the superstructure dug from the quarries of the rock on which it is founded. There are four ways leading to it, answering the four points, which lead through a rock over a current of water, and to streets, which all meet in the centre of the town. The wells and cellars are made in the rock, the descent to which every way keeps it clean, and it is really a fine town. It is supplied with water by pipes from springs, half a mile off, and has a noble stone-bridge over the Avon of twelve arches. Here is a castle, strong both by art and nature, which in the times of war was of great consequence; and now a noble and delightful seat of the lord Brook's, as it used to be of the earls of Warwick. The rock, on which it stands, is forty feet from the river, but on the north side it is even with the town. From its terrace, which is above fifty feet perpendicular above the Avon, there is a prospect of the river, and a beautiful country beyond it. The apartments are perfectly well contrived, and adorned with many original pictures by Vandyke; and there is a particular apartment of it not inferior to some of the royal palaces. We read, that where the castle stands, was formerly a cathedral by the name of All-Saints; and that it was the see of a bishop, who was forced to fly to Wales, and never was an episcopal see any more. Though it is a populous town, it has but two parish-churches, of which St. Mary's is a beautiful edifice, and the greatest part of it, with the lofty tower, is new built. The corporation is governed by a mayor, twelve brethren, twenty-four burgesses, &c. The town is said to have taken its name from Warremund, one of the ancestors of the Mercian kings, by whom it was rebuilt betwixt the times of its destruction by the Saxons and Danes. It was in ancient times a corporation, consisting of a mayor, bailiffs and burgesses, and sent members to parliament as soon as any whatsoever; but in the first of Philip and Mary, it was incorporated anew, by the name of Bailiff and Burgesses, with a perpetual succession, common seal, and twelve assistants to the bailiff, called Principal Burgesses, who should have power to regulate the borough, and to chuse a bailiff, recorder, serjeant at mace, and clerk of the markets, of whom the bailiff and recorder should be sole justices of the peace within the borough. To this charter king James I. added, by his letters patent, in the tenth of his reign, that the two ancient burgesses, for the time being, should after it be justices of the peace within the precincts thereof, together with the bailiff and recorder: and that the said bailiff, and one of the senior burgesses, should always be of the quorum. As for the other public buildings, they are, a town-house of free-stone, sup-

ported by pillars, an hospital, and three charity-schools, in which are taught and cloathed sixty-two boys, and forty-two girls. The streets are spacious and regular; and near the town, on the river Avon, lies Guy's Cliff, where Guy earl of Warwick is supposed to have lived a hermit, after his defeat of the Danish giant Colebrand, and his other military exploits. Though his story is so obscure, that it is very hard to distinguish the facts from the falsehood of it, several of the earls, his successors, called their sons by his name. Guy de Beauchamp built a chapel and noble tower, and set up a gigantic statue in it eight feet high, to his memory; and his sword, and other accoutrements, are still shewn in the castle, where was formerly a suit of arras hangings, representing his great actions. A vessel, called his pot, was also preserved, which used to be filled up with good liquor for all comers upon memorable days.

This city, as well as Holland in Lincolnshire, now gives title of Earl to the noble family of Rich, as it did formerly to the family of the Nevils, and of Duke to others. The county assizes and general quarter sessions are held at this town. The hospital above-mentioned is for twelve poor decayed gentlemen, with an allowance of twenty pounds a year to each, and fifty pounds to a chaplain, and was founded by the earl of Leicester.

In the north part of this town was an abbey, destroyed by the Danes in 1016.

A nunnery in this town was also destroyed by the Danes in the same year.

St. Mary's church, in this town, appears to have been more than parochial in the time of William the Conqueror; and about the year 1123, Roger earl of Warwick established in it a dean and secular canons. About the time of the dissolution, here were a dean, five prebendaries or canons, ten priests vicars, and six choristers, who had yearly possessions valued at two hundred and forty-seven pounds thirteen shillings.

On the north side of this town, Henry de Newburgh, earl of Warwick, in the time of king Henry I. founded an hospital or priory of canons regular, dedicated to the Holy Sepulchre, and of that order. About the time of the general dissolution, here was a priory, and two or three religious, endowed with forty-one pounds ten shillings and two-pence *per annum*.

Here was an hospital, founded by Roger earl of Warwick, in the time of king Henry I. for a master and warden, and several leprous brethren: it was dedicated to St. Michael, and had revenues valued, upon the dissolution, at no more than ten pounds one shilling and eight-pence *per annum*.

The same Roger earl of Warwick is said to have founded here a house of Templars, which was certified, in the nineteenth year of Edward II. to be of the annual value of fourteen pounds six shillings and eight-pence.

In the north east part of this town was an hospital, founded in the time of king Henry II. by William earl of Warwick, chiefly for the entertainment of strangers and travellers: it had also a master or warden, two chaplains, and two poor persons; and was valued, upon the dissolution, at twenty pounds three shillings *per annum*.

The same earl is also said to have founded in this town another hospital, dedicated to St. Thomas; but there are no particulars concerning it on record.

An house of White friars is said to have been built here by John Peyto, junior, about the eighteenth year of Edward III.

In the time of king Edward II. here was founded a college of four priests.

Warwick sends two members to parliament, has a weekly market on Saturday, and four annual fairs, viz. the twelfth of May, and the fifth of July, for horses, cows, and sheep; the fourth of September, for horses, cows, sheep, and cheese; and the eighth of November, for horses, cows, and sheep.

At Leamington, east of this town, there is a salt spring, which rises near the river Leam, the water of which is used by the poorer sort of people to season their bread.

At Burford, nine miles from Warwick, one Samuel Fairfax, who was born in the year 1647, lived to the age of twelve years under the same roof with his father and mother, grandfather and grandmother, and great grandfather, and great grandmother, all in perfect health, and dwelling together with the greatest harmony of duty and affection; neither of the three generations of either sex had been twice married.

Chesteron, upon the Fosse-way, south-east of this town, is supposed to have been a Roman station; for some coins, and other traces of Roman antiquity, have been discovered here.

At Studely, not far from this town, was a priory of Austin canons, founded by Peter de Studely in the beginning of the reign of king Henry II. It was dedicated to St. Mary, and at the time of the general dissolution, had yearly revenues amounting to one hundred and seventeen pounds ten shillings and a penny. Here was also an hospital for the relief and entertainment of poor impotent persons, founded by William de Cantilupe, before the twenty-third year of king Henry III.

At Guy's Cliff, near Warwick, there was a chauntry of two priests, founded by Richard Beauchamp, earl of Warwick, in the time of Henry VI.

Henly, the next town we visited after leaving Warwick, is also called Henly in Arden, from its situation in Arden, which was the ancient name of that part of the county, now called Wood-Land, and to distinguish it from several other towns in the kingdom of the same name. It is situated near the river Alne, at the distance of eighty-five miles from London; and has a chapel of ease to Waveney, in the neighbourhood, where the parish-church is. This chapel was first built in the forty-first year of Edward III.

This town has a weekly market on Monday, and two annual fairs, viz. Lady-day, and Tuesday in Whitfun-week, for cattle.

At Wattonwaven, near Henly in Arden, was a cell of Benedictine monks, belonging to the abbey of Castellion in Normandy, and given it by Robert de Tonci in the time of Henry I.

We then proceeded on our journey to Aulcester, a very ancient town and corporation, situated upon the river Avon, at the distance of one hundred and five miles from London. Here is a good free-school; and the corn trade here is not inconsiderable.

This town, which stands upon Ikenild-street, was a Roman station. The foundations of Roman buildings, several Roman bricks, and Roman coins of gold, silver, and brass, have at different times been dug up at this place; and about a century ago, an urn was discovered here, containing above six hundred pieces of Roman coin, eight of which were gold, and the rest silver. Most of these coins were impressed with the heads of some one of the emperors, and the reverses generally different.

Ralph Pincerna, in the year 1140, founded an abbey of Benedictine monks in this town, dedicated to the Virgin Mary, and St. John the Baptist: but this house being much decayed, was, about the year 1467, made a cell to the abbey of Evesham, a borough town of Worcester-shire. Its revenues were valued, upon the dissolution, at sixty-five pounds seven shillings and eleven-pence *per annum*.

Aulcester has a weekly market on Tuesday, and three annual fairs, viz. Tuesday before the fifth of April, the eighteenth of May, and the seventh of October, for cheese and horses.

Bitford stands upon the river Avon, near its confluence with the Arrow, at the distance of one hundred miles from London. It contains nothing which can recommend it to our notice, but having a weekly market.

We next entered Stratford, commonly called Stratford upon Avon, from its situation upon that river, and to distinguish it from several towns in England of the same name. It is a corporation, and governed by a mayor, a recorder, a high steward, twelve aldermen, of whom two are justices of the peace, and twelve capital burghesses.

This is a large, populous town, ninety-seven miles from London, and carries on a great trade in corn. Here is one parish-church, and a chapel of ease. The church is dedicated to the Trinity, and is thought to be almost as old as the Norman Conquest; but parts of it have at different times been rebuilt.

Stratford was formerly collegiate, and is highly celebrated for having had the honour of giving birth to the renowned and inimitable Shakespear. The remains of this great dramatic poet were likewise, in the year 1564, interred in one of the isles on the north side of the church. His grave is covered with a stone, on which there is the following inscription:

Good friend; for Jesus' sake, forbear
To dig the dust inclosed here.
Blest be the man that spares these stones,
And curst be he that moves my bones.

And in the wall over the grave there is a bust of him in marble. The chapel of ease in this town was built in the reign of king Henry VII. by Hugh Clapton, lord mayor of London. Here also is a free grammar-school, and an alms-house, founded by king Edward VI. and Hugh Clopton, who built the chapel, erected at this place a stone bridge, consisting of nine arches, over the river Avon, with a long causeway at the end of it, walled on both sides.

There was a monastery in this town before the year 703; and in 1310, a large chauntry or college was founded in the parish-church of this place, by John de Stratford, bishop of Winchester, and afterward archbishop of Canterbury; for a warden, four priests, three clerks, and four choristers, who were endowed; upon the suppression, with revenues rated at one hundred and twenty-seven pounds seventeen shillings and nine-pence *per annum*.

Stratford has a weekly market on Thursday, and three annual fairs, viz. the fourteenth of May, the twelfth of September, and the Thursday se'nnight after the twenty-fifth of September, for cloth, cheese, wheat, hops, and all sorts of cattle: the day after the last fair is a statute for hiring servants.

At Wroxhall, near this town, Hugh de Hatton, about the end of the reign of king Henry I. founded a priory of Benedictine nuns, dedicated to St. Leonard. About the time of the dissolution, here were five or six religious, who had revenues to the yearly amount of seventy-two pounds fifteen shillings and six-pence.

Leaving Stratford, we passed on to Atherston, commonly known by the appellation of Atherston on the Stour, from its situation on that river, and to distinguish it from another town of the same name in this county, north of Nuneaton, upon the borders of Leicester-shire. It is a large, well built town, distant from London one hundred and three miles. Here is a chapel of ease, and a charity-school, where twenty girls are taught to read, knit, sew, and spin.

Here was a church, and habitation for Friars Heremites of the order of St. Austin, built about the end of the reign of king Edward III. and valued, upon the dissolution, at no more than one pound ten shillings and two-pence *per annum*.

This town has a weekly market on Tuesday, and four annual fairs, viz. the seventh of April, for horses, cows, and sheep; the eighteenth of July, a holiday fair only; the nineteenth of September, for horses and cows; and the most considerable cheese fair in England; the fourth of December, for horses and fat horned cattle.

Mancester upon Watling-street, near this town, was the Manduessedum of the Romans, and here several Roman coins of brass and silver have been dug up. Near this place are the remains of an ancient fort, called Oldbury: it is of a quadrangular form, is inclosed with high ramparts, and contains about seven acres of ground. In the north part of this fortification have been found several flint stones, each about four inches long, curiously ground into the form of a pole-ax, and thought by Sir William Dugdale, who wrote an account of the antiquities of this county, to have been

a fort

a sort of weapons used by the ancient Britons, before they had the art of making weapons of brass and iron.

At Polesworth, north of Atherston, as some labourers were trenching, in the year 1762, they found a large earthen pot full of small copper coins, most part of which bear a beautiful impression of the head of the emperor Constantine, with the name, *Constantinus*, round it: on the reverse are two armed figures, with emblems of various kinds, and round them the words *Gloria Exercitus*. Some few among them have an armed head on each side, with *Urbs Roma* round it, and Romulus and Remus sitting under a wolf, on the reverse side: others have an armed head on one side, and the word *Constantinopolis* round it, and Pallas on the reverse: some have a chariot and four horses on the reverse side, and others have a variety of single figures.

At Oldbury was a cell of Black nuns, dedicated to St. Laurence, and subordinate to the nunnery at Polesworth. It is thought to have been founded by Walter de Hastings, and Athawis, his wife, in the time of Henry I.

Near Atherston, at a place called Merevel, Robert, earl of Ferrers and Nottingham, about the year 1148, founded an abbey of Cistercian monks, dedicated to the Virgin Mary, and endowed, at the suppression, with two hundred and fifty-four pounds one shilling and eight-pence *per annum*.

North of this town, at Aucot, there was a small priory of four Benedictine monks, founded in the year 1159, by William Burdet, and valued, upon the general dissolution, at thirty-four pounds eight shillings *per annum*.

CURIOUS PLANTS found in Warwickshire.

Millet Cyperus-grass; *Cyperus graminis miliaceus*, *Ger.* found in several places on the borders of this county.

Long-rooted bastard Cyperus; *Cyperus longus inodorus sylvestris*, *Ger.* found frequently in boggy places by the river Tame.

Naked Horse-tail, or Shave-grass; *Equisetum nudum*, *Ger.* found in a moist ditch at Middleton, towards Drayton.

Black-headed Rush with Gromil-seed; *Juncus semine Lithosperni*; found in the same places with the *Cyperus longus inodorus*.

Elegant Cyperus-grass with a rough compound head; *Gramen cyperoides palustre elegans, spica composita asperiore*; found in a pool at Middleton, towards Colehill.

Great Cyperus-grass, with round upright spikes; *Cyperoides angustifoliam spicis longis erectis*, *C. B.* found in several pools about Middleton.

Moonwort; *Lunaria minor*, *Ger.* found in several closes about Sutton-Coldfield, on the west side of the town.

Wild English Daffodile; *Pseudo-parcissus Anglicus*, *Ger.* found in some pastures about Sutton-Coldfield, on the east side of the town, in great plenty.

Fennel-leaved Water-Crowfoot; *Millefolium maratriphyllum ranunculi flore*, *Park*; found in great plenty in the river Tame, and the brooks which run into it.

Tower-mustard; *Turritis*, *Ger.* found on the borders of this county in many places.

Red-whorts, or Bill-berries; *Vaccinia rubra bacceis foliis*, *Park*; found on the black boggy heaths between Middleton and Sutton.

Wood Horsetail; *Equisetum sylvaticum*, *Tab.* found in moist places in the road between Middleton and Sutton.

Black-berried Heath; *Baccifera nigra*, *Park*; found on the moist banks by the new park at Middleton.

The greater Bistort or Snakeweed; *Bistorta major*, *Ger.* found in several parts on the borders of this county.

Moor-berries; *Idea palustris*, *C. B.* found in the moorish grounds in Sutton-Coldfield-park, in great plenty.

MEMBERS of PARLIAMENT for this County.

Warwickshire sends six members to parliament; two knights of the shire for the county, two citizens for the city of Coventry, and two burgesses for the town of Warwick.

G L O U C E S T E R S H I R E ;

O R,

G L O C E S T E R S H I R E .

THIS county is bounded by Warwickshire, Oxfordshire, and Berkshire, on the east; by Herefordshire and Monmouthshire on the west; by Worcestershire on the north; and by Wiltshire and Somersetshire on the south. It measures in length, from north-east to south-west, about fifty-six miles; in breadth, from south-east to north-west, about twenty-two miles; and is one hundred and fifty-six miles in circumference. It is divided into thirty hundreds, in which are one city, twenty-five market-towns, two hundred and eighty parishes, about twenty-six thousand seven hundred and sixty-nine houses, and one hundred and sixty-two thousand five hundred and sixty-eight inhabitants. It lies in the province of Canterbury, is a diocese of itself; and the city of Gloucester, which is nearly in the middle of the county, is one hundred and two miles north-west of London.

The ancient inhabitants of this county, in common with those of Oxfordshire, were by the Romans called Dobuni, a name generally supposed to have been derived from *Duffen*, a British word, which signifies *deep* or *low*, and alludes to the situation of these counties which consist chiefly of plains and vallies. Some, however, are of opinion, that it was derived from *Dofu*, a British word, which expressed the richness of the soil. Soon after the Saxons arrived in Britain, the name *Duboni* was lost, and the inhabitants of this county were called *Wiccii*, which is supposed to have its derivation from the Saxon word *Wic*, signifying the creek of a river, and to have been applied to these people, as bordering upon the Severn, a river full of windings and creeks.

The inhabitants of this county have a proverb, "The father to the bough, the son to the plough;" which alludes to an ancient privilege, by which the estate of a father, though a felon, descended to the son. This privilege was confirmed to them by a statute of the seventeenth of Edward II. but it has not been claimed many years. The custom called Borough English still remains in many parts of this county.

Gloucestershire is generally divided into three districts. The eastern part of the county, bordering upon Warwickshire, Oxfordshire, and Berkshire, is called Cotswould; the middle part the Vale of Gloucester; and the triangular part, included between the Wyc, the Severn, and a small river called the Leden, is known by the name of the Forest of Dean. The Vale of Gloucester manifestly received its name from its situation; and the Forest was probably called the Forest of Dean, from Dean, the principal town in the district; some have supposed the word *Dean* to be a corruption of Arden, a name used both by the ancient Gauls and Britons, to signify a Wood; and there is a wood in Warwickshire called Arden to this day.

R I V E R S .

There are several large rivers in this county; the principal of which are, the Severn, the Wyc, the Stroud, and two Avons. The name Severn is probably a corruption of Sabrina, the name given to this river by the Romans, but the derivation of Sebrina is not known. The Severn, which is esteemed the second river in England, rises on the east side of a vast mountain, called Plyn Lymmon, in the south-west part of Montgomeryshire, in Wales, from whence, by a variety of windings, it runs north-east, and enters Shropshire; where being joined by a great number of smaller streams, it runs through that county and Worcestershire, in the direction of south-east: it then enters the county of Gloucester at Tewkesbury, a borough town; whence running south-west by the city of Gloucester, it falls into that part of the western sea called the Bristol Channel.

The tide flows up the Severn as far as Tewksbury, which is near seventy miles from the sea; and from Newnham, a considerable market-town upon this river, upwards of fifty miles from the sea to its mouth, it has more the appearance of a sea than a river; the flood-tide advances with such impetuosity, that in one swell it sometimes rises near four feet.

The name Wye is supposed to have been an appellation, which in the ancient British language signified a *river* or *water*. The Wye rises within half a mile of the source of the Severn; and running south-east, separates Radnorshire and Brecknockshire, two counties in Wales, from each other: it then passes through Herefordshire, and parting Monmouthshire from Gloucestershire, falls into the Severn near Chepstow, a market-town of Monmouthshire.

The Stroud rises not far east of Painswick, a market-town; and running westward, falls into the Severn about five miles south of the city of Gloucester. The water of this river is remarkably clear, and fixes the colours mixed with it for dying broad cloth, scarlet, or any grain colour, better than any other: for this reason several clothiers have settled along the banks for twenty miles distance, and have erected a vast number of falling-mills upon it: of these clothiers, some used formerly to make each a thousand pieces of cloth in a year. No part of this river was navigable till the year 1720, when it was made so by act of parliament, quite from Stroud, a market-town, to its conflux with the Severn.

One of the rivers Avon rises in Northamptonshire, and running through Warwickshire, and separating Gloucestershire from Worcestershire, falls into the Severn near Tewkesbury. The other Avon, distinguished by the name of Avon-Weft, rises not far from Tetbury, a market-town, near the borders of Wiltshire; and separating Gloucestershire from Somersetshire, falls into the Severn near Bristol, a city in Somersetshire.

We shall consider the Inland Navigation at the end of our survey of this county.

AIR, SOIL, and NATURAL PRODUCTIONS.

Though the air of this county is equally healthy throughout, yet it is in other respects very different; for Cotswould being a hilly country, the air there is very sharp, but in the Vale it is soft and mild, even in winter; such indeed is the difference, that of Cotswould it is commonly said, eight months in the year are winter, and the other four too cold for summer; and of the Vale, that eight months are summer, and the other four too warm for winter.

Cotswould being thus exposed, is not remarkable for its fertility; and the corn is so slow in coming up, that, "as long a coming as Cotswould barley," is become a proverb of the county: the hills of Cotswould, however, afford excellent pasturage, and great numbers of sheep are fed upon them, whose wool is remarkably fine: the breed of sheep which produce the fine Spanish wool, is said to have been raised from some of these sheep, which were sent as a present by one of our kings to a king of Spain.

In the Vale the soil is very fertile, and the pastures are also very rich. The cheese, called Gloucester cheese, is made in this part of the county, and next to that of Cheshire, is the best in England. The Forest of Dean, which contains thirty thousand acres, being twenty miles long and ten broad, was formerly covered with wood, and was then a harbour for robbers, especially towards the banks of the Severn; so that in the reign of king Henry VI. an act of parliament was made on purpose to suppress them. The woods have been since reduced to narrower bounds, by clearing great part of

The ground, where many towns and villages have been built. The oaks that grow where the woods are still preserved, are reckoned the best in England; and from this forest most part of the timber formerly employed in ship-building, was brought, which was so well known to the Spaniards, that when they fitted out their famous Armada in 1558, to invade England, the people who had the direction of that expedition, were expressly ordered to destroy this forest, as the most speedy and effectual way to ruin our marine: on the other hand, to cultivate and preserve the wood in a sufficient part of this district, has been the constant care of our legislature. Great part of it was inclosed by an act of parliament passed in the reign of king Charles II. and some time ago, many cottages, which had been built in and near the woods, were ordered to be pulled down, because the inhabitants damaged the trees, by cutting or lopping them for fuel. In this part of the county there are also many rich mines of iron and coal, for the working of which several acts of parliament have passed; and at Taynton, a little village near Newent, a market-town of this county, a gold mine was discovered about the year 1700, of which a lease was granted to some refiners, who extracted some gold from the ore, but did not go on with the work, because the quantity of gold was so small, as not always to answer the expence of the separation. The king has a swanimote court here, as in all royal forests, to preserve the vert and venison, of which the verdurers are the judges, who are chosen by the freeholders of the county. The miners too have a court here, in which a steward, appointed by the constable of the forest, presides; and juries of miners, who have their particular laws and customs, by which they are governed, determine all differences and disputes that arise between them.

This county abounds with grain, cattle, fowl, and game; the inhabitants have also bacon and cyder in great plenty, each excellent in its kind; and the rivers afford great quantities of fish, especially the Severn, which abounds with salmon, lampreys, and conger eels.

Remarks on the HUSBANDRY of Gloucestershire.

The road from Witney to North Leach, is, perhaps, the worst turnpike in England; so bad, that it is a scandal to the country. They mend and make with nothing but the stone which forms the under stratum all over the country, quite from Tetsford the other side of Oxford. This stone, which rises in vast flakes, would make an admirable foundation for a surface of gravel; but by using it alone, and in pieces as large as one's head, the road is rendered most execrable. We travelled it with a very low opinion of all the counties and places it leads to: for if they were inhabited by people of fortune and spirit, it is natural to think they would never suffer such a barbarous method of mending their capital road to subsist.

All the country is open, dull, and very disagreeable, nor does a vigorous culture of the earth make any amends for those unpleasing circumstances: the crops were generally very poor, and mostly full of weeds; a strong proof of bad husbandry; and another yet more so, is their fallows being the same. About Burford and Sherborn their courses of crops are various. Some fallow for wheat. 2. Dibbled pease. 3. Barley. Others vary it, 1. Wheat. 2. Beans dibbled, or barley. 3. Pease: this is in the low lands about Sherborn; but on the Cotshill-hills they take a crop, and lay down with ray-grass and clover. They use all foot ploughs, with one wheel, and four horses in length; plough about one acre a day. The open fields on the hills let in general for about five or six shillings an acre, the low meadows about twenty shillings. They reckon three quarters of wheat to be a very good crop, and as much barley and beans. The farms are in general large, indeed absurdly so, considering the manner of managing them, for the farm-houses are all in the towns; so that the farmers are at a prodigious distance from their lands: they are in general two, three, four, and five hundred pounds a year, at about five shillings. Enclosing by no means

flourishes, for from Tetsford to Oxford enclosures are scarce; and from thence to North Leach, few or none. Mr. Dutton has planned some at Sherborn, but the scheme goes on very slowly. It is amazing that a man of his considerable fortune can bear to live in the midst of such a vastly extensive property, in its present condition. All this bleak unpleasing country is strong enough for any kind of trees, and might therefore be ornamented with fine plantations, which would yield considerable profit in a country wherein firing is so scarce. And farm-houses, barns, and all kinds of out-houses, might be built on the spot, cheaper, we apprehend, than in any part of England; for the stone, which every where lies almost within six inches of the surface, forms the walls and covering (slates) of all the buildings in the country.

PRICE OF LABOUR.

Winter and spring, eight-pence, nine-pence, and ten-pence a day.

Summer, one shilling.

Harvest, one shilling and eight-pence.

Reaping wheat, four and five shillings an acre.

Mowing barley and oats, six-pence and nine-pence.

Dibbling beans, five shillings.

Hoeing ditto twice, five shillings.

Threshing wheat, two shillings per quarter.

———— barley, one shilling.

———— oats, ten-pence.

———— beans, one shilling.

About North Leach they sow much sainfoine; they prepare for it by turnips, and sow it with oats, and mow it every year for about ten, getting generally a tun, or a tun and an half of hay from it.

Between North Leach and Frog-mill, the country improves continually, until it becomes what may really be called fine. About Stow, the seat of lord Chedworth, we observed them for the first time ploughing with oxen, and to our great indignation, eight large ones yoked to a plough, and skimming up the surface about three inches deep; which the ploughman, with a very grave face, called stiff work. It was a sainfoine lay, that had been pared and burnt about a month before, half an inch deep: it was turning up for turnips; the ashes laid but thin, we should not imagine above two bushels to a square rod. The price of paring, burning, and spreading the ashes, varies from fourteen to twenty shillings an acre. This is very cheap; such an operation would, in the eastern parts of the kingdom, come at least to three or four pounds an acre: such is the force of any practice being the custom of the country!

About Shipton day-labour used all winter to be eight-pence, nine-pence, and ten-pence a day; but the last, the farmers raised it to one shilling for the first time, on account of the dearness of provisions, and give the men one shilling and two-pence in the spring, one shilling and six-pence in mowing-time, and one shilling and eight-pence at harvest for five weeks. Oxen are pretty much used; we found they reckoned them something cheaper than horses, but that horses did their work better. In summer they feed them in both common and artificial grasses; and in winter seldom give them any thing besides good straw, on which they work them: they put them to labour at three years old, and continue them at it till five. The ploughs are here very clumsy; the beams ten feet long, and all have wheel-coulters.

From Frog-mill to Crickly-hill, which leads into Gloucester Vale, the beauty of landscape is great. Six miles from the former, from the top of an hill, is seen to the right a most prodigious prospect, over an extensive vale, bounded by Cheltenham hills, which seem to tower quite to the clouds; the inclosures appear in a bottom under you, and are very distinct. On the whole, it is inferior only to that amazing one of Billelicay. All this country is full of picturesque views; the romantic spots of Crickley-hill are exceedingly fine, or rather the whole forms a complete piece of sublime nature, and is well worthy of attention from those whose nerves will suffer them to relish those sorts of objects.

The husbandry of this tract does not materially differ from the preceding ones. Their course of crops is, 1. Barley. 2. Clover for two years. 3. Wheat. 4. Pease. They reckon two quarters middling crop of wheat, and the same of oats, and of barley three. Rents run from six to twelve shillings an acre, but in general six or seven shillings. The farms above hill are large, from two to three hundred a year, and some more; but in the Vale of Gloucester they are much less. What grass they have they mow; very few beasts are grazed, and but few dairies, except in the Vale, where they have all that fine breed of hogs, which at Barnet market are called the Shropshires, with exceeding long carcasses, and long slouching ears, which almost trail upon the ground, to make way for their noses. Sainfoine is much sown in all this country, and lasts generally about ten years, some longer; and their method of breaking it up, as well as sheep-pastures, after they have laid about ten years, is by paring and burning; they take off the surface about half an inch thick, and plough in the ashes for turnips, sometimes for wheat. The price of this work is something under twenty shillings an acre. Oxen are much used for all the purposes of husbandry; never less than six in a plough, frequently eight. They are reckoned the most profitable by some farmers, and horses by others; but it is generally agreed, that when a man keeps two teams, it is ever the most profitable to have one of them of oxen.

PRICE OF LABOUR.

In winter, &c. to hay-time, eight-pence, nine-pence, and ten-pence. The stoutest fellows often want work for nine-pence, and cannot readily get it.

In hay-time, for mowing, one shilling, and one shilling and two-pence.

In harvest, one shilling and eight-pence.

Reaping wheat per acre, four and five shillings.

Mowing spring corn, ten-pence, and one shilling.

Threshing wheat, two shillings a quarter.

———— barley, one shilling.

———— oats, ten-pence. All this exceedingly cheap.

IMPLEMENT S.

A stout waggon costs from sixteen to twenty pounds; and a plough ironed complete for half a guinea, which is amazing.

MANUFACTURES.

The principal manufacture of this county is woollen cloth; and it was computed, that before our wool began to be clandestinely exported to France, fifty thousand pieces of cloth were made yearly in this county, which being estimated at ten pounds a piece, the fine with the coarse amounts to five hundred thousand pounds.

CITY, and MARKET TOWNS.

The city is Gloucester; and the market-towns are, Berkeley, Campden, Cheltenham, Cirencester, Colford, Great Dean, Dursley, Fairford, Letchlade, Marshfield, Minching-hampton, Morton in Marsh, Newent, North Leech, Painswick, Sodbury-Chipping, Stanley-Leonard, Stow on the Would, Stroud, Tetbury, Tewksbury, Thornbury, Wickware, Winchcomb, and Wotton under Edge.

We entered this county from Warwickshire, and first visited Campden, or Camden, a town of great note in ancient history, for a congress held here by all the Saxon kings, in the year 689, to consult how to carry on the war jointly against the Britons. It is situated on the borders of Worcestershire, at the distance of eighty-seven miles from London. It was incorporated by king James I. and is governed by two bailiffs, twelve burgesses, and a high steward. Here is a church, in which are many fine marble monuments, the most sumptuous of which is supported by twelve marble pillars, and was erected in memory of Sir Baptist Hicks, viscount Campden, who built an alms-house for six poor men, and the same number of women, and rebuilt the market-place.

Here are also two charity-schools, one for cloathing thirty girls, and teaching them to read, knit, and spin; the other is for teaching twenty-four poor children to read. There is likewise a grammar-school in this town, endowed with sixty pounds a year, for a master and usher. There are some remains of a feat built here by lord Camden, which the Royalists burnt down in the civil wars, that it might not be a garrison for the parliament. This town is famous for its manufacture of stockings.

Here is a weekly market on Wednesday, and four annual fairs, viz. Ash-Wednesday, the twenty-third of April, the twenty-fifth of July, and the third of November, for horses, cows, sheep, linen-cloth, and stockings.

Morton in Marsh contains nothing worthy of notice, except that the Roman Fosse-way passeth through it.

Here is a weekly market on Tuesday, and two annual fairs, viz. the fifth of April, and the tenth of October, for cattle.

Within a mile of this town, in the great road from London to Worcester, are the four shire stones, where the counties of Gloucester, Warwick, Oxford, and Worcester meet.

Winchcomb, the next town we visited, was anciently a county or sheriffdom of itself, and was a borough in the reign of Edward the Confessor. Here is an almshouse, founded, but not endowed, by the lady Dorothy, wife of Edward lord Chandois, for twelve poor women. This town is small, distant from London eighty-seven miles, and situated in a bottom, in the midst of good pasture and arable lands. The inhabitants formerly planted tobacco here with great advantage, till they were restrained in the twelfth year of king Charles II. after which, the town, by little and little, decayed, and is now poor and inconsiderable. The church is a good building, hath two isles, a large chancel, and a lofty tower, adorned with battlements and pinnacles. It is remarkable, that it is a curacy worth no more than ten pounds a year, though the impropriation is valued at three hundred pounds *per annum*.

King Offa is said to have built here a nunnery in 787; and in 798, king Kenulph laid the foundation of a stately abbey for three hundred monks, and dedicated it to the Virgin Mary. Its lands being afterwards alienated, and its bishopric become corrupt, Oswald, who was bishop of Worcester in 985, reformed the discipline, recovered the lands, and dedicated the house to St. Kenulph, the martyred son of the founder. At the general dissolution, it was in the possession of Benedictine monks, and valued at seven hundred and fifty-nine pounds eleven shillings and nine-pence *per annum*.

This town has a weekly market on Saturday, and two annual fairs, viz. the sixteenth of May, and the twenty-eighth of July, for horses, sheep, and horned cattle.

At Hales, near Winchcomb, Richard earl of Cornwall, and afterwards king of the Romans, and emperor of Germany, began in the year 1246, and, at the expence of ten thousand marks, finished, in the year 1251, a noble abbey for monks of the Cistercian order, brought from Beaulieu, near New Forest, in Hampshire. It was dedicated to the Virgin Mary and All Saints, and valued, upon the dissolution, at three hundred and fifty-seven pounds seven shillings and eight-pence *per annum*.

We next proceeded on to Stow on the Would, called in all records Stow St. Edward. This town, from its high situation, is so much exposed to the winds, that the inhabitants are said to have but one element, viz. air, there being neither wood, common, field, nor water, belonging to the town. It is distant from London seventy-seven miles, is governed by two bailiffs, and has a large church, with a high tower, which contains several monuments. Here is an hospital, alms-house, and free-school; besides other charitable institutions, all well endowed, the poor here being very numerous. Here are some good inns, and the Roman Fosse-way passes through this town.

There was an hospital here, said to have been founded by Ailmar, who was earl of Cornwall and Devonshire, about the year 1010. It was dedicated to the Holy Trinity,

Trinity, and intended for the maintenance of poor women, and a chaplain. The revenues of it amounted to twenty-five pounds fourteen shillings and eight-pence yearly.

This town has a weekly market on Thursday, and two annual fairs, viz. the twelfth of May, for horses, cows, sheep, and cheese; and the twenty-fourth of October, for saddlers, shoe-makers, ironmongers wares, hops, and sheep. For sheep this is a very noted fair; 'tis said that twenty thousand were sold here at one time.

Northleech, or Northleche, is so called from its situation upon the river Leche, at the distance of eighty miles from London. It is governed by a bailiff and two constables. Here is a neat church, several almshouses, and a good grammar-school, which is free to all the boys of the town, and endowed with eighty pounds a year by Hugh Westwold, Esq; who being afterwards reduced, solicited the trustees to be master of it, but was denied. By a decree of Chancery, in the reign of king James I. this school was settled on Queen's College, Oxford.

This town has a weekly market on Wednesday, and three annual fairs, viz. Wednesday before the twenty-third of April, for cows and sheep; Wednesday before the twenty-ninth of September, for horses and small ware; and the third Wednesday in May, for cheese and cattle.

Fairford, the next town through which we passed, took its name from a ford which was formerly in this place, over a small river that runs into the Thames, called the Coln, on which this town stands. It is distant from London seventy-eight miles, and has two good bridges cross the Coln.

Many medals and urns are often dug up here; and in the adjoining fields are several barrows, supposed to have been raised over some considerable persons who have been slain here in battle, though it does not appear from history that any battle was ever fought in or near this place.

A great many charities are still subsisting in this town; but what it is chiefly remarkable for, is its large, handsome church, and the admirable painting of the windows, of which the following is an exact description and history.

John Tame, a merchant of London, purchased this manor of king Henry VII. to whom it descended from the Beauchamps, earls of Warwick. Having taken a prize-ship, bound for Rome, wherein he found a great quantity of painted glass, he brought both the glass and the workmen into England. The glass was such a curiosity, that Mr. Tame built this church at Fairford, (dedicating it to the Virgin Mary); which is in length one hundred and twenty-five feet, and fifty-five in breadth; and has three chancels, a good vestry, and a noble tower, arising from the midst of it, adorned with pinnacles; and the windows of the church, twenty-eight in number, he caused to be glazed with this invaluable prize, which remains intire to this day, the admiration of all that see it.

Mrs. Farmer (a daughter of the lord Lemster) gave two hundred pounds to be laid out in mending and wiring the windows: this has preserved them from accidents. And, in the grand rebellion, the impropiator, Mr. Oldworth, and others, (to their great praise be it remembered!) took down the glass, and secured it in some secret place, thereby preserving it from fanatic rage. The painting was the design of Albert Durer, a famous Italian master; and the colouring in the drapery, and some of the figures, is so well performed, that Vandyke affirmed, the pencil could not exceed it.

The subject is all scripture history; viz. the serpent tempting Eve; God appearing in the burning bush to Moses, when a shepherd; the angel conducting Joshua to war; Gideon's fleece; the queen of Sheba's visit to Solomon; king David judging the Amalekite regicide; Samson slaying the Philistines, killing the lion, and his being betrayed by Dalilah; Solomon's judgment between the two harlots; and the figures of the twelve major prophets.

But the greatest part is taken up with the stories of the New Testament: the angel appearing to Zacharias; Joseph and Mary contracted; the visitation of Mary by the angel, and her visiting her cousin Elizabeth; our Saviour born in a stable; the shepherds and Magi visiting him there; Herod waiting the return of the wise men; Christ circumcised; the purification of the holy Virgin; Simeon with our Saviour in his arms; Joseph's flight into Egypt; Herod slaying the young children of Bethlehem; the assumption of the Virgin, and Joseph and she seeking Jesus at the feast; our Saviour's transfiguration; Mary anointing his head; the disciples going to embalm him, and the angel relating to them his resurrection; Christ's appearance to Mary Magdalen; his riding to Jerusalem on an ass; Zaccheus, and the people stirring palm-branches, and children crying, Hosanna; his praying in the garden; Judas betraying him; Pilate judging him, and washing his hands from the guilt; the crucifixion between two thieves, the women standing by, and the soldiers watching him; Joseph of Arimathea begging the body, and receiving it; his burial by Nicodemus, and others; the darkness at the passion; and Michael contending with the devil.

Christ's travelling to Emmaus, and his appearance to the eleven, and afterwards to Thomas; his disciples going a-fishing, and Christ's appearing to them, with the breaking of the net, and broiling of the fish; Christ's ascension; and the descent of the Holy Ghost in cloven tongues.

In the west window is the Last Judgment, curiously designed, and well executed, containing a vast number of incidents relating thereto.

In the rest of the windows are many historical passages, that happened after Christ's ascension; viz. the twelve apostles at large, with the article of the Creed they are said to be severally the authors of; the four Evangelists, as writing the gospels; four principal fathers of the church, viz. St. Jerom, St. Gregory, St. Ambrose, and St. Austin; the worthies that have preserved the Christian church, in four upper windows of the middle isle on the south side, and the persecutors thereof in the four opposite windows.

John Tame, Esq; the pious and worthy founder of this noble structure, died in the year 1500, and was buried on the north side of the church, under a raised marble monument.

Fairford has a weekly market on Thursday, and two annual fairs, viz. the fourteenth of May, and the twelfth of November, for sheep and cattle.

At Quevington, near this town, there was a preceptory of Knights Hospitallers of St. John of Jerusalem, to whom this manor was given by Agnes de Lasico, or Lacy, and her daughter Sibylla, before the reign of king John. It was valued, upon the dissolution, at one hundred and thirty-seven pounds seven shillings and a penny *per annum*.

William Longefne, earl of Salisbury, in the year 1222, gave the manor of Hethorp, somewhere in this county, to certain monks and brethren of the Carthusian order, assigned part of his revenues towards building of a monastery for them here; and by his will, made in the year 1225, he bequeathed to them church-plate, vestments, relics, and a stock of cattle; but the religious here, after some few years stay, not liking their habitation, prevailed with the countess Ela, relict of their founder, to remove them to Henton, near Bath, a city of Somersetshire.

From Fairford we continued our journey to Letchlade. This place derives its name from being built on a spot of ground formerly called the Lade, and a small river running near it, called the Leech. It stands upon the river Thames, on the borders of Oxfordshire and Berkshire, at the distance of seventy-four miles from London. It is generally believed to have been anciently a Roman town, from a very plain Roman road, which runs from hence to Cirencester. Some are of opinion, that it was once a famous university for teaching Latin, as Creek-Lade was for Greek.

The Thames, after having been formed by the conjunction of the Leech, the Coln, the Churn, and the

Ifis,

Ifis, begins to be navigable in this town, and barges come to its quay to take in butter, cheese, and other goods for London, which renders this place not inconsiderable.

A priory of Black canons, or rather an hospital, for a master or prior, and certain poor and infirm brethren, dedicated to St. John the Baptist, was founded here near a bridge over the Thames, from hence called St. John's Bridge, given to this use by the lady Isabel Ferrers, wife of Hugh Mortimer, before the thirtieth of king Henry III. but this house being decayed, king Edward IV. in the twelfth year of his reign, gave his mother, Cicely, dutchess of York, leave to get it dissolved, and then to apply the revenues of it to the endowing of a perpetual chauntry of three priests, at the altar of St. Mary, in the parish church here, which continued till Dean Underwood, in the time of Henry VII. found means to place two of these chauntry priests at Wallingford College, in Berkshire, while the third remained at Letchlade.

This town has a weekly market on Tuesday, and two annual fairs, viz. the tenth of August, for cattle and toys; and the ninth of September, for cheese and cattle.

The ancient building lately discovered by digging in a meadow near Letchlade, deserves particular mention. It is fifty feet long, forty broad, and four high, supported with one hundred brick pillars, curiously inlaid with stones of divers colours of tesseraic work, and supposed to be a Roman bath.

Not far from it are the two towns, called Sarney, so named by the Saxons, from the Roman causeways; *Sarn*, in that language, and at present, signifying a paved way.

Having viewed Letchlade, we passed on to Cirencester, commonly called Cicester, which name it derived from having been a *cester* or *castle*, upon a small river called the Churn, that falls into the Thames at Crekelade, a borough town of Wiltshire. Cicester is distant from London eighty-five miles, is divided into seven wards, and is by some thought to be the oldest, and to have been formerly the largest town in the county. King Henry IV. gave it a charter, and several privileges; and queen Elizabeth granted it another, by which it was governed by a steward and bailiff; and it is now governed by two high constables, and fourteen wardsmen, over seven distinct wards, who are appointed yearly at the court leet. It is a post town, and maintains a stage coach to London. Here were formerly three parish-churches, one of which only now remains: this is a fine, large, beautiful structure, with two isles, supported by strong pillars: the chancel is handsomely decorated; it has five chapels adjoining to it, and a neat lofty tower, with an excellent ring of bells in it. There are twenty-eight windows in this church of painted glass, representing scripture history, and the history of several fathers, martyrs, and persecutors of the Christian church; and exhibiting the several religious orders of the church of Rome, from the Pope to the Mendicant Friar. Here is a free-school, and a charity-school for about nineteen children, and several hospitals and alms-houses. The manufactures of woollen in this town are very considerable, some idea of which may be formed from the great consumption of wool here, there having been some years no less than five thousand packs brought hither from Leicestershire, Northamptonshire, and Lincolnshire, and sold to the clothiers of Gloucestershire.

This town was of great repute in the time of the Romans and Saxons. Its eminence among the first appears by the many remains of Roman antiquities and ancient coins that have at different times been dug up in and near this place; particularly several pillars and pavements, supposed to have been those of a temple and bath; and the frequent mention of it in the histories of the Saxons, who, 'tis said, built an abbey, which was repaired by Henry II. makes it probable, that it bore a considerable figure among the latter. They took it from the Britons, after a long defence of it, in 577; the Mercians took it from the West Saxons in 656, and the Danes took it from the Mercians in 879. In the year 1020, king Canute held a general council here. Two

Roman consular ways cross each other at this place; one of which is still visible, with a high ridge all the way to Birdlip-hills, south of Cheltenham; and the other may be traced to Crekelade, a borough town of Wiltshire. Little of the abbey is now left, except two old and indifferently gate-houses. Here is a monument of earth, called Grismund's Tower, in the form of a wind-mill-hill, in the inside of which there were found human bones, said to have been of an extraordinary size, with some ashes in a vessel of lead.

Cirencester is thought to have been the ancient *Corinium* of the Romans, mentioned by Ptolemy, and the *Durocornovium* of Antoninus, and said to be rebuilt by Cissa, a viceroy under one of the Saxon kings, a great and populous city; then inclosed with walls, and a ditch of vast compass, which may be traced quite round. The foundation of the wall is also very visible in most places. A good part of this circuit is now pasture, corn-fields, and gardens, besides the site of the present town. Antiquities are dug up here every day; old foundations, houses, and streets, and many mosaic pavements, with rings, intaglia's, and coins innumerable, especially in one great garden, called Lewis's Grounds, which might have been the *Prætorium*, or general's quarters; for *Llys*, in British, signifies a palace. Large quantities of carved stones are carried off yearly in carts, to mend the highways, besides what have been used in building. A fine mosaic pavement was dug up here *anno 1723*, with many coins. One Mr. Richard Bishop lately dug up in his garden a vault sixteen feet long, and twelve broad, supported with square pillars of Roman brick, three feet and an half high, on which was a strong floor of terrace. Near it are now several other vaults, on which cherry-trees grow. These might have been the foundations of a temple; for in the same place they found several stones of the shafts of pillars, six feet long, and large stone bases, with cornices very handsomely moulded, and carved with modillions, and other ornaments, which are now converted into swine-troughs, and pavements before the door. Capitals of these pillars were likewise found. A mosaic pavement near it, and intire, is now the floor of his privy.

At Cirencester there was a rich college of prebendaries before the Conquest; and in 1117, king Henry I. built here a stately monastery for Black canons; he dedicated it to the Virgin Mary; and it was so liberally endowed by him, and several succeeding kings, that at the dissolution it was valued at one thousand and fifty-one pounds seven shillings and a penny *per annum*.

St. Laurence's Hospital, in this town, was founded in the time of Edward III. by Edith, lady of Wigold, for a master, and two poor women. The master was formerly nominated by the abbot, but is presented by the king. The two poor women have at this time about two shillings and six-pence *per week* each.

St. Thomas's Hospital was founded for decayed weavers, by Sir William Nottingham, who died in the year 1427. This also is yet in being, under the government of the Weavers Company.

This town sends two members to parliament, has two weekly markets, on Monday and Friday; and three annual fairs, viz. Easter-Tuesday, the eighteenth of July, and the eighth of November, for cattle, sheep, horses, wool, oil, and leather. The fair for wool is as considerable as that of any in England.

East of this town, at the distance of about a quarter of a mile, is Starbury-Mount, a barrow where Roman coins have been frequently dug up.

Continuing our journey to the west of Cirencester, we entered Minching-Hampton, so called from its having belonged to the Minching nuns at Caen, in Normandy.

This town is distant from London ninety miles: Here is a good rectory church, worth two hundred pounds a year, large, and in the form of a cross, with isles on each side, and a tower, with battlements rising in the middle. In the north isle are many inscriptions of benefactions; and in that on the south side is the statue of a man lying cross-legged, with a sword and shield by him, and his wife lying at his feet.

It is said there was a nunnery here before the Conquest, but no particular accounts of it are to be found.

The manor of this place was given by William the Conqueror to the nunnery of the Holy Trinity at Caen in Normandy; and after the seizure of the lands of the foreign monasteries, it was given by king Henry VI. and king Edward IV. to the nuns of Sion, in Middlesex; and, as a part of that nunnery, was valued, upon the dissolution, at one hundred and seventeen pounds sixteen shillings and eleven-pence *per annum*.

This town has a weekly market on Tuesday, and two annual fairs, viz. Trinity-Monday, and the twenty-ninth of October, for cattle and cheese.

Leaving this place, we came to Tetbury, a considerable cloathing-town, at the distance of ninety-three miles from London, situated on a rising ground, in an healthy air, but scarce of water in summer. 'Tis well built, has a large market-house, well frequented, for yarn; and there is a lesser market-house, for cheese, bacon, and other commodities. It is governed by a bailiff; and at the end of the town is a long bridge, whereof one half is in Wiltshire. The church is a vicarage, worth one hundred and twenty pounds a year: it is a good building, large and handsome, in which are divers monuments. Here are a free-school, and an alms-house. It had formerly a castle, built by Dunwallo Malmufius, a British prince. The town seems to be well furnished with every thing but water, which is so scarce, that the inhabitants are obliged to buy it at the rate sometimes of eighteen pence for an hoghead. In this parish rises the river Avon, which runs through Bristol, and afterwards falls into the Severn.

Tetbury has a weekly market on Wednesday, and two annual fairs, viz. Ash-Wednesday, and the twenty-second of July, for cattle, lambs, sheep, and horses.

A little to the north of this town is a meadow, called Maudlin Meadow, because, as we were told, it belonged to Magdalen College, in Oxford. Here the inhabitants shewed us the head of a spring, which flowing from thence, runs along an hedge-trough; and some tops of the wood, that grows in the hedge, rotting, and falling into this rill of water, are by it turned into stone. We took up a great many of them, which are generally in the shape of the pipes (as they are commonly called) which the peruke-makers curl their hair upon, and of a whitish, stony substance. We broke divers of them, and in the middle found generally a stick of wood, some as big as a goose-quill, others larger; some had but a thin stony crust about them; in others the stick was no bigger than a large needle: again, some had no stick in them, but only an hole through them, like that of a tobacco-pipe; and in some others we could perceive no woody substance, nor hole at all, but the whole was a soft kind of stone. Hence we guess, that the sand, which the water brings down with it, gathers and crusts about those sticks; and that, in time, the stick consumes, and the stony or sandy substance fills up and supplies its place.

At Kingfort, in the neighbourhood of Tetbury, it has been common, after a shower of rain, to find Roman coins in the fields, which the people call Chesse-money; and not far from this village are still to be seen the traces of a large camp, now called Bury-hill.

Peverstone Castle, about a mile north-east of this town, was built in the reign of Edward III. by Thomas earl of Berkley, out of the ransom of the prisoners he took at the battle of Poretiers, under the Black Prince.

Leaving Tetbury, we continued our journey, and entered Marshfield, situated in the road to Bristol, on the borders of Wiltshire, at the distance of one hundred and three miles from London. It is governed by a bailiff, who has the power of punishing offenders within its precincts. The town consists chiefly of one street of old buildings, near a mile long: it has a large church, with several monuments and inscriptions in the isles and chancel. Here is an alms-house, with a chapel belonging to it, well endowed, for eight poor people; founded by Mr. Alderman Crisp of London.

This town carries on a considerable trade in cloth

and malt, and is famous for cakes. It is said there was formerly a nunnery here, but no accounts of it remain.

Here is a weekly market on Tuesday, and two annual fairs, viz. the twenty-fourth of May, for horned cattle; and the twenty-fourth of October, for sheep, horses, and cheese.

From this town we passed to the city of Bristol, which has been already described in our survey of Somersetshire, and passed through Kingswood Forest, in the hundred of Wotton, near the city of Bristol, containing about five thousand acres, but formerly many more. It consists chiefly of coal mines, the property of which is vested in several gentlemen by patent. The constableness of this forest was, by king Edward IV. granted to Humphrey Stafford of Hooke, a branch of the family of the earls of Stafford; but at the restoration of the office of keeper of this forest, and of Filwood, was granted to colonel Humphrey Cooke. 'Tis a controverted point, whether this is a forest, or only a chase; for 'tis said to have been dependent on Miclewood, which has been long ago destroyed; and Kingswood itself was deforested in the reign of king Richard I.

It takes its name from a neighbouring parish upon the river Avon, which, though encompassed round by Gloucestershire, in the same diocese; and though it is seven miles from the nearest part of Wiltshire, yet is in the latter county, and under the power of its sheriffs and justices. The houses are as compact as in a market-town: and its cloth manufacture, which has been very considerable, made it tolerably large and populous. The whole parish is tythe-free, by virtue of a grant to an abbey which was founded in it in the year 1139. Here is now a small chapel, and a charity-school, founded and endowed by a private gentleman.

On the edge of this forest, and on the bank of the Avon, about a mile from Bristol, at a place called Conham, are those famous works for smelting of copper, a particular description of which we have already given in our account of Somersetshire.

About four miles to the north of Bristol, is a pit in a rock, whence lead ore was formerly dug, called Pen Park Hole. The descent is narrow, in the form of a tunnel, being about two yards wide, and forty deep. After passing through the rock, it opens into a cave, seventy-five yards long, forty-one broad, and nineteen high. In this cave there is a pool of sweet water, twenty-seven yards long, twelve broad, and five and a half deep.

About a mile and a half from Bristol is St. Vincent's rock, and the famous hot well so celebrated for curing the diabetes, and other disorders; a full account of which has been already given in our survey of Somersetshire.

Chipping-Sodbury, the next town we visited, is an ancient borough, originally governed by a bailiff; but in 1681, it was made a corporation, with a mayor, six aldermen, and twelve burgeses, by king Charles II. On the second of January, 1688, it was again discontinued by a proclamation of king James II. King Stephen granted the bailiffs and burgers of this place the same liberties as those of Bristol, and allowed every burger commonage for a heifer in a place called the Rodings; and they are still empowered to distribute eighty-eight cow-pastures to as many of the inhabitants, and eight acres of meadow for their own lives, and those of their widows; and as they fall, to grant them again in the like manner. This town is distant from London one hundred and three miles; and being a great thoroughfare in the road from Bristol to Cirencester and Oxfordshire, is well provided with good inns. Here is a spacious church, though it is but a chapel of ease to Sodbury, a village in the neighbourhood. Here is likewise a free-school, and other charities.

There is a weekly market here on Thursday, and two annual fairs, viz. the twenty-third of May, and the twenty-fourth of June, for cattle, cheese, and pedlary.

About three miles distant from this town lies Bodmington Magna, in the hundred of Grombaldash, a seat of the duke of Beaufort's; which, for its stately parks, pleasant walks, fine gardens, variety of fountains, and other contrivances for recreation and pleasure,

as well as its noble mansion-house, may justly be esteemed one of the compleatest in England; and king William, who came hither from King-road, where he landed on his return from his expedition to Ireland, was so well pleased with this retreat, that he told the duke, he was not surprized at his absenting himself from court, when he had so sumptuous a palace of his own.

In the fields near Badmington are found cylindrical and spherical stones, almost as big as common balls.

We next passed through Wickware, a small town, but a very ancient corporation, governed by a mayor and aldermen: the mayor, after having served that high office, remains an alderman for life. This town stands at the distance of one hundred and one miles from London, and is well watered by two brooks, over one of which is a handsome stone bridge. The church is a large edifice, with two chancels. The tower is at the west end, high, and adorned with pinnacles. Here is a free-school, and the neighbouring wastes afford plenty of coal. This town is greatly indebted to one Alexander Horsea, a native of this town, and poor, who, when a boy, run away from his parents, but met with such amazing turns of good fortune in the world, as enabled him to give six hundred pounds to build a school-house here, endowing it with a very good house in Gray's-Inn-lane, London, for the maintenance of the school-master, which gift is settled by a decree in Chancery.

In the garden of the manor-house of this town, is a chefnut-tree, which measures nineteen yards, or fifty-seven feet in circumference, at the height of six feet above the ground, and is supposed to have been planted during the reign of king John, about the year 1216.

Here is a weekly market on Monday, and two annual fairs, viz. the fifth of April, and the second of July, for oxen and horses.

We then came to Thornbury, situated two miles from the eastern bank of the Severn, on a rivulet that runs into it, and at the distance of one hundred and six miles from London. The town, which gives its name to the hundred, has a customary, or titular mayor, twelve aldermen, who must previously have been mayors, and two constables. In the civil wars it was fortified for king Charles I. as a check upon the garrison of Gloucester. The church here is large, in the form of a cathedral, with spacious isles on each side, together with a cross, and a beautiful high tower at the west end. Here are four small alms-houses, and a free-school.

Here are still to be seen the foundations of a magnificent castle, begun, but never finished, by Edward duke of Buckingham, who was beheaded in the reign of king Henry VIII.

This town has a weekly market on Saturday, and four annual fairs, viz. Easter-Monday, the fifteenth of August, Monday before St. Thomas's day, and the twenty-first of December, for cattle and horses.

Oldbury, upon the river Severn, and near Thornbury, was a Roman station; and Antoninus says, that here was the trajectus or passage over the river Severn. In this place are two large Roman camps; and at Alveston, not far from Oldbury, is a large round camp on the edge of a hill, from whence there is a beautiful prospect of the Severn. Near the camp is a large barrow, in which were found several stone coffins, with bones in them: and at a place called Castle-hill, not far from hence, is another camp still to be seen, being an oblong square with a single ditch.

This trajectus or passage over the Severn was afterwards removed to Aust, a hamlet of Hanbury, on the banks of the Severn, and formerly called Aust Clive, from its situation upon a craggy cliff; but the inconvenience and danger of the passage rendered it necessary to remove it. Accordingly, about thirty years ago, the ferry was fixed at a place called New-Passage, about two miles lower down the Severn, which is reckoned safer, and much more pleasant. This, however, may truly be said of Aust, that it has a neat chapel, and a high tower at the west end, adorned with pinnacles.

Continuing our journey, we came to Berkley, in the hundred of the same name, and near the Severn, at the distance of one hundred and eleven miles from London.

It is the largest parish in the county, being twenty-four miles in compass, and is an ancient borough, governed by a mayor and aldermen, and gives title of earl, as well as surname to the ancient family of Berkleys. The Severn, for almost six miles, runs by this parish, which lies so low, that it is esteemed neither pleasant nor healthy. The mayor is sworn at the court-leet of the earl of Berkley, who is lord of this manor, as well as the castle, which is termed in old records, The Honour of Berkley, and is one of the largest in England, most of the towns in the hundred, and many other places in the county, being in all near thirty parishes, depending on it: for which a fee-farm rent was paid in king Henry II's time, of five hundred pounds seventeen shillings and two-pence, which shews the vast extent and value of this estate, even in those days. It belongs to the present earl of Berkley, who is also baron of Dursley. The castle is a strong, magnificent, though antique building, and the ancient seat of this noble family, which is scarce to be paralleled by any subject for the nobility of its extraction. It is agreed by all our historical writers, that king Edward II. of England, was murdered in this castle: they shew the apartments where they say that the king was a prisoner, but they do not admit he was killed there. Here is a large, spacious church, with stately monuments belonging to the Berkley family, an isle on each side, and a chapel adjoining, a neat vestry, and a strong high tower. There is a charity-school in this town. Here was a nunnery long before the Conquest, which was suppressed by the villainous contrivance of Godwin earl of Kent, who procured many of the nuns, and the abbess herself, to be debauched, in the time of king Edward.

An hospital of St. James and St. John, in this place, is mentioned in a deed of the twelfth year of king Henry III. but no particulars are known about it.

This town has a weekly market on Wednesday, and an annual fair on the fourteenth of May, for cattle, and pigs.

At Longbridge, near Berkley, a priory or hospital was founded by Maurice lord Berkley, in the time of king Henry II. It was dedicated to the Holy Trinity, and afterwards augmented with two chauntry priests by William marquis of Berkley.

At Lewing, near this town, the same Maurice lord Berkley is said to have founded an hospital in the time of king Henry II.

At Woodchester, in the neighbourhood of Berkley, probably in the time of Edward the Confessor, Gueta, wife to Godwin earl of Kent, is said to have built a religious house, to atone for her husband's guilt in corrupting the nuns at Berkley.

From Berkley we proceeded to Wotton under Edge, situated on a pleasant and fruitful eminence, at the distance of ninety-nine miles from London. It is a pretty town, and long since noted for the making of cloth. The chief magistrate, who is chose yearly at the earl of Berkley's court-leet, is called a mayor, and is ever after an alderman. Here is a large stately church, which is a vicarage, and hath two wide isles, and an high handsome tower, adorned with battlements and pinnacles. In this church are several tombs and monuments, chiefly belonging to the Berkley family. Here are also a free-school, and an alms-house for six poor men, and six women. The town is well supplied with water, which was brought hither at the expence of Hugh Perry, Esq; alderman of London, in the year 1632.

Here is a weekly market on Friday, and an annual fair on the twenty-fifth of September, for cattle and cheese.

At Alderly, near this town, are some hills, on which great numbers of stones, in the form of cockle and oyster shells, are found. A variety of conjectures have been formed with regard to the origin of these stones; some considering them as a *lusus naturæ*, while others will have them to be really the shells of fish thrown up here by the sea at the universal deluge.

At Boxwell, not far from Wotton, there was a nunnery, said to have been destroyed by the Danes.

Dursley,

Dursley, the next place we visited, is ninety-seven miles from London. It is a corporate town, governed by a bailiff and four constables; but has nothing remarkable, except a manufacture of woollen cloth, and a spacious church, with a handsome spire.

This town has a weekly market on Thursday, and an annual fair on the fourth of December, for cattle and pedlars ware.

In the neighbourhood of this town is a rock of incredible durability, and yet easily cut. It is called Puff stone by the country people, who, as a specimen of its durable quality, say, that the walls of Berkley castle, which have very little appearance of decay, though near seven hundred years old, are built of it.

Robert Montgomery, earl of Salisbury, gave, in the reign of William the Conqueror, the manor of Horsely, a little to the north-east of Dursley, to the abbey of St. Martin at Troan, in Normandy, a structure which he himself had founded. In consequence of this donation, a prior and monks were settled here, dependent upon that foreign monastery. This house afterwards became a cell to the convent of Bruton, in Somersetshire, till that structure was totally destroyed at the dissolution of religious houses.

Leaving Dursley, we passed on to Stanley-Leonard, so called from its having once a monastery dedicated to St. Leonard. It is ninety-five miles distant from London, has a charity-school, a market on Saturday, and the annual fairs, viz. the seventeenth of November, the Saturday after St. Swithin; both for cattle and Briffars ware.

In the church of this town was a small monastery of two prior and canons; which being given by Roger Berksey, in the year 1146, to St. Peter's in Gloucester, became a cell of Benedictine monks to that abbey. At the dissolution, there were only three monks, whose annual revenues amounted to seventy-one pounds six shillings and eight-pence.

At Kingley, south of Stanley, there was an ancient priory, endowed with a manor, and dedicated to the Virgin Mary. At length, it became a college and free chapel of secular priests.

At Woodchester, a village near this town, a curious Roman pavement of mosaic work was discovered in the year 1722. It is of a considerable extent, and represents birds and beasts in their natural colours, besides a variety of other devices beautifully executed. And at Cromhall, a village between Wickware and Thornbury, was found, not long ago, another pavement of the same kind, eighteen feet and a half long, and near fifteen feet and a half broad, composed of cubical stones of beautiful colours, strongly cemented.

Stroud, the next town through which we passed, stands on a hill, at the foot of which runs the water called Stroud. It is distant from London ninety-three miles, has a handsome church, ninety feet long, and forty broad; the chancel is thirty feet long, and sixteen wide: at the west end rises an high spire steeple, and a tower in the middle. Here is a free-school, a charity-school, and a work-house.

Here is a weekly market on Thursday, and two annual fairs, viz. the twenty-third of May, and the twenty-fourth of June, for cattle, cheese, and pedlary.

At Bisby, a village near Stroud, was born and educated the famous Friar Bacon, who, from his superior knowledge, gained the reputation of a conjurer. He died in the year 1284.

We then continued our journey northward, and entered Painwick, situated in the most wholesome air of this county, on the river Stroud, at the distance of ninety-four miles from London. The cloathing trade is greatly followed here. The church is a vicarage, and very handsome, with two chancels, a north isle, and a neat spire.

Here is a weekly market on Tuesday, and two annual fairs, viz. Whitfun-Tuesday, and the nineteenth of September, for horned cattle and sheep.

Leaving Painwick, we arrived at the ancient city of Gloucester, which is a well built, clean, healthy town, at the distance of one hundred and two miles from Lon-

don, secured by the river Severn on one side, a branch of which brings up ships to it; beautified with a cathedral, and five parish-churches, and exceedingly well provided with hospitals. It has its name from its fair situation on a pleasant hill. It was a Roman colony, by the name of *Colonia Glevum*, and governed by a consul. It was called a city when London was but a burgh. The Saxons took possession of it about the year 570. Forging of iron seems to have been the business of the town so early as William the Conqueror; for we find in Doomsday, that the tribute required of it was a certain quantity of iron bars. It has had its misfortunes both from wars and fires, but still rose again and flourished; and at length king Henry VIII. having suppressed its abbey of St. Peter here, made it an episcopal see, (with a dean and six prebends) which to this day is its greatest glory; as is next to that, its giving title of duke to his Royal Highness Frederick Prince of Wales. Its castle, which was erected in the time of William the Conqueror, is very much decayed; part of it is leased out by the crown; and the rest serves for a prison, one of the best in England. In its cathedral, which is an ancient, but magnificent fabric, and has a tower, said to be one of the neatest and most curious pieces of architecture in England, are the tombs of Edward II. and of Robert duke of Normandy, son to William the Conqueror; and there is a whispering place, like to that in the cupola of St. Paul's at London. It has beautiful cloysters, in the stile of those at King's College, in Cambridge; and there are twelve chapels in it, with the arms and monuments of many great persons. King John, in the first year of his reign, made it a borough, to be governed by two bailiffs. Henry III. who was crowned here, made it a corporation. By its present charter, granted by Charles II. in 1672, on resignation of its former charters, it is governed now by a steward, who is generally a nobleman, a mayor, recorder, twelve aldermen, out of whom the mayor is elected, a town-clerk, two sheriffs, chose yearly out of twenty-six common-councilmen, a sword-bearer, and four serjeants at mace. Here are twelve incorporated companies for its trade, which was considerable, till lessened by the neighbourhood of Bristol; but pin-making is now one of its chief manufactures. Here is a fair stone bridge over the river, with a quay, wharf, and custom-house. King Edward I. held a parliament here *anno* 1272, wherein several good laws were made, now called The Statutes of Gloucester. King Richard II. also held a parliament here; and king Richard III. in consideration of his having borne the title of Duke of Gloucester, before he acquired the crown, added the two adjacent hundreds of Dudston and Kingsbarton to it, gave it his sword and cup of maintenance, and made it a county of itself, by the name of the County of the City of Gloucester: but after the restoration, the hundreds were taken away by act of parliament, and the walls pulled down, because the city had shut the gates against king Charles I. when he besieged it in 1643. Before that siege it had eleven parish-churches, but six of them were then demolished. Camden is of opinion, with Geoffrey of Monmouth, that this city was honoured with the episcopal dignity in the time of the Britons. Sir William Dugdale gives the name of one of its bishops *anno* 522; and archbishop Usher says, that Theonus was translated from Gloucester to the archbishoprick of London, *anno* 542. Here are abundance of crosses and statues of the kings of England, several market-houses supported with pillars, and large remains of monasteries. Its town-hall, for the assizes, &c. is called the Booth-Hall. Under the bridge there is a machine which raises the water to serve the town; though it is also supplied from Robin Hood's Well, which is a fine walk, a mile or two out of the city. Camden says, that the famous consular way, called Ermin-street, which begins at St. David's in Pembroke-shire, and reaches to Southampton, passes through this city.

Wulphere, the first Christian king of Mercia, is said to have begun a church and monastery here, which were finished by his brother and successor, Ethelred, about the year 680, through the care of Ofric, his nephew, and

and at that time his viceroy in these parts, but afterwards king of Northumberland. It was dedicated to St. Peter. Over this monastery three successive queens presided during more than ninety years: in the time of the civil wars that followed, it became desolate, and continued so fifty years, but some secular priests were placed in it about 823, by Bernulph king of Northumberland: these priests were turned out, and Benedictine monks put in about the year 1022, by command of king Cànute, and at the instigation of Wolstan bishop of Worcester. His successor, bishop Aldred, about the year 1058, new-built the abbey church in a place nearer the city, where it formerly stood; and after the Conquest, abbot Serlo, the Conqueror's chaplain, much increased the number of monks, and the revenues, which amounted, at the dissolution, to one thousand nine hundred and forty-six pounds five shillings and nine-pence *per annum*.

Some of the legendary writers report, that a stately monastery was built here in honour of St. Oswald, the king and martyr, about the year 660, by Merwald, viceroy of the western part of Mercia, and Domneva, his wife: it is also reported upon better authority, that in the year 909, Ethelred, earl of Mercia, and the famous Elfreda, daughter of king Alfred, his countess, translating the relicks of St. Oswald from Bardney, near Lincoln in Lincolnshire, to this place, founded here a religious house, which being deserted by the monks in the Danish wars, became a college of secular priests: it was then accounted a free chapel royal, exempt from the jurisdiction of the archbishop of Canterbury, or the bishop of Worcester; but king William Rufus gave it to the archbishops of York, in lieu of their claims to Lindsey, one of the three divisions of Lincolnshire, and to other parts in that county, which they quitted to the bishop of Lincoln. Henry Murdac, archbishop of York, in the year 1153, placed here a certain number of regular canons of the order of St. Austín, seven of whom continued till the general dissolution, when the revenues were valued at ninety pounds ten shillings and two-pence *per annum*.

Here was a priory of Black canons of the order of St. Augustine, founded by king Ethelstan.

King Henry III. founded, in the parish-church of St. Nicholas, near the West Bridge, in this city, a priory or hospital dedicated to St. Bartholomew, for four infirm brothers and sisters, under the government of a prior or master. In this hospital were once maintained fifty-two poor men; but afterwards it consisted of a master, three brethren, and thirty-two poor men and women. In Dugdale and Speed's valuations, there are two hospitals of the name of St. Bartholomew, in the city of Gloucester; one rated at forty-four pounds seven shillings and two-pence *per annum*, and the other at twenty-five pounds eleven shillings and two-pence *per annum*.

A house or college of Black friars was founded near the Castle Yard of Gloucester, by king Henry III. and Sir Stephen de Hernehill, about the year 1239.

One of the lord Berkleys founded here, not far from the South Gate, in the parish of St. Mary Cript, an house of Grey friars, before the year 1268.

There was a priory of Carmelite or White friars, in the suburb, without the North Gate, said to be founded by queen Eleanor, Sir Thomas Gifford, and Sir Thomas Berkley, in the time of king Henry III.

North of St. Margaret's church, in the parish of St. John Baptist of this city, there is an hospital dedicated to St. Mary Magdalen, but now called St. James's Hospital, which maintains nineteen poor people, at one shilling and six-pence per week each.

This city sends two members to parliament, has two weekly markets, on Wednesday and Saturday, and four annual fairs, viz. the fifth of April, a considerable cheese fair; the fifth of July, the twenty-eighth of September, and the twenty-eighth of November, for cattle, pigs, horses, and cheese.

At Lassington, a village near Gloucester, are found certain stones called the astroites, or star-stones, from their resemblance to a star. Some have supposed them

to be parts of a petrified marine animal; but the general and most probable opinion is, that they are a species of corals. They are striated from the centre to the circumference, and their radii are sometimes prominent above the surface of the mass; sometimes they are level with it, and sometimes sink below it. They are of a greyish colour, and when put into vinegar, will move about for a considerable time.

At Slymbridge, a small village on the banks of the Severn, about ten miles south of Gloucester, there is a family of the surname of Knight, which has been distinguished for many generations, by having five fingers and a thumb on each hand.

At Lanthony, near this city, Milo, earl of Hereford, in the year 1136, founded a monastery, dedicated to the Virgin Mary, and St. John the Baptist, for the Black canons of Lanthony, in Monmouthshire, who were driven out of their habitation by the Welsh. At the time of the dissolution, it was endowed with seventy-eight pounds nineteen shillings and eleven pence a year.

From Gloucester we kept eastward, and soon came to Cheltenham, a market-town, where is still a pretty good trade carried on in malt, but not so considerable as formerly. Here is a good church in the form of a cross, with isles on each side, and a spire rising in the middle, noted for a good ring of bells. But what is more remarkable, is, that the minister is to be nominated by, and must be a fellow of Jesus College, Oxon, (though the vicarage is but forty pounds a year) but approved of by the earl of Gainborough; and he cannot hold it more than six years. Here are a free-school, an hospital, and some other charities.

The mineral waters lately discovered at Cheltenham, which are of the Scarborough kind, are what will make this place still more and more remarkable, and frequented. An eminent physician has obliged us with the following account of their nature and qualities:

‘ These waters, he observes, were first found out by the flocks of all the neighbouring pigeons going constantly thither to provoke their appetites, as well as to quench the uncommon thirst of these salacious birds. I have been informed, says he, by a physician of credit and experience, who had made all the common trials on them, and observed their effects on many persons of various constitutions, and in different distempers, who had drank them, That, on evaporation, they were found to contain, in a gallon, eight drachms of nitrous salt, with two drachms of an alcalious earth: that they were compounded of a large quantity of nitre, to which they owed their purgative virtue; a light sulphur, which the fetid dejections manifested; and a volatile steel, discoverable by a transparent blue colour, when mixed with an infusion of nut-galls. Alcalious spirits have no effect on them, but they ferment with acids. He further adds, That there might be found some other materials in their composition, perhaps, if more minutely examined and tortured: but that these mentioned principles were evident and incontestable, and were sufficient to account for all their effects and operation; the others (if there be any) being of little efficacy. In the operation, they empty the bowels according to their dose, but gently, mildly, and easily, without sickness, nausea, gripes, or causing great lowness, far beyond any artificial purges whatsoever. They give a good appetite, an easy digestion, and quiet nights, in all nephritic and gouty cases, when not under the fit; in all rheumatic, scrophulous, scorbutic, or leprous cases; but especially in spermatic, urinary, or hæmorrhoidal cases, he thinks them sovereign, and not to be matched. In a word, in all inflammatory cases of whatever kind, and whatever part, he thinks them one of the most salutary means which can be used. Those of pretty strong nerves, and firm constitutions, bear them with high spirits, great pleasure and profit; but they do not at all suit with those of weak nerves, paralytic, hypochondriac, or hysterical disorders, or those who are subject to any kind of fits, cramps, or convulsions: they ruffle such too much, as generally all purgatives do. He thinks they have a great affinity

to the Scarborough waters, and might do great cures in most chronic distempers, if exercise and a proper regimen were directed with them.

Here is a weekly market on Thursday, and three annual fairs, viz. the second Thursday in April, and Holy Thursday, for all sorts of cattle; and the fifth of August, for lambs.

Here was a monastery in the year 803, of which no particulars are recorded.

At Henbury, a village about two miles from St. Vincent's Rock, was also a monastery, in very early times, of which there is no account extant.

The Cistercian monks of Kingswood, in Wiltshire, north-east of Bristol, having obtained Haselton, near Cheltenham, about the year 1153, translated their abbey thither; but in the time of Henry II. they returned to Kingswood.

We next visited Tewksbury: it is situated at the conflux of the Severn with the Avon, that runs out of Warwickshire; and these rivers, with the smaller streams of the Carron and the Swallgate, almost surround the town. It is distant from London ninety-six miles, and had its first privileges from king Edward II. they were confirmed by several succeeding kings, and the town was at length reincorporated by James I. It is governed by twenty-four burgeses, two of whom are chosen bailiffs yearly, who are the ruling magistrates, and have jurisdiction within the borough, exclusive of the justices of the peace for the county: this corporation was dissolved by proclamation of king James II. It is a large, beautiful, and populous town, consisting of three well built streets, and many lanes: it has a bridge over three of the four rivers that run by it; and a church, which is one of the largest in England, that is neither collegiate nor cathedral: it is adorned with a stately tower and funeral monuments, particularly several of the earls of Gloucester and Warwick, prince Edward, son of Hen. VI. and the duke of Clarence, brother to Edward IV. Here is a free-school, besides an hospital, endowed with forty pounds a year, by the late queen Mary, to be paid out of the Exchequer, for the maintainance of thirteen poor people, and a reader, who is appointed by the corporation. Near this town is a piece of ground called the Ham, which is a course for horse-races. The chief manufacture here is woollen cloth and stockings; but the town has long been famous for mustard balls, which are sent in great quantities into other parts.

At Tewksbury there was a monastery, first built and endowed by two brothers, Oddo and Doddo, dukes of Mercia, about the year 715: It was dedicated to the Virgin Mary; and having suffered much during the civil and Danish wars, became a priory to Cramborn, in Dorsetshire, about the year 980; but Robert Fitz-Haimon, a noble Norman, who came in with William the Conqueror, enlarged the buildings, and increased the possessions so much, that about the year 1102, the monks of Cramborn chose to remove thither, and make this their principal house of lepers, before the first year of king John.

Doddo, the duke or chief nobleman of Mercia, one of the founders of the monastery at Tewksbury, who became himself a monk at Parshore, a market-town of Worcestershire, is said to have built a monastery at Deerhurst, two miles south of Tewksbury, dedicated to the Virgin Mary, in memory of his brother Almaric, buried in this place. It was afterwards destroyed by the Danes, but rebuilt, and again inhabited before the year 980. King Edward the Confessor gave it, with all the lands belonging to it, to the Benedictine monks of the abbey of St. Dennis, in France, to which it became a cell: by these monks it was sold to Richard earl of Cornwall in the year 1250, when it had eight lordships, and was accounted worth three hundred marks a year. After many alienations, it at last became a cell to Tewksbury abbey, and continued so till the dissolution.

This town sends two members to parliament, has a weekly market on Saturday, and five annual fairs, viz. the seventh of March, the fourteenth of May, the twenty-second of June, the fourth of September, and

the tenth of October, for tanned leather, several sorts of cattle, and pedlary.

From thence we proceeded to Newent. This town took its name from an inn called New-Inn, which was set up here for the accommodation of passengers on their journey to and from Wales. It is situated on a small river, navigable by boats, in the Forest of Dean, at the distance of one hundred and four miles from London. Here is a handsome church, three alms-houses, and two charity-schools.

King William the Conqueror gave the manor of Newent to the abbot and convent of Cormeile, in Normandy, who sent over a prior and some Benedictine monks; and here was a cell, subordinate to that foreign monastery.

Here is a weekly market on Friday, and four annual fairs, viz. Wednesday before Easter, Wednesday before Whit Sunday, the first of August, and Friday after the eighth of September, for cattle, horses, and cheese.

We then passed on to Great Dean, or Michael Dean, the principal town in the Forest of Dean. It is distant one hundred and thirteen miles from London, and consists chiefly of one street. Here is a good church, with a handsome spire. The principal manufacture of this town was formerly cloth, but it is now pins: the hills round this town abound with iron ore, and there are several furnaces for melting it, and forges for beating the iron into flats. The workmen are very industrious in discovering the beds of old cinders, which not being fully exhausted of the metal, are purchased of the owners of the land at a good price; and being burnt again in the furnaces, afford better iron than the ore new dug from the mines. It is a custom among the miners, when one of them gives testimony as a witness, to wear a particular cap; and that he may not defile holy writ with unclean hands, he touches the Bible, when the oath is administered to him, with a stick.

This town has a weekly market on Monday, and two annual fairs, viz. Easter-Monday, and the tenth of October, for cattle, sheep, and horses.

At Flaxley, a village in this neighbourhood, Roger, the second earl of Hereford, after the Conquest, built an abbey in the time of king Stephen, for Cistercian monks: it was dedicated to the Virgin Mary, and at the suppression had nine monks in it, whose yearly revenues were rated at one hundred and twelve pounds three shillings and a penny.

From hence we proceeded to Newnham, an ancient town-corporate, the sword of state being still preserved there, which king John gave them with their charter; and the place is remarkable for its having been the first fortification that was raised on the other side of the Severn against the Welsh; for its having been the manor by which the great place of high constable of England was held, down to the execution of Edward Stafford, duke of Buckingham, on the seventeenth of May, 1521, and for its having given rise to the art of making glass in England; the remains of the first glass-houses that were erected in the kingdom being still to be seen here. The town consists of little more than one long street running north and south, and built upon the high shore of the Severn. It has a vale on the back of it, and is defended on that side with a great bank of earth, which makes the most agreeable terrace-walk. The extremity of the town southward, being the highest part of it, is adorned with a beautiful house and garden, which belonged to Thomas Cromp, Esq; deceased, from whence you have a full view of the whole semielliptical part of the river. The extremity of it northward, being the lowest part, it is adorned with an handsome house and garden, belonging to Mr. Thomas Trigg, an eminent attorney at law: and there being a common ferry here over the Severn, a spacious road running westward, and lately repaired at the expence of his majesty, leads from the town to the forest.

This town has a weekly market on Friday, and two annual fairs, viz. the eleventh of June, and the eighteenth of October, for horses and sheep.

Calford, or Coverd, the next town we came to, is situated in the Forest of Dean, in the road from Gloucestershire

cestershire to Monmouth, the chief town of Monmouthshire, at the distance of one hundred and twenty-one miles from London. Here is a charity-school, but nothing else that deserves notice.

This town has a weekly market on Friday, and two annual fairs, viz. the twentieth of June, for wool; and the twenty-fourth of November, for horned cattle, and cheese.

CURIOUS PLANTS found in Gloucestershire.

Elegant broad-leaved imperforate St. John's Wort; *Androsæmum Campoclaresense*, Park; found on St. Vincent's Rock, near Bristol.

Marsh-Asparagus, or Sperage, corruptly called Sparrow-grass; *Asparagus palustris*, Ger. found in Appleton-meadow, about two miles from Bristol.

The Box-tree; *Baxus arboreseens*, Park; found at Boxwell, in Cotswold.

Daisie-leaved Ladies-smock; *Cardamine pumila Bellidis folio Alpina*, Ger. found on St. Vincent's Rock, near Bristol.

Small autumnal Hyacinth; *Hyacinthus autumnalis minor*; found on the same rock.

English Sea-tree-mallow; *Malva arborea marina nostras*, Park; found on an island called Denney, three miles from King's-road.

Rock-Parsley; *Peucedanum minus*, Park; found on St. Vincent's Rock.

Wild-madder; *Rubea sylvestris*; found on the afore-said rock.

Small Sengrene of St. Vincent's Rock; *Sedum minus rupe S. Vincentii*; found as above.

Knobby-rooted Anemone or Wind-flower; *Anemone tuberosa radice*; grows on Cotswold-hills, near Black-Burton.

Alexanders; *Hippofelinum*, Ger. found on the rocks at Beckley, going down to Ast-ferry.

Finely cut annual Mountain-Cressie; *Nasturtium montanum annuum tenuissimè divisum*; found on St. Vincent's Rock.

Remarks on the NAVIGATION of Gloucestershire.

We have already, in our account of Somersetshire, described the navigation of the Avon, the only river navigable in this county, except the Severn. The mouth of the Severn, at the extremity of Gloucestershire, where the Avon falls into this river, is between five or six miles over, and is indeed a raging and furious kind of sea, occasioned by these raging kinds of tides called the Bore, which flow here sometimes six or seven feet at once, rolling forward like a mighty wave; so that the stern of a vessel is lifted six or seven feet upon the water, when her head is fast a-ground. The Severn is navigable to Welsh Pool, on the borders of Shropshire; and vessels of very large burden, called Troughs, come down the Severn from Gloucester, and other places, loaded with goods, which they carry to Bristol, Bridgewater, and all the southern coasts of South Wales. By this means a very considerable trade is carried on to the great advantage of this county.

We shall consider the navigable canal now making for connecting the Severn with the Humber, when we come to describe the counties through which it is intended to pass.—The navigation of the Wye will be considered in our account of Monmouthshire.

MEMBERS of PARLIAMENT for Gloucestershire.

This county sends eight members to parliament; two knights of the shire for the county, two citizens for Gloucester, two burgesses for Cirencester, and two for Tewksbury.

M O N M O U T H S H I R E.

THIS county is bounded by Herefordshire on the north, by Gloucestershire on the east, by the river Severn on the south, and by the two counties of Brecknock and Glamorgan, in Wales, on the west. Its length, from north to south, is twenty-nine miles; its breadth, from east to west, twenty; and its circumference eighty-four. Usk, which is nearer the middle of the county than any other market-town, is distant one hundred and thirty miles nearly west from London. It is divided into six hundreds, in which are one hundred and twenty-four parishes, seven market-towns, and about six thousand four hundred and ninety houses. It lies in the province of Canterbury, and diocese of Landaff.

This county was, in the time of the Romans, part of the territory inhabited by the Silures, of whom mention will be made in the account of Herefordshire, which was also a part of that district. Monmouthshire was by the ancient Britons called the *Gwent*, as is thought from the ancient city of the same name, which probably was the *Venta* or *Venta Silarum* of the Romans.

The inhabitants were cruelly harassed after the Romans came into England, by the lords of the marches, to whom the kings of England granted all the lands they could conquer from this people.

This county was originally considered as a part of Wales, and continued to be so till near the end of the reign of king Charles II. when it was reckoned an English county, because the judges then began to keep the assizes here, in the Oxford circuit.

R I V E R S.

This county is abundantly watered with fine rivers, the principal of which are, the Severn, the Wye, the Mynow, the Rumney, and the Usk. The Severn has already been described in our account of Gloucestershire, and the Wye will be in that of Herefordshire. The Mynow, Mynwy, or Monow, rises in Brecknockshire; and running south-east, and dividing this county from Hereford, falls into the river Wye at the town of Monmouth. The Rumney also rises in Brecknockshire; and running south-east, and dividing this county from Glamorganshire, falls into the Severn. The Usk rises likewise in Brecknockshire; and running also south-east, and dividing Monmouthshire into nearly two equal parts, falls into the Severn near Newport, a considerable market-town of this county.

Remarks on the INLAND NAVIGATION *of* Monmouthshire.

The river Wye, which separates this county from Gloucestershire, is navigable for barges to Monmouth, and ships of considerable burden come up to Chepstow, where the water rises with great violence, as we have already observed in our account of Gloucestershire. The river Usk is navigable for barges to Caerleon, and vessels of considerable burden come up to Newport. The navigation might be extended to Abergavenny; but the many falls in its course would render a considerable number of locks necessary, and consequently expensive. In all mountainous countries, indeed, the making of any inland navigation is difficult, and often tedious, though the utility generally answers the expence, and increases the riches of the county.

AIR, SOIL, NATURAL PRODUCTIONS, and MANUFACTURES.

The air of Monmouthshire is temperate and healthy, and the soil fruitful; the eastern parts are woody, and the western parts mountainous: the hills feed cattle,

sheep, and goats; and the vallies produce plenty of hay and corn: the rivers abound with salmon, trout, and other fish. Here is great plenty of coals; and the principal manufacture is flannel.

Remarks on the HUSBANDRY *of* Monmouthshire.

The lands, in many parts of this county, are rich and fertile, and the meadows remarkably fine. The course of crops on their ploughed ground, is, 1. Fallow. 2. Wheat. 3. Pease. 4. Oats. 5. Turnips. 6. Barley. 7. Clover and ray-grass. They use oxen chiefly, many farmers keeping no horses; plough with five, six, and sometimes eight, and use only foot-ploughs of a very clumsy construction. They reckon two quarters and an half a good crop of wheat, and three and an half of barley: about Lidney, land, at an average, lets for fourteen shillings per acre; but in some other places it runs up to twenty shillings, and more.

L A B O U R.

In winter, one shilling.

In spring, one shilling and two-pence.

In harvest, one shilling, and board and beer.

Mowing grass, one shilling and eight-pence per acre, and beer.

Around Chepstow, for some miles, there lies a great quantity of very good meadow-ground, which lets from one guinea to two per acre, but their arable land is in general about twelve shillings. They use oxen chiefly for ploughing, six at a time, and often mix them with horses. Labour, very dear; the same as last mentioned; or if any difference, rather dearer.

About Lanvachers, which is the mid-way between Chepstow and Newport, they have a great mixture of good and bad husbandry. As to all the general œconomy and management of their farms, it is generally bad; for we found them universal in employing supernumerary hands and beasts, without giving their lands a proportionable culture, than which there cannot be a more unprofitable practice: their numbers of each appeared to us pretty much, as twelve oxen and four or five horses to one hundred acres of arable land, and four or five men-servants and boys, and as many labourers most part of the year; which on the whole, ought to be productive of infinitely better, and more garden-like husbandry than is to be met with here: and in the management of their people they are strangely remiss; for notwithstanding their wages are good, yet we found upon inquiry, that they suffered a surprizing degree of idleness among them, and languid execution of their business; and notwithstanding the soil is tolerably light, and many fields level, yet the ridiculous custom of ploughing with six, and even eight oxen, continued here, which strength of cattle never did above an acre a day, and very frequently not above half an acre; and when they carry out their corn to the ports on the Severn, which are at a small distance, they do not load six or eight stout oxen with more than ten sacks, not often more than eight. All these instances are marks of wretched ideas of general management. But with such marks of miserable œconomy, we did not remark any fields of wheat or barley very foul with weeds; but in general clean crops, which is a point of great importance.

Their course of crops is in general as follows: 1. Fallow. 2. Wheat. 3. Barley. 4. Oats. 5. Ray-grass and clover, from three to eight years, then pare and burn; and, 1. Fallow. 2. Wheat. 3. Barley. 4. Clover, two years. 5. Wheat. The first is miserable husbandry, and the latter bad. Their fallow for wheat consists

consists of three ploughings; they sow two bushels of seed (nine gallon measure) on an acre, and reckon a middling crop between fifteen and twenty bushels: they then give two earths for barley, of which they sow three bushels, and consider from sixteen to twenty bushels a middling crop. The oats they sow on one ploughing, three bushels and a half to an acre; fifteen the medium: when they throw beans in, which is no regular husbandry with them, they sow them on one earth, four bushels to an acre; or if they set them, two, and reckon fifteen bushels a middling crop, but never hoe them. If they sow pease, which they likewise throw in irregularly, they give them but one earth to harrow in; but if for under-furrow, then they plough twice; fifteen bushels a medium, but never hoe. Turnips are not commonly sown, not so common as they ought, considering that some of their lands are extremely dry and light, but rich withal; but they never hoe them: their crops, therefore, may easily be supposed without description; they use them chiefly for their sheep, but some feed their oxen with them. What apples they can have, we have no conception, for they sow above a quart of seed on an acre, and all the culture they give them, is that of a harrowing.

Farms are in general small, from forty to two hundred pounds a year, but chiefly from forty to one hundred pounds; and the rents run from seven shillings and six-pence to ten shillings an acre arable, and about twelve or fourteen shillings grass; exceeding fine tracts of land are let on an average at fifteen shillings. Most of the farmers in this neighbourhood are sensible of the superior profit attending grass lands, on comparison with arable, and accordingly they have generally more of it than of ploughed land. Lime is the great manure here; they think little can be done without it; inasmuch, that every large farm has a kiln for burning lime-stone, of which the whole country has quarries. They generally lay on what they call three dozen; some four or five, that is, so many dozen bushels. We were informed in Herefordshire, the farmers go twenty miles, and pay three shillings a dozen for it.

L A B O U R.

Weekly pay, in general, five shillings.

In spring, six shillings.

In harvest, six shillings, and victuals; drink with all.

Reaping wheat, three shillings, and three shillings and six-pence.

Mowing grass, one shilling and six-pence, and a dinner and drink.

But in some villages they are as follows:

In winter to harvest, two shillings and six-pence a week, and victuals and drink.

In harvest, five shillings; and boys of from seven to twelve years of age, from one penny to three half-pence a day.

Reaping, six shillings.

Mowing grass, ten-pence, and a dinner every other day, and drink.

These variations are unaccountable in so small a distance.

Around Newport, though at no great distance from the last named place, we found a variation in some articles, which is worthy minuting: their course of crops is, 1. Fallow. 2. Wheat. 3. Barley. 4. Clover, two years. 5. Wheat. They have but a small proportion of grass to their arable lands, and use oxen in the cultivation; generally six to a plough, which scarcely do an acre a day. For wheat they plough four times, and reckon fifteen bushels a middling crop. For barley they plough three or four times, sow three bushels, and reckon fifteen a middling crop. For oats they plough but once, sow two bushels and a half, and fifteen the medium. They plough likewise but once for beans, and in common never hoe them: but Mr. Kemmish of Newport has introduced the method of setting them in rows, and keeping them clean by hand-hoes. Their culture of turnips is ridicule itself; for they plough but once, and

drag in the seed with ox-drags, then harrowing, and never hoe; the crop may be guessed at. Farms in general run from fifteen to one hundred and fifty pounds a year; and the rent of arable land from five to twelve shillings an acre; and of grass from seven to thirty-five shillings.

L A B O U R.

All the year round, ten-pence a day.

Mowing per acre, one shilling and eight-pence, and dinner and beer. This is out of all proportion.

An ox-boy to drive, four-pence a day.

M A R K E T T O W N S.

The market-towns are, Abergavenny, Caerleon, Chepstow, Monmouth, Newport, Pontipole, and Usk.

We entered this county at Chepstow, crossing the river Wye by means of the bridge. The name of this town is of Saxon original, and signifies *a place of trade and commerce*. It was formerly of great eminence, and much frequented. It stands at the distance of one hundred and thirty-one miles from London, near the mouth of the Wye, and had once a castle.

Chepstow is thought to have arisen from the ruins of an ancient Roman city, at the distance of four miles from it, called *Venta Silurum*. It is still a large, well built, populous town, walled round, and stands upon a hill, close to the river, with several fields and orchards within the walls.

It has a fine timber-bridge over the Wye, no less than seventy feet high from the surface of the water, when the tide is out. As this bridge is reckoned to stand partly in Gloucestershire, it is kept in repair at the expence of both counties. This town is the port for all towns that stand upon the rivers Wye and Lag: ships of good burden may come up to it, and the tides run in with great rapidity, rising commonly six fathoms, or six and a half, at the bridge.

This town has a weekly market on Saturday, and five annual fairs, viz. Friday in Whitsun-week, for horned cattle; Saturday before the twentieth of June, for wool; the first of August, Friday se'nnight after St. Luke, and the eighteenth of October, for horned cattle.

In the year 1607, a fenny tract of country, called the Moor, near the mouth of the river Usk, and not far from Chepstow, was, by a spring-tide, overflowed by the Severn, which swept away many houses, and destroyed a great number of the inhabitants and cattle.

Not far distant from this town, on an eminence near the mouth of the Severn, and a little eastward of the mouth of the Usk, is remarkable for glittering stones, which, when the sun shines, have the appearance of gold; whence this place has obtained the name of Gold Cliff.

At the distance of four miles from Chepstow, are the remains of the Roman town, which we have before mentioned to have been called by Antoninus *Venta Silurum*, and at this day by the Welsh *Caer Went*, or *the City Venta*. The ruins of this city are still about a mile in compass; and here, in the year 1689, three beautiful Roman pavements were discovered, together with several coins, bricks, and other Roman antiquities.

At Tintern, on the bank of a stream that falls into the Wye, between Chepstow and Monmouth, Walter de Clare, in the year 1131, founded an abbey for Cistercian monks, dedicated to St. Mary. About the time of the dissolution, here were thirteen religious, whose revenues were rated at one hundred and ninety-two pounds one shilling and four-pence *per annum*.

Five miles from Chepstow, at a place called Strogle, there was an alien priory of Benedictine monks, belonging to the abbey of Corneil, in Normandy, as early as the reign of king Stephen. It was dedicated to St. Mary, and at the time of the dissolution had three religious, and a revenue of thirty-two pounds *per annum*.

Leaving Chepstow, we passed along the Monmouth road to Persfield, the seat of Mr. Morris. We were shewn into a part of the garden, which consisted of slopes and waving lawns, having shrubby trees scattered

about them with great taste; and striking down a short walk to the left, came at once to a little sequestered spot, shaded by a fine beech tree, which commands a most beautiful landscape.—This little spot, over which the beech-tree spreads, is levelled in the vast rock, which forms the shore of the river Wye, through Mr. Morris's ground: this rock, which is totally covered with a shrubby underwood, is almost perpendicular from the water to the rail which encloses the point of view. One of the sweetest vallies ever beheld lies immediately beneath, but at such a depth, that every object is diminished, and appears in miniature. This valley consists of a complete farm, of about forty inclosures, grass, and corn-fields, intersected by hedges, with many trees; it is a peninsula almost surrounded by the river, which winds directly beneath, in a manner wonderfully romantic; and what makes the whole picture perfect, is its being entirely surrounded by vast rocks and precipices, covered thick with wood, down to the very water's edge. The whole is an amphitheatre, which seems dropt from the clouds, complete in all its beauty.

From thence we turned to the left, through a winding walk cut out of the rock; but with wood enough against the river to prevent the horrors which would otherwise attend the treading on such a precipice. After passing through a hay-field, the contrast to the preceding views, we entered the woods again, and came to a bench inclosed with Chinese rails in the rock, which commands the same valley and river, all fringed with wood; some great rocks in front, and just above them the river Severn appears, with a boundless prospect beyond it.

A little further we met with another bench inclosed with iron rails, on a point of the rock which is here pendent over the river, and may be truly called a situation full of the terrible sublime: you look immediately down upon a vast hollow of wood, all surrounded by the woody precipices which have so fine an effect from all the points of view at Persfield: in the midst appears a small, but neat building, the bathing-house, which, though none of the best, appears from this enormous height but as a spot of white in the midst of the vast range of green: towards the right is seen the winding of the river.

From this spot, which seems to be pushed forward from the rock by the bold hands of the genii of the place, you proceed to the temple, a small neat building on the highest part of these grounds; and imagination cannot form an idea of any thing more beautiful than what appears full to your ravished sight from this amazing point of view. You look down upon all the woody precipices, as if in another region, terminated by a wall of rocks; just above them appears the river Severn, in so peculiar a manner, that you would swear it washed them, and that nothing parted you from it but those rocks, which are in reality four or five miles distant. This *deceptio visus* is the most exquisite we ever beheld; for viewing first the river beneath you, then the vast rocks rising in a shore of precipices, and immediately above them the noble river Severn, as if a part of the little world immediately before you; and lastly, all the boundless prospect over Gloucestershire and Somersetshire, are, together, such a bewitching view, that nothing can exceed it; and contains more romantic variety, with such an apparent junction of separate parts, that imagination can scarcely conceive any thing equal to the amazing reality. The view of the right, over the park, and the winding valley at the bottom of it, would, from any other spot but this, be thought remarkably fine.

The winding road down to the cold bath, is cool, sequestered, and agreeable. The building itself is excessively neat, and well contrived; and the spring, which supplies it, plentiful and transparent. You wind from it up the rock; but here we must be allowed just to hint a want, if any thing can be wanted in such a spot as Persfield. This walk from the cold bath is dark, and rather gloomy, but breaks and objects are rather scarce in it; the trickling stream you have just left, puts one in mind of a cascade, which would be

here vastly beautiful, but does not appear throughout all the walks of Persfield. On the left, towards the valley, there is a prodigious hollow filled with a thick wood, which almost hangs beneath you: from the walk, an opening down through this wood might easily be made, with just light enough let in to shew to advantage the gush of a cascade: to look backwards, aslant upon such an object, would be infinitely picturesque amidst the brownness of this hanging grove. We know not whether water could be brought there; but if it could, never was there a situation for viewing it to such advantage.

Passing on, there are two breaks from this walk, which opens to the valley in a very agreeable manner, and then leads through an extremely romantic cave, hollowed out of the rock, and opening to a fine point of view. At the mouth of this cave some swivel guns are planted, the firing of which occasion a repeated echo from rock to rock in a most surprizing manner. Nor must you pass through this walk without observing a remarkable phenomenon of a large oak, of a great age, growing out of a cleft of the rock, without the least appearance of any earth. Pursuing the walk, as it rises up the rocks, and passes by the point of view first mentioned, you arrive at a bench, which commands a view delicious beyond all imagination: on the left you look down upon the valley, with the river winding many hundred fathoms perpendicular beneath, the whole surrounded by the vast amphitheatre of wooded rocks; and to the right, full upon the town of Chepstow; beyond it the vast Severn's windings, and a prodigious prospect bounding the whole.

From thence an agreeable walk, shaded on one side with a great number of very fine spruce firs, leads you to an irregular junction of winding walks, with many large trees growing from the sequestered lawn, in a manner pleasing to any one of taste, and figures in a very striking manner, by contrast to what presently succeeds. Full to the left, appears beneath you the valley, in all its beautiful elegance, surrounded by the romantic rocky woods; which might be called (to use another's expression) a coarse selva of canvas around a fine piece of lawn. In the front, rises from the hollow of the river a prodigious wall of formidable rocks, and immediately above them, in breaks, winds the Severn, as if parted from you only by them: on the right is seen the town and castle, amidst a border of wood, with the Severn above them; and over the whole, as far as the eye can command, an immense prospect of distant country.

The sloping walk of ever-greens, which leads from hence, is remarkably beautiful in prospect, for the town and the country above it appear perpetually varying as you move; each moment presenting a fresh picture, till the whole is lost by descending. You next meet with the grotto, a point of view exquisitely beautiful; it is a small cave in the rock, stuck with stones of various kinds; copper, and iron cinders, &c. You look from the seat in it immediately down a steep slope on to a hollow of wood, bounded in front by the craggy rocks, which seem to part you from the Severn in breaks; with the distant country, spotted with white buildings, above all, forming a landscape as truly picturesque as any in the world. The winding walk, which leads from the grotto, varies from any of the former; for the town of Chepstow, and the various neighbouring objects, break on you through the hedge, as you pass along, in a manner very beautiful. Passing over a little bridge which is thrown across a road in a hollow way through the wood, you come to a break upon a loop of wood alone, which being different from the rest, pleases as well by its novelty as its romantic variety. Further on, from the same walk, are two other breaks which let in rural pictures, sweetly beautiful; the latter opens to you a hollow of wood, bounded by the wall of rocks one way, and letting in a view of the town another, in an exquisite taste. The next opening in the hedge gives you, at one small view, all the picturesque beauties of a natural *camera obscura*; you have a bench which is thickly shaded with trees, in a dark sequestered spot;

and from it you look aside through the opening, on to a landscape which seems formed by the happiest hand of design, which is really nothing but catching a view of accidental objects. The town and castle of Chepstow appear from one part of the bench, rising from the romantic steep of wood, in a manner too beautiful to express; a small remove discovers the steeple so dropt in the precise point of taste, that one can scarcely believe it a real steeple, and not an eye-trap. Soon after a large break opens a various view of the distant country; and not far from it another, which is much worthy of remark: you look down upon a fine bend of the river, winding to the castle, which appears here romantically situated; the opposite bank is a swelling hill, part over-run with gorse and rubbish, and part cultivated inclosures: this difference in the same object is here attended with emotions not consonant; the wild part of the hill suits the rest of the view, and agrees with it in the sensations it raises; but the cultivated part being incomplete, and unlike the beautiful farm at the bottom of the before-mentioned amphitheatre, which is entire, has a bad effect. Was the whole well cultivated and lively, being rather distinct from the rest of the landscape, it would have a much better effect.

The last point, and which perhaps is equal to most of the preceding, is the alcove. From this you look down perpendicularly on the river, with a finely cultivated slope on the other side. To the right is a prodigious steep shoar of wood, winding to the castle, which, with a part of the town, appears in full view. On the left is seen a fine bend of the river for some distance, the opposite shore of wild wood, with the rock appearing at places in rising cliffs; and further on to the termination of the view that way, the vast wall of rocks so often mentioned, which are here seen in length, and have a stupendous effect. On the whole, this scene is striking and romantic.

About a mile beyond these walks is a very romantic cliff, called the Wind Cliff, from which the extent of prospect is prodigious; but it is most remarkable for the surprizing echo, on firing a pistol or gun from it. The explosion is repeated five times very distinctly from rock to rock, often seven; and if the calmness of the weather happens to be remarkably favourable, nine times. This echo is wonderfully curious. Beyond the cliff at some distance is the abbey, a venerable ruin, situated in a romantic hollow, belonging to the duke of Beaufort, well worth seeing.

Upon the whole, it exceeds any thing of the kind we ever saw. In point of striking picturesque views, in the romantic stile, Persfield is exquisite. The cultivated inclosures, forming the bottom of the valley, with the river winding round them, and the vast amphitheatre of rocks and pendent woods which wall it in, to such a stupendous height, is the capital beauty of the place; and Mr. Morris has fixed his benches, &c. in those points of view which command it in the happiest manner, with the utmost taste: nor can any thing be more truly picturesque than the appearance which the Severn takes in many places, of being supported and bounded by the wall of rocks, though four miles distant; this effect is beyond all imagination beautifully picturesque. In respect to the extensive prospects,—the agreeable manner in which the town, castle, and steeple, are caught—-with the rocks, woods, and river taken in themselves, other places are equal; but when they unite to form the landscapes we have just mentioned, we believe they never were equalled.

Throughout the whole of these walks, it is evident that Mr. Morris meant them merely as an assistance to view the beauties of nature, as a means of seeing what nature had already done to his hands, and without any idea of decoration or ornament. Every thing is in a just taste; but as we have been particular in speaking of all the beauties of Persfield, we must be allowed to hint a few circumstances wanting to render it complete. We do not mean in the least to disapprove the taste of the most ingenious owner: we are not certain that it would be possible to add what we are going to mention; but we minute them merely that the idea of Persfield

may be exact, and that the reader may not mistake any general exceptions we have made use of, to imply beauties which are not here.

The river Wye, which runs at the bottom of the walks, is an infinite advantage; but it is by many degrees inferior in beauty to a fresh water one, which keeps a level, and does not display a breadth of muddy bank at low water; and the colour is excessively bad: it has not that transparent darkness, that silver-shaded surface, which is, of itself, one of the greatest beauties in nature, and would, among these romantic objects, give a lustre inexpressibly elegant.—Cascades are likewise greatly wanting; in such steep of wood and embrowning hollows, which throw a pleasing solemnity on the mind; nothing has so glorious an effect, as breaking unexpectedly upon a cascade, gushing from the rocks, and over-hung with wood: there are many spots in the Persfield hollows, which point out in the strongest manner the beauty of such objects.—Lastly, There is a want of contrasts; for the general emotions which arise on viewing the rocks, hanging woods, and deep precipices of Persfield, are all those of the sublime; and when that is the case, the beautiful never appears in such bewitching colours as those it receives from contrast: to turn suddenly from one of these romantic walks, and break full upon a beautiful landscape, without any intermixture of rocks, distant prospect, or any object that was great or terrible, but on the contrary, lively and agreeable, would be a vast improvement here; and we venture the remark the rather, because those views at Persfield, which are beautiful, are all intermixed with the sublime: the farm beneath you is superlatively so; but the precipice you look down from, the hanging woods, and the rocks, are totally different. The small break, however, through the hedge, which catches the town and steeple, is in this taste; but even here, some large rocks appear. Small elegant buildings, in a light and airy taste, rising from green and gently swelling slopes, with something moving near them, and situated so as the sun may shine full upon them, viewed suddenly from a dark romantic walk, have a charming effect: but it must strike every one who walks over Persfield, that the finest seats, &c. are seen rather too much before you step into them; they do not break upon you unexpectedly enough: in many of them you see the rails, which inclose them on the brink of the precipice, at a small distance before you enter. What an effect would the view from the grotto, for instance, have, if you entered it from behind, through a dark zig-zag narrow walk!

Monmouth, the next town we visited, took its name from its situation at the mouth of the river Monow. The distance of this town from London is one hundred and twenty-seven miles: it was incorporated by king Charles I. and is governed by two bailiffs, fifteen common-councilmen, and a town-clerk. It stands between the rivers Monow and Wye, over each of which it has a bridge, and a third bridge over the Trothy, a small river which falls into the Wye, almost close to the Monow. This is a large, handsome town, of great antiquity, and has been considerable ever since the Conquest: it had a castle, which was a stately edifice, but is now in ruins. The church is a handsome building, the east end of which is much admired. The chief trade of this town is with Bristol, by means of the Wye, that runs into the Severn.

Wihenoc de Monmouth, in the time of Henry I, brought over a convent of Black monks from St. Florence, near Salmur in Anjou, and placed them first in the church of St. Cadoc, in the town of Monmouth, and afterwards in the church of St. Mary. This alien priory was made denison, and continued till the general dissolution, when it was valued at fifty-six pounds one shilling and eleven-pence *per annum*.

About the year 1240, John of Monmouth, knight, founded here the hospital of the Holy Trinity, and that of St. John.

Monmouth sends one member to parliament, has a weekly market on Saturday, and three annual fairs, viz. Whitfun-Tuesday, the fourth of September, and

the twenty-second of November, for horned cattle, fat hogs, and cheese.

At Llanthoth, north-west of Monmouth, there is a church, which, together with the manor of the place, was given, before the year 1183, to the abbey of Lira, in Normandy, which placed here a cell of Black monks.

At Gracedien, on the Trothy, south east of Monmouth, there was a small abbey of the Cistercian order, built in 1226, by John of Monmouth, knight, and dedicated to the Virgin Mary. Here were only two monks at the suppression, who had nineteen pounds fourteen shillings and four-pence *per annum*.

We then passed on to Abergavenny. The name of this town, in the ancient British language, signifies the *mouth* of the Gavenny, a small river which falls into the Usk at this place. Abergavenny is distant from London one hundred and forty-two miles, and is governed by a bailiff, a recorder, and twenty-seven burghesses. It is a large, populous, and flourishing town: it had once a castle, and is still surrounded by a wall: it is a great thoroughfare from the west parts of Wales to Bristol, Bath, Gloucester, and other places; and is therefore well furnished with accommodation for travellers, and carries on a considerable trade in flannels, which are brought here from the manufactories in other parts of the county, to sell. Here is a fine bridge over the Usk, consisting of fifteen arches.

The town of Abergavenny appears to have been the Gobannium of Antoninus; and the town of Usk, which he places at the distance of twelve miles from Gobannium, is his Barrium.

Hamelin Balon, or Baladun, one of those who came over with the Conqueror, about the end of that prince's reign, founded a priory in this town, dedicated to the Virgin Mary. One of his posterity, William de Breafa, in the time of king John, gave the tithes of the castle, and other privileges, on condition that the abbot of St. Vincent at Mans, in France, should send over hither a convent of Benedictine monks. It seems therefore to have been for some time an alien priory to that foreign house, but was not dissolved till the general suppression, when here was a prior and four monks, who had revenues worth one hundred and twenty-nine pounds fifteen shillings and eight-pence *per annum*.

Here is a weekly market on Tuesday, and three annual fairs, viz. the fourteenth of May, for lean cattle and sheep; the first Tuesday after Trinity, for linen and woollen cloth; and the twenty-fifth of September, for hogs, horses, and flannels.

At Landony, among those hills in the north-west part of this county, called Hotterel-Hills, about eight miles north of Abergavenny, not long after the year 1108, was settled a priory of canons regular, of the order of St. Austin, dedicated to St. John the Baptist, and founded by Hugh Lacy. At first here were about forty religious, but the greatest part of them removed first to the bishop's palace in Hereford, and afterwards, in 1136, to a place near Gloucester, which, from the mother monastery, was also called Landony; the revenues of the first Landony were, upon the suppression, valued at eighty-seven pounds nine shillings and five-pence *per annum*.

In the year 1113, Robert de Chandos founded and endowed a church at Gold-Cliff, near Abergavenny, dedicated to St. Mary Magdalen; and gave it to the abbey of Bec in Normandy. After the suppression of alien priories, this was annexed to the abbey of Tewksbury, in Gloucestershire, and afterwards to Eaton College; and at the general suppression, it was valued at one hundred and forty-four pounds eighteen shillings and a penny *per annum*.

Leaving Abergavenny, we passed on to Usk. This town stands upon the river of the same name, and betwixt it another small river, at the distance of one hundred and thirty miles from London; but contains nothing worthy of notice.

Here was formerly a priory of Benedictine nuns, founded before the year 1206, who at the suppression had fifty-five pounds four shillings and five-pence *per annum*.

This town has a weekly market on Monday, and two annual fairs, viz. Monday after Trinity, and the eighteenth of October, for horses, lean cattle, and pedlary.

We then passed on to Pontipole, or Ponty-Pool, a small town at the distance of one hundred and thirty-six miles from London, remarkable only for some iron-mills.

In the year 1697, there fell a shower of hail in this town, which did considerable damage, several of the hail-stones measuring eight inches in circumference.

Here is a weekly market on Saturday, and three annual fairs, viz. the twenty-second of April, the fifth of July, and the tenth of October, for horses, lean cattle, and pedlary.

Continuing our journey, we entered Carleon. The name of this town, in the ancient British language, signifies *the town of the Legion*. It derived this name from having been the station of the *Legio Secunda Britannica* in the time of the Romans. It is distant from London one hundred and forty-one miles, and had formerly three churches. In the time of the Britons, it was a kind of university, and an archbishop's see; and king Arthur is said to have held his court here. In the time of the Romans it was elegantly built, and surrounded by a brick wall about three miles in compass. It is situated upon the river Usk, over which it has a wooden bridge, and is now a small, inconsiderable town.

Carleon is the Isea of Antoninus, which he places at the distance of twelve miles from Barrium. Geoffrey of Monmouth relates, that in his time there were many remains of the ancient splendor of this city, such as stately palaces, very high towers, ruins of temples, theatres, hot baths, aqueducts, vaults, and sudatories.

In the year 1602, here were found a chequered pavement, and a statue in a Roman habit, but with a quiver of arrows; but the head, hands, and feet, were broken off: from an inscription on a stone found near the statue, it appears to have been that of Diana. At the same time, the fragments of two stone altars, with inscriptions, were dug up; one of which appears to have been erected by Haterianus, lieutenant-general of Augustus, and proprætor of the province of Cilicia. Here also was found a votive altar, from the inscription of which the name of the emperor Geta seems to have been erased.

It is related by several writers, that, long before the Saxons came into this county, there were three magnificent churches at Carleon, built by the ancient Britons; one of which, dedicated to the martyr Julius, had a convent of religious virgins; another, dedicated to his companion, St. Aaron, had a choir of canons; and the third had monks, and was the metropolitan church of all Wales.

It is more certain, that after the Conquest, here was an abbot and monks of the Cistercian order, whom king John, whilst earl of Morton, privileged to be free of paying toll at Bristol.

This town has a weekly market on Thursday, and three annual fairs, viz. the first of May, the twentieth of July, and the twenty-first of September, for cattle.

At St. Julian, near Carleon, in the year 1654, a Roman altar of free stone was found, inscribed to Jupiter Doliahenus and Juno, by Æmilianus Calpurnius Rufilianus.

Towards the end of the last century, was found in the church of a village called Tredonock, about three miles from this town, a fair and entire monument of a Roman soldier of the second legion, called Julius Julianus, erected by the care of his wife.

Near this place were found some other monumental inscriptions; and Roman bricks are frequently dug up, with this inscription, LEG II AUG. which is not cut in, but embossed.

In the year 1692, a chequered pavement was discovered near this town, about fourteen feet long. It was composed of cubical stones, of various colours, and formed into divers shapes of men, beasts, birds, and cups.

Between Carleon, and a small village in its neighbourhood, called Christ Church, a free-stone coffin was discovered last century, in which was inclosed an iron frame, wrapped up in a sheet of lead; and within the frame was a skeleton, supposed to be that of some person of very great distinction, from a gilt alabaster statue that was found near it, representing a man in armour: in one hand of the statue was a short sword, in the other a pair of scales: in the right-hand scale was the bust of a woman, which was outweighed by a globe in the other scale.

Here have been found likewise several ancient earthen vessels, on one of which is represented, in curious figures, the story called the Roman Charity, a lady nourishing her father, who had been condemned to be starved to death, with the milk of her breasts, through the grate of the prison in which he was confined.

At Lanternam, near Carleon, there was an abbey of the Cistercian order, in which were six monks at the time of the dissolution, with a revenue to the amount of seventy-one pounds three shillings and two-pence *per annum*.

We then passed on to Newport, which received this name in respect to the old port, Carleon, out of the ruins of which it arose. It stands upon the Usk, between the mouth of that river and Caerlon. It is a pretty considerable town, with a good haven, and a fine stone bridge over the Usk; and is distant one hundred and fifty-one miles from London.

Here is a weekly market on Saturday, and four annual fairs, viz. Holy-Thursday, Whitfun-Thursday, the fifteenth of August, and the sixth of November, for cattle.

Remarks on the SEA-COAST of Monmouthshire.

The coast of Monmouthshire forms the northern bank of the mouth of the Severn, and is bordered with sands from one end of the county to the other. The mouths of several of the creeks are navigable for small vessels, particularly the mouths of the Usk and the Rumney. Large sands also lie in the middle of the channel, having only small passages between them: some of these sands are dry at low water, and the rest have not water sufficient for ships of any considerable burden. Most ships keep on the southern side of these shoals, the channel being there both wider and deeper. There is, however, water sufficient for pretty large vessels between these sands and the Monmouthshire shore; but the pilot must be well acquainted with the channel; before he can carry a ship through with safety.

MEMBERS of PARLIAMENT for the County of Monmouth.

This county sends but three members to parliament; two knights of the shire for the county, and one representative for Monmouth, the county town.

H E R E F O R D S H I R E.

HEREFORDSHIRE is bounded on the north by Shropshire; on the south by Monmouthshire; on the east by Worcestershire and Gloucestershire; and on the west by the Welsh counties, Brecknockshire, and Radnorshire. It is almost of a circular form, measuring thirty-five miles from north to south, thirty from east to west, and one hundred and eight in circumference. It is divided into eleven hundreds, in which are one city, seven market-towns, one hundred and seventy-six parishes, about fifteen thousand houses, and ninety-six thousand six hundred inhabitants. It lies in the province of Canterbury, and diocese of Hereford; and that city, which is nearly in the middle of the county, is one hundred and thirty miles north-west of London.

This county, together with Radnorshire, Brecknockshire, Monmouthshire, and Glamorganshire, in Wales, constitute that district, which in ancient times was inhabited by the Silures, a people whom Tacitus, and some others, from their ruddy complexion, curled hair, and situation over-against Spain, have supposed to come originally from that country. The derivation of their name is uncertain; but we are told by Pliny and Tacitus, that they were a stout, bold, and warlike people, impatient of servitude, and inflexibly obstinate: they long opposed the Roman power under their king Caractacus, being made desperate by a declaration of the emperor Claudius, that they should be totally exterminated. During this war, they were at length defeated by Aulus Plautius, and their king Caractacus taken, and sent to Rome, where he was led in triumph; but they were not entirely subdued till the reign of Vespasian. A Roman legion was then placed in the garrison among them, which effectually prevented a revolt.

This county remained under the jurisdiction of the Britons several ages after the Saxons came into this island, but was at last subdued by a king of Mercia, and annexed to his own dominions. After this it was perpetually harassed by the Welsh, on whose country it borders; and to secure it from these incursions, Offa, who succeeded to the kingdom of Mercia, made a broad ditch, one hundred miles long, which was called Offa's Ditch, some traces of which are still visible. This county was also fortified with no less than twenty-eight castles, but the greatest part of them are now totally demolished.

R I V E R S.

Herefordshire is watered by several rivers, the chief of which are, the Wye, the Monow, and the Lug. The course of the Wye has already been described in the account of Gloucestershire. The Monow rises in a chain of mountains called Hatterel Hills, which, on the south-west, separate this county from Radnorshire: it then takes its course south-east, dividing Monmouthshire from Herefordshire; and after having been augmented by several less considerable streams, falls into the Wye at Monmouth, the county town of the shire of that name. The Lug rises in the hills, in the north-east part of Radnorshire; runs, by several windings, east, through Herefordshire, to Leominster, a considerable borough town of this county; and thence running south-east, after having been joined by several smaller rivers, falls into the Wye near Hereford. Other less considerable rivers in this county are, the Frome, the Loden, the Wadel, the Arrow, and the Dare.

Remarks on the INLAND NAVIGATION of Herefordshire.

The only navigable rivers in this county are, the Wye, and the Lug. Large troughs pass up the former

to Ross, and small boats to Hereford; but the prodigious floods in this river, occasioned by the enormous quantities of water descending from the Welsh mountains in a rainy season, often render the navigation both tedious and dangerous. The navigation of the Lug is also extended to Leominster, but is subject to the same floods as the former. Both navigations are, however, of great use to the county, especially by carrying the vast quantities of cyder made in this county, to Bristol, Bridgewater, the coast of Wales, &c.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is pure, and consequently healthy, particularly between the rivers Wye and Severn; which has given rise to a proverb very common among the inhabitants of this county, "Blessed is the eye, between Severn and Wye." The soil of Herefordshire is extremely fertile, yielding fine pasture, and great quantities of corn: it is also well stocked with wood: there are apple-trees here innumerable, particularly the redstreaks, which thrive here better than in any other county: the hedges on the highways are full of them, and the hogs grow fat by feeding on the wind-falls, which give a reddish colour and sweet taste to their flesh: but from these apples a much greater advantage arises to the inhabitants; for they afford such a prodigious supply of cyder, that it is the common drink all over the county; and a few years ago, when the smooth cyder was preferred to the rough, it was esteemed the best in England; and a great quantity of rough cyder has been made here since the rough was preferred to the smooth. The county abounds with springs of fine water, and the rivers afford abundance of fish.

Remarks on the HUSBANDRY of Herefordshire.

The soil of this county is very different in different places. About Leominster it is very rich and fertile, but in others almost barren. Their course of crops in general is, 1. Wheat. 2. Barley. 3. Oats. 4. Fallow. Or, 1. Wheat. 2. Barley. 3. Oats. 4. Pease or beans. Or, 1. Wheat. 2. Barley. 3. Clover. 4. Wheat. But few lands are rich enough for the last. They generally give three ploughings for wheat, sow three bushels, and reckon the produce from twenty-five to thirty bushels; but it is sometimes considerably more. They plough thrice for barley, and reckon twenty-five bushels a middling crop. They generally gain fifteen bushels from beans, but they never hoe them. They plough once for oats, and twice for pease. Sometimes they sow clover, and often feed their hogs with it; a piece of husbandry that cannot be too much recommended.

The farms in general are not large, generally from thirty to one hundred and fifty pounds a year: grass lands let for twenty-five, and common arable at fifteen shillings an acre; but some are let for considerably more, and others for much less.

P R I C E S O F L A B O U R.

Men who are constantly employed, have one shilling a day all the year round.

A boy to drive the plough, three-pence and four-pence a day.

Labourers are taken at various prices; in winter and hay-time, one shilling; in harvest, one shilling and six-pence.

Reaping wheat, four shillings and six-pence per acre.

Mowing corn, one shilling and six-pence, and beer.

Mowing grass, one shilling and eight-pence, and beer.

CITY, and MARKET TOWNS.

The city is Hereford; and the market-towns are, Bromyard, Kington, Ledbury, Leominster, Pembridge, Ross, and Weobley.

Leaving Monmouth, we continued our journey to Hereford, and entered the county at Ross. This is a well built, populous town, consisting chiefly of two streets, each about a mile long, crossing each other in the middle. It is situated upon the river Wye, at the distance of one hundred and seventeen miles from London, and was made a free borough by king Henry III. Here are two charity-schools, one for thirty boys, the other for twenty girls, who are taught and clothed by subscription. This town is much frequented on account of its markets and fairs, which are well stored with cattle, and other provisions. It is famous for cyder; and Mr. Camden says, that in his time it had a considerable manufacture of iron ware.

Ross has a weekly market on Thursday, and five annual fairs, viz. Holy Thursday, for horned cattle and sheep; Corpus Christi, or the thirteenth of June, for horned cattle and cheese; the twentieth of July, for horned cattle, horses, sheep and wool; the tenth of October, for horned cattle, cheese and butter; and the eleventh of December, for horned cattle and pigs.

At Doward-hill, in the parish of Whitchurch, not far from Ross, some men who were digging found a cavity, which seemed to have been arched over, and in it a human skeleton, which appeared to have been more than double the stature of the tallest man now known. These bones were, not many years ago, in the possession of a surgeon at Bristol, in Somersetshire.

A small village called the Old Town, near Ross, situated at the foot of Hatterel-hills, and on the river Monow, in the south-west corner of this county, is thought to be the town called Blestium, in the Itinerary of Antoninus; and appears, from several remains of antiquity in and about it, to have been once a place of some note and strength.

At Doward, about twelve miles to the west of Ross, are still to be seen the remains of some old fortifications; and in digging here for iron ore, they have frequently found broad arrow-heads: there are likewise the ruins of an old castle near this town.

At Cresswell, near this town, and near the foot of Hatterel-hills, on the borders of Brecknockshire, was a monastery, dedicated to the Virgin Mary, for a prior and ten religious of the order of Grand-mount, in Normandy: they were settled here about the time of king John, by Walter de Lacy; and the revenue of forty shillings *per annum* was, in the second year of king Edward IV. granted to God's House College, now Christ's College, in Cambridge.

At Flanesford, said to be a village upon the river Wye, a little to the south of Ross, though no such place is now to be found, Richard Talbot, lord of Castle Gotheridge, or Goodrich, near Ross, built and endowed, in the year 1347, a small priory of Black canons, dedicated to St. John the Baptist; which, at the dissolution, was valued at fourteen pounds eight shillings and nine-pence *per annum*.

Hereford, the next town we visited, is called, in most of our ancient annals, by the same name as at present. The word is said to be pure Saxon, and to signify "the ford of the army," a name that agrees well with the situation of the place, which stands on the Wye, that falls into the Severn, and makes part of the barrier between England and Wales. As the two nations were almost always at war with one another, this town was generally the head quarters of such Saxon or English forces as were stationed in the county; and at this place both armies probably forded the river, when they passed out of Wales into England, or out of England into Wales. There is, however, some reason to suspect this account to be more plausible than true, for the ancient British name of the county was *Ereinuc*; and there can be little doubt but that *Here*, the first part of the Saxon name, was implicitly borrowed from *Erei*, the first part of the British; so that except *Erei* in British, and *Here*

in Saxon, have the same signification, Hereford was not intended to express the ford of the army. What *Erienuc* signifies, is not known, but the Saxons probably only changed the termination, and called the place the Ford of Erie, considering Erie not as a significant word, but the proper name of the place. Some however have supposed, that both the British and Saxon names were derived from Ariconium, the name of an ancient town near this place, mentioned by Antoninus, which is said to have been destroyed by an earthquake, and Hereford to have been built in its stead.

Hereford is governed by a mayor and twelve aldermen, a high steward, a deputy steward, recorder and town-clerk, with thirty-one common-councilmen, among whom are reckoned the mayor, and five of the aldermen, who are justices of the peace: the mayor has a sword-bearer, and four sergeants at mace.

The trading companies have their distinct halls, laws, and privileges; and here are held the assizes, quarter-sessions, and county-courts. A small river that appears to have no name, running by the north side of this city, falls on the east side of it into the Wye, which flows by the south side; so that this city is surrounded by rivers, except on the west side. It often suffers by the swell of the Wye on the south, over which it has a good stone bridge of eight arches. It is about a mile and a half in circumference; the houses are old, the streets dirty, and the inhabitants few. It has now a cathedral, and four parish-churches; before the civil war in the last century, it had six, but two were then destroyed. The cathedral is a beautiful and magnificent structure, adorned with the monuments of several of its ancient prelates. It has a bishop, a dean, a chancellor, sixteen canons, twenty-seven prebendaries, a chanter, a treasurer, and twelve vicars choral, with deacons, choristers, and other officers. The bishop has a palace called the Castle, and the other dignitaries have houses in a place called the Close; the vicars and choristers also have a college in which they live, in a collegiate or academical way, under a governor or president: the situation is pleasant, but the buildings are mean.

In the north wing of the cathedral of Hereford is the shrine where Cantalupe, the great miracle-monger in the west of England, was deposited. The wing was built by himself, and on the wall his picture is painted. All round are the marks of hooks, where the banners, lamps, relics and similar presents were hung up; and the riches of this place were doubtless very considerable. The shrine is of stone, carved round with knights in armour.

The Chapter-house was very beautiful, but destroyed in the civil wars. About four windows are left standing; and the springings of the stone arches between are of fine rib-work, which composed the roof, of that sort of architecture of which King's College in Cambridge is built. In every compartment under the windows there was painted a king, bishop, saint, virgin, or the like; some of which are still distinct, though they have been so long exposed to the weather.

Here is an hospital, which was founded in the reign of queen Elizabeth, and well endowed, for twelve poor people; and two charity-schools, one for sixty boys, the other for forty girls, who are all taught and clothed by subscription.

The only manufacture is gloves, and some other leathern wares.

Hereford is thought by some to have been founded by king Edward the Elder, though others suppose it to have sprung up about the time that the Saxon heptarchy was at its height, and first to become considerable about the year 825, by a church built here by Milfrid, king of the Mercians, to the memory of Ethelbert, king of the East Angles, who was murdered by the queen of king Offa, while he was courting their daughter. This church soon after became a cathedral, and Hereford was made the see of a bishop; but in the time of Edward the Confessor, Griffin, prince of South Wales, sacked the city, destroyed the cathedral, and carried the bishop away prisoner. This city was therefore, at the Norman invasion, almost in ruins; the Conqueror however re-
built

built both the city and cathedral, and erected a castle, which, though now in ruins, Leland says, was in his time the fairest, largest, and strongest in England: it was surrounded by a double wall, each of which was surrounded with water, part being the river, and part a ditch; the donjon was high, and extremely well fortified, having ten semicircular towers in the outward wall, and one very large tower in the inward.

Kenchester, four miles north-west from Hereford, is thought to be the ancient Ariconium; and about the year 1669, a great vault paved with stone, and a table of plaster in it, was discovered in a neighbouring wood; and near the same place were frequently dug up Roman coins and urns, with bones and ashes in them. Here was also discovered a bath, and the pipes of brick which heated it were in a perfect state of preservation.

At Creden-hill, about a mile from Kenchester, there is a very large camp, strongly fortified, the ditch being double, and the whole taking up no less than forty acres of ground.

At Eaton Wall, a village upon the Wye, two miles from Hereford, is a camp, with single works, which includes near forty acres.

Within a mile of Hereford is a Roman camp, now called Oyster-hill, supposed by some etymologists to have taken its name from Ostorius, who was the Roman general when the army encamped here.

There is also in this city a chapel dedicated to St. Cuthbert, where anciently there were prebendaries, who were afterwards translated to the church of St. Peter, built by Walter de Lacy, in the time of William the Conqueror, and endowed by him with several estates. This collegiate church, with all the revenues belonging to it, being given in the year 1101, by Hugh de Lacy, son of Walter, to the abbey of St. Peter at Gloucester, the provost and secular canons were changed into a prior and Benedictine monks, who were removed into the east suburb, without Bishopsgate, where Robert Betun, bishop of Hereford, gave them ground, on which was built the monastery of St. Peter, St. Paul, and St. Guthlac, which was valued, upon the dissolution, at one hundred and twenty-one pounds three shillings and three-pence *per annum*.

In Wydmer-street, or the suburb, without the north gate of this city, there was an hospital of St. John, which Leland says was sometimes a house of Templars, and when he wrote, an alms-house, with a chapel; but bishop Tanner is of opinion, that this is the hospital which king Richard I. gave to the preceptory at a place called Dynmore (though there appears to be no place now of this name in the county) which was of Hospitalers, not of Templars; and was, as a parcel of Dynmore, restored to those knights, in the reign of Philip and Mary.

The hospital of St. Anthony at Vienna had a grant of the church of All Saints, and the chapel of St. Martin, in Hereford, by a charter dated the thirty-third of king Henry III.

Without Frere-gate, in Hereford, is a college of Grey friars, which was founded by Sir William Pembrugge, in the time of Edward I. and dedicated to St. Guthlac. The revenues, at the dissolution, were valued at one hundred and twenty-one pounds three shillings and three-pence *per annum*.

The Friars Preachers came hither first in the time of St. Thomas Cantilupe, bishop of Hereford, about the year 1280, and set up a little oratory at Portfield, in the Inn-gate suburb, where Sir John Daniel, or Deinvile, knight, began a new priory and church for them, which was finished by king Edward III.

In the suburb, without St. Andrew's Gate, as Leland calls that which in Speed's map is called St. Owen's Gate, there was an hospital of St. Giles, which once had friars of Grisey, or Savignian monks, and then Templars. King Richard gave this chapel to the town, upon which it was made an hospital.

There was also in the suburb, without Inn-gate, a chapel of St. Giles, first founded for lazars, but afterwards converted to the use of other poor, of which the burgeses are patrons.

The vicars of the cathedral church here, were, in the time of Richard II. incorporated, and made a college; and it is said, continue so at present, having a common hall, a warden, and other officers.

It appears by some manuscript collections, made by St. Lo Kynveton, Esq; from ancient records, that there was a priory in this city, called the Hospital of St. Thomas.

There was an hospital near the bridge over the Wye, in Hereford, as early as the year 1226.

Hereford sends two citizens to parliament, has three weekly markets, on Wednesdays, Thursdays, and Saturdays; and six annual fairs, viz. Tuesday after Candlemas-day, for horned cattle, horses, and hops; Wednesday in Easter-week, for horned cattle and horses; the nineteenth of May, for toys; the first of July, for horned cattle and wool; and the twentieth of October, for horned cattle, cheese, and Welsh butter.

At Harold's Ewias, a village south-west of Hereford, there was a church, dedicated to St. Michael, which was given by Harold, lord of Ewias, to the abbey of St. Peter in Gloucester, in the year 1100, upon condition that they should settle here a prior and small convent of Black monks. This settlement was accordingly made; but the revenues falling short, it was, in the year 1358, incorporated with the great abbey of Gloucester.

At Kilpecke, south of Hereford, there was a church, dedicated to St. David, which was given by Hugh, the son of William the Norman, whose family afterwards assumed the name of Kilpecke, to the abbey of St. Peter at Gloucester, to which it became a cell in the year 1134, and so continued till the time of Thomas Spofford, bishop of Hereford, when it was altogether united to Gloucester, about the middle of the fifteenth century.

At Dowre, near Harold's Ewias, Robert de Ewias, youngest son to Harold, lord of Ewias, in the time of king Stephen, built an abbey of White monks, dedicated to the Virgin Mary; which, at the dissolution, consisted of an abbot and eight religious, and was valued at one hundred and one pounds five shillings and two-pence *per annum*.

The manor of Ocall, near Hereford, being given to the abbey of Lira, in Normandy, by one of the ancestors of Robert Chandos, before the year 1160, it became an alien priory of Benedictine monks.

At a hill, near the place called Dynmore, about half way between Leominster and Hereford, there was a commandry, which belonged to the order of the Knights of St. John of Jerusalem in London, to whom it was given by a brother of the order, in the time of king Henry II.

At Home Lacy, upon the river Wye, three miles south of Hereford, William Fitz Wain, in the beginning of the reign of Henry III. founded an abbey of Premonstratensian canons, and dedicated it to the Virgin Mary, and St. Thomas a Becket. It was endowed with several parcels of land in the neighbouring country, but the revenues of it, at the suppression, are not known.

Margery, the wife of Walter de Laco, founded, in the forest of Acornbury, three miles from Hereford, a nunnery, and dedicated it to the Holy Cross. In this house there was a prioress and seven nuns, of the order of St. Augustine, whose revenues, at the suppression, amounted to sixty-seven pounds thirteen shillings and two-pence *per annum*.

In Westhyde, near Hereford, on the sixth of June, 1697, there fell such a prodigious shower of hail, as broke all the windows, destroyed the poultry, corn, grafs, and most of the fruit-trees in the village; several of the stones measuring nine inches round.

In the year 1575, Marcleys-hill, six miles east of Hereford, after shaking and roaring in a terrible manner for three days together, was, about six o'clock on Sunday evening, put in motion, and continued moving for eight hours, during which time it advanced upwards of two hundred feet from its former situation, and mounted twelve fathoms higher than it was before. In the place whence it set out, it left a gap four hundred feet long, and three hundred and twenty feet broad; and in its progress it overthrew a chapel belonging to a village called

called Kinnaston, together with all the trees, houses, &c. that stood in its way; carrying with it the trees that grew upon it, the sheep-folds, and some flocks of sheep that were feeding there. Mr. Camden observes, that the earthquake which removed this hill was of that kind which naturalists call *Brafnacia*, being a motion up and down, or perpendicular to the horizon.

On a common meadow called *Valled the Wergins*, to the east of Hereford, two large stones set on end for a water-mark, were, about the year 1695, removed two hundred and forty paces, nobody knew how, though they were so large, that when they were removed back again, one of them required nine yokes of oxen to draw it.

Between Hereford and Leominster is another *Hampton-Court*, the seat of the late earl of Coningsby. That lord was, from an Irish peer, made an English one, by his late majesty king George I. and having no son, his daughter was created by the same prince, in the lifetime of her father, baroness and viscountess Coningsby of Hampton-Court, in order that her descendants might be intitled to a peerage. She married Sir Michael Newton, Bart. and a knight of the Bath. This is a fine seat, built by Henry Bolinbroke, duke of Lancaster, afterwards king Henry IV. in the form of a castle, situated in a valley upon a rapid river, under coverture of *Brynmaur*. The gardens are very pleasant, terminated by vast woods covering all the sloping side of the hill. There is a plentiful supply of water on all sides of the house, for fountains, basins, and canals. Within, are excellent pictures of the earl's ancestors and others, by Hoiben, Dobson, Vandyke, Sir P. Lully, &c. an original of the founder king Henry IV. of queen Elizabeth, the dutchess of Portsmouth, &c.

The windows of the chapel are well painted: there are some statues of the Coningsbys.

Here are two new stone stair-cases, after a geometrical method. The Record-room is at the top of a tower arched with stone, paved with Roman brick, and has an iron door. From the top of the house goes a stair-case, which, they say, has a subterraneous conveyance into *Brynmaur* wood.

The park is very fine, eight miles in circumference, and contains about twelve hundred head of deer. There are extensive prospects, on one side reaching into Wiltshire, on the other, over the Welsh mountains, lawns, groves, canals, hills, and plains. There is a pool three quarters of a mile long, very broad, and included between two great woods. The dam which forms it, and is made over a valley, cost eight hundred pounds, and was finished in a fortnight by two hundred hands. A new river is cut quite through the park, the channel of which, for a long way together, is hewn out of the rock. This serves to enrich vast tracts of lands, which before were barren. Here also are new gardens and canals laid out, and new plantations of timber in proper places.

Warrens, decoys, sheep walks, pastures for cattle, &c. supply the house with all sorts of conveniencies and necessaries, without having recourse to a market.

Westward of Hereford, the *Golden Vale* extends itself along the river *Dore*, which runs through the midst of it, and is called by the Britons *Duffrin-Dore*: it is called the *Golden Vale*, from its pleasant fertility in the spring, when it is covered over with a yellow livery of flowers. It is encompassed with hills, which are crowned with woods.

We next came to *Weobley*, or *Webley*, an ancient borough by prescription, but no corporation. It stands at the distance of one hundred and thirty miles from London, and is chiefly noted for its fine ale. Not many years ago it suffered considerable damage by fire, for which there was a brief. Here are two charity-schools, one for twenty-five boys, and another for girls; both supported by subscriptions. In king Stephen's reign, this town had a castle, which was fortified against him by the partizans of the empress *Maud*, but reduced by his forces.

This town sends two members to parliament, has a weekly market on Tuesday, and two annual fairs, viz.

Holy-Thursday, for horned cattle and horses; and three weeks after Holy-Thursday, for horses, cattle, and coarse linen cloth.

At *Wormsley*, situated south-east of *Weobley*, *Gilbert Talbot* founded a priory of Black canons of the order of *St. Victor*, and dedicated it to *St. Leonard*, about the reign of king *John*. At the dissolution of religious houses, it had seven canons, and was endowed with eighty-three pounds ten shillings and two-pence *per annum*.

Kington, or *Kinetan*, the next place we visited, is a pretty large, well built town, situated on a small river called the *Arrow*, one hundred and forty-six miles from London. It is inhabited chiefly by clothiers, who carry on a considerable trade in narrow cloth. Here are a free-school and a charity-school, but nothing besides worth the attention of a traveller.

Here is a weekly market on Wednesday, one of the most considerable in the county; and four annual fairs, viz. Wednesday before Easter, Whitfun-Monday, the second of August, and the fourth of September, for horses and cattle of all sorts.

About ten miles to the north of *Kington*, on the borders of *Shropshire*, is a perfect Roman camp, called *Brandon*. It is a single square work, with four parts; near which are two barrows, where, in the year 1662, an urn was found, with ashes and bones in it; and half a mile from thence, on the other side of a small stream, in a place called *Bardfield*, was a British camp, now covered with large oaks, and called *Coxal*.

Brampton Brien Castle, about eight miles north of *Kington*, is a stately pile of ancient buildings, and will please the eye of every traveller who loves to contemplate the buildings of the ancients.

At *Clifford*, a village situated on the river *Wye*, eight miles south of *Kington*, on the borders of *Radnorshire*, *Simon Fitz-Richard Fitz-Ponce* founded, in the reign of *Henry I.* a priory of *Cluniac* monks, subordinate to a monastery at *Lewis*, a borough town of *Suffex*. It was dedicated to the *Virgin Mary*, and continued till the general dissolution, when it was valued at fifty-seven pounds seven shillings and four-pence *per annum*.

About five miles to the north of *Kington*, is *Limbrook*, where there was a cell belonging to *Aveney*, in *Normandy*; and about a quarter of a mile from the left bank of the river *Lug*, was a priory of nuns of the order of *St. Augustine*, founded by some of the *Mortimer* family, about the reign of *Richard I.* and which continued till the general suppression, when it had six nuns, and was valued at twenty-two pounds seventeen shillings and eight-pence *per annum*.

We passed from *Kington* to *Pembridge*, a small market-town upon the river *Arrow*, one hundred and thirty miles from London. It has a manufacture of woollen cloth, but nothing else remarkable, except a weekly market on Tuesday, and two annual fairs, viz. the twelfth of May, and the twenty-second of November, both for black cattle.

In the neighbourhood of this place are the manor and church of *Lena*, or *Monkland*, which, in the reign of *William Rufus*, was given to the *Benedictine* monks of the abbey of *St. Peter* at *Castellione*, or *Canches*, in *Normandy*, to which it became a cell. It was afterwards given to the *Carthusians* at *Coventry*.

In the year 1100, a small college of three prebendaries was founded in the parochial church of *Wigmore*, a village north of *Pembridge*, by *Ralph Mortimer*. And within a mile of this place, his son *Hugh* founded and endowed an abbey for monks of the order of *St. Augustine*, and dedicated it to *St. James*. The revenues of this abbey, at the suppression, amounted to two hundred and sixty-seven pounds two shillings and ten-pence *per annum*.

At *Titley*, on the river *Arrow*, north-west of *Pembridge*, there was a cell subordinate to the abbey of *Tyronne*, in *France*.

Leominster, or *Lemster*, which we next visited, is situated on the river *Lug*, over which it has several bridges, one hundred and thirty-six miles from London. It was originally called *Monasterium Leonis*, from a

monastery built here by king Merwald, after seeing a lion in a vision. Others, however, are of opinion, that the present name is a corruption of Llan Lien, an appellation given it by the ancient Britons, signifying a church of nuns; and there are some who derive Lemster from *linum*, the Latin name for flax, of which the best kind is said to grow here.

This town was incorporated by queen Mary, and is governed by a high steward, a bailiff, a recorder, twelve capital burgeses, from whom the bailiff is chosen, and a town-clerk. It is large, well built, and populous, and is a great thoroughfare between South Wales and London. Here is a handsome, spacious church, and an alms-house, founded by the widow of a gentleman, who is said to have given away the greater part of his estate in his life-time, and to have been afterwards treated with a disrespect, from which his fortune would have preserved him. This is probably alluded to by the figure of a man holding up a hatchet, in a niche over the entrance to the house, with the following lines underneath:

Let him that gives his goods before he's dead,
Take this hatchet, and cut off his head.

Many horses and black cattle are sold at the fairs held at this town; and it had once so considerable a trade in wool, that its market, which was held on a Thursday, the same day the markets were held at Hereford and Worcester, that those cities petitioned to have the day changed, complaining of their loss of trade. Their petition was granted; Lemster market-day was changed from Thursday to Friday; and since that period, the trade of the town has greatly decreased. The wool brought to this market has been esteemed the best in all Europe, except that of Apulia and Tarentum, and was deservedly called Lemster ore, because it greatly enriched the town. This place has also the best flax, wheat, and barley, in England; carries on a considerable trade in wool, leather, and hats; having many mills, and other machines constantly working on the rivers flowing through the valley on which it stands.

Merwald, king of the western part of Mercia, built a monastery in this town to the honour of St. Peter, about the year 660, and which was afterwards destroyed by the Danes. Here was afterwards a college of prebendaries, and next an abbey of nuns, who were all dispersed, and most of their lands possessed by laymen, long before the year 1125, when Henry I. gave this monastery, with every thing belonging to it, to the new abbey he had founded at Reading in Berkshire, to which it became a cell. In the year 1536, it was endowed with a yearly revenue of six hundred and sixty pounds sixteen shillings and eight-pence, out of which there was paid to Reading four hundred and forty-eight pounds four shillings and eight-pence *per annum*.

This town sends two members to parliament, has a weekly market on Friday, and six annual fairs, viz. the thirteenth of February, Tuesday after Midlent-Sunday, and the thirteenth of May, for horned cattle and horses; the tenth of July, for horned cattle, horses, wool, and Welsh butter; the fourth of September, for horned cattle, horses, and butter; and the eighth of November, for horned cattle, hops, and butter.

At the foot of a hill, on the summit of which is Richard's Castle, about five miles north of Leominster, is a well called Bone-well, in which a large quantity of small bones is always found, and of which there is always a fresh supply, in a very short time after it is cleared. Some imagine these to be the bones of small fish, and others, those of frogs; but whence they came, or how they are here collected, is not easy to conjecture.

In a park belonging to Croft Castle, on the north-west of Leominster, is a large camp, with two ditches, called the Ambury; and on a hill in the neighbourhood of this town, are the ruins of a castle, now called

Comfor Castle. Some few remains of a priory are also to be seen at the east end of the church of Leominster.

From Leominster we passed on to Bromyard, situated near the river Frome, in a country full of orchards, one hundred and twenty-four miles from London. It is a small, obscure town, having nothing remarkable, except a weekly market on Monday, and five annual fairs, viz. Thursday before the twenty-fifth of March, for horses and black cattle; the third of May, Whitfun-Monday, Thursday before St. James, and Thursday before the twenty-fifth of October, for black cattle and sheep.

Ledbury, the next place we visited, stands at the south end of a ridge of mountains called Malvern-hills, near the eastern borders of this county, one hundred and eighteen miles from London. It is a well built town, inhabited principally by clothiers; and has an hospital liberally endowed; besides a charity-school for twenty-three poor children.

The rectory of this town was anciently divided into several portions or prebends; but about the year 1400, a college for a master, and eight secular priests, was founded in the parish-church, by John Trevenant, bishop of Hereford. Here was also an hospital for a master, rector, or prior, and several poor brothers and sisters, built by Hugh Foliot, bishop of Hereford, in the year 1232, and dedicated to St. Catharine. At the suppression, its yearly revenues amounted to twenty-two pounds five shillings. It still exists, having been refounded by queen Elizabeth in the year 1580, for a master, who is appointed by the dean and chapter of Hereford, seven poor widowers, and three poor widows, who are nominated by the master, and have each an allowance of six pounds thirteen shillings and four-pence *per annum*, besides cloaths and firing.

Here is a weekly market on Tuesday, and five annual fairs, viz. Monday before Easter, and the twelfth of May, for black cattle and cheese; the twenty-first of June, for cattle and wool; the second of October, for cattle, hops, cheese, and pigs; and Monday before St. Thomas's day, for cattle, cheese, and fat hogs.

On the top of one of Malvern hills, about four miles to the east of Ledbury, is a spring, whose waters are said to be a remedy for several disorders of the eyes; and at about a furlong distant from it, is another, said to be of great efficacy in the cure of cancers. About two miles and a half distant from these springs, is another, which the people in the neighbourhood call Holy Well. It is situated on the side of a hill, in an arable field; and besides possessing several medicinal properties, it is said to clear the skin from sun-burns and freckles, if washed with it two or three mornings successively. This spring passes through a light sand, appears to ferment, and is full of very small, thin *lamina*, of a metalline appearance, and as bright as the purest silver; from which, however, the refiners could never extract any thing of value. Within two miles of this spring is another, called also Holy Well, situated on the brow of a hill, in the middle of a corn-field: the water of this spring is greatly recommended in disorders of the eyes, and is said to have performed many extraordinary cures upon persons afflicted with putrid ulcers.

At Colwall, about two miles north of Ledbury, a poor cottager found a coronet of gold, adorned with diamonds. He sold it to a goldsmith in Gloucester for thirty-one pounds, who sold it again to a jeweller in London for two hundred and fifty pounds, and the jeweller is said to have sold it a third time for no less than fifteen hundred pounds profit.

MEMBERS of PARLIAMENT for this County.

Herefordshire sends eight members to parliament; two knights of the shire for the county, two citizens for Hereford, two members for the borough of Leominster, and two from Weobley.

W O R C E S T E R S H I R E.

THIS county is bounded by Staffordshire on the north; by Gloucestershire on the south; by Shropshire and Herefordshire on the west; and by Warwickshire on the east. It is of a triangular form, and extends in length thirty-six miles, in breadth twenty-eight, and is one hundred and thirty in circumference; but there are several parcels of the county which are detached from these bounds: some were once part of Gloucestershire, some of Herefordshire, and others of Oxfordshire, within the general bounds of which counties they lie; and in the opinion of Mr. Camden, were annexed to Worcestershire by some of the ancient lords or proprietors of these estates, who presided over the county before the Conquest, that their power and authority, as earls or governors of Worcestershire, might extend over their several manors in other counties. This county is divided into seven hundreds, contains one city, ten market-towns, one hundred and fifty-two parishes, about twenty-one thousand houses, and one hundred and three thousand inhabitants. It lies in the province of Canterbury, and diocese of Worcester.

This county was, in the time of the Romans, part of the district inhabited by the Cornavii, of whom mention will be made in the account of the antiquities of Cheshire. Under the Saxons it constituted part of the kingdom of Mercia, and was a subdivision of that kingdom, known by the name of Wiccia.

Dorn, a village in this county, near Campden in Gloucestershire, was a Roman city, many foundations of ancient buildings having been discovered here; the traces of streets are still discernable; Roman and British coins have been frequently dug up, and the Roman Fosse-way passes through it.

A tempest happened not two hundred years ago, which blew down near a thousand very tall oak trees, in the forest of Wire, in this county.

R I V E R S.

The principal rivers of Worcestershire are, the Severn, the Avon, the Stour, and the Tame. The course of the Severn, which runs through this county, from north to south, has been described in the account of Gloucestershire. The Avon, which separates Worcestershire from Gloucestershire, has likewise been described among the rivers of the latter.

The Stour rises in the northern extremity of Worcestershire, not far from Sturbridge, a market-town; and running south-west, and passing by Kidderminster, another market-town, falls into the Severn near Bewdley, a borough town.

The Teme, or Temd, is a river of Shropshire, and will be mentioned in our description of that county.

The less considerable rivers of Worcestershire are, the Ren, the Arrow, the Bow, the Salwarp, and the Swiliate.

Remarks on the INLAND NAVIGATION of Worcestershire.

The two principal rivers in the county are navigable, viz. the Severn and the Avon. By the former, very large vessels pass up to Worcester, and some much higher. The Avon is navigable from its influx with the Thames to Warwick. An account of the former navigation has been already given in our account of Gloucestershire, and of the latter in that of Warwickshire.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is exceeding sweet and healthy, and the soil remarkably rich, both in tillage and pasture; the hills being covered with flocks of sheep, and the vallies abounding in corn and rich meadows.

Hops are much cultivated in this county; and it yields great plenty of all sorts of fruit, particularly pears, with which the hedges every where abound, and of which great quantities of perry are made. The rivers here afford great plenty of fish, and the Severn abounds with lampreys.

Worcestershire is particularly remarkable for the many salt springs which have been discovered in it. Three of them only are made use of, it being thought necessary to stop up the others for the preservation of the wood, of which great quantities were used to burn in their seals; but for some years past, coal has been made use of for this purpose. One of these pits yields as much brine in twenty-four hours, as will produce four hundred and fifty bushels of salt: but what is more remarkable, is, that springs of fresh water rise in some places almost contiguous to the salt springs; and that several salt springs issue out of the very channel of the river Salwarp, at this place.

Remarks on the HUSBANDRY of Worcestershire.

The soil in this county, like that of most others, is very different: in the Vale of Evesham, it is rich and fertile, and yields a very large increase: in other places, it is sandy; and in others, almost barren. In the Vale of Evesham, their course of crops is either, 1. Fallow. 2. Wheat. 3. Oats. 4. Clover. Or, 1. Fallow. 2. Barley. 3. Wheat. They sow two bushels of wheat on an acre, and reap on an average twenty-two bushels. They sow the same quantity of barley, and gain near thirty bushels; and the same of oats. They mow their clover twice, and gain two tons and a half the first time, and about a ton the second.

Their arable lands let for about eighteen shillings per acre, and their grass from twenty to forty.

PRICE OF LABOUR.

In harvest, one shilling and three-pence, or one shilling, and beer.

In hay-time, one shilling and beer.

In winter, ten-pence.

Reaping wheat, from three to four shillings per acre.

———— barley, four to five shillings.

———— oats, three to four shillings.

———— beans, four shillings and six-pence.

Mowing grass, from one shilling and six-pence to two shillings and six-pence.

Ditching, from five-pence to eight-pence per rod.

Threshing wheat, one shilling and two-pence for five bushels.

———— barley, three half-pence per bushel.

———— oats, from one shilling and six-pence to two shillings for twenty measures.

———— beans, one shilling for five bushels.

Digging, eight-pence per rod.

MANUFACTURES, and TRADE.

The chief manufactures of Worcestershire are, cloth, stockings, gloves, and glass; in which, together with the salt, hops, and other commodities of this county, the inhabitants carry on a considerable trade.

CITY,

CITY, and MARKET TOWNS.

We crossed the Malvern-hills from Herefordshire to that of Worcester, and stopped at Upton, an ancient town, supposed, by the Roman coins which have been frequently dug up here in great abundance, to have been formerly a station of the Roman soldiers, before the arrival of the Saxons. It is situated on the river Severn, over which it has a stone bridge, and is distant from London one hundred and one miles. Here is a charity-school for sixteen girls, and a good harbour for barges.

This town has a weekly market on Thursday, and four annual fairs, viz. Thursday after Midlent, Thursday in Whitsun-week, for horses, cattle, and sheep; the tenth of July, and Thursday before St. Matthew, the twenty-first of September, for horses, cattle, sheep, and leather.

On Malvern-hills, south-west of this town, upon the borders of Herefordshire, are two medicinal springs, called Holy Wells; one of which is recommended for many disorders of the eyes; and the other for cancers.

Upon these hills there is a very large ditch, which is esteemed an admirable antiquity, and is said to have been cut by Gilbert de la Clare, earl of Gloucester, about the time of Henry III. to part his lands on the east side of these hills, from those belonging to the county of Hereford, on the west. On these hills are two villages, called Great Malvern, and Little Malvern, at the distance of about two miles from each other. At Great Malvern, king Edward the Confessor founded an hermitage, or some kind of religious house, for seculars, which afterwards became a cell of monks to Westminster Abbey. It was dedicated to the Virgin Mary, and valued, upon the dissolution, at three hundred and eight pounds one shilling and five-pence *per annum*.

At Little Malvern, two brothers, Joceline and Edred, in the year 1171, founded a Benedictine priory dedicated to St. Giles: it was a cell to the monastery at Worcester; and at the time of the suppression, had a prior and seven monks, who had a yearly income valued at ninety-eight pounds ten shillings and nine-pence.

From this place we passed on to Parshore, a pretty large old town, and a considerable thoroughfare in the lower road from Worcester to London. It derives its name from the Saxon word *Periscoran*, which refers to the great number of pears which grow in this neighbourhood: Parshore is situated upon the bank of the river Avon, at the distance of one hundred and two miles from London; and contains about three hundred houses, with two parish-churches, and has a manufacture of stockings.

In the year 689, Oswald, nephew of Ethelred, king of Mercia, is said to have founded in this place a convent of secular clerks, which, in 984, became an abbey of Benedictine monks, dedicated to the Virgin Mary, and the apostles Peter and Paul, but afterwards to St. Eadburgh. Upon the dissolution, it was rated at six hundred and forty-three pounds four shillings and five-pence *per annum*.

This town has a weekly market on Tuesday, and three annual fairs, viz. Easter-Tuesday, the twenty-sixth of June, and Tuesday before All-Saints, for cattle and horses.

Abberton, in the neighbourhood of Parshore, is famous for a medicinal spring of the same nature with the waters at Epsom, in Surry, and by many thought not inferior.

At Bredon, south of Parshore, Ethelbald, king of Mercia, about the year 716, seems to have founded a monastery, which, before the Conquest, became part of the possessions of the church of Worcester.

At Wick, near Parshore, Peter de Corbezon, otherwise Studley, founded, about the end of the reign of Henry I. a priory of Augustine canons, which, some time after, was removed to Studley, in Warwickshire.

Evesham, the next place we stopped at, is a neat town, built on a gentle ascent from the river Avon, over which it has a handsome stone bridge, with a harbour for barges. It is ninety-five miles from London. Here, in the year 701, Edwin, the third bishop of Worcester, built and endowed an abbey, dedicated to the Virgin Mary, for

Benedictine monks. The abbot was mitred; and at the dissolution, the revenues amounted to one thousand one hundred and eighty-three pounds twelve shillings and nine-pence. It is an ancient borough, reckoned the second in the county, and enjoys many privileges, some by prescription, and others by charters. It was governed by bailiffs till the third year of king James I. who, at the request of prince Henry, granted it a new charter, incorporated it with the title of mayor, seven aldermen, twelve capital burgessees, a recorder, and chamberlain, who are all of the common-council, with twenty-four other burgessees, called Assistants; and he included the parish of Bengworth, on the other side of the bridge, in its jurisdiction. Four of the aldermen, and the mayor for the time being, are justices of the peace, and of oyer and terminer, and of gaol delivery for all offences arising in the corporation, excepting high treason; and the corporation has power to try and execute felons within the borough. The town has two parish-churches, and in the reign of king William, had the honour of giving title of baron to that great lawyer, statesman, and patriot, the lord chancellor Somers. Its chief manufacture is woollen stockings. At the bridge-foot, in the division of Bengworth, where is another church, there was formerly a castle, which the abbot d'Audeville recovered from William Beauchamp in 1157, and utterly demolished, and caused the ground to be consecrated for a church-yard. There are a grammar-school, and a charity-school, at Evesham; the latter maintained by a thousand pounds legacy, left by the late Mr. Deacle, a woollen-draper in St. Paul's Church-yard, one of its members; and there is another charity-school at Bengworth, where thirty boys are taught, clothed, and maintained by a legacy of two thousand pounds, left by the same gentleman. From this town there is an open prospect of the spacious valley, from hence denominated the Vale of Evesham, which affords such an abundance of the best of corn, as well as pasture for sheep, that it may be justly reckoned the granary of these parts; but as in most fruitful countries, its roads are deep and miry. This vale runs all along the banks of the Avon, from Tewkesbury to Pershore, and to Stratford upon Avon, in the south part of Warwickshire.

Evesham is famous in our history for the great battle here, when prince Edward, afterwards king Edward I. gained that complete and decisive victory over Simon Montfort, the great earl of Leicester, by which he restored his father and uncle to their liberties, and crushed the power of the barons by the death of Montfort, who was killed at the beginning of the battle.

This town sends two members to parliament, has a weekly market on Monday, and four annual fairs, viz. Candlemas-day, the first Monday after Easter, Whitsun-Monday, and the twenty-first of September, for cattle and horses.

On Harrow-hill, north-east of Evesham, is a spring, whose water is said to be of great use in disorders of the eyes. It appears to be of a soft balsamic nature, though, from the moss growing about the spring, it evidently possesses a petrifying quality.

In the year 691, king Ethelred gave the town of Fladbury, on the north-west of Evesham, to Ostorius, bishop of Worcester, who placed there a society of religious persons subordinate to the church of Worcester; and the place still continues in the possession of that cathedral.

North-east of Evesham, at a place called Cleve, there was an ancient monastery, dedicated to St. Michael the Archangel, before the year 790; but it seems to have been annexed to the church of Worcester before the year 888.

At Elmley, south-west of Evesham, there was formerly a castle, in which Guy Beauchamp, earl of Warwick, in the reign of Edward II. founded a college or large chantry, for eight priests, and dedicated it to the Virgin Mary.

Worcester, the next place we visited in our tour, is the capital of the county, and gives name to it. The city stands on the banks of the Severn, over which it has a stone bridge, one hundred and twelve miles from London.

London. It is supposed to have been one of the cities built by the Romans, (who called it Branovium) for curbing the Britons who dwelt beyond the Severn. The latter called it *Caer Wrangon*. It was erected into an episcopal see by the Saxon king Ethelred, *anno* 679, when the church was filled with married presbyters, till Dunstan turned them out, and put monks in their room. In the year 1041, it was plundered and burnt down, and the inhabitants put to the sword by the Danish king Hardicanute, to revenge the death of some of his tax-gatherers, whom the people had rashly murdered. Not long after William Rufus's time, it was burnt down again, when the Welsh were suspected to have set fire to it. King Stephen besieged and took it, and burnt it to the ground a third time. The last time it was remarkable for any military event, was in 1651, when that famous battle was fought, wherein king Charles II. was defeated by Cromwell; and in a garden just without the south gate of the city, where the heat of the battle was, the bones of the slain are often dug up. A mile and a half above that gate, is that called Perrywood, where Cromwell's army lay; and above in the park is a great work of four bastions, called, *The Royal Mount*, from whence a vallum and ditch run both ways to encompass that side of the city. Camden tells us, it flourished under an excellent government, by two bailiffs chose out of twenty-four citizens, two aldermen, and two chamberlains, with a common-council of forty-eight citizens. And the writer of the *Addenda* to his history says, since that time, by virtue of a charter of king James I. October 2, in the nineteenth of his reign, this city is governed by a mayor and six aldermen, who are justices of the peace (that are chose out of the twenty-four capital citizens) a sheriff usually chose out of the same twenty-four, (for it is a city and county of itself, divided into seven wards); likewise a common-council of forty-eight other citizens, out of which number there are yearly elected the two chamberlains. They have also a recorder, town-clerk, two coroners, and a sword-bearer, thirteen constables, four serjeants at mace. It is a much larger city than Gloucester, and more level; but it lies in such a bottom, that it is hardly to be seen till we come upon it. The chief manufactures of the place are broad cloth and gloves, especially the former, in which it is incredible what a number of people are employed here and hereabouts; and by the convenience of the Severn, it is in a thriving condition. One part of the city is inhabited by the Welsh, who speak their own language. The public buildings make a grand appearance, particularly the Guild-hall, and the Workhouse. All their markets are well supplied with corn, cattle, and all sorts of provisions. It had formerly a castle, as also walls one thousand six hundred and fifty paces in circumference, with three gates, and five watch-towers; but both walls and castle are long since destroyed. The cathedral, which is exactly the model of that at Brussels, is a large edifice, but not very elegant, except the choir of the chapel on the south side of it, which is of very curious workmanship, and one hundred and twenty feet long. The whole length of the church is three hundred and ninety-four, the breadth seventy-eight, and the tower is one hundred and sixty-two feet in height. There is a library belonging to the cathedral, which is a handsome, large, round room, supported by only one pillar in the middle. King John lies in the middle of the choir, between two very pious bishops, as he directed by his last will. Prince Arthur, the elder brother to king Henry VIII. lies interred also in a pretty little chapel; and there is a very fine monument of that countess of Salisbury who dropped her garter as she danced before king Edward III. at Windsor. Here are also twelve parish-churches, nine within the city, and three without. The streets are broad, and well paved, of which the Foregate is remarkably regular and beautiful, the houses pretty well built; and, take it all together, it is a very delightful place.

We read in Fox, of an hospital here dedicated to St. Wulfstan. It is certain, that here is a noble one erected by Robert Berkley of Spetchley, Esq; who laid out two thousand pounds in the building, and four thousand

pounds in endowing it for twelve poor men; and in and about the city there are six or seven other hospitals. The King's School here, founded by Henry VIII. has been famous for its masters; and the many good scholars it has sent to the university. Here is a free-school also for grammar, with two others for the same learning; and the lists mention six charity-schools, in which are taught one hundred and ten boys, part of them clothed. The work-house above-mentioned, which stands over-against Mr. Berkley's fine hospital, is an instance rarely to be met with of a charity restored after it has once been alienated: for after that laudable institution had continued several years, the guardians of it contracted such a heavy debt, that they returned the poor back to their several parishes; the charity was sunk, and the corporation let out the building for a hop-market, ware-houses, &c. but their then worthy representative in parliament, lord Sandys, and other gentlemen, procured an act of parliament, which took place in June 1730, for restoring it to its original institution. St. Nicholas's church in this city has been lately rebuilt, and is a neat structure; and All Saints church being so ruinous, that part of it actually fell down, an act passed in the session of 1737-8, for taking it down, and rebuilding it. This city formerly gave title of earl to several noble families, as it now does those of marquis and earl to the duke of Beaufort. It is remarked, that the Severn, though generally rapid elsewhere, glides by Worcester very gently. Here is a very good water-house and quay, to which many ships come. This city has enjoyed the privilege of sending members to parliament as long as any town. Of its bishops, it is said there have been one pope, four saints, seven lord high chancellors, eleven archbishop, two lord treasurers, one chancellor to the queen, one lord president of Wales, one vice president, and by the confession even of the poet, one un sullied mitre.

The episcopal see of this city was founded by king Ethelred, in the year 680, with a chapter of secular clerks, in a church dedicated to St. Peter. Before the year 954, a new cathedral was founded by bishop Oswald in the church-yard of St. Peter's, and dedicated to the Virgin Mary; in which were settled a prior and monks of the Benedictine order, who were removed by bishop Wulfstan to a new and a larger monastery, which he erected for them in the year 1088. About the time of the suppression here were fifty religious, whose annual revenues amounted to one thousand three hundred and eighty-six pounds twelve shillings and ten-pence: and most of these revenues were applied by king Henry VIII. towards the endowment of a dean, ten prebendaries, ten minor canons, ten lay-clerks, ten choristers, forty scholars, two school-masters, and other members.

Worcester sends two citizens to parliament, has three weekly markets, held on Wednesdays, Fridays, and Saturdays; and four annual fairs, viz. Saturday before Palm-Sunday, and Saturday before Easter, for black cattle, horses, and linen cloth; the fifteenth of August, and the ninth of September, for horses, black cattle, lambs, cheese, hops, and linen.

At Kemsey, on the Severn, south of Worcester, are some remains of a square camp, with single, but high ramparts. Here was also a noble palace belonging to the bishops of Worcester, built before the Conquest.

At Whittington, near Worcester, Osber, viceroy, lord lieutenant, or earl of Worcester, founded, about the end of the seventh century, a monastery, which continued till the year 774; after which the estates of this religious foundation came to the bishops of Worcester, and made part of the endowments of the bishopric. There was also a monastery at Kemsey, about four miles south of Worcester, which was afterwards united to the church of Worcester.

At Aftley, about six miles from Worcester, Ralph de Toden, before the year 1160, founded an alien priory of Benedictine monks, subordinate to the abbey of St. Taurinus, near Ebroix, in Normandy; but in the reign of Edward IV. it was annexed to the college of Westbury, in Gloucestershire.

At Whiston, near Worcester, was a priory of seven or eight White nuns, founded by one of the bishops of Worcester before the year 1255, and valued, upon the suppression, at fifty-three pounds three shillings and seven-pence *per annum*.

Leaving the city of Worcester, we passed on to Droitwich, remarkable for its salt springs. It stands on the river Salwarp, about five miles from its influx with the Severn, ninety-five miles from London. The river Salwarp is navigable to this town from the Severn, and is of infinite advantage to the place. It is a corporate bailiwick, with about four hundred houses, and four churches, and is much enriched by its salt-works, which may at least be traced as high as the Saxons; for it appears from Doomsday-book, that salt was made here before the Conquest. The author of the Addenda to Camden gives us an opportunity to judge of the proportions that are made of it, by observing, that the taxes annually paid for it from hence to the crown amount to about fifty thousand pounds a year, at the rate of three shillings and six-pence a bushel.

The reader will probably expect some account of the salt springs, and the nature of the soil they rise in, pursuant to our proposals of taking in all that is material in natural history; and therefore we have extracted what follows from an account of it given by Dr. Thomas Rastal, which will, it is hoped, be the more acceptable, not only as it is the latest that has come to our hands, but as it was written on the very spot.

“ The country is neither plain, neither hath it any great hills, but many small risings, the greatest hills near us being the Lichie, within six miles, which some call Look High, supposing it to be the highest ground in these parts, because the springs which rise there run into the North and South seas, near to which are Clent Hills, about the same distance. On the other side the river Severn are Aberley Hills, at about seven miles distance from us. There are many salt springs about the town, which is seated by a brook side, called Salwarp Brook, which arise both in the brook, and in the ground near it, though there are but three pits that are made use of. Where the springs are saltest, there grows nothing at all; but by the brackish ditches there grows *Aster Atticus*, with a pale flower, which I find no where else with us. Some of the salt springs rise on the top of the ground, which are not so salt as others. The great pit, which is called Upwich Pit, is three feet deep, in which are three distinct springs rising in the bottom; one comes into the pit north-west, another north-east, the third south-east, which is the richest both in quantity and quality. They all differ in saltness, which I can give no exact account of, it being impossible to separate them, but there will be some mixture. The pit is about ten feet square. The sides are made with square elms, jointed in at the full length, which I suppose is occasioned by the saltness of the ground, which appears to me to have been a bog; the surface of it is made of ashes. That it was originally a bog, I am induced to believe; for not many years since, digging to try the foundation of a Seal, for so we call our houses we make salt in, I thrust a long staff over head. Though the brine be colder than the other water, yet it never freezes; but the rain water that lies upon the brine in extreme hard frosts, will freeze, but not much. The soil about the town, on the lower side of it, is a black rich earth, under which two or three feet is a stiff gravelly clay, then marle. Those that make wells for fresh water, if they find springs in the marle, they are generally fresh; but if they sink through the marle, they come to a whitish clay mixed with gravel, in which the springs are more or less brackish. In the great pit at Upwich, we have at one and the same time three sorts of brine, which we call by the names of First Man, Middle Man, and Last Man; these sorts are of different strengths. The brine is drawn by the pump, so that which is in the bottom is first pumped up, which is what we call First Man, &c. That I might make an exact trial of the strength, I made me a quart that contained

“ twenty-four ounces Troy of distilled water; which quart being filled with the first brine, besides the tare of the quart, weighed twenty-nine ounces, which made seven ounces and three drams of salt, without any addition. The next day I weighed the same salt again, and it weighed seven ounces and six drams; so that four tuns of brine make above one tun of salt. The same quart filled with Middle Man, which is the second sort of brine, weighed twenty-eight ounces. I also weighed a quart of brine as it came immediately out of the spring, which weighed twenty-eight ounces, and the third sort twenty-seven ounces; so that what the first gets, the last loses, which does precipitate as much in twenty-four hours, as if it stood a much longer time. The quantity of brine that this pit yields every twenty-four hours, is as much as will make four hundred and fifty bushels of salt, which is drawn out twice or three times a day, for so oft we ordinarily draw, and that as long as the pump will go. In the best pit at Netherwich a quart of brine weighs twenty-eight ounces and an half. This pit is eighteen feet deep, and four feet broad, and yields as much brine every twenty-four hours, as makes about forty bushels of salt. There is but one spring in the pit that comes in two feet and eight inches above the bottom. The worst pit at Netherwich is of the same breadth and depth as the former, a quart of brine, out of which weighs twenty-seven ounces, and yields as much brine daily as makes about thirty bushels of salt. In this pit are three springs, two in the bottom, and one about two feet higher. These pits are within six yards of one another. They are near the brook, the great pit on the north-side, and about a quarter of a mile lower, the two lesser pits on the south side. In the great pit I found no variation, either in quality or the strength of the brine; but the springs in the other pits are augmented by much rain, and yield less salt. That every man may know his own proportion, the brine is divided into Phats Wallings. A Phat Walling is divided into twelve weaker brines, and every weaker brine into eight burdens, every burden being a vessel that contains about thirty-two gallons, whereof every one has six burdens of First Man, six of Middle Man, and six of Last Man; so that every man has not only his just proportion in quantity, but in quality also. This brine is carried in coolers to every man's Seal, by eight sworn men, whom we call Piasters of the Beachin, and four Middle Men, and there put into great tons for use. The fuel heretofore used was all wood, but since the wood has been destroyed by the iron-works, we use almost all pit-coals, which are brought to us by land thirteen or fourteen miles. The phats we boil our brine in are made of lead cast into a flat plate, five feet and a half long, and three feet over, and then the sides and ends beaten up, and a little raised in the middle, which are set upon brick-work, which we call Ovens, in which is a grate to make the fire on, and an ash-hole, which we call a Trunk. In some seals are six of these pans; in some five; in some four; some three; some two. In each of these pans is boiled at a time as much brine as makes three pecks of white salt, which we call a Lade, and is laded out of the pan with a Loot, and put into Barrows, which are set into Bastals over vessels we call Leachcombs, that the brine may run from the salt, which brine we call Leach, with which we dress our phats, when the cold brine, they are first filled with, is something boiled away. In these bastals the salt stands till it is dry, which is about four hours; then we carry it into Cribbs, which are houses boarded on the bottom and sides, where it is kept till sold, which is sometimes half a year, or three quarters, in which time, if the crib is good, it will not waste a twelfth part, the salt itself being of so strong a body: whereas in Cheshire, they are forced to keep their salt in barrows, in stoves to dry it, and make it no faster than they sell. For clarifying the brine, we use nothing but the whites of eggs, of which we take a quarter of a white, and put it into a gallon or two of

“ brine,

“ brine, which being beaten with one’s hand, lathers
 “ as if it were soap, a small quantity of which froth put
 “ into each phat, rishes all the scum, so that the white
 “ of an egg will clarify twenty bushels of salt, by which
 “ means our salt is as white as any thing can be, neither
 “ has it any ill favour as that salt has which is clarified
 “ with blood. For granulating it, we use nothing at all,
 “ for the brine is so strong of itself, that unless it be
 “ often stirred, it will make salt as big grained as bay-
 “ salt. I have boiled brine to a candy height, and it
 “ has produced clods of salt as clear as the clearest
 “ allum like Isle of May salt, so that we are necessitated
 “ to put a small quantity of rosin into the brine to make
 “ the grain of the salt small. Besides the white salt,
 “ we have another sort which we call Clod Salt, which
 “ grows to the bottom of the phats, that after the white
 “ salt is laded out, is dugged up with a picker, which is
 “ made like a mason’s trowel, pointed with steel, and
 “ put upon a short staff; this is the strongest salt I have
 “ seen, and is most used for salting bacon and neats
 “ tongues, it makes the bacon redder than other salt,
 “ and makes the fat eat firm; if the swine are fed with
 “ mast, it hardens the fat almost as much as if fed with
 “ pease, and salted with white salt. It is very much
 “ used by country women to put into their runnet-pots,
 “ and, as they say, is better for their cheese. These
 “ clods are used to broil meat with, being laid on coals.
 “ We account this salt to be too strong to salt beef
 “ with, it taking away too much of its sweetness. A
 “ third sort of salt we have, which we call Knockings,
 “ which does candy on the barrow as the brine runs
 “ from the salt, after it is laded out of the phats. This
 “ salt is scraped off the phats when we reach them,
 “ that is, when we take our phats off the fires to beat
 “ up the bottom, and is bought by the poor sort of
 “ people to salt meat with. A fourth sort is Pigeon
 “ Salt, which is nothing but the brine running out
 “ through the crack of a phat, and hardens to a clod
 “ on the outside over the fire. The salt leaves are the
 “ finest sort of white salt, the grain of which is made
 “ something finer than ordinary, that it may the better
 “ adhere together, which is done by adding a little more
 “ rosin, and is beaten into the barrows when it is laded
 “ out of the phat. Our salt is not so apt to dissolve as
 “ Cheshire salt, nor as that salt that is made by dissolving
 “ bay-salt, and clarifying it, which is called Salt upon
 “ Salt, which appears by our long keeping it without
 “ any fire. I believe there cannot be better white salt
 “ than ours, for several reasons.

“ 1. There is none can be whiter, and consequently
 “ more free from dross.

“ 2. It is the weightiest, as I have seen myself, and
 “ been informed by others; for the bags of salt I have
 “ usually seen brought out of Cheshire on horseback,
 “ contain six bushels and a half, or seven bushels;
 “ whereas the best horses that carry salt from hence,
 “ if they go with it above five miles, carry not above
 “ three strikes, and three pecks, or four strikes. A
 “ Winchester bushel of our salt weighs half a hundred
 “ weight; so that it must necessarily follow, the
 “ weightiest and driest must needs be best.

“ 3. In the time of the first Dutch war, our salt
 “ was carried down into the west, where they had none
 “ before but foreign salt; and, at first using ours, they
 “ complained that it made their meat too salt, which
 “ was because they put as much of ours on their meat,
 “ as of others; if so, it must be better than French salt.

“ 4. I have been assured by many that have made use
 “ both of ours and Cheshire salt, that both for flesh
 “ and white meat, they must lay on more of Cheshire
 “ salt than of ours.

“ 5. It preserves all sorts of flesh for long voyages,
 “ viz. to Jamaica, as well as any which has been lately
 “ tried.

“ 6. I have seen herrings that have been salted with
 “ our salt in Ireland, and brought over to Droitwich,
 “ which have been whiter and better tasted than those
 “ salted with bay-salt.

“ 7. It is an ordinary way of powdering beef with
 “ us, to give it but one salting to keep it the whole

“ year. We use no iron pans, as they do in Cheshire,
 “ and other places; for we have found upon trial, that
 “ the strength of the brine does so corrode, that it
 “ quickly wears out those of forged iron, and breaks
 “ those of cast iron.” Thus far Dr. Raftal.

The upper Wych, or Brine-pit, is very neatly kept,
 and exceedingly drawn on account of the many pro-
 prietors it has; yet it is but a small pit comparatively
 with the others. The salt being here boiled in leaden
 pans, there is not the least grain of sand at any time,
 which either falls before the graining of the salt, or that
 adheres to the pan’s bottom; wherefore this brine being
 naturally without sand, it must yield the more wholesome
 salt.

The lower pit, at the Nether-wych, in the same
 town, had lately, if it has not now, but one proprietor,
 and is therefore less drawn, but yet is constantly and
 well wrought. Here is also no appearance of any sand
 at all. The water of these pits stink like rotten eggs,
 especially after Sunday’s rest, and will, if flesh be pickled
 in it, make it stink in twelve hours; and yet the salt that
 is boiled out of these pits is accounted the very best
 inland salt of England, and perhaps as good as any in
 the world. In a ditch over-against the Nether-wych
 Houses, the water stands with a white scum, as at the
 Sulphur Spaws in Yorkshire.

As to the number of the salt-pits at present, it is in
 vain to determine it, some springs going off, and others
 coming on continually. They sink about eighty feet,
 and sometimes throw off much waste water before they
 come at a spring. The experiment will cost one hundred
 pounds, and a pit, if it stands good, may last ten years,
 and bring in two or three hundred pounds a year to the
 owner. They are all within half a mile of one another;
 and when one man has sunk a pit, and discovered a
 spring, it is usual for the owner of the ground bordering
 upon it to sink another as near as he can, to draw off
 his brine, which is sometimes done; but if it fails, then
 the other pit holds good. They work all the year round,
 and always find a market for their salt. The proprietors
 of these salt-pits are a corporation, and none can be a
 burges of Droitwich, but he must have some propriety
 in the salt-springs; and in the year 1690, upon a con-
 tested election between Sir John Packington and Philip
 Foley, Esq; it was resolved by the House of Commons,
 that the right of electing burgeses for this borough was
 in the burgeses of the corporation of its salt springs.
 The ways from hence to Bewdley were once so bad,
 that horses were often mired, waggons overturned, and
 salt damaged or spoiled by it; upon which a project was
 set on foot to convey the brine in pipes to Bewdley,
 and there boil up the salt, and put it on board the barges;
 but the poor at Droitwich, who are intirely supported
 by the salt works and carriage, made such pressing
 instances against it, that the profits came to nothing,
 and an act of parliament was procured to mend the road
 between the two towns. Feckenham forest and Norton
 wood, in this neighbourhood, formerly supplied the
 wood for boiling the salt water, but now they burn
 coals, as is before observed.

This town had great privileges by charter from king
 John, which they have to shew at this day; after whose
 time, viz. anno 1290, St. Andrew’s church, with the
 greatest part of the town, was burnt. They were also
 much favoured by king Henry III. and other princes.
 In the reigns of Edward I. and II. this borough returned
 eight times to parliament, but discontinued it afterwards
 till the first of Philip and Mary, when it had farther
 privileges, besides the renewal of the former; and
 James I. granted them a new charter. ’Tis governed
 by a bailiff and burgeses. The bailiff is a justice of
 the quorum, and a justice of the peace the year after;
 and there is a recorder, who is also a justice.

At this town there was formerly a free chapel or
 hospital, consisting of a master and some poor brethren,
 dedicated to St. Mary, and under the government of the
 priory at Worcester. Its revenues, on the suppression,
 were valued at twenty-one pounds eleven shillings and
 eight-pence *per annum*.

Droitwich

Droitwich sends two members to parliament, has a weekly market on Friday, and three annual fairs, viz. Good-Friday, the twenty-eighth of October, and the twenty-first of December, for hats and linen cloth.

At Westwood, near Droitwich, Eustatia de Say, and her son, Osbert Fitz-Hugh, founded an alien priory in the reign of Henry II. a cell to the abbey of Font-Ebroid, or Fontevraud, in Normandy: it was dedicated to the Virgin Mary, had six nuns of the order of Fontevraud, with annual revenues rated, on the suppression, at seventy-eight pounds eight shillings and ten-pence.

At Wick, near Droitwich, was a house of Friars Heremites, of the order of St. Augustine, founded about the fourth year of Edward III.

Bromsgrove, to which we next proceeded in our tour, is a pretty large town, situated near the source of the river Salwarp, one hundred and eighteen miles from London. It was formerly a borough, and sent members to parliament; and is governed by a bailiff, recorder, aldermen, and other officers. Here is a charity-school, founded by Sir Thomas Cook, for teaching, cloathing, and putting out apprentices, twelve boys. Here are also considerable manufactures, both of linen and woollen cloth.

This town has a weekly market on Tuesday, and two annual fairs, viz. the twenty-fourth of June, and the first of October, for linen cloth, cheese, and horses.

At Bardesley, near Bromsgrove, upon the borders of Warwickshire, Maud, the empress, founded, in 1138, a Cistercian abbey, dedicated to the Virgin Mary. At the suppression, its yearly revenues amounted to three hundred and eighty-eight pounds nine shillings and ten-pence.

At Dodford, two miles west of Bromsgrove, was a small priory of Premonstratensian canons, dedicated to the Virgin Mary. It was built about the reign of king John, and valued, upon the dissolution, at seven pounds *per annum*.

Leaving Bromsgrove, we proceeded to Tenbury, probably so called from its situation on the Teme. It is a large, populous, well built town, one hundred and twenty-eight miles from London; but has nothing remarkable, except a weekly market on Tuesday, and three annual fairs, viz. the twenty-sixth of April, the eighteenth of July, and the twenty-sixth of September, for horses, black cattle, and sheep.

On the top of a down called Woodbury-hill, near the river Tame, and not far from Tenbury, is an ancient intrenchment, commonly called Owen Glendowr's camp; but whether it be a work of the Britons or Danes, is not certainly known.

Bewdley, Beawley, or Beaulieu, the next place we visited, is so called from its beautiful situation on the declivity of a hill, on the west branch of the Severn, over which it has a stone bridge, one hundred and twenty-two miles from London. It was remarkable in ancient times for the vast high trees in the adjacent forest of Wyre, before they were destroyed by tempests one hundred and fifty years ago, particularly one that blew down one thousand oaks in this forest and Horton wood. It sent burgesses to parliament so early as Edward I. after which there was a long interruption. Edward IV. granted it a charter of incorporation, with great privileges both by land and sea; which shews, that in those days they improved the advantage of the river for traffic. King Henry VII. built a palace near it, called Tickenhall (or rather Ticken-hill, *i. e.* Goats-hill, as the place was termed before it was built) for the retirement of his son prince Arthur; and in the twenty-second of his reign, he granted it another charter, with additional privileges, which were confirmed in the first of Henry VIII. by his charter, reciting the former charters by *Inspeximus*. By an act of the thirty-fourth and thirty-fifth of that king, it was annexed to the county of Worcester. In the third of James I. it obtained another charter, by the name of Bailiffs and Burgesses, which confirmed all its former liberties and privileges, and granted it several officers, as a recorder, steward, town-clerk, twelve capital burgesses, and two

serjeants at mace. It appointed the supreme magistrate, the bailiff, to be chose yearly by the bailiff and burgesses. In the thirty-fifth of Charles II. this corporation underwent a regulation, and a surrender was procured under their seal of the charter granted it by king James I. And in the first of king James II. they were obliged, by the violence of the times, to accept of another charter; but on a trial in B. R. Trinity term 1707, the aforesaid surrender was held void, and a new charter was obtained of the then queen, by which a new corporation was erected, with a grant of the privileges of the old one. In consequence of this, two members were elected to parliament, and two returns made to the sheriff, the one by the bailiff of the old corporation, and the other by the bailiff of the new; and a petition being lodged in behalf of the old, it occasioned a dispute in parliament, and at law; and after the expence of some hundreds, if not thousands of pounds, the new charter carried it; since which only one member has been elected for this borough. The bailiff is justice of peace and quorum, and justice the next year; the recorder is also a justice. It is a place of considerable trade; for, by means of the Severn, great quantities of salt, iron ware, glass, Manchester goods, &c. are put aboard barges here, and at Gloucester aboard troughs, for Bristol, Bridgewater, and other ports, which renders this a populous thriving town and corporation: but its chief manufacture is caps, which the Dutch seamen buy, called Monmouth Caps. It has only a chapel at ease to the church at Ribbesford, on the other side of the river: the town is well supplied with corn, malt, and leather, and every Saturday has a market for hops. There was a fine park about Tickenhall house, above mentioned, which, together with the house, was destroyed in the civil wars.

Bewdley sends one member to parliament, has a weekly market on Saturday, and three annual fairs, viz. the twenty-third of April, for black cattle, horses, cheese, linen and woollen cloth; the tenth of December, for hogs; and the eleventh of December, for black cattle, horses, cheese, and woollen cloth.

Kidderminster, where we next stopped in our tour, is a pretty large town, situated on the Stour, one hundred and twenty-eight miles from London. It is a compact town of five or six hundred houses, where the people, who are at least two thousand, drive a pretty good trade in cloth, and weaving linsley woolseys, &c. and have a handsome church, a good free-school, and two almshouses. It is governed by a bailiff, who is a justice of peace, twelve capital burgesses, twenty-five common-councilmen, and other subordinate officers, who have a town-hall. It gives title of baron to the lord Foley: it was anciently a borough, and sent members to parliament; and the famous Mr. Richard Baxter, a man of so much note for his natural and acquired parts, for his popular preaching, for his voluminous writings, and for his constancy to and sufferings for his principles, was minister of this place. This parish extends to Bewdley-bridge, and includes Rubenhall, a hamlet adjoining to it.

This town is famous for its blankets and carpets; has a weekly market on Thursday, and three annual fairs, viz. Holy-Thursday, three weeks after Holy-Thursday, and the fourth of September, for black cattle, horses, cheese, linen and woollen cloth.

Sturbridge, or Stourbridge, the next place we visited, is a well built town on the river Stour, over which it has a stone bridge, one hundred and twenty-eight miles from London. It has been much enriched by iron and glass works; by the former, Mr. Richard Foley raised a great estate, since much improved by his posterity; and so did the father of the late Sir Ambrose Crawley, of London. There are about half a score glass-houses near it, where glasses, bottles, and window-glass are made, together with fine stone pots for glass-makers to melt the metal in, also crucibles, &c. the clay, whereof they are made, being peculiar to the place. Here is also a manufacture of fine freeze-cloth; there is a good grammar-school well endowed, and a library given by Edward VI. Mr. Tanner, and the Monasticon, take notice

notice of a monastery, founded by Ethelbaldt, king of Mercia, at Stoure, supposed to be this place, there being no other town or parish of the name in the county; the mother church of this is at Old Swinford, where a noble hospital was founded, and well endowed by Thomas Foley, Esq; for sixty poor children of this and the neighbouring parishes, to teach them reading, writing, arithmetic, and grammar, and fit them for trades. Their habit and discipline are much like those of Christ's Hospital in London. At Old Swinford, there are also two charity-schools. Mr. Biggs, a clothier of this town, by his will in 1726, gave three hundred pounds to the governors of its free-school, towards building a church or chapel, and by the help of additional contributions of the nobility and gentry in the neighbourhood, the same was finished at the expence of near two thousand pounds, and an act passed in 1742, for making it a parish-church separate from that of Old Swinford.

This town has a weekly market on Friday, and two annual fairs, viz. the twenty-ninth of March, for horses, and other cattle; and the eighth of September, for sheep, and other sorts of cattle.

Shipton upon Stour, which we passed from Sturbridge, has its name from a large sheep market formerly held here, and from its situation upon the Stour. It is a

small town, seventy-five miles from London, but still remarkable for a very large weekly market on Friday: it has also two annual fairs, viz. the twenty-second of June, and the Tuesday after the tenth of October, for horses, cows, and sheep.

CURIOUS PLANTS found in Worcestershire.

Common Meadow Saffron; *Colchium vulgare*, Ger. found in the meadows in most parts of this county.

The lesser green-leaved Hounds-tongue: *Cynoglossum folio virenti*, J. B. found in the shady lanes near Worcester.

The true, or manured Service or Sorb-tree; *Sorbus sativa*, C. B. found in several of the woods of this county.

Polonian Wheat; *Triticum speciosum grano oblongo*, J. B. found in many of the fields of Worcestershire.

MEMBERS of PARLIAMENT for this County.

Worcestershire sends nine members to parliament; two knights of the shire for the county; two citizens for Worcester; two members for Droitwich; two for Evesham; and one for Bewdley.

S H R O P S H I R E ;

O R , T H E

C O U N T Y O F S A L O P .

THIS county is bounded on the north by Cheshire, and part of Flintshire; on the south by Worcestershire, Herefordshire, and part of Radnorshire; on the east by Staffordshire; and on the west by the counties of Denbigh, and Montgomery. It is of an oval form, forty miles in length from north to south, thirty-three miles in breadth from east to west, and one hundred and thirty-four miles in circumference. It is divided into fifteen hundreds; in which are fourteen market-towns, one hundred and seventy parishes, about twenty-three thousand five hundred houses, and one hundred and thirty-nine thousand inhabitants. It lies in the province of Canterbury; that part of it which lies on the south side of the Severn, is under the jurisdiction of the bishop of Hereford; while that on the north is under the bishop of Litchfield and Coventry, except Oswitry, and a few more places, which belong to the bishop of St. Asaph. But the archdeacon of Shrewsbury is the archdeacon for the three dioceses.

That division of Shropshire which lies to the north of the Severn, is part of the country which, in the time of the Romans, was inhabited by the Cornavii, of whom some account will be given in our survey of Cheshire. But that part of the county which lies on the south side of the Severn, belonged to the Ordovices, a people who extended themselves over the greater part of Wales, and of whom an account will be given in our description of that principality. Shropshire, under the Saxons, was part of the kingdom of Mercia.

This being a frontier county between England and Wales, was better fortified than any other county in England, having no less than thirty-two castles, besides fortified towns. The extremity of Shropshire towards Wales being the limits of both countries, were called the Marches of Wales, and governed by some of the nobility of this county, who were stiled lords of the marches. These lords, within the bounds of their respective jurisdictions, acted with a kind of palatinate authority, which approached nearer to sovereign power than any other delegated authority: but this power, which was generally exercised with great insolence over the inhabitants of the Marches, was by degrees abolished, after the reduction of Wales, and the accession of it to the crown of England.

The famous military way, called Watling-street, entered Shropshire out of Staffordshire, at Boningale, a village on the borders of that county, north-east of Bridgenorth. From Boningale it passes north-west to Wellington, and thence south-west, through Wroxeter, where crossing the Severn at a place called Wroxeter-Ford, it runs southward through the county into Herefordshire.

At Caer Caradock, a hill near the conflux of the Clun and Temd, are still some remains of a fortification thrown up by the famous Caractacus, in the year 53, and gallantly defended against Ostorius, at the head of a Roman army. It is commonly called the Gaia, and is situated on the eastern side of the hill, which is accessible only on the west. The ramparts are walled, but now the greater part are covered with earth; and though the soil of this hill is a hard rock, yet the trenches of the Roman camp are very deep. The above fortification was however taken by Ostorius, and the British prince Caractacus, and his family, sent prisoners to Rome; and for which exploit the Roman senate decreed their general a triumph. But the behaviour of Caractacus at Rome was so noble, that the emperor Claudius set both

him and his family at liberty. Other traces in this neighbourhood, said to be destroyed in the same celebrated expedition of Ostorius against Caractacus, are, a perfect Roman camp, called Brandon; a British camp, called Coxoll; the ruins of a large fort on the south point of a hill, called Tongley; another large fort, called the Bishop's-moat, on the west side of a hill, within a mile of Bishop's-castle; and on the east side of the same fort is an acre of ground, surrounded with an intrenchment. At Lanterden, near Caer Caradock, are two barrows, in which were some time since found ashes and burnt bones.

The famous Thomas Parr, who lived to the amazing age of one hundred and fifty-two years, was a native of this county. He was called Old Parr, and sent for to court a few years before he died.

R I V E R S .

The chief rivers of this county are, the Severn, the Temd, and the Colun. The Severn, which runs through the county from west to east, and divides it nearly into two equal parts, has been already described in our account of Gloucestershire. The Temd rises in the north part of Radnorshire; and running eastward, and separating Shropshire from the counties of Radnor, Hereford, and Worcester, falls into the Severn near the city of Worcester. The Colun, or Clun, rises near Bishop's-castle, a borough town in this county; and running to the southward, discharges itself into the Temd, not far from Ludlow.

Besides these rivers, there are other less considerable streams in this county; the principal of which are, the Ony, the Warren, the Curve, the Rea, the Tern, and the Rodan.

Remarks on the INLAND NAVIGATION *of* Shropshire.

The Severn is navigable through the whole county, and vessels of large burden come up to Shrewsbury. The navigation is, however, greatly impeded by the prodigious current of the river after heavy rains, which often throw up shoals and banks, which, when the water is low, render the passage troublesome, and often tedious. The river Temd is navigable by means of locks, constructed in the old manner, to Tenby, in Worcestershire.

A scheme has some time since been formed for making a navigable canal from Winsford-bridge, in the county of Chester, to Chickley-brook, near Wine-hill, upon the borders of Staffordshire, and thence to join the Severn and Trent by other canals, in order to open a communication between the great trading ports of Bristol, Liverpool, and Hull. This scheme, when completed, will be of the utmost advantage to the kingdom in general, and to the several counties through which it is carried in particular.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of this county is pure and healthy; but the country being mountainous, it is in many places cold and piercing.

The soil is various: the northern and eastern parts of the county yield great plenty of wheat and barley; but the southern and western parts, which are hilly, are less fertile,

fertile, though they afford pasture for sheep and cattle; and along the banks of the Severn there are large meadows, which produce abundance of grafs. Here are mines of copper, lead, iron, stone, and lime-stone; besides which, the county abounds with inexhaustible pits of coal. Between the surface of the ground and the stratum of coal, there is generally a layer of a black, hard, though very porous substance, which being reduced to powder in proper mills, and then boiled with water in coppers, deposits an earthy or gritty matter to the bottom, and throws up to the top of the water a bituminous matter, which is, by evaporation, reduced to the consistency of pitch: an oil is also produced from the same stratum, by distillation, which, mixed with the bituminous substance, dilutes it into a kind of tar. Both these substances are used in covering the bottoms of ships, and are even better than pitch or tar for that purpose, for they never crack. Perhaps the bottom of a ship paved with this bituminous pitch, would be proof against the worm.

Remarks on the HUSBANDRY of Shropshire.

As the soil of this county is various, the husbandry is also various. In the southern parts, where they raise large quantities of corn, and where the land is very fertile, their course of crops is as follows: 1. Fallow. 2. Wheat. 3. Pease. 4. Barley. In some places, 1. Fallow. 2. Wheat. 3. Barley. 4. Pease. And in others, 1. Turnips. 2. Barley. 3. Clover. 4. Oats.

They plough six times for wheat, sow two bushels in October, and reap about twenty upon an average. For barley they plough once or twice, sow three bushels in April, and gain about twenty-four bushels in return. They stir the ground but once for oats, sow six bushels, and reckon the medium crop at thirty. They give four earths for turneps, hoe them twice, and value the produce at fifty-five shillings per acre, but use them only in feeding of sheep. They plough but once for beans, sow three bushels and a half broad-cast, never hoe them, and reckon the return at eighteen bushels. They plough also but once for pease, sow four bushels, and gain fifteen.

MANUFACTURES.

Shrewsbury is famous for the manufactures of Welsh cottons and flannels, and Bridgenorth for stockings. Bridgenorth is also furnished with common artificers of every kind, who make and sell clothes, iron tools, and instruments of all sorts; and the other ordinary manufactures of the kingdom.

MARKET TOWNS, &c.

The market-towns are, Bishop's-castle, Bridgenorth, Church Stretton, Clebury, Drayton, Hales Owen, Ludlow, Newport, Oswestry, Shrewsbury, Wellington, Wem, Great Wenlock, and Whitchurch.

We entered this county from Worcestershire, and crossed the Temd to Clebury, a small market-town on the northern bank of that river, one hundred and eighteen miles from London. It had formerly a castle, but has nothing now remarkable, except a weekly market on Wednesday, and two annual fairs, viz. the second of May, and the twenty-seventh of October, for black cattle, sheep, and pigs.

Leaving this town, we passed to Hales Owen, a small market-town of Staffordshire, but in a part separated from that county, in order to view the Leafowes, the seat of the late William Shenstone, Esq.

About half a mile short of Hales Owen, you quit the great road, and turn into a green lane on the left hand, where descending to the bottom of a valley finely shaded, the first object that occurs is a ruined wall, and a small gate within an arch, inscribed, The Priory Gate. Here the company should properly begin their walk, but generally chuse to go up with their horses or equipage to the house; from whence returning, they descend back into the valley. Passing through a small gate at the

bottom of the fine swelling lawn that surrounds the house, you enter upon a winding path, with a piece of water on your right. The path and water, overshadowed with trees, form a scene at once cool, solemn, and sequestered; which is so striking a contrast to the lively scene you have just left, that you seem all on a sudden landed in a subterraneous region. Winding down the valley, you pass beside a small root-house, where, on a tablet, are these lines:

Here in cool grot, and mossy cell,
We rural fays and faeries dwell;
Though rarely seen by mortal eye,
When the pale moon ascending high,
Darts thro' yon limes her quivering beams,
We frisk it near these chrystal streams.

Her beams reflected from the wave,
Afford the light our revels crave;
The turf with daisies broider'd o'er,
Exceeds we wot the Parian floor;
Nor yet for artful strains we call,
But listen to the waters fall.

Would you then taste our tranquil scene,
Be sure your bosoms be serene;
Devoid of hate, devoid of strife,
Devoid of all that poisons life:
And much it 'vails you in their place,
To graft the love of human race.

And tread with awe these favour'd bowers;
Nor wound the shrubs, nor bruise the flowers;
So may your path with sweets abound!
So may your couch with rest be crown'd!
But harm betide the wayward swain,
Who dares our hallow'd haunts profane.

You now pass through the Priory gate, and are admitted into a part of the valley somewhat different from the former; tall trees, high irregular ground, and rugged seats. The right presents you with perhaps the most natural, if not the most striking of the cascades here found: the left with a sloping grove of oaks, and the centre with a pretty circular landscape appearing through the trees, of which Hales Owen steeple, and other objects at a distance, form an interesting part. The seat beneath the ruined wall has these lines of Virgil inscribed:

—————Lucis habitamus opacis
Riparumque toros, & prata recentia rivis
Incolimus.

You now proceed a few paces down the valley to another bench, where you have this cascade in front, which, together with the internal arch and other appendages, makes a pretty irregular picture. The stream attending us with its agreeable murmurs as we descend along this pleasing valley, we come next to a small seat, where we have a sloping grove upon the right, and on the left a striking vista to the steeple of Hales Owen; which is here seen in a new light. We now descend farther down this sequestered valley, accompanied on the right by the same brawling rivulet running over pebbles, till it empties itself into a fine piece of water at the bottom. The path here winding to the left, conforms to the water before-mentioned, running round the foot of a small hill, and accompanying this semicircular lake; into another winding valley, somewhat more open, and not less pleasing than the former. Before we enter this, it will be proper to mention a seat about the centre of this water scene, where the ends of it are lost in the two vallies on each side; and in front it is invisibly connected with another piece of water of about twenty acres, open to the Leafowes, but not the property of the owner. The back ground of this scene is very beautiful, and exhibits a picture of villages and varied ground, finely held up to the eye.

We now leave the Priory upon the left, and wind along into the other valley; till by a pleasing serpentine walk we enter a narrow glade, the slopes on each side finely

finely covered with oaks and beeches, on the left of which is a common bench, which affords a retiring place secluded from every eye, and a short respite, during which the eye reposes on a fine amphitheatre of wood.

We now proceed to a seat beneath a fine canopy of spreading oak, on the back of which is this inscription:

Huc ades; O Meliboeë! caper tibi salvus, & hoedi,
Et si quid cessare potes, requiesce sub umbra.

The picture before it is that of a beautiful home-scene; a small lawn of well varied ground encompassed with hills and well grown oaks, and embellished with a cast of the piping Faunus, amidst trees and shrubs on a slope upon the left; and on the right, and nearer the eye, with an urn thus inscribed:

INGENIO ET AMICITIÆ
GULIELMI SOMERVILLE;

And on the opposite side,

G. S. POSUIT,
Debita spargens lacrima favillam
Vatis amici.

The scene is inclosed on all sides by trees; in the middle only there is an opening, where the lawn is continued, and winds out of sight.

Here through a gate, you are led by a thicket of many sorts of willows, into a large root-house inscribed to the earl of Stamford, who was present at the first opening of the cascade, which is the principal object from the root-house. Other cascades may have the advantage of a greater descent, and a larger torrent; but a more wild and romantic appearance of water, and at the same time strictly natural, for one hundred and fifty yards together, is perhaps no where to be seen.

Proceeding on the right hand path, the next seat affords a scene of what Mr. Shenstone used to call his Forest Ground, consisting of wild green slopes peeping through dingle, or irregular groups of trees, a confused mixture of savage and cultivated ground, forming a landscape fit for the pencil of Salvator Rosa.

Winding on beside this lawn, which is over-arched with spreading trees, the eye catches at intervals, over an intermediate hill, the spire of Hales church, forming here a perfect obelisk, the urn to Mr. Somerville, &c. And now passing through a kind of thicket, we arrive at a natural bower of almost circular oaks, inscribed to Mr. Dodsley, in the manner following:

Come then, my friend, thy sylvan taste display,
Come hear thy Faunus tune his rustic lay;
Ah! rather come, and in these dells disown
The care of other strains, and tune thine own.

On the bank above it, amidst the fore-mentioned shrubs, is a statue of the piping Faunus, which not only embellishes this scene, but is also seen from the court before the house, and from other places. It is surrounded by venerable oaks, and very happily situated. From this bower also you look down upon the forementioned irregular ground shut up with trees on all sides, except some few openings to the more pleasing parts of this grotesque and hilly country. The next little bench affords the first, but not the most striking view of the Priory. It is indeed a small building; but seen as it is beneath trees, and its extremity also hid by the same, it has in some sort the dignity and solemn appearance of a large edifice.

Passing through a gateway, we enter a small open grove, where the first seat we find affords a picturesque view through trees of a clump of oaks at a distance overshadowing a little cottage upon a green hill. We thence immediately enter a perfect dome, or circular temple of magnificent beeches, in the centre of which it was intended to place an antique altar, or a statue of Pan. The path serpentine through this open grove, leads us, by an easy ascent, to a small bench with this motto, from Horace:

Me gelidum nemus
Nympharumque leves cum satyris chori
Secernant populo.

alluding to the retired situation of the grove. There is also seen through an opening to the left, a pleasing landscape of a distant hill, with a whited farm-house upon the summit; and to the right a beautiful round slope, crowned with a clump of large firs, with a pyramidal seat on its centre; to which, after no long walk, the path conducts us.

On an urn which was put up since Mr. Dodsley's account of the Leafowes was drawn up, is the following inscription to the memory of Mr. Shenstone's brother:

Fratri ejus unico.
Fratrum amantissimo.
Juvenum suavissimo.
Hominum integerrimo.
1752.

— Postquam te fata tulerunt
Ipsa Pales agros, atque ipse reliquit Apollo.
GULIELMUS SHENSTONE.

P.
Aliorum moestitiæ consulens.
Et suæ.

But we first come to another view of the Priory, more advantageous, and at a better distance, to which the eye is led down a green slope, through a scenery of tall oaks, in a most agreeable manner; the grove we have just passed on one side, and a hill of trees and thickets on the other, conducting the eye to a narrow opening through which it appears.

We now ascend to a small bench, where the circumjacent country begins to open; in particular, a glass-house appears between two large clumps of trees, at about the distance of four miles. Ascending to the next seat, which is in the Gothic form, the scene grows more and more extended; woods and lawns, hills and vallies, thickets and plains, agreeably intermingled. On the back of this seat is the following beautiful inscription:

Shepherd, wouldst thou here obtain
Pleasure unalloy'd with pain?
Joy that suits the rural sphere?
Gentle shepherd, lend an ear.

Learn to relish calm delight,
Verdant vales and fountains bright;
Trees that nod on sloping hills,
Caves that echo tinkling rills.

If thou canst no charm disclose
In the simplest bud that blows;
Go, forsake thy plain and fold,
Join the crowd, and toil for gold.

Tranquil pleasures never cloy;
Banish each tumultuous joy:
All but love—for love inspires
Fonder wishes, warmer fires.

Love and all its joys be thine—
Yet ere thou the reins resign,
Hear what Reason seems to say,
Hear attentive, and obey.

“Crimson leaves the rose adorn,
“But beneath 'em lurks a thorn;
“Fair and flow'ry is the brake,
“Yet it hides the vengeful snake.

“Think not she, whose empty pride
“Dares the fleecy garb deride,
“Think not she who, light and vain,
“Scorns the sheep, can love the swain.

“Artless deed and simple dress,
“Mark the chosen shepherd's;
“Thoughts by decency controul'd,
“Well conceiv'd, and freely told.

a ton and a half of hay per acre. A little buck-wheat is cultivated for swine.

For potatoes they dig up grass land, and dibble in the sets; get fine crops of five or six hundred bushels per acre; and very good wheat after them.

Lime is their principal manure; they lay nine quarters per acre, at two shillings a quarter, besides loading; they mix it with dung, earth, &c.

Hollow draining is not uncommon in this county; they dig them from two to four feet deep, generally until they come to a bed of gravel: they fill them up a foot deep with furnace, cinders, heath, ling, &c. &c. They are from four to eight inches wide at bottom, and twenty inches, or two feet, at top.

Good grass land lets from twenty to forty shillings an acre. Most of it is applied to feeding cows, for supplying Birmingham with milk. Many farmers manure it. The product of cows in that way amounts from six to ten pounds a cow; a middling one will give six or seven gallons a day. The winter food is hay alone, of which they eat in general three hundred weight a week. The calves do not suck above two weeks. The summer joist per cow is one shilling and six-pence a week: in the winter, after calving, they are kept in the house.

Sheep are kept only by farmers that have a right of commonage; the profit they calculate at eight shillings a head. The average fleece, two pounds and a half to three pounds.

In their tillage they reckon six horses necessary for the management of an hundred acres of arable land: they use two or three in a plough, and do an acre a day. The annual expence per horse they calculate at five pounds: the summer joist two shillings a week.

They break up their fallows for turneps at Christmas; the depth of stirring in general from three to six inches: much straw is here cut into chaff.

The hire of a cart, three horses, and driver, five shillings, to five shillings and six-pence.

MANUFACTURES.

The principal manufactures of this county are cloth and iron utensils, all kinds of which are made here in great perfection.

CITY, and MARKET TOWNS.

The city is Litchfield; and the market-towns are, Betley, Brewood, Bromley-Abbots, Burton upon Trent, Cheadley, Eccleshall, Kinver, Leek, Newcastle under Line, Penkridge, Rugeley, Stafford, Stone, Tamworth, Tutbury, Uttoxeter, Walshall, and Wolverhampton.

We entered this county near Newport, in Shropshire, and continued our journey to Stafford, the shire-town, where the assizes are held. It is an ancient borough, governed by a mayor, recorder, ten aldermen, twenty common-councilmen, a town-clerk, and two serjeants at mace. The situation of this town is low, upon the banks of the river Sow, one hundred and thirty-five miles from London. Here are two handsome parish-churches, a free-school, and an hospital, built, towards the close of the last century, by Mr. Martin Noel, a native of this place: and here is a spacious market-place, in which stands the shire hall, and a good stone bridge over the Sow. Stafford is said to have been founded by the widow of Ethelred, earl of Mercia, who made it the chief town of the shire. It is well built and paved, and much increased both in wealth and inhabitants, by its manufacture in cloth: the buildings are for the most part of stone and slate, and some of them are very modern. The old custom of Borough-English, which has frequently been mentioned in this work, is still kept up here. In Doomsday-book, which contains a survey of England in the time of William the Conqueror, this town is termed a city; but though it is in general esteemed more commodious for transacting the county business, it is now much inferior to Litchfield. William the Conqueror built a castle here, which is now entirely destroyed; and the town is thought to

have been once walled in, from some remaining walls that are still to be seen round it. By virtue of a statute of queen Elizabeth, not only the county assizes, but the quarter sessions are always to be kept here. This town was incorporated by king John, and confirmed and enlarged in its charter by Edward IV. The barony of Stafford, from the Conqueror's reign to that of Edward III. is said to have surpassed in its extent most others in England: there belonged to it sixty knights-fees, and eighty villages were held of it; -but by the attainder of Henry Stafford, duke of Bucks, it was dissolved. This town, as well as some others in this county, is famous for excellent ale.

Here is a church dedicated to the Virgin Mary, which was a very ancient free chapel royal, and given by king Stephen to the bishop and chapters of Litchfield and Coventry. It consisted, upon the dissolution, of a dean, and thirteen prebendaries. The deanery was valued at thirty-five pounds thirteen shillings and ten-pence; but all the prebendaries at no more than thirty-eight pounds *per annum*.

About the year 1180, here was a priory of Black canons, founded by Richard Peche, bishop of Coventry and Litchfield, and dedicated to St. Thomas the Martyr. At the time of the dissolution, there were in this house seven religious, who had yearly revenues computed to be worth one hundred and ninety-eight pounds and nine-pence.

In the north part of this town there was a house of Franciscan friars before the year 1282, the tenth of Edward I. valued upon the dissolution at thirty-five pounds thirteen shillings and ten-pence *per annum*.

There was in the castle, which we have mentioned to have been formerly here, a free chapel dedicated to St. Nicholas.

Ralph, lord Stafford, about the year 1344, gave to the friars Heremites, of the order of St. Austin, a piece of ground in the south suburb of this town, called Forbridge, upon which were founded a church, dormitory, refectory, and other useful buildings.

Near the convent of the friars Heremites, in this town, there was a free chapel or hospital, dedicated to St. John, which had a master and several poor brethren; and was valued, upon the suppression, at ten pounds *per annum*.

Here was also an hospital or free chapel, dedicated to St. Leonard; which was valued, upon the dissolution, at four pounds thirteen shillings and four-pence *per annum*.

Stafford sends two members to parliament, has a weekly market on Saturday, and five annual fairs, viz. Tuesday before Shrove-Tuesday, and the fourteenth of May, for horses and cattle; the twenty-ninth of June, for wool; the second of October, for colts; and the fourth of December, for cattle and swine.

At Gnostall, south-west of this town, there is a church, which had peculiar privileges and customs belonging to it, as far back as the time of Henry I. This church was given by king Stephen to the cathedral of Litchfield; but afterwards it became a royal free chapel, and was enjoyed by secular canons at the dissolution, who had yearly revenues to the amount of forty-seven pounds six shillings and eight-pence.

In the neighbourhood of Stafford is Ingefra, where the late Walter Chetwynd, Esq; built, or rather rebuilt a very fine church at his own charge; and where the late lord viscount Chetwynd has, with a profusion of expence, laid out the finest park and gardens that are in this part of England.

About a mile from this place lies Shuckborow-Manor, the seat of Thomas Anson, Esq; elder brother to lord Anson. The house stands near the Trent; and the gardens, which are laid out in a fine taste, are situated on the banks of the river. There are some ruins, built with large stones which the present possessor found on the spot, and which have a very good effect.

At the bottom of the garden, in the public road, is a large standing water, which in winter, and after great rains, is impassable: over it is a stone bridge of thirty-nine arches, for horse and foot passengers, but for wheel-carriages it is too narrow.

Not far from Shuckborow-Manor is Beaufesert, a famous old seat, said to be built by Hugh Lupus, earl of Chester. The name indeed intimates it to be of Norman or French original; at present it is in the noble family of Paget. The park is exceeding fine, and the situation delightfully pleasant; but the house is ancient. In the park is a much esteemed piece of antiquity, which is a large camp or fortification, surrounded with a double trench, very large and deep.

On the left of the road is Ousley, the seat of Sir William Ousley. The house is ancient, and situated low among the marshes, with the river running in front. The park is separated from the house and gardens, and stands on a rising ground on the right of the road. In the front of the house, next Ousley-Bridge, grows an old cedar-tree, whose branches extend so far, and so low, as to cover intirely that front of the house.

From hence we passed on to Penkridge. This town derives its name from its situation upon the river Penk, over which it has a stone bridge. It is one hundred and twenty-one miles distant from London, and noted for having one of the most considerable fairs in the world for horses, both for the saddle and draught.

Penkridge, in the opinion of Mr. Camden, is the Pennocrucium of Antoninus; but this town lying a mile or two north of the military way; and there being scarce any other grounds for this conjecture but the similitude of names, Dr. Plot, who wrote the natural history of Staffordshire, places the Pennocrucium at Streeton, upon Ikenild-street, near Tutbury.

There was a collegiate church at Penkridge, dedicated to St. Michael the Archangel, and given to the bishops and churches of Litchfield and Coventry, before the reign of king Stephen. The advowson of the church and the manor were granted by one Hugh Haose to the archbishop of Dublin, in Ireland. That bishop at length became perpetual dean of this church, and had the collation of all the prebendaries, who were thirteen in number about the time of the dissolution, and had revenues valued at one hundred and six pounds fifteen shillings and a penny *per annum*.

This town has a weekly market on Tuesday, and two annual fairs, viz. the second of September, and the tenth of October, for saddle horses and colts.

At Lapley, south-west of Penkridge, there was an alien priory of Black monks from the abbey of St. Remigius at Rheims, to which it was given in the time of Edward the Confessor, by Algar, earl of Chester.

Leaving Penkridge, we passed on to Brewood, a pretty little town; with a free-school, one hundred miles from London.

In the year 1678, on the night of the fourth of November, in the space of three hours, three successive shocks of an earthquake, accompanied with a rumbling noise like distant thunder, were felt in this town, and the neighbourhood round it; and the night following, another less considerable shock, attended with the like rumbling noise, was perceived about this place.

In the time of king Richard I. there was a small Benedictine nunnery in this town, dedicated to the Virgin Mary, and valued upon the dissolution at eleven pounds one shilling and six-pence *per annum*.

Brewood has a weekly market on Tuesday, and an annual fair held on the nineteenth of September, for horses and cattle.

At Hilton, near this town, Henry de Audley, in the year 1223, founded an abbey of Cistercian monks, dedicated to the Virgin Mary, and valued, upon the suppression, at eighty-nine pounds ten shillings and a penny *per annum*.

Wolverhampton, the next town we visited, was anciently called Hampton; and so large a parish, that it measured near thirty miles in compass, and contained seventeen villages. In the year 996, a priory was erected here by king Edgar, according to Sir William Dugdale, at the request of his dying sister, Wulfruna; but others say, the lady herself was the founder: from this circumstance, the place was called Wulfrune's-Hampton, which has since been corrupted into the present name. It stands upon a high ground, one

hundred and seventeen miles from London; and is a populous town, well built, and the streets handsomely paved; but the inhabitants are so ill supplied with water, that all they receive, except what the rain furnishes them with, is from four weak springs of different qualities, known by the names of Pudding-well, Horse-well, Washing-well, and Meat-well; all appropriated to their several uses. From the last they fetch all the water which they use for boiling, or brewing, in leather budgets laid across a horse, with a funnel at the top, by which they fill them; and to the other three wells they carry their tripe, horses, and linen. Notwithstanding the adjacent coal-mines, this town is esteemed remarkably healthy, which is ascribed to its high situation, and the great scarcity of water. It has been observed, the plague was hardly ever known here, but the small-pox often, which is said to be an indication of the wholesomeness of the air.

Here is a collegiate church, which is annexed to the dean and chapter of Windsor; with a tower, in which are seven bells. The pulpit is very ancient, and of stone. In the church are several old monuments, and a brass statue of Sir Richard Leveson, who engaged the Spaniards under Sir Francis Drake; and in the church-yard is an antique stone cross. A charity-school was erected here, and endowed by Stephen Jennings, a native of this place, and lord mayor of London in the year 1608; and here are two other charity-schools, supported by subscription; one for fifty boys, who are taught and clothed; and the other for forty girls, part of whom are also clothed.

The chief manufacturers of this town are locksmiths, who are esteemed the most expert of that trade in England: they are so curious in this art, that they can contrive a lock in such a manner, that if a servant is sent into the closet with the master key, or their own, it will shew how many times that servant has gone in at any distance of time, and how many times the lock has been shut for a whole year, some of them being made to discover five hundred or a thousand times. It is also said, that a very fine lock was made in this town, sold for twenty pounds, which had a set of chimes in it that would strike at any hour the owner should think fit.

In the year 1394, Clement Luson, and William Waterfall, founded a hospital at this place, for one priest and six poor men, which was dedicated to the Virgin Mary; but its revenues are not known.

Wolverhampton has a weekly market on Wednesday, and an annual fair held on the tenth of July, for commodities of all sorts.

Wrottesley, north-west of Wolverhampton, deserves particular mention, as it contains the ruins of an old city, supposed to have been either British or Danish. It appears to have been three or four miles in circumference. Stones of a prodigious size have been found here; one of which, after having been hewn, is said to have made an hundred loads; and another, after ten loads were cut off from it, required thirty yoke of oxen to draw it, and was made into a great cistern in a malt-house here, which wets thirty-seven strikes of barley at one time.

In the hall of Dudley-Castle, about four miles from Wolverhampton, there is a table of one intire oak plank, which was originally seventy-two feet nine inches long, and three feet broad, but was reduced to its present length of fifty-two feet, to suit the hall it stands in.

At Tettenhall, near Wolverhampton, there is a pasture called the Clots, in which, if any horned cattle graze for one summer, their colour, however black before, will, it is said, turn to a whitish dun.

Not far from Wolverhampton, at a place called Stetfold, there is a church, the steeple of which was repaired upwards of a century ago; and it has been affirmed by the inhabitants, that the top-stone of this steeple being thrown by one of the workmen from the pinnacle into the church-yard, broke into two pieces, and discovered a living toad in the centre of it, which died soon after it was exposed to the air.

There

There was found, in the year 1700, at Pattingham, west of Wolverhampton, a large torquis or chain of fine gold, for the arm or neck: it measured two feet in length, and weighed three pounds two ounces: the links were curiously wreathed, and so very flexible, that it would fit several sizes. The torquis was wore as well by the ancient Britons as by the Romans.

We next passed through Kinver, or Kinfare, a place of no note, one hundred and nine miles from London. It is supposed to have derived its name from some Saxon king's having made this his head quarters, or from his having stopped here upon a march. Here is an ancient fortification, of an oblong form, the longest side measuring about three hundred yards: and in a piece of pasture-ground near this town, there is a large stone, six feet high, and twelve feet in circumference, which the inhabitants of the neighbourhood call Battle Stone, or Balt Stone. In the top of this stone are two notches, which form the resemblance of three heads. Some persons suppose the stone to have been a British deity; and others are of opinion, that it was put up by the ancient Britons as a memorial of a battle fought in this place.

Upon Ashwood Heath, north-east of Kinver, there is a large intrenchment, which is supposed to have been Roman; and at Barrow-hill, in this neighbourhood, are two uniform Roman tumuli, or barrows, consisting of solid rock, which Dr. Plot supposes to have been petrified by subterraneous heat.

At Abbots-Castle, north-west of Kinver, upon the borders of Shropshire, there is an ancient fortification, which stands on a high promontory, and is supposed to have been British. It has a steep ridge for half a mile together, with hollows cut in the ground, over which the tents are supposed to have been pitched.

From hence we passed on to Walsall, or Walsall, pleasantly situated on a hill, by the side of a river of the same name, one hundred and thirteen miles from London. It is a corporation town, governed by a mayor and other magistrates: in and near it are several mines of iron, wherewith the townsmen make spurs, bridle-bits, stirrups, buckles, &c. which are the chief manufactures of this place, and in which the inhabitants carry on a considerable trade.

There is an ancient and extraordinary custom in this town, of distributing, on the eve of Epiphany, a present of one penny to all persons then residing in the town, whether strangers or inhabitants.

Walsall has a weekly market on Tuesday, and three annual fairs, viz. the twenty-fourth of February, and Whitfun-Tuesday, for horses and cattle; and Tuesday before the tenth of October, for horses, cattle, cheese, and onions.

At Horborn, south of Walsall, on the borders of Warwickshire, resided one John Sands, who died in the year 1625, at the age of one hundred and forty years; and his wife lived to be one hundred and twenty.

In a place called Berry Bank, at Darleston, about a mile south-west of Walsall, are the ruins of a large castle, which, according to tradition, was the seat of Wolphere, the Mercian king, who murdered his two sons for embracing Christianity.

At Sandwell, south of Walsall, William, son of Guy de Offney, about the beginning of the reign of king Richard I. and in the year 1109, founded a small priory of Benedictine monks: it was dedicated to St. Mary Magdalen, and was suppressed by Cardinal Wolfey in the reign of Henry VIII. when its revenues were rated at thirty-eight pounds eight shillings and seven-pence *per annum*.

Continuing our course, we entered Litchfield; or Lichfield. The name of this town is a corruption; *Licidfeld*, the ancient British name, which signifies *A Field of Carcases*, a great slaughter of Christians having been made here in the time of the persecution under the emperor Dioclesian.

This city, united with that of Coventry, in Warwickshire, is the see of a bishop, who is called Bishop of Litchfield and Coventry: it is both a city and county incorporated by king Edward VI. and governed by two

bailiffs, twenty-four burgessees, a recorder, a sheriff, a steward, and other officers. The district comprehended in the county of this city, is ten or twelve miles in circumference; and the sheriff rides round it in procession on the eighth of September annually, and then gives the corporation and neighbouring gentry a genteel entertainment.

Litchfield stands in a valley, one hundred and eighteen miles from London, and three miles south of the Trent; and is divided by a stream which runs into that river. The division on the south side of this stream is called the City, and that on the north is called the Close, from its being inclosed by a wall and a dry ditch on every side, except that next the city: both parts are connected by two bridges, but the city is by much the largest. Litchfield is by some persons thought to be the most considerable city in the north-west of England, Chester excepted. It is a long, straggling place, but has some handsome houses; the streets are well paved, and kept clean; and this being a great thoroughfare from London to the north-west counties, here are several very good inns.

This city has a cathedral, and three parish-churches. The cathedral, which stands in the Close, was founded in the year 1148: it suffered much in the civil wars under Charles I. but it was so effectually repaired soon after the Restoration, that it is now, without exception, one of the noblest Gothic structures in England. It extends in length, on the inside, four hundred and fifty feet, of which the choir is one hundred and ten, and it is eighty feet broad. There is a fine lofty steeple over the middle of the church. The front is adorned with a good portico, and over that are two corresponding spires. Above the portico also are twenty-six statues of the prophets, apostles, and king of Judah as large as life. There are also several statues in the inside of this church. The choir is in great part paved with alabaster and cannel-coal, in imitation of black and white marble; and behind the choir is a neat chapel. The prebendaries stalls are of excellent workmanship: they were erected at the charge of some gentlemen in the county; and each stall bears the name and arms of the donor. Though this church, upon the whole, is very elegant, it is nevertheless flat, and wants projection, or as it is termed by architects, *relief* to give it boldness. The two towers are much too low for their breadth, and appear very heavy for want of windows, especially where the bells hang. The circular stair-cases projecting octagonally at one angle only of each, without any of the other three angles answering, is a great irregularity; but the spires above are carried up in an exceeding beautiful taste, and far exceed any thing of the kind ever seen. The middle spire and tower are much higher than those at the west end, and are equally beautiful. The great window over the middle door is very large, and its pediment finely adorned, a large cross terminating the top of it.

To this cathedral belongs a bishop, dean, precentor, chancellor, treasurer, four archdeacons, twenty-seven prebendaries, five priest-vicars, seven lay-clerks, or singing-men, eight choristers, and other officers and servants. The revenues of this bishopric were valued, upon the dissolution, at seven hundred and ninety-five pounds seventeen shillings and six-pence *per annum*.

In the Close are, a palace for the bishop, a house for the dean, and very handsome houses for the prebendaries.

The sub-chanter, sacrist, vicars, and clerks of the cathedral, seem to have been collegiate since the year 1240: their revenues were valued, upon the dissolution, at two hundred and two pounds one shilling *per annum*. The choristers of this church had also distinct estates appropriated to them, which were valued, on the suppression, at thirty-nine pounds nine shillings and seven-pence *per annum*.

Oswy, king of Mercia, is said to have built a cathedral church, in the year 656, or 657; and about the year 789, king Offa, by the favour of pope Adrian, made it an archiepiscopal see; but about ten years afterwards, Litchfield lost this honour, and its church and diocese were again subjected to the metropolitanical see of Canterbury.

bury. In the year 1075, this see was translated to Chester, and from thence in 1102, to Coventry; but in a short time afterwards the bishops settled here again, and Roger de Clinton about the year 1140, not only founded the cathedral we have above described, which he dedicated to St. Mary and St. Chadd, but also restored and augmented the chapter.

Here are three other parish churches, but nothing in them remarkable, except that, to St. Michael's belongs a church-yard which contains six or seven acres of ground.

In this city there is a gaol for felons and debtors apprehended within its liberties; a free-school, and a large and well endowed hospital for the relief of the the poor; and in the neighbourhood of this city there are frequent horse races. This place is famous for fine ale.

About the year 1229, Alexander, bishop of Litchfield, founded a house of Grey-friars in the south part of the city; and near it is a college or priory dedicated to St. John, in which was a master and fellows, who, upon the suppression, were endowed with yearly revenues to the amount of 46l. 18s. 1d. The founder of this hospital is not known, but it is still in being.

Here was formerly a castle, but it has long since been destroyed.

Litchfield sends two members to parliament; has two weekly markets, on Tuesday and Friday, and three annual fairs, viz. Shrove-Monday, for cattle, sheep, bacon, cheese, and iron; May 12, for sheep and other cattle; and Friday before November 8, for geese and cheese.

Not far from this city, there is a ditch which affords a kind of natural phosphoras; for the mud of this ditch, rubbed upon any thing in the dark, emits a faint bluish flame for near a quarter of an hour.

At Radmore, north-west of Litchfield, there was an abbey of Cistercian monks, founded by the Empress Maud, about the year 1140, and dedicated to the Virgin Mary; but this being found an inconvenient place, the monks were removed to Stanley, near the city of Coventry, in Warwickshire.

Roger, bishop of Chester, in the year 1140, founded a religious house at Torwell, north-west of Litchfield. It was dedicated to the Virgin Mary, and was at first called an abbey, and possessed by regular canons, or hermits, but afterwards by Benedictine nuns, and became a small priory, which was suppressed by Thomas Wolfey, bishop of York.

From this place we proceeded to Tamworth. The name of this town is derived from the river Tame, upon the banks of which it stands, and the Saxon word Scoith, which signifies a yard, farm, or an island.

This town is so equally divided by the river Tame, that one half of it, which stands upon the western bank of that river, is in Staffordshire, and the other half in Warwickshire; for which reason each side chuses a representative in parliament; and the borough is by some writers placed in Staffordshire, and by others in Warwickshire. Tamworth is a fine pleasant trading town 107 miles from London, the most ancient in this part of the country; and formerly the royal seat of the Mercian kings. It was destroyed by the Danes, and rebuilt by queen Ethelfleda, who added a strong tower to it, which stood below that which is the present castle. This borough continued in the crown from the time of Edward the Confessor to Henry III. when it was granted in fee-farm; after which it decayed, and had almost lost the name of borough; but queen Elizabeth upon the petition of the townsmen made it a corporation, under whose charter it is governed, by a high steward, two bailiffs, one for each county, a recorder, a town-clerk, an under steward, twenty-four principal burghesses, two serjeants at mace, and other officers. The corporation have power to keep a three weeks court of record, and a court-leet twice a year; and they have a gaol and a common seal.

In the Staffordshire-side of this town there is a church, which is collegiate, a grammar-school, founded

by queen Elizabeth, and a fine hospital, founded by Mr. Guy, the founder of the noble hospital that bears his name in the borough of Southwark, of which mention has been made in the account of London. This town has a considerable trade in narrow cloths, and other manufactures.

Here are still to be seen the remains of a large trench, called King's Ditch, in which spear heads, and bones, both of men and horses, have been dug up.

Before the end of the tenth century, here was a convent of religious, concerning which no particulars are known.

Here likewise was an hospital dedicated to St. James, which was rated upon the dissolution at three pounds six shillings and eight-pence *per annum*.

This town sends two members to parliament, has a weekly market on Saturday, and three annual fairs, viz. May 4, for cattle and sheep; July 26, for cattle and wool; and October 24, for cattle of all sorts.

At Wiggington, north of Tamworth, are several Roman tumuli, called here lows, some of which having been dug up, discovered ashes, charcoal, and pieces of burnt bones.

South-west of Tamworth, at a place called Canwell, Geva, daughter of Hugh earl of Chester, and widow of Jeffrey Riddell, about the year 1142, founded a priory of Benedictine monks, which was dedicated to St. Mary, St. Giles, and All Saints. It went to decay, and being a poor cell for one monk was suppressed by Cardinal Wolfey, in the reign of Henry VIII.

We next came to Rugeley, a handsome well built town, one hundred and twenty six miles from London, in the road from that city to Lancashire and Cheshire: it contains nothing worthy of notice but having a weekly market on Tuesday, and two annual fairs, viz. June 26, and October 21, for saddle-horses and colts.

On one side of Cankwood-chase, in the neighbourhood of this town, there is a paper-mill.

At Blithbury, near Rugeley, was a small monastery, founded about the beginning of the reign of king Stephen, by Hugh Malveyfin: it was dedicated to St. Giles, and consisted of nuns of the order of St. Benedict.

Before the year 1146, there was an hermitage at Colwich, near Rugeley, which was given by Nicholas de Grefelei Fitz Nigell, to the priory of Kenelworth, near the city of Coventry, in Warwickshire; upon which here was placed a small convent of Black canons.

Continuing our journey we arrived at Burton, on the north side of the Trent, one hundred and twenty-three miles from London. It was formerly remarkable for an abbey, and for its alabaster works, but at present 'tis chiefly noted for its excellent ale. Here was formerly a castle which belonged to the Ferrar's family; but the principal structure this town has now to boast of is its bridge over the Trent, which, except the bridge of Westminster, is thought to be the finest piece of workmanship of any civil public building in England. It is built of squared free-stone, is above a quarter of a mile in length, and consists of thirty-seven arches, through which the river runs and here divides into three channels. The parish church joins to the decayed abbey. This house was founded and endowed by Walfric Spot, in the year 1009, for Benedictine monks, dedicated to the Virgin Mary, and St. Modwin, and valued upon the dissolution at two hundred and sixty-seven pounds fourteen shillings and three-pence *per annum*. Its abbot being mitred sat in parliament. In the year 1541, king Henry VIII. founded on the site of this abbey, a church and college, for a dean and canon, dedicated to Jesus Christ, and the Virgin Mary, but this college was dissolved before the thirty-first of January, 1545. Burton consists chiefly of one long street, extending from the abbey to the bridge. Here was lately, if there is not still, a good manufacture of cloth; which was carried on to great advantage. Barges come up hither, by the help of art, with a full stream, in a deep, safe channel.

This town has a weekly market on Thursday, and four annual fairs, viz. April 5, for black cattle and horses; Holy-Thursday, for black cattle; July 16, of no note; and October 29, a considerable fair for horses and horned cattle.

Betwixt the rivers Trent, Dove, and Blith, near this town, is Needwood, a large forest, with many parts in it, where the neighbouring gentry frequently divert themselves with hunting and horse-races.

From Burton we came to Tutbury, or Stutesbury, situated near the Dove, a little before it falls into the Trent, one hundred and twenty miles from London. He had a castle with a small monastery, built by Henry de Ferrars, a Norman, to whom it was given by William the Conqueror. Mr. Camden says this was a noble structure, and commanded the low country, by its situation on an alabaster hill. It was destroyed by king Henry III. but John of Gaunt, duke of Lancaster, afterwards built the Gatehouse, and the walls round it. At this present time it is a good old house, walled on all sides but one, where the hill is so steep that it requires no fortification; notwithstanding which it is inclosed with a strong pole. It has a prospect eastward over the Dove and Trent, as far as Nottingham; and on the south, and south east, are all woodlands, in which are many parks, most of them belong to the castle and manor of Tutbury; to which great part of the inhabitants of the adjacent country are homagers, and of which they hold their estates.

This town has a weekly market on Tuesday, and three annual fairs, viz. February 14, August 15, and December 1, small fairs for horned cattle.

Bromley Abbots, the next town we entered, was at first called Bromley only, and had the additional epithet Abbots, from an abbey of which it was formerly opposite, to distinguish it from some other towns in this county called Bromley. It is sometimes also called Bromley Pagets, from a lord Paget, to whom it was granted by the crown at the dissolution of monasteries. It is one hundred and twenty-eight miles from London, upon the borders of Derbyshire, but contains nothing remarkable. Dr. Plot says, the inhabitants of this place had formerly a sport, on a New-Years-Day and Twelfth-Day, called the Hobby-Horse dance, from a person's riding upon the figure of a horse made of thin boards, with a bow and arrow in his hand, with which he made a snapping noise as he drew it to and fro, keeping time with the music, while six other men danced the hay, and other country dances, with each a rein-deer's head on his shoulders, half white, half red. To this hobby-horse belonged a pot, which the reeves of the town kept, and filled with cakes and ale, and to which all the spectators gave a penny for themselves and families; wherewith they paid for the cakes and ale, and with what remained, maintained their poor, and repaired their church.

This town has a weekly market on Tuesday, and three annual fairs, viz. Thursday before Midlent Sunday May 22, and August 24, for horses and horned cattle.

At Hanbury, on the east side of Bromley Abbots, there was a nunnery, founded about the year 680, by Ethelred, king of Mercia, but destroyed by the Danes.

Uttoxeter, or Utcester stands on a gentle ascent, upon the western bank of the river Dove, one hundred and twenty-five miles from London. It is tolerable large, the streets broad, clean, and well paved; but the houses in general are meanly built. Here is a spacious market-place; with a cross in the center, and a good stone bridge over the Dove. The market is one of the most considerable in these parts for cattle, sheep, swine, butter, cheese, corn, and all sorts of provisions: some of the London cheese-mongers have factors here, who, it is said, buy up cheese to the value of five hundred pounds every market day. In this town and neighbourhood are many considerable iron manufactories. The weekly market is on Wednesday; and here are three annual fairs, viz. May 6, and July 31, for black cattle and

sheep; and September 19, for strong black colts, and horned cattle.

At Checkley, north-west of Uttoxeter, is a church, and in the church-yard three tall stones, each in form of a pyramid, and engraved with a variety of figures. The inhabitants of this place have a tradition, that there was an engagement in Naked-Field, in the neighbourhood, between two armies, one armed, and the other unarmed; that in one of the armies three bishops were killed; and that in memory of the bishops, these stones were erected. They are supposed to be Danish monuments.

About the year 1146, Richard Bacon built an abbey for Black canons, dedicated to the Virgin Mary, at Rocester, north-east of Uttoxeter. At the time of the dissolution this abbey had nine religious, who had yearly revenues to the value of one hundred pounds two shillings and ten-pence.

We next passed through Stone, on the north bank of the river Trent, one hundred and forty miles from London, and in the great road from that city to Chester. It is well provided with good inns, has a small charity school, and a free grammar school, founded by the reverend Mr. Thomas Allen.

This town is said to have derived its name from a heap of stones thrown up here, according to a custom of the Saxons, to perpetuate the memory of a murder committed by Wulphere, a king of Mercia, on his two sons Wolfadus and Rufinus for embracing Christianity; of which crime he afterwards so sincerely repented, that he turned Christian himself, destroyed all the heathen temples in his kingdom, which he converted into Christian churches and monasteries; and in the year 670 founded a college of secular canons, which he dedicated to his two sons. These secular canons were afterwards changed into regular canons, who were endowed upon the suppression with one hundred and twenty-nine pounds two shillings and eleven-pence *per annum*.

This town has a weekly market on Tuesday, and four annual fairs, viz. Tuesday after Midlent; Shrove-Tuesday, Whitsun-Tuesday, and July 25, for cattle.

From this place we continued our journey to Eccleshall, a pretty good town, one hundred and thirty-six miles from London. It has a charity school, and is famous for pedlars ware. This town has a weekly market on Friday, and four annual fairs, viz. Midlent Thursday, Holy-Thursday, August 5, and the first Friday in November, for black cattle, sheep, and saddle horses.

Here was once a castle, built, or at least repaired, in the reign of Edward I. by Walter Longton, bishop of Litchfield, and lord-high treasurer of England, to whom the manor then belonged.

Newcastle under Line, the next town we visited, is pleasantly situated on a branch of the Trent, called the Line, one hundred and forty-nine miles from London. It was formerly called Newcastle, from a castle now in ruins, built there by Henry III. and by way of distinction from an older castle which stood at Chester-town, a village in the neighbourhood. It was afterwards called Newcastle under Line from its situation on the river Line, and to distinguish it from Newcastle upon Tine, in the county of Northumberland.

This town was first incorporated by Henry I. and afterwards by queen Elizabeth, and Charles II. It is governed by a mayor, two bailiffs, and twenty-four common-council men; and the corporation has a court, which hold pleas for actions under forty shillings.

The streets are broad and well paved, but the buildings low, and mostly thatched. Here were formerly four churches, which are now reduced to one. Here are considerable manufactories of shoes and hats; the former employs about an hundred men, who earn from ten-pence to two shillings a day; in the latter, four hundred hands, at least, are employed. The men earn from seven shillings to ten shillings a week; the women three shillings, and the children one shilling.

This town sends two members to parliament, has a weekly market on Monday, and four annual fairs, viz. Easter-Monday, Whitsun-Monday, Monday before the 15th of July, Monday after the 11th of September, and November 6; all for cattle.

At Burslem, and the neighbouring villages about three miles to the northward of Newcastle under Line, the manufacture for making what is called Staffordshire ware is carried on with amazing success. There are three hundred houses, which are calculated to employ, upon an average, twenty hands each, or six thousand in the whole; but if all the variety of people that labour in what may be called the preparation for employment of the immediate manufactures, are reckoned, the whole number cannot be less than ten thousand: and this manufacture, already so considerable, is increasing every day.

The period from whence its great demand may be dated, is about the year 1765, when Mr. Wedgewood, the principal manufacturer, introduced the cream-coloured ware; and since that time the increase has been amazingly rapid. Large quantities are exported to Germany, Ireland, Holland, Russia, Spain, the East-Indies, and America; and some of the finest sorts to France. A considerable shopkeeper from the Pont-neuf at Paris, was lately at Burslem, and purchased a large quantity.

The common clay of the county is used for the ordinary sorts; the finer kinds are made of clay from Devonshire, chiefly from Biddeford; but the flints taken out of the chalk-pits in Kent, near the Thames, are all brought rough by sea, either to Liverpool or Hull, and so by Burton upon Trent. There is no conjecture formed for fixing the manufacture upon this spot, except for the convenience of coals which are dug plentifully in the neighbourhood.

The flints are first ground in mills, and the clay prepared by breaking, washing, and sifting. When these necessary operations are performed, the two ingredients are mixed in the requisite proportions. The flints are first purchased by people in different parts of the county, who, after calcining and grinding them to powder, sell them to the manufacturers by the peck.

The ingredients being properly mixed, the mass is laid on kilns to evaporate the moisture; but this operation requires the greatest care; for it may be rendered too dry. It is next beat with large wooden hammers, when it is in a proper condition for throwing, or moulding into the proper forms in which it is to remain. The latter is the most difficult work in the whole manufacture. A boy turns a vertical wheel, which, by means of thongs, turns a small horizontal one, just before the thrower with such velocity, that he presently forms the lump of clay laid on it into any figure he pleases with his fingers. When the ware is thus formed, it is glazed, and baked in the kilns erected for that purpose.

The earnings of the people employed in this manufacture are various: grinders here, seven shillings a week; washers and breakers, eight shillings; throwers, from nine shillings to twelve; engine lath-men, from ten shillings to twelve; handlers, and other kinds of finishers, for adding sprigs, horns, &c. from nine shillings to twelve; gilders, twelve shillings the men, and seven shillings and six-pence the women; pressers, eight shillings to nine; painters, ten shillings to twelve; moulders in plaister of paris, eight shillings.

But in general the men earn from seven shillings to twelve a week; and the women from five shillings to eight; boys from two shillings to three a week.

In the neighbourhood of Newcastle is a stone-quarry, where Dr. Plat tells us a stone was found, in the middle of which was a human skull, with all the teeth in it. This fact the doctor produces as an irrefragable instance of the growth of stone.

At Trentham, about three miles from Newcastle under Line, king Ethelred founded a nunnery before the year 683. In the reign of king Henry V. this

house was refounded by Randal, earl of Chester, for canons of the order of St. Augustine. It was dedicated to the Virgin Mary, and All Saints, and had, about the time of the suppression, seven religious, and the house was endowed with annual revenues amounting to one hundred and twenty-one pounds three shillings and two-pence. Not far from where this ancient structure stood, is the noble seat of earl Gower, which is esteemed the finest retreat in this county. The house is a modern structure, built after the model of the Queen's palace in St. James's-park; but is situated so near the church, that the entrance into the house is rendered very inconvenient, the church and church yard being in front.

The park is remarkably beautiful, and has two large pieces of water in it; from the edge of the water rise several eminences covered with wood, which has a fine effect as you pass along the road to Newcastle. The park is walled round, and from the high grounds in it is a beautiful and extensive view of the adjacent country.

Betley is an inconsiderable market town one hundred and fifty-two miles from London. It has nothing remarkable, except a small market on Tuesday, and an annual fair on the thirty-first of July.

Cheadle, the next place we visited, is also a small market town situated near the source of the Dove, one hundred and thirty six miles from London. Here is a charity-school, a weekly market on Saturday, and two annual fairs, viz. Holy Thursday, for black cattle; and the twenty-first of August, for horses and black cattle.

At Alton, about three miles from Cheadle, are the ruins of a castle built before the conquest. In the year 1173, it was in the possession of Bertram de Verdun.

Leek, which we next visited, is situated in the mountainous parts of the county, called the Moorelands, one hundred and thirty-seven miles from London. Here is a manufacture of buttons, and the town is noted for its excellent ale. Here is a weekly market on Wednesday, and seven annual fairs, viz. Wednesday before Candlemas, Easter-Wednesday, May 18, Whitsun-Wednesday, July 3, July 28, and November the thirteenth, for cattle and pedlars ware.

In the Blue Hills near this town are several coal-mines, and a salt stream issues from thence, which tinges the stones and earth, forming the channel in which it runs of a rusty colour, and turns an infusion of galls into ink. Here are also rocks of a most surprising height, without any turf or mould upon them.

At Dieu le Cres, near Leek, there was a Cistercian abbey, founded by Randal, the third earl of Chester, in the year 1214. It was dedicated to St. Mary and St. Benedict, and endowed at the revolution with yearly revenues, amounting to two hundred and twenty-seven pounds five shillings.

CURIOUS PLANTS found in Staffordshire.

The female, or yew-leaved fir-tree, *abies fœmina* ♀. B. found at Laynton.

The pear-like service, *forbus pyriformis*; found in several parts of the Moorelands.

White-berried elder, *sambucus fructu albo*, Ger. found plentifully in the hedges near the village of Cambridge.

The lesser sea-starwort, *tripolium minus vulgare*; found in a place called the March, near the place where a salt spring rises, fretting away the grass, and forming a pond of salt water.

MEMBERS of PARLIAMENT for Staffordshire.

This county sends ten members to parliament; two knights of shire for the county; two citizens for Litchfield; and two representatives for each of the following boroughs; Stafford, Tamworth, and Newcastle under Line.

C H E S H I R E,

Or the County Palatine of CHESTER.

THIS county is bounded on the north by Lancashire; on the east and south-east by Derbyshire and Staffordshire; on the south by Shropshire, and part of Flintshire; and on the west and north-west by Denbighshire, and the Irish sea, into which a corner of it shoots out, and forms a peninsula, near sixteen miles long, and seven broad, called Wiral. The sea breaking on each side of this peninsula, forms two Creeks; one between the north-east side of the peninsula, and the south-west coast of Lancashire; the other between the south-west side of it, and the north-east coast of Flintshire: these two creeks receive all the rivers of the county. Cheshire is about forty-five miles long, twenty-five broad, and one hundred and twenty in circumference. It is divided into seven hundreds; in which are one city, twelve market towns, one hundred and twenty-four villages, eighty-six parish churches, and thirty-eight chapels; about twenty four thousand houses, and one hundred and twenty-five thousand inhabitants. It lies in the province of York, and diocese of Chester; and the town of Middlewich, which is nearly in the center of the county is one hundred and fifty-six miles from London.

Cheshire was one of the counties which, in the British times, was inhabited by the Cornavii; and under the Saxon Heptarchy it was included in the kingdom of Mercia. It continued in the possession of the descendants of Creada, the founder of the Mercian kingdom, about 200 years, and then fell into the hands of the Danes. About the year eight hundred and seventy seven, Alfred the Great, having recovered it from the Danes, made a province of the West Saxon kingdom, and appointed Etheldred, a descendant of the kings of Mercia, to be its governor, or shirereeve. After the death of Etheldred, the government of this county devolved upon his widow Ethelfleda; and at her death descended to Etheldred's posterity, till, with the rest of England, it came once more into the hands of the Danes, under Canute the Great. Canute committed it to the government of Leofric, who assumed the old title of Earl or Comes. From Leofric it descended to his son Algar, and from Algar to Edwin, who were successively earls of Chester; and in the time of Edwin it was subdued by William the Norman, who gave it, as a principality, first to Gerherd, a nobleman of Flanders, who had greatly assisted him in his enterprize against England, and then to Hugh Lupus his nephew, to whom he gave a palatine or sovereign jurisdiction, by a grant of the county, "to hold to him and his heirs, as freely by the sword, as the king held the crown of England."

By this grant Cheshire became a county palatine, with sovereign jurisdiction within its own precincts, in so high a degree, that Lupus, and many of his successors, had parliaments, consisting of their own barons and tenants, who were not bound by the general acts of the general parliament of the kingdom. This power of the earls of Chester, which was originally reposed in them to enable them more effectually to express any attempts of the neighbouring people to recover their independency, was, after the kingdom had submitted quietly to the conqueror, no longer necessary for this purpose; and being at length become formidable to the king himself, Henry VIII. restrained it, and rendered it dependant upon the crown; though all pleas concerning property, whether real or personal, are still heard and determined in the county, though

cases of felony and treason are determined by the judges in their circuits.

There are in this county, several mineral springs, particularly at Stockport there is a chalybeat, said to be stronger than that at Tunbridge. In the morasses, or mosses, whence the country people cut their turf or peat for fuel, there are marine shells in great plenty, pine cones, nuts and shells, trunks of fir-trees, and fir-apples, with many other exotic substances. The morasses, in which these substances are found, are frequently upon the summits of high mountains; and the learned have been greatly divided in their opinions how they came there. The general opinion however is, that they were brought thither by the deluge, not merely from their situation, but because seven or eight vast trees are frequently found much closer to each other than it was possible for them to grow; and under these trees are frequently found the exuvia of animals, as shells and bones of fishes; and particularly the head of a hippopotamus was dug up in one of these moors, some years ago, and shewn to Dr. Leigh, who has written the natural history of this county. There are, however, substances of a much later than the general deluge found among these trees and exuvia, particularly a brass kettle, a mill-stone, and some amber beads, which were given to the doctor soon after they were found. The fir-trees are dug up by the peasants, and are so full of turpentine, that they are cut out into slips and used instead of candles.

Doctor Leigh also mentions a kind of sheep, in the park of Stipperly, belonging to John Leigh of Adlington, which differed from all other sheep in the kingdom; he supposes them to be natives of this county, and says they are larger than most other sheep, and covered rather with hair than wool; and that all of them have four horns, which are sometimes of an extraordinary size: the two horns nearest the neck stand erect, like those of goats, but larger; while the two next the forehead are carved like those of other sheep. The doctor doubts whether these sheep are a particular species, or whether they might not be produced at first by goats and sheep engendering together; but as the words at first seem to imply that they had afterwards increased by engendering among themselves, this cannot be admitted, without departing from the general opinion universally confirmed with respect to mules, that creatures of a mixed breed are a sort of monsters, and never propagate their kind. The flesh of these sheep was different from that of other mutton, and had some resemblance in colour and taste to the flesh of goats.

R I V E R S.

The principal rivers of this county, are the Mersee, the Weaver, and the Dee. The Mersee runs from the north-east westward, and dividing this county from Lancashire, falls into the northern creek of the peninsula. The Weaver rises in Shropshire, runs from south to north, and falls into the northern creek. The Dee rises from two springs near Bala, a market town in Merionethshire, in Wales, and is a name supposed to be derived from Dwy, which in the ancient British language signifies the number two; it runs north-east through Merionethshire, and Denbighshire, and then directing its course north, and separating Cheshire from North Wales, falls into the southern creek of the peninsula. The Dee abounds with salmon; and it is remarkable

markable that the longest and heaviest rains never cause it to overflow, though it always floods in the neighbouring fields, when the wind blows fresh at south-west. The British name of this river is Dyffrdwy, a word signifying the water of two springs. The Romans called it Deva probably from Dyffyr; and its present name is probably derived from the same source. Of the names of the Mersee and the Weaver, we have no accounts. Besides these rivers there are several meres and lakes of considerable extent, which abound with carp, tench, bream, eels, and other fish.

Remarks on the INLAND NAVIGATION of
Cheshire.

The rivers Weaver and Mersee, are by nature navigable from Liverpool, in Lancashire, to Fradsham-bridge, in this county. And by an act of parliament passed in the seventh year of the reign of George I. certain trustees were empowered to make the Weaver navigable from Fradsham-bridge to Winsford-bridge. They were also empowered by the same act to extend that navigation, by making Wittun Brooke navigable, from its junctions with the Weaver up to Witton-bridge. These navigations have been long since perfected, and trade and commerce thereby greatly extended, to the benefit of the public.

But as the north-east parts of the county of Chester lie remote from these, or any other navigations, though from the circumstances of their situation, produce, and the number and employment of their inhabitants, they want them most. A canal has been therefore proposed, and is now carrying into execution, to be carried from the navigable part of Wittun-brooke at Witton-bridge, near Northwich, to the market towns of Knutsford, Maclesfield, and by Stockport to Manchester. But a much greater scheme has been lately proposed, and is now carrying into execution, for extending a canal from the Trent to the Mersee, to open a communication between the ports of Hull and Liverpool. We have already in our account of Staffordshire given a detail of the astonishing works carrying on at Hare-castle. It has been proposed to carry this canal over the river Mersee, in an aqueduct at Runcorn; and the duke of Bridgewater proposes to extend his canal to Runcorn; by which means this canal will undoubtedly be the best way of sending goods of all kinds from Liverpool to Manchester. The attempt is amazing. The river Mersee, at Runcorn, is five hundred and sixty yards wide; and the water, at spring tides, flows near eighteen feet perpendicular. The masts of vessels which navigate the river itself are said to be seventy feet high. Add to this, that the river is sometimes very rough and boisterous.

Ships of very large burden formerly passed up the river Dee to Chester; but the river was at last so choked up that ships of burden could not come within some miles of it. An act therefore passed in the year 1732, for rendering it navigable; and accordingly the undertakers raised a sum of forty-seven thousand eight hundred and thirty pounds, which they expended in cutting and perfecting a new channel from the river Dee, of near ten miles in length, and by proper dams and sluices turned the river into this channel; so that it is now navigable for ships of considerable burden to the quay of Chester, where they load and unload with great safety and convenience. This success encouraged the undertakers to apply again to parliament in 1741, for further powers for completing their work, and for uniting the undertakers into a company for keeping this canal and works in proper repair.

A I R A N D S O I L.

The air of this county is serene and healthful, proportionable colder than the more southern parts of the island. The country is in general flat and open, though it rises into hills on the borders of Staffordshire and Derbyshire, and contains several forests, two of

which, called Delamere and Maclesfield, are of considerable extent. The soil in many parts is naturally fertile; and its fertility is greatly increased by a kind of marle, or fat clay, of two sorts, one white and the other red, which the peasants find in great abundance, and spread upon their lands as manure; corn and grass is thus produced with the most plentiful increase; and the pasture is said to be the sweetest of any in the kingdom. There are however several large tracts of land covered with heath and moss, which the inhabitants can use only for fuel. The mossy tracts consist of a kind of moorish boggy earth; the inhabitants call them mosses, and distinguish them into white, grey, and black, from the colour of the moss that grows upon them. The white mosses, or bogs, are evidently compages of the leaves, seeds, flowers, stalks, and roots of herbs, plants, or shrubs. The grey consists of the same substances in a higher degree of putrefaction; and the only differences of the black is, that in this the putrefaction is perfect; the grey is harder and more ponderous than the white; and the black is closer and more bituminous than either. From these mosses, square pieces like brick are dug out, and laid in the sun to dry for fuel, and are called turfs.

Remarks on the HUSBANDRY of Cheshire.

Between Dunham and Knutsford, land lets from twenty shillings to thirty-five shillings *per* acre. Farms rise from forty pounds to two hundred pounds a year. They reckon the product of a cow at five pounds.

About Knutsford there are chiefly two soils, clay and sand. The average rent is about sixteen shillings an acre. Farms are, in general, about twenty pounds, or thirty pounds, but some of one hundred and fifty pounds, and two hundred pounds a year.

Their courses,

1. Fallow
2. Wheat
2. Barley
4. Oats

And,

1. Fallow
2. Wheat
3. Barley
4. Clover for two or three years
5. Wheat.

The quantity of wheat sown is but trifling. For barley they plough three or four times, sow three bushels, and gain, at an average, five quarters. For oats they plough once, sow five bushels, and gain from forty to fifty. Very few turneps are sown by farmers, but some by gentlemen.

The farmers are getting more into tillage than formerly, and to their prejudice, for barley will only grow with much manure. The town of Manchester setting up malt-kilns in opposition to those of Yorkshire, is what encourages the farmers to extend their tillage.

Clover they sow with barley, mow it twice, and gain two ton and a half the first time, and about a ton the second.

Potatoes they prepare for by digging, generally grass land for the first crop; they slice and dibble them in one foot asunder every way, twenty bushels to the acre: hand-hoe and hand-weed. The produce generally from three to four bushels from a perch, or about five hundred *per* acre:—Wheat after them. The expences are,

Digging, 2*l.*

Weeding, &c. 15*s.*

Taking up, 1½*d per* bushel.

Marle is their chief manure; they have it brown, red, blue, and also shell marle. They lay two square roods and an half *per* acre, which cost them from 3*l.* to 4*l.* lay it chiefly upon grass. Shell marle is of so excellent a nature, that it lasts very good for ten years, and the land constantly cropped—a husbandry not much to the credit of the Cheshire farmers. They know nothing of chopping stubble, but stack their hay at home.

Good

Good grass land lets at about twenty-five shillings per acre; they apply it chiefly to dairying, and reckon that an acre and half is sufficient for the summer feeding a cow. Their breed of horned cattle is a mongrel, between the long and short. The product of a cow they reckon at from five pounds to eight pounds. Many give in cheese alone to the amount of six pounds ten shillings:

Cheese,	-	-	-	6	0	s.
Butter,	-	-	-	1	0	
Calf,	-	-	-	0	10	
				<hr/>		
				7	10	

The average quantity of milk per day about four gallons. They do not keep above three swine to twenty cows. Their winter food is hay and straw; of the first they eat about two ton. A dairy maid can take care of fifteen. The summer joist is twenty-first. In the winter they are always kept in the house tied up.

It is supposed in general, that the famous Cheshire cheese depends more on the quality of the land, than on any particular receipt.

It has been found, that liming and enriching the land has made it the worse for cheese.

Cold clays are beneficial soils for cheese; in general, the worst land makes the best cheese.

Many of the great dairy farmers keep their cows like running horses, littered down as well; kept perfectly clean, and fed constantly with ground oats; straw only till Christmas. Some of these make eight, nine, and ten pounds profit per cow.

The breed even of these is in general small; will not fat to above thirty-two stone. None of the Lancashire long horns will equal them in milking. Some farmers have got a cross breed by Lancashire bulls, but it has been found prejudicial to the dairy.

In the management of their milk, the last night's is set for cream, and the milk, with the new of this morn, mixed for the cheese; likewise most of the cream of last night's milk, warmed to the warmth of the new milk. They use nothing but rennet for coagulation.—The cheeses weigh from fifteen pounds to one hundred and twenty pounds.

Their tillage is too trifling to admit a general description; but they reckon the annual expence of a horse at six pounds. They break up their stubbles for a fallow in May or June, stir three inches deep. The price of ploughing per acre, four shillings and six-pence, and five shillings. Know nothing of cutting straw into chaff.

In the hiring and stocking of farms they reckon two hundred pounds sufficient for one of fifty pounds a year.

Land sells at thirty and thirty-two years purchase.

Tythes both gathered and compounded.

Poor rates three shillings in the pound. The employment chiefly spinning of flax. All drink tea.

The farmers carry their corn seven miles; that is, to the duke of Bridgewater's navigation.

Leafes run chiefly for three lives.

The little farmers in this country are reckoned more wretched than even day-labourers.

L A B O U R.

In harvest, 1s. 6d. and beer.

In hay-time, 1s. 6d. and ditto.

In winter, 1s.

Mowing grass, 1s. 6d. to 2s.

Ditching, 4d. to 7d.

The soil about Holm's Chapel is chiefly of sand and clay; lets about twenty shillings at an average. Farms from twenty pounds to three hundred a year. Their course generally

1. Fallow
2. Wheat
3. Oats
4. Clover.

And,

1. Fallow

2. Barley

3. Wheat.

Of wheat the average crop is about twenty bushels, of barley thirty, and of oats as much.

Marle is here the grand manure; they lay about a rood and half on an acre, which costs from one pound ten shillings to two pounds, and lasts from twenty to forty years; it is of a brown colour mixed with blue. They also lime their land, generally mix it with dung for wheat; it costs them ten-pence the *cwt.*

Their grass land lets from twenty shillings to forty per acre, it is all used in dairying. Of meadow land they reckon an acre and half will summer feed a cow. but in the uplands it takes three acres. They are pretty careful in manuring the grass with lime and earth mixed together.

Their cows are of an ordinary breed, loose boned; some farmers have aimed at an improvement by Lancashire bulls, but it does not answer, except in beauty.

The average quantity of milk is about five gallons; but of Mr. Vernon's near this place have given ten gallons per day. The product of a good cow they calculate as follow:

Four <i>cwt.</i> of cheese, at 32 s.	£	6	8
Butter	-	-	1 0
Calf	-	-	1 1
Swine	-	-	0 10
<hr/>			
		8	19

But the average is not above two *cwt.* and a half of cheese; and the whole amount about six pounds or six pounds ten shillings.

They reckon that ten or twelve cows will fat three or four pigs. The calves suck a month. They calculate seven cows the proper number for a dairy maid. They are kept in the house in winter, and fed with hay or straw, as the farmer manages: one ton of hay will winter a cow with straw; but if without two tons.

In the hiring and stocking farms, they reckon the following sums necessary for one of one hundred pounds a year.

Twenty cows,	-	-	£	140
Implements,	-	-	-	40
Three horses and gears,	-	-	-	30
Seed,	-	-	-	10
Rent,	-	-	-	50
Housekeeping,	-	-	-	40
Labour,	-	-	-	50
Swine,	-	-	-	2
<hr/>				362

NATURAL PRODUCTIONS and MANUFACTURES.

The chief commodities of this county are cheese, salt, and mill-stones. The cheese is esteemed the best in England, and furnished in great plenty by the excellent pasturage on which the cattle are fed.

The stone which is wrought into mill-stones, is dug from a quarry at Mawcop-Hill, near Congleton, a market town.

What remains to be said of the salt springs, after the account that has already been given of the salt works in Worcestershire, shall be mentioned at the Wiches, where the salt is made.

CITY and MARKET TOWNS.

The city is Chester; and the market towns are Congleton, Macclesfield, Stockport, Altringham, Knotesford, Namptwich, Northwich, Middlewich, Sandbach, Malpas, Frodsham, and Halton.

We entered this county from Staffordshire, and proceeded to Congleton, so called from its old name Condatum, which it is supposed to have been derived from Condate, a town in ancient Gaul, whence it was peopled. This town, though old, is well built; and the middle of it is watered by the little brook Howtey, the east side by the Daning Schow, and the north by the

the Dan, over which it has a bridge. It is very populous, and in ancient writings is called a borough. It stands on the borders of Staffordshire, one hundred and fifty seven miles from London; and is now a corporation, governed by a mayor and six aldermen, and has two churches. The chief manufacture of this place is gloves, in which it carries on a considerable trade.

Congleton has a weekly market on Saturday, and four annual fairs, viz. First Thursday before Shrovetide, May the twelfth, July the fifth, and July the thirteenth for cattle and pedlars ware.

We next visited Macclesfield, or Maxfield, a large ancient town, and one of the pleafantest in the county, situated on the river Bollin, one hundred and fifty one miles from London. It was erected into a borough by king Edward III. is governed by a mayor, and enjoys great privileges and jurisdictions, by virtue of the court and liberties of the forest of Macclesfield, to which it gives name. Here is a handsome church, with a high steeple, in form of a spire; but as it stands in the parish of Prestbury, it should rather be called a chapel than a church: on the south side of it there is a college, or chantry of secular priests, founded about the year 1508, by Thomas Savage, a native of this place, who was first bishop of London, and afterwards arch-bishop of York. In the parochial chapel, on the south side, there is an oratory, built by the Leighs of Lime; in which there is an old epitaph on Perkin a Leigh, and his son Sir Riers Leigh; the former was the ancestor of the family, who received the lordship of Lime from king Edward III. as a reward for taking the count of Tankerville prisoner; and other military services in France, particularly at the battle of Cressy: the latter was slain at the battle of Agincourt.

This epitaph, as it now appears, was inscribed on a plate of brass, in the year 1626, by Sir Peter Leigh, of Lime, who found it written upon a stone in this chapel.

On the other side of the same chapel, in another oratory belonging to the Savages, there is an indulgence engraved on a plate of brass, promising a pardon of twenty-six thousand years, and twenty-six days, for saying five pater-nosters, and five aves.

There is a free-school in this town, of an ancient foundation; and a considerable manufacture of buttons.

Here is a weekly market on Monday, and five annual fairs, viz. May the sixth, June the twenty second, July the eleventh, October the fourth and November the eleventh, for cattle, wool, and cloth.

Stockport, the next place we passed through, is sometimes called Stopford. It is a town of good entertainment, one hundred and sixty miles from London, situated in a valley on the south side of the river Mersee, over which it had a bridge; but it was pulled down in the year 1745, to prevent the retreat of the rebel army, which had marched from the north of Scotland, into the center of this kingdom, from returning that way; in consequence of which the king's forces in pursuit of them were obliged to ford it up to their middles, and the soldiers were drove to the disagreeable necessity of either following their example or being left behind.

This town has a weekly market on Friday, and four annual fairs, viz. March the fourth, March the twenty-fifth, May the first, and October the twenty-fifth, for cattle and pedlars ware.

Altrincham, or Altringham is a small town, situated between Warrington and Stockport, near the borders of Lancashire one hundred and fifty two miles from London. It is governed by a mayor of an ancient institution; but has otherwise nothing remarkable, the buildings being very indifferent.

Here is a weekly market on Tuesday, and two annual fairs, viz. August the fifth, and November the sixth, for cattle and drapery goods.

Leaving this place we passed on to Knottesford, called also Knutsford, or Canute's Ford. This town is situated near the Mersee, and divided by a rivulet called Bichen, into two parts, which are distinguished by the Upper and Lower town. In the upper, stands the parish church; and in the Lower, a chapel of ease, the market, and town-house; in the latter of which the justices frequently hold the sessions.

Here is a pretty brisk manufacture; particularly a silk mill that employs eighty women and children; the former earns from four to five shillings a week, and the latter from eight pence to two shillings.

There is also a thread manufacture, in which men earn from six to eight shillings a week, and children from one to two shillings; few women are employed in this manufacture.

Besides these there is likewise a worsted manufacture, from wool; the men earn from twelve to fourteen shillings a week; the women spinners, from two shillings and six-pence to three shillings; and the children, two shillings.

This town has a weekly market on Saturday, and two annual fairs, viz. July the tenth, and November the eighth, for cattle and drapery goods.

Namptwich, the next place we visited, is situated in the Vale Royal, on the river Weaver, one hundred and sixty four miles from London. It was consumed by fire in 1438, and again in 1583; but by a collection made through the whole nation, promoted and completed by Sir Hugh Cholmondeley, it was not only rebuilt, but in such order and beauty, that it rose better out of its ashes, than it was before, and continues flourishing to this time.

Upon the breaking out of the civil wars, this town was secured for the parliament; and being besieged by general Monk and lord Byron, was relieved by Sir Thomas Fairfax, who forced them to raise the siege with great loss. King William III. honoured this place by creating Hugh lord Cholmondeley baron of Wick-Malbank, alias Namptwich, which is therefore one of the titles of the present earl of Cholmondeley.

The streets here are very regular, and adorned with many gentlemen's houses. The church is a large beautiful structure in form of a cross, like a cathedral, with the steeple in the middle. The inhabitants drive a considerable trade, and grow rich not only by means of its large weekly market for corn and cattle, its Bartholomew-fair, and the advantage of a great road to Ireland, but by means of its cheese and salt, which are made to greater perfection here than any where else. The soil in and about this town yields such a sweet and pleasant feed for the cattle, that though good cheese is made in other parts of this county, yet that made here and hereabouts, excels all the rest. Several ladies and others have endeavoured to come up to it in their dairies, but in vain, it having a taste peculiarly agreeable; and its easy digestion rendering it acceptable to the most delicate stomachs.

As to the salt-works, they require, or at least deserve a full and exact discussion, as it has been given by Dr. William Jackson, who lived here not many years ago; but our limits allow us room only for what follows:

'The salt springs in some places are not above three or four yards deep, but the pit in this township is full or seven. In two places in Nantwich springs break up so in the meadows, as to fret away not only the grass, but part of the earth, which has a salt liquor oozing as it were out of the mud. Our springs are about thirty miles from the sea, and generally lie all along the river Weaver; yet there is an appearance of the same vein at Middlewich, nearer the river Dane than the Weaver; which notwithstanding seems not to be out of the line of the Weaver's stream; and those lie all near Brooks, and in the meadow-grounds. The water is so very cold at the bottom of the pit, that when the briners sometimes go about to cleanse it, they cannot stay in it above half an hour, and in that time they are forced to drink strong waters. The springs are rich or poor in a double sense; for a spring may be rich in salt, but poor in the quantity of brine it affords. Our pit yields about one pound of salt for six pounds of brine; but then 'tis always without any sensible difference so plentiful a spring, that whereas they seldom will, *i. e.* make salt in above six houses at a time, and there are or should be above fifty wick-houses in the town, this pit is judged sufficient to supply them all, without falling much lower than a yard or two at most. 'Tis a mistaken notion of the briners, that the brine is strongest at the full and change of the moon. The quick

quick use of the pit adds extremely to the strength of the brine, for much or frequent drawing makes way for the salt-springs to come quicker, and allows the less time for the admission of fresh springs. 'Tis observed by the briners, that they make more salt with the same quantity of brine in dry than in wet seasons. They use for their fuel Staffordshire pit-coal. The pans in which they boil the salt are set upon iron-bars, and closed up on all sides with clay and bricks, that neither flame nor smoak may get through. They first fill their pans with brine out of the pit, from which it comes to them in several wooden gutters: then they put into their pans, among their brine, a certain mixture made of about twenty gallons of brine, and two quarts of calve's, cow's, or chiefly sheep's blood, mixed into a claret colour. Of this mixture they put about two quarts into a pan that holds about three hundred and sixty quarts of brine. This bloody brine, at the first boiling up at the pan, brings up a scum, which they are careful to rake off with a wooden handle thrust through a long square of wainscot-board, twice as big as a good square trencher. This they call a zoot. Here they continue the fire as quick as they can, till half of the brine be wasted, and this they call boiling up of the fresh; but when 'tis half boiled away, they fill their pans again with new brine out of the ship (the name they give to a great cistern by their pan's side), into which their brine runs through the wooden gutters from the pump which stands in the pit. Then they put into the pan two quarts of the following mixture: they take a quart of whites of eggs, beat them thoroughly with as much brine till they are well broken; then they mix them with twenty gallons of brine, as before was done with blood; and thus that which they call the whites is made. As soon as this is in, they boil sharply till the second scum rises; then they scum it off as before, and boil 't very gently till it corn; to procure which, when a part of the brine is wasted, they put into each pan of the contents aforesaid, about a quarter of a pint of the best and strongest ale they can get. This makes a momentary ebullition, which is soon over, and then they abate their fires, yet not so but that they keep it bling all over, though gently; for the workmen say, that if they boil fast here, which they call boiling on the leach, because they usually at this time lade in the leach-brine, which is such brine as runs from the salt when it is taken up before it hardens; if I say the boil fast here, it wastes their salt. After all their lea-brine is in, they boil gently till a kind of scum comes on it like a thin ice, which is the first appearance of the salt. Then that sinks, and the brine everywhere gathers into corns at the bottom to it, which they gently rake together with their loots. They do it gently; for much stirring breaks the corn: so they continue till there is but very little brine left in the pans. Then with their loots they take it up, and the dropping from it, and throw it into barrows, which are cases made with flat cleft wickers in the shape most of a sugar-loaf, with the bottom uppermost. When the barrow is full, they let it stand for half an hour in the trough, where it drains out all the lea-brine abovementioned. Then they remove it into their hot-house behind their works made there by two tunnels under their pans carried back for that purpose. The leach-brine that runs from the barrows they put into the next boiling, it being salt melted, and being only to be hardened. This work is performed two hours in the smaller pans, which are shallow and generally boil their brine more away; whereas their salt will last better, though it does not granulate so well, because when the brine is wasted, the fire, and the stirring, breaks the corns. But this salt weighs heavier, and melts not so soon, and therefore is sought by them who carry it far: in the greater pans, which are usually deeper, they are about half an hour longer in boiling; but because they take their salt of the brine, and only harden it in their hot-house 'tis apter to melt away in a moist air; yet of this soft salt, the bigger the grain is, the longer it

endures, and generally this is the better granulate and the clearer, though the other be the white. This kind measures to good profit, therefore 'tis much sought by them who sell again.

They never cover their pans at all during their whole time of boiling. They have their houses like barns open up to the thatch, with a louver hole or two to vent the steam of the pans, which is such, that I am confident no plaister will stick, but the board will warp, and the nails will rust, so as quickly to fret to pieces.

Grey-salt is the sweepings of the salt which are constantly shed and scattered about on the floor, not without taking much of the dirt which occasions its greyishness. This does not sell at half the price of white salt, and is only bought up by the poorer sort of people to salt their bacon, coarse cheese, &c. catts of salt are made of the worst sort of salt, when yet wettish from the pans, molded and intermixed with cummin-seed and ashes, and so baked into a hard lump in the mouths of their ovens. The use of those is only for pigeon-houses; but loaves of salt are the finest of all for trencher use. There is no difference in the boiling of these from the common way of fine salt, but in the making up some care is used; for first, they cut their barrows, which they intend for salt-loaves, with a long slit from top to bottom, equally on both sides; then they tie both sides together with cords; then they fill this barrow with salt boiled as usual, but in the filling are careful to ram down the salt with the end of some wooden bar, continuing this till their barrow be filled to their minds: then placing it speedily in their hot-house, they let it stand there all the time of their walling; wherefore they prepare for their loaves at the beginning of the work, that they may have all the benefit of their hot-houses; and when these begin to slack, they take out the loaves, and untie the cords which fastened the barrow, that both sides may open easily without breaking the loaf. Then they take the loaf and bake it in an oven, where household bread has been baked, and just drawn out. This they do twice or thrice till they see 'tis baked firm; and this being placed in a stove, or a chimney corner, and covered close with a hose of cloth or leather like the sugar-loaf papers, will keep very white; and when they have occasion to use any they shave it off with a knife, as is done with loaf-sugar to fill the salt-cellar. Here is but one brine pit, the water of which smells as if it were corrupted, or like sulphur, and upon a few days forbearance of the pit, it becomes attamentous with galls. It yields a white sand or stone, in the manner of thin scales, to the bottom of the iron pans, in which the brine is boiled. The pit is about fourteen foot from the river. Their pans are something better than a yard square, and about six inches deep. Thus far Dr. Jackson, to which we shall add these farther particulars from another author.

When the troughs or barrels set in the earth to receive the salt-water from the pit are full, of which notice is given by a bell, they lade the water into their leads, of which they have six in every wick-house, and immediately put fire to them to boil up the salt. These brine-pans are attended by certain women called wallers, who with little wooden rakes draw the salt from the bottom as the brine is seething, and put it into the abovementioned wickers or barrows, where they let the salt stand for the water to drain from it.

Though Mr. Camden was of opinion with others, that the Cheshire salt-springs and works were known to the Romans, yet 'tis very much to be doubted whether those works were then of the same kind as now, the manner of working and managing the salt being altered within these sixty or seventy years. Camden says, 'These are the noble salt-wiches about five six or miles distant from one another, where they draw brine or salt-water out of pits, and do not, according to the method of the Old Gauls and Germans, pour it upon burning wood, but boil it upon the fire to make salt of. Nor do I question but these were known to the Romans, and that their impost for salt was laid on them. For there

was a noble way from Middlewich to Northwich, which is raised so high with gravel, that one may easily discern it to be Roman, especially if he considers that gravel is scarce in this country, and that private men are even forced to rob the road of it for their own uses. We refer for the rest on this subject to Ray's Northern Works, and the Philosophical Transactions.

Matthew Paris says, these salt-pits were stopped by king Henry III. when he wasted this country, that the Welsh, who were then in rebellion, might have no supplies from them; but upon the next return of peace they were opened again.

There's a charity-school at Namptwich for forty boys, and another for thirty girls.

Here is a weekly market on Saturday; and three annual fairs, viz. March the twenty-sixth, September the fourth, and December the fifteenth, for cattle, horses, clothes, flannels, bedding, hard-ware, and pewter.

Northwich, to which we passed from Namptwich, is situated on the river Weaver, near its conflux with the Dan, one hundred and fifty-nine miles from London. Here is a deep and plentiful brine-pit, near the river Dan, with stairs about it, by which, when they have drawn the water with their leather-buckets, they ascend half naked to the troughs, and fill them; from whence it is conveyed to the wick-houses, near which are many great piles of wood. The salt, according to its Welsh name, is not so white as at the other wicks, nor is it made with so much ease on account of the depth of the brine-pits, of which here are four.

This appears by the buildings to be a very ancient town. 'Tis so near the middle of the county, that 'tis often appointed for the meeting of the justices, and other gentlemen on public affairs. The chief lordship of the town does, or did lately belong to the Earl of Derby; but one street called Witten is appendant to the barons of Kinderton. Here's a free grammar-school founded and endowed by Mr. John Daynes, minister of St. Bartholomew's in London; and in the printed account of charity-schools we read, that a person bequeathed a house for a school-master, and seven hundred and eighty pounds to purchase lands for teaching ten boys to read, write, and cypher. Mr. Camden's continuator says, that in 1670, a rock of natural salt was discovered in this county, from which issued a strong brine, sharper than any of the springs made use of in the salt works.

On the south side of this town, within these fifty years, were also discovered a great many mines of rock-salt, which they continually dig up, and send in great lumps to the sea-ports, where 'tis dissolved, and made into eating-salt. The salt-quarries here, when a person is let down into them by a bucket to the depth of a hundred and fifty foot, afford a most pleasant prospect, looking like a subterraneous cathedral, supported by rows of pillars, and a chrystal roof, all of the same rock, transparent and glittering, from the numerous candles burnt there to light the workmen, who with their steel pick-axes dig it away. This rock-work extends several acres. There is a good church at this town, with a fine roof, and a semi-circular choir.

There is a Roman way from this place to Middlewich, raised very high with gravel, and manifestly intended for public use.

This town has a weekly market on Friday; and two annual fairs, viz. August the second, and December the sixth, for cattle, drapery goods, and bedding.

At Mobberly, to the north-east of Northwich a priory of black canons was founded in the year 1206, by Patrick de Modberly, who dedicated it to the honour of the Blessed Virgin Mary, and St. Wilfrid; but it continued a very short time, a discovery being made that Patrick had only an estate for life, in the lands with which he had endowed it.

At Rudheath, sometime since the seat of the Mainwarings, near Northwich, was once an asylum for criminals, where they were permitted to remain in safety a year and a day; but it was so grossly abused, that long before the reformation the privilege was taken away.

Middlewich, so called from its situation between Namptwich and Northwich. It stands near the con-

flux of the river Dan, with the Croke, one hundred and fifty miles from London. It is an ancient borough, governed by burgeses; consists of many streets and lanes; and is very populous. The salt-springs here are said to produce more salt in proportion to the brine, than those at any other place. The parish extends into many townships; and the place has a spacious church.

Here is a weekly market on Tuesday; and three annual fairs, viz. St. James's Day, July the twenty-fifth, and Holy Thursday for cattle.

At Darnall Grange, on the south west side of this town, prince Edward, eldest son to Henry III. began in his father's life time, about the year 1266, to build an abbey for one hundred monks of the Cistercian order; but when he became king, in the year 1277, he laid the foundation of a stately monastery, at a small distance, in a more pleasant situation, which he called Vale Royal. It was erected on the river Weaver, east of Delamere forest; and to this place the monks of Darnall were removed, about the year 1281. The building, however, was not finished 'till the year 1330; and in the mean time they were much incommoded for want of room. The conventual church was dedicated to our Lord, the Virgin Mary, St. Nicholas, and St. Nicholas; and at the dissolution it was endowed with the clear yearly value of five hundred and eighteen pounds, nineteen shillings and eight pence.

Leaving Middlewich we continued our journey to Sandbach. This town is delightfully situated on the river Wheelock, which flows in three streams from Mowcap-hill, and falls into the Dan, a little above the town. It is one hundred and fifty-three miles from London; and has a church with a lofty steeple. The market-place is tolerable good; in it are two stone crosses, elevated on steps, and adorned with several images, and the history of the sufferings of our Saviour, carved in basso relievo.

This place has a weekly market on Thursday, and two annual fairs, viz. Easter-Tuesday, and the first Thursday after the tenth of September for cattle and horses.

From hence we proceeded to Malpas, a name given it from the steep, rugged way leading to it. The Romans called it Malo Passus; and the Normans, Malpas; a name it still retains. It is situated on a hill on the borders of Shropshire, not far from the Dee, one hundred and fifty seven miles from London. It consists principally of three streets, which are now well paved; has a stately church, situated in the highest part of the town, and the benefice is so considerable, that it supports two rectors, who officiate alternately. It had formerly a castle, and has now a grammar-school and an hospital.

Here is a weekly market on Monday, and three annual fairs, viz. March the twenty-fifth, July the twenty-fifth, and December the eight, for cattle, linen, woollen cloaths, hardware, and pedlary.

Chester, or as it is generally called West-Chester, from its western situation, to which we passed from Malpas, is situated at the mouth of the river Dee, one hundred and eighty-two miles from London. It is a large city, full of wealthy inhabitants, and supposed to have been a city before the time of the Romans; though others are of opinion that it became a city by the gradual increase of building, which were necessary to accommodate the persons that resorted thither on various occasions, while it was the station of the twentieth Roman legion, called Valeria Victrix, or Valens Vitrix. Nor do we meet with any other city in Britain, that so long retained the Roman splendor; for we find the Romans continued here to the very last; and that long after the Saxons were masters of the other parts of England, the Roman Britons preserved their liberty here, and were under their own masters, the Britons assuming the government every where, when the Roman soldiers quitted the island. In Wales several petty princes set up for sovereigns, and Chester was the chief seat of the British sovereignty. This city and the neighbouring country became subject to the Saxons about a hundred and fifty years after Hengist and Horsa first landed

in England; but the Britons recovered it again, and kept possession of it, till king Egbert the first Saxon monarch took it from them about the year 826, and about sixty years after, it was taken by the Danes. The Saxons and Britons hating those robbers alike, assembled in great numbers, and besieged the Danes so closely, that after they had been forced to eat horse-flesh, they surrendered the city, which in the time of king Edward the Elder was enlarged; and the castle, which was before without the walls, was now encompassed with them. King Edgar being here in the 13th year of his reign, required the attendance of all the kings and princes of the island of Britain to pay him homage. Accordingly, the kings of Scotland, Cumberland, and Man, and five petty kings of Wales, having taken an oath of fidelity to him, he went with them next day on board a barge in the river Dee, and caused all those princes to row him up and down the river, where they laboured at the oar like so many bargemen, while himself sat in triumph steering the helm, and was rowed to and from St. John's church, and his palace; upon which he is reported to have said, *Tunc demum posse successores suos gloriari se reges Angliæ esse, cum tanta prærogativa honorum fruereutur.*

In the reign of Edward III. we read, that Edward the Black Prince came hither with other great lords to protect the justices itinerant, who were threatened by the people of Chester; and that as king Edward III. had held this earldom during his father's life-time, so he settled it by patent on the said Black Prince, his son; since which all the succeeding kings of England, when they created their sons and heirs apparent princes of Wales, created them also earls of Chester. Richard II. as has been already observed in the general history of the county, had so particular a kindness for this place, that he erected it into a principality, annexing to it the castle of Leon, with the territories of Bromfield and Yale, the castle of Chirk, with Chirkland, the castle of Oswestry, with the hundred and the townships belonging to it, the castles of Isabella and de le Ley, with other large possessions which had come to the crown by the attainder of Richard, earl of Arundel. King Richard himself was styled Princeps Cestriæ, though it was an unfortunate title for him, this being the place to which he was first brought prisoner from Flint-Castle, where he had agreed to resign his crown, and the place from which he was conveyed to the tower of London. His successor Henry IV. made his son Henry, justice of Chester, and constable of the castle. He also repealed the act, which erected this earldom into a principality; but it still retained the prerogative of a county palatine, and continued to give title of earl to the princes of Wales, and dukes of Cornwall.

When king Henry VIII. erected this city into an episcopal see, an act of parliament was passed, empowering the freeholders of this city and county to elect members to parliament. The sheriffs of this city, Richard Massey, and Peter Lycherbaud, had such a quarrel in 1569, that it ended in a battle, for which they were forced to repair that part of the wall which runs between the New Tower and the Water-Gate.

In the civil wars this city held out a siege for king Charles I. against the parliament. In 1659, when one protector was dead, another deposed, and the nation was fallen into such a state of anarchy, that the people longed for some settlement, Sir George Booth, who had never taken arms against the parliament, declared for a free one, and seized this city, together with Warrington and Manchester; but on general Lambert's approach, he thought fit to leave them, and to give him battle; in which he was defeated, and afterwards taken in woman's apparel. In 1695, a mint was established here for coining money.

What remains relating to this city is a description of its situation, building, trade and government. Lucian the monk, who lived about six hundred years ago, speaking of this place, writes thus: 'It is to be considered, that the city of Chester is a place very pleasantly seated, and being in the west parts of Britain, it stood very convenient to receive the Roman legions

that were transported hither; and besides, it was a proper key to Ireland. For being opposite to the north parts of Ireland, it opened a passage for ships, and mariners, who were continually in motion to and again. Besides, it lies curiously, not only for prospect towards Rome, and the empire, but for whole earth; a spectacle exposed to the eye of all the world. So that from hence may be discerned the great actions of the world, and the first springs and consequences of them, the persons who, the places where, and the times when they were transacted. We may also take example from the ill conduct of them to discern the base and mean things, and learn to avoid them: The city has four gates, answering the four winds. On the east side it has a prospect towards India, on the west towards Ireland, and on the north towards the Greater Norway; and lastly, on the south to that little corner wherein God's vengeance has confined the Britons for their civil wars and dissensions, which heretofore changed the name of Britain into England, and how they live to this day, their neighbours know to their sorrow. Moreover, God has blessed and enriched Chester with a river running pleasantly, and full of fish, by the city walls; and on the south side with a harbour to ships coming from Gascoigne, Spain, Ireland, and Germany; who, by Christ's assistance, and by the labour and conduct of the mariners, repair hither, and supply them with all sort of commodities; so that being comforted by the grace of God in all things, we drink wine very plentifully, for those countries have abundance of vineyards. Moreover, the open sea ceases not to visit us every day with a tide; which, according as the broad shelves of sands are open or shut by tides and ebbs, is wont more or less to change, or send one thing or other; and by reciprocal ebb and flow, either to bring in or carry out.'

The houses are, generally speaking, distinguished from all the buildings in Britain. They are for most part of timber very large and spacious; but they are built with galleries, piazzas, or covered walls before them, in which the people, who walk, are so hid, that to look up or down the streets, one sees no body stirring, except with horses, carts, &c. and yet they may be said to be full of people. By the same means also the shops are, as it were, hid, little or no part of them being to be seen, unless one is under those rows, or just opposite to a house. This was formerly reckoned the glory and beauty of Chester, but now its disgrace and deformity; for to obtain this conveniency of walking dry from one end of the street to the other when it rains, the houses are lessened, whose fronts would otherwise come out into the streets as far as those galleries; also the shops are all dark and close, and many ways incommodious. Yet, with all this inconveniency and disadvantage, 'tis a very handsome city; and in those streets where the rows do not cloud the buildings, there are very large and well-built houses. The streets are generally strait, large, and very broad, and crossing one another in strait lines, meet in the centre as at Chichester.

The walls of the city, first erected by Ædelfleda a Mercian lady, anno 908, are firm, and built of very large stone. On the south side of the town, and on a rising ground, surrounded in part by its river, is a very strong castle, to which the walls on that side join; and from thence 'tis a most agreeable walk round the whole city upon the walls, only it is intercepted by some of the towers over the gates. It is kept in good repair, and has always a strong garrison, for it is of very great importance when any military preparations are making for Ireland, or any disturbances raised on that side of the country, it being a good place for magazines, as it is a frontier either towards Wales or towards the north, as appeared in the late rebellion at Preston, many of the prisoners taken there being afterwards brought hither to be secured. The city consists of four large streets, which make an exact cross, with the town-house and exchange in the middle, which is a neat building, supported by columns thirteen foot high of one stone each.

From the city walls there is a prospect of Flintshire and the mountains of Wales.

Here is a noble, firm, spacious and very high-built bridge, with a grate at each end; and about a dozen arches over the Dee, which here falls into the sea. It is the largest and longest river on the west side of Britain, between the Severn and Clyde; but a strange river both for the force of its current, and the quantity of its waters in the winter seasons, and upon hasty rains or snows; for then the mountains of Wales, from whence they come, pour down such floods, that the height of the waters is sometimes very frightful; and not many years ago, such an inundation happened here, as drowned and drove away all their new-built key for the landing and snipping off goods, with all the ware-houses and store-houses newly erected there, and all the goods that were in them, to the incredible loss and damage of the merchants and tradesmen.

There are eleven parishes in this city, with well-built churches to them all, which are also pretty well filled. The great church or cathedral, a venerable pile, looks as antique as the castle. It is said they were both built by Hugh Lupus nephew to William the Conqueror; but some say that he only finished and endowed the church, and that Edgar founded it. In this church they pretend, according to Camden, to shew the monument of Henry IV. Emperor of Germany, who having abdicated the imperial crown, came and lived here as an hermit; though it is certain that he did not abdicate, but was treacherously taken prisoner as he was going to the dyet at Mentz, after he had reigned fifty years, in which he fought sixty-six battles, wherein he was generally victorious; which, says Dr. Nicholson, was more than Marcus Marcellus, Julius Cæsar, or any Roman general could boast of. Nevertheless this brave prince was so unfortunate, that besides his being deposed, he was denied a prebend by the bishop of Spire, in the very church which himself had built and endowed, and died in misery.

The adjacent country is the richest in pasturage of any on the west-side of Britain, as is plain from the produce of its cheese, known all the world over by the name of Cheshire cheese. Of this it is said that London alone takes off fourteen thousand tons a year; that the navigation of the Trent and Severn carries off near eight thousand tons; and the kingdoms of Scotland and Ireland, above four thousand tuns more; besides all that goes away by land-carriage, and is consumed in Wales, and in the several inland counties: so that the whole produce is computed to be at least thirty thousand tons a year. And indeed if we consider the consumption of the cities of Worcester, Gloucester, Hereford, and Bristol, with all the populous part of England down the Severn, and the Severn Sea, to Devonshire and Cornwall, where they have hardly any other cheese, the account will not appear extravagant.

The episcopal see was first translated to this city from Litchfield, immediately after the conquest, by Peter, bishop of Litchfield; which is the reason why the bishops of Litchfield are sometimes called by our historians bishops of Chester; and why the said Peter is by the Saxon annals sometimes called Episcopus Licfeldensis sive Cestrensis. It was afterwards translated to Coventry, and from thence to the ancient see again. So that Chester remained without this dignity, till king Henry VIII. restored it in the twenty-third of his reign, to contain within its jurisdiction this county, Lancashire, Richmond, &c. and to be itself contained within the province of York.

This city was made a corporation and county by king Henry VII. and is governed by a mayor, twenty-four aldermen, two sheriffs, and forty common-council-men. The cathedral, with the bishop's palace, and the prebendaries houses, stand on the north side of the city. In the castle, where the earls formerly assembled their parliaments, is a stately hall, in which the palatine court and assizes are held twice a year, with commodious apartments for lodging the judges, a hall for the prince's exchequer-court, offices for the records, &c. a prison for

the county, an office for a prothonotary, and a tower ascribed to Julius Cæsar. Here are kept the courts for the county, which, as was said before, being a palatinate, has a very extensive jurisdiction still left, though curtailed of many of its privileges by king Henry VIII. for all causes relating to the county, (criminal causes excepted; which, as in other places, are left to the judges on their circuit) are determined in these courts, held by a chamberlain, a judge special, or chief justice of Chester, two barons of the exchequer, three serjeants at law, an attorney, escheator, &c. A Dutch colony settled here some years ago, by whose ingenuity and industry, the traffick of this city was much augmented. The city is square, with battlements on the walls, four gates, and three posterns, and is two miles in compass. The manufacture of most note here is tobacco-pipes, which it is said are the best in Europe, being made of clay brought from the Isle of White, Pool, and Biddiford. Here are assemblies every week, and horse-races are run every St. George's Day beyond the Rhodoc, which is a fine large low green, often overflowed by the river Dee.

The diocese, which at the first foundation of the see was subjected to the province of Canterbury, though afterwards to York, contain two hundred and fifty-six parishes in it, of which one hundred and two are impropriate.

Here is a charity-school for forty boys, who are taught, and cloathed, and maintained by a fund of five hundred and seventy pounds a year subscriptions.

The suburbs of Hanbrid is called by the Welsh Treboeth, i. e. the Burnt Town, it having been frequently burnt by them in their incursions. This city is plentifully supplied with water from the river Dee, by mills erected for this purpose on it about 1690, and by the water-tower, which is one of the gates on the bridge. The keeping of the city gates was formerly reckoned a very honourable office, and several noble houses pretended to it. East-gate was committed to the custody of the earl of Oxford, Bridge-gate to the earl of Shrewsbury, Water-gate to the earl of Derby, and North-gate to the mayor of the city. Another gate is called Pepper-gate, which has given occasion to a proverb here, "When the daughter is stolen, shut Pepper-gate." It is a postern on the east side of the town, which in ancient time one of its mayors shut up, because his daughter, who had been playing with some maidens at stool-ball, in Pepper-street, was stolen from him, and conveyed away through this gate.

The center of the city, at which meet the four streets facing the cardinal winds, is called the Pentife; from whence a man has at once a pleasant prospect of all four. The new-exchange, or common-hall, which was begun in 1695, and finished in 1699, is one hundred and twenty-five foot long, forty-five broad, eighty-five in height, and is a very noble structure; as is the shire hall, built in the castle, a handsome large place, somewhat like that at Westminster. The chamberlain has all the jurisdiction of a chancellor within Cheshire, the inhabitants of which, for the enjoyment of their liberties, were to pay at the change of every owner of the earldom, three thousand marks, and the county of Flint, parcel of this palatinate, two thousand marks. The fee farm-rents are vested in the princes of Wales, as Earls of Chester. These they hold with the castle and profits of the temporalities of the bishopric; and the freemen swear to be true to the king and earl. The officers established here, are a governor of the city and castle, lieutenant-governor, with a master-gunner, store-keeper, and furnisher of small-arms: and for the receipt of the customs, here are a collector, customer, comptroller, searcher, and twenty-one subordinate officers. The cathedral is three hundred and seventy foot long, eighty foot broad within the body and iles, and two hundred and sixty in breadth in the great cross ile from north to south.

The walls here being built, like the generality of the houses, of stone, which is a soft reddish grit, and very brittle, are often out of repair, so that here are officers on purpose, called murengers, who gradually reset them where they are most worn out.

In the year 1653, an altar was dug up here with this inscription :

J. O. M. TANARO T. ELUPIUS GALER. PRAESENS GWIA. PRI. LEG. XX. W. COMMODO. ET LATERANO COS. V. S. L. M.

Which is read as follows: *Jovi Optimo Maximo Tanaro Titus Elupius Galerius Praesens Gubernator Principibus Legionis Vicefima Victricis Varteriae Commodo et Laterano Consulibus Votum Solvit Lubens Merito.*

Another altar was found some time afterwards, with this inscription :

PRO. SAL. DOMINORUM. NN. INVICTISSIMORUM—AUGG. GENIO LOCI FLAVIUS. LONG—TRIB. MIL. LEG. XX. — LONGINUS — FI. — EUS.

It was discovered in digging a cellar, at the house of one Heath, lying with the inscription downward, upon a stone two feet square, which is supposed to have been its pedestal; on the left side of it was a flower pot; on the top a catyla, or cavity; in the bottom of that cavity a young face, supposed to be that of the genius; on the back, ornaments of drapery of uncertain figures; on the right side, Genius, standing with a cornucopia in his left hand; the right was cut off by the workmen in digging it out, before they knew what it was. The foundation was broad, consisting of many large stones, and it lay deep. The earth about it was solid, but of several colours, and mixed with ashes. In this earth, near the foundation, were found the bones, horns, and heads of several creatures, supposed to have been sacrificed there; with two coins, one of brass, and the other of copper; on the first side of the brass coin was this inscription: *Imp. Caes. Vespasian. Aug. Cos. III.* and the face of the emperor; on the reverse, *Victoria Augusti S. C.* and a winged victory standing. On the first side of the copper coin was, *Fl. Val. Constantius Nob. C.* and the face of Constantius; on the reverse, *Genio Populi Romani*, and a genius standing, holding a sacrificial bowl in the right hand, and in the left a cornucopia.

In a ruinous fabric, called the chapter, there was discovered, about thirty years ago, a skeleton, supposed to be the remains of Hugh Lupus: the bones were very fresh, and in their natural position: they were wrapped in leather, and contained in a stone coffin; the legs were bound together at the ankles, and the string was intire. In the cathedral, among other ancient monuments, is the tomb of Henry IV. emperor of Germany, who is said to have abdicated his kingdom, and lived the life of an hermit, at Chester, totally unknown, till he discovered himself to the priest, who confessed him just before he expired.)

There was early in the Saxon times a religious house in this city, probably a nunnery, dedicated to St. Peter, and St. Paul; whither, as a place of safety from the outrages of the Danes, the remains of St. Werburg were brought from Heanburgh, or Hanbury, in Staffordshire, in the year 875. St. Werburgh is said to have been the daughter of Wulferus, the first Christian king of Mercia, and to have professed herself a nun very early in life, under Audria, her aunt, at Ely. She lived mostly at Weedon, in Northamptonshire, died at Trentham, in Staffordshire, and was buried at Hanbury; whence, after near two hundred years, she was removed to Chester. From the shrine of this virgin princess, the church of St. Peter and St. Paul was called St. Werburg's. It was some time after totally ruined, by the intestine commotions of the times; but it was afterwards rebuilt by Edelfleda, for secular canons; and more liberally endowed by king Edmond, king Edgar, earl Leofric, and other benefactors, in honour of St. Werburg. Hugh Lupus, in the year 1093, at the instigation of the celebrated Anselm, who was afterwards archbishop of Canterbury, expelled the seculars, and established in their stead an abbot, and convent of Benedictine monks, from Bee, in Normandy, in whose possession St. Werburg's church continued, till the general dissolution, in the thirty-third year of Henry VIII. Henry, however, restored the foundation to a dean and six prebendaries, directing the church to be from that time stiled the church of Christ and the Blessed Virgin,

and making Chester once more the seat of a bishop. The yearly revenues were then rated at one thousand pounds, five shillings and eleven-pence.

The ancient collegiate church of St. John the Baptist, in the east part of this city, is said, by Giraldus Cambrensis, who, about the year 1200, was bishop elect of St. Davids, to have been founded by king Ethelred, in the year 689; but it is more probable, that Ethelred, who was earl of Mercia, in the year 906, either founded, or at least rebuilt it with the rest of the city; for not long afterwards there was a celebrated church, or monastery, at Chester, dedicated to this Saint, which, in the next century was repaired by earl Leofric; and was endowed with houses and lands at the time of the Conqueror's survey. It is said that Peter, bishop of Litchfield, when he removed the episcopal see hither, made this church his cathedral. Here was, till the suppression, a dean, and seven prebendaries, or canons, who were in the collation of the bishop of Litchfield; besides seven vicars, two clerks, four choristers, sextons, and other servants. Their yearly income in the twenty-sixth of Henry VIII. after reprisals, was no more than twenty seven pounds, seventeen shillings and four-pence.

Not far from St. John's, was a monastery, dedicated to the Blessed Virgin; which, at the suppression, was rated at sixty-six pounds, eighteen shillings and four-pence *per annum*.

There was likewise a monastery in this city, dedicated to St. Michael, before the year 1162, as appears by a charter of Henry II. to the canons of Norton.

In the year 1279, Thomas Stadham, gentleman, erected a house of Carmelite, or White Friars, in the parish of St. Martin; and one of the bishops of Litchfield, founded a house of Black or Preaching Friars, in the same parish.

In the parish of the Holy Trinity, there was also a house of Grey or Franciscan Friars, which is believed to be as ancient as the time of Henry III. who began his reign in the year 1216.

The city of Chester sends two members to parliament; has two weekly markets held on Wednesday, and Saturday, and three annual fairs, viz. Last Thursday in February, for cattle; July the fifth, and October the tenth, for cattle, Irish-linen, cloths, hard-ware, hops, drapery goods, and Manchester wares.

A few miles distant from Chester, and on the south side of the entrance into the peninsula, called Wiral, there was anciently a royal castle, but of which there are now but very few remains.

A little to the east-ward of the Wiral lies the forest of Delamere, where Elfleda built a city which she called Caderburg, the happy town. Camden tells us that in his time, a heap of rubbish, the ruins of this city, remained, and was called the Chamber of the forest.

From this city Eadburgh-Hall, an old building near this place, which gives name to an eminent family, and one of the hundreds of this county, was probably denominated.

At a little distance are the ruins of Finborough, another town said to have been built by the same lady.

Not far from Delamere Forest, near a village called Bunbury, stands Beeston-castle, which was built by Ranulph the third, the sixth earl of Chester after the conquest, when he returned from the holy war. This Ranulph began his government in the year 1180, and having governed somewhat more than fifty years, died 1232. The castle, which covers a great extent of ground, stands upon a hill, and is fortified, as well by the mountains that almost surround it, as by its wall, and the great number of its towers: the chief of these towers was supplied with water from a well that is now ninety-one yards deep, though it is supposed to be near half filled up with rubbish, that has either fallen into it by accident, or been thrown in by design. This castle is now in a ruinous condition; but Leland, in some verses which he wrote upon it, says, that if old prophecies are to be believed, it will in some future time recover its original splendor. Near this place there are many traces of ditches, and other military works.

At Poromborough, anciently Brunnesburgh, in Wiral, near the river Mersee, was a monastery, founded by Ædelfleda, which soon decayed; and the church was appropriated to the abbey of Chester, and has since been made part of the endowment of that dean and chapter.

There was another religious house at Runcorn, near the mouth of the Mersee, said to have been founded by the lady Ædelfleda: and in the year 1133, William Fitz Negell, built a priory for regular canons of the order of St. Austin. This priory in the reign of king Stephen, before the year 1148, was removed to Norton-Hall, where there was also a priory, which, at the dissolution, was valued at one hundred and eighty pounds seven shillings and six-pence *per annum*.

At Poulton, in Wiral hundred, there was a Cistercian abbey, built and endowed by Robert Randal, brother to the second earl of Chester, in the year 1153. This abbey being in perpetual danger from the incursions of the Welch, the monks were translated to Dieulacres, in Staffordshire.

At Barrow, on the south-west side of Delamere-forest, there was a preceptory of the Knights Hospitalers of St. John of Jerusalem, which, with Yeveley in Derbyshire, was valued at ninety-three pounds three shillings and four pence *per annum*.

At Hillbree, or Hilbury, a little barren island, which lies off the end of Wiral, in the mouth of the river Dee; there is said to have been once a convent of Benedictine monks, which was a cell to Chester; and was dedicated to the Blessed Virgin Mary.

Four miles east of Chester, at a place called Tarvin, or Tervin, there was an hospital endowed out of the tithes of the parish church, by Alexander Stavensby, bishop of Litchfield, about the year 1230.

At Boughton, just without the east gate of the city Chester, there was an alms-house for poor lepers, as early as the year 1309.

We now proceeded on our journey and arrived at Frodsham, a sea port town, situated on the river Weaver, near its conflux with the Mersee, one hundred and sixty-two miles from London. It consists of one long street, at the west end of which there is a castle, that for many ages past was the seat of the earls Rivers. Here is a stone bridge over the Weaver; and about a mile from the town, in the way to Halton, is another of brick, called Frodsham-bridge. The church stands at a field's length from the town, near a lofty hill, called Frodsham-hill, the highest in the county, on which there used formerly to be a beacon.

Here is a weekly market on Wednesday; and two annual fairs, viz. May the fourth, and August the twenty-first, for cattle and pedlars ware.

There is a small wild white-heart cherry, peculiar to a little spot in this county, near Frodsham; where there is also a stone-rock, in which the belemnites, or thunder-bolt, has been frequently found.

In the year 1172, John Constable, of Chester, founded an abbey at Stanley, or Stanlow, near Frodsham, for forty Cistercian monks; and dedicated it to the Virgin Mary. The monks of this monastery being incommoded by the overflowing of the sea, or the waters of Mersee, were removed to Whalley, in Lancashire. Four monks, however, remained here, so that Stanley

continued to be a small town till the time of the general dissolution.

From hence we passed on to Halton, or Haulton; that is, High-Town, so called from its situation, which is on a hill, about two miles north of Frodsham, and one hundred and sixty-three miles from London. Here is a castle, said to have been built by Hugh Lupus, to whom the county was granted by William the Conqueror, which, with the barony, belongs to the dutchy of Lancaster, and maintains a large jurisdiction in the county round it, by the name of Halton Fee, or the Honour of Halton; having a court of record, and a prison. The king's officers of the dutchy keep a law-day at the castle every year, about Michaelmas; and a court is held there once a fortnight, to determine all matters within their jurisdiction. The inhabitants claim a market here by prescription; but the town was not formerly considered as a market town, though it is now generally registered as such.

The weekly market here is held on Saturday; and the annual fair, Lady-day, April the fifth.

At Norton-hall, a seat of Sir Thomas Brook, near the northern boundary of the county, in the neighbourhood of Halton; and about four miles distant from Warrington, in Lancashire, is a remarkable echo. There is a wall, about one hundred and twenty yards long; at one end of which are some steps that lead into the house; near the middle there is a round tower with a gate in it; and at the other end another tower and gate of the same kind: if a flute is sounded on the steps is scarce heard at the first gate; but at the distance of thirty yards from it, nearer to the farther tower, is heard very distinctly, not however as coming from the steps where it is sounded, but from the farther tower; but upon approaching ten yards, still nearer to the farther tower, it is no longer heard from that gate, but from the steps where it is sounded.

Near this place there have been many pieces, or pigs of lead dug up of an oblong form: the upper part of some was thus inscribed.

IMP. VESP. VII. T. IMP. V. COSS.

On others was this inscription:

IMP. DOMIT. AUG. GER. DE CEANG.

From this inscription, it has been conjectured, that the Cangi, a people of the old Britons, of whom very little is now known besides the name, lived in this county; and that these pieces of lead belonged to some monument of a victory gained over them by the Romans; a conjecture which is strengthened by a passage in Tacitus, from which it appears that the Congi were situated upon the Irish sea; and by the names of several places in this part of the county, as Conghill, Congleton, Kendale, and Kentland, which by an easy corruption may have been formed from Congi.

Naturalists have not observed any plants peculiar to this county, except the small white-heart cherry, mentioned in our account of Frodsham.

MEMBERS of PARLIAMENT for the County.

Cheshire sends only four members to parliament, viz. two knights of the shire for the county, two citizens for Chester.

L A N C A S H I R E,

Or the County Palatine of LANCASTER.

THIS county is bounded by parts of Cumberland and Westmoreland on the north; by Cheshire on the south; by Yorkshire on the east; and by the Irish sea on the west: towards the north it is divided by an arm of the sea, which renders that part of Lancashire bordering upon Cumberland a peninsula. The figure of it nearly resembles that of England. It is about forty-five miles in length, from north to south; thirty-two in breadth, from east to west; and one hundred and seventy in circumference. It is divided into six hundreds; in which are sixty very large parishes, twenty-seven market towns, about forty-five thousand houses, and one hundred and thirty-seven thousand inhabitants. It lies in the province of York, and diocese of Chester; and Preston, a very considerable town, nearly in the county, is two hundred and eleven miles north-west of London.

King Edward the third made this a county palatine, in favour of his son, John of Gaunt, and it has a court, which sits in the dutchy chamber at Westminster, for the revenues of the dutchy of Lancaster; and a chancery court at Preston: the seal of the county palatine is different from that of the dutchy, for there are lands in the dutchy which are not in the county. From the time that Lancashire has been a county palatine, Lancaster gave the title of duke to a branch of the royal family, till the union of the houses of York and Lancaster, in the marriage of king Henry VII. of the Lancaster line, with Elizabeth, heiress of the house of York.

This county, in the times of the ancient Britons and Romans, was part of the large territory inhabited by the Brigantines, and under the Saxon heptarchy became a portion of the kingdom of Northumberland. Not long after the Norman Conquest, it obtained the privileges of a county-palatine, and afterwards the honour of dukedom annexed to the royal family.

Ribchester, or Ribbleschester, was a large Roman town, generally supposed to have been the Coceium, or Gocceium, of Antoninus, and the Rigodunum, or Ribodunum, of others. But, however that may be, the ruins of it, and the many remains of antiquity that have been discovered in and near it, prove that it was once a place of great opulence and splendor. There are still visible traces of Roman military ways leading to it, one from the north, another from the north-east, and a third from the mouth of the Ribble, near Preston. Relicks of military engines and weapons, and variety of coins, statues, pillars, pedestals, funeral monuments, and altars, with inscriptions, have been frequently discovered here; many of which are described in Camden's Britannia, and Dr. Leigh's natural history of this county.

A remarkable piece of antiquity in this neighbourhood, and the object of much speculation, is an ancient fortification; which, because anchors, rings, nails, and other parts of vessels have been frequently dug up near it, is called Anchor-Hill. As this is a considerable distance from the sea, it is supposed that it was a rampart of the fortress of Coceium; and the broad and deep fosse under it, which leads towards the river, served as a canal to the boats that were to pass and repass the river, for the service of the garrison: and as we may reasonably suppose that there were a great number of such boats belonging to so large a fort and city, we may conclude, that the Anchor-Hill was a small dock for building and repairing them.

In this hill have been often dug up Roman pateræ, or bowls, adorned with flowers and the figures of wolves, and some of them marked at the bottom as follows: FAB. PRO. which, without doubt, implies, that they were made when one of the Fabii was procurator, or proconsul. Near Anchor-Hill was also discovered a common sewer, and a floor laid with Roman tiles.

The mouth of the Ribble is supposed to be the æstuary, called by Ptolemy Bellifama.

R I V E R S.

The chief rivers in this county are the Mersee, the Ribble, the Wire, and the Lon. The Mersee rising in the mountains of Derbyshire, runs south-west, dividing that county from Lancashire, and being joined by a considerable stream, called the Gout, which parts Derbyshire and Cheshire, and receiving the Taume, the Irwell, the Billen, and several other small rivers, passes to Warrington, a market town of Lancashire; whence, returning westward, it falls into the Irish sea at Liverpool, the most considerable town in these parts.

The Ribble rises in Yorkshire, and running south-west, enters this county at Clithero, a market town. In its course this river is augmented by Great Calder, the Hodder, the Darwen, and the Savock; and dividing Lancashire nearly into two equal parts, falls into the Irish sea not far from Preston. In its mouth are æstuary; it receives a large river, formed by the conflux of the streams Tand, Dowglas and Charnock.

The Wire is formed by the Little Calder, the Broke, and other small streams, and running west-ward falls into the Irish sea about twelve miles north of the mouth of the Ribble.

The Lon rises near Kerby-Lonsdale a market town of Westmorland, and running south-west, is augmented by several streams, and passes the town of Lancaster, near which it falls into the Irish sea at a wide channel, which also receives the rivers Caker and Condor.

Remarks on the INLAND NAVIGATION of Lancashire.

The river Mersee, by its communication with the western sea, is by nature navigable, in spring-tides, from Liverpool to Warrington-bridge.

By an act of parliament, passed in the year 1720, certain undertakers were empowered to make the rivers Mersee and Irwell navigable from Liverpool to Manchester, and to take a tonnage of 3s. 4d. per ton for all goods navigated between Bank Quay (being near three miles below Warrington-bridge) and Manchester.

The freight and tonnage upon those rivers, between Liverpool and Manchester, is twelve shillings per ton; and between Warrington and Manchester ten shillings per ton.

The town of Manchester being supplied with coals by land-carriage, at the expence of from nine to ten shillings per ton upon a medium; and there being no communication by water, from any collieries to the rivers Mersee or Irwell above Warrington, the duke of Bridgewater, who has considerable coal mines in his estate at Worsley, about four miles north of the river Irwell, formed a plan for conveying his coals from his works at Worsley to Manchester, by means of an artificial canal.

Accordingly he applied to parliament in the year 1758, and obtained an act for enabling him to cut a navigable canal,

canal, from Worsley to Salford, near Manchester; and to carry the same to or near Hollin-Ferry.

Soon after the passing this act, his grace began his works, and made a navigable canal from Worsley Mill, to the public highway leading from Manchester to Warrington; but it being then discovered, that the navigation would be more beneficial, both to his grace and the public, if carried over the river Irwell, near Barton-bridge, to Manchester; his grace applied again to parliament, to vary the course of his canal accordingly, and to extend a side-branch to Longford-bridge, in Stretford, and obtained an act for that purpose.

The making a navigable canal over the river Irwell, and filling up the hollow or low ground on the north side of this river, were esteemed to be a very arduous undertaking, and, by most persons who viewed the chasm, thought to be impracticable; but his grace being well supplied with materials from his own estate, hath already completed this, which was looked upon as the most difficult part of his undertaking, and hath now carried it into execution.

By the first act, a rate or duty, not exceeding two shillings and six-pence *per* ton, was granted to the duke as a recompence for the charges of making and completing his navigation; and the second act varies the course of the canal, and extends it, but makes no alteration with respect to the tonnage.

The duke, upon a further survey and taking levels, found it practicable to extend his canal from Longford-bridge, by Dunham, to fall into the river Mersey, at or near a place called the Hemp-Stones, below Bank-Quay, and so as to bring vessels into his canal at the lowest nepe tides; and having obtained a third act for that purpose, undertook the whole at his own expence, without any addition or increase to the tonnage.

This stupendous work was begun at a place called Worsley-Mill, about seven miles from Manchester; where, at the foot of a large mountain, the duke has cut a basin capable of holding all his boats, and a great body of water, which serves as a reservoir, or head, to his navigation; and in order to draw the coals out of the mine, which runs through the hill to an amazing extent, his grace has cut a subterraneous passage, big enough for long flat bottomed boats to go up to the work, and has so preserved the level, that a part of the water, which drives a mill near the mouth of the passage, runs in, and stands to the depth of about five feet. This passage also serves to drain the coal mines of that water which would otherwise obstruct the work, and is to be carried on three miles or more under ground.

Having obtained a ticket to see this curiosity, which is done by sending your name to a new house which the duke has lately built for his residence, at about half a mile distance, you enter with lighted candles the subterraneous passage in a boat, made for bringing out the coals, fifty feet long, four and a half broad, and two feet three inches deep.

When you first enter the passage, and again when you come among the colliers, your heart will be apt to fail you: for it seems so much like leaving this world for the regions of darkness, that I could think of nothing but those descriptions of the infernal shades which the poets have drawn for Ulysses, Æneas, and your old friend Telemachus. There is more civility, however, in this region, than Homer, Virgil, and Fenelon, have discovered in theirs; for, should your spirits sink, the company are ever ready to aid you with a glass of wine: even Charon himself will offer you a cup on the occasion.

Through this passage you proceed, towing the boat on each hand by a rail, to the extent of a thousand yards, that is, near three quarters of a mile, before you come to the coal works; then the passage divides, and one branch continues on a straight line among the coal works three hundred yards further, while another turns off, and proceeds three hundred yards to the left; and each of them may be extended farther, or other passages be conveyed from them to any other part, as the mines may run, and necessity require. Hence you will perceive, that those who go up both passages, travel near three miles under ground before they return. The passages

in those parts where there were coals, or loose earth, are arched over with brick; in others the arch is cut out of the rock.

At certain distances there are, in niches, on the side of the arch, funnels or openings through the rock to the top of the hill, (which is in some places near thirty-seven yards perpendicular,) in order to preserve a free circulation of fresh air, as well as to prevent those damps and exhalations that are often so destructive in works of this kind, and to let down men to work in case any accident should happen to the passage. Near the entrance of the passage, and again further on, there are gates to close up the arch, and prevent the admission of too much air in tempestuous and windy weather.

At the entrance the arch is about six feet wide, and about five feet high from the surface of the water; but as you come further in it is wider, and in some places opened, so that the boats, that are going to and fro, can pass each other; and when you come among the pits the arch is ten feet wide.

The coals are brought from the pits to this passage, or canal, in little low waggons, that hold near a ton each, and as the work is on the descent, are easily pushed by a man, on a railed way, to a stage over the canal, and then shot into one of the boats already mentioned, each of which holds about eight tons. They then, by means of the rails, are drawn out by one man to a basin at the mouth of the passage, where four, five, or six of them are linked together, and drawn by one horse or two mules, by the side of the canal, to Manchester, or other places where the canal is conveyed.

There are also, on the canal, other broad boats, that hold about fifty tons, which are likewise drawn by one horse. Of the small boats there are about fifty employed in the work, and of the large ones a considerable number.

Before we quit the coal-mines, to speak of the open canal and its conveyance, we must take some notice of a mill near the mouth of the passage, and which, though an overshot mill, is so well contrived as to work three pair of grinding stones for corn, a dressing or boulding mill, and a machine sifting sand and compounding mortar for the buildings. The mortar is made by a large stone, which is laid horizontally, and turned by a cog-wheel underneath it, and this stone on which the mortar is laid, turns in its course two other stones that are placed upon it obliquely, and, by their weight and friction, work the mortar underneath, which is tempered and taken off by a man employed for that purpose. The boulding mill is also worthy notice. It is made of wire of different degrees of fineness, and at one and the same time discharges the finest flour, the middling sort, and the coarse flour, as well as the pollard and the bran, and without turning round, the work being effected by brushes of hogs bristles within the wire.

For the basin we have been speaking of, the canal takes its course to Manchester, which is nine miles by water, though but seven by land, the other two miles being lost in seeking a level for the water. The canal is broad enough for the barges to pass, or go abreast, and on one side of it there is a good road made for the passage of the people concerned in the work, and for the horses and mules that draw the boats and barges. To perfect this canal without impeding the public roads, or injuring the people in the country, the duke has in many places built bridges to cross the water, and (where the earth was raised to preserve a level) arches under it; all of which are built chiefly of stone, and are both elegant and durable; but what principally strikes the common observer, is the work which is raised near Barton-bridge, to convey the canal of water over the Irwell, which makes a part of the old navigation from Manchester to Liverpool. This is done by means of three arches built of stone, which are so spacious and lofty as to admit of the vessels sailing underneath it; and it is indeed a most noble sight to see large vessels in full sail under his aqueduct, and the duke's vessels sailing at the same time over all, and near fifty feet above the navigable river. At convenient distances there are, by the sides of the canal, receptacles for the superfluous water;

water; and at the bottom of the canal machines constructed on very simple principles, and placed at proper distances, to stop and preserve the water in case any part of the bank should happen to break down. The aqueduct is perfected as far as Manchester, where coals are brought from the mine in great plenty, and another large basin is making for the reception of the vessels employed in this work.

The method taken by Mr. Brindley for filling up a channel where too deep is admirable: he fills two very long boats, fixes them within two feet of each other, and then crests upon them a triangular trough, large enough to contain seventeen tons of earth: the bottom of this trough is a line of trap doors, which, upon drawing a pin, fly open at once, and discharge the whole burden in an instant. These boats are filled any where from the banks where the earth is in superfluous quantities, by which barrowing it on a plank, laid from the shore, to the side of the trough: the boat is then drawn over the spot, which is to be filled up, and the earth dropped down in its proper place: it is astonishing what a vast saving is made by this invention: it has lessened the expence more than five thousand per cent.

But there are other marks at Barton which claim our attention besides the crossing the river. Here are two roads crossing the navigation, and both in this valley, where the canal is so much higher than the level of the country, to have built bridges over it would have cost immense sums, as the great rise would have rendered it necessary for them to have been half as long as that at Westminster. The method therefore taken by Mr. Brindley was to sink the road gradually on both sides, and turning a large arch, to carry the canal over the roads, as well as the river; and this is practised on both: so that going under it you sink gradually on one side, and rise in the same manner on the other.

The head of the navigation near Manchester, forms two terminations. The first is a common wharf, for landing coals out of the large barges, for the supply of carts and waggons. The second is a subterraneous canal arched over, into which long and narrow boats enter. In the center of this subterraneous passage is a well, bricked like the common ones sunk from the surface of the ground. Near the mouth of this well is erected a crane of a new construction; which, turning on a pivot, is easily brought over the mouth of the well, and dranes up the coals. The boats are filled with square boxes, each containing about eight hundred weight, for the convenience of being landed through this well; they therefore enter the subterraneous canal, and move on till they come under the well, where they stop, and the ropes which are fixed to the crane above, being let down with hooks, are fastened to the boxes, which are drawn up. This crane is moved by a water wheel, driven by a small current of water.

The navigation is carried a mile and half beyond Worsley, into the middle of a large bog, called here a *moor*, belonging to the duke, and merely for the use of draining it, and conveying manures to improve it: it is greatly to that nobleman's honour to find him attending, and at a considerable expence, to matters of husbandry, in the midst of undertakings that would alone convey his name with peculiar brilliancy to the latest posterity.

This bog is of large extent, extremely wet, and so rotten, that, before it is improved, it will not bear even a man. The duke begins by cutting small drains, very near each other, which soon render the surface pretty firm. Then his barges bring the chippings of stone, and other rubbish, which arise in digging the coals, and which are brought out of the mine exactly in the same manner, only instead of going to market, to be sold, they are converted into money, in another way, by being brought hither. This rubbish is wheel-barrowed out of the barges on boards, on to the land, which is greatly improved by it; the surface soon becomes sound, the aquatic spontaneous growth disappears by degrees, better herbage comes, and thus it is converted into profitable pasture, without any paring, burning, or ploughing. Some of the longer shivers of the stone will not crumble with the frosts; such are picked up, laid in heaps, and

carried back to the stone yard, where they are squared for buildings, or converted to other uses.

As fast as the bog becomes improved, the canal is extended, for the sake of going on with the work; and almost at the end of it his grace is building a small house, for an overseer, situated upon land which once would not have borne even the men employed now in building on it.

This improvement is of a new kind, and peculiarly useful in the neighbourhood of quarries, stone mason's yards, mines in rocks, &c. &c. In this instance it is of noble advantage, for the rubbish would be troublesome at Worsley, and expensive to carry out of the way; so that this improvement must be considered as another part of this grand whole, which is so admirably connected, and, by itself, so astonishingly supported.

At Worsley land lets from twenty shillings to three pounds *per acre*. Farms rise from twenty pounds to one hundred a year.

The next business is to view the other branch of the canal, which extends to Altringham, &c. and for this purpose you return to Manchester to lie, and keep the pleasure-boat, to be ready at Castle-field the next morning.

After arriving in the old course, at the branching off, you first come to Longford-bridge, under which is a canal-door. And just by a small circular wear, for the conveyance of a stream under the canal, the brook falls into the well, in the nave of the circle, down to an arched passage, which conveys it under, and lets it rise again in its old course on the other side.

At Waterford the canal extends a long valley, the level being preserved without lock: the work is here very noble: the banks of earth of a vast height and thickness, beautifully sloped, and the whole appearance strikingly great. It here crosses at the same time a large brook much subject to floods, and a road: two arches carry it over the stream, and a third over the road.

The three arches extend eighty feet. Here are trap-doors, &c. as at Barton-bridge, for securing the water of the canal in case of a breach, or for repairing the aqueduct.

Further in the same valley the navigation is carried across the river Mersey, on one arch of seventy feet span.

We should remark, that the canal across this whole valley is of a vast breadth, and has rather the appearance of a great navigable river than an artificial canal cut at the expence of a single person.

Next it is carried across Sale Moor; under the first bridge you catch a pleasing view, through the arches of other bridges, in a line, and at the end a church and steeple. This part of the navigation, from the lowness of the Moor below the level of the canal, was pronounced by many to be impracticable, and Mr. Brindley's *ne plus ultra*; but this difficulty was removed by perseverance and spirit; a complete bed was made for the canal, raised at bottom as well as the sides, sufficient for conducting the water on a level. This was effected by making a vast cañe of timber for the whole work: great piles of deal were fixed as a mound to keep the earth in a proper position to form the banks; and when they were raised, the piles removed on for answering the same work again, and the water brought forwards by degrees, to the astonishment of those who pronounced the work impracticable. It is carried over two brooks here, for which arches are turned.

At Altringham-bridge, the duke has a large warehouse on the side of the canal, several stories high, for the convenience of stowing and lodging goods, in the trade that is carried on, on this part of the navigation: also a wharf for selling coals, with cranes erected for loading and unloading boats: here, likewise, his Grace's people burn charcoal.

We shall here give some account of the intended navigation for a communication between the parts of Liverpool and Hull, &c. And this cannot be set in a clearer and more conspicuous light than by an extract from a very sensible pamphlet, intituled, "A View of the Advantages of Inland Navigations, &c."

"The

“ The present design comprehends only a part of the great one mentioned before. It is to join the river Trent, near Wilden, in Derbyshire, with the river Weaver, in Cheshire, or the duke of Bridgewater’s navigation, or the tide-way in the river Mersey, as shall be found most expedient, by a canal, with branches to Birmingham, Litchfield, Tamworth, and Newcastle. And if this work meets with the approbation of the country, and the encouragement of the legislature, in all probability the other parts of the design will soon be undertaken, to the great advantage both of the commercial and landed interests; and petitions to parliament, for branches out of the principal canals, will become as frequent as they now are for turnpike roads.

The canal now intended to be carried into execution, was first proved to be practicable by the survey of Messrs. Taylors of Manchester, and Mr. Eyes of Liverpool, made in the year 1755, at the expence of the Liverpool corporation; and chiefly promoted by the late Mr. Hardman; an active and able friend to the commercial interests of this nation, and one of the representatives of that borough. And the public is indebted to the earl Gower, and the late lord Anson, for another survey of the intended course of this canal, made by Mr. Brindley in 1758, and afterwards reviewed by Mr. Smeaton, F. R. S. and Mr. Brindley jointly; and these surveyors concurred in opinion, that no tract of land in the kingdom was naturally better adapted for the purpose of an inland navigation, than none stood in more need of it, or was so convenient for an union of the east and west seas.

The reasons for preferring a canal to a river navigation, are many and important. The shortness of the voyage on the former, which is protracted on the latter by the winding course of the stream; the absence of currents, which in rivers impede the upward navigation more than they assist the downward, and hourly undermine and wear away the banks; the security from the mischief and delay occasioned by floods; the easier draught for the horses, as the boats will, in a canal, move nearer the towing path; and the advantage of choosing high ground for the locks; while in the other case, the situation of them must be regulated only by the accidental shallows of the rivers, are all circumstances greatly in favour of canals; and especially the last: for as in river navigations, the locks must frequently be erected on low lands, the neighbouring meadows are thereby often rendered damp and swampy; while in canal navigations this disadvantage is not only avoided, but as the canal, to pursue its most convenient course, must frequently wind along the edges of the rising ground, numberless springs will be cut through, and the plain beneath rendered actually drier and more fertile. It is also another circumstance not unworthy of notice in favour of canals, when compared with river navigations, that as the conveyance upon the former is more speedy, and without interruptions, and delays, to which the latter are very liable, opportunities of pilfering earthen wares, and other small goods, and stealing and adulterating wine and spirituous liquors, are thereby in a great measure prevented. The losses, disappointments and discredit of the manufacturers, arising from this cause, are so great, that they frequently choose to send their goods by land at three times the expence of water carriage, and sometimes even refuse to supply their orders at all, rather than run the risque of forfeiting their credit, and submitting to the deductions that are made on this account.

We may also add, with respect to the potteries in Staffordshire, that this evil discourages merchants abroad from dealing in those manufactures, and creates innumerable misunderstandings between them and the manufacturers.

This canal is designed to fall into the Trent at Wilden rather than at Burton, to avoid the shallows which greatly interrupt the navigation on that river: At Harecastle, the highest part in the course of the canal, from whence the water falls north and south, it will pass above a mile under ground; by which means fewer locks will be necessary, and more water supplied from the coal

mines in that country: and the whole length of it, with the branches, will be upwards of an hundred miles.

The canal and vessels are to be constructed on the plan found most eligible, from various experiments made on the duke of Bridgewater’s navigation.”

We have already in our survey of Cheshire, given an account of the amazing works carrying on at Harecastle, and therefore shall not repeat it here.

The boats are to be seventy feet in length, six feet wide, to draw near thirty inches water, and to carry twenty tons burthen. They are to be so constructed as to sail with either end foremost, by removing the rudder; and to cost about thirty pounds each.

There is to be a man and a boy to each boat, which one horse will draw with ease along the canal; but when necessary, will be able to draw three of them.

It is proposed to raise the money by subscription, in lots or shares, of two hundred pounds each; no person to subscribe more than twenty shares; the tonnage to be fixed by act of parliament, and vested in the subscribers, as a security for their money; the company to be under the inspection of commissioners, as in most other navigation acts; the shares to be transferable in an easy manner, like government securities; the navigation to be free and open to all persons, paying the tonnage fixed by law; and land-owners to have liberty to erect warehouses and wharfs, on the banks or sides of the navigation.

It is also proposed to repay the money subscribed for obtaining the act of parliament, out of the capital stock, if the application to parliament be attended with success.

Particular Advantages of the intended Canal.

The advantages arising from cheapness of carriage and easy communication between the distant parts of a country, and the manufacturing towns and sea-ports reciprocally, are so very extensive and complicated, that it is impossible to reduce them to any very exact estimation. If we would attempt to estimate them at all, it will be necessary to discover, as near as we can, how much the price of carriage is likely to be diminished; and what quantities, and kinds of goods, will probably be conveyed by this navigation.

The price of land-carriage, in the neighbourhood of the canal, is, upon an average, about nine shillings a ton, for ten miles. It is supposed the tonnage upon the canal, for the same distance, will be about two shillings, and the freight not above six-pence more, making together two shillings and six-pence per ton; so that near three fourths of the present price of carriage will be saved to the public. And the difference between land and water carriage, in other places, confirms the justice of this conclusion. Land-carriage, for instance, between Manchester and Liverpool, which are about thirty-eight miles distant from each other, costs forty shillings per ton; water carriage only six shillings and eight pence one way, and ten shillings the other; suppose nine shillings upon an average; and the saving, by this navigation, is above three fourths of the expence of land-carriage.

If we suppose the saving to be only six shillings in nine, which is a very moderate computation, this circumstance alone will not only enable land-owners, manufacturers, and merchants, to convey many articles to markets where they never could have borne the expence of land carriage; but will also bring into use many natural productions; such as coals, stone of various kinds, timber, iron ore, alabaster, &c. which, from their unfavourable situations, never could have been employed.

To give some idea of these advantages, we must endeavour to enumerate the chief sources of employment for the intended navigation: and these may be considered under the three following heads: 1. Natural productions of the countries that lie near the canal. 2. Cultivated commodities and manufactures. 3. Imported raw-materials, and general commerce.

From Northwich to Lawton there lies a vast bed of rock-salt, about forty yards thick, which, besides being purified and chrystallized for home consumption and exportation,

portation, as will be mentioned in its proper place, might be made great use of in agriculture, and probably in metallurgy, and several of the mechanic arts, if any method could be discovered of granting the liberty of using it with safety to the revenue.

There is a mountain called Mole Cop, near Lawton, that contains four different and useful kinds of stone.

1. Millstones of an excellent quality, which are now carried by land upwards of an hundred miles, and to all parts of the intended navigation.
2. A good limestone.
3. A fine freestone.
4. Grinding stones of different forts.

A mile from Rudley, a blazing kind of coal, called canel, and other coals, are found, belonging to the earl of Uxbridge. The lower stratum of these mines is said to be a valuable one; and it is apprehended a navigable fough might be carried from the new canal into the heart of them, in the manner of the duke of Bridgwater's colliery in Lancashire; and that this would lay them dry; the want of which is the present obstacle to their being worked; and at the same time convey the coals into the new canal, to the great advantage of the noble proprietor, and the neighbouring country.

Near that part of the Trent where the canal is to terminate, arises a vast mountain of lime-stone, on which the village of Breden, in Leicestershire, is situated: at Tickenhall, in Derbyshire, not far from the last mentioned place, there are also quarries of lime-stone; and at Barrow, in Leicestershire, they burn an excellent kind of lime for building, which is conveyed to places at a great distance by land, every way; and lime is much wanted through the whole course of the canal, both for the purposes of architecture and cultivation.

A few miles lower, at Clay-Hill, a firm and elegant alabaster is found, proper either for stucco or sculpture.

Not many miles from the Trent, near the river Soar, in Leicestershire, which it is hoped the gentlemen in that neighbourhood, and the inhabitants of Leicester, will now be able to make navigable, without opposition, are the noted quarries of Swithland slate; a beautiful and durable covering for houses; and prodigious rocks of that kind of grey porphyry, which is brought from Scotland, to pave the streets of London and Westminster.

A great quantity of marle will be thrown out in making the canal; and may besides, in many places, be found so near the banks, as to be delivered from the spade into the boats; which will greatly contribute to the improvement of such land as stands in need of this kind of manure. Other manures will also be procured from large towns, on reasonable terms, for back-carriage; and as it is intended to exempt manure from the charge of tonnage, these advantages, together with the lime, mentioned before, will double the produce and value of many farms bordering upon the canal.

Several parts of the country, in the neighbourhood of the canal, yield great quantities of that sort of iron-ore, commonly called iron-stone, proper for making cold-short iron; and which, when mixed with the red ore from Cumberland, makes the best kind of tough, or merchant-iron. The iron-stone of this country is likewise so necessary for working the ore in the north, that even the great expence of land-carriage hath not prevented large quantities of it from being conveyed that way to the river Weaver, to be shipped for Cumberland; and the ore from the north has been brought into this country under the like inconveniencies. It seems, therefore, highly probable, that the intended canal will occasion the sending much greater quantities of iron-stone into the north; and the receiving more red mine back in return; and thereby greatly increase the intercourse between these two parts of the kingdom, to their mutual advantage.

Not only these natural productions, that are to be found on the banks of the intended canal, but many of those from the more distant parts of the counties it is to pass through, will have their value and consumption greatly increased, by this easy and cheap conveyance. Of this number are lead, copper, calamine, marble,

rottenstone, raddle, white clay, ochres, &c. and many other articles will probably become useful to society, which at present lie unmolested in their native beds.

From natural productions we may proceed to the consideration of those that are cultivated and manufactured; and that which deserves our first attention, under this head, is corn; as the growth and exportation of this important article will be greatly increased by a new navigation; and the benefit to the public, from the exportation of corn does not arise, as in other merchandize, only from the employment of our hands at home, the improvement of our estates, and the return of wealth, for which it is exchanged abroad; but likewise from its being an infallible security against those dreadful famines formerly experienced in this nation, in years of uncommon scarcity.

In the year 1751, an account of the exportation of grain was laid before the House of Commons; and it appeared that above five millions of quarters of grain were exported from Great Britain in the years 1746, to 1750, both inclusive; and near seven millions and a half of money gained by the nation in exchange. And since grain has been made an object of foreign commerce, its price has not only in general been lowered at home, but its cultivation has increased to such a degree, that a good harvest is supposed to be a provision for four or five years.

The kingdom of England alone, according to Dr. Halley's computation, contains about forty millions of square acres; and of these, in the years 1689, when a bounty was first given on the exportation of corn, one third part was supposed to lie in uncultivated commons. No year has elapsed, since that time, in which the legislature have not passed many acts for the inclosure of waste grounds; whereby the country, in various places, is converted from barren heaths into fruitful fields; yielding riches and support to the industrious farmer, and his useful dependants.

Agriculture is an inexhaustible source of plenty and riches, which can never be so much enlarged, or its streams so widely diffused, as by the means of inland navigations: and as the inhabitants, in some places near the intended canal, consume much more corn and grain of all kinds than they can raise, and those in others raise more than they can consume, this circumstance will find great employment for the navigation, to the general advantage of the adjacent counties.

The farmers, in the neighbourhood of the new canal, may indeed object, that the price of grain will never rise so high as it has done in times of scarcity, when there is the opportunity of an easy importation. In answer to which, it may be observed, that from the ease of exportation, it will never sink so low in plentiful seasons; so that the profits of the farmers, upon the whole, will not be less, but more equal: and we cannot help observing, in this place, that inequality of gain is, of all others, the most frequent cause of their ruin; as in scarce times, when their profits are great, they become more expensive and luxurious, and do not so well know how to contract their manner of life, when cheaper seasons lower the value of their commodities.

In times of plenty, the land-owners and farmers near the canal, will receive great benefit from the exportation of their grain, of all kinds: in times of scarcity, the whole country will be relieved, by means of a reasonable importation; and thus the blessings of providence be more equally and uniformly distributed, and an artificial dearth rendered almost impossible. How ineffectual would be the attempt of the most powerful monopolizer, in such a country as China, where plenty can be thrown into any market, from all parts, by means of navigable canals?

Another cultivated article, of great importance, is that of timber of all kinds, and especially oak; of which there are many large woods near the course of the intended canal, that, for want of a proper conveyance to sea-port towns, where timber is much wanted for ship building, are sold in the neighbourhood at a low price. Any method of conveying so bulky an article as this to the places of consumption, at any easy expence, will

greatly encourage the growth of it, and help to repair that decrease of ship-timber in this nation, which is a very alarming circumstance, to a people whose riches and power depend so greatly upon navigation.

Cordwood, to make charcoal for the iron works, oak-bark for the tanners, and woad, madder, and other articles which may become the objects of cultivation, will be carried at a cheap rate upon the canal, to the mutual advantage of the proprietors and consumers. Wool, hides, tallow, and provisions of various kinds, will become more beneficial to their owners, by the advantage of an easy conveyance, to places where they may be consumed or manufactured.

As this canal will go through the middle of Cheshire, so famous for the great quantities of good cheese it produces, the advantages arising from it to the dairies will be very considerable; as many hundred tons of this article are annually carried by land, above forty miles, to Willington in Derbyshire, to be shipped for London, and other distant markets, which will, for the future, be sent by water, all the to Hull and Liverpool, at a very moderate expence.

From the Wiches, in Cheshire, manufactured salt is carried, on horseback, to almost all parts of Staffordshire, Derbyshire, Leicestershire, Nottinghamshire, Yorkshire, and Lincolnshire; to which places it will gain a much cheaper access, by means of the intended navigation: and so great is the home consumption of this article, that from the salt-works of Northwich only, a duty of sixty-seven thousand pounds was last year paid into the Exchequer. At Northwich and Winsford are annually made about 24,000 tons.

The town of Burslem, and villages of Stoke, Henley-green, Lane-delf, and Lane-end, are employed in the manufacturing of various kinds of stone and earthen wares, which are carried, at a great expence, to all parts of the kingdom, and exported to our islands and colonies in America, and to almost every part of Europe; but the ware which is sent to Hull is now carried by land upwards of thirty miles, to Willington; and that for Liverpool twenty miles to Winsford. The burthen of so expensive a land-carriage to Willington and Willington, and the uncertainty of the navigations from those places to Frodsham, in Cheshire, and Wilden, in Derbyshire, occasioned by the floods in winter, and the numerous shallows in summer, are more than these low-priced manufactures can bear; and without some such relief as this under consideration, must concur, with their new established competitors in France, and our American colonies, to bring these potteries to a speedy decay and ruin.

All the branches of the metallic trades, which are almost innumerable, and carried to an astonishing extent at Birmingham, Walsal, Wolverhampton, and other places in the neighbourhood of the intended navigation, must receive advantages from it, that cannot at present be estimated or conceived.

We have already mentioned the important circumstance of bringing ores out of the north, to mix with those in Staffordshire; by which the iron of that country must be rendered better and cheaper; and to this we may add, the great advantages of having charcoal, lime, and other fluxes brought to the furnaces at a small expence: and likewise the great saving there may be in conveying this heavy article from the forge to the manufacturer by water; all which circumstances must contribute to encrease the consumption of English iron, and enable the iron masters, in that neighbourhood, to come upon a competition with foreigners, so far as to reduce the price of foreign iron, and upon the whole greatly to benefit both themselves and the manufacturers: and certainly the first object, in the encouragement of any manufactory, is to furnish it with its raw-materials at the lowest price; to which nothing, in general, contributes so much as inland navigations.

By the means of this canal, then, the iron masters will be enabled to serve the manufacturers better with their materials: and by the same means, the manufacturers will be enabled to send their finished goods away much cheaper, and to more markets; by which the consump-

tion, and exportation of them; cannot fail to be greatly increased.

The circumstance of a water-conveyance, all the way from Birmingham to the ports of Hull and Liverpool, will be a very great reciprocal advantage to all the three places. The reduction of the price of carriage, which will take place between Birmingham and the last-mentioned port, is so great a proportion of the value of guns, nails, and other heavy manufactures of iron, that the exportation of them from thence must be increased to a degree beyond estimation.

The fine ale, made at Burton upon Trent, which is now exported to Germany, and several parts of the Baltic, may, by means of the intended canal, be exported from Liverpool to all parts of America, where it is likely to become a very considerable article of commerce.

The valuable manufactures of Nottingham, Leicester, and Derby, will find a cheap conveyance to Liverpool, by this navigation; and the demand for them, at that port, will consequently be increased.

In the neighbourhood of Burslem, and the potteries, bricks and tiles are made of a blue colour, which are so far vitrified, as to be harder, and more durable than any kind of stone used in building; and these articles are likely to find a demand through the whole course of the canal.

Having mentioned the principal natural productions, cultivated commodities, and manufactures in the neighbourhood of the intended navigation, we come to the articles of importation, and of general commerce.

Great quantities of flint stones, used at the potteries in Staffordshire, are brought by sea, from different parts of the coast, to Liverpool and Hull. And the clay, used in the white and coloured ware, is brought from Devonshire, chiefly to Liverpool; and from thence sent up the river Weaver to Winsford in Cheshire: the flints from Hull are sent up the Trent to Willington in Derbyshire; and from Winsford and Willington they are both brought to the works, at a very great expence, by land-carriage; the one being twenty, and the other not less than thirty eight miles distant from the potteries: and they are likewise subject to the same expences and delays, from floods and shallows, as the manufactured goods, mentioned before, to the very great disadvantage of the manufacturers. Inconveniencies which nothing but a navigable canal can remove.

The iron-ore from Cumberland, as it will be a considerable article of importance, must be mentioned in this place, though, in another view, it has been taken notice of before.

Hemp, flax, and linen-yarn, will be conveyed by this canal, to various manufacturers, who make use of those materials; and probably occasion the establishment of several new manufactories.

Deals for building, and mahogany for cabinet-work, which are much wanted, and are now very dear, in many parts of those counties through which the canal is to pass, owing to the heavy charge of land-carriage upon such bulky commodities, will be conveyed, through the whole extent of this navigation, at a moderate expence, and become very considerable articles of commerce.

American iron will also, by this means, be brought cheaper to the manufacturing towns, from the ports of Liverpool and Hull; and contribute, with the advantages already mentioned, arising to the iron-masters, to lessen the consumption of foreign European iron, to the great profit of this nation, in general, and our own iron works, in particular; and have a tendency to keep that money at home, which, for want of a better system of commercial policy, is now sent to foreigners, who take very few of our manufactures; and also to prevent the destruction of a trade, on which many thousands of industrious workmen depend for subsistence.

The numerous manufactures in Birmingham, and its neighbourhood, will, in general, receive their raw materials, of all kinds, much cheaper, by means of the intended canal; such as copper, calamine, lead, zinc, ivory, and many others.

The merchants of Liverpool and Hull will supply the towns and villages, bordering upon the canal, with rum,
wine,

wine, tobacco, sugar, and all kinds of groceries and dying stuffs, at lower prices than they have been accustomed to receive these commodities, and with much more safety and expedition. And, as these are articles of general consumption, the amount of them must be very considerable; and the benefit to the public proportionably great.

The salt-trade will receive a very important advantage from the canal, when the navigation in the Weaver may, at any time, be interrupted; as that article may occasionally be forwarded to Liverpool, by this new conveyance, for the dispatch of those vessels which would otherwise be detained there, at a great expence. And any injury the proprietors of the Weaver navigation have to apprehend from it, supposing the canal should not terminate in that river, must weigh light in the balance of public utility; as their freight depends chiefly upon salt, and salt-rock, from Winsford and Northwich; which, at present, amount to about fifty thousand tons a year; and will no doubt be still increased: and none of this likely to come upon the new canal, but when floods, or the repairing of the locks, obstruct the Weaver; because the canal will be some miles distant from Winsford; and though it should come near the works at Northwich, the disadvantage of unloading, and loading again, as the canal-vessels cannot live in the tide-way, will prevent the salt from being sent by them, except upon such occasions as those that are mentioned above.

The diminution of the price of carriage, which will take place, by means of the canal, must also appear to be a very great and necessary advantage to our manufactures and commerce; when our present price of land-carriage is placed in a comparative view with that of our chief competitors: the price of land-carriage between Birmingham and London, being about eight shillings per ton, for ten miles; and in the neighbourhood of the intended canal, and in many other places, no less than nine shillings per ton; whilst merchandize may be conveyed, by land, between Lyons and Marseilles, in France, at the rate of five shillings per ton, for the same distance. A circumstance that must give the manufacturers of that nation, a very great superiority over ours, at all markets, where they would otherwise meet upon equal terms.

Having considered the principal advantages which the public may reasonably expect from the execution of this design, we ought not to forget the pleasures that may arise from it to individuals; especially as taste is so universally cultivated, that our farms are gradually improving into gardens. And here it must be allowed, that to have a lawn terminated by water, with moving objects, passing and repassing upon it, is a finishing, of all others, the most desirable. And if we add the amusements of a gondola, that may convey us to many flourishing towns, through the most delightful vallies in the kingdom; and the convenience of having variety of fish, brought alive in well-boats, for our tables; we have articles of luxury, which the inhabitants, in other situations, wish for in vain.

So many, and important, are the advantages that will undoubtedly arise to the public from the intended canal, that we presume, an attentive consideration of them, must convince every one, that they infinitely outweigh all the inconveniencies that can be supposed to attend it: and it is to be hoped, every friend to his country will be cautious of giving weight to trivial inconveniencies, in opposition to a work of this immense importance; especially at a time when our manufacturers are suffering, for want of the usual demand for their goods; and when several rival nations, as well as our own colonies, are availing themselves of this opportunity, to seduce our workmen, in many branches, to leave the country, and contribute to the support of these alarming competitors.

Some of the objections, that may be urged against this navigation, have already been obviated; and those that remain, do not seem to be well-founded, or of great importance. It may be said, that many estates will be divided by the canal: but, as in several parts it will be

carried through uncultivated commons, and lands that want draining: as a full compensation will be paid for the ground that is cut through; and as the farms will be again connected, by bridges and fords, at suitable distances; it is presumed no inconveniencies will proceed from this circumstance, which are not amply counter-balanced by the many advantages that have been before pointed out, and must evidently arise to every farm through which it may pass.

Nor must we here omit the trite objection of the dishonesty of watermen, that they will pilfer fruit and poultry in their passage. But, certainly, this class of travellers may be ranked, in point of honesty, with the common carriers; and as one man and a boy will be sufficient to attend the conveyance of twenty tons of goods along the canal, which by land would require the attendance of ten persons, the number of these dangerous visitors will be greatly decreased.

The only remaining objection, that has occurred to us, is, that by an inland navigation, between the ports of Liverpool and Hull, the coasting trade, that great nursery for seamen, will be diminished. To which may be answered, that, in the first place, there is little or none of that trade between those two ports. Secondly, that as this inland navigation will give an opportunity for a more easy conveyance of the products of the interior parts of the country to the neighbouring ports, which may from thence be conveyed, by sea, to distant parts of the kingdom, from whence other products and commodities may be returned; the coasting trade must hereby be greatly promoted. And lastly, as this navigation will contribute to increase the produce of our farms, will benefit our present manufactures, and occasion the establishment of new ones, it must, of course, enlarge the amount of our exports; and, instead of lessening, have a direct tendency to augment the quantity of our shipping, and the number of our seamen.

It must also be observed, that when the other parts of this great design are executed, and the principal ports and manufacturing towns of the kingdom come to have a reciprocal inland communication by water, then, though the coasting trade may be diminished, the export trade will not only be inceptibly enlarged, but the internal national commerce be carried on with much more ease and dispatch; less exposed to expensive and hazardous delays; and perfectly secure, in time of war, from the depredations of an enemy.

How far these favourable circumstances must contribute to enhance the value of our lands; to promote the wealth, strength, and splendor of this nation; and to confirm, and perpetuate, the peculiar blessings and privileges of its inhabitants; is referred to the imagination of every intelligent reader.—The prospect is delightful!—Patriot minds will dwell upon it with pleasure, and be employed in projecting schemes to realize it, in its whole extent.—But our present attention must be confined to one part of the general design, and, no doubt, many advantages to be expected from the navigable canal, now under consideration, will occur to the reader, that have escaped our notice: those that have been pointed out are, however, very numerous and extensive.

To have the means of conveyance so greatly facilitated; the price of carriage so much diminished; old manufactures encouraged; new ones established; estates greatly improved; plenty widely diffused; and the country, in general, rendered still more affluent, populous, and secure; are considerations of such weight, as cannot fail to interest all benevolent and public-spirited persons, in the success of this important undertaking.

A I R.

The air of this county in general is more serene than that of any other maritime county in England; so that the inhabitants are strong and healthy, except near the fens and sea-shore, where the sulphureous and saline effluvia, which, on the approach of storms are extremely fitid, produce fevers, scurvy, consumptions, rheumatisms,

tisms, and dropsies. There also certain tracts in the more inland parts of the county, which the inhabitants call mosses, that are moist and unwholsome.

SOIL, and NATURAL PRODUCTIONS.

The soil of Lancashire, on the west side, generally yields great plenty of wheat and barley; and though the hilly tracts on the east side are for the most part stoney and barren, yet the bottom of those hills produce excellent oats. The land in some places bears very good hemp, and the pasture is so rich, that both oxen and cows are of a larger size here than in any other county in England; their horns also are wider and bigger. In this county are mines of lead, iron and copper, of antimony, black-lead and lapis calaminaris; also quarries of stone for building. Here is likewise great plenty of coal, and a particular kind, called cannel, or candle-coal, which is chiefly found in the manor of Haigh, near Wigan, a large market-town of this county. This coal will not only make a much clearer fire than pit coal, but will bear a good polish, and when polished, looks like black marble; so that candlesticks, cups, standishes, snuff-boxes, and other toys, are made of it. In some of the coal-pits are found alum, brimstone, and green vitriol.

The mosses, or morasses of this county are generally distinguished into three kinds, the white, the grey, and the black; all which being drained bear good corn. They also yield turf for fuel, and marle to manure the ground; trees are sometimes found burned in these mosses, and the people are obliged to make use of poles and spits, to discover where they lie. These trees, when dug up, serve likewise for firing, and burn like a torch; which is supposed by some to be owing to the bituminous stratum in which they lie; but by others to the turpentine which they contain; being generally of the fir kind.

This county has great plenty and variety of fish. Upon the sea coasts are found cod-fish, flounders, plaise, and turbot; the sea dog, inle fish, and sheath fish, are taken upon the sands near Liverpool; sturgeon is caught near Warrington, and along the whole coast are found green-baks, mallots, soles, sand-eels, oysters, lobsters, shrimps, prawns, the best and largest cockles in England, the eckrim torculars, wilks and perriwinckles, rabbit-fish and pap-fish; and such abundance of muscles, that the husbandmen manure their land with them.

Almost all the rivers of Lancashire abound with fish; the Mersey in particular with sparlings and smelts; the Ribble, with flounders and plaise; the Lon with the best of salmon; and the Wire is famous for a large sort of muscles, called Hambleton-hookings; because they are dragged from their beds with hooks; in them pearls of a considerable size are very often found. The Irk, a small river that falls into the Mersey, is remarkable for eels so very fat, that few people can eat them; the fatness of these fish is imputed to their feeding upon the grease and oil, which is pressed by a number of water mills upon this stream, out of the woollen cloths, that are milled in them.

There are also several lakes in this county which abound with fish, particularly Keningston-Meer, about five miles from Winander Meer, in Westmoreland, which produce very fine chars, and other fish.

Remarks on the HUSBANDRY of Lancashire.

At Kabers, near Lancaster, the soil is chiefly clay, but they have some light loam and some sand; lets at an average for seventeen shillings an acre. Farms from ten pounds to seventy pounds a year.

- Their course,
1. Fallow
 2. Barley
 3. Oats
 4. Fallow
 5. Wheat
 6. Beans
 7. Oats

About Cockeram they break up and sow;

1. Pease
2. Barley
3. Oats.

For wheat they plough three times, sow three bushels and a half, often in February and March, and get about twenty-six in return. For barley they stir three times, sow three bushels about May day, and gain thirty in return. They give but one ploughing for oats, sow six bushels, and gain forty in return. They stir but once for beans, sow four bushels, broad cast, the beginning of March, and reckon the average produce at thirty-six bushels. For pease they plough but once, sow three bushels, at the time with beans; the crop thirty bushels. For rye they plough thrice, sow three bushels, and gain four quarters in return.

But few turneps cultivated: the method is to plough twice for them, never hoe; the average value eight pounds: use them for beasts and sheep.

For potatoes they plough three, dung the land well, and dibble them in eight or ten inches square; they afterwards weed them by hand: the crop from one hundred to two hundred bushels, at from one shilling to one shilling and four-pence a bushel: they sow wheat after them, and get very fine crops, much superior to their common ones.

As to manures, marle is the grand one, which is found under all this country, and generally within sixteen or twenty inches of the surface; it lies in beds, many of them of a vast depth, the bottoms of some pits not being found: it is white, and as soft and soapy as butter. They lay about an hundred two horse cart loads to an acre, but some farmers less on to lays and stubbles. It lasts a good improvement for twenty years; costs about four pounds ten shillings an acre. Their hay they stack in houses.

Good grafs lets for twenty-six shillings an acre; is used chiefly for dairying; one acre and a quarter they reckon enough for a cow in summer, and one acre to four sheep. They marle a good deal, and find it a good improvement, making the grafs fatten well, and excellent for milk. Their breed of cattle the long horned. They reckon the profit of a cow at four pounds, and a middling one to yield six gallons of milk a day. The winter food straw and hay, of the latter an acre and a quarter: keep about a pig to two cows; and reckon a dairy maid to ten or twelve. The summer joist is thirty shillings; keep them in winter in the house.

Their swine they fat to four pounds ten shillings, or five pounds value.

Their flocks of sheep rise from twenty to four hundred, having some commons in the neighbourhood; and reckon the profit at seven shillings and six-pence, or eight shillings a head: keep them all the year on the commons: their fleeces weigh, at a medium, three pounds.

In tillage they account six horses necessary for fifty acres of arable land; use six in a plough, and do an acre a day. The annual expence per horse four pounds fifteen shillings. None of them cut straw into chaff. The time of breaking up their stubbles for a fallow is Candlemas; plough generally four or five inches deep. The hire of a cart and three horses is four shillings and six-pence a day.

They reckon one hundred and fifty pounds necessary for hiring and stocking a farm of fifty pounds a year.

Price of LABOUR.

- In harvest, 1 s. and board.
 In hay time, ditto,
 In winter, 6 d. and ditto.
 Reaping wheat, 6 s. 6 d.
 ———barley, 6 s.
 ———oats, 5 s.
 ———beans, 6 s.
 Mowing grafs, 2 s. and ale.
 Ditching, 6 d. to 8 d. per rood.
 First man's wages, 9 l.
 Next ditto, 5 l.

Boy of ten or twelve years, 40s.

A dairy maid, 3l.

Other ditto, 40s. to 50s.

Women *per* day in harvest, 8d. and board.

In hay time, 6d. and ditto.

In winter, 4d. and ditto.

They reckon the value of a man's board, washing, and lodging, three shillings and six-pence a week.

Around Garstang are several variations which deserve noting. The soils are clay, black moory, on clay, and light loam; which left on an average at seventeen shillings an acre. Farms from ten to one hundred and fifty pounds a year. Their course,

1. Fallow

2. Wheat

3. Beans

4. Barley

5. Oats, and then left to graze itself, and they assert very gravely that the grass was excellent: they plough thrice for wheat, sow three bushels a fortnight before Michaelmas, and reckon thirty-five bushels the average produce. For barley they stir from one to four times, sow three bushels *per* acre the end of April; and gain thirty bushels an acre. For oats they plough but once, sow seven bushels an acre in March, and gain on an average forty-five bushels. They stir but once for beans, sow four bushels and a half, broad cast, both under furrow, and above, the end of February or beginning of March; never hoe them: they gain thirty bushels. They sow neither pease nor rye, and scarce any turneps. Clover with both barley and oats; and generally mow it for hay.

For potatoes they dig all the land nine inches deep, and then dung it well; dibble in the sets nine inches asunder; reckon a peck to set a perch of twenty-one feet: they hand-weed them, and gain upon an average three bushels and a half *per* perch, or four hundred and fifty bushels *per* acre; after them they sow corn of all sorts, and get great crops.

Marle is their principal manure, both white, black, blue, sandy, and some shell marle. They sometimes find perfect cockle and periwinkle shells, nine yards deep, in beds of marle. The surface is from one to four feet of thickness above it: twenty-three square yards marles an acre. It is quite soft and soapy. The land will be for ever the better for it: it does best on light soils. The marle husbandry here is to plough three years, and let it lie three. They find a second, and even a third marling, to answer well: the average expence about four pounds *per* acre.

Lime they also use: lay fifty windles *per* acre, at one shilling and four-pence *per* windle; and sometimes up to eighty and a hundred; the expence to five pounds and six pence ten shillings *per* acre; it lasts generally four or five years in great heart; but, with very good management, for twenty years.

Good grass lets from thirty shillings to thirty-five an acre; they use it chiefly for cows, and reckon an acre and a quarter sufficient for the summer feed of a cow, and four sheep to the acre. They manure their pastures with both marle and lime. The breed of their cattle long horned. And it will not here be amiss to remark, that Lancashire is famous for this long horned breed, so that cows, which produced by bred bulls (and they are very curious in their breed) will sell at very high prices, up to twenty and thirty pounds a cow, if they promise well for producing good bulls, which sometimes sell for one or two hundred pounds a bull.

They fat their oxen to forty and sixty stone.

Their swine, in common, to twenty stone: some in particular, to thirty.

They reckon the product of a cow from three pounds ten shillings to four pounds. Keep scarce any swine the more upon account of their dairies. Feed their cows in winter upon straw and hay; and reckon an acre of the latter necessary. The summer expence from twenty shillings to thirty shillings. Keep them in both field and house in the winter.

Their flocks of sheep rise from twenty to two hundred; they calculate the profit at four or five shillings, keep

them in both winter and spring on the commons: the mean weight *per* fleece three pounds.

They reckon twelve or thirteen horses necessary for the management of one hundred acres of arable land. Use four in a plough, and do an acre a day. The annual expence of keeping horses is five pounds ten shillings each. The summer expence is from thirty shillings to fifty shillings, and three shillings and six-pence a week. They break up their stubbles for a fallow in March; plough in general six inches deep. The price *per* acre eight shillings. Know nothing of chopping straw for chaff. Hire of a cart, three horses and a driver, four shillings a day.

In the stocking of farms, five hundred pounds is necessary to stock a grazing one of one hundred and fifty pounds a year; but two hundred is sufficient for the common ones of one hundred a year.

Land sells at from thirty to forty years purchase.

Price of LABOUR.

In harvest, 1s. a day and board.

In hay-time, 10d. and ditto.

In winter, 6d. and ditto.

Reaping wheat, 6s.

— barley, 5s. 6d.

— oats, 5s. 6d.

— beans, 7s. to 8s. 6d.

Ditching, 3d. to 5d.

First man's wages, 10l.

Next ditto, 7l.

Boy of ten or twelve years, 38s.

Dairy maid, 3l. 10s.

Other ditto, 3l.

Women *per* day, in harvest, 6d. and board.

In hay-time, 5d. and ditto.

In winter, 4d. and ditto.

MANUFACTURES.

The principal manufactures of this county are woollen cloth, cottons and tickens.

MARKET TOWNS, &c.

The market towns are Warrington, Newton, Prescot, Liverpool, Ormskirk, Wigan, Bolton, Manchester, Rochdale, Bury, Haslingden, Blackburn, Charley, Preston, Ecclestone, Kirkham, Poulton, Garstang, Lancaster, Hawkehead, Cartmel, Ulverston, Dalton, Hornby, Clithero, Coln, and Burnley.

We entered this county by crossing the river Mersee, at Warrington, a tolerable large, neat, old built, populous, and rich town, one hundred and eighty-two miles distant from London. Here is a fine stone bridge over the Mersee, and a charity school, where twenty-four poor boys are taught and clothed, out of an estate given by Peter Leigh, Esq. Some of the boys are taught grammar till they are old enough for apprenticeship: at which time they have a bible, common-prayer book, and a suit of cloaths given them. This town is chiefly inhabited by reputable tradesmen; and the manufactures of sail-cloth, and facking, are very considerable here. The first is spun by women and girls, who earn about two pence a day. It is then bleached; which is done by men who earn ten shillings a week; after bleaching, it is wound by women, whose earnings are two shillings and six-pence a week: next, it is warped by men, who earn seven shillings a week; and then starched; the earnings, ten shillings and six-pence a week. The last operation is the weaving, in which the men earn nine shillings, the women five shillings, and the boys three shillings and six-pence a week.

The spinners, who are women, in the facking branch earn six shillings a week; then it is wound on bobbins by women and children, whose earnings are four-pence a day; then the starchers take it; they earn six-shillings a week; after which it is wove by men at nine shillings a week. The sail-cloth employs about three hundred

weavers, and the facking one hundred and fifty; and they reckon twenty spinners, and two or three other hands to every weaver.

During the war the fail-cloth branch was very brisk, grew a little faint upon the peace, but is now, and has been for some time, pretty well recovered, though not so good as in the war. The facking manufacture was better also in the war; but is always brisk.

The spinners never stand still for want of work; they always have it if they please; but weavers are sometimes idle for want of yarn, which, considering the number of poor in the neighbourhood, the spinners living chiefly, in Cheshire, is melancholy to think of.

Here is a small pin-manufactory, which employs two or three hundred children, who earn from one shilling to two shillings a week.

Another of shoes for exportation; that employs four or five hundred men, who earn nine shilling a week.

Upon the whole these manufactures are very advantageous, as they employ above eleven thousand hands.

Besides those already mentioned, there is another very considerable one in the neighbourhood for that sort of linen called huckaback; of which, it is said, five hundred pounds worth, or more, is sold every week.

There are likewise in this town, copper works carried on, the proprietor of which has built a very elegant house for his own residence.

Warrington is famous for malt, which is brought here to such perfection, that the ale brewed from it is said to be no ways inferior to that of Derby, or any the most noted ales in England.

As this town lies in the great road to Carlisle and Scotland, it has always been judged a pass of the utmost importance in the time of war, and therefore the forces of George I. took special care to secure it during the rebellion in Scotland, and the north of England.

Here is a weekly market on Wednesday, and three annual fairs, viz. July the eighteenth, St. Andrew, and November the thirtieth, for horses, horned cattle, and cloth.

Winwick, not far north of Warrington, is thought to have been the *cair-guntin* of the ancient Britons, and appears to have been the favorite mansion of Oswald, king of Northumberland, by the following lines, in old barbarous characters, in the church of this place:

*Hic locus, Oswalde, quondam placuit, tibi valde,
Northanubrorum fueras Rex, nunquæ Polorum
Regna tenes, loco passus Marcella vocato.*

At the bridge end, near Warrington, there was a priory of Augustine friars, founded before the year 1379.

Leaving Warrington we continued our journey to Prescot, and in our way passed through Newton, an ancient borough, by prescription, one hundred and eighty-seven miles from London, governed by a steward, bailiff and burgesses. Here is a charity school, founded in the year 1707, by one Hornby, a yeoman of this place, and endowed with two thousand pounds; where children are taught to read, write, and cast accounts; and are allowed a dinner every school day; and there are ten boys, and as many girls, lodged in a neighbouring hospital, where they are provided with all sorts of necessaries, till they are fourteen years of age. This town formerly had a market, but it has been dissolved for many years, and is now remarkable only for the above mentioned charity, for sending two members to parliament, who are returned by the steward of the lord of the manor; and for two annual fairs, viz. May the seventeenth, and August the twelfth, for horses, black cattle, and toys.

Prescot is a pretty large town, but far from being a populous one. It is one hundred and ninety miles distant from London, but remarkable only for having a weekly market on Tuesday; and three annual fairs, viz. June the twelfth, All Saints, and November the first, for horses and toys.

We next entered Liverpool, Litherpool, or Lirpool, by the Saxons called Lireppole, as is supposed, from the waters of the Mersee, spreading themselves here like a pool, or fen. This town was incorporated by king John, and had its privileges confirmed by several suc-

ceeding kings: it is governed by a mayor, recorder, aldermen without limitation, two bailiffs, and forty common-council men, of whom the mayor is one; the burgesses are above fifteen hundred. The freemen of this town are also free of Bristol in England, and Waterford and Wexford in Ireland.

Liverpool is a large, populous, and neat town, one hundred and eighty-three miles from London; it has three handsome parish churches, and several meeting-houses; one of the three churches, which has been lately built, is one of the finest in England. It is dedicated to St. Paul, and is a structure that does credit to the town. It stands in the center of a square; so that it may be viewed to very great advantage; but though handsome in several respects, yet it will by no means stand the test of critical examination. The cupola is by no means striking; it does not rise in a bold stile; its being ribbed into an octagon, is disadvantageous; nor is there simplicity enough in the lantern. There is, besides, a great heaviness in the breadth of the space between the capitals of the pillars and the cornice. Within there is a central circular area of forty feet diameter, inclosed by pillars of the Ionic order. There is much lightness, and a simple elegance in it that is pleasing: but all is hurt by the absurdity of the square cornices above the pillars, which project so much as to be quite disgusting. This church was raised at the expence of the parish, and cost twelve thousand pounds. The new building of this town, which are daily increasing, are of brick, and very handsome, like the new buildings at London, but not so high: the streets are spacious, and there is a fine town-house, standing upon twelve stone pillars, and under it was the Exchange; but on the 14th of September, 1749, the first stone was laid of a new Exchange, and an Assembly-room, which are now compleated, and is a quadrangular building surrounding a court, which is inclosed by a double row of Tuscan pillars, and over them another of Corinthian ones; but the area is so small that it has more the appearance of a well than the court of an edifice. In this building is the assembly-room, sixty-five feet by twenty-five, handsomely fitted up; but the music-gallery at one end, is by far too small, and might rather be termed a large shelf; a blunder too frequently met with in the generality of assembly-rooms. The card room is preposterous; a narrow slip of about eleven feet wide; so that Lilliputian card tables must be made on purpose for the room, or no passage remain around them for spectators. From the cupola on the top of the structure is a very fine view of the town. Here is a free school, which is a large beautiful structure, and was formerly a chapel: and there are several alms-houses for sailors widows, and old people; a work-house for employing the poor; and a charity-school, where fifty boys and twelve girls are taught, fed, clothed, and lodged, by contributions.

This is not a very ancient town; but it is the most flourishing in these parts, and is a rival even to Bristol, the second port in England: within the last fifty years its customs are increased ten fold, and its houses three times as many as they then were. Most of the inhabitants are merchants, and trade to all foreign parts, except Turkey, Greenland, and the East-Indies. It shares the trade of Ireland and Wales with Bristol. As Bristol trades chiefly to the south and west parts of Ireland, this town has all the trade on the east and north shores. As Bristol has the trade of south Wales, Liverpool has great part of that of north Wales: as Bristol has the south-west counties of England, Liverpool has all the north counties, besides its trade to Cheshire and Staffordshire, by the navigation of the Mersee, the Weaver and the Dan. The merchants of Liverpool are also concerned with those of Londonderry in the fishery on the north coast of Ireland; and Liverpool is the most convenient and most frequented passage to that kingdom from London.

The river Mersee, at full sea, is here above two miles over, and is crossed by a ferry; but when the boat comes to the side of the town, the passengers are brought on shore on the shoulders of men, who wade knee-deep in the mud for that purpose. Ships of any burden may come up with their full loading, and ride

before

before the town, which is quite open and unfortified; but the harbour is defended on the south side by a castle founded by king John, and on the west by a strong tower.

There is a wet dock, with iron flood-gates, at the east end of the town, made by act of parliament in the reign of queen Anne, that will hold eighty or a hundred sail of ships. But the entrance of this dock from the open harbour was at first so narrow, that vessels could not safely go in or out. An act of parliament was therefore passed in the year 1738, for enlarging it, for erecting a pier in the harbour, on the north and south sides of the entrance, and for putting up a sufficient number of lamps to lighten it.

This and many other noble improvements are now carried into execution; one very fine new dock, of a circular form, is finished, and defended by a pier, all excellently well faced with stone, and perfectly secure from storms. Out of this is an entrance into another, called the New Dock, now executing, of a large size, capable of containing several hundred sail, and faced in the same manner all round with large stone: out of this is to be a passage into another very capacious one, called the Dry Pier, and this again leads into two others, called the Old and South Docks, and likewise has an entrance by the river from the sea: into this, likewise, open three very noble docks for building, admirably contrived.

These three, Dry Pier, and Old and South Docks, are totally surrounded by the town; so that ships of four, five, six hundred, and some of nine hundred tons burthen, lay their broad sides to the quays, and goods are hoisted out of them, even into many of the warehouses of the merchants. The docks, therefore, at this time, are the glory of Liverpool, and are undoubtedly much superior to any mercantile ones in Britain. The custom-house adjoining, is not only a commodious, but an elegant structure.

The Mersey is navigable for ships of burthen as high as Warrington, and also up the river Weaver, which is called the South Channel; but little is sent either way, except rock salt and Cheshire cheese, of which great quantities are shipped off for the west and south parts of England.

Part of this town is supplied with fresh water, from springs about four miles off; and is conveyed by pipes, pursuant to an act of parliament passed in the reign of queen Anne.

There is a manufacture of porcelane at this place, which employs many hands; the men earn in it, from seven shillings to ten shillings a week. Likewise a stocking manufactory, in which they earn from seven shillings to nine. Also two glass-houses, in which the earnings are nine or ten shillings a week. The inhabitants of this town are supposed to amount to near forty-thousand persons.

Liverpool sends two members to parliament; has a weekly market on Saturday; and two annual fairs, viz. the twenty-fifth of July, and the eleventh of November, for horses and horned cattle.

In the neighbourhood of this town are frequent horse-races, on a five mile course, the finest, for the length, in England; and a little out of the town is a very pretty new walk, spread on one side with small plantations, and looking on the other, down on the town and river. A coffee-house, and other buildings are erected upon it. This is lately done, and must be acknowledged a good improvement.

In the year 1611, several Saxon coins were dug up at Little-Crosby, near Liverpool.

From hence we passed unto Ormskirk, a handsome town, with a good inland trade, one hundred and ninety miles from London. This place contains nothing remarkable. It has a weekly market on Tuesday, and two annual fairs, viz. Whit-Monday, and September the eighth, for horned cattle and horses.

In the neighbourhood of this town lies Latham, anciently the seat of lord Latham; to which belongs a very large estate, and a fine park. Latham-house is noted for having been gallantly defended in the civil wars

by a woman, the lady Charlotte, countess of Derby, who held it to the last extremity against the parliament forces, which could never reduce her to capitulate, but kept the place gloriously, till the arrival of prince Rupert, who relieved her. It was, however, destroyed in a second siege; sold out of the Latham family; and is now in the possession of Sir Thomas Bootle, who has built a magnificent house.

There are several excellent springs of chalybeat waters in this county; the most remarkable of which is at Latham, called Maudlin's-Well, which has performed many remarkable cures. It was walled in and covered at the expence of Charles, late earl of Derby. Though this spring is not near the sea, nor any salt rivers, yet it used to throw up marine shells in great quantities, till mill-stones were laid upon it, which now prevent that inconveniency. This spring would be more frequented if there were better accommodations around it. It is said to be impregnated with vitriol, sulphur, and oker mixed with iron, lapis scissilis, and a marine salt united with a better purging salt.

About this place, likewise, is found a bituminous earth, which yields a scent much like the oil of amber; and an oil may be extracted from it, little inferior to that of amber, in its most valuable qualities. The country people cut it into pieces, and burn it instead of candles.

There is a remarkable spring of salt water at Barton, near Ormskirk; a quart of which will produce eight ounces of salt, though a quart of sea water will yield but an ounce and a half.

At Barfceugh, near Ormskirk, Robert Fitz Henry, lord of Latham, in the time of Richard I. founded a priory of Black canons, dedicated to St. Nicholas; which, at the time of the dissolution, had a prior of five religious, and forty-eight servants, whose yearly revenues were valued at one hundred and twenty two pounds, five shillings and seven pence.

We next came to Wigan, or Wiggin, a neat well built town, pleasantly situated near the source of the Dowgles, in the post road to Lancaster, one hundred and ninety five miles from London.

King Henry I. erected it into a corporation, and by charters of queen Elizabeth, and king Charles II. it is governed by a mayor, recorder, twelve aldermen, two bailiffs, and a sword and mace bearer. It has a stately church, one of the best endowed in the county; and the rector of it is always lord of the manor. This town is famous for the manufacture of coverlets, rugs, blankets, and other sorts of bedding; and likewise for its pit coal and iron works, and is inhabited chiefly by brasiers, pewterers, dyers and weavers.

Wigan returns two members to parliament; has two weekly markets, held on Mondays and Fridays; and three annual fairs, viz. October the thirteenth, Holy Thursday, for horses, horned cattle, and cloth; and June the twenty-seventh, for horses and black cattle.

At Ancliff, about two miles from this place, there is a curious phenomenon, called the Burning Well, the water of which is cold, and entirely void of scent, yet so strong a vapour of sulphur issues out with it, that upon applying a candle to it, the top of the water is covered with a flame, like that of burning spirits, which lasts several hours, and emits so fierce a heat, that meat may be boiled over it: but this water being taken out of the well, will not emit a sufficient quantity of vapour to catch fire.

On the west side of Wigan, at a place called Holland in the chapel of St. Thomas, the martyr, there was a college or chantry, consisting of a dean, and twelve secular priests, who were changed in the year 1319, by Walter, bishop of Litchfield, at the request of Robert Holland, then patron, into a prior and Benedictine monks. About the time of the suppression, here were five religious, and twenty-six servants, whose annual revenue was valued at sixty-one pounds, three shillings and four pence.

From this place we proceeded to Bolton, remarkable only for its mineral water, and for being the staple of divers sorts of cotton cloth, called fustians, especially the

the Augsburg and Milan fustians, which are brought to its market and fairs from all parts of the country. This town is two hundred and thirty seven miles from London; has a weekly market on Monday; and two annual fairs, viz. July the nineteenth, and October the twenty second, for hories, horned cattle and cheefe.

Manchester, the next town we visited, is the ancient Mancunium, or Manutium, by both which names it is mentioned in different copies of Antoninus's Itinerary. Some have supposed this name to have been originally derived from Main; which, in the ancient British language, signifies a rock, or stone, and might have been applied to this town, from its situation on a stony hill, and near a famous quarry called Colyhurst. It stands near the conflux of the rivers Irk and Irwell, about three miles from the Mersee, and one hundred and sixty-five miles from London, and is much improved during this and the last century. Though it is not a corporation, nor sends members to parliament, yet as an inland town, it has perhaps the best trade of any in these northern parts, and surpasses all the towns hereabouts in buildings and numbers of people, manufactures, and its trade, and in its college. It had formerly a market for woollens, which, by act of parliament in the reign of Henry VIII. was transferred to Chester. The woollen manufactures, called Manchester cottons, are the most famous for all sorts of broad and narrow cloths, and are much improved by some inventions of spinning and knitting, which, with the variety of other manufactures known by the name of Manchester goods, as kerseys, flannels, and broad cloth, enrich not only the town, but the whole parish, and render the people industrious. Above a hundred years ago there were reckoned near twenty thousand communicants in this town and parish; since which time the inhabitants are much more numerous in proportion to the increase of their trade: a new parish is erected, and a new church built in it, dedicated to St. Ann, and the town has been much improved by the building of a very handsome street of stately houses, at the end of which the said church was erected by the contribution of the inhabitants and others, pursuant to an act of parliament of the seventh of queen Anne. The collegiate church, which was built in 1422, is also a very large, beautiful, and stately edifice, with a choir, remarkable for its neat and curious carved work, and a famous clock that shews the age of the moon. The three most remarkable foundations here are a college, hospital, and a public school. Thomas de la Ware, rector of St. Mary's church, succeeding his brother, the Lord de la Ware, both in the title and estate, not only built its market-place, but founded a college here in 1421, consisting of one master or keeper, eight fellow-chaplains, four clerks, and six choristers, in honour of St. Mary, St. Denis of France, and St. George of England. The family, being by his late brother's death like to be extinct, the pope allowed the rector to marry, on condition of his founding a college for a warden, and such fellows as the bishops of Durham and Litchfield should think fit, which he accordingly did. This foundation being dissolved by Edward VI. the lands and revenues of it were seized by the king, and demised to the earl of Derby, who made a purchase of the college-house, and some of the lands. Queen Mary refounded the college, and restored most of the lands and revenues; only the college itself, and some of the revenues, remained still in the hands of the earl of Derby. It was also founded anew by queen Elizabeth, by the name of Christ's-College, in Manchester, consisting of one warden, four fellows, two chaplains, four singing men, and four choristers: the number being lessened, because the revenues were lessened, by the avarice and foul practices of Thomas Herle, the warden, and his fellows, who sold, or made such long leases of the revenues, as could never yet be totally retrieved. It was last of all re-established by king Charles I. with the same name, and the statutes for it were drawn up by archbishop Laud.

The king, by an act of parliament passed in 1729, is impowered to be visitor of this collegiate church, whenever the warden of it happens to be bishop of Chester.

The hospital was founded by Humphry Cheetham, Esq; and incorporated by king Charles II. for the maintenance of forty poor boys out of this town and parish, and other neighbouring parishes: but 'tis enlarged since to the number of sixty, by the governors of the said hospital, to be taken in between the age of six and ten, and there maintained with meat, drink, lodging, and cloaths, to the age of fourteen, and then to be bound apprentices to some honest trade or calling, at the charge of the said hospital. For the maintenance hereof, he endowed it with four hundred and twenty pounds a year; which was improved to five hundred and seventeen pounds, eight shillings and four pence *per ann.* in 1695, by the good management of the governors, who laid out one thousand eight hundred and twenty five pounds in the purchase of lands, which was saved out of the yearly income, over and above the maintenance of the poor children, and others belonging to the said hospital, wherein near seventy persons are annually provided for. The founder also erected a library in the hospital, and settled one hundred and sixteen pounds a year on it to buy books for ever, and to support a library-keeper. There is also a large school for the hospital boys, where they are taught every day to read, write, &c.

The public school was founded Anno 1519, by Dr. Oldham, bishop of Exeter, who bought the ground on which it stands, and took a lease of the mills there for sixty years, of the Lord de la Ware. Hugh Bexwich and his sister having afterwards purchased another estate of the Lord de la Ware, and the mills upon Irk, left them in perpetuity to the said free-school for ever; which revenues have been very much improved by the fees of the scholars, and of the exhibitions yearly allowed to the maintenance of such scholars at the university, as the warden of the school and the upper master shall think fit; and they have since for some years past added a third master, and erected a new school in him at the end of the other.

Besides these public benefactions, several other considerable sums of money and valuable lands have been left to the poor of this town. Here were above twenty years ago two charity-schools, for forty boys each, and six or seven hundred pounds in bank, for setting up another.

As the Hague, in Holland, is deservedly called the most magnificent village in Europe, Manchester may, with equal propriety, be stiled the greatest mere village in England, for 'tis not so much as a town, strictly speaking, the highest magistrate being a constable, or headborough; yet 'tis more populous than York, Norwich, or most cities in England, and as large as two or three of the lesser ones put together. For the people here, including those in the suburbs on the other side of the river, are reckoned at not less than fifty thousand; which is ten times the number of people that Preston has, and 'tis said to return more money in one month than that does in fifteen. Here is not only a spacious market-place, but a modern exchange.

Its new church was finished about the year 1723, by subscription. The old church, which is very large, has three rows of neat pillars. Here is an ancient, but firm stone bridge over the Irwell, which is built exceeding high; because, as the river comes from the mountainous part of the country, it rises sometimes four or five yards in one night, and falls next day as suddenly. For the space of three miles above the town, it has no less than sixty miles upon it. The weavers have looms here that work twenty-four laces at a time; an invention for which they are obliged to the Dutch.

The following is a more particular account of the present state of the manufactures at Manchester, and therefore cannot be disagreeable to the reader.

The Manchester manufactures are divided into four branches,

- The fustian
- The check
- The hat
- The worsted small wares.

All these are subdivided into numerous branches, of distinct and separate work. In that of fustians are thirteen.

- No. 1. Corded dimities
2. Velvets
3. Ververets
4. Thicksets
5. Pillows
6. Quilts
7. Petticoats
8. Draw-boys
9. Diapers
10. Herringbones
11. Jeans
12. Jeanets
13. Counterpanes.

These goods are worked up of cotton alone, of flax and cotton, and of Hamborough yarn. All sorts of cotton are used, but chiefly the West Indian. These branches employ men, women, and children.

In the branch No. 1. Men earn from 3*s.* to 8*s.* a week.

- Women the same.
No children employed in it.
2. Men from 5*s.* to 10*s.*
Neither women or children.
3. and 4. Men from 5*s.* to 10*s.* average 5*s.* 6*d.*
Women as much,
Children 3*s.*
5. Men from 4*s.* to 5*s.*
Women the same.
Children 2*s.* 6*d.*
6. and 7. Men from 6*s.* to 12*s.*
Neither women or children.
8. Men, at an average, 6*s.* but a boy paid out of it.
No women.
9. Men from from 4*s.* to 6*s.*
Women as much.
No children.
10. All children, 1*s.* 6*d.*
11. Men from 4*s.* to 10*s.*
No women or children.
12. Women 1*s.* 6*d.* to 3*s.* 6*d.*
Children the same.
13. Men from 3*s.* to 7*s.*
Neither women or children.

These branches of manufacture work both for exportation and home consumption: many low priced goods they make for North America, and many fine ones for the West Indies. The whole business was exceedingly brisk during the war, and very bad after the peace; but now are pretty good again, though not equal to what they were during the war. All the revolutions of late in the North American affairs are felt severely by this branch. It was never known in this branch that poor people applied for work but could not get it, except in the stagnation caused by the stamp act.

We enquired the effects of high or low prices of provisions, and found, that in the former the manufacturers were industrious, and their families easy and happy; but that in times of low prices the latter starved; for half the time of the father was spent at the ale-house. That both for the good of the masters, and the working people, high prices were far more advantageous than low ones: and the highest that were ever known much better than the lowest.

All in general may constantly have work that will; and the employment is very regular: the master manufacturers not staying for orders before the people are set to work, but keep, on the contrary, a great many hands in pay, in expectation of the spring orders.

The principal sub-divisions of the check branch are the following.

- No. 1. Handkerchiefs.
2. Bed ticking.
3. Cotton hollands.
4. Gowns.
5. Furniture checks.
6. Silk and cotton gingham.
7. Souffees.

8. Damask.

9. African goods, in imitation of the East Indian.

These branches employ both men, women, and children; their earnings as follow.

- No. 1. Men 7*s.*
Women 7*s.*
Children 2*s.* to 5*s.*
2. Men 6*s.* to 10*s.*
Neither women or children.
3. Men 7*s.*
Women 7*s.*
Children a few, 2*s.* to 5*s.*
4. Men 8*s.*
Neither women or children.
5. Men 7*s.*
Women 7*s.*
No children.
6. Men 7*s.* 6*d.*
Neither women or children.
7. Men 7*s.* 6*d.*
Neither women or children.
8. Men 7*s.* 6*d.*
Neither women or children.
9. Men from 6*s.* to 9*s.*
Women the same.
No children.

Most of these articles have many preparers; among others.

- Dyers at 7*s.* 6*d.*
Bleachers 6*s.* 6*d.*
Finishers 7*s.* 6*d.*

The check branch, like the fustian, works both for exportation and home consumption, but vastly more for the former than the latter. During the war the demand was extremely brisk; very dull upon the peace, but lately has arisen greatly, though not equal to the war; and the interruptions caused by the convulsions in America, very severely felt by every workman in this branch: none ever offered for work but they at once had it, except upon the regulations of the colonies cutting off their trade with the Spaniards, and the stamp act. The last advices received from America have had a similar effect, for many hands were paid off in consequence of them.

In the hat branch the principal subdivisions are,

1. Preparers.
2. Makers.
3. Finishers.
4. Liners.
5. Trimmers.

They employ both men, women, and children, whose earnings are somewhat various.

- No. 1. No men.
Women, 3*s.* 6*d.* to 7*s.*
No children.
2. Men 7*s.* 6*d.*
No women.
Children, 2*s.* 6*d.* to 6*s.*
3. Men, 12*s.*
No women.
Children, 7*s.* 6*d.*
4. No men.
Women, 4*s.* to 7*s.* 6*d.*
Children, 2*s.* 6*d.* to 6*s.*
5. No men.
Women, 4*s.* to 7*s.* 6*d.*
Children, 2*s.* 6*d.* to 6*s.*

This branch works chiefly for exportation; during the war it was surprizingly brisk; after the peace quite low; lately it has been middling.

In the branch of small wares are numerous little articles; but the earnings in general run as follow:

- Men from 5*s.* to 12*s.*
Women from 2*s.* 6*d.* to 7*s.*
Children, from 2*s.* 6*d.* to 6*s.*

The number of spinners employed in and out of Manchester is immense; they reckon thirty thousand souls in that town; and fifty thousand manufacturers employed out of it.

Cotton spinners earn,
Women, 2s. to 5s.

Girls from six to twelve years, 1s. to 1s. 6d.

In general all these branches find, that their best friend is high prices of provisions: we were particular in our enquiries on this head, and found the sentiment universal: the manufacturers themselves, as well as their families, are in such times better clothed, better fed, happier, and in easier circumstances than when prices are low; for at such times they never worked six days in a week; numbers not five, nor even four; the idle time spent at alehouses, or at receptacles of low diversion: the remainder of their time of little value; for it is a known fact, that a man who sticks to his loom regularly, will perform his work much better, and do more of it, than one who idles away half his time, and especially in drunkenness.

The master manufacturers of Manchester wish that prices might always be high enough to enforce a general industry; to keep the hands employed six days for a week's work; as they find that even one idle day, in the chance of it's being a drunken one, damages all the other five, or rather the work of them. But at the same time they are sensible, that provisions may be too high, and that the poor may suffer in spite of the utmost industry; the line of separation is too delicate to attempt the drawing: but it is well known by every master manufacturer at Manchester, that the workmen who are industrious, rather more so than the common run of their brethren, have never been in want in the highest of the late high prices. Large families in this place are no incumbrance; all are set to work.

America takes three-fourths of all the manufactures of Manchester.

Manchester was a Roman station, called, as we have before observed, Mancunium; and there are still many monuments of antiquity to be seen in and about the town. In a neighbouring park, at the conflux of the Meldock and Irwell, are the marks of an old square fort, which the inhabitants thereabout call Mancastrle; and which, for that reason, some have supposed to have been the ancient Mancunium: but the compass of it being too small for a town, it may more reasonably be thought a Roman station. Mr. Camden saw a stone here with the following inscription, \odot CANDIDI TIDES XX. — — III.—A draught of another stone was sent him, inscribed thus: COHO. I. FRISIN. \odot MASAVANIO P—XXIII. which stones, he thinks, may have been erected to the memory of two centurians, who had given proofs of their fidelity to the emperors their masters. And in the year 1612, a stone was dug up with this inscription; FORTVNÆ. CONSERVATRICI L. SENECIANIVS MARTIVS \odot LEG. VI. VICT. which seems to have been an altar, dedicated to Fortune, by L. Senecianius Martius, the third governor, or commander in the sixth legion, which was stationed at York when Severus was there.

This town has a weekly market on Saturday, and three annual fairs, viz. Whitfun-Monday, St. Matthew, September the twenty first, and November the sixth, for horses, black cattle, cloth and bedding.

Continuing our journey from Manchester, we arrived at Rochdale. This town derives its name from its situation in a valley, on a small river that falls into the Irwell, called the Roch. This valley lies at the bottom of a ridge of hills, called Blackstone-edge, so high that they are sometimes covered with snow in the month of August. This is a pretty large and populous town, one hundred and seventy five miles from London, and is of late very much improved in the woollen manufacture.

Here is a weekly market on Tuesday, and three annual fairs, viz. May the fourteenth, Whitfun-Tuesday, and November the seventh for horses, horned cattle, and woollen cloths.

We next passed through Bury, situated on the river Irwell, one hundred and eighty three miles from London. The trade of this town is very considerable, particularly in the fustian manufacture; and likewise in the coarse goods called halfthicks and kerseys. Many Roman coins, both of silver and copper, have been dug up in this place.

Here is a weekly market on Thursday, and four annual fairs, viz. March the fifth; May the third, Thursday but one after Whit-Sunday, and September the eighteenth, for horses, black cattle, and woollen cloth.

Haslington is an obscure town, situated at the bottom of some mountains, on the east side of this county, one hundred seventy eight miles from London. It has a weekly market on Wednesday, and three annual fairs, viz. May the eighth, July the first, and October the tenth, for horses, horned cattle, and sheep.

Blackburn, or Blackbourn, was so called from its standing on the bank of the Bourn, or river Darwen, which is remarkable for the blackness of its waters. This town is one hundred and fifty four miles from London, and has nothing in particular to distinguish it, except a weekly market on Monday, and three annual fairs, viz. May the twenty first, September the thirtieth, for toys and small wares, and October the twenty-first, for horses, horned cattle and toys.

Charley is a little inconsiderable town, one hundred and fifty four miles from London, remarkable only for a weekly market on Saturday, and three annual fairs, viz. May the fifth, August the twentieth, for horned cattle, and September the fifth for toys and small wares.

Having passed through these small towns we came at length to Preston, or Priest-town, so called from its having been inhabited by a great number of religious. It is situated on a delightful eminence on the bank of the Ribble, two hundred and eleven miles from London; and for its beauty and extent, may be compared to some cities. It was first incorporated by king Henry II. and had privileges, and large immunities granted and confirmed by several of his successors. It is governed by a mayor, recorder, eight aldermen, four under aldermen, seventeen common-councilmen, and a town-clerk. This town is said to have risen out of the ruins of Ribchester, anciently a very considerable city in this neighbourhood, though now a village. Preston is plentifully supplied with fish, coal, and other commodities, by means of the Ribble, over which here is a stone-bridge. It is in general a pleasant retirement; many of the streets are handsome and well inhabited; and by being the residence for the officers belonging to the chancery of the county palatine, is rendered a very gay place, and is by its neighbours termed Proud Preston. Here is a charity school for twenty-eight boys, and another for as many girls; and on the neighbouring common there are frequent horse races. This town is rendered remarkable by the defeat of duke Hamilton near it, in the year 1648, when he came to rescue king Charles I. from his imprisonment; and likewise for the defeat of the English rebels who took arms against king George I. on the twelfth of November 1715, on the very day that, by a remarkable interruption of providence, Scots rebels were routed at Dumblain.

On the north-west side of this town, there was a college of Grey friars, founded by Edmund, earl of Lancaster, son to king Henry III.

Here was also an ancient hospital, dedicated to St. Mary Magdalen, the mastership of which was in the gift of the king.

Preston sends two members to parliament; has three weekly markets held Wednesdays, Fridays, and Saturdays, and four annual fairs, viz. First Saturday after Epiphany, January the sixth, chiefly for horses; March the twenty-seventh, for horses and horned cattle; and September the seventh, for coarse cloaths and small wares. Besides the foregoing fairs, there is held every twentieth year, a guild, or jubilee, which begins the last week in August, and continues a month; to which resort persons of the first rank, from all parts, London itself not excepted. The last guild was in the year 1762.

At Lanridge, north-east of this town, there was an hospital and brethren, dedicated to the Virgin Mary, and Jesus Christ.

Henry Lacy, earl of Lincoln, having given the advowson of the parish church of Whalley, near Preston, to the White monks of Stanlaw in Cheshire, they procured the same to be appropriated to them; upon which, in the year 1296, they removed their abbey hither, and

encreased

encreased the number of their religious to sixty. It was dedicated to the Virgin Mary; and the suppression had revenues to the yearly value of three hundred and twenty one pounds, nine shillings and one penny.

Warine Bussell having given the church and tithes of Penwortham, near Preston, with several other estates in this county, to the abbey of Evesham, a very considerable market town of Worcestershire, in the time of William the Conqueror, a priory was erected soon after, in which were placed several Benedictine monks from Evesham. This priory was dedicated to the Virgin Mary, and rated at twenty nine pounds, eighteen shillings and seven pence *per annum*.

Eccleston is noted only for being a market town. It is situated on the Charnock, one hundred and ninety two miles from London, and has a weekly market on Saturday; but no annual fairs.

Kirkham, the next town we entered, stands on the north side of the æstuary of the Ribble, one hundred and ninety one miles from London. It has a free grammar school, well endowed by Mr. Colbron, a citizen of London, in the year 1674, with three masters, one of whom must be in holy orders, and preach a lecture once a month in the mother church, or in some chapel in the parish.

Here is a weekly market on Tuesday, and two annual fairs, viz. June the twenty-fourth, for horses and black cattle; and October the eighteenth, for toys and small ware.

In many parts on the coast, near this town, the inhabitants gather great heaps of sand together; which, after having lain some time, they put into troughs full of holes at bottom, pour water on it, and boil the lees into white salt.

Not many years ago, in draining Merton-lake, near Kirkham, which was several miles in circumference, and situated on the south side of the mouth of the Ribble, there were found sunk at the bottom of it, eight canoes, somewhat resembling those made use of by the Indians in America, in which, it is supposed, the ancient Britons used to fish upon this lake.

Poulton is conveniently situated for trade, near the mouth of the river Wire; and is noted for a good pearl fishery. It is two hundred and twelve miles from London; has a weekly market on Monday, and three annual fairs, viz. February the second for horned cattle; May the third, and July the twenty-fifth, for horned cattle, and small wares.

Garstang is situated in the past road between Preston and Lancaster, two hundred and twenty-two miles from London, has a weekly market on Thursday, and three annual fairs, viz. Holy-Thursday, for horned cattle; July the twenty-first, and December the third, for black cattle, wool and cloth.

Leaving Garstang, we continued our journey to Lancaster, the county town, by some called Loncaster, or Longcaster. The name of this town is derived from the river Lon, or Lun, upon the southbank of which it stands. It is an ancient, neat handsome town, two hundred and thirty two miles from London; and governed by a mayor, a recorder, seven aldermen, two bailiffs, twelve capital burgessees, twelve common burgessees, a town clerk, and two serjeants at mace. King John confirmed to the burgessees all the liberties he had granted to those of the city of Bristol; and king Edward III. granted to the mayor and bailiffs, that pleas and sessions should be held here, and no where else in the county. In the shire-hall, above the bench, are the king's arms, with W. M. above; and below it the following inscription: "Let judgment run down as waters, and righteousness as a mighty stream."

On a hill close to the town there is a fine strong, but not ancient, castle, where the county assizes are held, and where also is the county gaol. On the top of this castle there is a square tower, called John of Gaunt's Chair, whence there is a beautiful, and extensive prospect of the adjacent country, and the sea. There has been within these few years, an handsome square of neat buildings, erected near the castle, which

are a great addition to the town. They are well inhabited, and the situation delightful and pleasant; having on one side a fine prospect of the adjoining meadows and the river, and on the other a view of the port. Here is only one church; but it is a noble edifice, and stands on the summit of the castle hill. Here is likewise a custom-house, and a fine stone bridge of five arches over the Lon; but the port is so choaked with sand, that it will not admit ships of any considerable burden. It is, notwithstanding, a very populous thriving corporation, and carries on a prodigious trade to America in hardware and woollen manufactures, in vessels of about seventy tons burden; but the country round is so thinly peopled on account of the barrenness of the soil, that it cannot take off the quantity of sugars imported.

Lancaster is the ancient Longovicum, mentioned in the Itinerary of Antoninus, where the Roman lieutenant of Britain kept a company in garrison, called the Longovici. Several utensils used in sacrifice, and a variety of Roman coins, have been dug up here; and near the church, on the steepest side of the hill, hangs a piece of an old Roman wall, now called Werywell. The ancient town was not exactly upon the same spot where the present one now stands; for in the year 1322, the old Longovicum being destroyed by the Scots, Lancaster was built nearer the river.

In the year 1094, earl Roger, of Poitiers, gave the church of St. Mary in this town, with some lands here, to the abbey of St. Martin de Sagio, or Sees, in Normandy; upon which a prior and five Benedictine monks from thence were placed at Lancaster; who, with three priests, two clerks, and servants, formed a small monastery, subordinate to that foreign house, which was endowed with the yearly revenue of about eighty pounds. After the dissolution of the alien priories, this, with the lands belonging to it, was annexed, by King Henry V. to the abbey of Sion, in Middlesex.

Here was an hospital dedicated to St. Leonard, for a master, chaplain, and nine poor persons, of which three were to be lepers, founded by king John, while he was earl of Morton; which was afterwards annexed to the nunnery of Seton, in Cumberland, by Henry, duke of Lancaster, about the thirtieth of Edward III.

There was also an house of Dominican or Black friars in this town, founded by Sir Hugh Harrington, about the forty-fourth of king Henry III. and near the bridge in this town, there was a Franciscan convent; but we are not acquainted with any particulars concerning it.

Lancaster returns two members to parliament; has a weekly market on Saturday, and three annual fairs, viz. May the first, for cattle, cheese and pedlary; July the 5th, for the above commodities and wool; and October the tenth, for wool and cheese.

A colony of Cistercian monks were fixed for some time at Wierdale, a dismal and solitary tract, south-east of Lancaster; but about the year 1188, they removed over to Ireland, and founded the abbey of Wythney, in that kingdom.

There was formerly a priory at Cockerham, a little south-east of Lancaster.

We next arrived at Hawkehead, situated on the west side of Winander-Meer, in a woody promontory, called Fourness, in the most northern part of the county, two hundred and fifty-six miles from London. Dr. Gibson is of opinion, that Fourness should be written Furness, or Fournage; and that the name is derived from the many furnaces which were anciently in this place, as the rents and services at this day paid for them, under the name of Bloom-Smithy rents, still testify. Here is a free grammar school, endowed by Edwin Sends, an archbishop of Canterbury, who was born near it.

At the south extremity of the promontory of Fourness, lies a long island before it, like a rampart, called the isle of Walney, formed by a small arm of the sea. This island was formerly defended by a castle, called Peele, or Pile-castle, and sometimes the Pile of Fuldrey. The shell of this castle is still standing upon a rock near the south end of the isle of Walney.

In the year 1127, Stephen, then earl of Morton and Boloigne, afterwards, king of England, founded an abbey at Fourness, in a village then called Bekangefgill. It was of the Cistercian order, dedicated to the Virgin Mary, and endowed at the dissolution with eight hundred and five pounds, sixteen shillings and five-pence *per annum*. The ruins of this abbey are still to be seen upon the promontory of Fourness.

Hawkehead has a good weekly market on Monday, for provisions and woollen commodities, and two annual fairs, viz. Holy Thursday, for pedlary, and horned cattle; and St. Matthew, September the twenty-first, for pedlary.

At Conisheved, not far from this town, Gabriel Pennington, in the time of Henry II. and by the encouragement of William of Lancaster, baron of Kendal, who was a great benefactor, built an hospital and prior of Black canons, dedicated to the Virgin Mary; which priory consisted of a prior, seven religious, and forty-eight servants, and was valued upon the dissolution at one hundred and twenty-four pounds, two shillings and one penny *per annum*.

From hence, continuing our tour, we came to Carmel situated among some hills called Cartmel Fells, one hundred and ninety-two miles from London. It stands on a point of land between two bays of the sea, one formed by the æstuary of the river Ken, from Westmoreland, and the other by the conflux of several small rivers from Westmoreland and Cumberland, which here fall into the Irish sea. The conflux of these rivers have thrown up three sands, one called Kenesand, denominated from the river Ken, another called Dudden Sand, from a river of the same name, and the third on the like account called Leven Sand. These several sands, though very dangerous, both by reason of the tides, which are quicker or slower, according as the winds blow more or less from the sea; and on account of the many quicksands, which are chiefly occasioned by much rainy weather, are nevertheless frequently passed by travellers, as being the shortest way to several places they may be bound to; upon this account, there is a guide on horseback appointed to each sand, for the direction of such persons as shall have occasion to pass over; and each of these three guides has a salary paid him by the government. William Marefchall the elder, earl of Pembroke, in the year 1188, founded a priory in this town of regular canons, of the order of St. Austin. It was dedicated to the Virgin Mary; and about the time of the dissolution contained ten religious, and thirty-eight servants, whose revenues were valued at one hundred and twenty-four pounds, two shillings and one penny *per annum*. Here is a church which is built in form of a cathedral; a harbour for boats; a good weekly market on Monday for corn, sheep, and fish, and two annual fairs, viz. Whitfun-Monday, and the first Tuesday after October the twenty-third, for pedlary.

At Wrayholm tower, on the south side of Carmel, was discovered, not long since, a medicinal spring of brackish water, which is since much drank every summer by persons troubled with worms, the stone, gout, itch, and several other distempers.

Ulverston, the next town through which we passed, is situated on the west side of the large bay that runs up through this county, two hundred and thirty-nine miles from London; remarkable only for a weekly market on Thursday, and two annual fairs, viz. Holy Thursday, and the first Thursday after October the twenty-third, for pedlary.

Dalton, two hundred miles from London, is likewise remarkable for nothing but a weekly market on Saturday, and two annual fairs, viz. June the sixth, for horned cattle; and October the twenty-third, for horses, horned cattle, and pedlary.

Many uncommon birds have been observed near this town, and other parts on the coast of this county; particularly the sea-crow, distinguished by its blue body, its black head and wings, and by its feeding upon muscles; the puffin; the asper, which is a species of sea eagle; the sparring fisher; the cormorant; the curlew-

hulp; the razor-bill, a bird like a water-wagtail, fond of a red colour, and called by Dr. Leigh, in his Natural History of this county, the copped-wren; besides these there are red-shanks; perrs; swans; the tropic-bird; king's-fisher, and hey-bough.

At Kirby, north of Dalton, there happened formerly such a violent eruption of water, as carried down whole houses before it, and swept away fragments of rocks of such a magnitude, that many teams of oxen could not move them.

At Cockerfand, near Dalton, there was first an hermitage, and then an hospital, for several infirm brethren, under the government of a prior, dedicated to St. Mary, and subordinate to the abbey of Leicester, the chief town of the county of that name, supposed to have been founded, or at least chiefly endowed by William of Lancaster, in the time of Henry II. About the year 1190, it was changed into an abbey of Premonstratensian canons, to which there seems to have been united another abbey of the same order, which Theobald, brother to Hubert Walter, archbishop of Canterbury, some few years after, built, or designed to build, at Pyling. The abbey of Cockerfand, about the time of the dissolution, consisted of twenty two religious, and fifty-seven servants, and was then found to be worth two hundred and twenty-eight pounds, five shillings and four-pence *per annum*.

We next came to Hornby, situated on the river Lon, at the extremity of the county, next to Westmoreland, two hundred and thirty miles from London. It contains nothing worthy of notice but the remains of an ancient castle, beautifully situated on a hill, round the bottom of which runs a river called the Winning.

There formerly was an hospital, or cell, in this town, for a prior, and three Premonstratensian canons, belonging to the abbey of Croxton, on the borders of Leicestershire and Lincolnshire. It was founded by one of the ancestors of Sir Thomas Stanley, lord Monteagle; to whom this priory, as a part of Croxton-Abbey, was granted by king Henry VIII. It was dedicated to St. Wilfred, and endowed at the dissolution, with land to the yearly amount of twenty-six pounds.

Hornby has a weekly market on Monday, and an annual fair, July the thirtieth, for horned cattle and horses.

From hence we came to Clithero, situated with its ancient castle on the river Ribble, not far from its source, at the bottom of a very high hill, called Pendle-Hill, two hundred and seven miles from London. It is an ancient borough by prescription, but has several charters from king Henry II. and is governed by two bailiffs; one called the Out-bailiff, chose by such gentlemen as have borough-houses, but do not live in the town; and the other called the In-bailiff, who resides in the town. On an adjacent moor are frequent horse-races.

This town sends two members to parliament; has a weekly market on Saturday, and four annual fairs, viz. July the twenty-first, for horned cattle and woollen-cloth; March the twenty-fourth, the fourth Saturday after St. Michael, September the twenty-ninth, and December the seventh, for the above mentioned articles and horses.

Leaving this place we continued our journey to Coln. This town, from the many coins, both of copper and silver that have been cast up by the plough, appears to have been very ancient, if not a Roman station. It is situated near Pendle-Hill, on the opposite side to Clithero, one hundred and ninety-nine miles from London.

Here is a weekly market on Wednesday, and two annual fairs, viz. May the twelfth, and October the tenth, for black cattle, sheep and woollen cloth.

Burnley derives its name from Bourn river, and Lay, a field. It is a small inconsiderable town; but situated in a very healthy air, upon the bourn or river called Great Calder, one hundred and fifty-three miles from London. Several Roman coins have been dug up here, dated in the time of the consuls.

Here is a weekly market on Saturday, and five annual fairs, viz. March the sixth, Easter Eve, May the thirteenth, July the tenth, and October the eleventh, for horses, black cattle and sheep.

CURIOUS PLANTS found in Lancashire.

Lancashire asphodel, or bastard-English asphodel; called, by Label, maiden-hair, because the women hereabout used to colour their hair with the flower of it. *Alphodelus Lancastriæ verus*, Ger. Found in mosses and boggy grounds, in many parts of this county.

The least tway-blade. *Bifolium minimum*. Observed among the heath upon Pendle-hill.

Wild heart-cherry-tree, commonly called the merry-tree. *Carascus sylvestris fructa minimo cordiforme*, P. B. Found about Bury and Manchester.

Small sea-scurvy-grass, with a cornered leaf. *Cocklearia marina folia anguloso parvo*, D. Lawson. Found in the isle of Walney.

Jagged fleabane-mullet, or harsh-fleabane. *Gonyza helenitis foliis laciniatis*. Found plentifully in the ditches about Pillin moss.

Prickley samphire, or fear-parsnip. *Crithmum spinosum*, Ger. Observed at Roofbeck, in Low Fournels.

Sea buglafs. *Echium marinum*, P. B. Found in great plenty in the isle of Walney, over against Bigger.

Small jagged yellow rocket of the Isle of Man. *Ervea monensis laciniata lutea*, Cat. Found between Marth-Grange, and the Isle of Walney.

Bloody cranes-bill, with a variegated flower. *Geranium hæmatedes Lancastrense flore eleganter striato*. Found in a sandy soil near the sea shore, in the Isle of Walney.

Hares-tail-rush. *Juncus alpinus cum eunda leporina*, J. B. Found plentifully upon the mosses in this county.

Purple goats-beard. *Rosmarinum purpureum*, P. B. Found on the banks of the river Chalder.

Tormentil, with a round root, and square leaves. *Tormentilla quadrifolia radice rotunda*. Found near Wigan, in this county.

Elder, with jagged leaves. *Sambucus foliis laciniatis*. Found in a hedge near Manchester.

MEMBERS of PARLIAMENT for Lancashire.

This county sends fourteen members to parliament; two knights of the shire for the county, and two representatives for each of the following boroughs, Lancaster, Preston, Newton, Wigan, Clithero, and Liverpool.

D E R B Y S H I R E.

THIS county, which lies in the middle of England, inclining a little northward, is bounded by Nottinghamshire, and a part of Leicestershire on the east; by another part of Leicestershire on the south; by Staffordshire, and part of Cheshire on the west; and by Yorkshire on the north. It is of a triangular form, measuring from south to north about forty miles; in breadth upon the north side, about thirty, and on the south side it is no more than six: its circumference is about one hundred and thirty miles. It is divided into six hundreds; in which are one hundred and six parishes, eleven market towns, five hundred villages, about two hundred and twelve thousand houses, and one hundred twenty seven thousand inhabitants. It lies in the province of Canterbury, and diocese of Litchfield and Coventry; and Wirksworth, the most central town in the county, is one hundred and eighteen miles from London.

The ancient inhabitants of Derbyshire, in common with those of Northamptonshire, Leicestershire, Rutlandshire, Lincolnshire, and Nottinghamshire, were by the Romans called Coritahi; but whence the name was derived is not known. In the time of the Saxon heptarchy, these counties were all included in the kingdom of the Mercians; and the inhabitants of Derbyshire and Nottinghamshire, from their situation on the north side of the river Trent, were stiled Mercii Aquilonos, or the Northern Mercians.

R I V E R S.

The principal rivers in this county, are the Derwent, the Dove, and the Erwash. The Derwent rises in a rocky, mountainous, and barren tract of country, in the north-west part of this county, which the Saxons called Peakland; that is, on an eminence; and is now called the Peak of Derby; thence it runs south-east, through a soil which gives the water a blackish colour, quite croses the country, dividing it nearly into equal parts; and about eight miles south-east of the town of Derby it falls into the Trent, a large river which rises in Staffordshire, and runs through the counties of Derby, Nottingham, Lincoln, and York.

The Dove is said to derive its name from the glossy blue or purple colour of its water, which resembles the colour of the bird of the same name. This river also rises in the Peak of Derby, and running south-east divides this county from Staffordshire, and falls into the Trent, a few miles north of Burton upon Trent, a considerable market town of Staffordshire. This river sometimes swells in the space of twelve hours, to such a height, that it carries away whole flocks of sheep, and herds of cattle; and returns as suddenly to its natural channel. These inundations are occasioned by shots of water, which this river frequently receives in its course through so mountainous a country. This river is remarkably famous for producing a fish called graylings, and for trouts, which are esteemed the best in England.

The Erwash separates the counties of Derby and Nottingham, and falls into the Trent, four or five miles north-east of the place where the Derwent empties itself into that river.

Remarks on the INLAND NAVIGATION of Derbyshire.

The principal inland navigation in this county is the river Trent, which runs through part of this shire, and has water sufficient for craft of considerable burden to the extremity of Derbyshire.

The Derwent, which falls into the Trent soon after it enters this country, is navigable to Derby, and proves of very great service to the county; as a communication is thereby opened with the port of Hull, and other places on the Trent, and also with several other towns in this and the adjacent county.

We have already, in our surveys of Staffordshire and Cheshire, given some account of the canal intended to join the Trent with the Mersee; to which we shall only add, that several miles of this canal are already finished in Cheshire and Derbyshire; but the greatest part is from Armitage, through Hanfacre, Bromley, Fradley, Alrewas, and to the river Trent. At Armitage the canal goes through an exceeding fine rock of free-stone, which is used in building locks, &c. The locks are seventy feet long; some are finished, and others in great forwardness. Ten road bridges are completed, and bricks, and other materials provided for many more. The number of men usually employed is about six hundred. The company have come to a resolution to finish the two extremes, viz. from Shutborough to the Trent, and from Harecastle to the Mersee, first, as they will, when perfected, yield an immediate profit to the company. At the same time the works at Harecastle will be prosecuted with all expedition.

AIR, SOIL, and NATURAL PRODUCTIONS.

The two parts into which the river Derwent divides this county are very different, as well with respect to the air as the soil, except just on the banks of the river, where the soil is on both sides remarkably fertile. In the eastern division, the air is healthy, and its temperature agreeable. The soil is every where fruitful, and therefore well cultivated, producing grain of almost every kind, in great abundance; particularly barley. But in the western division the air is in general sharper, the weather more variable, and storms of wind and rain more frequent. The face of the country is rude and mountainous, and the soil, except in the vallies, is rocky and sterile; the hills, however, afford pasture for sheep; which, in this county, are very numerous. Along the banks of the Dove this county is remarkably fertile, which is generally ascribed to the frequent overflowings of this river, especially in the spring, and leaving upon the ground a prolific slime, which it brings from the beds of lime among which it rises.

The western part of this country, notwithstanding its barrenness, is yet as profitable to the inhabitants as the eastern, for it produces great quantities of the best lead; also antimony, mill-stones, and grind-stones; besides marble, alabaster, a coarse sort of crystal spar, green and white vitriol, alum, pit-coal, and iron.

Remarks on the HUSBANDRY of Derbyshire.

The husbandry, like the soil of the county, is various. The soil is a sandy gravel in many parts of Derbyshire; and such land lets from six to twelve shillings an acre. Their course of crops is

1. Fallow,
2. Barley,
3. Beans,
4. Wheat.

For the latter they plough but once; sow three bushels. For barley they plough four times; sow four bushels on an acre, and reap about twenty bushels on a medium, and reckon the average produce four bushels. They stir the land but once for oats, sow four bushels, and gain about four quarters in return.

In their clay lands they sow a considerable quantity of beans, plough but once for them, sow four bushels, and reckon eighteen bushels the average produce. They sow but few turnips; but their culture is to plough four or five times for them; hoe them once; sometimes, and value an acre at thirty shillings.

Price of LABOUR.

In hay-time and harvest 1 s. a day, and board.
 In winter 1 s. and beer.
 Reaping wheat, from 3 s. to 4 s. 6 d. per acre.
 Mowing corn 1 s. 6 d.
 Mowing grafs 1 s.
 Hoeing turneps 5 s.
 Threshing 9 d. the five bushels.
 Threshing spring corn, 1 s. 6 d. the quarter.

T R A D E.

The chief commodities of this county are lead, antimony, mill-stones, grind-stones, marble, alabaster, alum, pit-coal, and iron: with these articles, and with malt and ale, of which great quantities are made in Derbyshire, the inhabitants carry on a considerable trade.

MANUFACTURES.

The principal manufactures in this county are silk stockings, &c. and a patent has been lately obtained for a machine for making ribbed hose. Here is also a manufacture of porcelain, where excellent figures and other ornamental pieces are produced.

MARKET TOWNS, &c.

The market towns are, Chapel in the Frith, Tideswell, Bakewell, Winster, Worksworth, Ashborne, Derby, Alfreton, Chesterfield, Balsover, Dronfield.

We entered the county near its north-west extremity, and repaired to Chapel in the Frith, situated in a hundred called the High Peak, about one hundred and forty nine miles north west of London, which is too inconsiderable ever to have been particularly described. It has a weekly market on Thursday, and eleven annual fairs, viz. Thursday before Old Candlemas, February the thirteenth, March the twenty-ninth, Thursday before Easter, April the thirtieth, Holy-Thursday, three weeks after Holy-Thursday, for cattle; July the seventh, for wool; Thursday before August the twenty-fourth, for cheese and sheep; Thursday after September the twenty-ninth, and Thursday before November the eleventh, for cattle.

Tideswall, or Tideswell, probably derived its name from a well, or spring, at the bottom of a hill near it, which constantly ebbs and flows with the tide of the sea. It is one hundred and forty-six miles distant from London; has a free school; a weekly market on Wednesday, and three annual fairs, viz. May the third, for cattle; First Wednesday in September, and October the eighteenth, for sheep and cattle.

We now visited the several remarkable curiosities, generally called the Seven Wonders of the Peak.

The first is the magnificent palace of the duke of Devonshire, called Chatsworth house, and which we shall describe in the course of our survey.

In our tour to view the wonders of the Peak, we passed by Bakewell, which lies in a deep valley, and appears from the hill we went over, to be a considerable town, having a large church and lofty spire. We passed by another rich and pleasant valley, called Maunsel Dale, when descending the hill we came to a village, called Ashford: here we visited a famous marble quarry, about half a mile off, belonging to a very ingenious gentleman, whose name is Watson. He has erected a water-mill of his own invention near the quarry, where the marble is at once saw'd out and polished; the mechanism of which mill is worth a traveller's observation, the whole work being of so simple and easy a construction, and answers every purpose so well, that a slight de-

scription of it may not be unacceptable. In the beam which runs cross the roof of the mill, a mortice is cut, into which is inserted perpendicularly a piece of wood, fastened in the mortice with an iron pin, so that it may move backward and forward like the pendulum of a clock: at one end, a large block of marble being fixed in a proper pit; a number of saws (answerable to the thickness of the block) being fixed to this pendulum, are employed to cut it into so many slabs as the thickness of the block will allow: at the other end of the machine, the slabs of marble, already sawed, are laid flat; and the same motion of the pendulum draws a polisher over their surface; at the same time a small cog-wheel moves the slab sideways, that the whole surface may be polished alike. Before the slabs are brought hither for polishing, they are laid under a large horizontal shaft, where the surfaces are ground smooth from the saw. The marble of this quarry is black, but bears so fine a polish; that in the great room at Edinfor inn, we observed a large slab placed in a gilt frame, over a chimney-piece; which is by many mistaken for looking glass. We were shewn several slabs and chimney-pieces of different coloured marble, the produce of other parts of the Peak; all finely wrought and polished, and some marble tables inlaid with lucid petrifications, which are both rich and beautiful. Mr. Watson likewise shewed us several vases and urns fit for ornaments of grand rooms, made of the different coloured marbles and petrifications; all of curious workmanship.

After viewing this repository of curiosities, we returned, and ascending the hills, looked round in vain for a bush or tree, the mountains appearing quite barren; or, fertile in nothing but stone; of which a good use is made: for as the vallies are full of corn, or fine pasture, the inhabitants make inclosures with the stone, called hedges; which are seen for many miles round from the tops of the hills, and appear like the ruins of old fortifications. Proceeding further over the hills, we discovered several lead-works; and observing some people labouring at one of them, we thought proper to pay it a visit. On entering a kind of shed, we perceived a large hole like the mouth of a well, where the ore is drawn up; for which purpose, a large wheel or shaft is worked by horses, in a round wooden building, which they call a cupola, adjoining to the shed; the entrance into the mine is at a considerable distance in the side of the hill, to which our curiosity did not lead us. The ore, when drawn up, appears like a heap of dirt and stones mixed together; this the poor people, women and children, put into tubs; and washing the dirt away, they pick out the stones, and with great pains of searching and sifting, find a little ore, which is laid by in separate parcels, according to its different value, this seems very hard labour; and the poor women told us, they must work very briskly at it to earn a groat a day.

From hence we passed through a village inhabited by those poor people, consisting of about a hundred cottages; not built like a street, but scattered in an irregular manner, forming indeed a most romantic scene. The inhabitants appeared so poor and wretched, the land about them so barren and stony, so unsheltered from wind and weather, and so removed from the comforts and even necessaries of life; that reflecting on the difference of condition between the people here, and those who with equal industry live in rich and populous cities, affected me with pity for their hard lot! yet it is possible, the wants and anxieties of these may be fewer and less than those; and health and contentment may compensate and make ample amends for what we might otherwise account a desolate and unhappy state of mere existence. The boundary of true felicity in this life, is to be content in the station which providence has allotted us; and however we may judge of happiness in others, measuring them by our own desires, we shall be sure to err: God is just and equal in all his ways; and,

What happier natures shrink at with affright,
 The hard inhabitant contends is right.

We travelled on without any thing to attract our particular attention, except the dreary mountains, at great distances round about us, peeping their bald heads over

one another, till we came to a view of Mam Torr, a mountain higher than the rest; and only notable to us, for the side next us being steep, and seemingly of loose earth. What is wonderful of it, according to the report of our guide, is, that notwithstanding the earth, accompanied sometimes with huge stones, is continually tumbling down, yet the mountain never seems to diminish.

Leaving Mam Torr to the north, and coming at length to the summit of a hill, we saw Castleton in a deep valley beneath us: at this place we, with great care of our footsteps, ventured directly down to Castleton, which would be a tolerable looking place, were it not for the poverty of the inhabitants. We soon found a guide ready with candles to conduct us to the horrid cavern, called the Devil's Arse; or, as the inhabitants more politely phrase it, Peak's Hole. It luckily happened, that another company, consisting of seven gentlemen and ladies, were just arrived with the like curiosity to explore the dark abyss: we readily agreed to join our companies, in order both to lighten the expence, and cheer up one another's spirits; for courage is best exerted in concert, and especially where ladies bear a part in the adventure.

The cave lies behind the town, about a quarter of a mile from the inn. On approaching it, and before we could see the entrance, we came to the foot of the mountain, which is divided with a sort of clift, from whence it is said to take its name. Walking about a hundred yards on level ground, the hill rises sharply on each side, forming almost a circle round us; the front is a ragged perpendicular rock of amazing height, with here and there a few shrubs and bushes, fitly inhabited by kites, daws, and screech-owls. On the top, and at the utmost verge of the rock, stands a castle, from which the town takes its name. We could obtain no account either when or wherefore this castle was built, its situation not being calculated for either offence, defence, or safety; but its antiquity and situation add to the horrible solemnity of the place. On our left-hand we saw another precipice beneath us, with a running water, not resembling the purling rills and silver streams, the haunts of fighting nymphs and love-sick swains, as described by the poets; but a brook, black and dismal as Styx or Acheron. We viewed this brook and the impending rock with awe and astonishment; till our attention at length was taken off, and turned to the entrance of the cavern; the sight of which, occasioned one of our company, an Oxford scholar, to break forth, "Oh! how tremendous!" and I could hardly help contrasting good old Jacob's words, and crying out, "How dreadful is this place! surely this is no other than the habitation of devils, and this is the gate of hell!" And indeed no one could have thought otherwise, who had been brought suddenly to the place, and seen how we were attended by infernal hags, and imps of darkness. Of these we had near a hundred, with lighted candles and wretched countenances, standing ready to conduct us into the cavern, which we are now to describe.

The extreme top of the arch is about forty feet high, and the width at bottom about double the height; it appears to be the work of chance or nature, and not to have had the hand of any human architect in its formation, though the sweep of the arch is not altogether irregular, but something in the gothic taste. When we were entered with our myrmidons, we saw on each side divers huts, and women busy at their spinning-wheels before their doors; in the middle a packthread-spinner's ground, where divers men and boys were at work. Passing by them about a hundred yards, the roof declines and comes within about three feet of the ground, which obliged us to stoop very low to get through; but after creeping sideways about twelve or fourteen yards, the roof rises again, and advances to such a height, that we could not discern the top with all the lights we had. At about fourscore yards farther, the roof declines again lower than before; and here we arrived at the first river, as it is called, but it seems rather a standing lake of water, which continues under the low part of the rock to the opening on the other side. Farther than this,

few travellers care to go: nay, that unbelieving philosopher, Hobbs, declares, none can or ever did go farther; and treats all accounts to the contrary as fiction. We shall quote a few lines from the translation of his poem, where he describes the entrance of the cave to the river:

Making our entrance with confused lights,
Two rocks, with crooked backs, drove from our sight
The beams of day, and bending down below,
On all-four force us through their arch to go;
Until at length the slow and humble source
Of a dark river crossing, stopp'd our course.
"Thus far we went, beyond it none can have
"The least admittance."

To this we shall subjoin Mr. Cotton's account of this river:

————— to a silent brook at last you come;
And there the rock its bosom bows so low,
That few adventurers further press to go;
For, who will pass, in double dangers bound,
Rising he breaks his skull, he's stooping drown'd:
Thrice I the pass attempted with desire,
And thrice I did ingloriously retire.

Having got to the place before my company, I turned round to look for them; but a sight so uncouth and dismal I never beheld before: they had just reared themselves upright from the first mentioned rock, and as they came forward, looked like a grand infernal funeral procession. In the front marched a gentleman in black, with a candle in each hand; after him three ladies, each with one hand on a woman's shoulder, and in the other a light; in like manner came the rest, attended by a multitude of lights on each side, directing their feet over the wet sand, slippery rocks, and loose stones. Thus they marched forward with slow and solemn pace, their heads reclining on their breasts; not as a mark of sorrow, but to mark their foot-steps: When they were arrived at the brink of the river, an old man, of venerable aspect, appeared in the character of Charon, to know who would be ferried over. The company looked silently on each other; but none seemed prepared for a voyage to the other world: at length our coachman determined to venture; and therefore informed the old gentleman, that he was ready to go with him; accordingly the boat was dragged to the shore, which was not like one of the boats of this world, being indeed no other than an oval tub or cooler, about six feet long, four wide, and one deep; and for the better accommodation of travellers, the bottom was strewed with straw. Into this our man got, and extending himself on his back, took leave of his friends, and was fairly launched off. The boatman jumped into the river; and wading up to his middle, towed his fare to the rock, and shoving the boat under it, we immediately lost sight of him.

When the honest driver had thus made his exit, great part of the cavalcade returned back in the same solemn pomp they came hither; for my own part I could not be satisfied to return without attempting the passage: but as the boat, which was now returned for another freight, appeared too shallow to support my weight, I enquired if there was no other way of pervading this horrible dungeon, and was shewn at the brink of the river, a dirty hole, full of loose stones, and not bigger than an oven's mouth; through this place, I was informed, those who did not chuse to go by water, might travel by land; not on foot, but on their hands and knees, crawling sideways, like as you may have seen crabs by the sea-side, among the crevices of rocks.

I was left to my choice; and therefore casting myself forward, I tried how the dirty rough pavement would agree with the temper of my hands. Being thus prone, I at once concluded it best to foot it away on my hands and knees, which I did till I came to about the middle of the chasm, and there I found my back rub against the rock, while my waistcoat buttons grazed along the rough stones at bottom; being encouraged by a person before me, who told me I had but a little farther to go, I scrambled on to the end; nor indeed was the whole way above eight or ten yards.

Being fairly got through, and helped upon my feet, by some kind of Christian devils I found attending, I lift up my eyes and beheld afar off, through the dark region, a company, surrounded with glittering stars, of what might be mistaken for celestial beings, whether cherubims or seraphims, could not be judged at that distance; but immediately they tuned their shrill throats, and chanted a divine hymn most melodiously; the concert was very agreeable and musical, to which the echo resounding through the high and hollow vault did not a little contribute; it seemed something like that which Milton describes at the raising Pandæmonium,

the found

Of dulcet symphonies, and voices sweet.

If my astonishment was great at seeing the mouth of the cavern, judge what it must be when I had got thus far, and seeing what I now saw. Indeed my spirits were fluttered, and in great confusion; the scene was so new, and so unexpected, that I was at a loss to guess, whether I had awoken in that undiscovered country, "from whose bourn no traveller returns;" or whether I was not now in a dream: all about me was total blackness, except the few glimmering lights that attended me, and at a great height and distance others like twinkling stars; betwixt us a vast abrupt, an empty void, or gulph of horrid darkness. However, after wiping my face, which was plentifully bedewed with sweat, notwithstanding the striking coldness and dampness of the place, I was informed by the guide, that those apparitions I had seen in the air, were no other than a collection of about a dozen lads of the town with candles in their hands; that what I heard was a Christmas carol; that the place they were in, was the highest part of the cavern, and called the Chancel, to which they clambered over the rocks; that its perpendicular height was about thirty yards, and the distance about fifty; that it was their custom to entertain subterranean adventurers with those cantations; for which they would expect some gratuity at our return.

Leaving them, we marched forward till we came to the second river, over which there was no bridge, nor the convenience of a ferry-boat; and therefore no other way of crossing it, than by wading, or being carried over on the guide's back. As I found myself too hot for wading, and the alternative might have subjected me to being soufed over head and ears, the bottom being full of large, loose, and slippery stones, I thought it time to suspend any further curiosity, and began to consider how I should get back again, there being no other way out than that we entered in by.

When we got back to the hole of the rock, the guide desired me to stand still awhile and compose myself, and when I crept through not to be in a hurry: I took his advice, and found the way less difficult than at first. One observation let me make here; which is, that after a sudden and heavy rain, the river rises to a considerable height, so as to prevent any passage under the rock; and if such an accident had happened while I was there, it would have been impossible to come out till the waters were abated, which might not have been for several days. I was informed of this when we came back; had I known it sooner, I should scarcely have been so foolhardy, it being now a very showry season. Mr. Cotton, who ventured farther in this cavern, according to his own account, than any man before him, takes notice of this in the following manner:

But soon I felt a new access of pain,
Now I was here, how to get back again;
For if the water should six inches swell,
'Twould render all retreat impossible.

Thus my ignorance encouraged me to encounter an adventure I should otherwise have shuddered at the thoughts of; but

Unseen the danger, we escape the dread.

Having viewed this subterraneous cavern, we were conducted by our guide back over the same hill we came down; when turning westward we passed within sight of the town of Tidswell, famous for containing the fourth wonder of the peak, which is a well (from whence the town takes its name) that ebbs and flows at uncertain seasons; for which reason we thought it not

not worth our while to dance attendance to its incon-
stancy. We therefore bore away more to the right-hand for Elden-Hole, the fifth wonder: when we came within a mile and a half of it, we dismounted, as there was no road for a carriage, the hills being full of large stones, sticking out of the ground like the grey weathers on Marlborough Downs.

We found Elden-Hole surrounded with a stone wall to prevent cattle from tumbling into it; the wall appears to be new raised; and seeing the farmer just by it, who holds the land, he informed us he had lost two fat oxen down the hole, within the last two years; for which reason, he said, he had walled it round. With the farmer's assistance, who pulled down some of the stones, we gained admittance, and soon perceived the wonder we came in search of. Mr. Hobbs calls it (in contradistinction to the last wonder we saw) *obscuræ conscia virgo figuræ*. We could see nothing remarkable but its being a huge gap or chasm in the earth, probably the effect of an earthquake; it appears to be entirely rock; the length of it is about five yards, and the width in the widest part three yards; the top of it is somewhat higher than the surface of the earth, and the mouth very jagged and uneven. It seems to be prodigiously deep, because 'tis wonderous dark. Mr. Cotton describes this at a very terrible place to behold:

Steep, black, and full of horror, that who dare
Look down into the chasm, I must declare,
If he betray no fear, is certainly
A better Christian, or a worse, than I.

It was not to us so horrible. We got the farmer to throw down some great stones as big as he could lift; in their passage we saw them strike the rock, and bound from side to side, till we lost sight of them, and could hear the sound sometime after, which, as the stone descended, decreased gradually, till it ended in a murmur. We could not learn that the depth was ever known. Mr. Cotton, who fathomed it, gives the following account of his experiment:

How deep this gulph does travel under-ground,
Tho' there have been attempts, was never found;
But I myself, with half the Peak surrounded,
Eight hundred fourscore and four yards have sounded;
And tho' of these, fourscore return'd back wet,
The plummet drew, and found no bottom yet.

This part of the country is called Peak Forest, and is, perhaps, the only forest in England, that has hardly scarce a bush or tree in it.

The next place we visited was Poole's-Hole, the sixth wonder of the Peak: it is about half a mile from Buxton; there are a few straggling cottages about it, inhabited by poor people, whose livelihood is gained by shewing strangers the place; but as we came early, we were not much crowded with them; however, three or four women soon got candles and shewed us the way. This cave lies at the bottom of a hill called Coitmois, but the entrance into it is very different from the former; for this is almost hid among bushes and brambles, and so very low, we were obliged to creep with our hands on the ground to get in. After we were entered we found it lofty enough, for in many places we could not see the roof. Peak's-Hole is very cold and damp; but this is extremely so; and the continual dropping of water upon us made it very unpleasant and troublesome: this water being mixed with some kind of petrifying juices from the rock, which is of lime stone, has formed abundance of odd shapes, which the country people have given names to. Over the entrance we were shewn Poole's bed-chamber; on the right-hand, his kitchen; and a little further on, his saddle, which is a large piece of petrified matter joined to the native rock, and is somewhat in the shape of a pack-saddle; beyond that, we were directed to his chair, pendulous from the roof; and just by it a sitch of bacon, hanging in the same manner, and both looked as if they would tumble upon our heads. Besides these, we were shewn a lion and an ape, 'squire Cotton's haycock, &c. all of the same materials, and as much like what they are said to represent, as they are like any thing else. We asked our guide who this Poole was? she told us he was a great robber, that

used to harbour in this cave many years ago; she could not tell in what king's reign.

We were now got about two hundred yards into the cave, still clambering up rocks so wet and slippery, that we really thought there was danger of falling and breaking our limbs, for the rocks are very steep and ragged, and on our left-hand a frightful precipice where we could see no bottom. As we were still ascending, we asked how far it was to the queen of Scot's pillar, which is reckoned the most curious thing here, it being (according to account) a petrified column of considerable height, spangled with glittering spar or ore, and transparent; though we have since learnt, the curiosity has been considerably magnified; the woman informed us it was about as far again as we had already come, and higher up all the way; that from thence we should descend about as far again, being about half a mile in length, and then come back through the bottom, which would be easier walking. We asked our companions whether they chose to go forward or return back. Their curiosity seemed satisfied as well as ours, and they chose the latter; so we faced about, and got out again as clean as we could. At the mouth of the cave, divers females were attending with basons of water and clean towels; we washed our hands, paid the fees of the place, and bought a few of their natural curiosities; among which were some small chrystal stones of an oblong figure, naturally squared, and which runs to a fine point at each end; these are called Derbyshire diamonds, and are found on the peaks, not by digging, but in mole-hills, where they are cast up.

Buxton-Well is the seventh wonder of the Peak; famous for a hot and cold spring within a few feet of each other. This place was formerly called St. Ann's-Well, where many miraculous cures were said to be performed. It lies at the bottom of the dirty village of Buxton, a small village not far from the head of the river Wye. The public baths are at a public inn; which, by way of preeminence, is dignified and distinguished by the name of The Hall, built by the duke of Devonshire. It is a large commodious house, and a great deal of good company resort to it in summer-time, and stay a month or two for the benefit of bathing, or the pleasure of the country for air and exercise: there is plenty of grouse or moor-game for gentlemen that love shooting; and trout and grayling for those who like fishing; in short, there is no want of diversions, and the manner of living is easy and not expensive. They are accommodated with a good assembly-room, in which the company dine and sup together; after supper they generally have a ball. The well is about a stone-cast from the house, crosses a dirty lane; which is covered with a handsome building to shelter it from the splash of the road, being the section of a rotunda; the inside of which is paved with brick, and the well steened round with stone. A young female attends to dip the water, which is not so warm as that of Bristol, much less than that of Bath. The walks are adjoining the well, and are contained in a field of about an acre, almost circular; bounded on one side by a pretty river; on the other, by the above dirty lane. The walks are not of grass or gravel, but of pure natural earth, strewed over with fine ashes, to prevent the soil from sticking to the ladies shoes. On the side next the river, stands a large temple, dedicated to the goddess Cloacina; in the middle, a mount is cast up and planted with trees and shrubs.

The water possesses an intermediate degree of heat, between those of Bath and Bristol; and is the principal calcarious water, described by Dr. Short; who informs us, that if five-eighths of a quart of boiling water be added to three pints of river water in the summer, it will give the exact heat of Buxton water in that season. It has a sweet and pleasant taste, and when cooled, weighs eight or ten grains in a pint less than river water. Its nature approaches nearer to that of Bristol than Bath, and it may be safely used both inwardly and outwardly in cases where Bath-waters are hurtful. It has relaxing, diluting, sweetening and attenuating qualities, and opens obstructions of the smallest vessels. It cools the

parts that are too hot, gently warms those that are cold, and dries up those that are moist. It is not followed with sweating, but rather with coldness; and is good in consumptions, for hot scorbutic humours, and all fluxions and bleedings, as well as hypochondrical and hysterical cases. It is also of great use both externally and internally, in the regular gout, in rheumatic and scorbutic pains, in vomiting of blood, and in inordinate fluxes of the piles, as well as in other bleedings. It is proper in an inflammation of the liver, and in heat and obstructions of the kidneys; in all which cases it has been found successful even by external use. Internally it is good in a diabetes, in bloody urine from a weakness in the urinary passages, in a bilious cholick, in want of appetite, in cold stomachs from hard drinking, especially spirituous liquors, and in an atrophy, from a sharpness of blood, occasioned by free drinking at improper times of the day. To these may be added, contraction and stiffness of the vessels, especially in old age; cramps, convulsions, the dry asthma without a fever or quick pulse, barrenness from various cases, and also a gonorrhœa. It likewise cures St. Anthony's fire, ring-worms, scabs, the itch, morphew, nodes, chalky swelling, and all hard, callous tumours, and old strains and withering of the parts; in all which last cases bathing is chiefly to be used. Buxton is seated four miles from the three shire stones, five west of Tideswell, and thirty-two north-west of Derby.

We have already in our account of Tideswell, mentioned a reciprocating well. This well is one of the wonders of the Peak, and therefore merits here a more particular description. It is about three feet deep, and three feet wide, and the water at certain periods of time, sinks and rises with a gurgling noise, two thirds of the perpendicular height of the well. Many conjectures have been formed to account for this phenomenon. Some have thought, that the aqueduct there is a stone standing in equilibrio, and occasions the rise and fall of the water by its vibrations backwards and forwards. But it is as difficult to conceive what should occasion these vibrations at uncertain periods, as what should produce the rise and fall of the water. Others imagine that these irregular ebbings and flowings, as well as the gurgling noise, are occasioned by air, which agitates, or presses the water from its subterraneous cavities: but they do not tell us what can be supposed to move the air. Others have imagined the spring to be occasionally supplied from the overflowing of some subterraneous body of water, lying on a higher level. But perhaps the whole is owing to a subterraneous syphon; which, when full to the bend, discharges a quantity of water; which, added to that always issuing from the spring, causes the well to rise, till the water in the basin of the syphon is sunk below the aperture of the leg, where the syphon ceases to act, and consequently the well sinks, till the basin is again full: and by thus discharging a greater and less quantity at different periods of time, occasions the flux and reflux, or flowing and ebbing of the well.

At a village in these parts, called Birchover, is a large rock, on which are two logan, or rocking stones. One of them is twelve feet high, and thirty-six feet in circumference, yet so equally poised upon a point, that it may be easily moved with the finger. We have described several of these stones in our survey of Cornwall.

At the bottom of several mountains in this county, there are cavities, called by the inhabitants Swallows, from their swallowing up several streams which never afterwards re-appeared. But some say that the subterraneous rivers in the Devil's Arse, and other rapid springs that issue out of the mountains near Castleton, a town six miles north-east of Buxton, are formed from the conflux of waters in these cavities.

Burgh, a little village near Castleton, was frequented by the Romans, as appears from a causeway leading from it to the baths of Buxton, and thence called Bath-gate; it being evident from several remains of antiquity, that the Romans were well acquainted with these baths. It must also be observed, that Lucan, and other Roman writers, mention them. Here are still the remains of a Roman wall,

wall cemented, with red Roman plaster, near one of the springs called St. Anne's Well; where also may be seen the ruins of an ancient bath and its dimensions.

At Spittle, a village in Peak, near Castleton, there was an hospital founded before the twelfth year of Edward III. and dedicated to the Virgin Mary. The mastership was in the gift of the crown, and valued on the dissolution at forty shillings *per annum*.

From hence we proceeded on our journey to Bakewell, by the Saxons called Baddeconpell, and supposed to have taken its name from baths and springs of hot water near it, now called Baxton-Wells, Bade or Raden, in the German language signifying a well. It stands on a small river called the Wye, near its conflux with the Derwent; and is thought to have been a Roman town, from an altar which was dug up here some years ago, in the grounds belonging to Haddon-House, cut in a rough kind of stone, such as the house is built with, and bearing the following inscription: DEO MARTI BRACIACÆ OSITTIVS CÆCILIAN. PRÆFECT. TRO.——V. S. Two or three other altars have likewise been found near this place, but without any inscription. Bakewell is a large, good town, and though it has but one church, has seven chapels, that are exempt from episcopal jurisdiction. Its chief trade, which is very considerable, is in lead.

Here is a weekly market on Monday, and six annual fairs, viz. Easter-Monday, Whitfun-Monday, August the eighteenth, for cattle and horses; Monday after October the tenth, for ditto; and Monday after November the twenty-second, for horses and cattle.

Near Bradwall, a village in the High Peak, about seven or eight miles north-west of Bakewell, a substance resembling a tooth was dug up; which, though one fourth of it was broken off, measured thirteen inches and a half round, and weighed near four pounds; and among other substances, supposed to be bones, there was a skull which held seven pecks of corn. It is somewhat remarkable, that if the skull was intire, there should be any doubt whether it belonged to man or brute; yet we are told these supposed bones were thought by some to have belonged to an elephant, and by others to a man; it has, however, been judiciously determined by later writers, that they are not bones, but formed of that genius of spars called the *stalactitæ*, by the dropping of water from the roofs of some subterranean caverns.

At a small distance from Bakewell is the village of Wardlow, where some people, making a turnpike road, took out of an adjoining field an heap of stones that had lain there time immemorial, and which plainly appeared to be a work of art; when, to their great surprize, they found that seventeen persons or more had been interred there in a circular range. The bodies appeared to have been lain upon the surface of the ground, upon long flat stones, and their heads and breasts protected from the incumbent weight of stone, afterwards heaped over them, by small walls made round each, with a flat stone over the top, and two of them were walled up, and covered from head to foot in the form of a long chest. Upon removing the rubbish, many bones were found undecayed. The heap of stones that covered them was thirty-two yards in diameter, and about five feet high, and the stones, of which the coffins or tombs were composed, appeared to have been taken from a stone quarry, about a quarter of a mile distant. A part of the circle was vacant, which was probably occasioned by that part being destroyed before the people were aware that it contained any thing remarkable, as several bones and teeth were found there.

Some lands in this county were anciently held by a tenure for destroying wolves; and at Wormhill, a small village near Bakewell, are certain lands, which to this day retain the name of Wolvehunt, which they originally acquired by being held under this tenure.

South-west of Bakewell stands Winster, the next town we passed through: it is situated near some rich mines of lead, one hundred and thirty-three miles from London, has a weekly market on Saturday, but no annual fairs.

Leaving this place we come to Wirksworth, or

Wirksworth, a large and much frequented town, the chief of an hundred of the same name in the Peak; one hundred and eighteen miles from London. The Peakails, as they are commonly called, are a rude, boorish kind of people; but bold, daring, and even desperate in their searches under ground; for which reason they are frequently employed by our engineers in the wars to carry on the sap, when they lay siege to strong fortified places. Here is a handsome church, a free school, an alms house, and the largest market for lead in England; for at a small distance from the town, at Creich, a village to the eastward of it, and on the east side of the Derwent, are the furnaces for smelting this mettle. These furnaces are built on the hills east of the town, and on that part of them which lies exposed to the west winds. They burn wood in them, and generally wait for a west wind before they begin to smelt; for the fumes, which are extremely noxious, are by this means carried directly from the town; and though it has been thought by some persons, that if they had been built west of the town, and worked with the wind at east, the fumes would have been equally blown from the town; yet the east situation was certainly greatly to be preferred, because it is found by experience, that the wind blows longer from the west quarter than from any other. At the smelting-mills they melt down the lead ore, and run it into a mold, whence it becomes what they call pigs. The bellows are kept in continual motion by running water.

The produce of the mines in this hundred is very considerable. The king claims the thirteenth penny as a duty, for which the proprietors compound at the rate of one thousand pounds a year: and it is said that the tythe of Wirksworth alone has been worth as much yearly to the rector of the parish.

There is a remarkable court kept in this town, called the Barmoot, for judging controversies among the miners, and adjusting subterranean quarrels and disputes. It consists of a master and twenty-four jurors, who, when any person has found a vein of ore in another's land, except it is in orchards or gardens, assign two meres of ground in a pipe, as they term it, and a flat; the former being twenty-nine yards long, and the latter fourteen yards square, appointing to the finder one mere, and the other to the owner of the land, besides, certain fees and perquisites, for the passage of carts, the use of timber and other conveniences. This court not only prescribes the works under ground, but is likewise judge of all their little quarrels.

When any miner has found a vein of ore, he uses the following method to ascertain his property; he thrusts into the ground a number of small forked sticks of about a foot long, at certain distances, where the vein runs crooked, each stick marked with the initial letters of the miner's name, and those they call possessions; so that no person dare move these marks, or dig across or into other veins, under a severe penalty.

Wirksworth has a weekly market on Tuesday, and three annual fairs, viz. Shrove-Tuesday, May the first, and September the third, for horned cattle.

Near this town there are two springs, one hot, and the other cold, not two feet distant from each other.

We next visited Ashborn, or Ashborne, situated on the east side of the river Dove, and on the borders of Staffordshire, one hundred and eight miles north-west from London, and ten from Derby. It stands in a rich soil and carries on a considerable traffic in cheese, great quantities of which it sends both up and down the Trent.

Here is a weekly market on Saturday, and seven annual fairs, viz. February the thirteenth, for horses of all kinds, and black cattle. April the third, May the twenty-first, July the fifth, for horses, and wool. August sixteenth, for horses and black cattle; October the twentieth, and November twenty-ninth, for horned cattle, cart horses and others; the fairs for horses begin three or four days before the fair day. If the twenty-ninth of November falls on a Sunday, then the fair is kept on the Saturday before for the rule is, to keep it on St. Andrew's eve.

At Yeveley, a few miles south of Ashborne, there was an hermitage which Ralph Le Fun, in the reign of king Richard the first, gave, with all its revenues, to the Knights Hospitallers of St. John at Jerusalem whereupon it became a preceptory to that order, and was dedicated to St. Mary and St. John the Baptist. Its revenues upon the dissolution were valued at ninety-three pounds, three shillings, and four-pence per annum.

Derby, which was the next place we visited, is a large populous town, situate on the western banks of the Derwent, one hundred and twenty-two miles from London. It is watered on the south by a small stream called Merton brook, which a little to the eastward of the town falls into the Derwent. There are nine bridges over this brook, and a large stone bridge of five arches, over the Derwent. Upon this structure is a dye-house, which was formerly a chapel dedicated to St. Mary, and founded by some of the kings or queens of England, tho' neither the person nor revenues are known.

While the Danes continued masters of this county, they made the town of Derby their principal residence; till Ethelfleda, a princess of the Mercians, took it by surprize, and put all the Danes she found in it to the sword. It is thought there was formerly a castle in the south east quarter of this town, because there is a hill in that part called Cow-castle-hill, and a street leading to St. Peter's church, which, in ancient deeds, is called Castle-gate, though not the least vestiges of a castle are now to be found.

In the reign of Edward the confessor, which began in the year 1042, there were one hundred and forty three burgeses in the town of Derby; but this place was so reduced in the reign of William the conqueror, who ascended the throne in 1066, that the burgeses amounted to no more than one hundred; and these at the feast of St. Martin were obliged to pay twelve sheaves, or forty shocks of corn to the king. It was afterwards incorporated by king Charles I. and is governed by a mayor, a high-steward, nine aldermen, a recorder, a town-clerk, fourteen brethren and fourteen common-council-men. The town is large, well-built, and populous; contains five parish churches and several meeting-houses for dissenters of different denominations. Among the churches, that of All-saints is the most remarkable; and appears from an inscription to have been originally built in the reign of queen Mary, by the contributions of the batchelors and maidens of the town; but no part of the old structure is now standing except the tower, a beautiful piece of Gothic architecture, one hundred and twenty-eight feet high. The church has been rebuilt in a very elegant manner, not many years since. It was originally a free collegiate chapel, and besides the master or rector, who was the dean of Lincoln, had seven prebendaries; but at the suppression the whole revenues of the church amounted to no more than thirty-nine pounds twelve shillings *per annum*. Near this church there is an hospital for eight poor men and four women, founded by a countess of Devonshire.

The market-place is a handsome square, adorned with genteel buildings; an elegant market-house, and town-hall, in which the assizes are held; the latter is a large and beautiful structure. Some of the streets are narrow, and composed of old timber houses; but the other parts of the town are decorated with new buildings which make a noble appearance; many of the gentlemen who have estates in the Peak generally residing here. Frequent horse-races are frequently held near this town, on a piece of ground called the Row Ditches.

In this town was a cell of Cluniac monks, dedicated to St. James, but belonging to the abbey of Bermondsey in Southwark, near London, to which abbey this church was given, by one Waththeof, before the year 1140; for in that year king Stephen confirmed the grant. It was protected as a poor hospital, in the fourteenth year of the reign of Henry III. and in the next reign reckoned among the alien priories; but it continued till the general dissolution, when the king was considered as founder, and the yearly revenues amounted to about ten pounds.

In digging near the place where the chapel of this re-

ligious house formerly stood, a stone coffin was discovered, and in it a body of prodigious size, but tumbled into dust with the first motion. The coffin was hollowed in the shape of a human body; but it is not known to whom it belonged, or how long the corps had been buried.

Here was also an hospital for leprous persons, called Maison de Dieu, or the House of God, under the government of a master, as old as the time of king Henry II.

Here was likewise an hospital of royal foundation for leprous brethren. It was governed by a master, whose place was in the gift of the crown.

A little below the bridge over the Derwent, is a beautiful island formed by that river. It is said to be artificial, and to have been raised at a very great expence; but however that be it is beautifully planted, and forms an elegant garden. Opposite to this island is a very extensive building, containing, a curious machine for making orgazine or thrown silk, erected in the year one thousand seven hundred and thirty-four, by the late Sir Thomas Lambe, alderman of London, who, at the hazard of his life, had brought this machine from Italy, where this sort of silk was imported to England. This engine has 26,586 wheels, and 97,746 movements, which are all worked by one water-wheel fixed on the outside of the house, and turned by the stream of the Derwent, three times round in a minute. By every turn of this water-wheel, the machine twists 73,726 yards of silk, so that in twenty-four hours, it will twist 318,496,320 yards. Any single wheel or movement of this complicated machine, may be stopped without impeding the rest; and the whole is governed by one regulator. There have been three or four hundred hands constantly employed, most of whom were women and children, whose business was to tie the threads that broke. The house, which contains this mill, is a large, handsome structure, built with brick, five or six stories high, and of very great extent; yet the whole of it is at once equally warmed by a fire-engine, contrived for that purpose. The machine was esteemed of such importance by the legislature, that on the expiration of the patent, which Sir Thomas had obtained for the sole use of it, during fourteen years, the parliament granted him 14,000 l. as a farther recompence for the great hazard he ran, and the expence he had incurred by introducing and directing it, on condition that he should suffer a perfect model of it to be taken, in order to secure and perpetuate the invention; which was accordingly done, and this model is now kept in the Record-office, in the Tower of London. However, great care was taken, during Sir Thomas's life, to prevent any one examining the engine itself too nearly; by which means it continued the only engine of the kind in Great-Britain till after his death; when it being publicly exposed to sale, by order of his widow, several plans were taken of it, and other engines of the same kind were soon after erected in different parts of the kingdom.

Derby sends two members to parliament, has a weekly market on Friday, and eight annual fairs, viz. January the twenty-fifth, and on Wednesday in the assize week, for cheese; Friday in Easter week, Friday after May-day, Friday in Whitfun-week, and July the twenty-fifth, for horned cattle; September twenty-seven, twenty-eight, and twenty-nine, for cheese; and on the Friday before Michaelmas-Day, for black cattle.

The old Roman city, Derventio, now called Little Chester, is situated on the river Derwent, about a mile below Derby. Dr. Stukely traced the track of the wall quite round, and in some places saw under ground the foundation of it in the pastures. Within the walls are the foundations of houses; and in the fields, round what is called the Castle, you may see the track of the streets laid with gravel, particularly in a dry summer, when the grass over them is very bare. Several wells are found, some of which are square, and curbed with good stone. And here abundance of Roman coins of gold, silver, and brass, have been dug up. There have also been found earthen pipes, the remains of aqueducts, and various other antiquities. Towards the river they have dug

dug up human bones, brass, rings, and the like. There was a bridge over the river, and its foundations may be still felt with a staff.

St. Helen's, near Derby, was a monastery of canons regular of St. Augustine. To this house, Hugh the priest, dean of Derby, gave to the prior Albinus, and the canons there, which he held in little Derby, for the erecting a church, and an habitation for them; together with divers lands of his patrimony. It was valued, at the dissolution, at two hundred and forty-eight pounds fourteen shillings and five-pence *per annum*.

Repton, a small town situated near the conflux of the Trent and Dove, about nine miles south-west of Derby, was called by the Romans, Repandum. It was formerly a large town, and the burial place of several of the Mercian kings. A noble monastery for religious persons of both sexes was founded at this place about the year 658, under the government of an abbeys; but this structure being destroyed by the Danes, Maud, widow to Ranulph, the second earl of Chester, founded near the same spot, about the year 1172, a priory of black canons, of the order of St. Augustine, dedicated to the honour of the Holy Trinity and St. Mary. At the general dissolution of religious houses, it was endowed with annual revenues to the amount of one hundred and sixteen pounds, eight shillings and six pence.

At Griefley church, about four or five miles south of Repton, there was a small priory of canons, of the order of St. Augustine, founded by William, son of Nigell de Greifly, in the reign of Henry I. dedicated to St. Mary and St. George, and endowed at the general dissolution with an annual revenue of thirty-one pounds, six shillings.

At Dale Abbey, Depe-Dale, or Stanley-Park, a little to the east of Derby, was founded by Radulphus, son of Germundus, on account of an admonition to a baker in Derby; who thereupon left all he had, and became a hermit. Serlo de Grendon, son-in-law to the said Radulphus, built a magnificent church and monastery here, wherein he placed canons from the cell at Calke, and procured several privileges from Rome; but being remiss in divine offices, for fear of being removed, they resigned, and returned from whence they came. Then they had six canons from Topholon, who were recalled on the same account. After this William Grendon, son of Serlo de Grendon, settled the town and park of Stanley Depedale, and lands in Okebrook, upon this house; and nine canons from New-House, in Lincolnshire; and the heirs of the said William confirmed the gifts of their ancestors, to the canons of Stanley-park; all which, with other possessions, were confirmed to them by king Henry III. in the nineteenth year of his reign. The present owners are the earls of Stamford and Chesterfield. The annual value, at the dissolution, was one hundred and forty-four pounds, twelve shillings. A great part of the walls are still standing.

At Calkey-abbey, a small village near Derby, Maud, countess of Chester, founded a monastery of regular canons of the order of St. Augustine, dedicated to St. Mary, and St. Giles, before the year 1161; but she afterwards caused most of the canons to be removed to the priory of Repton, to which the monastery continued a cell till the dissolution.

At King's Mead, a village near Derby, was a priory of Benedictine nuns, founded about the year 1160, and dedicated to St. Mary de Pratis, or St. Mary of the Meadones. Henry II. granted and confirmed to the nuns, twenty-seven acres of land, in his forest of the Peak, with large commonage in that forest; and Henry III. granted to the prioress and nuns, an augmentation of an hundred shillings *per annum*, to be paid by the bailiffs of Nottingham. At the suppression, the annual revenues amounted to three hundred and eighteen pounds, sixteen shillings and two-pence.

At Bradhall, near Derby, was a house of Hermit friars, which was in being in the reign of Henry III. after which it became a small priory, of the order of St. Augustine, dedicated to the Holy Trinity; and thus it continued till the dissolution, when the annual revenues amounted to thirteen pounds and eight-pence.

At Lokay, near Derby, was an hospital of the order of St. Lazarus of Jerusalem, dedicated to St. Mary Magdalen, and subject to a religious house in France; to which they annually paid a rent of twenty pounds; but a war breaking out with France, it was seized, and given by Edward III. to King's College, in Cambridge.

At Stanley, a village on the north side of Balslover; and at Quarndon, another small village near Derby, there are Chalybeat springs, of the same kind with those at Tunbridge, in Kent, and the Scarborough Spaw, in Yorkshire. At Quarndon there is also a cold bath, and great numbers of people resort thither, at the proper seasons, to drink the waters.

At Kedleston, a small town near Derby, is a well, said to be of singular virtue in healing old ulcers, and the leprosy.

At Kedleston, near Derby, lord Scarfdale has erected an elegant palace, and fitted up the whole in a most superb manner. When we visited this beautiful structure, the following pictures were placed in the apartments; but these are only a small part of this nobleman's collection.

In the Dining-Room.

Dead Game and Dogs: an excellent picture, in high preservation, by *Snyders*.

A Landscape, with a public house, and figures, by *Teadon*.

An Historical Piece, by *Zuccarelli*.

Birds, by *Barlow*.

Two Landscapes, by *Zuccarelli*.

Still Life: a fawn, peacock, &c. by *Snyders*.

The Saloon

Terminates in a grand dome at top, finished like the Pantheon.

An old man with a flapped hat and ruff, by *Rembrandt*.

Bacchus and Ariadne, a capital picture, by *Luca Giordano*.

Landscape with Figures, by *Tempesta*.

Figures and Cattle, by *Bassan*.

Joseph interpreting Paroah's Dream, by *Rembrandt*, in his best manner.

Bacchus and Ariadne, two single figures, by *Guido*.

Holy Family, by *Raphael*.

Adam and Eve, by *Dominico Fetti*.

Landscape, by *Claude Lorrain*.

Marcus dead, by *Paul Veronese*.

Coriolanus, *Ditto*.

Orlando rescuing Armida, by *Caracci*.

A Sleeping Cupid, by *Guido*.

The Flight into Egypt, by *Polemburg*.

Holy Family, by *Carlo Maratti*.

Andromache, by *Guido*.

Landscape, by *Wilson*.

Landscape, with rocks and asses, by *Berghen*.

Another by *Dieft*.

Leaving Derby, we proceed to the northward, till we reached Matlock, a village situated on the banks of the Derwent ten miles from Derby, and famous for its medicinal waters.

Matlock-bath is a most beautiful place; happy in its situation, for those who love a peaceful solitude, or would divide their time betwixt that and agreeable society: it seems calculated in the due medium between the gay flutter and extravagance of Bath and Tunbridge, and the dull, dirty, lifeless aspect of Buxton and Epfom; abounding with every thing that tends to health and rational pleasure: further than this it has nothing to boast; and beyond this, happiness is sought for in vain.

Matlock-bath consists of one uniform range of buildings; except an out-house of handsome lodging rooms, nearly adjoining, and the stables, which are out of sight of the house. In the first part of the building are two baths; one for gentlemen, the other for ladies; the entrance and dressing-rooms are quite distinct; the ladies bath is arched with stone about ten feet above the surface of the water, which makes the place cool, and

tenders it impervious to every eye but their own: over the bath are the lodging-rooms, for the convenience of those who most constantly bathe. Beyond the Bath, on the ground-floor, is a range of rooms, each capable of entertaining a dozen people; at the further end is a large kitchen a servants-hall. In the middle of the building, is a grand stair-case, fronting the top of which, is the music-room; on the right-hand is the assembly-room, which is large and commodious, having a passage out on the side of the hill, which rises to a great height, and shelters the back-part of the house. As the company who come to this place, are, for the time being, one family, they breakfast, dine, and sup together in this room. On the left-hand of the music-room are bed-chambers, and others on the floor above.

Before the front of the house runs a spacious terras; from whence a few steps bring you down to a level grass-plot, convenient for the company to walk or play at bowls on, as they like best; and at the edge of the green is built a dwarf-wall, beyond which descends a rocky shelf to the river Darwent, which is here very wide and rapid, and runs with a murmuring noise, greatly increased by the repercussion of the sound from the high rocks that over-hang it; the highest of them, called Matlock-Torr, has been one hundred and twenty-three yards in perpendicular height, being ten yards higher than the top of St. Paul's. On one side of the house is a grove of lofty trees, on the other a delightful shady lawn, called The Lovers Walk. In short, the whole place is surrounded with agreeable landscapes, fine woods, pleasant walks, high rocks, steep hills, and romantic views; which, together with the constant rolling of the Darwent streams, render it a perfect paradise.

Towards evening we strolled by the river side, about a mile, to a pretty house at the foot of a rock, called The Boat-house; we found the landlord a facetious fellow; who, after drinking to better acquaintance, grew very sociable, shewed us his garden, the wall of which, he told us, is one solid block of marble, and, for ought he knew, was a mile thick: we found it, on enquiry, to be a vein of grey marble; and that at some distance is a quarry from whence it is hewn: he afterwards shewed us his house, and a neat assembly-room, where company from the Bath frequently come to drink tea, and have a concert; there being a handsome orchestra furnished with a harpsichord, and divers other instruments: sometimes the company go in the pleasure-boat on the river, and have a concert of french horns, &c. which must make fine harmony among these rocks.

About seven we returned back to the Bath, where we found sufficient amusement till supper-time, by observing the different employments of the company. Some were loitering on the terras, some frolicking on the green, some sauntering in the grove, and some amusing themselves in the lovers walk. In the great room some ladies were employed at their needle, while others were as busy at cards: but we observed this difference; that those who were at work had the happiest flow of spirits, and were the cheerfullest of the company. About a quarter before eight, a servant rang a great hand-bell on the terras, which we found was notice to the company that supper was ready; about ten minutes after he rang again, which was to inform them supper was serving up. We sat together at one table, and the company being seated, a band of music played for some time: the supper, which was plain, and plentiful, being ended, the bell was a third time rung, on which the company arose, and formed themselves into parties, some to cards, and some to country-dancing; while others retire to enjoy the more rational amusement of instructive conversation.

What makes Matlock-bath still more agreeable, is, that besides the place being pleasant, and the people who resort to it polite, there are no extravagant charges annexed; the company pay nothing for lodging or bathing, let them stay ever so long or short a time; and the ordinary expences are three shillings a day for meals, including tea in the afternoon: and

though there is neither master nor mistress of the house, there is found the most courteous and complaisant behaviour from the attendants, and the whole business is conducted with the utmost politeness, decency, and oeconomy. The reason of its being thus managed, by servants, we were informed is, that the Bath rooms, house, &c. being new erections, and rendered so compleat at a great expence, by the subscription of divers gentlemen round the country, who are now proprietors; at first they could not let it any rate, nor since at the rate they set upon it; for having tasted the profits, and finding their dividends amount to more than by any rent that had been offered, they chuse to continue it to themselves in the manner it is.

The water of Matlock-bath is not so hot as that of Bristol; but it is very clear, and emits no steam except in a cold morning, or in the winter season. It is lighter than common water; and a gallon of it, upon evaporation, yields forty grains of sediment, whereof thirty grains are salt, consisting of nitre and sea-salt, and the remainder is a white rough alkaline earth; that it may be properly called a calcarious water. It nearly agrees with that of Bristol, with regard to the quantity of earth it contains, and is more powerful in sweetening the blood and humours, than that of Buxton. The virtues are nearly the same as the waters of Buxton and Bristol, both for external and internal use. They are proper to cure gleans, the fluor albus, the cancer, and the king's evil, both by bathing and drinking. Bathing is proper for rheumatisms, the scurvy, itch and scabs; hectic ulcers are relieved both by outward and inward use; internally it is good in an atrophy, from an hectic fever, where the blood is thin and sharp, the motion quick, and the vessels weak. It is also successfully used in spitting of blood, bloody urine, bloody stools, and frequent bleedings at the nose; it likewise cures the diabetes, and a bilious cholic.

Leaving Matlock we proceeded on our tour and came next to Alfreton, which is thought to have been anciently called Alfred's Town, from its having been originally built by king Alfred. It is one hundred and thirty-five miles north-west of London, and remarkable only for its ale; which, though very strong, is extremely pleasant.

Here is a weekly market on Friday, and an annual fair, held July the thirtieth, for horses and horned cattle.

Chesterfield, the next town we entered, is the chief of a hundred in the north-east part of this county, called Scarsdale-hundred, one hundred and sixteen miles north-west from London. It is pleasantly situated, in a fruitful soil, on the side of a hill, between two rivulets, called the Ibber and Rather. This town was made a free borough by king John, and had formerly a monastery, dedicated to St. Mary and the Holy Cross, which was valued, at the dissolution, at no more than nineteen pounds a year. It had also an ancient hospital for lepers, in the reign of king Richard I. dedicated to St. Leonard; but we do not find by whom it was founded, nor its revenues at the dissolution. The houses of this town are, for the most part, built of rough stone, and covered with slate. The market-place is spacious, and a market-house has been lately erected. It has a large, handsome church; but the spire being built with timber, and covered with lead, is warped by the weather, from its perpendicular direction. It has a free-school, which is said to be the most considerable in the north of England; it sending many students to the universities, especially to Cambridge. The town is governed by a mayor and aldermen; and the sessions for the peace are held here for the northern division of the county.

Here is a weekly market on Saturday which is well supplied with corn, lead, malt, leather, stockings, blankets, and bedding; commodities, in which the inhabitants carry on a considerable trade, not only with the neighbouring towns, the Peak, the city of Chester, Manchester, and Liverpool, but with Yorkshire, Northamptonshire, Lincolnshire, Leicestershire and London. It has also eight annual fairs, viz. on January the twenty-fifth,

fifth, February the twenty-eighth, April the third, May the fourth, and July the fourth, for cattle, horses, and pedlars goods; on September the twenty-fifth, for cheese, onions, and pedlars goods; and on November the twenty-fifth, for cattle, sheep and pedlary.

At Beauchief, a village on the borders of Yorkshire, north-west of Chesterfield, there was an abbey of Premonstratensians founded in the year 1183, by Robert, Fitz Ranulph, lord of Alfreton, who being one of the four knights concerned in the murder of Thomas Becket, archbishop of Canterbury, erected this abbey as an expiation of that fact, and dedicated it to him by the name of Thomas the Martyr. It was valued upon the dissolution at the yearly income of one hundred and twenty-six pounds, three shillings and four-pence.

In passing from Chesterfield to Balfover, we visited Chatworth-house, a noble seat belonging to the duke of Devonshire, and reckoned the first wonder of the Peak. The road leading to it from Chesterfield, is over hills, that seem to be piled upon one another, like Pelion upon Offa. The trees here are as scarce as churches; for there is hardly any thing to be seen but stones sticking out of the earth, from three to seven feet high; and from five to fifteen feet in breadth. These are called Peak-stones, and serve to make mill-stones. There is a high hill, in the same road, from the top of which may be seen, in a clear day, Lincoln-minster, which is at least forty miles distant. From this hill there is a descent to Chatworth-park, which is prodigious rough all the way; so that no vehicle can pass it without danger, and even foot travellers must step down carefully from stone to stone. Chatworth-house is large, lofty, and built with hewn stone, of a square form, and the roof is flat, and surrounded with a handsome ballustrade. The windows are lofty, and glazed with plate glass; each square being two feet broad, and the sashes seventeen feet high. The glass is ground with a bevil edge, and the frames double gilt. In short, the external parts of the building and ornaments make altogether a most magnificent appearance. It is seated in a fertile and delightful valley, enriched by a variety of native beauties, while the dreary wildness of the country around adds to the charms of this delightful spot, and gives it the air of enchantment. The river here, for a while, puts on a smooth aspect, and glides gently by, as unwilling to leave so enchanting a spot. Between it and the house is a venerable walk of trees, which, says Dr. Stukeley, still retain the name of the Philosopher Hobbs, who frequently studied under its shade. Noble iron gates and ballustrades expose to view the front of the house and court, and are terminated at the corners next the road with two large stone pedestals of attic work, curiously adorned with trophies of war, and utensils of all the sciences, cut in basso relievo. The face of the building is Ionic, the whole being a square of a single order, but every side of a different model. The stone is of an excellent sort, veined like marble, hewn out of the neighbouring quarries, and tumbled down the adjacent hill; and is introduced into the work in very large blocks, finely jointed.

Before the west front is a stone bridge over the Derwent, on which is a tower built by the countess of Shrewsbury. There is also an island in the river, in which is a building like a castle, which seen from the house has a good effect.

On entering the court-yard, which is on the north-side, there is an ascent to the house by a few steps. The hall, which is extremely lofty, has the doors, chimnies, windows, stair-cases, stairs, &c. of marble. This room is finely adorned with paintings of the Roman history, by the celebrated Varrío; particularly a curious representation of the murder of Cæsar, in the capital, and of the resurrection of our Lord. At the farther end of the hall are two flights of stairs, fourteen feet wide, and each landing-place is formed of a single stone, fourteen feet square. These stairs winding round meet and form a gallery at the top, adorned with iron balustrades of excellent workmanship richly gilt. In the centre between the stairs is a fine arched door-case,

which leads to the lower rooms and offices. The whole, viewed from the entrance, appears extremely picturesque.

Having ascended the stair-case, you have a fine view of the picture just mentioned, it being then level to the eye. From thence you enter the grand apartments. At one end of the gallery is the duke's closet, finely ornamented with Indian paintings. The great state-room is richly furnished and truly magnificent: the ceiling and walls are adorned with curious paintings, and from the former hang two large chandeliers of silver gilt. Two other rooms are, according to their several purposes, equally magnificent, and nobly furnished; that called the Queen of Scots apartment, is decorated with fine old tapestry and landscapes. On one ceiling is a painting, with emblematical figures, to commemorate the crushing of the rebellion in 1715. The Bath-room is all of marble curiously wrought. The chapel is prodigiously rich, without being gaudy, the altar end, and the floor, are of marble, the seats and gallery are of cedar, and the rest of the wall embellished with painting, by Varrío, representing several of our Saviour's miracles, not in a glaring manner, but in stone colours, with the pillars heightened by streaks of blue and gold, resembling Lapis Lazuli.

The pictures are few in number, and not remarkable for their beauty.

Some of them are,

Christ in the Garden, by *Gennari*.

Judith, by *Guido*. Much damaged.

Cupid, by *Correggio*.

Venus and Cupids, by *Gennari*.

Several Portraits, by *Vandyke*, &c.

Among the rest;

The first Earl of Devonshire in his robes, ascribed to *Mytens*. Mr. Walpole thinks it to be of *Paul Vansomer*; and says it is equal to the pencil of *Vandyke*, and one of the finest single figures he has seen.

A sleeping Cupid, by *Gennari*.

The Flight into Egypt, from the School of *Caracci*.

A *Salvator Rosa*.

An original drawing, by *Hans Holbein*, of the two Kings Henry VII. and VIII. as large as life; it is in black chalk and heightened. The architecture is rich, and parts of the picture are in a good stile.

A particular picture, said to be *General Monke*, his Child, and his Mistress. The man in armour undoubtedly resembles *Monke*, but the whole piece has the air of a Holy Family, by *Dobson*.

Towards the north-east of the garden rises a very high mountain, thick planted with different kinds of trees, whose heads appearing one above another, with leaves of various green, form a most beautiful hanging wood of prodigious height. On the summit of this mountain northward stands the summer-house, which appears over the tops of the trees like the old tower of a country church, and sets off that part of the prospect to great advantage. Due east from the house is the grand cascade, which falls, for about a furlong, down a very easy and regular slope betwixt two woods. At the upper end of the cascade is an hexagon temple about thirty feet high; on three sides of which, next the cascade, are the figures of *Flora*, *Ceres*, and *Pomona*, with their emblems or symbols. From the top of the temple issues a flood of water, which covering with roaring waves, the whole dome falls down with great rapidity and noise like a cataract; from the symbols of the figures likewise spout various kinds of fountains; and before the front of the temple two jets arise in the form of fans. Afterwards the whole of this water rushes down the cascade, and has a most grand effect. To see the torrent rolling down, and covering the temple like a sheet, the fountains gushing up with expanded arms to meet it, and altogether come tumbling down the headlong rough cascade, appears very amazing. At the bottom of the cascade lie a great number of loose irregular stones, among which the water runs, and is immediately lost.

From thence, turning southward, you walk along an avenue, through a grove of tall pines, which brings you

you to a kind of wilderness, in the middle of which a fountain rises on a pedestal, about five feet high, and spouting regularly round the top forms a bell, and appears like a large glass punch bowl inverted; from many places, among the trees, other fountains issue in curve lines, which they call a battery. These play on the punch bowl, and as fast as they break it in pieces, it joins and mends itself again. At a small distance is the representation of a weeping willow, the leaves of which continually drop with water, and the limbs and smaller branches send forth a great number of fountains. There is here likewise a very fine piece of water, in which are several statues representing Neptune, the Nereids, and sea-horses.

We have already mentioned the desolate and dreary moor near the house; this contains a large body of water, which is not only a common drain for all the country round, but supplies all the reservoirs, canals, cascades, and other water works, in the above garden, to which it is conducted by pipes.

Upon the hills, beyond the garden, is a park, where are some statues, and other curiosities; but even these hills are overlooked by a high rocky mountain, from which the view of the palace, and the numberless beauties of this smiling view breaks upon the traveller like the effect of enchantment.

This palace was built by William, the first duke of Devonshire: but it ought not to be omitted, that in the house first erected there by Sir William Cavendish of Suffolk, Mary queen of Scots remained a prisoner nineteen years, under the care of the countess of Shrewsbury, Sir William's widow; in memory of which one of the new apartments is called the Queen of Scots. Marshal Tallard, the French general, whom the duke of Marlborough took prisoner at the battle of Hockstet, was also entertained here for some days; and on his taking leave of the duke, politely said, that when he returned to France, and reckoned up the days of his captivity in England, he should leave out those he had spent at Chatsworth.

Balfover, the place we next visited, stands on the borders of Nottinghamshire, one hundred and forty-two miles from London. The town is pretty large, and the houses tolerably well built; but it is principally remarkable for its castle, which is now an elegant modern structure; which, from its lofty situation, has an agreeable appearance at a distance. The roof is decorated with turrets; one of which has a stone staircase leading to the top, and seems to have been part of the old castle. The battlements on the top are both beautiful and regular. This structure has an elegant gallery, seventy-two yards in length, and seven yards four inches in breadth, within the walls. The original builder of this castle is not known; but it is thought

to have been a strong garrison of the Danes, there being still two large trenches. Here is a weekly market on Friday; but no annual fair.

Dronfield, the next town we passed through, is situated among the mountains, at the edge of the Peak, one hundred and twenty-four miles north-west of London, and four miles west of Balfover. The air of this place is remarkably wholesome; the natives commonly live to a very great age, and the neighbouring gentry resort much to it; in consequence of which here are a number of handsome buildings. Here is a charity school, and a free grammar school; the latter was founded in the year 1567, by H. Fareshaw, Esq; a native of this place, who was remembrancer in the exchequer to queen Elizabeth.

Here is a weekly market on Thursday, and four annual fairs, viz. January the tenth, April, the fourteenth, and July the fifteenth, for sheep and cattle; and September the first, for cheese.

CURIOUS PLANTS found in Derbyshire.

Small fine-leaved mountain chickweed, with a milk-white flower, *Alsine pusilla pulchro flore, folio tenuissimo nostras albo pusilla caryophylloides flore albo pulchello*. Found plentifully in the mountainous parts of this county; about Worksworth and elsewhere.

Common rounded-leaved scurvy-grass, or garden scurvy-grass, *Cochlearia rotundifolia*, Ger. Found on the mountains at Castleton, in the Peak, about the great subterraneous vault or hole.

Golden dock, *Lapathum folio acuto, flore aureo*, C. B. *Anthoxanthon* J. B. In the meadows by the road-side leading to Swarfton bridge, which in winter-time in floods are over-flown by the Trent.

Giant throat-wort, *Trachelium majus belgarum*, Park. In the mountainous pasture-fields by the hedge-sides, &c. plentifully, as well in this county as in Yorkshire, Staffordshire, and Nottinghamshire.

Pansies or hearts ease *Viola tricolor*, Ger. *tricolor major* & *vulgaris*, Park. In the mountains among the corn, and upon the mud-walls and fences of stone.

Pansies, with a large yellow flower, *Viola montana lutea grandiflora nostras*. In the mountainous pastures of the Peak, in several places, principally where the soil is moist and boggy.

Red whorts or bilberries, *Vitis idea semper virens fructu rubro*, J. B. In the mountains of the Peak plentifully.

MEMBERS of PARLIAMENT for this County.

Derbyshire sends four members to parliament; two knights of the shire for the county, and two burgesses for the town of Derby.

Y O R K S H I R E.

THIS county is bounded on the north by Durham and Westmoreland; on the south, by Derbyshire, Nottinghamshire, and Lincolnshire; on the west, by Lancashire and Cheshire; and on the east, by the German ocean. It is by much the largest county in England, and extends in length one hundred and fourteen miles, in breadth eighty, and three hundred and sixty miles in circumference. It is divided into three parcels, or ridings, each of which is as large as an ordinary county. This large county is divided into twenty-six wapentakes, or hundreds; of which the West Riding contains ten, the East Riding four, and the North Riding twelve. It is subdivided into five hundred and sixty-three parishes; in which are one city, fifty-four market towns, two thousand three hundred and thirty villages, about one hundred six thousand one hundred and fifty houses, and five hundred thirty thousand seven hundred and fifty inhabitants. It is also divided into three lesser shires, viz. Richmondshire, Allertonshire, and Howdenshire; to which some add Hollamshire; and these are subdivided into other partitions, as Craven, Cleeve-land, Marshland, Holderness, &c. It lies in the province and diocese of York, except Richmondshire, which belongs to the diocese of Chester.

R I V E R S.

Yorkshire is watered by many rivers, the chief of which are the Don, the Calder, the Aire, the Wharfe, the Nidd, the Ure, the Swale, the Ouse, the Derwent, the Hull, the Humber, the Ribble, and the Tees.

The name Don, or Done, is supposed to be a variation of the British word Dan, which signifies a deep channel, such as this river runs in. It rises near the borders of Cheshire, not far from Barnesley, a market town, and running south-east to Sheffield, another market town, it directs its course north-east through Rotherham, Doncaster, and Thorn, all market towns, and falls into the Aire at Snath, another market town.

The Calder rises in Lancashire, and running eastward, falls into the Aire, about five miles north-east of the market town called Wakefield.

The name of the Aire is supposed to be a small variation of the British word Ara, which signifies slow or gentle, and might well be applied to this river, which scarce appears to have any motion. It rises at the bottom of a high hill, called Pennigent, near Settle, a market town, not far from the borders of Lancashire, and running east by Leeds, Pontefract, and Snath, three market towns, and being joined by the Don and the Calder, falls into the Ouse, not far from Snath.

The Wharfe, or Wherfe, is so called by a variation of the Saxon name Guerth, which is derived from the British word Guer, swift, on account of the rapidity of its stream. It rises in a wild stony tract, called Craven-hills, north of Pennigent-hill, and running almost parallel to the river Aire, and passing through Wetherby, and Tadcaster, two market towns, falls into the river Ouse, south-east of Tadcaster.

The Nidd rises also among the Craven-hills, and running nearly parallel to the Wharfe, and passing by Ripley and Knaresborough, two market towns, falls into the Swale, a few miles east of Knaresborough.

The Ure, Eare, Yore, or York, rises in a mountainous tract on the borders of Westmoreland, not far west of Askrig, a market town, and running south-east, and passing by Midlam, Masham, Rippon, and Burrowbridge, all market towns, joins the Swale, near Burrowbridge.

The name of the Swale is said to be ancient British Saxon, and to signify swiftness. It rises near the spring

of the Ure, and runs with a rapid stream south-east; through a tract of country to which it gives the name of Swaledale, to Richmond, a considerable borough town, near which it falls, with great violence, down some rocks, and forms a cataract: from hence it continues its course south-east, and being joined by the Ure, and other rivers, the united stream is called the Ure, until it arrives at the city of York; where, receiving a small stream called the Ouse, it takes that name, and running eastward falls into the Humber, not far from Howden, a market town.

The Derwent rises not far from Whitby, a market town upon the coast of the German ocean, and running south by Malton, a borough town, falls into the Ouse near Howden.

The Hull rises in a wild part of the county, called York Wold, near Kilham, a market-town, and running south by Beverley, a borough-town, falls into the Humber at Kingston upon Hull, another very considerable borough-town of this county.

The Humber is supposed to derive its name from the British word Aber, which signifies the mouth of a river, because all the rivers already mentioned fall into it, together with the Trent in Lincolnshire. It is indeed an æstuary of many rivers, and the largest in Britain. It is called the Humber, from the conflux of the Ouse and Trent to its mouth, where it falls into the German ocean, east of Patrington, a market-town. The Humber, being properly an arm of the sea, regularly ebbs and flows; and at ebb, in discharging its own waters, together with those of the ocean, it flows with prodigious rapidity and roaring noise. This reflux is called the Hygre, and is dangerous to such sailors as are not acquainted with it.

The Ribble rises among the Craven Hills, and running south by Settle and Gisborn, two market-towns, passes into Lancashire, not far south of Gisborn.

The Tees separates this county from the bishopric of Durham, and will be described among the rivers of that county.

The less considerable rivers of Yorkshire are the Washbrook, the Cook, the Rother, the Idle, the Went, the Hebden, the Hyde, the Kebeck, the Dent, the Revel, the Gret, and the Foulness.

Remarks on the INLAND NAVIGATION of Yorkshire.

The river Ouse is navigable to Abborough, and vessels of seventy tons burden come up to the city of York; small boats pass up to Rippon, and might be extended farther at no great expence.

The Derwent is navigable to New-Melton, where it is joined by the river Rye, and several other small streams, which water these parts of the county.

The river Hull is navigable considerably above Beverley; but that town standing some distance from the river, had anciently a channel of six furlongs in length from the river to the town, for the convenience of boats and barges; this channel was by act of parliament, in the year 1727, rendered both deeper and wider, in order to admit of vessels of a larger burden.

The Wharfe is navigable a considerable distance above its influx with the Ouse; and large boats pass up to Wetherby, and it might be extended much farther.

The Aire is navigable to Leeds, and small boats pass much farther.

The Calder, which falls into the Aire about five miles below Wakefield, is navigable to Halifax. The navigation of this river has lately been considerably extended, and greatly improved by the ingenious Mr. Smeaton.

The Don is navigable to Sheffield, and the works has been greatly improved within these few years, and rendered more serviceable to the county in general.

These inland navigations are of the utmost service to this large shire, where so many manufactures are carried on with great advantage to the nation in general, and to this county in particular.

R I D I N G S.

As the air, soil, and productions of this spacious county differ in the several districts of it, it is necessary to anticipate its general division into three parts, called Ridings. The name Riding is no more than a corruption of the antient Saxon name Thrithing, which was applied to the third part of a province or county; and the division into ridings, though now peculiar to Yorkshire, was before the conquest common to several other countries in the north of England. The Ridings of this county, each of which is as large as most shires, are distinguished by the appellations of the West-Riding; East-Riding, and North-Riding.

The WEST-RIDING, or Western Part of this County.

This Riding or division, is separated by the Ouse from the East-Riding, which is its Eastern boundary; the North-Riding is its boundary to the north; the northern parts of Lancashire and Cheshire bound it on the west and south-west; and Lincolnshire, Nottinghamshire, and Derbyshire on the south and south-east.

AIR, SOIL, and NATURAL PRODUCTIONS.

The air of the West-Riding is sharper but healthier than in either of the other two Ridings. The soil on the western side of this division is hilly and stony, and consequently not very fruitful, but the intermediate vallies afford plenty of good meadow and pasture ground; and on the side of the Riding next the river Ouse, the soil is rich, producing wheat and barley though not in such abundance as oats, which are cultivated with success in the most barren parts of this district. This Riding is famous for fine horses, goats, and other cattle. Here are some native trees which are seldom found wild in any other part of England, particularly the fir, the yew, and the chesnut. This riding abounds with parks and chaces, and contains many mines of pit-coal and jet. At Tadcaster, a market town, there is a lime quarry; and at Sherborne a sort of stone is dug up, which when first taken out of the ground is soft, but by being exposed to the weather becomes hard and durable. In many parts of this Riding there are likewise mines of stone of a blueish colour, which will cleave like cornish-slate: the mine lies deep, and requires great labour to dig it up; but being calcined, is made into alum by various percolations and boilings, of which a particular description will be given in the sequel.

This Riding is remarkable for curing legs of pork into hams like those of Westphalia. Its chief manufactures are cloth, and iron wares.

REMARKS on the HUSBANDRY of the WEST-RIDING.

The country between Sheffield and Barnsley is fine; it abounds with the beauties of landscape, and has a pleasing variety. The soil is in general good, and the crops the same.

Farms run from twenty pounds to eighty pounds, and the rent of land from fourteen shillings to twenty shillings, an acre. Their course of crops,

1. Fallow
2. Wheat
3. Clover
4. Wheat

This is very bad husbandry. Another is,

1. Fallow
2. Wheat
3. Oats

They plough five times for wheat, sow ten pecks, and

reckon the mean produce at twenty bushels. For barley they give five tilths, sow three and an half bushels, and get on an average four quarters. For oats they stir but once, sow five bushels, and get in return four quarters. For pease they likewise give but one earth, sow three bushels, and reckon the medium at twenty. They plough but once for beans, sow them broad-cast three and an half bushels, never hoe them, and reap about thirty. For turnips they stir five times, hoe them once or twice, value an acre at about forty shillings, and use them for sheep, and stall-feeding bullocks. They drain their lands with much attention, being in many places of a wet springing nature. They cut them from two to six feet deep, according as the springs are found which damage the land; the price is about one shilling a perch; but this relates only to good farmers, who copy it from the Marquis of Rockingham. They lay a considerable quantity of lime upon their lands, about four quarters an acre, and do it for all sorts of crops. Their yard manure they never mix with earth, lay it on wheat and turnip land. They sow some rye, plough for it five times, sow two bushels, and reap on a medium thirty.

They use three and four horses in a plough, at length, and do an acre a day. They let their cows at 45s. for twenty weeks in summer. The particulars of a farm:

70 Acres in all
25 Ditto grafs
45 Arable
£. 50 Rent
24 Acres of wheat
18 Spring corn
4 Turnips
4 Horses
6 Cows
8 Oxen
3 Servants
1 Labourer

Price of LABOUR.

In harvest, 1s. a day, and board.

In hay-time, 1s. a day and board, for mowing.

In winter, 1s.

Reaping wheat, 4s. 6d. and 5s.

Mowing grafs, 1s. 6d.

Hoeing turnips, 4s. and 2s. the second,

Ditching, 2s. for 28 yards the acre.

Threshing wheat, 8d. the load of three bushels.

Barley, 1s. a quarter.

Oats, 8d. ditto.

The country from Leeds to Tadcaster is fine, and to Winnmoor, a strong blue clay soil with noble crops on it. About Kiddel, land inclosed lets at about eight shillings or nine shillings an acre; it is generally limestone with a covering of various sorts, but chiefly clay: farms from ten pound to one hundred and fifty pound a year; the course

1. Fallow
2. Wheat or barley
3. Oats
4. Barley, &c.

They plough three or four times for wheat, sow three bushels, and gain in return eighteen or twenty. For barley they plough five times, sow four bushels, and reckon the medium produce at four quarters. They stir but once for oats, sow better than four bushels, and reap from three to eight quarters. For pease, they likewise stir but once, sow three bushels, and gain from eight to twenty. They give but one earth for beans, sow four bushels broad-cast, never hoe them, and reap from twelve to forty bushels. They reckon their soil in general too heavy for turnips, but plough five, six, or seven times, hoe once; value them at from thirty-five shillings to fifty shillings an acre, and use them for sheep and oxen. Clover they sow on wheat and barley, and get at one mowing on good land near three loads of hay an acre. Mr. Rooks, from whom we have this account, has introduced the husbandry of seeding the clover; he mows it for hay, or feeds the first crop, and lets

lets the second stand for seed, gets from four to twelve bushels *per acre*: they manure with rape dust, lay three quarters *per acre* on wheat, and four on barley, costs them thirteen shillings and six-pence a quarter, besides carriage of nine miles. They use two horses double, in their light lands; in their strong, four oxen and one horse, or two oxen and two horses; oxen reckoned best for ploughing.

The Marquis of Rockingham has, to his immortal honour, made prodigious improvements in husbandry, by introducing the methods practised in every county, remarkable for their agriculture, and by that means changed the whole face of the adjacent country, and inspired the farmers with a desire of excelling in that useful art.

The two general divisions of the soil in the neighbourhood of Wentworth-house, small tracts excepted, are into clay and loam; the former is strong and rich, but wet; the latter light enough for turnips, and rich enough for wheat, which has been often remarked, as the criterion of excellent land; the general average rent is about eight shillings an acre. The farms are all small, rising in general from twenty pounds to sixty pounds a year.—The courses of crops are chiefly these. On the light loams,

1. Turneps
2. Barley
3. Clover one year
4. Wheat
5. Barley

On the clays,

1. Fallow
2. Wheat
3. Beans
4. Wheat

And

1. Fallow
2. Barley
3. Clover
4. Wheat

For wheat on a fallow, they plough four or five times, sow nine pecks and an half, and reap, at an average, three quarters on clay land, and three quarters six bushels on their loams.

But one earth for wheat, on clover land.

A fallow for barley consists of four stirrings on clay; but on turnip land they plough and sow. Three bushels of seed used; and the average crop on all land about five quarters. For oats they plough but once, sow four bushels, and gain at a medium, in return, about four quarters and an half, but on fresh land, six or seven quarters.

Pease are not a common crop, but when sown they plough for them but once; sow three bushels and an half, use the common rouncival, and get twenty-four bushels an acre, at an average. For rye, they plough four or five times, sow nine pecks, and gain in return twenty-four bushels. Their culture of turnips is from four to six earths; hoeing, through the attention and example of the Marquis of Rockingham, is coming into practice, inasmuch that many farmers now hoe their crops, who formerly had scarce any notion of it. Perhaps a quarter or a third of the crops are now hoed: they reckoned the medium value of crops not hoed at twenty shillings an acre, and of those that are hoed, at forty shillings: a most striking proof of the excellency of the practice. They use them both for sheep and beasts, generally draw them, and feed on pastures; sometimes in sheds, and reckon that a middling acre of hoed turnips will fat two beasts, of fifty stone each; that is finish their fattening, if half fat by grafs. They give both hay and straw with them. Of rape they sow very little; generally on fresh land, and feed it off with sheep, sowing wheat after it.

Clover they sow with barley, chiefly for mowing; they cut it twice, and get three tons of hay at the two mowings: they find no crop whatever to answer better, but some land begins to grow tired of it, the culture having been common these forty years. The wheat they find better after that which is mown, than that which is fed.

The management of their manure chiefly consists in

the foddering their farm-yards with the straw of the crop; the excellent custom of cutting stubble for that purpose is almost unknown among them. In the spring they lead the dung on to a hill, some few, in imitation of his lordship, turn it over, but it is not common; they lay it upon turnip land, and wheat fallow. Lime is much used on turnips and wheat fallows. They lay a chaldron an acre, which costs them seven shillings, besides the leading, all together twelve shillings by the time on the land. To carry a chaldron twelve miles they reckon worth twenty shillings.

Pigeon dung they lay on all sorts of land, a chaldron *per acre*, which they value at thirty shillings. In the neighbourhood of Sheffield, bones are a very common manure; they lay a chaldron *per acre* on grafs, and find them excellent.

Some malt-dust is used, of which they lay a chaldron *per acre*.

Soap ashes are a favourite manure for grafs lands, and some are laid on a fallow for turnips, three chaldrons *per acre* at eight shillings *per chaldron*; they are reckoned to last three or four years.

Coal-ashes they likewise lay on their grafs lands, five or six chaldron *per acre*; cost one shilling and sixpence *per chaldron*.

Rape-dust they generally use with lime, but not mixed; five quarters of lime and fifteen bushels of rape dust to an acre. It is an excellent manure, but declining in use, on account of the high price, being got up to thirteen shillings a quarter. Soot they get for fourpence a bushel, lay it on grafs and barley, a chaldron to the acre; it lasts one or two crops.

Respecting the tillage of this neighbourhood; they reckon six horses necessary for the culture of sixty acres of arable land; in ploughing, at strong work, they use four at length, but afterwards only two-a-breast; and do three rood or an acre a day. Their allowance of corn consists only of half a peck of oats each horse *per day* in seed-time; the price of joisting from May-day to Michaelmas is thirty-five shillings and they reckon their teams to cost them yearly, upon the whole, (shoeing included) seven pounds ten shillings a horse. Their oxen they winter in common upon straw; but, when they work, upon hay: horses for tillage, they reckon best.

The price *per acre* for ploughing is five shillings.

Sheffield, the first town we visited in this county, is situated on a rising ground on the borders of Derbyshire, one hundred and forty miles from London, and is the chief of a district called Hallamshire. It has been famous for many hundred years, for cutlery wares and iron-works, particularly files and knives or whittles, for which it was celebrated by Chaucer; who, speaking of the accoutrements of his miller, says,

“A Sheffield whittle bare he in his hose.”

The cutlers here are incorporated by the stile of the Cutlers of Hallamshire, and enjoy many privileges. They are denominated Master-cutlers, and are said to be six hundred in number; each of whom gives a particular stamp to his wares. The corporation choose a master and other officers yearly; and it is computed that they do not employ less than forty-thousand men in the iron manufacture.

The great branches carried on here are the plating work, the cutlery, the lead-works, and the silk-mill.

In the plated work some hundreds of hands are employed; the men's pay extends from nine shillings a week to sixty pounds a year. In works of curiosity, it must be supposed that dexterous hands are paid very great wages. Girls earn four shillings and sixpence, and five shillings a week; some even to nine shillings. No men are employed that earn less than nine shillings. Their day's work, including the hours of cessation, is thirteen.

In the cutlery branch are several subdivisions, such as razor, knife, scissar, lancets, fleams, &c. &c. Among these the grinders make the greatest earnings; eighteen, nineteen, and twenty shillings a week, are common among them; but this height of wages is owing in a great measure to the danger of the employment; for the

the grindstones turn with such amazing velocity, that by the mere force of motion they now and then fly in pieces, and kill the men at work on them. These accidents used to be more common than they are at present; but of late years they have invented a method of chaining down an iron over the stone on which the men work in such a manner, that in case of the above-mentioned accidents, the pieces of the stone can only fly forwards, and not upwards; and yet men by the force of the breaking have been thrown back in a surprizing manner, and their hands struck off by shivers of the stone. The mechanism of these grinding wheels is very curious; many grindstones are turned by a set of wheels which all receive their motion from one water-wheel, increasing in velocity from the first movement to the last, which is astonishing; in the finishing wheels it is so great, that the eye cannot perceive the least motion. In the other branches of the cutlery, workmen earn from one shilling and six-pence and two shillings, to ten shillings and six-pence a day. The first are common wages, and the last easily earned by the polishers of the razors. Surprizing wages for any manual performances! all the hands in these branches have constant employment.

Here is likewise a silk mill, a copy from the famous one at Derby, which employs one hundred and fifty-two hands, chiefly women and children; the women earn five or six shillings a week by the pound; girls at first are paid but one shilling, or one shilling and two-pence a week, but rise gradually higher, till they arrive at the same wages as the women. It would be propesterous to attempt a description of this immense mechanism; but it is highly worthy of observation, that all the motions of this complicated system are set at work by one water-wheel, which communicates motion to others, and they to many different ones, until many thousand wheels and powers are set at work from the original simple one. They use Bengal, China, Turkey, Piedmont and American raw silk; the Italian costs them thirty-five shillings a pound, but the American only twenty shillings. It is a good silk, though not equal to the Piedmont. This mill works up one hundred and fifty pound of raw silk a week all the year round, or seven thousand eight hundred *per annum*. The erection of the whole building, with all the mechanism it contains, cost about seven thousand pounds.

Sheffield is allowed to be as far superior to Birmingham in cutlery wares and files, as Birmingham is to Sheffield in locks, hinges, nails and polished steel. Here are several iron mines, and some of alum; and a fine stone bridge over the river Don.

This is a very ancient, large and populous town; but the streets are remarkably narrow. The houses are built with stone, but by the constant smoke of the forges look dark and black. The parish church is a handsome spacious edifice in the form of a cross, and has a fine high spire. It was built in the reign of king Henry I. and upon a petition of the inhabitants to queen Mary, representing that the parish was too large and populous for the vicar to serve it, without assistants, she incorporated twelve of the principal inhabitants, and their successors for ever, by the stile of the twelve capital burgesses of Sheffield, empowering them to elect three priests to assist the vicar; and for that purpose endowed them with certain lands and rents belonging to the crown. The parish church having been found too small to accommodate the number of parishioners, a chapel of ease was lately erected by the towns-people assisted by the nobility and gentry in the neighbourhood; and consecrated by the name of St. Paul; there are, besides this, two other chapels, one at Attercliffe, and the other at Ecclesale, two hamlets in this parish, in which chapels service is performed by two of the priests above-mentioned, while the third in his turn assists the vicar in the parish church. There are several ancient monuments in this church of the family of the Talbots earls of Shrewsbury, whose possessions in this and the next county were formerly very considerable, particularly those of George earl of Shrewsbury, who died in the year 1538. George, his grandson, who died in 1590,

and Gilbert his son, who founded the stately hospital, in this town which he endowed with 200*l. per annum*. his great grand-father above-mentioned likewise left 200*l.* a year for ever to the poor of the parish.

The gift of the hospital is perpetuated by the following inscription over the gate:

The Hospital of the Right Honourable Gilbert, Earl of Shrewsbury, erected and settled by the Right Honourable Henry, Earl of Norwich, Earl Marshal of England, great grandson of the said Earl, in pursuance of his last will and testament, Anno 1678.

King James the first founded a grammar school in this town, and appointed thirteen school burgesses, to manage the revenue, and nominate the master and usher. Here are besides two charity schools, one for thirty boys, and the other for the same number of girls. There was formerly a very fine castle here, built by Henry III. with a noble mansion-house, the seat of the dukes of Norfolk, in which Mary queen of Scots was prisoner fifteen or sixteen years. After the death of king Charles the first, it was destroyed with divers others by order of parliament.

The lord of the manor has a prison here, and holds a court every three weeks. The first mill for turning grind-stones in England were erected in this town.

Sheffield has a weekly market on Tuesday, and two annual fairs, viz. Tuesday after Trinity-Sunday, and November the twenty-sixth, for cattle and horses.

Near Sheffield is a park, where, in the last century, an oak was cut down which had above ten thousand feet of board in it; and in the same park another was felled, the trunk of which was so large, that two men on horse-back, one on each side the tree, as it lay along the ground, could not see the crowns of each other's hats.

There are still to be seen the remains of a Roman fortification between Sheffield and Rotherham. Here is likewise the famous trench, by some called Devil's bank, by others Danes Bank; it extends five miles in length, and in some places goes by the name of Kemp Bank, but in others Temple's Bank.

At Ecklesfield, near Sheffield, was an alien priory of benedictine monks, subordinate to the abbey of St. Wandragsilus, in the diocese of Roan in Normandy.

From Sheffield we proceeded to Rotherham, so called from its situation near the bank of the Rother, at its confluence with the Don, over which here is a fine stone bridge. It is a neat handsome town, one hundred and sixty-one miles from London. Here is a church which is a fair stone building in the form of a cathedral, with an handsome spire steeple; and a charity school for forty-two boys. Thomas Scott, alias Rotherham archbishop of York, who was a native of this place, in the year 1481 founded a college here on the bridge, dedicated to our Saviour, consisting of a provost, five priests, six choristers, and three masters, one for grammar, one for music, and another for writing; and endowed with revenues, which upon the suppression were valued at eighty-eight pounds twelve shillings *per annum*. This college has long since been converted into an alms-house.

Rotherham is famous for its iron works, of which it contains one very large one, belonging to Mr. Walker, and one or two smaller. Near the town are two collieries, out of which the iron ore is dug, as well as the coals to work it with; these collieries and works employ together near five hundred hands. The ore is here worked into metal, and then into bar iron, and the bars sent into Sheffield to be worked, and to all parts of the country; this is one branch of their business. Another is the foundery, to which they run the ore into meral pigs, and then cast it into all sorts of boilers, pans, plough-shares, &c. &c. &c. The forge-men work by weight, and earn from eight shillings to twenty shillings a week, but twelve or fourteen shillings the average; the foundery men are paid by the week, from seven to ten shillings. No boys are employed younger than fourteen, such from three to four shillings a week. In the collieries, the men earn from seven to nine shillings a week. There are few women employed; and only in piling old bits of scrap iron (which are brought

to Rotherham by way of Hull from Holland, London, &c.) into the form of small pyramids, upon round pieces of stone, after which they are set into the furnace till they become of a malleable heat; and are then worked over again.

Besides the iron manufactory, they have a pottery, in which is made the white, cream-coloured (Staffordshire) and tortoise-shell earthen-ware. It employs about two or three and twenty men, and forty boys; the men are paid nine shillings a week for day-work, but much is done by the piece, in which case they all earn more, up to fifteen shillings a week. Boys of nine or ten years old have two shillings, and two shillings and sixpence a week. There is also a very large quantity of lime burnt in this town, which constantly employs about twenty hands, that earn at a medium nine shillings a week.

Rotherham has a weekly market on Monday, and two annual fairs, viz. Whitsun-Monday, for horned cattle, and sheep; and December the first, for cattle and horses.

In the neighbourhood of Rotherham, is Wentworth-castle, the seat of the earl of Stafford. The new front to the lawn is one of the most beautiful in the world. It is surprizingly light and elegant; the portico, supported by six pillars of the Corinthian order, is exceedingly elegant; the triangular cornice inclosing the arms, as light as possible; the ballustrade gives a fine effect to the whole building, which is exceeded by few in lightness, unity of parts, and that pleasing simplicity which must strike every beholder.

The hall is forty by forty, the ceiling supported by very handsome Corinthian pillars; and divided into compartments by cornices elegantly worked and gilt; the divisions painted in a very pleasing manner. On the left hand you enter an anti-chamber, twenty feet square; then a bed-chamber of the same size, and thirdly a drawing room of the like dimension; the pier glass is large, but the frame rather in a heavy stile. Over the chimney is some carving by Gibbons.

The other side of the hall opens into a drawing room, forty by twenty-five. The chimney-piece exceedingly elegant; the cornice surrounds a plate of Siena marble, upon which is a beautiful festoon of flowers in white; it is supported by two pillars of Siena wreathed with white, than which nothing can have a better effect. The door-cases are very elegantly carved and gilt. Here are three fine slabs, one of Egyptian granate, and two of Siena marble; also several pictures.

Carlo Maratt. David with Goliath's head, supped by this master; fine.

Salvator Rosa. Two cattle pieces, exceedingly fine, and in a more finished and agreeable stile, than what is commonly seen of this master.

Guido. Diana, copied from this master; the naked body is painted well, but the arms in the blue drapery very ill done; it is not at first sight clear, whether the figure has a right arm or not.

Paulo Mattea. Abraham.

Dining-room, twenty-five by thirty. Here is found the great Earl of Strafford, by *Vandyke*; the expression of the countenance and the painting of the hands very fine.

Going up-stairs, you enter the gallery, which is one of the most beautiful rooms in England. It is one hundred and eighty feet long by twenty-four broad, and thirty high. It is in three divisions; a large one in the center, and a small one at each end; the division is by very magnificent pillars of marble, with gilt capitals. In the spaces between these pillars and the wall, are statues,

Apollo,
An Egyptian Priestess,
Bacchus, and
Ceres.

This noble gallery is designed and used as a rendezvous-room, and an admirable one it is; one end is furnished for music, and the other with a billiard-table. This is the stile which such rooms should always be regulated in. At each end is a very elegant Venetian window, contrived (like several others in the house) to

admit the air by sliding down the pannel under the center part of it. The cornices of the end-divisions are of marble, richly ornamented. Here are several valuable pictures.

Borgognone. Two battle pieces.

Vandyke. Charles I. in the Isle of Wight; very fine.

Bassan. Wisemen's Offerings.

Carlo Maratt: Himself, and Turkish lady kept by him; the lady is beautiful and graceful: Carlo had a better taste than Rubens.

Titian. Miracle by St. Paul; group and colouring very fine.

Carlo Maratt. Christ in the garden, and the bloody issue cured; very fine.

Michael Angelo. Two sharpers cheating a gentleman at cards; very fine. Vision of St. John; the colouring and attitude bad.

Lord Strafford's library is a good room, thirty by twenty, and the book-cases handsomely disposed.

Her ladyship's dressing-room is extremely elegant, about twenty-five feet square, hung with blue India paper; the cornice, ceiling and ornaments, all extremely pretty; the toilette boxes of gold, and very handsome.

Her ladyship's reading closet is excessively elegant, hung with a painted satin, and the ceiling in Mosaics festooned with honey-suckles; the cornice of glass painted with flowers. It is a sweet little room, and must please every spectator. On the other side of the dressing-room is a bird closet, in which are many cages of singing birds: the bed-chamber twenty-five square, is very handsome; and the whole apartment pleasingly complete.

But Wentworth-castle is more famous for the beauties of the ornamented environs, than for that of the house, though the front is superior to many. The water and the woods adjoining, are sketched with great taste. The first extends through the park in a meandering course, and wherever it is viewed, the terminations are no where seen, having every where the effect of a real and very beautiful river; the groves of oaks fill up the bends of the stream in the most elegant manner. Here advancing thick to the very banks of the water; there appearing at a distance, breaking away to a few scattered trees in some spots, and in others joining their branches into the most solemn brownness. The water, in many places, is seen from the house between the trees of several scattered clumps most picturesquely; in others it is quite lost behind hills, and breaks every where upon the view in a stile that cannot be too much admired.

The shrubbery that adjoins the house is disposed with the utmost elegance. The waving slopes dotted with firs, pines, &c. are excessively pretty, and the temple is fixed at so beautiful a spot, as to command the sweet landscape of the park, and the rich prospect of the adjacent country, which rises in a bold manner, and presents an admirable view of cultivated hills.

Winding up the hill among the plantations and woods which are laid out in an agreeable taste, we came to the bowling green which is thickly encompassed with evergreens; retired and beautiful with a very light and pretty Chinese temple on one side of it; and from thence cross a dark walk catching a most beautiful view of a bank of distant wood. The next object is a statue of Ceres in a retired spot, the arcade appearing with a good effect; and through the three divisions of it, the distant prospect is seen very finely. The lawn which leads up to the castle is elegant; there is a chump of firs on one side of it; through which the distant prospect is seen, and the above-mentioned statue of Ceres, caught in the hollow of a dark grove, with the most picturesque elegance; and is one among the few instances of statues being employed in gardens with real taste. From the platform of grass within the castle walls (in the center of which is a statue of the late earl who built it) over the battlements, you behold a surprizing prospect on which ever side you look; but the view which pleased us best, is that opposite the entrance, where you look down upon a valley which is extensive, finely bounded

by rising cultivated hills, and very complete in being commanded at a single look notwithstanding its vast variety.

Within the menagery at the bottom of the park, is a most pleasing shrubbery extremely sequestered, cool, shady, and agreeably contrasted to that by the house from which so much distant prospect is beheld; the latter is what may be called fine; but the former is pleasingly agreeable. We proceeded through the menagery (which is pretty well stocked with pheasants, &c.) to the bottom of the shrubbery, where is an alcove in a sequestered situation; in front of it the body of a large oak is seen at the end of a walk in a pleasing stile; but on approaching it, three more are caught in the same manner, which from uniformity in such merely rural and natural objects displeases at the very first sight. This shrubbery, or rather plantation, is spread over two fine slopes, the valley between which is a long winding hollow dale, exquisitely beautiful; the banks are thickly covered with great numbers of very fine oaks, whose noble branches in some places almost join over the grass lawn, which winds through this elegant valley; at the upper end is a gothic temple, over a little grot, which forms an arch, and together have a most pleasing effect; on a near view, this temple is found a light, airy, and elegant building. Behind it is a water sweetly situated; surrounded by hanging wood in a beautiful manner, an island in it prettily planted; and the bank on the left side rising elegantly from the water, and scattered with fine oaks. From the seat of the river God, the view into the park is pretty, congenial with the spot, and the temple caught in a proper stile.

Near this town stands Sandbeck, a noble seat of the earl of Scarborough; which, when the beautiful lawn before the house, and the extent of the adjoining woods, remarkable for the improvements of art, as well as for the bigness and flourishing state of the trees, are considered, may vie with most seats, in respect to situation.

Not far from hence are the ruins of Roch, or Roch-abbey, hid by a steep woody cliff, towards the south, and by large rocks towards the north, and north-east: the north and south-west sides of these ruins are bounded by two large woods: the circumference of that on the south-west, called Kings-Wood, is about a mile and a half, and that on the north-west, called from a large farm on one side of it, Grange-Wood, is about four or five miles. To the east is a large bed of water, which is the collection of a rivulet that runs amongst the ruins: the banks on each side this water are steep, and delightfully clothed with trees of various sorts, interspersed with several peeping rocks and ruins. Under one of the rocks is the mouth of a cavern, which it is said had formerly a communication under ground with the monastery in Tickhill-Castle, about two miles distant; but that the passage is now stopped by the falling in of the earth. Several traditional stories are almost universally told, and believed by a number of the inhabitants hereabout, of ridiculous pranks which have been played by several goblins and ghosts in this cave and about the abbey. One side of the nef of the building, from north to south, under the middle tower, and some old pillars and arches are all that are now left, except several small fragments which are dispersed for above half a mile round, great part having been carried away at different times, to repair adjacent churches, or build gentlemen's seats; but particular care was taken by the late earl of Scarborough, to preserve what remains. These ruins, among which large trees are now grown up, and the contiguous borders from a picture inexpressibly charming, especially when viewed with the lights and shadows they receive from a western sun; and its retired situation free from every noise, except the murmur of a limpid rivulet, together with the vestiges of sepulchral monuments, and the gloomy shades of those venerable greens, ivy and yew, which creep up, and luxuriantly branch out and mix with the beautiful whiteness of the rocks; gives such a solemnity to this scene, as strikes an awful reverence in the beholder, and inspires a contemplative pleasant melancholy. This abbey was found-

ed by Richard de Builli, and Richard Fitz-Tuivils, in 1147, and dedicated by them to the Virgin Mary, with yearly revenues of two hundred and twenty-four pounds. The stone of which this abbey is built, was dug out of the famous quarry near adjoining, and well known to the masons by the name of Bach-Abbey-stone, which whiteness and beauty in every respect is not to be equalled.

Another object worthy of notice is the tower and spire of the church of Laughton, in this neighbourhood; which, for delicacy and justness of proportion, is not excelled by any other gothic piece of the kind. It is somewhat surprising, that so elegant and ornamental a structure, superior by far to all others round it, should have been bestowed upon a village church.

This edifice stands upon a very high hill, which at a distance greatly resembles that at Harrow, in the county of Middlesex. The height of the steeple to the weathercock is one hundred and ninety-five feet, and by its situation rendered the most conspicuous in every point of view of any perhaps in the whole kingdom, being seen from many places at the distance of forty, fifty, and sixty miles. It has a peculiar beauty when viewed in the diagonal line, the pinnacles at the corners of the tower being joined by the arches to the spire, as are others above them, which break its out-lines, and give at the same time an elegant diminution; but time has so greatly injured it, that, without considerable repairs, it will not stand many years longer.

The duke of Leeds, whose seat at Kiveton is worth a stranger's attention, has cut a vista through the woods of his park, to take this steeple into his view. You enter first the hall, which is fifty feet by thirty, painted by Sir James Thornhill. Around it are several antique statues, some of which are very finely executed.

Cupid.

Lucretia; the drapery admirably light and fine; and the air of the head beautiful.

Hercules.

Venus.

Paris.

Diana. Her drapery good, but the folds rather too small.

In the anti-room, among other pictures are, *Holbein*. Portrait of the earl of Worcester. Lord Cecil. The hands and face very fine.

Vandyke. Marquis of Montrose inimitably fine; the features and countenance noble, and the attitude easy and elegant.

King and Queen of Bohemia.

Drawing-room, twenty-four square.

Bed-chamber.

Closet. A music-piece by *Titian*. The drapery pretty.

Dining-room, thirty-six by twenty-five.

Rubens. The four parts of the world. The figures are those of Rubens, a pure fleshy female, but the beasts surprizingly fine; the panther equal to any thing ever painted, and the crocodile admirably done. The groupe vile.

Titian. The four Evangelists; heavy and inexpressive, but the diffusion of light good, the air of the heads is fine, and the hands very well executed.

Paul Veronese. Marriage of Cana. A strange groupe; the drapery very bad; nor is there any propriety of action: the expression is however strong.

Solomon receiving his wisdom. The figure of Solomon is that of a sleeping clown. The attitude of the Deity in the air, and the expression of his countenance are fine: the colours bad.

David and Nathan, by the same master, but unknown. The colours and manner the same.

Reynolds. The late Duchefs of Leeds; a most sweet attitude and exquisite eyes.

Drawing-room, twenty-five square.

Vandyke. Earl of Strafford; fine.

Rubens. Sea goddesses; the figures, attitudes and colours are not pleasing.

Ditto. Venus and Cupid. By no means agreeable.

Schalken. Old woman with a candle. The expression of the light strong and fine.

Bassan.

Bassan. The creation.

The landscapes: fine.

Adoration of the shepherds; ditto,

Lucretia and Tarquin; the picture of an old hag, pulling a letcher by the nose.

Carlo Marrat. Virgin and child.

Wife men's offerings. Figure of the Virgin, good.

Holbein. Erasmus and Sir Thomas More; very fine.

Ostend. A man reading a paper. The minute expression strong.

Vandyke. Earl of Derby; fine.

On the right of the hall is the stair-case, painted by *Le Guere*, thirty-two square by sixty high.

The saloon fifty-four by thirty-four; here are the following antiques.

Nero. The head and attitude very fine.

Paris.

Venus and Cupid. The head, and turn of the neck exquisite; and the attitude elegant.

Cleopatra. Nothing can be finer than this drapery; the turn of the head is good, but the attitude wants expression.

The pictures are,

Guido. Death of St. Sebastian; fine. The colours, naked, and lights expressive.

Titian. Ditto tying to a tree; fine colouring, but no expression.

The vestibule, twenty-three square.

Canaletti. Six views of Venice; of a fine and blooming brilliancy.

Poussin. Landscape; fine. The figures excellent, the hills and trees noble, but the sky appears to be of too deep a blue.

Rubens. His family.

Ancona. Two views of Rome; the architecture fine.

Dressing room, twenty-five by twenty-one.

Titian. Philip the second of Spain: exceeding fine; the same as at Devonshire House.

Bed-chamber, twenty-three by twenty-one.

Closet.

Vandyke. King Charles on horse-back. The horse by *Wootton*; fine.

Dressing-room, twenty-five by twenty-four.

Bed-chamber, twenty-five by twenty-two.

Closet. A nun, the drapery excellent.

A landscape; a waterfall, good.

Bed-chamber, thirty-four by twenty-four.

Portrait of the Duke of Florence and Machiavel; excellent.

Drawing-room, thirty-three by thirty-one.

Bartolomeo. Armida and Rinaldo.

Titian. Figure of a man and a woman.

Danae and the golden shower, the colours are pretty good, but the drawing appears to be bad.

Other pictures not hung in order, are,

Holbein. Alderman Hewet; very fine.

Vandyke. Earl of Strafford, and his secretary.

Earl of Arundel.

David with Goliath's head.

Titian. Himself at music. The colours, drapery and attitude fine, but the diffusion of light quite unnatural.

Bassan. Landscape.

Titian. Lot and his daughters; vile.

Portrait of the Duke of Newburgh; very fine.

Having viewed Kiveton house, we directed our way to Tickhall, or Tickhill, an ancient town, one hundred and forty nine miles from London. It appears to have been a place of considerable note in the time of the Saxons, and to have taken its name from a mount or hill here, which remains to this day, and is by Camden called Moles Edita. It gives name to an honour of a very extensive jurisdiction, and to which a great many manors owe suit and service. This honour has been vested in the crown ever since the reign of king Henry IV. and is leased out to a subject. Here is a large handsome church, a charity school, and an hospital.

On the hills above-mentioned are the remains of an ancient castle, supposed to have been built before the

conquest; in it was a royal free chapel, or collegiate church, founded by queen Eleanor, wife to king Henry II. and given by king John to the canons of the cathedral church of Roan, in Normandy. It was afterwards granted to the prior and convent of Lenton, in Nottinghamshire; and lastly to the abbot and convent of St. Peter, at Westminster. The ruins of this castle are surrounded with a wide and deep moat, and a wall about five feet high; and on the north-east side is an immense mount, with a round tower on the top of it. About the center of the space, within the walls, is an house; which, from its great number of apartments, and the paintings of saints and crucifixes on the walls, plainly denotes its having been a religious house.

On the west side of this town was an house of Austin friars in the beginning of the reign of king Edward I. and before the year 1225, here was an hospital dedicated to St. Leonard; and likewise another in the year 1326, in a marsh land near this town.

Tickhill has a weekly market on Saturday; but no annual fair.

While we continued in these parts we visited Wentworth-house, the seat of the marquis of Rockingham, situated in the midst of a most beautiful country, and in a park that is one of the most exquisite spots in the world. It consists of an irregular quadrangle, inclosing three courts, with two grand fronts. The principal one to the park extends in a line upwards of six hundred feet, forming a center and two wings. Nothing in architecture can be finer than this center, which extends nineteen windows. In the middle, a most noble portico projects twenty feet, and is sixty long in the area; six magnificent Corinthian pillars support it in front, and one at each end. This portico is lightness and elegance itself; the projection is bold, and when viewed afloat from one side, admits the light through the pillars at the ends, which has a most happy effect, and adds surprizingly to the lightness of the edifice. The bases of the pillars rest on pedestals, in a line upon the rustics, which by some critics has been objected to, by asserting that the pedestal of a column ought to be fixed on the ground alone; but without enquiring into the propriety of such strict rules, it may be remarked that the effect of breaking them, is a beauty; for as it is always necessary to inclose the area of the portico with a ballustrade, when there are no pedestals, the shafts of the pillars are cut by it, which hurts the beauty of their proportion, and has in general a bad effect. But in this portico, the ballustrade extending from pedestal to pedestal, the shafts are seen complete, and the unity of the view not in the least destroyed. The timpanum is excellently proportioned; at the points are three very light statues; the cornice, the arms, and the capitals of the pillars admirably executed. A ballustrade crowns the rest of the front, at each end a statue, and between them a vase; the whole uniting to form a center at once pleasing and magnificent; in which lightness vies with grandeur, and simplicity with elegance.

The rustic floor consists of a very large arcade, and two suites of rooms. In the the arcade is a fine group in statuary, containing three figures as large as life, in which one of gigantic stature is getting the better of two others; the sculpture is Foggini; the upper parts of the two lower figures are finely executed; the turn of the backs, and the expression of the countenances, good; the forced struggling attitude of the hinder one very great, especially that of pushing his hand against the body of his antagonist. On the left of this arcade is the common apartment; first, a supping-room, thirty by twenty-two, and fourteen high; a drawing-room, thirty-three by twenty-five; anti-room to the dining-room, and the dining-room, thirty-six by twenty-five. On the other side, offices for the steward, butlers, &c. Upon this floor are an immense number of rooms of all sorts; and among others a great many admirable good apartments, of anti-room, dressing-room, bed-chamber, furnished with great elegance in velvets, damasks, &c. and gilt and carved ornaments.

Upon the principal floor you enter first the grand hall, which is, beyond all comparison, the finest room in England;

England; the justness of the proportions such as must strike every eye with the most agreeable surprize on entering it. It is sixty feet square, and forty high; a gallery ten feet wide is carried round the whole, which leaves the area a cube of forty feet; this circumstance gives it an elegance and a magnificence unmatched in any other hall. The gallery is supported by eighteen most noble Ionic fluted pillars, incrusted with a paste, representing in the most natural manner several marbles. The shafts are of Siena, and so admirably imitated as not to be distinguished from reality by the most experienced and most scrutinizing eye; the bases pedestals, the capitals of white marble, and the square of the bases of verd antique. Nothing can have a more beautiful effect than these pillars; those only on one side of the room are yet completed; but the most skilful hands from Italy are kept constantly employed in finishing this noble design. Between the pillars are eight niches in the wall for statues, which are ready to be placed when the pillars, walls, and niches are finished for receiving them. Over these niches are very elegant reliefs in pannels, from the designs of Mr. Stewart. Above the gallery are eighteen Corinthian pilasters, which are also to be incrusted with the imitation of marbles. Between the shafts are pannels struck in stucco, and between the capitals festoons in the same, in a stile which cannot fail of pleasing the most cultivated taste. The ceiling is of compartments in stucco, simply magnificent, and admirably executed. His lordship designs a floor in compartments answerable to the ceiling, of the same workmanship as the columns.—To the left of this noble hall is a grand suite of apartments; containing,

First, a supper-room, forty feet by twenty-two. The ceiling compartments in stucco; the center a plain large oblong; at each end a square, in which is a most elegant relief, representing two angels supporting an urned cup of flowers resting on the head of an eagle; the divisions on each side containing scrolls; the whole exceedingly elegant. The chimney-piece very handsome, the frieze containing the Rockingham supporters, with a plain shield, in white marble, finely polished; the columns festooned in the same.

Second, a drawing-room thirty-five, by twenty-three. The ceiling coved in stucco; the center an oval in oblong, with medallions in the corners of the square cut by the oval, inclosed in wreaths of laurel surrounded by scrolls; the cove rising to it struck in small octagon compartments, chequered by little squares, extremely elegant. The cornice, frieze, and architrave of the wainscot beautifully carved; nothing more elegant of the kind than the scroll of carving on the frieze. The chimney-piece of white marble, polished; the cornice supported by figures of captives, in the same; on the frieze, festoons of fruit and flowers; on each side a vase, on which are four small but elegant figures in relief, something in the attitude of the hours in the Aurora of Guido.

Third, a dining-room forty feet square; the ceiling of stucco; in the center a large octagon; around it eight divisions, within four of which are reliefs of boys supporting a shield, inclosing a head in a blaze, by a wreath of fruit; over it a basket of flowers on a shell inverted; and under it an eagle spreading its wings. In the other division are rays in circles of fret-work. The design of the whole in a most just and elegant taste. The chimney-piece large and handsome, of white polished marble; above it architectural ornaments; a cornice, &c. supported by Corinthian pillars; the whole finely carved, and surrounding a space left for a picture. In the walls of the room are pannels in stucco, of a bold and spirited design, and like the ceiling, exceedingly well executed. Over the doors are six historical reliefs; in the center on each side a large frame-work for a picture, by which are pannels, inclosing in wreaths four medallions;

Theocritus,
Hector,
Agamemnon,
Hyacinthus.

On one side the chimney-piece, in the same stile,
Hamilcar;
And on the other,
Triolus.

Returning to the grand hall, you enter from the other side another suite.

First, an anti-room thirty by twenty; the ceiling finely finished in stucco.

Secondly, the grand drawing-room, thirty-six square; ceiling the same.

Third, a dressing-room thirty by twenty-five; by the ceiling coved in stucco; the center an oval cut in a square, elegantly decorated; the cove rising to it mosaic'd in small squares, designed with great taste.

Fourth, the state bed-chamber, twenty-five square ceiling of stucco, and elegant.

Fifth, another dressing-room, sixteen square, communicating with the passage which runs behind this suite of apartments.

At the other end of the house behind the great dining-room is the India apartment, a bed-chamber fifteen square, with a dressing-room the same; the chimney-piece extremely elegant; pillars of Siena marble.

From the other corner of the hall on the right-hand you enter by a large passage; the gallery, or common rendezvous room one hundred and thirty feet by eighteen, hung with India paper; a most useful and agreeable room. To the right, this opens into the new damask apartment, consisting of a bed-chamber and two dressing-rooms, one of the latter twenty-seven feet by eighteen, the ceiling compartments in stucco: the chimney-piece surprizingly elegant; a border of Siena marble, surrounded by compartments of a black marble ground, inlaid with flowers, fruit, and birds of marble in their natural colours; most exquisitely finished. The bed-chamber, twenty-seven by fifteen, the ceiling very well designed and executed in stucco; the other dressing-room (both open into the gallery) twenty-eight by eighteen; a coved ceiling stuccoed in compartments extremely neat; the chimney-piece pilasters of Siena, with white polished capitals supporting the cornice of white and Siena marble; the whole very elegant: over it a copy, from Vandyke, of Charles the First's Queen, by Lady Fitzwilliams, exceedingly well done; the face, hair, and drapery excellent.—Here is one of the most curious cabinets in England; it is in architectural divisions of a center and two wings, on a basement story of drawers; a cornice finely wrought of ebony, the frieze of ivory, and the architecture tortoise-shell, supported by Corinthian fluted pillars of tortoise-shell and ebony carved in reliefs, the capitals and bases gilt. The entrance of the building rustics in tortoise-shell, the divisions in ivory. By looking in the center on either side, is a deception of perspective; the design is very elegant, and the workmanship excellent.

On the other side of the gallery, you open into a blue damask dressing-room, twenty-five by twenty-four; here are two pictures by Mr. West, which seems to be in his happiest manner; Diana and Endymion, and Cymon and Iphigene. In the first, the most striking peculiarity is the light, all issuing from the crescent of Diana; this is something of the *Concetto*, but the execution is fine; the diffusion spirited and natural. The turn of her neck and naked arm is very beautiful; all the colours are fine and brilliant; and the general harmony very pleasing. In the other piece, the naked bosom of Iphigene is fine, and the turn of her head inimitable. Cymon's figure is good, his attitude easy and natural; the colours are glowing, and consequently pleasing. Besides these pieces, here is likewise a large portrait of the late King on horseback; it is a good one, the attitude very natural. Likewise a small relief in alabaster of a Cupid in a car, drawn by panthers: his attitude very pleasing.—Next is the chintz bed-chamber, twenty-four by twenty.

After this comes the yellow damask apartment. The dressing-room eighteen square; and the bed-chamber twenty-five by eighteen. Upon a cabinet in this room is a small Venus in white marble; fine, delicate, and pleasing; the drapery under her breast beautiful.

The red and white apartment, nineteen square; and a dressing-room twenty by nineteen. Then into the last apartment on this side, very elegantly furnished, twenty by eighteen, and twenty-two by twenty.

The library sixty by twenty, and nobly furnished; among other particulars are the engravings of antiques found in Herculaneum.

Besides this very magnificent work, there are in this library a vast number of books of prints, architecture and medals; of the last, his lordship has one of the greatest collections in England.

From the library is a direct communication, on one side with the preceding rooms, and on the other with the crimson velvet apartment; consisting of, first, an anti-room, painted in obscura in blue, in a very neat taste, twenty-three feet square; this opens into the bed-chamber of the same dimensions, the ornaments of the bed, the glass frames, &c. &c. of gilt carving well executed; then the dressing-room twenty-three by fifteen.

The Attic story consists of complete sets of apartments, of bed-chamber and dressing-room; including those of lord and lady Rockingham, which are four dressing-rooms and a bed-chamber. In his lordship's anti-room hangs the famous picture of the earl of Strafford, and his secretary, by Vandyke; and incomparably fine it is. Also the portrait of an old servant, by Stubbs; which appears to be most excellently done. The strong expression of the face is worthy the pencil of Rembrandt himself. The rooms on this floor are all spacious, many of thirty-six by thirty, thirty by twenty-five, &c. &c. in general well proportioned, and the furniture rich and elegant. Upon the whole, much superior to the common stile of Attic apartments.

In respect of convenience, the connection of the apartments throughout the house is excellently contrived. For the grand suite of rooms on the left of the hall has a roomy passage behind it, which communicates with the offices by back stairs, and with the library and apartments adjoining by passages. To the right of the hall the same convenience is found, for one of its doors opens into the great stair-case, landing-place and passage, which runs behind the grand apartment and opens into the second dressing-room; so that there is a double way through all this suite, to the state bed-chamber; either through the great rooms to the first dressing-room, and then into the bed-chamber; or on the other side through the second dressing-room; and an immediate communication between these apartments and the stair-case, which leads down to the rustic floor, and up to the Attic story. All these apartments are nearly contiguous to each other, and yet you may enter almost any one of the rooms without going through another. The disposition of the other apartments is not inferior.

The passage before-mentioned, or rather vestibule which connects the hall and the apartments to the right of it, likewise opens into the gallery, which as a rendezvous room is excellently situated; for to the right it opens into both the dressing-rooms of the blue damask apartment; and on the left through the green damask dressing-room to the library and apartments adjoining, and by several large, handsome, and well-lighted passages to other apartments and stair-cases, which communicate with the offices, so that on every side there is a communication between all the apartments, and yet without making one a passage-room to another; which is excellently contrived.

But the park and environs of Wentworth house, are, if any thing, more noble than the edifice itself; for which way soever you approach, very magnificent woods, spreading waters, and elegant temples break upon the eye at every angle. But there is so great a variety in the points of view, that it is impossible to lead you a regular tour of the whole without manifest confusion; we shall therefore take the parts distinctly, and so pass from one to the other.

Many of the objects are viewed to the greatest advantage by taking the principal entrance from Rotherham; this approach, his lordship is at present laying out; much of the road, &c. is done, and when com-

pleted it will be a continued landscape, as beautiful as can be conceived. At the very entrance of the park, the prospect is delicious. In front you look full upon a noble range of hills, dales, lakes and woods, the house magnificently situated in the center of the whole. The eye naturally falls into the valley before you, through which the water winds in a noble stile. On the opposite side, is a vast sweep of rising slopes, finely scattered with trees, up to the house, which is here seen distinctly, and stands in the point of grandeur from whence it seems to command all the surrounding country. The woods stretching away above, below, and to the right and left with inconceivable magnificence; from the pyramid on one side, which rises from the bosom of a great wood, quite around to your left hand, where they join one of above an hundred acres hanging on the side of a vast hill, and forming altogether an amphitheatrical prospect, the beauties of which are much easier imagined than described. In one place the rustic temple crowns the point of a waving hill, and in another the Ionic one appears with a lightness that decorates the surrounding groves. The situation of the house is no where better seen than from this point, for, in some places near, it appears to stand too low; but the contrary is manifest from hence, for the front-sweep of country forms the slope of a gradually rising hill, in the middle of which is the house, up to it is a fine bold rise. If it was on the highest of the ground, all the magnificence of the plantations which stretch away beyond it, would be lost, and those on each side take the appearance of right lines, stiffly pointing to the edifice. But this remark is almost general, for I scarce know a situation, in which the principal building should be on the highest ground.

Descending from hence towards the wood beneath you, hanging towards the valley, and through which the road leads, before it enters another view breaks upon the eye, which cannot but delight it. First, the water winding through the valley in a very beautiful manner; on the other side, a fine slope rising to the rustic temple, most elegantly backed with a dark spreading wood. To the right a vast range of plantations, covering a whole sweep of hill, and near the summit the pyramid raising its bold head from a dark bosom of surrounding wood. The effect truly great.—In the center of the view, in a gradual opening among the hills, appears the house; the situation wonderfully elegant. Turning a little to the left, several woods, which from other points are seen distinct, here appear to join, and form a vast body of noble oaks, rising from the very edge of the water to the summit of the hills, on the left of the house. The Ionic temple at the end most happily placed, in a spot from whence it throws an elegance over every landscape.

The road then entering, winds through the wood before mentioned. This wood is cut into winding walks, of which there is a great variety; in one part of it, on a small hill of shaven grass, is a neat house for repasts in hot weather. The dining-room is thirty-two feet by sixteen, very neatly fitted up; the chimney-pieces of white marble of an elegant simplicity; the bow-window remarkably light and airy. Adjoining is a little drawing-room hung with India paper, and a large closet with book-cases; beneath are a kitchen and other offices. From hence a walk winds to the aviary, which is a little light Chinese building of a very pleasing design; it is stocked with Canary and other foreign birds, which are kept alive in winter by means of hot walls at the back of the building; the front is open net-work in compartments. In another part of the wood is an octagon temple in a small lawn; and the walk winds in another place over a bridge of rock-work, which is thrown over a small water thickly surrounded with trees.

Upon coming out of this wood the objects all receive a variation at once; the plantations bear in different directions, but continue their noble appearance; for your eye rises over a prodigious fine bank of wood to the Ionic temple, which here seems dropt by the hand of Grace in the very spot where Taste herself would wish it to be seen.

The road from hence is to wind over the hill, and take a slanting course down to that part of the water where the octagon temple is situated; a very elegant little building, sweetly situated in the valley, commanding the bends of shore among the adjoining groves, and the hanging woods which crown the surrounding hills. Not far from this temple, a magnificent bridge is to be thrown over the water, and the road then to be traced through another wood, which is full of an immense number of the most venerable oaks in England; one of which is nineteen feet in circumference; and a great many of them near as large, with noble stems of a majestic height. After this it will gain an oblique view of the grand front of the house, and wind up to it in such a line, that the feet may never travel in a direction that the eye has before commanded.

Another noble approach from which this exquisite park is seen to great advantage, is the lower entrance from Rotherham, where the new porter's lodge is building. From hence the pyramid is seen upon the right, rising from a noble sweep of wood. In front the rustic temple just shews its head above a spreading plantation in a picturesque manner. On the left, along the valley, winds the lake in that waving line, which art uses to imitate the most elegant touches of nature. It is broke by bold projecting clumps of wood upon the banks, through which the water is in some places seen with a most charming elegance. At a distance upon the banks of this noble water, which is upwards of two hundred yards wide, is seen the octagon temple, in a situation fixed with such taste as to leave little for the imagination to supply. On the other side of the water, you look upon a great extent of park, scattered with trees in the most beautiful manner imaginable, crowned with two vast woods, which here appear as one; and on every side fine prospects of cultivated hills spreading one beyond another.—This approach crosses towards the lodge, where is a small but very neat room of prints on blue paper, and furnished with an harpichord, for varying the scene of the most elegant of all amusements. The view from the windows is full upon the water, then the hills rising boldly from the shore, and terminated with a magnificent range of woods. The road winds from hence around the hill on which the rustic temple stands, and breaks at once upon the house, in a manner not only strikingly judicious in itself, but finely contrasted to the other approaches from which it is gradually seen. A part of this design was the cutting away a large part of that hill, which projected too much before the front of the house; a vast design but not yet completed, although his lordship has already moved from it upwards of one hundred and forty thousand square yards of earth. An immense work, which required the spirit of a Rockingham to undertake.

The pyramid and temples are finely scattered over the scene, and give it just the air of liveness which is consistent with the grandeur of the extent. This view is perhaps the most beautiful in Yorkshire; for the house, park, and woods form a circular connected landscape, more elegantly beautiful than the brightest paintings of Zuccarelli; and more noble than the grandest of Poussin's ideas; while the surrounding country exhibits Arcadian scenes smiling with cultivation, and endless in variety.

Having often mentioned the pyramid, it is requisite to add, that it is a triangular tower, about two hundred feet high, which was built on the summit of a very fine hill, at a distance from the house. There is a winding stair-case up it, and from the top a most astonishing prospect around the whole country breaks at once upon the spectator. The house, and all its surrounding hills, woods, waters, temples, &c. are viewed at one glance, and around them an amazing tract of cultivated inclosures. A view scarcely to be exceeded. The following inscription is engraven over the entrance.

1748.

“ This pyramidal building was erected by his MAJESTY'S most dutiful subject, Thomas, Marquis of Rockingham, &c. in grateful respect to the preserver of our religion, laws, and liberties, KING GEORGE THE SECOND, who, by the blessing of God, having sub-

dued a most unnatural rebellion in Britain, anno 1746, maintains the balance of power and settles a just and honourable peace in Europe.”

1748.

Near it is a small but very neat room, looking down upon a beautiful valley, and over a fine and extensive prospect, where lady Rockingham sometimes drinks tea.

At no great distance from the pyramid is the arch, another building, which was raised as an object to decorate the view from the Ionic temple.

In a village called Cuckhold's Haven, near this town, there now grows, or very lately did grow, a yew tree, the stem of which is straight and smooth, to the height of about ten feet; the branches rise one above another, in circles of such exact dimensions, that they appear to be the effect of art. The shoots of each year are exactly conformable one to another, and so thick, that the birds can scarce find an entrance. Its colour is remarkably bright and vivid; which, together with its uncommon figure, gives it at some distance the appearance of a fine artificial tuft of green velvet.

We next entered Bautre, situated upon the bank of the river Idle, one hundred and forty seven miles from London. It stands in the great post road from London to Scotland, and is on that account well furnished with inns. The river Idle being navigable from Derbyshire to this town, renders it the center of all the exportation of this part of the country, particularly for heavy goods, which are brought down hither from all the adjacent countries, such as lead, mill-stones, and grind-stones, from Derbyshire; and wrought iron, and edged tools of all sorts from Sheffield.

This town has a weekly market on Saturday, and two annual fairs, viz. Holy Thursday, and November the twenty-second, for cattle and horses.

Leaving this place we passed on to Doncaster, in the road from London to York, one hundred and fifty-five miles from London. It derives its name from its situation on the river Don, or Dan; and from an old castle here which is now in ruins, by the Saxons was called Donacester, a castle upon the river Don. It is a very ancient Roman town, and was stiled both in the Itinerary and the Notitia Danum, and the Britons named it Caerdaun. There it was that the lieutenant of the Crispinian horse, under the governor of Britain, was quartered. About the year seven hundred and sixty it was burnt down to the ground by lightning, and so entirely buried in its own ruins that it is even at this time scarcely recovered. It is however at present a noble, large, spacious and populous town; and is a corporation governed by a mayor, a recorder, six aldermen, and a common council. King James II. granted them a new charter, which was with great pomp brought to the town-hall in the year 1685, attended by a procession of three-hundred horsemen. Here are two fine lofty stone bridges over the river, Don, besides a long causeway beyond them, the waters of the river being dangerous to passengers when they swell over its banks, as is sometimes the case. Here is but one church, but it is large and neat, and its tower of admirable workmanship; in it are the monuments of two remarkable benefactors to the town; one, of Thomas Ellis, who had been five times mayor, and founded an hospital which he richly endowed; and the other of Robert Byrk, known by the name of the Famous Man of Doncaster, who gave a place called Rosling-Wood, to the poor: on his tomb-stone is the following remarkable epitaph.

“ Howe, Howe, who is here,

“ I, Robin of Doncastere,

“ And Margaret my feare.

“ That I spent, that I had,

“ That I gave, that I have,

“ That I left, that I lost.

“ A. D. 1597.

“ Quoth Robertus Byrks, who in this world did reign
“ Threescore years and seven, but lived not ane.”

At one end of this town is a remarkable ancient column, called a cross, which bears the following Norman inscription:

+ ICEST

† ICEST: EST LA CRIVICE: OTE: D.

TILLAKI: ALME: DEV: EN: FACE: MERCI: AM

In the beginning of the reign of king Henry III. here was an hospital for sick and leprous persons, dedicated to St. James; which, before the general suppression, degenerated to a free chapel, with a chantry in it. During the reign of the same king here was a chapel dedicated to St. Nicholas.

Here was likewise a house of Grey friars, before the year 1315; but when or by whom founded does not appear.

The celebrated sailor Sir Martin Frobisher, was born in this town. He was the first Englishman, who, in the reign of queen Elizabeth, discovered the north passage to China and Cathai, and found some streights, which he called after his own name, and a foreland, which he named after the queen. Some of his ship's company brought home with them a few black stones, out of which it was said some refiners extracted gold; which encouraged Frobisher to load his ship with the same sort of stones, when he visited those parts in a subsequent voyage; but they were found fit for nothing more than to mend the high-ways.

Doncaster has a weekly market on Saturday, and four annual fairs, viz. April the fifth, August the fifth, November the twenty-sixth, and Monday before Old Candlemas-day: all for horses, black cattle, sheep, and pedlars ware.

In the neighbourhood of Doncaster, on the river Don, are the remains of Conisburg-castle, to which Hengist, the Saxon, is said to have retired after having been routed by Aurelius Ambrosius, the Briton; and here, in revenge for the barbarous murder of the British nobility in cold blood at Stonehenge in Wiltshire, he put him to death. Before the gate is a mound of earth said to be the grave of Hengist.

Near these ancient ruins is a church belonging to the village of Conisburg, and in the church-yard a stone of black marble, engraved with antique figures; one of which represents a man with a target encountering a small winged serpent; another, a man on horseback curiously cut; and a third, another man bearing a target. This stone is cut into the form of a coffin, and is doubtless a very ancient monument. This town is also famous for its situation. It stands upon an eminence, having in its neighbourhood six large market towns; one hundred and twenty villages; many large woods of oak, some containing an hundred acres, and others having beautiful walks cut through them; six iron furnaces; many mines of coal and iron, and quarries of stone; nine large stone bridges; forty water-mills; six seats of noblemen, and sixty of gentlemen; fifteen parks, and two navigable rivers.

At a small distance from Conisburg, on the river Don, is a place called Temple-borough. It is a Roman fortification, the north-east corner of which is washed away by the river. The area is about two hundred paces long; exclusive of the mount, or keep. On one side is a large, deep, open ditch; but on the other it is covered with large trees.

At Hampall, north-west of Doncaster, William de Clarefair, and Avicia de Tany, his wife, founded, about the year 1170, a priory for fourteen or fifteen Cistercian nuns, and dedicated it to the Virgin Mary. At the dissolution its annual revenues amounted to only thirteen pounds, five shillings, and four-pence.

At Sprotborough, south-west of Doncaster, was an hospital dedicated to St. Edmund, before the year 1363. It continued till the general suppression, when its annual revenues amounted to nine pounds, thirteen shillings, and eleven-pence.

Leaving Doncaster we continued our journey to Barnesley, a small market town situated on the side of a hill, one hundred and seventy-five miles from London. It is well built of stone, and is often called Black Barnesley; but whether from the smoke of the manufactories of wire, steel, and iron ware, carried on here, or from the moors in its neighbourhood exhibiting a black aspect, is uncertain.

Here is a weekly market on Wednesday, and three annual fairs, viz. the Wednesday before the twenty-eighth of February, and May the twelfth, for black cattle and hogs; and October the tenth, for cattle, cheese, and goose pies.

Pontefract, or Pomfret, the next town we visited, is an ancient place, situated near the banks of the Aire, and its conflux with the Calder, one hundred sixty-nine miles from London. It is a large well-built town, about a mile in length; but smaller than formerly. It was incorporated by Richard III. and is now governed by a mayor, a recorder, twelve aldermen, who are in the commission of the peace, and burgeses without limitation: the mayor, who is also a justice of the peace, is chosen annually by the burgeses.

Here are the remains of an ancient castle, built originally by Ilbert de Lacy, the ruins of which shew it was once a very noble pile of building. One of the round towers is still entire, and near it are winding stairs which descend into several vaults and subterraneous passages. In this castle, and in the town of Pontefract, great quantities of blood have been spilt in different ages. Here Henry the Great, earl of Lancaster, who was lord of the castle, and whose ancestors had beautified, enlarged and fortified it, was here beheaded by order of his nephew, Edward II. Here Richard II. was murdered; and, according to tradition, in or near the tower, which is still standing: and here Anthony, earl of Rivers, and Sir Richard Gray, the former uncle, and the latter brother-in-law, to Edward V. were beheaded by that cruel tyrant Richard III. During the civil wars, a company of Veteran soldiers took this castle by surprize for the king, and desperately defended it to the last extremity; but being at length obliged to surrender the castle, five of them, disdaining to be made prisoners, attempted to cut their way through the besiegers camp, where three of them perished in the noble though unequal contest.

The parish church, which stands near the castle, was remarkable large, and finely decorated; but received so much damage in the civil wars, that a part, and even that no more than the shell, is left standing. It is a handsome Gothic building in the form of a cross, having a tower in the center. This tower was formerly crowned with a magnificent lanthorn, enriched with carved work: but it was so much damaged by a cannon shot, during the siege of the castle, that it was soon after blown down, and soon after the surrender of the castle, the parliament granted a thousand pounds, to be raised by the fall of the materials of the castle, to the town of Pontefract, towards repairing their public place of worship. Part of this grant was probably applied for erecting a plain octagon building upon the tower, and which finishes the whole in a manner not disagreeable, though far inferior to the former. In the north-west corner of the tower, are two circular flights of stairs, winding about the same center, with separate entrances below, and distinct landing places above. The inhabitants still continue to bury in the church-yard, but divine service is performed in a chapel adjoining to the market place, which is very spacious; the town-hall is at the bottom of the market-place. Here is a charity school for twenty-four boys, and twelve girls.

Pontefract had both a college and an hospital, soon after the conquest. In the castle already mentioned Ilbert de Lacy founded a chapel, and dedicated it to St. Clement. It was afterwards made collegiate, consisted of a dean, and three prebendaries, and was considered as a royal free chapel at the time of the dissolution.

Here was a Cluniac priory founded, in the time of William Rufus, by Robert de Lacy. It was dedicated to St. John the Evangelist, and its annual revenues at the dissolution amounted to three hundred and thirty seven pounds, fourteen shillings and eight pence.

The same Robert Lacey founded here, in the time of Henry I. an hospital, which he dedicated to St. Nicholas. At the time of the suppression a chaplain and thirteen poor persons resided in this hospital, and the annual revenues amounted to ninety-seven pounds, thirteen shillings and ten-pence.

Edmund La cy, earl of Lincoln, who died in 1257, founded a priory of Carmelites, or White friars, in this town.

Here was also a house of Black friars before the year 1266, said to have been foundrd by one Simon Piper.

Here was likewise a lazar-house, built about the year 1286, and dedicated to St. Mary Magdalen.

In the eighth year of Edward III. one William de Tabouret obtained the king's licence to found an hospital here for a chaplain. It was dedicated to the Virgin Mary.

About the year 1385, Sir Robert Knolles, and Constance his wife founded here a college or chauntry for a master and six chaplains or fellows, and an alms-house adjoining to it, for a master, two chaplains, and thirteen men and women. This foundation was dedicated to the Trinity, and endowed at the suppression with yearly revenues amounting to two hundred pounds, five shillings.

Pontefract sends two members to parliament, has a weekly market on Saturday, and several annual fairs, viz. St. Andrew's fair, on the first Saturday in December; Twenty-day fair, the first Saturday after the twentieth day from Christmas; Candlemas fair, the first Saturday after February the thirteenth. St. Gile's fair, the first Saturday after September the twelfth; and all the other moveable fairs, viz. Palm-Sunday, Low-Sunday, and Trinity-Sunday, to be held on the Saturday before each of those days respectively. The fortnight fairs will always be held on the Saturday next after York fortnight fairs as usual. The shew for horses, formerly called Palm-Sunday shew, will always for the future begin on the fifth of February.

Methley, the seat of lord Mexborough, about six miles from this town, is fitted up and furnished in so rich a manner, as to attract the attention of travellers. The ground-floor consists of a vestibule, a dining-room, and a drawing-room; the first thirty-seven by twenty-seven, with a large bow window; the second thirty-seven by twenty-five, hung with crimson damask, the ornaments carved and gilt: the ceiling in compartments, ornamented in green, gold, and white. The chimney-piece very handsome, the cornice, &c. of white marble, the frieze of Siena, with white scrolls on it; and supported by Ionic pillars of Siena: the door and window cases of white and gold; the cornice of the same, and the frieze green and gold, very elegant. The frames of the glasses, fettees, chairs, &c. carved and richly gilt.

Upon the first floor are three apartments: the green velvet bed-chamber, nineteen by eighteen. The chimney-piece, Corinthian pillars of Siena marble, with gilt capitals. The crimson damask room, twenty-three by eighteen; the ceiling white and gold in compartments, with festoons of gilding in them in a light and elegant taste; the chimney-piece white and Siena marble; in the center, doves in bas-relief, very fine. The ornaments of the bed gilt carving; and the window curtains covered with scrolls of the same in an elegant taste: adjoining, a small dressing-room, the ceiling gilt scrolls on a lead white, light and pleasing. The chintz-room, twenty-five by eighteen, the ceiling in compartments with slight scrolls of gilding, in a very pretty taste. Here are two large and very fine India figures, above a yard high, in glass-cases. A dressing-room, eighteen by twelve, neatly as well as richly fitted up. We should remark in general, that the articles of carving and gilding are done throughout the house with much elegance; the doors, door-cases, window-frames, pannels, &c. are ornamented in this manner; the ceilings are in general very elegantly executed, the scrolls of gilding, not crowded, but light and neat as well as rich, and the furniture equally well chose.

From Methley, we went to Temple Newtham, the seat of Lord Irwin; whose collection of pictures is not only capital, but very numerous. The following are those which struck us the most. We cannot add the masters, as the person who shews the house, knows neither the subject, or painter of scarce any; a circumstance to be regretted, when a catalogue is so easily written for the information of the curious traveller; one advantage

however attends it, which is the certainty, that one's remarks are mere feelings, and never the praise or censure which the world attaches to names.

In the breakfast room, thirty-two by twenty-seven, are, A Baichanalian-piece: The attitude of the naked woman, in the front ground, fine; and the figures well designed.

An Astrologer. Very fine.

In the crimson damask bed-chamber.

Present Dutchies of Grafton; a portrait. The very first sight of this picture will extort from you,

"Grace was in all her steps, heaven in her eye:

"In every gesture, dignity and love."

The whole figure excellent. The attitude astonishingly spirited and elegant; the air of the head, the beauty of the face and hair, inimitable. An exquisite piece.

Landscape with figures. The woman in white, good; the water very bad.

In the dressing-room.

Large Landscapes. Very fine.

Dead Game. excellent.

Landscape. We apprehend by *Bassan*. Strong but ugly expression.

Sea-piece. Fine.

In the green dressing-room.

Landscape. Rocks, and every thing green.

A storm. Fine.

A large battle-piece. Strong expression; supposed by *Borgognone*.

Group of horsemen, with rocks. The wild manner of *Salvator Rosa*.

Lot and his daughters. Colours and attitudes very fine.

Battle-piece. Spirited.

Ditto. Ditto.

Sleeping woman; satyrs, &c. Good: In the style of *Rubens*.

Landscape. Middling.

In the blue damask dressing-room.

Boys. Charity and her three children introduced; the brilliancy of the colours exceeding fine; the boys very well done.

Cephalus and Procris. Fine.

Two battle-pieces. Round ones; amazingly spirited.

Two pieces of dead game. Inimitable.

Two small pieces on copper. In one a decollation by a female figure, with a cymeter in her hand: perhaps *Holophernes*. The colours and finishing exquisite.

Landscape. A water-fall; very fine.

Group of boys. Inimitable.

Sea-piece.

Two small pictures, groups of horsemen. Very fine: the spirited manner of *Salvator* and *Borgognone*.

A calm. Pretty.

A large landscape. Rocks and trees dark, but expressive.

In the gallery, a very fine room, one hundred and eight by twenty eight, are

Two large battle-pieces. Exceeding fine.

Landscape under one of the above, a calm evening:

Very fine; the boor on an ass, exquisitely done; colours, expression, attitude, and cattle excellent.

Ditto. Its companion. The figures, rocks, and broken trees admirable.

Group of horsemen on a bridge. The lights strong; and the expression spirited.

Its Companion. Ditto.

Storm among rocks; and the companion. Surprizing expression.

Fruit. Excellently done.

A baptism. Very fine colours.

Descent from the Cross. This is in the style of *Albert Durer*: The minute expression resulting from high finishing, amazing; but the draperies (except the gauze linen) dreadful.

Battle at sea. Very fine.

Two rocks with figures. Very wild and dark, but nobly touched: If they are not by *Salvator*, they are worthy of him.

- Large piece of birds. Spirited; the colours excellent.
 Two large pieces, a storm among rocks, and a raging torrent. A wild and very noble expression.
 Holy family. In the stile of *Carlo Marratt*; the boy admirably fine. Her countenance good, but the draperies heavy and disgusting.
 Large landscape. In a dark stile; but the light through the trees, and on the woman very fine: the general blueish cast unnatural.
 Hunting the wild-boar. Strong expression.
 Two pieces of fruit, &c. Very fine.
 Two landscapes. In the stile of *Poussin*.
 Landscape with rocks and buildings. The tree on the left side, exquisite: the keeping fine.
 Its companion. Trees and buildings excellent.
 Prometheus. Great.
 A large ship-wreck. Amazingly spirited in the figures; and a general horror nobly expressed.
 A water-fall. Its companion: the figures, trees, and general wildness, exceedingly fine.
 A landscape; under ditto. Admirably fine. The general effect of the clear obscure: the calm majesty of the scene; the spirit of the figures, architecture, &c. incomparable: worthy the pencil of *Poussin*.
 Portrait of a Scotch lord. Excellent expression.
 Ditto of Mr. Scarborough. Good.
 Ditto of a man writing. Great expression; in the manner of *Rembrandt*.
 Fruit-shop. Excellent.
 Jane Shore. The minute expression of the naked, and the gauze drapery is astonishingly fine. The finishing of the breasts and limbs, surprizing.
 Europa. It seems in the stile of *Rubens*; fine. The colours excellent.
 A supper. The lights, and ugly expression, fine: it is in the manner of *Schalken*.
 Moses striking the rock. The colours bad; the group, and figures quite Dutch.
 Shadrech, Meshach, and Abednego. Prodigious fine.
 Two boys heads. Amazingly fine; the turn, attitude, and expression great.
 Two pieces of horses. Fine.
 Portrait of the Earl of Holland. Admirable.
 Holy Family. A large picture in the stile of *Rubens*. Nothing can be finer than the boys; the principal one is inimitable; the head and face of the Virgin very fine, but somewhat too elegant for *Rubens*. A very capital picture.
 Two small battles.
 A dead Christ. Amazingly fine.
 Two sea-pieces. Fine.
 Architecture. An arch and a landscape through it. The arch fine.
 A priest holding a crucifix. Excellent.
 Joseph and our Saviour. Fine; something in the manner of *Carlo Marratt*.
 Rachel, Joseph and Benjamin. Fine, but unpleasing.
 Architecture and figures. Exceedingly fine.
 Christ praying in the garden. The colouring and attitude inimitable; but the lights unnaturally diffused: should suppose it of the school of *Carrach*.
 Its companion. A figure praying; vile drapery; but the rest fine.
 Lord Irwin. Very good.
 A group of dancing boys: finished with a glow and brilliancy, beyond expression. The attitudes exquisite: the colours astonishingly fine; the landscape beautiful; but the lights strangely diffused.
 Diana, in two pieces. Clumsy as ever *Rubens* painted.
 Portrait of Sir Arthur Ingram. Good; but a wretched attitude.
 A fruit-piece. Fine.
 A small picture of many figures. It somewhat resembles the manner both of *Borgognone* and *Bassan*; fine.
 Its companion, a woman reading. Quite Dutch ideas, figures and drapery.
 Cattle-piece; (over the library door). Fine.
- Architecture; (under the large sea-piece). Very fine and bold.
 The library is a very handsome room, divided by Corinthian pillars. It is twenty-four square. In the chapel is an altar-piece, somewhat curious: a last supper. The figure of Christ has the countenance of a clown; the group is wretched; one of the apostles is in a tye-wig, and another's hair would do exceedingly well for a bag.
 At Byron, the seat of Sir John Ramsden, are several pictures, which will give no slight entertainment to those who are fond of painting: among others here are, in the dining-room, thirty-six by twenty-five.
Rubens. Boys, with a festoon of fruit by *Snyders*. Most capital; nothing can be finer than the attitudes and sweet expression of the boys. The group is sketched with all imaginable elegance. The faces and hair incomparable.
 Spaniels on the scent. An admirable spirit in the attitudes of the dogs. The partridge in the air very fine.
 A water-fall with rocks. Amazingly fine. The foam of the water incomparable; the rock nobly majestic; the colours excellent; the figures fine and well placed; their attitudes striking; and the general keeping and brilliancy very pleasing. I should suppose it by *Poussin*.
 Water-fowl. Fine.
 A Musician. It is *Titian* in that character; said at Kiveton (where is another) to be by himself. The colours and attitudes are good; the diffusion of light bad.
 An hunting-piece. The spirit of the dogs excellently caught; the colouring is likewise good. But the figures are thrown into a corner, as if they had nothing to do with the sport; but cattle was the painter's forte.
 In the drawing-room, thirty by sixteen.
 A large landscape. Cattle going over a bridge; incomparably fine: the colours very lively, without being tawdry. The general brilliancy excellent. The tree amazingly fine: the cattle good: the figures elegantly grouped: the bridge, water, &c. inimitable. It may be called, *La belle Nature*.—Perhaps by *Zuccarelli*.—Under it.
 Dead game. The partridge very natural.
 Landscape. A glowing heat; very fine: the finishing exquisite; light through the trees, fine.
 Fruit with a tankard, &c. Very well done.
 A fox with a dead fowl. Excellent.
 A dead hare, &c. fine. The greyhound's head good; but not curiosity enough in his nose.
 Two landscapes. (Over the doors) Fine. The figures elegantly grouped: that of the lake and trees very pleasing.
 A large battle. Great fire and spirit.
 Two small landscapes. Colours admirable; the rocks and forest sublimely grand.
 Butterflies and leaves. Exceedingly well finished.
 A Nativity. Very graceful and pleasing; the Virgin's countenance fine, and her attitude easy and natural. If the hands are any rule to judge by, I should suppose this piece by *Parmegiano*.
 A Venetian Prospect. Brilliant and fine. It is in *Canaletti's* manner.
 Two pieces, companions; one of fruit-women: the colours very good. The other, A woman milking a goat, &c. fine; but not so brilliant. But the cattle very well done.
 Marchioness of Rockingham (over the chimney.) The attitude elegant, and drapery good.
 Two Heads; Oliver Cromwell, and another, its companion.
 Castleford, near Pontefract, appears to have been the *Legiolium*, or *Legitium*, of the Romans, and stands upon a Roman military way that runs from Doncaster to Aberworth. Vast quantities of Roman coins have, at different times, been dug up here, and are called by the inhabitants of this neighbourhood, Saracens heads.
 From Ferry-bridge, within a mile of Pontefract, extends

tends a large stone causeway, about a mile in length, to a village called Brotherton, whither Margaret, wife of king Edward I. was forced to retire as she was hunting, and was delivered of a son, called from the village, Thomas of Brotherton; this son was afterwards created earl of Norfolk, and marshal of England. Not far from the church is a piece of ground of twenty acres, surrounded with a trench, and a wall, where, as tradition informs us, stood the house in which the queen was delivered; and the tenants are obliged by tenure to keep it surrounded by a wall of stone.

We arrived next at Snath, a small inconsiderable town, one hundred and seventy five miles from London; but by means of the navigation of the rivers Aire and Don, near the conflux of which it stands, is rendered a town of good trade. Here was anciently a small Benedictine priory, subordinate to the convent at Selby, founded by Girard, archbishop of York, about the year 1106.

Here is a weekly market held on Friday, and three annual fairs, viz. the first Friday in April, August the tenth, for cattle, horses and pedlary; and the first Friday in September for cattle and horses.

At Drax, north-east of Snath, William Paynell, in the time of Henry I. founded a priory of Black canons, dedicated to St. Nicholas, and valued upon the dissolution at one hundred and four pounds, fourteen shillings, and nine-pence *per annum*.

North-west of this town, at a place called Temple Hurst, Ralph de Hastings, in 1152, founded a preceptory of Knights Templers.

Thorn, the next town through which we passed, is situated upon the river Don, one hundred and sixty-one miles from London, and contains nothing worthy of note except having a weekly market on Wednesday, and two annual fairs, which last three days each, viz. the first Monday, Tuesday and Wednesday after June the eleventh, and the first Monday, Tuesday and Wednesday after October the eleventh, for black cattle, horses and pedlary.

At a small distance to the north-east of Thorn, lies a moorish and fenny tract of country called Marshland, surrounded by the Don, the Idle, the Ouse and other rivers, in which are frequently dug up great quantities of fir and oak trees. Their depth under ground is from one to two yards: the roots are found in various directions, from which some of the trees seem to have been cut off, others broken, and others burnt. In the last century large canals were made for draining this spot of ground, in digging which were found gates, ladders, hammers, shoes, and other such things; together with the entire body of a man, at the bottom of a turf-pit, about four yards deep; his hair and nails not decayed. Here were also found several Roman coins; and from these circumstances, and the subterraneous wood before-mentioned, it conjectured that this, and other such places, were anciently forests, in which the Britons had taken refuge, and which were on that account cut down and burnt by the Romans.

From Snath we passed on to Selby, a populous town situated on the river Ouse, one hundred and seventy two miles from London. It is a place of considerable trade; on which account several merchants make it their residence. Here is a handsome church; but in 1690, part of it, with half of its beautiful steeple, suddenly fell down; it has, however, long since been rebuilt. Here is a charity-school; and one Mr. Rayner some years ago left one hundred pounds for teaching the children. This town is remarkable for having been the birth place of king Henry I. on which account 'tis said, his father, William the Conqueror, in the year 1069, founded a noble abbey here for Benedictine monks, dedicated to St. Mary and St. German, and rated, upon the suppression, at seven hundred and twenty-nine pounds, twelve shillings and ten-pence *per annum*.

Selby has a weekly market on Monday, and three annual fairs, viz. Easter Tuesday, June the twenty-second, and October the tenth, for cattle, wool, tin and copper ware.

We next proceeded to Sherborne, a populous town, about half a mile in length, and one hundred and se-

venty-six miles from London. It is supposed to have derived its name from the clearness of the rivulet which runs by it, or rather from Scire, a division, it being situated on a brook, on the borders of the Elmet. King Athelstan gave it to the see of York, whose bishops had formerly a palace here. In the year 1645, a battle was fought here between the forces of king Charles I. and the Parliament.

Robert Hungate, Esq. a most zealous protestant, founded an hospital or school in this town, for twenty-four poor orphans, who are allowed each five pounds a year for their maintenance, in lodging, board, and cloathing, from seven to fifteen years of age, and then according to their respective genius's are put out apprentices, or sent to the university; the provision made for the whole of this charity, including the maintenance of the hospital, and the allowance of forty marks a year for four poor scholars at St. John's College Cambridge, amounts to two hundred and fifty pounds a year.

There is a Roman way very high raised from hence to Aberford. Here is a good harbour for barges at the conflux of the Wherfe and Ouse; and this place is remarkable for having plenty of cherries.

In the year 1131 here was an hospital dedicated to St. Mary Magdalen.

Sherborn has a weekly market on Friday; and an annual fair, held October the sixth for flax and hories.

We next proceeded on our way to Aberforth, or Aburford, a small inconsiderable town, two hundred and ten miles from London, situated on the great Roman causeway; which, between this and Castleford-bridge, appears as intire as at its first making, though near one thousand six hundred years ago; under the town runs the river Cock, and near it is still to be seen the foundation of an old castle, called by the inhabitants Castle Cary. This town is famous for nothing but a manufacture of pins.

Here is a weekly market on Wednesday, and four annual fairs, viz. the last Wednesday in April, the last Wednesday in May, the last Wednesday in October, and the Wednesday after October the eighteenth, for horses, black cattle and sheep.

At Hedley, north of Aberforth, Ypolitus de Bram, in the reign of king Henry I. founded a priory of Benedictine monks, a cell to the monastery of the trinity at York.

From Aberforth we continued our journey to Tadcaster, advantageously situated for the reception of travellers on the south side of the river Wherfe, where the road from Chester, and that from Cambridge to York meet. It is an ancient town, one hundred and eighty-two miles from London; and is generally supposed to be the Calcaria of the Romans; several Roman coins have been dug up here, the marks of a trench are still visible round the town, and here is the platform of an old castle, or fort, out of the ruins of which, about one hundred and forty years ago, a fine stone bridge was rebuilt over the neighbouring river Wherfe. Some, however, are of opinion that Newton Kyme, near Tadcaster, was the Roman Calcaria: it stands upon the military way that runs through Holensford; and many Roman coins, urns, and other remains of Roman antiquity, have been dug up at this place. The name Calcaria is derived from the lime-stone soil in this neighbourhood, which the Romans called Calx.

Dr. Oglethorp, bishop of Carlisle, who, for want of a protestant archbishop, set the crown on the head of queen Elizabeth, but was afterwards deprived of his bishoprick for adhering to popery, founded a free school, and hospital here, dedicated to Jesus Christ, called the school and hospital of our Lord and Saviour Jesus Christ of Tadcaster, and endowed the school with forty pounds a year, and the hospital, with revenues for twelve poor people, each to have one shilling a week.

In the civil wars this town was seized for the parliament, but abandoned again on the approach of a superior force. Here was a monastery about the year 655, of which we have no particular account.

This town has a weekly market on Thursday, but no annual fair.

At Nun-Appleton, east of Tadcaster, Adelis, or Alice de St. Quintino, about the end of the reign of king Stephen, founded a Cistercian nunnery, dedicated to the Virgin Mary, and St. John the Apostle and Evangelist. Here was a prioress and thirteen or fourteen nuns, who, at the time of the dissolution, were possessed of revenues to the amount of seven-three pounds, nine shillings and ten-pence *per annum*.

North of Tadcaster at a place called Helagh-park, was an hermitage, which was converted to a monastery of regular canons, dedicated to St. John the Evangelist by Bertram Haget, before the year 1203. About the time of the dissolution, here were fourteen cannons, who had revenues to the value of seventy-two pounds, ten shillings and seven-pence *per annum*.

Leeds, the next town we visited, is so called by a variation of the word Loyder, generally supposed to have been derived from Lead, which signifies a people or nation, and might possibly be applied to this place, from its having been populous in the time of the Saxons. Others however suppose the original derivation of the name Leeds to have come from the British word Llwydd, a pleasant situation.

This town is situated on the north side of the river Aire; over which it has a magnificent stone-bridge extending to the suburbs, which are very large. It is a spacious, wealthy, populous and flourishing town, one hundred and eighty one miles from London, and was incorporated by king Charles I. under a chief alderman, nine burgesses, and twenty assistants; but at present it is governed under a charter of king Charles II. by a mayor, twelve aldermen, and twenty-four assistants. Here are three churches, one of which only, dedicated to St. Peter, is parochial; this is a spacious, strong, venerable and very ancient pile, built in the form of a cathedral, with a tower rising from the middle with eight bells in it; the walls are of free stone, and the roof, which is almost entirely covered with lead, supported by three rows of solid Gothic pillars. In the inside, the ceiling is adorned with fine painting, the subject of which is the delivering of the law to Moses, beautifully executed in fresco by Parmentiere, who voluntarily gave this specimen of his art, in gratitude for the encouragement he had met with here. The other church, called St. John's, was built in the year 1634, at the charge of John Harrison, Esq. a native of this town, who likewise endowed it with eighty pounds a year, and ten pounds to keep it in repair; and near it erected a house for the minister. The third was built a few years ago; and is an elegant structure, with a spire steeple, and dedicated to the Holy Trinity. In the year 1691, a presbyterian meeting-house was built here, which is called the New Chapel. In the town and suburbs are several others; but this is allowed to be the best meeting-house in the north of England. Here is a free-school built by Mr. Harrison above-mentioned, to which Mr. Lawson, mayor of the town, in 1669, added a library. The same benevolent gentleman, Mr. Harrison, likewise founded an hospital here for the relief of such poor persons who bore the character of having been honest and industrious; and endowed it with eighty pounds a year, besides ten pounds for a master to read prayers: he likewise erected a stately market-cross, and the streets called New-street, the rents of which he appropriated to pious uses. In the year 1699, alderman Sykes of this town, built a work-house of free-stone, where poor children are taught to mix wool, and perform other easy parts of that manufacture; and part of the same building has been used many years as an hospital for aged poor. Here are besides three alms-houses, built by Mr. Lancelot Iveson, who was mayor of the town in the year 1695, and two charity-schools, in which an hundred boys are taught, maintained and decently clothed in blue. There is a house in this town, which, from being the first brick building erected in it, is called Red-hall. It was built by Mr. Metcalf, an alderman of Leeds, and in it king Charles I. had an apartment, still known by the name of the King's Cham-

ber. At the west end of the town formerly stood a castle, wherein king Richard II. was imprisoned before he was conveyed to Pontefract. This castle was besieged by king Stephen on his march into Scotland, but when it was demolished does not appear. There was also a park, of which the name is still kept up, though it has been long since turned into inclosures.

Here are two magnificent halls, both built about the year 1714; one for white cloths, supported by pillars and arches, which form a quadrangle like the Royal Exchange, with an handsome cupola, and a bell on the top, to give notice when the market for these sort of goods begin. The other is the guild or moot hall, the front of which is built likewise on arches, with rustic coins and tabling; where in a nich is placed a fine white marble statue of queen Anne, executed by Mr. Carpenter at the expence of alderman Milner.

Leeds has been long famous for the woolen manufacture, which its merchants, and those of York, and Hull, ship off for Holland, Hamburgh, and the north. The cloth market was formerly kept on the bridge; at which time there was a custom practised by the innkeepers, of giving the clothiers a refreshment, which they called the bridge-end, or brig-shot, and consisted of a pot of good ale, a noggin of pottage, and a trencher of roast or boiled meat, which cost no more than six-pence. The trade being now considerably increased, the market is kept in a long street, called Bridge-street, or Bridgate; where, every market day in the morning, numbers of tressels are ranged and covered with boards, which form a temporary counter; and upon the ringing of the market bell, which is done at six o'clock in the summer, and seven in the winter, the clothiers, who are by this time assembled in the inns, bring out their cloth. When the bell ceases, the chapmen enter the market, where they match their patterns, and treat for the cloth in as few words as possible, and those spoken in a low voice; by which means all noise and disturbance is prevented, one dealer does not interrupt another, the greatest good order and regularity is preserved, and twenty-thousand pounds worth of cloth is frequently bought up in an hours time.

If a merchant has bidden a clothier a price, and he will not take it, he may go after him to his house, and tell him he has considered of it, and is willing to let him have the cloth; but they are not to make any new agreement for it, as that would be removing the market from the street, to the merchant's house.

At half an hour after eight o'clock the bell rings a second time, upon which the clothiers and their chapmen retire with their tressels, and make room for the linen-draper, hard-ware-men, shoe-makers, fruiterers, and other trades: at the same time the shambles are well furnished with all sorts of fish and flesh, and five hundred horse loads of apples have been bought up here in a day. This place trades not only in these commodities, to York, Hull, and Wakefield, by the river Aire, but likewise furnishes the city of York with coals.

The principal manufacture is of broad cloths, from one shilling and eight pence to twelve shillings a yard; but chiefly of four shillings and six-pence, or five shillings. Good hands might earn at this branch half a guinea a week the whole year round, if fully employed; but as that is not at present the case, they do not get above eight shillings. A boy of thirteen or fourteen years of age earns about four shillings a week; some women earn as much by weaving as the men. What they call offal work, which is the inferior branches, such as picking, rinting, &c. are paid one penny an hour.

But besides this manufacture of broad cloth, there are some shalloons, and large quantities of stuffs made at Leeds, particularly Scotch camlets, grograms, burdets, some calimancoes, &c. The weavers earn from five to twelve shillings a week; boys of thirteen or fourteen, five shillings a week; but they cannot work in bad weather. Dressers earn, from one to three shillings a day, but are not fully employed. The women by weaving stuffs, earn three shillings and six-pence, or four shillings a week. Wool-combers, from six-shillings to twelve shillings a week. The spinning trade is constant,

constant, and the women earn about two shillings and six-pence, or three shillings a week; girls of thirteen or fourteen, one shilling and eight pence a week: a boy of eight or nine, has two-pence half-penny a day; and of six years old, a penny.

Leeds is famous for some medicinal springs; one of which, called St. Peter's-well, is remarkable cold, and has proved very beneficial in rheumatisms, rickets, and other complaints; and another, called Eyebright-well, has frequently been found useful in disorders of the eyes.

Leeds has two weekly markets held on Tuesday and Saturday, and two annual fairs, viz. July the tenth, for horses and hardware; and November the eighth, for cattle, horses and hard-ware.

At Temple-Newfom, south-east of Leeds, William de Villiers, in the reign of king Henry II. founded a preceptory of Knights Templars.

In a wood called the wood of Elmet, not far from Leeds, there was a monastery about the year 730; and to the east of this town, at a place called Widkirk, is a church, dedicated to St. Mary, in which William, earl of Warren, Ralph Lisle, and William, his son, in the time of Henry I. placed some Black canons, who were subordinate to the priory of Nestle, and at the suppression had revenues to the amount of forty-seven pounds and four-pence *per annum*.

At Barn-ldfweek, not far from Settle, Henry de Lacy, in the year 1147, placed a convent of Cistercian monks from Fountain; but this place proving inconvenient for them, in five or six years afterwards, they were removed to Kirkstall, north of Leeds, where, in the year 1152, they erected a fine abbey, dedicated to the Virgin Mary, and endowed upon the dissolution with yearly revenues worth three hundred and twenty-nine pounds, two shillings and eleven-pence.

Having viewed Leeds, we continued our journey, and next arrived at Wakefield, a large, well-built, populous town, which, though no corporation, is said to contain more inhabitants than the city of York. It is situated on the river Calder, in a fruitful soil, one hundred and seventy-two miles from London; and consists of three great streets, which meet in a center near the church, which is a very large and lofty gothic structure. The body of it was repaired in the year 1724, but the spire, which is one of the most lofty in the county, remains in its original state. This church is endowed, by lady Campden, with eighty pounds a year for a weekly lecture; and here is a charity school for sixty three children, supported by the inhabitants, the boys of which have yearly, at Christmas, coats and caps. A spacious market place might be erected here, where the three capital streets meet; but at present here is only a small area round the market cross, which is a very elegant building, being an open colonade of the Doric order, supported by a dome, to which you ascend by an open circular flight of stairs, in the center of the building, which brings you to a room that receives light from a turret on the top. This might with propriety be called the town-hall, all business being transacted here. Here is a handsome stone bridge over the Calder, from which you have an agreeable view to the south-east, where, by the side of the river, rises a hill covered with wood, at about the distance of a mile; this joins to an open moor or common, called Heath-moor, upon which are several gentlemens seats very pleasantly situated. Upon the bridge stands a chapel, erected by king Edward IV. in memory of his father, Richard, duke of York, who was slain near this place. This chapel is ten yards long, and six broad, and though very much decayed by time, it appears to have been wrought in a very curious manner; it is now used as a warehouse for goods. A little above the bridge is a wash, or dam, over which the water rolling, forms a beautiful natural cascade of a considerable length.

Wakefield has been long famous for that branch of the woollen manufacture which is called the dressing trade. The cloths come to this town to be dyed, &c. and go through their last hands. The men earn, from six shillings a week, in winter, to fourteen; boys till

they are fourteen or fifteen, from one shilling and six-pence to two shillings a week. Around the town are many collieries; the men employed in them earn, from ten to twelve shillings a week.

This town has two weekly markets, held on Thursday and Friday; and four annual fairs, viz. July the fourth and fifth, a two day fair, the first for horses and hard-ware, and the last for toys, &c. November the eleventh and twelfth, a two day fair likewise, the first for horses and black cattle, and the last for toys, &c. If either of these days fall on a Sunday, the fair is held on the Saturday before. In the neighbourhood of this town are annual horse-races.

In the year 1697, were found at Lingwell-gate, not far from Wakefield, certain moulds or impressions upon clay, invented for the purpose of counterfeiting the Roman coin. This place is supposed to have been originally called Lingwell, from some intrenchments called Vallum by the Romans, which might have been thrown up here by the Lingones, who are known to have been quartered at Ilkely, near Skipton, which was the Olicana of the Romans, and not far from this place.

Olicana was rebuilt by Virius Lupus, legate and pro-prætor of Britain, in the time of the emperor Severus, as appears by the following inscription upon a stone dug up here: *IM. SEVERUS AVG. ET ANTONIVS CÆS. DESTINATVS RESTITVERVNT, CVRANTE VIRIO LAPO LEG. EORVM. P. R. P. R.*

That the second cohort of the Ligones were quartered in this town, appears from an inscription on an altar found here, and dedicated by the captain of that band to Verbeia, supposed to be the goddess of the river Wherfe. The inscription is as follows: *VERBEIAE SACRVM CLODIVS FRONTO PRÆS. COH. II. LINGON.*

Here is a church, in the well of which is a stone, with an imperfect Roman inscription. In this church is a figure cut in stone of Sir Adam Middleton, who lived in the reign of king Edward I. and in the church-yard, and in some other part of the town, are Roman stone pillars, some of which have gravens and inscriptions.

At Nostell, south-east of Wakefield, were a church, and house of poor hermits, dedicated to St. James. And here Robert de Lacy, in the time of William Rufus, founded a monastery, dedicated to St. Oswald, in which were placed regular canons, of the order of St. Austin, who had revenues valued upon the suppression at four hundred and ninety two pounds, eighteen shillings and two pence *per annum*.

At Newland, near Wakefield, king John founded a preceptory of the Knights Hospitalers of St. John of Jerusalem, which was valued upon the dissolution at two hundred and twenty three pounds, nineteen shillings and seven pence *per annum*.

Our next visit was to Huthersfield, or Hotherfield, situated on the bank of the river Calder, one hundred sixty-five miles from London. It is famous for a manufacture of woollen cloth; but contains nothing else remarkable.

Here is a weekly market on Tuesday, and an annual fair held May the twenty-fourth, for lean horned cattle and horses.

At Almondbury, near this town, are the ruins of a Roman work, consisting of some remains of a stone castle and ramparts, with a triple fortification, still visible, and generally supposed to have been the Cambanum of the Romans.

About three miles from Huthersfield, at a place called Kirklees, is a funeral monument of the famous outlaw Robin Hood, who lived in the reign of king Richard I, with the following inscription:

Here undernead dis flaid stean
Lais Robert, earl of Huntingtun.
Nea arier ver ar hie fa geud,
An piple kauld im Robin Heud.
Sick utlawz hi an is men
Vil England niver fi agen.

Obiit 24, Kal. Decembris, 1247.

Reynerus Flandrensis, in the time of Henry II. founded a Cistercian nunnery here, dedicated to the Virgin Mary, and endowed upon the dissolution with no more than

than thirteen pounds, five shillings and four-pence *per annum*.

From Hutherfield, we passed on to Halifax, so called by a very trifling variation of its ancient name Halig-fax, which, in the old English language, signifies holy-hair; it was originally called Horton, and its name is said to have been changed to Halig-fax by the following incident. A secular priest of this village being violently enamoured of a young woman, his passion at length deprived him of his reason, and unfortunately meeting her in a retired place, he murdered her, horribly mangled her body, and cut off her head. The head being afterwards, for what reason does not appear, hung up upon a yew tree, was soon regarded with a superstitious veneration, and frequently visited in pilgrimage; but at length rotting away, the devotion of the vulgar was transferred to the tree, and so many branches were continually torn off, and carried away as relics, that it was in time reduced to a bare trunk: this trunk succeeded to the honours of the tree, as the tree had succeeded to those of the head, and the devotees, who still visited it, conceived a notion, that the small fibres in the rind between the body and bark of the tree, were in reality the very hairs of the young woman's head; a miracle now became a new object of devotion, and the resort of pilgrims was greater than ever; so that in a short time, from a small village rose a considerable town, and acquired the new name of Halig-fax.

This town stands near the river Calder, on the gentle descent of a hill, one hundred and ninety miles from London. It is reckoned the most populous, if not the largest parish in England; and so long ago as the reign of queen Elizabeth, was able to send out twelve thousand men to join her forces against the rebels, under the earl of Westmoreland. Here is a stately, venerable old church, in which are many extraordinary monuments, most of them very ancient. Here are likewise twelve chapels, and, besides these, sixteen meeting-houses, most of which have bells and burial grounds belonging to them. Here is a good hospital, founded and endowed in the year 1642, by Nathaniel Waterhouse, Esq; for twelve old people; and a work-house for twenty children, the overseer whereof has a salary of forty-five pounds a year; and the same gentleman left a salary to the preachers of the twelve chapelries. Mr. Crowther, a clothier, also left ten pounds a year for ever to the poor; and twenty pounds a year to the free-school here, called queen Elizabeth's school.

The extraordinary industry, spirit and ingenuity of the inhabitants in the manufacture of cloth, particularly kerseys and shalloons, has rendered Halifax one of the most flourishing towns in England. It has been computed that one hundred thousand pieces of shalloon are made in a year in this town alone; and that one dealer has traded by commission for sixty-thousand pounds *per annum*, to Holland and Hamburg, in the article of kerseys alone. It is a general observation, that the inhabitants of Halifax are so employed in the woollen manufacture, that they scarce sow more corn than will keep their poultry; and that they feed very few oxen or sheep.

At the first erecting of the woollen manufacture in these parts, which was in the reign of Henry VII. it was so common a practice to steal the cloths as they lay out all night upon tenters, that a bye-law, called the Halifax was made to prevent them. By this law the magistrates of Halifax were empowered to pass and execute sentence of death on all such criminals as came within either of these three cases, so as to make it *furtum manifestum*.

First, Hand-habened, that is, when they were taken in the fact of stealing.

Secondly, Back-beroned, that is, when the cloth stolen was found upon them.

Thirdly, Confessioned, that is, when they owned the fact.

The crime must likewise have been committed, and the criminal apprehended, within the liberties of the forest of Hardwick; and the value of the things stolen

exceed in value thirteen-pence half-penny. On such charge the person suspected was carried before the bailiff of Halifax, who summoned the frithburghers of the several towns in the liberties of the forest of Hardwick: by these he was either acquitted or convicted; and if convicted was executed in the space of a week, by severing his head from his body, in the manner following. Near the town was an engine, in the form of a very high gallows; in the two perpendicular posts were grooves, where a heavy piece of timber, with a sharp ax fixed in it, was made to slide up and down with great ease, by means of a pully and a cord. On the day of execution, the convict was conveyed to the gallows, and his neck placed on a block directly under the ax, which was drawn up to the top of the gallows, and fixed by fastening one end of the rope on which it was suspended to a pin in one of the perpendicular posts. The pin being removed, upon a signal for execution, set the rope at liberty, upon which the ax fell down with great force and velocity, and cut off the criminal's head. This engine was used at Halifax till the year 1620, when it was removed; but the basis on which it stood is to be seen here to this day.

This law partly gave occasion to a common litaney, or cant of the beggars and vagrants of these parts, where they frequently say,

“ From Hell, Hull, and Halifax,
Good Lord deliver us!”

The reason ascribed for Hull's being so tremendous to beggars, is the rigid discipline they meet with in that town, where all foreign poor are whipped out, and those belonging to the town are set to work.

This town is noted for having been the birth-place of John of Halifax, or de Sacro Bisco, the chief mathematician of the age in which he lived, who was buried at the public expence of the university of Paris; and likewise of the celebrated Dr. John Tillotson, archbishop of Canterbury.

Halifax has a weekly market on Saturday, which is thronged by prodigious numbers of people who come to sell their manufactures, and purchase provisions. It has also an annual fair, which is held on the twenty-fourth of June for horses.

In the year 1705, some gallons of Roman copper coins was dug up at Clifton, a village on the south-east of Halifax, among which were some of the emperor Quintillus, who reigned only seventeen days. And in a stone quarry at St. Yeadon, south of Otley, was found in 1762, an urn of curious workmanship, filled with burnt bones and ashes.

At Staneland, near Halifax, several Roman coins have been dug up. In 1678, a very considerable quantity of these coins was found at Sowerby, not far from Staneland. At Gretland near Sowerby was found a votive altar, which from an inscription on it, seems to have been dedicated to the tutelar god of the capital of the Brigantes. On one side is DVI BRIG. ET NVM. GG. T. AVR. AVRELIANVS DD. PRO SE ET SVIS. S.M.A. G.S. and on the other ANTONINO III. ET GET COSS. And at Ealand, east of Halifax, several bricks have been found inscribed COH. IIII. BRE.

Leaving Halifax we pursued our journey to Bradforth or Bradford, another town eminent for the woollen manufacture, one hundred and eighty-three miles from London. It was garrisoned for the parliament in the civil war, but retaken for king Charles I. Here is a church in which a lecture was founded and endowed with forty pounds a year by Mr. Peter Sunderland. It has a weekly market on Thursday, and three annual fairs, viz. March the fourteenth and fifteenth; June the twenty-eighth, twenty-ninth, and thirtieth for black cattle and household furniture; and December the twentieth, twenty-first, and twenty-second for hogs.

Gisborn, the next place we visited, is situated on the borders of Lancashire, one hundred and eighty-nine miles from London: but contains nothing remarkable, except a weekly market on Monday, and seven annual fairs, viz. Easter-Monday; Monday fortnight after Easter; Monday month after Easter; Saturday after

Monday month from Easter, for horned cattle: Monday five weeks after Easter for pedlary; and September the eighteenth and nineteenth for black cattle and pedlary.

There was indeed formerly a priory of Augustine canons founded in this town by Robert de Bruce, in the year 1129, and dedicated to the Virgin Mary, with yearly revenues valued upon the dissolution at six hundred and twenty-eight pounds, thirteen shillings and four-pence.

Leaving Gisborn we passed on to Skipton, situated in the midst of that mountainous tract called Craven, near the bank of the Aire, two hundred and twenty-one miles from London. It is a pretty large well-built town; has a handsome church and a grammar-school; to which and the church library, one Mr. Petit, who had been principal of Bernard's Inn, London, gave a valuable collection of books. Here is also a school in which church musick is taught by the parish clerk. One Robert Montgomery, a native of Scotland, who at the age of one hundred and twenty-six years went about begging, lived many years in this town.

Here is a weekly market on Saturday, and ten annual fairs, viz. March twenty-three, for black cattle and sheep; Palm-Sunday eve, for horses; Easter-eve, for black cattle and sheep; first Tuesday after Easter, second Tuesday after ditto, and third Tuesday after ditto, for horned cattle; Whitfun-eve, for linen cloth and mercery; August the fifth, for horses and cloth; November the twentieth, for horned cattle; and November the twenty-second for horses, cloth and pedlary.

At Emmeley, near Skipton, William Mifetunes, and Cecelia de Romeli his wife, founded before the year 1120, a monastery, for canons regular of the order of St. Augustine, dedicated to the Virgin Mary and St. Cuthbert, but about thirty years after this foundation, the religious were translated by their daughter Alice de Romeli, to Bolton, in the neighbourhood of Gisborn, where they continued till the general dissolution, when their yearly revenues were rated at two hundred and twelve pounds, three shillings and fourpence.

At Selley, not far from Skipton, the third William de Piercy, in the year 1147, built a Cistercian abbey, and dedicated it to the Virgin Mary. About the time of the general suppression, was endowed with estates to the amount of one hundred and forty-seven pounds, three shillings and ten-pence *per annum*.

At Bolton, near Skipton, was a house of Carmelite friars.

We passed from Skipton to Settle, a pretty town situated in the road from York to Lancaster, two hundred miles from London; but has nothing remarkable except a weekly market on Thursday, and several annual fairs, viz. Tuesday before Palm-Sunday; Thursday before Good-Friday; and every other Friday till Whit-Sunday, for horned cattle; April the twenty-six, for sheep; August eighteen, a three day fair; and first Tuesday after October twenty-seven, for black cattle, sheep, lambs, leather, wool, &c.

About half a mile from Settle, at a village called Gilefwick, is one of the most remarkable curiosities in this county. It is a reciprocating spring, which frequently ebbs and flows three times in one hour, when the water sinks and rises two feet.

Rippon the next town we stopped at, is an ancient borough town, which formerly made three returns of members to parliament; but lost that privilege, and was restored to it in the first year of the reign of Queen Mary. It was incorporated by king James the first, and is governed under a charter of James the second, by a mayor, twelve aldermen, twenty-four assistants and other officers.

Before the conquest, and some time after it, this place was governed by elders, and a chief magistrate called a wakeman, or watchman, from the great diligence required of them while in their office.

Rippon is a large, well built, pleasant, populous town, six furlongs in length, and situated between the river Ure and a small stream called the Skell, one hundred and ninety miles from London. Over the Ure here are two

stone bridges, one of which consists of thirteen or fourteen arches.

Camden says this town was indebted to religion for its greatness. It is certain here was a famous monastery built by Wilfrid archbishop of York, in the first ages of christianity; but this pious gift of the bishop was destroyed some years after; for the Danes invading Yorkshire, rifled and burnt it to the ground, together with the whole town of Rippon. It afterwards flourished again as a monastery: but that with the rest of the religious houses being suppressed in the reign of king Henry VIII. the church only was preserved, to which king Athelstan granted the privileges of a sanctuary, which he extended a mile round the church; and whoever broke those rights, were to forfeit both life and estate; for the church, not only the church, but the whole town, was to be walled round, and the king was to refuse admittance to any who should be driven out of the town, and the king was to be walled round.

And in the year 1147, the third William de Piercy, in the year 1147, built a Cistercian abbey, and dedicated it to the Virgin Mary. About the time of the general suppression, was endowed with estates to the amount of one hundred and forty-seven pounds, three shillings and ten-pence *per annum*. At this time the whole being demolished except the church, the revenues were seized by King Henry VIII. so that nothing remained for the support of an officiating clergyman, till King James I. having the case represented to him by his queen, founded in the church a dean and seven prebendaries, besides petty canons, singing-men and choristers; and endowed it with revenues for their support. The dean of this church has no place in the convocation of the province of York, but the chapter sends a proctor to it. It is both parochial and collegiate; and is a venerable Gothic building, firm, strong and plain; there being no imagery of statues to be seen about it; there are three spire steeples on it, which may be viewed at a great distance: On one side this ancient edifice stands a small college for the singing-men, founded by one of the archbishops of York. On the other side is a great mount of earth, called Hilsaw, thrown up, it is said, by the Danes; and in the church-yard lies a plain grave-stone, over the remains of a generous benefactor, who gave two thousand pounds to pious uses; yet has no other epitaph than the following:

*Hic jacet Zacharias Jepson, cujus etas fuit 49.
Per paucas annos tantum vixit.*

Here lies Zachary Jepson, whose age was 49 years:
A very short period for so worthy a person.

In the times of popery this church was famous for a piece of priestcraft practised in it, by which the canons got much money. In the church was a freight passage which led to a close vaulted room; this passage was so contrived that none could pass through it but such as were favoured. The passage was called St. Wilfrid's needle, and was used to prove the chastity of any woman suspected of incontinence. If she bribed the priest, she

passed through it, and was reputed chaste; but if the priest was not satisfied, she stuck in the passage.

In the year 1318 this town was plundered by the Scots, when many of the inhabitants retiring into the church, so annoyed them, that after a stay of three days, they agreed for one thousand marks to spare the town from burning; which the inhabitants accordingly paid them and they departed; but they returned again the following year, when because the inhabitants could not raise the same sum, they fired the town and church, and put many of the inhabitants to the sword. In 1322 a synod was held here; and in the reign of Charles I. a treaty was made in this town, between his commissioners and the Scots.

I should have before observed, that in the year 1660, the great steeple of the church was blown down, which by its fall broke down the chancel, the only place where the people could assemble for divine worship, and much shattered the rest of the fabrick; but the inhabitants, in the reign of king Charles II. obtained a brief for its repair.

The market-place of Rippon, is esteemed the finest square of the kind in England; and is adorned with an obelisk, erected not many years ago, by John Aislaby, Esq.

This town formerly carried on a considerable trade in the woollen manufacture; which it has now totally lost: it is still however a staple for wool; and is at present famous for a manufacture of the best spurs in England.

In the year 1695 was found here a considerable number of Saxon coins, particularly those brass ones called *sticca's*, of which there were eight to a penny; and that they were the coin of a later race of the kings of Deira, or rather the Subreguli, after Egbert had reduced it to be part of his monarchy.

Before the fourth year of the reign of king John, here was an hospital, built by one of the archbishops of York, and dedicated to St. John the Baptist. At the time of the suppression, it had yearly revenues to the amount of ten pound fourteen shillings and four-pence.

Rippon sends two members to parliament, has a weekly market on Thursday; and seven annual fairs, viz. Thursday after January the twenty fourth, Thursday after March the twenty first, for horses, black cattle and leather. May the twelfth and thirteenth, for horses and sheep. First Thursday in June, for black cattle, horses, sheep and leather. Holy Thursday, first Thursday after August the twenty second, and November the twenty-second, for horses and sheep.

In the neighbourhood of this town, are two famous seats belonging to Mr. Aislaby, one called Studley, and the other Hackfall.

Studley Park is situated in the midst of an agreeable country, about four miles from Rippon. The house is a very good one, and contains several spacious apartments well fitted up. But the pleasure-grounds are chiefly considered.

The first object we were shewn to, is the banqueting-house; a handsome apartment, containing a well-proportioned room for dining, and a sleeping one with a sofa within a screen of very light elegant carving. In the former is a statue of Venus of Medicis. At one corner of the lawn, in front of this building, stands an Ionic dome temple in ruins, from which the views are various and pleasing; there are two of water, partly surrounded with wood; another up to a Gothic tower, upon a fine rising ground; a fourth down upon a basin of water, with a portico on the banks; besides others.

Advancing up the hill to the right, we came to a bench which looked down upon a double cascade, one falling to appearance from out of a cavern of rock, in a just taste, into a canal, which forms a little beneath you another fall, and then is lost, to the left, behind wood.

Winding yet further to the right, and crossing a woody vale, we mounted a little hill, with a tent on the summit, in a very picturesque and agreeable situation; for you look down on a fine winding lake, which floats the valley, surrounded by a noble bold shore of

wood rising from its very banks. In one part of it a green seat is seen, and an arch in another.

From this hill we were next conducted to Fountaine's abbey, an exceeding fine ruin adjoining, and in sight of his grounds, lately purchased by Mr. Aislaby.

Returning from the abbey, you wind in the valley on the banks of the lake, at the bottom of the tent-hill; the spot is exceedingly beautiful; that hill, a cone of rising wood, is exquisitely pretty.

From hence the walk arises upon the edge of the surrounding hills, which are covered with wood; and through the trees you catch many obscure views that are truly picturesque. You look down through them to the right upon the lake, in a most pleasing manner, and catch a beautiful view of the abbey. After this you command a river, winding around the tent-hill, covered with trees, and all incircled by a noble amphitheatre of hanging woods; the river meandering towards the abbey, which is seen to infinite advantage.

Your next view is from the green seat, where the same noble ruin appears in a varied situation. You here look down on the water, in front of the tent-hill; and catch to the left, at the top of a range of hanging woods, the arch before mentioned. This view is very fine.

Next we came to the white bench, from which the landscape is different from any of the preceding; it is a fine hollow of wood. Here are seen two statues.

Further on, from a bench in a dark walk, an obelisk in the opposite wood is seen with a very good effect. This walk leads to the Gothic tower, a very neat elegant building, commanding a various and very beautiful view. You look full upon a noble bank of wood, finely diversified with objects. To the left you see a tower, rising out of hanging wood; next to that a building, peeping over trees in a pleasing stile; over this the ruined dome temple, in the very point of taste, most exquisitely situated; sweetly pleasing and picturesque. In another part of the wood, the obelisk, with a fine front and back ground of wood. Besides these objects, you see, at the same time, a small building, almost beneath you, on the bank of the lake; the house and plantations adjoining in the park; the Roman monument and Chinese temple, two buildings among other plantations in the park; a small spot in the opposite walks, called the Dial Lawn; with several other objects that throw a great variety over the scene, and render it upon the whole truly beautiful and picturesque.

Driving from hence through the park, the riding leads by the edge of a vast woody precipice, which bounds a winding valley with a rapid stream in it; the views of which, among steep of wood and romantic precipices, have a noble effect. The river forms two cascades that enliven the scenes very beautifully.

Upon the edge of this bank of wood stands the Roman monument, the model of that erected to the Horatii and Curiatii; you look down from it into a winding valley, at a considerable depth, through which the river takes its bending course; at one end, it is lost most beautifully in the hanging woods; and at the other under a wall of rocks. At your feet it forms another cascade, which has a fine effect. In front you command hanging woods, which give an air of majesty to the whole scene; and through them, in one place, catch the Gothic tower.

Leaving this spot, which is so truly beautiful, the riding leads on the edge of more precipices finely romantic. You look down on the river in the vale below, through the hanging wood, in a noble stile. The next point of view is the Chinese temple, which stands on a circular projection of the high ground into the valley, which is here seen in great perfection; the river winds through it, and forms a cascade. But the principal object from hence is the glorious range of wood, which covers the opposite hills, and presents a magnificence to the eye that is very noble. Melow's tower is seen at a distance upon a hill; and to the right the Gothic one, picturesquely situated in surrounding woods. Upon the whole, the scene from this spot is equally beautiful, romantic, and sublime.

Following the riding through the park from hence towards

towards the house, the scenes totally change, and that with an effect which is very advantageous; for, losing these rocky steep and hollows of wood, in which the objects are all near, and fully viewed in the bird's-eye, landscape stile, you rise to the command of a vast prospect of distant country. The town of Rippon and its minster is seen in the center of a finely cultivated and well peopled vale, scattered with villages, houses, and other objects, in a very pleasing manner. This contrast closes the scene, and operates not only from its intrinsic beauty, but from being various to the numerous landscapes, which, in another stile, decorate the country passed.

Studley, upon the whole, must please every person that views it: the fine deep glens of woods, the winding stream falling in cascades, and surrounded with noble amphitheatres of wood; the picturesque views, at a distance of Fountains's abbey; the principal scenes viewed from the Gothic tower; the tent-hill vale, and water adjoining, with some other touches before described, are naturally romantic, picturesque, and beautiful.

Hackfall, seven miles from Studley, is laid out in a different stile; greatly worth the trouble of any traveller's going many miles out of his way to view it.

Entering the woods, the first point of view we came to was a little white building, by way of a seat, on the point of a round projecting hill; you look down upon a rapid stream, through scattered trees which fringe the slope; the effect very picturesque: to the right is an opening among the trees, which lets in a most beautiful view of a fine range of hanging woods, which unite to form a gloomy hollow. Behind, through another opening in the adjoining trees, you look upon a fine bend of the river; Massam steeple, and part of the town, appearing over some wood that hangs to the water; nothing can be more sweetly picturesque: for the spot whereon the building stands, being shaded with trees, and dark, the brightness of the sheet of water has the effect of an elegantly natural clear obscure; and the buildings seeming to rise from branches of wood hanging on the stream, adds greatly to the beauty of the scene: a gentleman's white house, a little on one side, is an object which improves the landscape.—Another view from this spot, is to the left; a fine curve of the river, under a bank of hanging wood, scar'd with bare rocks.

From hence the riding winds on the banks of the river, and passing a picturesque dropping spring, rises up some slopes, to an open octagon bench, from whence the views are truly elegant. To the right you look upon a bold shrubby hill, which has an air of grandeur that is striking: there is a building by way of object, raised upon it, that is called an arch, or a ruin, almost hanging over a dell of wood; the river peeping in one spot in a pleasing manner, and the murmur over the rocks in its bed, fills the ear, and gives room for the imagination to play: nothing raises such ideal pictures as the noise of a river foaming among rocks, but hid by wood; the romantic steep, and torrents, receive a heightening from the fancy, which would be half dissipated by viewing the reality. To the left a bend of the river is seen fringed with hanging woods; and above them distant prospects.

Winding from this spot through the grove, we come next to a rustic stone temple, by the side of a basin, with the stump of a jet d'eau in the middle of it. It is in a small area, a hollow in the hanging woods, retired, and naturally beautiful: a little gushing fall of water from the bank into the basin is picturesque, and worthy of an irriguous meandering course, over moss and pebbles: an opening in the front of this spot lets in a view of a scar of rock, in the middle of a fine bank of wood.

Walking round the circular lawn, an opening to the left displays a most glorious hollow of hanging groves, on one side of which is seen the white seat first mentioned: this view is very noble.—A little farther you catch a prodigious fine rounding hill of wood, and the shore of the river, which winds at its feet; it has a magnificent appearance.

Advancing a little further, through a winding walk, you come to a grotto, from which the scene is beautifully picturesque. You look astant upon a natural cascade, which falls in gradual sheets above forty feet, in the midst of a hanging wood; it is quite surrounded by the trees, and seems to gush forth by enchantment: the water is clear and transparent, and throws a moving lustre to the eye, inexpressibly elegant; for the picturesque motion of the water, in its fall, pleases not only from its genuine beauty, but from the peculiar happiness of its situation, viewed from a woody retired spot, wherein the contrast sets off each object.

But those touches of reality, which exceed the utmost efforts of painting, thicken upon us; for leaving this elegant spot, we presently come to another, from whence we see a most beautiful natural cascade, gushing to appearance out of a cavern in the rock, sweetly overhung with thick wood, and falling from one bit of rock to another, till it loses itself among the adjoining woods.

From hence you move to a bench, where you are again most exquisitely entertained by the same cascade, viewed in a different direction, with the addition of its trickling at your feet over the grass, beautifully scattered with trees: Through them, in front, a fine opening over a most noble hollow of hanging woods. To the right you look down through another opening among the trees (so natural as to give a most elegant effect) and catch the river running rapidly over the rocks; most exquisitely picturesque: nothing can exceed the taste, variety, and beauty of this bewitching landscape.

Following the winding course of the walk, we came next to Fisher's Hall, a small octagon room, built of a petrified substance, upon a beautiful little swelling hill, in the middle of a fine romantic hollow, surrounded by a vast amphitheatre of hanging woods. This is the outline of the picture, which is in itself noble; but the filling up of the canvas adds a colouring more than equal to the pencil of a Claud.

The little hill on which this building is placed, is covered with a thicket of trees, so that you view every object by varying your position either full, or in obscura, which makes all picturesque. The river gives a noble bend at your feet, imbanked by glorious hanging woods; the white building, first mentioned, peeping from among them in one spot, and a fine scar of rock in another. Under the seat, the stream is rapid, raging over rocks, and winding away under walls of them, covered with hills of wood; a noble range, magnificently great. To the right of these objects, the other hills appear in a fine stile, one in particular covered with shrubby wood, projects in a magnificent sweep that cannot but strike the spectator with some degree of awe. All the surrounding hills appear from hence in very fine waves, rearing their woody tops, one beyond another, in a stile truly great.

Besides these objects, which partake so much of the sublime, here are others of the most genuine and native beauty. From one side of this building, you have a most exquisitely pleasing landscape, consisting of two cascades, divided by a projecting grove of trees. That to the right pours down from one cleft of the rock to the other, for a considerable space, most admirably overhung with the spreading branches of the adjoining thick wood, which rises in noble sweeps around it; gloomy with the brownness of the shade, and exquisitely contrasting the transparent brightness of the water.

The other cascade likewise falls down an irregular bed of rock, but not in such strong breaks as the former; it is seen in the bosom of a fine wood, which fringes a rising hill, upon the top of which is a building.

Winding from this inimitable scene down to the river's side, and following it, you come to a romantic spot under a fine range of impending rocks, with shrubby wood growing out of their clefts, and a few goats browsing on their very edges—the effect noble. From hence you look back on the preceding scenes, which in general appear like a fine hollow of surrounding woods. Fisher's-hall, a beautiful little hill, the building elegantly

gantly overhung with a tuft of trees; a most happy spot.

Pursuing this road a little further (though without the bounds of the ornamented grounds) you rise with the hill, and have a noble view of the river broken into three picturesque sheets of water, divided by scattered woods, and the banks ornamented by a straggling village beyond; between the hills a distant prospect is seen; the whole truly beautiful.

Returning, we took the walk that leads by Fisher's-hall, and winds up the hill to the left. The first point you come to, is a bench overhung with trees, from which, at your feet, you look down upon a beautiful cascade, gushing out of a rock under a thicket of trees; exquisite; and to the right, at a little distance, another, but different. This scene is sequestered, and will naturally tempt the spectator to stop, to admire the mild but pleasing beauties of the spot.

The walk winds from hence up the hill by the side of a continued cascade, the water falling in small sheets from rock to rock in a more agreeable stile; on one side a thick wood, and on the other a rocky bank, fringed with shrubs. This leads to Kent's seat, an alcove, from which the landscape is in the pure stile of ornamented nature. If you suppose art to appear, it is the *simplex munditiis* of design.—In front, at the distance of a few yards, is a double cascade; the water gushes from a dark spot, half rock, half wood, and falling on a bed of rock, has but a short course before it falls a second time into the rill beforementioned, which winds over a bed of stone at your feet; these parts of the scenery are surrounded by a little amphitheatre of thick wood, and form upon the whole a most beautiful picture; it may not be admired by those who are fond only of the great, but to such as are pleased with the soft tints of nature's pencil, with the mild glow of Vernet as well as the majesty of Poussin, this landscape will yield pure enjoyment. Nor is this all; for turning your eye a little to the left, you catch through a small, and, to appearance, purely natural opening in the trees, a sweet view of a fine scoop of hanging woods; and beyond a distant prospect, one of the most complete bird's-eye landscapes in the world.

Continuing this walk, you mount to the top of the hill, and there arrive at a spot called Mowbray Point. The building (called the Ruin) has a little area before it, from which you command a prodigious prospect. You look directly down on an exceeding fine winding valley, the river appearing in different sheets of water, and the roar of its rapidity heard distinctly, though so far beneath. This valley bends round a bold projecting promontory of high land; the hanging banks of which, like all the others, are covered with thick plantations, forming upon the whole a most glorious hollow of pendent woods. At the bottom, besides the river, you see Fisher's-hall in a very picturesque situation; and, at the top of the opposite projecting hill, a most beautiful pasture, so truly elegant as to decorate the whole scene. The distant prospect has a most noble variety; to the right, it is unbounded except by the horizon; in front, you look upon the extent of Hambleton hills at the distance of about twenty miles; and to the left you have inclosures distinctly seen for many miles. The whole vale before you is finely scattered with towns, villages, churches, seats, &c. York-minster is seen distinctly at the distance of forty miles; Rosebury Topping, in Cleveland, as far another way. In front you view the scar in Hambleton hills, called the White Mare, the town of Thirsk almost under it, and Northalerton to the right. In the building are two neatly-furnished apartments, one for dining, and the other by way of drawing room.

From hence we proceeded on our tour to Burrow-bridge, or Burrowbridge, a borough and post town, about three furlongs in length, and as many in breadth, two hundred and nine miles from London. It derives its name from a stately stone bridge over the river Ure, which has no more than five arches, but those are near forty feet, and the center one much wider and lofty in proportion. At the ends of the bridge there are high causeways carried on of stone, to keep in the water,

which, notwithstanding this precaution, sometimes overflows. In a battle which was fought here between king Edward II. and his barons, as Humphry de Bohun, earl of Hereford, was passing over this bridge, a foldier, who lay hid under it, killed him, by thrusting a spear or pike through a chink of it into his body. From this circumstance there is great reason to believe, with Camden, that this was formerly a wooden bridge. This town is governed by a bailiff, and first sent members to parliament in the first year of the reign of queen Mary I. Its chief support is a manufacture of hard-ware, which is so considerable, that it is computed no less than seven or eight thousand pounds is laid out here yearly in this commodity. Some years ago was dug here a stone, with an imperfect sepulchral inscription.

Burrowbridge sends two members to parliament, has a weekly market on Saturday, and three annual fairs, viz. April the twenty-seventh, for black cattle and sheep; June the twenty-second, for horned cattle, sheep, and hard-ware; and October the twenty-third, for black cattle and sheep.

Near this town are three stones of an immense size, in the form of pyramids, very rough and unpolished, called the Devil's bolts, a name they received from the country people, who, being unable to account for the means by which they could be placed there, concluded they were shot by the devil at some cities hereabout, by which means they were destroyed. The general opinion with regard to them is, that they have been a Roman trophy; though some suppose that they were British deities. They stand in a straight line, and were formerly four in number, but one was removed about the beginning of this century, in hopes of finding money under it. It is the belief of several men of learning, that these stones are not natural, but an artificial compound of fine sand, lime, and vitriol; as also of an oily unctuous matter. There were cisterns of this kind at Rome, which Pliny tells us were made of sand and hot lime, so very compact and firm, that it was difficult to distinguish them from real stone.

Not far from Burrowbridge stands Fountain monastery, delightfully situated, in a fruitful soil, wherein are veins of lead. It had its original from twelve monks of York; who, affecting a more rigid and strict course of life, left their cloisters, and, after having endured great hardships, were settled here by Thurstan, archbishop of York, who founded it for that purpose, in the year 1132, after the Cistercian order. It was dedicated to the Virgin Mary, and endowed upon the dissolution with nine hundred and ninety-eight pounds, six shillings and eightpence *per annum*.

At the gate of the monastery was an hospital for the relief of the poor in the neighbourhood, and for travellers, as early as the reign of king Richard II.

At Kirkby-Overblowes, near Burrowbridge, there was a collegiate church, with a provost and four chaplains.

We next proceeded to Aldborough, or Oldborough, situated on the bank of the river Ure, one hundred and sixty-eight miles from London. The name of this town plainly proves it to have been an ancient borough, though now so greatly reduced as scarcely to merit being called a village. Here is a good church; but neither market, fair, or any thing else worthy of notice, except the remains of antiquity found in it.

It was the *Isurium Brigantum* of the Romans; and derived the name *Isurium*, in all probability, from the Ure, being situated, as I have before observed, upon the banks of that river. It was a considerable city in the time of the Romans, and undoubtedly a place of great strength; for, by the ruins of the walls, it appears that they were four yards thick, and built upon a foundation of large pebbles, laid on a bed of blue clay, about five yards deep; they formed a compleat square, and included sixty acres of ground. It is generally believed that this city was destroyed by the Danes; and from the soil, which is black, it appears to have been burnt; what further adds to this belief is, that, upon digging the ground, bones are frequently turned up half burnt, with other black ashes. Few places have afforded a

more considerable variety of Roman antiquities. Here have been discovered the fragments of Roman aqueducts cut in great stones, and covered with Roman tiles. In the time of Charles I. a vault was discovered here, which leads, it is thought, to the river, and is supposed to have a repository of the dead. Vast quantities of Roman coins, some few of silver, but most of them brass, have been found in this place; particularly those of Constantine the Great, Augustus Cæsar, Claudius, and down to the Antonines. Small Roman heads of brass have sometimes been met with; and pieces of gold coin, with chains of the same metal, have formerly been found. Here have likewise been found, about twenty little polished signets, variously engraved with the figures of men, birds and beasts; in particular, one had a horse on it, and a stem of laurel, from which shot five branches; another, a Roman sitting, with a sacrificing vessel in one hand, and resting his other on a spear; a third, a Roman, thought to be Pellas, with a spear in one hand, wearing a helmet and a shield on the back, or on the other arm; and under that something which bore the resemblance of a quiver hanging to the tree; a fourth of a purple colour, with a Roman head, like Severus or Antonine; a fifth bore the head of Jupiter Ammon; a sixth, an eagle with a civic crown in its bill; and a seventh, a winged victory crowning a trophy. Urns, and other vessels of red earth, wrought with a variety of figures, knots and flowers, have been dug up here; together with several pavements of mosaic work, consisting of small stones about a quarter of an inch square, with a border of stones, about four times as big. A lump of earth, and a Cothuræ, or Petulum Laconicum, used by the Roman soldiers, when on their marches, for clearing of water, by passing it into several concavities made therein.

Near the church of this town was dug up a rough stone, on which is cut the figure of the god Pan, still to be seen in the wall of the vestry room of the church; and on the south-side of this place there appears to have been a camp, containing about two acres of ground, in which Roman coins have frequently been found.

Within these few years has been observed a Mosaic pavement of a different form and beauty, discovered on digging the foundation of an house, and which is now about two feet from the level of the street.

At the door of the college is another tessellated pavement of a different form from the other; and though not more than three yards from it, is a foot nearer the surface of the street. The former is composed of white and black squares, with a border of red; but the stones of this are of smaller squares, and the colour of them, white, yellow, red and blue.

Not long since, more pavements of this kind were discovered, on an eminence at a small distance from hence, called Borough-hill; as also the foundation of a considerable building; two bases of pillars of some regular order; large stones of the girt kind, with joints for cramping; sacrificing vessels; flues for conveyance of smoke, or warm air; bones and horns of beasts, mostly stags; an ivory needle; and a copper Roman stylus: from all which it may reasonably be supposed, that a temple formerly stood in this place.

Thus, having viewed the remains of this ancient city, we proceeded on our journey, and arrived next at Ripley, situated near the river Nidd, over which it has a bridge, one hundred and eighty-three miles from London. It consists chiefly of one street, about three furlongs in length, and is noted for its plentiful production of liquorice; but is more particularly famous for having been the birth-place of Sir George Ripley, the eminent chymist and canon of Bridlington; who, after travelling to Italy, and twenty years study to find out the Philosopher's Stone, is said to have discovered it anno 1470, by which means he was enabled to give the knights of Rhodes one hundred thousand pounds a year to support their wars against the Turks. It is likewise pretended there is a record of this in the island of Malta; a circumstance which demands an equal

share of credit with the former part of the story. Here is a pretty good charity-school; a weekly market held on Monday; and an annual fair, which holds three days, viz. August the twenty-fifth, and the two following days, for sheep, horned cattle, and linen.

Leaving Ripley, we passed on to Knareborough, or Gnareburgh, an ancient borough, by prescription one hundred and seventy-five miles from London; and governed by a bailiff. It is almost surrounded by the river Nidd, which issues from the bottom of Craven-hill; it is about four furlongs in length, formerly had a castle situated on a craggy rock, from whence it derived its name; but has been long since destroyed. This town is rendered famous by some medicinal springs which were formerly much frequented. They are four in number, situated almost close to each other, yet of qualities totally different. The first, distinguished by the name of the Sweet Spaw, or Vitrioline Well, is in a forest called Knareborough-forest, about three miles from the town. It was discovered in the year 1620, by one Mr. Slingby; and is acknowledged to be a sovereign remedy in several disorders. The second is called the Stinking Spaw, or the Sulphur Well, from its strong sulphureous foetid smell. It is generally used by bathing in rheumatic and paralytic cases; and is drank in dropical, splenetic, scorbutic, and arthritic disorders. The third bears the name of St. Mungah's, or Mungo's Well, from Mungo, a Scottish saint, who was once greatly revered in these parts. It is about four miles distant from the town, and is used as a cold bath. The fourth spring is in the town, and is with great propriety called the Dropping Well, because the water drops from a spongy porous rock, into a stone basin underneath. It is the most famous petrifying well in England; the ground which receives it, before it unites in the well, is, for twelve yards long, become a solid rock. From the well it runs into the Nidd, where the spring-water has formed a rock, that stretches some yards into the river.

In the reign of king Henry III. Robert Flower founded a priory in this town; of the sect of friars of the Holy Trinity, endowed at the dissolution with thirty-five pounds, ten shillings and eleven-pence *per annum*.

Knareborough sends two members to parliament; has a weekly market on Wednesday, and six annual fairs, viz. first Wednesday after January the twenty-fourth, first Wednesday after March the twelfth, May the sixth, first Wednesday after August the twelfth, first Monday after October the tenth, and the eighteenth, for black cattle, horses, hogs and sheep.

The neighbouring fields are noted for liquorice, and a soft yellow marle, which proves an excellent manure.

About the beginning of this century, was found in the forest a large medal, inscribed as follows; J O. KENDAL RHODI TVREPELLERIVS. REV. TEMPORE OBSIDIONES TVREHORVM. MCCCCLXXX. †.

Near this place is a cell, called St. Robert's-chapel, hewn out of a rock. Part of the rock is formed into an altar, in which are cut the figures of three heads, designed, as is supposed, for an emblem of the Holy Trinity.

This cell was the hermitage of Robert, the founder of a religious sect called the Robertines; and here he died in the year 1216.

At Allerton Mauleverer, near Knareborough, Richard Mauleverer founded an Alien priory, subordinate to the abbey of Marmonstier, at Tours in France; the revenues of which, upon the suppression of Alien-priories, were given by king Henry VI. to King's College, Cambridge.

At Ribstane, near Knareborough, Robert, lord Ros, about the beginning of the reign of king John, founded a commandry of Knights Templars; which, upon the suppression of that order, became part of the possessions of the knights of St. John of Jerusalem, and was endowed upon the general dissolution, with a yearly revenue, valued at two hundred and seven pounds, nine shillings and seven-pence.

Otley, the next town we visited, is situated under a cliff, called Chevin, on the south side of the river Wherfe, one hundred and seventy-five miles from London.

don. This spot is reckoned the most delightful in England, the only thing for which the town is remarkable.

In the time of king Edward II. here was an hospital for lepers, of which there is no particular account remaining.

Here is a weekly market on Tuesday, and two annual fairs, viz. August the first, and November the fifteenth, for black cattle, and household goods.

At Cookridge, near Otley, several Roman coins have been dug up; and upon a moor, near a village called Addle, in the neighbourhood of this place, were discovered, in the year 1702, the ruins of a Roman town, consisting of a large stone aqueduct, several urns, statues, and sepulchral monuments, and in the neighbourhood a Roman urn very entire, with a single rampart.

From hence we came to Wetherby, a well-built good trading town, one hundred and seventy-eight miles from London, agreeably situated on the river Wharfe, over which it has a noble bridge; above it the river forms a beautiful cascade, by falling in a grand sheet of water over an high dam erected for the conveniency of the mills, where they not only grind corn, but press great quantities of oil from rape-seed, and rasp logwood for the use of the clothiers and dyers in the manufacturing parts of the country. This town lying on the great north road from London to Edinburgh, is well furnished with inns, for the accommodation of travellers.

Here is a small charity, a good weekly market, particularly for corn, held on Thursday, and three annual fairs, viz. Holy Thursday, August the fifth, and November the twenty-second, for horses, sheep and hogs.

In the neighbourhood of this town is a noble and beautiful seat, built by the late lord Bingley. It has the advantage of a most agreeable situation, in a fine country, over which it commands a most extensive prospect, embellished with a distinct view of the magnificent cathedral of York, from the hall door. The gardens are curious and large, with great numbers of delightful vistas cut through the adjacent woods, which are adorned with variety of fountains, statues and temples; and, in short, it may truly be said, that nature and art seem to vie with each other in this enchanting spot.

At Helemsford, near Wetherby, the remains of a Roman military way are still visible.

At Syrenthwate, east of Wetherby, Bertram Haget, in the year 1160, founded a nunnery of the Cistercian order, dedicated to the Virgin Mary, and endowed, on the suppression, with sixty pounds, nine shillings and two-pence *per annum*.

The EAST-RIDING.

This riding, which is the smallest of the three, is bounded on the North and West by the Derwent and the Ouse; on the south, by the Humber; and on the east, by the German ocean. Its rivers are the Ouse, Derwent, Faulwy, or Fowlness, Shelfleet, and Hull, a particular account of which we have given in our general description of Yorkshire.

The air of this Riding, on account of the neighbourhood of the German ocean, and the great æstuary of the Humber, is less pure and healthy than that of the other two; yet, on the hilly parts, towards the north-west, in a large tract called the York Woulds, the air is but little affected by either of these waters; the soil, however, in general, is dry, sandy, and barren; yet the sea-coast and vallies are fruitful, and the Woulds produce some corn, and feed great numbers of black cattle, horses, and sheep; and the wool of the sheep is esteemed equal to any in England. This division yields plenty of wood, pit-coal, turf, jet, and alum stones; and the inhabitants are well furnished with sea and river fish. Its principal manufacture is cloth.

Remarks on the HUSBANDRY of the EAST-RIDING.

The soil between York and Resby is of two sorts, clay and sand; the former is a strong fertile soil, which yields good crops of all sorts of corn; and the

sand is mostly of a dark colour, rich, not shewing any of the signs of poor or barren land; for the spontaneous growths are large and vigorous, such as whins in the uncultivated parts and natural grasses; even the pastures on this sand yield very tolerable crops of hay and feed; and the hedge-wood is strong and luxuriant. Some of the fields, indeed, have a lighter-coloured and a thinner sand, that is not so rich, but none in which the spontaneous growth does not shew a large portion of nourishment. The crops of corn on these sands were tolerably good, that is, as good as they could be with bad husbandry.

The mean rent (tythe-free) of Stillingfleet, is about fourteen shillings an acre; but if the adjoining country is included, it is not above ten shillings.

Their course of crops,

1. Fallow
2. Wheat
3. Barley, &c.
4. Beans

And 1. Turneps

2. Barley
3. Oats, pease or beans

About Selby, many farmers pursue the following:

1. Turnips
2. Barley
3. Clover
4. Wheat

At Fuforth and Nabourn,

1. Fallow
2. Wheat or rye
3. Barley
4. Pease or beans

For wheat they plough four times, sow three bushels, and reap at a medium three quarters. They stir three times for barley, sow three bushels, and reap the same quantity as of wheat. For oats they plough once or twice, sow five bushels, and reckon four quarters the mean produce. They likewise give but one earth for beans, sow five bushels broad-cast, and reckon the mean crop two quarters and a half, or three; they never hoe. It is asserted, that Edward Smith, of Cawcod, once had ten quarters of beans *per acre*, in the broad-cast way, from five bushels of seed, and without any hoeing, which is almost incredible for an after-crop. They sow a few turneps, plough for them four or five times, never hoe them, feed them off the land with sheep and beasts, and reckon the mean value *per acre* at about twenty-seven shillings. We walked over several of their crops, and found them prodigiously thick of plants and weeds, all promiscuous. They plough three or four times for rye, sow two bushels and a half, and reap, at an average, three quarters; they sow it chiefly on their sands, as they find wheat on that soil very apt to be mildewed.

Tassels for dressing cloth have been cultivated in their richest clays to good advantage. They give the land a year's fallow, weed the crop by hand once, at the expence of seven, eight, or ten shillings *per acre*. It remains three years. They are sold by the thousand, and are reckoned very profitable, but supposed to exhaust the land greatly. Here are likewise many potatoes cultivated, but more about Fuforth and Nabourn; the method is the same in all; they give a winter fallow for them, plant sixteen bushels on an acre in rows two feet asunder, and the plants one foot, plough between them two or three times, and hand-weed the same at five shillings an acre; eighty bushels they reckon a middling crop; the price, one shilling a bushel.

Their pastures they lay down with corn, twelve pounds weight of white clover, and one quarter of hay-seeds, and sometimes four bushels of rib-grass. They always lay them down, or rather up, in broad high ridges, by which means there is always a breadth of about two yards in the furrows that is good for naught, quite poisoned with water.

They have better ideas of manuring, than of most other parts of husbandry; they lay large quantities of lime on their lands with good advantage; the quantity from two to three chaldrons, sometimes one and an half, and ten loads of dung. It costs them eight shillings

lings a chaldron, and one shilling and two-pence carriage; it is generally laid for wheat or barley, and lasts three years. Paring and burning is practised among them; the paring costs ten pence *per* acre; the burning, five shillings; and the spreading, one shilling and two-pence. They have no flocks of sheep large enough for folding.

Some clover is sown among their barley; they leave it on the ground but one year; always mow it once, and sometimes twice; get one and an half, or two ton of hay at two mowings.

They reckon the product of a cow at, from three pounds, to four pounds ten shillings. Upon a medium, two firkins of butter *per* cow, at twenty-five shillings. Cheese about one third in value of the butter, besides calf and pigs. Their method of feeding calves and weaning them is extraordinary; for they never let any suck above ten days or a fortnight, whether for killing or weaning, but in general only two or three days for weaning, after which they are fed with skim-milk; and numbers of oxen, even of sixty, seventy, or a hundred stone, are weaned almost as soon as born in this cheap manner, which, in the south of England, would be thought impossible. A middling cow, in the height of the summer's feed, will give about four gallons of milk *per* day.

The tillage is done all by horses, two or three in a plough abreast, and the general quantity done in a journey is an acre. The price of ploughing, if hired, is three shillings and six-pence *per* acre the first stirring, and two shillings and six-pence the rest.

They reckon that three hundred pounds is sufficient to stock a farm of one hundred pounds a year, half grass and half arable; and two hundred pounds for the same, all arable; which sums are very low, and would never allow of any spirited culture.

Price of L A B O U R.

In hay-time and harvest, 1 s. 6 d. a day, and board.
 In winter, 8 d. and ditto.
 After Candlemas, 1 s. and ditto.
 Reaping wheat, barley or oats, 6 s. *per* acre.
 Mowing barley, &c. and binding into sheaves, 3 s. 6 d.
 Mowing grass, 2 s.
 Making ditto into hay, 1 s.
 Ditching, new, the ditch four feet wide, and 2 $\frac{1}{2}$ deep, 8 d. or 9 d. the rood of seven yards.
 Repairing ditto, 4 $\frac{1}{2}$ d. ditto.
 Threshing wheat, 2 s. a quarter.
 ——— barley, 1 s.
 ——— oats, 10 d.
 ——— beans, 1 s.
 Making faggots, 1 s. a load of sixty.
 Servants wages; a head man, 10 l. 10 s. to 12 l.
 A ploughing lad, 8 l.
 A dairymaid, 5 l.
 A common maid, 4 l. 4 s.
 Women and children earn, by spinning, 4 d. a day.
 Some only 1 d.

From Beverley to Driffeld is an open wold country, cultivated in a very different manner. About the latter, the soil is chiefly clay; lets at about ten shillings an acre. Farms, from thirty pounds to one hundred and twenty. Their course is,

1. Fallow
2. Wheat or barley
3. Pease or beans
4. Oats.

They plough four times for wheat, sow two bushels and a peck, and reap at an average twenty-four. For barley they give five ploughings, sow three bushels, and gain in return about three quarters and an half. They plough but one for oats, sow four bushels, and do not get a crop of above two quarters. Beans they give but one stirring for, sow four bushels broad-cast, never hoe them; the crop three quarters and an half; use them for hogs and horses.

They stir once for pease, sow three bushels, and gain in return about three quarters. They have very few

turnips, but plough five times for them; hoe them once, and value an acre of good ones at three pounds. They use them only for sheep. Clover they sow with oats, mow it for hay twice, and get three loads an-acre; and after it, sow barley.

Their manuring consists of their farm-yard-dung, which they carry out and lay in heaps, but do not stir it over, or mix it with any thing; and folding their sheep, which they do on the pea-land for wheat.

Good grass lets at twenty shillings an acre: they have very good dairies. They reckon that an acre will not maintain a cow. The product *per* head they value at five pounds. A good one gives in the best season two gallons of milk *per* day. Their winter food is straw, when dry; and at other times clover hay: the calves they let suck only two or three days. The joist of a cow, through summer, is thirty-two shillings and six-pence.

Their flocks of sheep are from three hundred to five hundred; the folding they reckon the chief profit of them, which they carry on from May to Martinmas. They keep them all winter in the field, their turnips being too trifling to mention. The weight of wool *per* sheep is about three pounds and an half.

In their tillage, they use six oxen and eight horses, for one hundred and twenty acres of arable land; four horses in a plough abreast, and do from one acre to one and an half a day. The expence of keeping horses, they can give but little account of; for their oats they give only in the straw, but reckon the amount about six pounds a year. Their joist in summer is forty-five shillings.—The food of their working oxen in winter is little besides straw; they reckon both them and horses absolutely necessary.—The price *per* acre of ploughing, is two shillings and six-pence.

They reckon four hundred and fifty pounds necessary to take a farm of one hundred pounds a year, half grass and half arable. Lands sell at forty years purchase.

Price of L A B O U R.

In harvest, 9 s. a week and board.
 In hay-time, 7 s. and ditto.
 In winter, 6 s. or 7 s.
 All work by the day.
 Headman's wages, from 12 l. to 15 l.
 Ploughman's ditto, 8 l. or 9 l.
 Boy of ten years old, 1 l. 15 s.
 Dairy-maid, 4 l. 10 s. to 5 l.
 Other ditto, 4 l.
 Women *per* week, in harvest, 5 s. and board.
 In hay-time, 7 d. a day.

Between Driffeld and Burlington, the country is various, but chiefly open wolds; in them the soil is indifferent, and lets from two shillings, to seven shillings and six-pence *per* acre; but in the inclosures it is much dearer. That town is a little sea-port, which is supported by a slight trade that maintains ten or a dozen ships, and by the resort of some company to the quay for bathing.

We entered this Riding near York; but that city standing on a point where the boundaries of the three Ridings meet, and being also a county of itself, belongs properly to neither Riding. The name York is a corruption or contraction of the Saxon names Euor-thie and Eofor-thie, which were derived from Eboracum, the Roman or British name of this city, which is by some supposed to have been given it from Ebrancus, a British king, who is said to have been its founder; but the most general opinion is, that it was called Eboracum from the river Ure, which, in conjunction with the rivers already mentioned, runs through it from north to south.

This having been the capital city of the Brigantes, is by Ptolemy called Brigantium; but is more generally known among the Roman writers by the name Eboracum. That it was a Roman colony, appears from the testimony of both Ptolemy and Antoninus, as well as from the following inscription upon a stone that was dug up here. M. VEREC—VIR COL EBORII M Q MORT

MORT CIVIS BITVRIX CVBFS HÆC SIBI VIVVS FECIT.

From the following inscription upon the reverse of the emperor Severus's coins, it appears, that the sixth legion, called Victrix, which was sent from Germany into Britain by the emperor Hadrian, was in garrison here: COL. EBORACVM LEG. VI. VICTRIX.

It also appears, that the ninth legion resided in this city, from the following inscription upon a funeral monument found here, which had been erected in memory of the standard-bearer of that legion. L. DVCCIVS L. VO T. RVFINVS VIENSIGN. LEG VIII. AN. XXIX. H. S. E.

Here also was found a Roman brick, inscribed as follows: LEG. IX. VIC. and a stone altar or monument, dedicated to the genius of the place, with this inscription: GENIO LOCI FELICITER.

In 1638 an altar was found here, inscribed thus: I. O. M. DIS DEABVSQVE HOSPITALIBVS PENATIBVSQ. OB CONSERVATAM SALVTEM SVAM SVORVMQ. P. AEL. MARCIANVS PRÆF. COH. ARAM. SAC. F. N C D.

The emperor Severus resided a considerable time in this city; and dying here, his ashes were carried from hence in a golden urn to Rome. Constantius Chlorus also died at York; and here his son, Constantine the Great, was, upon his father's decease, declared emperor by the Roman soldiery.

It is said, that in a vault belonging to a little chapel here, in which Constantius was thought to have been buried, a lamp was found burning, about the time of the dissolution of monasteries;

There passed no less than three Roman military ways through this city: Bellona had a temple in it; and here are still to be seen some remains of Roman buildings, particularly an arch at a place called Micklegate Bar, several parts of the city walls, and a multangular tower, near a place called the Mint-yard.

Without a place called Botham Bar in this city, was the burying place of the Romans, after the custom of burying the dead, instead of burning them, had been introduced among that people: and several remains of antiquity have been discovered here, particularly an earthen vessel or urn, on one side of which was the figure of a woman's head, as large as the life, with some strokes of a pencil in red paint, very fresh, about the hair, eye-brows, and neck. This vessel is supposed to have been made of Halifax clay, and is preserved in the Ashmolean museum at Oxford.

Here was also discovered a vault of Roman bricks, like those in which the urns were usually deposited. It was arched with bricks, each about two feet square, and proportionably thick, and paved with bricks, about eight inches square, and two inches thick. It was of sufficient capacity to hold two bodies, but nothing was found in it except the bottom of a Roman coffin, consisting of several fragments of a reddish clay, something coarser than that of which the urns were usually made.

In this burying ground was also found a Roman shuttle, three inches and a half in breadth; the wool it carried must have been very fine, because the hollow into which it was received is at most but a quarter of an inch wide. It is supposed to have been used in weaving the asbestinum, or incombustible linen, in which the dead bodies were wrapped before they were burnt, in order to preserve the ashes. Here also were found two urns of a blue grey colour; and two vessels of red clay. The urns contained burnt bones and ashes; and the largest of the two red clay vessels has a spiral thread in the inside, like the nut of a screw. It is about a foot long, four inches broad, and the bore wider at one end than at the other. The smallest red vessel is a kind of lacrymatory, into which the friends of the deceased were wont to shed their tears. Here also was found a lead coffin seven feet long, inclosed in a strong coffin of oak planks, within which was the entire skeleton of a human body.

In digging the foundation of a large house, not long since built, in Micklegate above-mentioned, the workmen went much below any former foundation that could be observed on this spot; and at the depth of ten feet came to a stone, which, upon taking it up, appeared to

have figures on it, but miserably defaced. This drawing, says Dr. Stukely, is a sculpture of Mithras, sacrificing a bull. He has on the Persian mantle, called candys, and the Phrygian bonnet, called tiara. He represents the Archimagus, performing the great annual sacrifice at the spring equinox; according to the patriarchal usage.

These ceremonies to Mithras were generally celebrated in the cave of a rock: therefore this sculpture was found so deep in the earth.

There is commonly a figure on each side of him, habited in the same manner, standing cross-legged: the one holds a torch up, the other down. Here is only the latter; the other is imperfect.

Underneath is the figure of an horse; intimating the Sun's course; for, in the time when the old patriarchal customs became profane, and deenerated into idolatry, they made Mithras to be Apollo, or the Sun. Whence these sculptures had a number of symbols; relating to the solar circuit of the year through the twelve zodiacal constellations. The two figures attending on the Archimagus are inferior officers to him. There is a mystery in their standing cross-legged, like our effigies of croifaders in churches; and it means the same thing: for the cross was one part of the Mithriac ceremonies. These two, by the different attitude of their torches, represent Day and Night, as Mithras represents the Sun. The figure imperfectly drawn, at the tail of the horse, may be a genius twisted round with a snake; which means the vitality imparted to all things by the solar power.

The other figures are officiating priests, dressed in a symbolic manner, to imitate the Sun's influence, and annual motion.

The Romans became extremely fond of the Mithriac ceremonies: whence this sculpture was placed in the imperial city of York. There is an image of Mithras at Chester, and no doubt many more in Britain.

St. Jerom, in his epistle to Læta, writes: "A few years ago your cousin Gracchus, a person of patrician quality, when he was Prefect of the city, destroyed, broke, and burnt, the cave of Mithras." This was at Rome, about the year 378. Not long after, we may well imagine, the Roman Prefect of York followed his example, and demolished the subterranean temple in Micklegate; where this sculpture of him was found.

The city of York is surrounded by a strong wall, kept in good repair, in which are four gates, and five posterns. It is a county of itself, extending over all the Wapentake, called Ainsty, and is governed by a mayor, who is styled Lord; as at London, a recorder, twelve aldermen in commission of the peace, two sheriffs, twenty-four prime common-council men, eight chamberlains, seventy-two common-council men, a town-clerk, sword-bearer, and common-serjeant; and the mayor and aldermen have conservation of the rivers Ouse, Humber, Wharfe, Derwent, Aire, and Don, within certain limits of each.

This city has given title to the second prince of the blood royal, and the two citizens they return to parliament have a privilege of taking their places in the House of Commons, next the citizens of London, upon what is called the Privy Counsellor's bench; a privilege, which, if neglected to be claimed, ought to be made known, as it appertains to the citizens of London and York only, and is by those of London exercised the first day of the meeting of every new parliament.

The situation of York is in a plain on both sides the river Ouse. It was formerly very populous, and had a great trade; but has declined since the Reformation, and the disuse of the court of president of the north. In the time of Henry V. there were forty-one parishes, seventeen chapels, sixteen hospitals, and nine abbeys; besides the cathedral; but now there are only seventeen churches in use.

The present support of the city is chiefly owing to the gentry, who make it their winter residence; as there is great plenty of provisions of all kinds, to furnish an elegant table at a moderate expence, so that the altar, which was found there, with a Roman inscription, is applicable to the present circumstances of the place, DIS

DEABVSQVE HOSPITALIBVS. And as the inhabitants abound with the conveniences of life, they likewise partake of its diversions, there being plays, assemblies, music-meetings, or some entertainments, every night in the week.

The public edifices which most deserve mention, I shall now take notice of; and first, of the bridge over the Ouse. It consists of five arches: the diameter of the middle arch, which was the largest in the kingdom, before that at Blenheim-house was built, is eighty-one feet, and its height fifty-one feet. The reason it was built so wide, was on occasion of an accident which once happened to it, when, upon a sudden thaw, which occasioned a great flood, a prodigious weight of ice drove down two arches of the old bridge, by which twelve houses were demolished, and several persons drowned.

The great council-chamber for this city, near which the records are kept, as also the exchequer and courts of the sheriffs, and, beneath them, the two city prisons for debtors and felons, are all upon this bridge.

The castle, which stands at the confluence of the Ouse, and the Fosse, was built by William the Conqueror, anno 1069; and though the face it now wears, and the use made of it, are so different from that which was the primitive state of this fortress, yet, in its present disguise, it brought to my memory that tragical scene of bloodshed perpetrated within its walls, upon the eleventh of March 1189; which being to be met with in very few historians, I shall give a brief account of it.

The Jews, from their first introduction into England, growing immensely rich by traffick, never failed to become the objects of envy and hatred, both to prince and people, and the slightest pretences were always eagerly laid hold of, to plunder them; so that, on every new accession or turn of affairs, they were forced to compound for their safety, by large presents to the prince.

At the accession of Richard I. though that prince gave them no disturbance, yet he issued out an order, that no Jew should be present at the ceremony of his coronation, either at church, or at dinner.

However, the chief of the Jews, from all parts, being summoned to London by their brethren there, in order to agree upon a rich gift to the new king, to obtain his favour and protection, many of them, notwithstanding the injunction, had the curiosity to see the ceremony; and being discovered among the croud by the guards, they were beat, abused, and some of them killed.

The people hereupon, being possessed with a notion, that the king had given orders that the Jews should be destroyed, began a massacre of them in London, and plundered and burnt their houses, and in them many of their wives and children.

And though the king immediately ordered a proclamation to stop these proceedings, yet the example at London was followed at Norwich, Lynn, and Stamford, and with still greater fury at York, notwithstanding the king, at his departure to the Holy Land, left orders for the protection of the Jews, and the punishment of such as should molest them; for, being inflamed by a wicked priest, certain bloody wretches, who had resolved upon the destruction of the Jews, and to enrich themselves with their pillage, set fire to a part of the city of York; and, while the citizens were busy in extinguishing the flames, broke into the house of a principal Jew, who had been murdered at London, and whose wife had strengthened it for her defence; and, murdering the whole family, and all who had taken refuge there, burnt the house to the ground.

The Jews hereupon, in the utmost terror, got leave to convey all their wealth into the castle, and obtained shelter there for their own persons, and for their wives and children, except some few, who were sacrificed to the rage of the populace, who burnt all the houses of the Jews throughout the city.

It unluckily happened, that the governor of the castle having business in the town, the poor Jews, being afraid he went out to agree upon delivering them up to their enemies, refused him admittance into it; which incensing him, he applied to the high sheriff, who, raising the Posse Comitatus, besieged the castle, and reduced the

Jews to so great extremity, that, being refused mercy, though they offered to buy it at the expence of immense sums, they took the dreadful advice of one of their rabbis, come lately among them from abroad; and first, having burnt all their rich goods, and so damnified even their plate, that their barbarous enemies could not be much the better for their spoils, they set fire to all the towers of the castle, and fell each man to cutting of the throats of his own family, till they had destroyed all who came into this dreadful scheme of their rabbi's, who, in the last place, followed the advice he had given.

In the mean time, the fire of the castle increasing, a number of unhappy Jews, who would not come into this bloody action, (in vain endeavouring to extinguish it) from the walls besought the mercy of the besiegers, acquainting them with what had happened; and threw over the dead bodies of their brethren, in confirmation of the truth of what they said; and offering to become Christians, had hopes given them of their lives: but no sooner did their merciless enemies gain admittance, than they butchered every one of the Jews, calling aloud for baptism, in hope of escaping their worse than paganish cruelty.

Not satisfied with this, these barbarous robbers, as well as murderers, ran next to the cathedral, where were deposited the bonds and other securities of the money owing to the Jews by the Christians, broke open the chests, and destroyed them all.

There were five hundred men who took shelter in the castle, besides women and children. So that the whole number of Jews thus miserably slaughtered, must be between one thousand and one thousand five hundred, besides those who were massacred in the city.

We must do this justice to the king, who was then in the Holy Land, that, as soon as he heard of this unparalleled proceeding, he was highly incensed; and sent orders to the bishop of Ely, his chancellor and regent, to go down in person to York, and execute strict justice, without favour or affection, on all offenders. The bishop came to the city, but the chief authors of the riot had fled to Scotland. However, the citizens were laid under a great fine, and the sheriff and governor of the castle were removed from their places, and committed to prison; and the soldiers concerned in the fray were punished, and turned out of service; but not one man, either then or afterwards, was executed for the unheard-of villainy.

The strength of this castle has been often experienced in times of war, and becomes famous in history, upon account of several memorable events. We hope, for the future, there will never be occasion to make any other use of it, than to the same necessary purpose to which it is now converted, namely, a prison; but a prison, the most stately and complete of any in the whole kingdom, if not in Europe. The present edifice was erected in the year 1701. In the left wing of the building is a handsome chapel, neatly adorned with suitable furniture, and an allowance of forty pounds a year is settled upon a minister, for performing divine service, and preaching to the prisoners weekly; and such of the debtors as attend at sermons, are allowed each a large loaf of fine bread. The justices of the peace take great care, that the gaol shall be kept as neat within-side as it is noble without. The felons are allowed straw, and their beds are now raised from the ground: and there is an infirmary apart from the common prison, to which the sick are conveyed, and a surgeon has an appointed salary to attend them.

The castle-yard is larger than the areas of the Fleet or King's Bench in London; and the situation is so high, pleasant, and airy, that it is surprising any prisoners should remove themselves by *Habeas Corpus* to either of those prisons, unless it be with a view of purchasing the liberty of the rules, because here they are never permitted to go without the walls. Strangers, who visit the inside of it, seldom depart, without making a trifling purchase of some of the small manufactures the prisoners work up for subsistence.

The next building we come to is the assembly-room, for the entertainment of the nobility and gentry, who

reside at York during the races. It was designed by the Earl of Burlington. That part which is the Egyptian hall, taken from a draught of Palladio, is in length one hundred and twenty-three feet, forty broad, and rather more in height. This hall communicates with the common ball-room, in length sixty-six feet, in height and breadth twenty-two feet, besides other rooms for cards and tea; all richly decorated and illuminated with magnificent lustres. The front to the street is an exceeding fine piece of architecture; but the Egyptian hall, if you except the banqueting-house at Whitehall, may undoubtedly claim the preference of any other room in the kingdom, if not in Europe. The expence of this edifice, amounting to several thousand pounds, was defrayed by subscriptions, chiefly among the nobility and gentry of the county, who contributed, some fifty pounds, and none less than twenty-five pounds.

In the year 1728, a very handsome mansion-house was erected for the Lord-Mayor: the basement is a rustic arcade, which supports an Ionic order, with a pediment in it. There is a large room the length of the front, forty-nine feet by twenty-nine, so that this city has had the honour to begin a precedent, for the city of London to copy after.

Some writers have related, that Lucius, a British king, founded the see of an archbishop in this city, and that here was a succession of three or four archbishops in the time of the Britons: but this account is generally thought to be fabulous, and it is more probable, that the metropolitical church of York owes its origin to Edwin king of the Northumbers, who, upon his conversion to christianity, in the year 627, constituted Paulinus an archbishop, and built here a small wooden church, which, sometime afterwards he began to rebuild of stone. The first stone building was finished by king Oswald and archbishop Wilfrid; but that building being burnt down in 741, was afterwards rebuilt; it was again burnt down in 1069, and rebuilt by Thomas, the first archbishop, who constituted the several dignities and prebends, and made it a regular chapter. In the year 1187, this cathedral was a third time destroyed by fire, together with St. Mary's monastery. The monastery soon recovered its former splendor, but the cathedral lay neglected till the reign of Edward the 1st. when it was begun to be rebuilt, by John Roman, the treasurer of the church, and finished in the beautiful manner it now appears, by the contributions of the Percys, the Vevafors, and other neighbouring gentry, and of several of the archbishops, particularly Thoresby, a cardinal, who, in the year 1361, laid the first stone of the new choir, to which, at sixteen payments, he gave so many hundred pounds, besides lesser sums, towards carrying on that work.

This magnificent structure may challenge the pre-eminence of all other Gothic churches, not only in this kingdom, but throughout Europe.

The city of Lincoln indeed contends with this of York for a preference to its cathedral; and as this is a point in which both cities are very tenacious, I will distinguish the particulars wherein each of them have the advantage over the other.

In the first place, then, Lincoln cathedral has greatly the advantage of York, in the height of its situation; and by different accounts given by several authors, of the dimensions of both churches, it appears Lincoln exceeds York in length; from east to west, either fourteen, or eleven, or three feet and an half: in the middle cross or transept from north to south, five feet; in the outward breadth of the west end, by the addition of two chapels, as at St. Paul's, London, fifty-three feet; in the height of the west towers and spires, seventy two feet; and of the middle tower, including the pinnacles, seventy-five feet.

York exceeds Lincoln in the breadth of its middle nef, and side isles, within-side, twenty-six feet; in the height of the middle nef to its canopy, seventeen feet; and in the inside height of the middle lantern, sixty-four feet and an half.

The breadth of the west end of Lincoln will not the least avail in this dispute, as it has so many egregious defects, not to say absurdities. The two steeples are

crowded together, instead of being placed at the extremities of the front, which by that means would have had an appearance much more grand. They rise up above the body of the church, as if behind a screen, without the least affinity to any part of the building below. Their ornaments are but mean, and the leaden spires upon them still meaner. The whole front, extending in a straight line, wants boldness when viewed at some distance; and there is such an expansion of solid wall, without windows, or any sort of aperture, as gives an heaviness throughout. The cloistered work, or niches for images, which is the chief ornamental part of Gothic structures, is disposed with a shameful disregard to every thing like design: in one place, crowded with needless profusion; in another, wanted to fill up, where now there is nothing but a naked and dead space; and in the ornaments the fancy is so irregularly varied, that all kind of connection and harmony is destroyed, so that the building to appearance has the same effect, as if it were pieces of different structures patched up together.

The plan of the church is very irregular, the middle transept from north to south having no isles on the west side, to answer those on the east. The upper transept, or double cross, can never be considered as a beautiful addition, especially since this, and the eastern parts beyond, are surrounded with chapels and vestries erected without uniformity, and the windows of the church are meanly small, crowded, and out of proportion.

'Tis to be observed, there is a great resemblance between the ground-plat of Lincoln, and that of Canterbury; and the one was certainly built after the model of the other.

The only defect objected to York, is, that the middle tower or lantern wants height, and that the cross or transept, from north to south, is built in a different stile and manner from the rest of the cathedral. Both these must be admitted to be faults; but, by the way, the middle lantern is as lofty as the celebrated towers of Canterbury and Gloucester, exclusive of their pinnacles, though not sufficiently high in proportion to its breadth, being seventy feet square, or to the height of the church. They have a tradition in this city, that a wooden spire was once intended to have been raised upon this tower; which in that case would have exceeded the height of Salisbury steeple, as the present battlements are higher by six feet, and of a larger square than the present tower at Salisbury.

The only amendment that can be made, would be to pull down the bell-turret at one corner, and to raise the battlements about twenty feet, piercing them through with proper ornaments; and carry four pinnacles above them, about twenty feet more.

However, this building has two remarkable beauties not to be found in any other Gothic edifice; which are, that the height and breadth of the nef and side isles of the church, and of all the arches and windows, come very near, if not agree with, the dimensions laid down by the established rules of Roman architecture; that the span of the roof, from east to west, rises very near equal to the modern proportion; the excessive height of the roofs being the chief blemishes in most cathedrals, as may be seen at Lincoln, Salisbury, Westminster, and particularly Winchester.

The plan of the whole church is uniform, as well as the superstructure, especially from east to west: the windows are of a size and distance proper to the magnitude of the structure, and are admirable for their workmanship; neither is it crowded and encumbered on the outside by its buttresses, but every part is enriched with ornaments, which receive an additional beauty from the colour of the stone, as it retains almost its original whiteness.

Thus far what I have said of this building in general was necessary, in comparing it with Lincoln. I will now take some notice of its several parts distinctly, both with-inside and without, beginning first at the outside.

The west end, which is one hundred and twenty-four feet in breadth, shews a grandeur inexpressible; this front contains two uniform towers, diminished by several contractions

contractions, all cloistered for imagery, and enriched with other ornaments. In the south tower hangs a deep peal of twelve bells, the tenor weighing fifty-nine hundred weight.

Between these towers, over the principal entrance into the church, is a large window, whose tracery in masons work is of a figure so beautiful, that it cannot be equalled any where. The several windows in the towers are large, and their tracery and ornament well fancied.

The south entrance is ascended by several courses of steps, and tradition assures us, there was once as great an ascent to the west door. Here a remarkable spiral turret is erected on the middle of the pediment, and called the Fidler's Turret, from an image of a fidler on the top. Over the door is a dial both horary and solar, on each side of which two images strike the quarters on two bells.

In viewing the building from this part eastward, we easily discerned it to be much newer than that westward, though conformable to it.

The east front is exceeding noble, and has the finest window in the world.

The north side is the same as the south: only a wall is built to prevent night-walkers, and other disorderly persons, from nesting and intriguing in the obscure corners of the buttresses.

The lantern steeple, is ornamented in a fine taste, wanting nothing but a better finishing at the top: it has eight windows, two on each side, to give light within; these windows from top to bottom are forty-five feet high.

We now entered the inside, at the west door, opening into the middle nef of the church, under the largest gothic arch in Europe, which binds and supports the two towers. The nef is the most spacious of any in Europe, except St. Peter's at Rome; it exceeds the dimensions of the nef of St. Paul's cathedral four feet six inches in width, and eleven feet in height; and that of Westminster-Abbey, sixteen feet six inches in breadth; but its height is two feet less. This is an instance of what I took notice of before, with regard to the justness of the proportion of York cathedral; and at the same time shews the extravagance of that of Westminster-Abbey, in this particular. The canopy at top is enriched with curious knots of carving.

From thence we proceeded under the middle lantern, to a stone screen, that parts the choir from the body of the church, adorned with curious workmanship, among which are placed the statutes of the British kings, from the Conquest to Henry VI.

Over the entrance into the choir stands the organ, having a double front; it had before been removed from thence by king Charles I. to one side, opposite to the bishop's throne. The reason his majesty gave for doing it, was, That it spoiled the prospect of the fine east windows from the body of the church.

The choir is adorned with antient wood-work carved, and set up with clusters of knotted pinacles of different heights. The ascent from the body of the church, through the choir to the altar, is by a gradation of a sixteen steps. The altar has lately received a considerable improvement as to its situation, and the whole church in its beauty, by taking away a large wooden screen, which almost obstructed the view of the east window. By this means it was carried one arch farther back, to a stone screen of excellent gothic architecture; which now not only shews a beauty in itself, before hid, but opens a view to one of the noblest lights in the world, both for masonry and glazing; which is the aforementioned east window.

This window is thirty feet nine inches broad, and seventy-five feet high: the upper-part is a piece of fine tracery, but, not so beautiful as that at the west end. Below the tracery are one hundred and seventeen partitions, wherein is represented, in fine painted glass, most of the history of the Bible. This window was glazed in 1405, by one John Thornton, glazier, of Coventry; who received, for his own work, four shillings a week; and contracted to finish the whole in three years.

In a circular window, at the south end of the church, is another fine piece of masonry, in the form of a wheel, called the Marigold Window, from its painted glass, which resembles the colour of that flower. The north end has five noble lights; each constitute one large window, and reach almost from top to bottom. There is a tradition, that five maiden sisters were at the expence of these lights. The painting of the glass represents a kind of embroidery, or mosaic needle-work; which might perhaps give occasion to the story.

We ought not to omit mentioning, that all the windows of the church, except one or two, are adorned with painted glass, representing the sacred history, and the portraitures of eminent persons. This painting was preserved at the time of the civil wars, by the Lord Fairfax, general of the parliament's army, who, at the request of the gentry and citizens of York, placed a guard of soldiers about the church for that purpose.

The body of the church has been lately new-paved, the plan of which was drawn by that ingenious architect Mr. Kent, under the direction of the earl of Burlington: the figure is mosaic, and properly adapted to a Gothic building.

The monuments in this church are numerous, many of them very antient, and several very magnificent; but, to enumerate them distinctly, would take up more room than we can spare.

After taking this view of the cathedral, we were conducted into the Chapter-house; a building which, for a Gothic piece, disdains to allow an equal in the universe, and well deserves the encomium bestowed upon it, as is said, by a great traveller, in an old monkish verse inscribed on the wall, in golden letters, as follows:

Ut rosa phlos phlorum, sic est domus ista domorum.

"As shines the rose above all meaner flow'rs,

"So, above common piles, this building tow'rs."

'Tis an octagon of sixty-three feet diameter. The height to the middle knot of the roof is sixty-seven feet ten inches, unsupported by any pillars, and intirely dependent upon one pin geometrically placed in the center. The whole roof has been richly painted, and the knots of carved work gilt; but is now defaced and sullied by time. Over the roof is a spire of timber-work, covered with lead, admired as a masterly piece of work in the carpenter's art. The eight squares of the octagon have each a window beautifully adorned, and embellished with painted glass.

The next place we saw was the vestry-room; its dimensions forty-four feet by twenty-two; wherein are kept several antiquities, particularly the famous horn so called, made of an elephant's tooth; which is indeed the greatest piece of antiquity the church can exhibit, and to which they ought to pay an high veneration, on account of the benefit they reap from the act that it witnessed to. The account Camden gives of it, is; "That Ulphus the son of Toraldus, who governed in the west parts of Deira, by reason of a difference likely to happen betwixt his eldest son and his youngest, about his lordship, when he was dead, presently took this course: Without delay, he went to York, and taking the horn, wherein he was wont to drink, with him, he filled it with wine; and, kneeling before the altar, bestowed upon God, and the blessed St. Peter, all his lands."

The lands are still called de Terra Ulphi. The horn was imagined to have been quite lost; but Thomas lord Fairfax was the occasion of its being preserved. Where it had lain, or where he got it, is uncertain; but, stripped of its golden ornaments, it was restored by his successor. The chapter thought fit to decorate it anew, and bestowed the following inscription to the memory of the restorer upon it:

CORNV HOC VLPHVS IN OCCIDENTALI PARTE
DEIRÆ PRINCEPS, VNA CVM OMNIBVS TERRIS
ET REDITIBVS SVIS, OLIM DONAVIT.
AMISSVM, VEL ABREPTVM,
HENRICVS DOM. FAIRFAX DEMVII RESTITVIT.
DEC. ET CAPIT. DE NOVO ORNAVIT,
A. D. M.DC.LXXV.

Ulphus, *Prince of the West Part of Deira, formerly dedicated this Horn, together with all his Lands and Revenues. Being lost or stolen, Henry Lord Fairfax at length recovered it; and the Dean and Chapter repaired it, in the Year 1675.*

To this cathedral belong an archbishop, a dean, a precentor, a chancellor, a sub-dean, four arch-deacons, twenty-eight prebendaries, a sub-chanter, five priest-vicars, seven lay-clerks, six choristers, four vergers, with other officers and servants.

We will now conclude our account of this noble pile of building, with the character given of it (as Mr. Camden informs us) by Æneas Sylvius, afterwards Pope Pius II. "It is, says he, famous for its magnificence and workmanship, all the world over, but especially for a fine lightsome chapel, with shining walls, and small thin wasted pillars quite round.

The south side of the church is enriched by a library, to which Archbishop Matthew's widow was a great benefactress. A bishop was her father, and an archbishop her father-in-law; she had four bishops for her brethren, and an archbishop for her second husband.

The bishop had a palace in the minister-yard, where great hospitality was wont to be kept; but it has long since been leased out.

In the archbishop's register and prerogative office, is a noble repository of antient ecclesiastic records, bearing date ninety-three years earlier than any at Lambeth or Canterbury.

The church of All-Saints in the Pavement in York is a beautiful old church, with a Gothic steeple of exquisite workmanship. Upon the tower is a fine lantern (with pinnacles of a considerable height) not much unlike that of Boston in Lincolnshire.

St. Margaret's church has one of the most extraordinary porches I ever saw. It is a most sumptuous and elaborate piece of Gothic architecture, with our Saviour on the cross on the top of it; but what seems still more surprising is, that they say it did not originally belong to the church, but was brought hither from the dissolved hospital of St. Nicolas.

St. Mary's in Castle-gate is admired for a pyramidal steeple; as Christ's church is for a very fine modern one.

In the month of August 1738, a subscription was set on foot for an infirmary in this city, like those begun at London, Winchester, &c. And this excellent charity has found much encouragement and support here.

The other most remarkable buildings are, the Guild-hall, well worthy observation; it is larger and in other respects superior to that of London. Near it is the statue of king Edgar, who rebuilt the city; and St. Anthony's-Hell, which is a large handsome edifice; and in it are rooms large enough to hold most of the inferior tradesmen of the city.

The market-house is in the street called the Pavement, a curious piece of architecture, supported by twelve pillars of the Tuscan order; and there is another for Thursday's market, not unlike the exchange at Chester.

The city of York stands upon more ground, perhaps, than any in England, except London and Norwich; but then the buildings are not so close as at Bristol or Durham, nor is it so populous as either Bristol or Norwich. But as York is full of gentry, and persons of distinction, so they have houses proportioned to their quality, which makes the city lie so far extended on both sides of the river.

While we were here, we took one day's time to see the fatal field, called Marston-moor, where prince Rupert, a third time, by his excess of valour, and defect of conduct, lost the royal army, and had a victory wrested out of his hands, after he had all the advantage he could desire.

In the time of William the Conqueror, Allan earl of Richmond gave a church in this city, dedicated to St. Olave, with four acres of land to build offices on, to a religious society that had been driven hither from Whitby. But that church being too small, king William Rufus, about the year 1088, laid the foundation of a church dedicated to St. Mary, and endowed the

monastery with possessions, which being increased by other benefactions, were valued, upon the dissolution, at two thousand and eighty-five pounds, one shilling and five-pence *per annum*.

In the west part of this city was a church dedicated to the Trinity, in which, anciently, were canons, endowed with lands; but these being dispersed, Ralph Painell, in 1089, gave it to the Benedictine monks of St. Martin Marmonstier, at Tours in France, upon which it became a cell to that abbey; but it was afterwards made denison, and valued, upon the dissolution, at one hundred and sixty-nine pounds, nine shillings and ten-pence *per annum*.

The Culdees, or secular canons, belonging to the cathedral church of this city, in the time of William the Conqueror, founded, near the westward of the church, an hospital for the reception and entertainment of poor people. But king William Rufus erected a larger and more convenient building for this charity, in the place now called the Mint-yard; and so increased its revenues, that he is generally reckoned the founder. This hospital was called St. Peter's, till the time of king Stephen, who erected a large church within the precincts of it, which he dedicated to St. Leonard; after which the hospital went generally by the name of that Saint. At the time of the dissolution here were maintained a master, thirteen brethren, four secular priests, eight sisters, thirty choristers, two school-masters, two hundred and six beadmen, and six servants; with lands and rents amounting to five hundred pounds, eleven shillings and one penny *per annum*.

About two furlongs without the city walls, on the west side, archbishop Thurstan, in 1130, founded a Benedictine nunnery, dedicated to St. Clement, and valued, upon the dissolution, at fifty seven pounds, seven shillings and nine-pence a year.

In or near the city, there was an hospital for leprous persons, as ancient as the time of Maud the empress. It consisted of a warden, and several brothers and sisters, and had yearly revenues, valued upon the suppression at twenty-nine pounds, eighteen-shillings and eight pence.

In the year 1200, Hugh Mordac founded in this city a priory for twelve canons of the order of St. Sempringham dedicated to that saint, and valued, upon the dissolution, at fifty-seven pounds, five shillings and nine-pence *per annum*.

About the beginning of the reign of king Henry III. a convent of Black friars settled in this city, through the bounty of Bryan Stapleton, Esq.

Near the castle of York was a house of Franciscan, or Grey friars, founded in the time of king Henry III. by the king and the city of York.

Here was a convent of White friars, founded in 1255, by lord Vesey, and lord Percy.

In 1274, there was in this city an hospital dedicated to St. Giles.

Within the close of the cathedral here was a college of thirty-six vicars-choral, called the Bedern, under the direction of a warden or keeper. This place was given them by William de Lanum, some time canon of this church; and they were fixed here by archbishop Walter Gray, about the year 1252. They had a chapel dedicated to the Holy Trinity; but their house was called St. Peter's college, and was endowed, upon the dissolution, with two hundred and thirty-six pounds, nineteen shillings and four-pence *per annum*.

Here was an house of Grey friars, of the order of St. Augustine, as early as the year 1278, said to have been founded by the lord Scroop.

About the year 1314, Robert Pickering, dean of York, founded here a large chantry of six priests, which he afterwards turned into an hospital for a master and brethren. It was dedicated to St. Mary, and valued, upon the dissolution, at thirty-seven pounds *per annum*.

In 1391 here was an hospital dedicated to St. Thomas the Martyr; and mention is made of another hospital here in 1399.

In the north-east part of the city was an hospital called

called St. Anthony's hospital, founded about the year 1440, by Sir John Langton.

In 1451, here was a society of chaplains, or regular curates, called the house of the priests of Peseholme.

In 1460, archbishop George Nevill, and his brother Richard Nevill, earl of Warwick, founded a college for twenty-three chantry priests belonging to the cathedral, to have their lodgings and commons together. It was dedicated to St. William, formerly archbishop of York, and had yearly revenues, valued, upon the suppression, at twenty-two pounds, twelve shillings and eight-pence *per annum*.

Here was an hospital founded before the year 1481, by John Gisburgh precentor of York, for two chaplains. It was dedicated to St. Mary, and valued, upon the suppression, at nine pounds, six shillings and eight-pence *per annum*.

In this city was an hospital before the year 1481, called the House of God: and here was another hospital near Laithorpgate, founded by — Bigot.

In York Would, after very rainy seasons, water frequently gushes out of the earth, and rises to a considerable height. These jets the inhabitants of the country call vipsies or gipsies, and believe them to be the forerunner of a famine, or some other public calamity. To account for these phenomena, it is supposed that the rain water being received, and collected in large basons or caverns in the hills in this mountainous tract, finds a vent below, towards the bottom of the hills; but that this vent not being large enough for the water to issue as fast as it gathers above, it is forced up in jets or spouts, upon the principle of artificial fountains; and after springs and summers so wet as to produce these spouts, a scarcity of corn has frequently happened throughout the kingdom; so that the notion of these spouts being prognostics of a famine, is better founded than many others of the same kind.

The city of York sends two members to parliament; has two weekly markets held Thursday and Saturday; and several annual fairs, viz. Whitsun-Monday, July the tenth, August the twelfth, and every first Thursday in the year. Besides this there are two shews for horses; the summer shew is on Monday in the York-race week; and the winter shew on Monday the first whole week before Christmas.

Audley, on the river Derwent, north-east of York, appears to have been the Derventio of Antoninus, and the Petuaria of Ptolemy. The name Derventio was, no doubt, derived from the situation of the place on the bank of the Derwent, which was also called Derventio by the Romans. The captain of the company of Dervetienfes, under the general of Britain, was quartered here: this was a royal village in the time of the Saxons; the ruins of an old castle was still visible in this place, and here have been found some remains of Roman antiquity.

At a place formerly called Glamanho, near the city of York, Siward, earl of Northumberland, is said to have built a monastery before the year 1055.

At Risby, in the neighbourhood of York, lies the seat of Mr. Ellerker. The house, which is a large quadrangle, with three fronts, is situated on the brow of a rising ground, and overlooks to the south and west, a fine inequality of soil well spread with an old growth of wood; a winding valley runs before the south front, at the distance of two or three hundred yards, the banks of which are fringed with thorn-trees. To the north is a large lawn, surrounded with plantations; to the north-west, but unseen from the house, is a middling sized park, all hill, dale and wood, exceedingly beautiful; and near the house to the east, are several groves of young timber.

Howden, the next place we visited, is situated near the north bank of the river Ouse, one hundred and seventy-three miles from London. The lands round the town are very low, so that the whole neighbourhood, together with the town itself, are sometimes laid under water by the river overflowing its banks. Here is a church, which was formerly collegiate, with a very

tall steeple, erected by Walter Skirlaw, bishop of Durham, who flourished in the fourteenth century, for a place of security to the inhabitants against the inundations of the Ouse. The church which is dedicated to St. Peter and St. Paul, was made collegiate in the year 1226, by Robert, bishop of Durham, and had five prebends and six vicars, besides chantry-priests. Near the church is a palace belonging to the bishop of Durham, who is possessed of several estates in and about this town, together with a temporal jurisdiction. The river Ouse, on which Howden is situated, and which, three miles below, falls into the Derwent, was made navigable by an act of parliament passed in the first year of the reign of queen Anne.

Here is a weekly market on Saturday, and four annual fairs, viz. the second Tuesday in January; Thursday before the twenty-fifth of March; second Tuesday in July; and October the second, for horses, cattle, &c.

The river Ouse appears to have been the Abus of Ptolemy; and near Metham, not far from Howden, upon the bank of that river, has been discovered a Roman pottery, where Roman urns, and other earthen vessels were made.

At Ellretton, north of Howden, William Fitz-Peter founded, about the year 1212, a priory of canons of the Sempringham order, and dedicated it to the Virgin Mary and St. Laurence. At the dissolution its annual revenues amounted to sixty-two pounds, eight shillings and ten-pence.

At Hemingburgh, west of Howden, is a church dedicated to St. Mary, which was made collegiate in the year 1426, by the prior and convent of Durham, for a provost or warden, three prebendaries, six vicars, and six clerks. Upon the suppression, its revenues amounted to eighty-four pounds, five shillings and eleven-pence *per annum*.

Leaving the town and neighbourhood of Howden, we passed to Kingston upon Hull, commonly called Hull, by contraction. It was called Kingston, or King's-town, from its having been founded by king Edward I. and Kingston upon Hull, from its situation on the river Hull.

The town is situated at the mouth of the river, one hundred and sixty-nine miles from London. The advantages of this situation struck king Edward I. as he was hunting in the neighbourhood, after his return from the defeat of the Scots in the year 1296. Upon which he granted several privileges and immunities to those who would build and settle here, erected a manor-hall himself, and deepened the harbour. It held out against king Charles I. who went in person to demand it, and was told by the governor, Sir John Hotham, "That he kept it for the parliament."

It was first incorporated by Edward I. but Henry VI. made it a town and county incorporate of itself, and under the charter of that prince it is still governed by a mayor, twelve aldermen, a recorder, a chamberlain, a water-bailiff, a sheriff, a town-clerk, and a sword and mace bearers. It is said that this town has a power of giving judgment on life, though it does not now exert that privilege. The mayor had two swords given him, one by king Richard II. and the other by king Henry VIII. though only one sword is carried before him. He had also a cap of maintenance, and an ear of lignum vitæ given him, which is an ensign of his jurisdiction, as admiral within the liberties of the Humber. In the reign of Henry VIII. this town was, by an act of parliament erected into an harbour, and by another passed in the reign of William III. it was enabled to build work-houses and houses of correction.

This town is situated so low, that by cutting the Humber banks, the country may be laid under water for five miles round. It is surrounded by a wall and a ditch, where it is not defended by the river Humber, and is fortified by a castle, a citadel, and a block-house.

Hull is a large, and, in general, a close built town, though some of the streets are wide and handsome; and all of them, down to the narrowest alley, excellently paved.

paved and perfectly clean. The houses in general are well built, but there are few large ones. It is exceedingly populous, being said to contain twenty-four thousand souls.

Among the public buildings in this town are the Trinity-house, the new theatre, and the assembly-room.

The Trinity-house is a very antient establishment for the maintenance of captains widows: There is nothing striking in the building, except a modern sea-piece in one of the rooms, representing the sea-fight between Sir Edward Hawke and the French fleet off Quiberon-bay, by D. Serres. It is a good picture; the smoke in a variety of colours and expressions, the clouds, and the clear obscure of the whole, are pleasing. In one of the passages is the effigy of a man in a boat, who was taken up at sea, alive, but died three days after. The following is the inscription:

“ Andrew Barker, one of the masters of this house, upon his voyage from Greenland, Anno Domini 1613, took up this boat and a man in it, of which this is the effigy; the coat, badge, oars, and dart, the same.”

The boat is only eighteen inches broad and ten feet long, covered over so as just to admit the man to sit in it, and joins round his waist; it is amazing it should live a single day at sea.

This corporation maintains thirty sisters, the widows of seamen. They have a government by twelve elder brethren, and six assistants. Out of the twelve, they chuse annually two wardens, but the whole eighteen vote in electing them, and two stewards. These have a power of deciding disputes between the masters of ships and their crew, in matters relating to sea affairs; and with this limitation, that their judgment be not contrary to the laws of the land; but such great difference is paid to it, that in trials at law in such affairs, they are often called on to give their opinion.

The next building worthy a particular observation, is the new theatre. It is well contrived, and handsome, contains a small orchestra, a pit, and three ranges of boxes, and galleries; but the ballustrade fronts of the boxes being lead colour, has not a good effect; they had better have been pannelled, unless carved and gilt; another great disadvantage is, that the stage had not half a sufficiency of extent in the front of the house.

The assembly-room, which is the other building deserving attention, is elegant and well contrived; it is fifty feet by twenty seven, and twenty-five high; the card-room, thirty-two feet by twenty, is parallel with it, so that at the entrance you see through the doors of each, upon a large handsome pier glass at the farther side of the latter, catching the principle glass lustres in a proper manner; of these there are eight in the assembly room, and one in the card room. The former of these is walled with a most disagreeable red clouded coloured stone, which destroys the beauty of the room; it is ornamented with Ionic pilasters. The music gallery is a coved recess on one side, the front of which being parallel with the side of the room, the proportions are not damaged by it, nor has it that vile effect so disgusting in projecting galleries.

Here are only two churches, Trinity and Stullary's; the former is very large; but the pillars remarkably small. The altar piece, by Parmentier, is esteemed very fine.

The other church is thought to have been once larger than it is at present. King Henry VIII. used it as his chapel royal; during which time he ordered the steeple to be pulled down, because it stood opposite to the palace where he resided; but the inhabitants afterwards rebuilt it at their own expence.

Here are several meeting houses, and a free-school, founded by John Alcock, bishop of Worcester, in the reign of queen Elizabeth, with a hall over it for the merchants of the town. Here is, likewise, a charity school, in which a great number of poor children are taught and maintained; and in the year 1714, it appeared that this charity had, in less than ten years, provided for fifty boys and thirty girls.

Michael de la Pole, earl of Suffolk, in the year

1584, founded here an hospital, called God's House, and likewise the chapel on the north side of it; but both were pulled down in the late civil wars, and rebuilt, and the house enlarged in 1673. To the east of this chapel a new hospital was afterwards built for the better reception of the poor belonging to the other house, which was too small to contain them altogether with the master and his family.

Here was likewise a priory of the Carthusian order, for thirteen monks, founded by the above-mentioned earl of Suffolk, in the reign of Edward III. It was dedicated to St. Mary, St. Michael, and St. Thomas of Canterbury; and endowed, on the suppression, with one hundred and seventy-four pounds, eighteen shillings and three-pence *per annum*.

The same earl, in the year 1384, founded an hospital here for thirteen poor men, and as many poor women. It was dedicated to the Holy Trinity, and had revenues valued, on the suppression, at thirty-two pounds, nineteen shillings and nine-pence *per annum*.

In the reign of king Edward I. here was a priory of White-Friars; and also a house of Black-Friars.

In the eighteenth year of king Edward III. John Kingston founded an hospital in this town for thirteen poor men, and the like number of women.

At the west end of the church-yard, was a handsome row of buildings, for lodging the priests of Hull; and near it was an hospital, both founded by John Grigge, mayor of Hull.

Mr. Skinner, another mayor, left a fund for the distribution of eight dozen of bread for ever on the first Sunday of every month; and Mr. George Crowle, who was twice mayor of the town, as well as representative in parliament, erected an hospital here during his life-time, in the year 1661, and had the following inscription placed over the door.

*Du dum tempus habes tibi propria sit manus Hæres,
Auferet hoc nemo quod dabis ipse Deo.*

In the year 1621, an exchange was built here; and in 1674, a building called Greenland-house, at the charge of the merchants who traded to Greenland for stock fish; but that fishery being neglected, Greenland-house is now converted into a stone-house for corn, and other goods. Here is likewise a custom-house and wooll-hall.

This town has a good old stone bridge over the hall consisting of fourteen arches; and a good harbour was made here by king Edward I. or king Richard II.

Hull has not only the most considerable inland traffic of any port in England, but a foreign trade superior to any in the kingdom, excepting the ports of London, Bristol and Yarmouth; the customs here being computed at between thirty and forty thousand pounds a year. The inland trade of this place is rendered so very considerable by the many large rivers that fall into the Humber, not far distant from it; for by means of these rivers it trades not only to every part of Yorkshire, but to Lincolnshire, Nottinghamshire, Staffordshire, Derbyshire, Cheshire, and Warwickshire, the heavy goods of which counties are brought hither, and exported to Holland, Hamburgh, France, Spain, the Baltic and other parts of Europe; and for which are returned, iron, copper, hemp, flax, canvas, Russia linen and yarn, besides wine, oil, fruit, and many other commodities. By these rivers also, such a quantity of corn is brought hither, that Hull exports more corn than London. The trade of Hull with London, especially for corn, lead, and butter, and with Holland and France in times of peace, not only for these commodities, but for cloth, kerseys, and other manufactures of Leeds, Halifax, and other towns of Yorkshire, is so considerable as not only to employ ships but fleets, the Hull fleets to London being generally from fifty to sixty sail, and in time of war frequently a hundred sail or more; so that more business is done in this port, in proportion to its extent, than in any other part of Europe.

This town is remarkable in history for a repulse that king Charles I. met with here from Sir John Hotham,

the governor, when he came to demand the magazine of arms and ammunition that was designed for the army against the Scots, which, upon the peace, was brought back and laid up here. Sir John told the king that he held the town for the parliament, and that he could not admit him into it, unless he came singly and unarmed. This answer so provoked his majesty, that he turned away, and declared him a traitor; but next year Sir John and his son leaving the parliament party, formed a design to deliver up the place to the king; which being discovered, they were both beheaded upon Tower-hill.

Here are two weekly markets on Tuesdays and Saturdays; and two annual marts, granted by king Charles II. which hold five days each; the first on the twenty-first of July, and the second on the twenty-first of December.

At Ferriby, near Hull, lord Euface Vesey founded a priory of Knights Templars, which, upon the suppression of that order, seems to have become a priory of canons of the order of St. Augustine, and to have continued in their possession till the general dissolution of religious houses, when its annual revenues were valued at sixty pounds, one shilling and two-pence.

At Sutton, north-east of Hull, there appears to have been a house of White friars in the time of Edward I. but we have no account of its foundation, nor by what accident it was abolished.

Sutton had also a free chapel dedicated to St. James, in which John Sutton settled and endowed a chantry of six priests. The parish church also was once a college, and valued, upon the dissolution, at thirteen pounds, eighteen shillings and eight-pence, *per annum*. Here was likewise an hospital, valued, upon the dissolution, at seven pounds, eighteen shillings and four-pence *per annum*.

At Cottingham, north-west of Hull, Thomas lord Wake, of Lyddel, founded, in the fifteenth year of Edward II. a monastery of Augustine friars, who the same year removed to a neighbouring hamlet called Newton. This monastery was dedicated to the nativity of our Saviour, the annunciation of the Virgin Mary, and the exaltation of the cross. At the time of the general dissolution it had eleven or twelve Black canons, and was endowed with annual revenues to the amount of one hundred pounds, three shillings and three-pence.

At Cottingham, not far from Hull is a beautiful pleasure-ground, belonging to Mr. Watson. It consists of shrubberies, with winding walks, and the imitation of a winding river through the whole. The grass-plot in front of the house, surrounded with ever-greens and shrubs, with a Gothic bench on one side, is very pretty, and the clumps to the water's edge well disposed. Hence passing by a bridge, you follow the water through a pasture ground, surrounded with walks and benches. The banks are closely shaven, the bends of them natural, and quite in the stile of a natural river. About the middle of the field it divides and forms a small island, which contains two or three clumps of shrubs, and forms a very great ornament to the place; the walk afterwards leads to the other serpentine ones round the field, which is laid out in an excellent taste.

Beverley, the next place we visited, is a large, populous town, one hundred and seventy-nine miles distant from London. It is a corporate and borough town, under the government of a mayor, alderman, &c. It takes its name from the great number of beavers, with which that river abounded. It had formerly a considerable trade, by means of a creek, or cut, commonly called Beverley-beck, of old, made from the town to the river Hull, which runs into the Humber, for the passage of ships and boats, keels, wherries, hoys, &c. to and from the said town; and as it had likewise divers staiths, or landing-places adjoining to the said beck, for the lading and unlading of all sorts of merchandize, the town was wont to receive no small advantage from this cut or river. But there being no settled fund for keeping it open, and cleansing it, and the expence of

doing it being beyond the ability of the corporation, the said beck was, in time, choaked up, and the staiths grew out of repair; whence an act passed, Anno 1727. for cleansing, deepening, and widening the creek, and for repairing the staiths, and for mending the roads leading from the said cut to the town; and at the same time providing for the cleansing of the town itself: all which has had a very good effect; for before, the creek lying in the lower part of the town, the filth, dirt, and soil of the town was washed into it, which very much contributed to choak it up.

Beverley is the chief town of the East Riding, and began to be of great note from the time that John of Beverley, archbishop of York, the first doctor of divinity in Oxford, and preceptor to venerable Bede, built a monastery here, and afterwards retired into it himself, where he died, in the year seven hundred and twenty-one. King Athelstan, having made a vow at the altar of St. John, before he proceeded against the Scots, in his return, in the year nine hundred and thirty, instituted a new college of secular canons, and granted to the town many immunities; particularly, to the freemen of it, an exemption from all manner of tolls, which was afterwards confirmed by king Henry I. and by all or most of the kings and queens of this realm to this time, as the mayor's certificate expresses it; which he gives to such freemen as apply for it, in the form following:

Villa de Beverley in Com' Ebor, ff.

“ To all persons to whom these presents shall
“ come, A. B. Esq; mayors of the aforesaid
“ town of Beverley, sendeth greeting.

“ Know ye, that king Athelstan, of famous memo-
“ ry, did grant, and also king Henry I. did grant and
“ confirm, to the men of the said town of Beverley,
“ and afterwards to them, by the name of the gover-
“ nors, or keepers, and burgesses of Beverley, an
“ exemption of all manner of imposts, toll, tallage,
“ stallage, tunnage, lastage, pickage, wharfage, and
“ of and from all and every the like exactions, pay-
“ ments, and duties, throughout and in all places what-
“ soever, by sea and land, within all their dominions of
“ England and Wales. Which said grants were con-
“ firmed by all or most of the succeeding kings and
“ queens, to the time of queen Elizabeth, who confirm-
“ ed the same to them by the name of the mayor, go-
“ vernors, and burgesses, of Beverley, with several
“ grants, which have been also confirmed by all or most
“ of the kings and queens of this realm, till this time;
“ as by many and fundry charters, under their great
“ seals, more at large may appear. These are therefore
“ to certify, that C. D. is a burges of the said town of
“ Beverley, and is therefore discharged of and from all
“ and every the said exactions, payments, and duties.
“ In testimony whereof the said mayor hath hereunto
“ subscribed his name, and caused the common-seal of
“ the said town, used in this behalf, to be affixed, this
“ — day, &c.

By these, and the like privileges, the town keeps up its flourishing condition, notwithstanding it is within six miles of so powerful a rival as Hull. It has all the advantages, indeed, of a good situation, to invite gentlemen to reside in it; and, being the nearest town of note to the centre of this riding, the sessions are always held here, in a spacious and beautiful hall, which has a public garden and walks, not inferior to any of their kind in England. In this Hall-garth, as it is called, is an handsome register-office for deeds and wills within this division; which is the only county in England, besides Middlesex, which has such a registry; to the great reproach of the nation be it said, especially when it shall be remembered, that no less than two bills (one for a registry for the county of Surry, and another, after that, for a general registry over the whole kingdom) were respectively opposed, and miscarried very lately in parliament.

The market-place is as large as most, having a beautiful cross, supported by eight free-stone columns, of
one

one intire stone each, erected at the charge of Sir Charles Hotham, and Sir Michael Wharton; upon which was this inscription:

HÆC SEDES LAPIDEA FREED-STOOLE DICITVR,
I. E. PACIS CATHEDRA; AD QVAM REVS FVGIENDO
PERVENIENS OMNIMODAM HABET SECVRITATEM.

That is:

This stone seat is called Freed-Stoole, or chair of peace; to which if any criminal flee, he shall have full protection.

The common gaol has been lately re-edified at a considerable expence, the windows well fashed; and, as if works of piety were more peculiarly adapted to this place, there are seven alms-houses in the town, and legacies left for two more; besides a work-house, which has cost seven hundred pounds. It has a free-school, to the scholars of which are appropriated two fellowships at St. John's College in Cambridge, and nine exhibitions.

Here were formerly four churches, now only two, but the largest and finest parochial ones in the kingdom, viz. the late collegiate church of St. John the Evangelist, still called the Minster; and St. Mary's. The Minster being very ruinous, Mr. Moyser, then member of parliament for Beverley, in the year 1708, procured a brief for the repair of it; and, by his sole sollicitation among his friends and acquaintance, raised one thousand five hundred; to which he and his family contributed very largely. This sum, with eight hundred pounds, the produce of the brief, being put out in the funds, was considerably augmented by the rise of South-Sea stock in the year 1720, which enabled him to complete his pious design in a most beautiful manner in his life-time; as he had the sole management and direction both of the money, and of the application of it, being assisted by the advice of that noted architect Nicolas Hawksmore, Esq; king George I. encouraged this work, not only by a liberal donation of money, but of stone likewise, from the dissolved monastery of St. Mary's, in York. Sir Michael Wharton gave in his life-time five hundred pounds, and by will, four thousand pounds, as a perpetual fund towards keeping it in repair.
